DICTIONARY OF Psychology

ANDREW M. COLMAN

How to search for terms in *A Dictionary of Psychology*

To find an entry in this e-book you can:

- Browse the [Alphabetical List of Entries](#) and select the entry you would like to view
- or
- Use your Search function to be taken to a complete list of references to your search term in the *Dictionary*
 - If your search term has its own entry, it will usually be listed at the top of your results
 - In cases where your search term appears in more than one entry heading, the results will be listed alphabetically

A note on special characters

While most e-readers can display special characters (such as é and â), many cannot search for words containing them, unless the special characters themselves are typed into the search box. If you are unable to type these characters, please browse for your term using the [Alphabetical List of Entries](#).

Alphabetical List of Entries

abnormal psychology

abortion

ABO system

aboulia

Abraham Lincoln effect

abreaction

absence

absent-mindedness

absolute acuity

absolute error

absolute judgement method

absolute limen

absolute pitch

absolute reflex

absolute refractory period

absolute scale

absolute thinking

absolute threshold

absorbance

abstinence

abstinence rule

abstinence syndrome

abstract attitude

abstraction

abstract measurement theory

absurdity test

abulia

abuse (alcohol, child, elder, spouse, substance)

ABX paradigm

academic problem

academic skills disorders

acalculia

acatamathesia

accent

acceptance and commitment therapy

acceptor

access consciousness

accessibility

accessory cell

accessory nerve

*****ebook converter DEMO Watermarks*****

accidence

accidental sample

accommodation

accommodation reflex

acculturation

acculturation difficulty

accumbens nucleus

accuracy test

acephalous

acetaldehyde

acetic acid

acetyl

acetylcholine

acetylcholinesterase

acetylsalicylic acid

achievement motivation

achievement test

Achilles tendon reflex

achromatic

achromatic interval

*****ebook converter DEMO Watermarks*****

achromatic system

achromatopsia

acid

acid odour

A consciousness

acoustic

acoustic coding

acoustic confusion

acoustic cue

acoustic feature

acoustic generalization

acoustic–mnestic aphasia

acoustic nerve

acoustic reflex

acoustic similarity effect

acoustic store

acquaintanceship knowledge

acquiescence response set

acquired distinctiveness

acquired dyslexia

*****ebook converter DEMO Watermarks*****

acquired similarity

acrasia

acrolect

acromegaly

acronym method

acroparaesthesia

acrotomophilia

ACT

ACT*

actigraphy

actin

acting in

acting out

action

action, drug

action potential

action research

action slip

activated gene

activating event

activator gene

active analysis

active avoidance conditioning

active imagination

active sleep

active technique

active transport

active vocabulary

activity monitor

activity wheel

actomyosin

actor–observer difference

act psychology

actualization

actual neurosis

actuarial prediction

actus reus

acuity

acuity grating

acupuncture

acute

acute confusional state

acute pain

acute stress disorder

acute stress reaction

Adam

adaptation

adaptation level

adaptation-level theory

adaptation syndrome

adaptive control of thought

adaptive radiation

adaptive testing

adaptor

addiction

additive alleles

additive colour mixture

additive model

additive primary

additivity

addressed phonology

adelphogamy

adenine

adenohypophysis

adenosine

adenosine diphosphate

adenosine monophosphate

adenosine triphosphate

adenylate cyclase

adenylic acid

adequate stimulus

adiadochokinesia

adipose

adipose tissue

adipsia

adjacency pair

Adjective Check List

adjustment

adjustment disorders

adjustment method

*****ebook converter DEMO Watermarks*****

Adlerian

admissible alternative/strategy

adolescence

adolescent

Adonis complex

adoption study

ADP

adrenal cortex

adrenal gland

adrenalin

adrenalin rush

adrenal medulla

adrenergic

adrenergic receptor

adrenocorticotrophic hormone

adultomorphic fallacy

advantage by illness

adverse (drug) reaction

adynamia

aerial perspective

*****ebook converter DEMO Watermarks*****

aerobic

aerophagia

aesthesiometer

aetiology

affect

affect display

affectional bond

affective disorder

affective flattening

afferent

affiliation need

affirming the antecedent

affirming the consequent

affordance

affricate

aftereffect

afterimage

after sensation

aftertaste

agape

agapic love

age-equivalent score

ageing male syndrome

ageism

agenesis of the corpus callosum

age of acquisition

age regression

age-related cognitive decline

age-related memory impairment

age scale

age score

ageusia

agglomerative hierarchical clustering

agglutinative language

aggression

aggression, displaced

aggression, instinctual

agitated depression

agitation

agnosia

agnosticism

agonist

agoraphobia

agrammatism

agraphia

agraphic acalculia

agreeableness

agrypnia

aha experience

ahedonia

ahylognosia

AIDS

AIDS dementia complex

AIDS-related complex

aim-inhibition

aim of instinct

air crib

air encephalogram

air theory

akatamathesia

*****ebook converter DEMO Watermarks*****

akathisia

akinaesthesia

akinesia

akinetiC apraxia

akinetopsia

akrasia

alarm call

alarm pheromone

alarm reaction

alarm signal

albedo

alcohol

alcohol abuse

alcohol amnestic disorder

alcohol dependence

alcohol hallucinosis

alcohol-related disorders

aldehyde dehydrogenase

aldosterone

alethia

Alexander technique

alexia

alexia acalculia

alexithymia

algaesthesia

algnesia

algometer

algolagnia

algorithm

algorithmic

aliasing

alienation

alien hand sign

alienist

alimentary

alimentary canal

alimentation

aliphatic

alkali

alkaloid

allaesthesia

Allais paradox

allegro speech

allele

allergen

allergy

allesthesia

alliaceous

allochiria

allocortex

allo-erotism

allomone

allomorph

allopathy

allophone

alloplastic

all-or-none law

Allport–Vernon–Lindzey Study of Values

alogia

alpha-adrenergic receptor

*****ebook converter DEMO Watermarks*****

alpha blocking

alpha element

alpha fibre

alpha-foetoprotein

alpha function

alpha male

alpha-methylparatyrosine

alpha motor neuron

alpha movement

alphanumeric

alpha personality factor

alpha receptor

alpha reliability coefficient

alpha wave

alprazolam

altered state of consciousness

alternating personality

alternating perspective

alternative forms

alternative hypothesis

*****ebook converter DEMO Watermarks*****

altricial

altruism

altruistic suicide

alveolar

Alzheimer's disease

amacrine

amafufunyane

Amanita muscaria

amantadine

amaurosis

amaurotic familial idiocy

ambient system

ambiguity aversion

ambiguity tolerance

ambiguous figure

ambilingual

ambivalence

amblyacusia

amblyaphia

amblygeusia

amblyopia

amblyopia ex anopsia

amenorrhoea

amentia

American College Testing Program

American Sign Language

Ameslan

Ames room

Ames window

ametropia

amfetamine

amimia

amine

amino acid

Amitril

amitriptyline

Ammon's horn

amnesia

amnesic syndrome

amnestic disorder

amniocentesis

amobarbital

amodal completion

amok

amorphognosia

AMP

amphetamine

amphetamine psychosis

amphetamine-related disorders

amphiboly

amphipathic

amplification

amplitude

ampulla

amputee

amuck

amurakh

amusia

amygdala

amygdalohippocampectomy

amyl nitrite

amylobarbitone

amyloid plaque

amyotrophic lateral sclerosis

Amytal

anabolic androgenic steroid

anabolic steroid

anabolism

anaclitic

anaclitic depression

anaclitic object-choice

anacoluthon

anacusia

anaerobic

anaesthesia

anaesthetic

Anafranil

anaglyph

anaglyptoscope

anagogic interpretation

*****ebook converter DEMO Watermarks*****

anal character

analeptic

anal erotism

anal-expulsive phase

analgesia

analgesic

analogies test

analogue

anal-retentive phase

anal sadistic stage

anal stage

anal triad

analysand

analysis

analysis by synthesis

analysis of covariance

analysis of covariance structures

analysis of variance

analyst

analytical psychology

*****ebook converter DEMO Watermarks*****

analytic language

analytic statement

anamnesis

anamorphic

anandamide

anankastic neurosis

anankastic personality disorder

anaphase

anaphia

anaphora

anaphrodisiac

anaphylactic shock

anaphylaxis

anarchic hand

anarthria

anchoring and adjustment

anchor test

ancient mariner effect

androgen

androgen decline in the ageing male

*****ebook converter DEMO Watermarks*****

androgenization

androgenous

androgynous

andromania

andropause

androsterone

anecdotal evidence

anechoic room

anergasia

anergia

anesthesia

aneurysm

angel dust

angina

angiogram

angiotensin II

angst

angstrom

angular gyrus

angular size

*****ebook converter DEMO Watermarks*****

anhedonia

aniconia

anima

animal magnetism

animal psychology

animism

animus

anion

anion channel

anisotropic

ankle reflex

Anna O

annealing

anniversary reaction

anoesia

anomaloscope

anomalous dichromacy

anomalous myopia

anomalous sentence

anomalous trichromacy

*****ebook converter DEMO Watermarks*****

anomia

anomic aphasia

anomic suicide

anomie

anoopsia

anopia

anopsia

anorexia

anorexia nervosa

anorgasmia

anorthopia

anorthoscope

anorthoscopic

anosmia

anosognosia

Antabuse

antagonist

antecedent

antedating of consciousness

anterior

anterior cingulate cortex

anterior commissure

anterior funiculus

anterior horn

anterior pituitary

anterior prefrontal cortex

anterograde amnesia

anterograde degeneration

anterograde transport

anthrax

anthropic principle

anthropobiology

anthropocentrism

anthropogenic

anthropography

anthropoid

Anthropoidea

anthropology

anthropomorphism

anthroponomastics

*****ebook converter DEMO Watermarks*****

anthropophagus

anthropophonics

anthroposophy

anti-anxiety drug

antibody

anticathexis

anticholinergic

anticholinesterase

anticipation method

anticipatory socialization

anticonformity

anticonvulsant

antidepressant

antidiuretic hormone

antidromic

antigen

antigen–antibody response

antihistamine

anti-intraception

antimanic

antimorph

anti-Müllerian hormone

antinomy

antiparkinsonian

antipsychiatry

antipsychotic

anti-Semitism scale

antisocial personality disorder

Anton's syndrome

antonym

antonym test

anvil

anxiety

anxiety disorders

anxiety hysteria

anxiety neurosis

anxiolytic

anxious personality disorder

apathy

Apgar score

*****ebook converter DEMO Watermarks*****

FOURTH EDITION

ANDREW M. COLMAN

Andrew M. Colman is Professor of Psychology at the University of Leicester and is a Fellow of the British Psychological Society. He has authored numerous journal articles and several books, including *Facts, Fallacies and Frauds in Psychology* (1987), *What is Psychology?* (3rd edn, 1994), and *Game Theory and its Applications in the Social and Biological Sciences* (2nd edn, 1995). He edited the two-volume *Companion Encyclopedia of Psychology* (1994) and the 12-volume *Longman Essential Psychology* series (1995).

Preface

The Red Queen shook her head. ‘You may call it “nonsense” if you like,’ she said, ‘but *I’ve* heard nonsense, compared with which that would be as sensible as a dictionary!’

Lewis Carroll: *Through the Looking-Glass*

The aim of this dictionary is to provide sensible and informative definitions of the most important and difficult words that a reader is likely to encounter in books and articles on psychology. Other dictionaries of psychology are available, but they do not generally seek to provide detailed coverage of the more technical terminology of neuroanatomy, neurophysiology, psychopharmacology, and statistics, and most of them make no systematic attempt to cover the specialized vocabulary of psychoanalysis. This dictionary provides systematic coverage of these areas, in addition to the basic terminology of psychology and psychiatry, and the definitions contain more explicit factual information and explanation than is available in other dictionaries.

This fourth edition incorporates a large number of improvements and additions. The publication in 2013 of the American Psychiatric Association’s latest diagnostic and statistical manual DSM-5 necessitated a radical revision of many of the entries relating to mental disorders—every mental disorder specifically named in DSM-5 is included in this edition and clearly identified as a DSM-5 disorder. Many other entries required amendment or updating, for sundry reasons. In this new edition, more than 750 of the entries carried over from the third edition have been revised. To bring the dictionary fully up to date, Oxford University Press have permitted me to add more than 200 completely new entries (**boarding school syndrome**, **eudaimonic well-being**, **hemisity**, **hybrid image**, **Knobe effect**, **leaning tower illusion**, **retrieval-based learning**, **System 1 thinking**, **ten thousand hour rule**,

vocal fry, and many others), over 40 new abbreviations, and 12 new illustrations. Finally, I have revised all three appendices.

The definitions are as simple as possible, but no simpler than that. Many of the concepts of psychology are inherently difficult and, if they are to be treated seriously, they ought not to be oversimplified or trivialized. In recognition of this, the definitions attempt to provide enough information to enable the serious reader to grasp the fundamental meaning and significance of even the more difficult concepts. Thus, for example, the entry under the headword **blood-brain barrier** avoids defining it in the usual, but misleading, way as a membrane and instead provides a detailed description of this remarkable but complex mechanism. In the same vein, the **peg-word mnemonic** is explained in enough detail to enable the reader to use it in practice; the **lateral geniculate nucleus** is not dismissed in a single sentence as a type of nerve cell, as in other dictionaries, but is described more accurately in terms of its structure and functions; and the **visual cortex** is not merely identified with vision and located at the back of the head but is given a full and detailed description. The entries under **information theory**, **prospect theory**, and **signal detection theory** provide enough information for the reader to grasp the fundamental ideas behind the theories and to understand how they actually work, and the same approach is adopted with other difficult terms. The aim is always to respect genuine difficulties and complexities but to provide the clearest possible definitions using the simplest possible language relative to the ideas being discussed.

Two unusual features of this dictionary deserve mention here. First, in many cases important terms and concepts are attributed to their originators or discoverers and, at the request of the publisher, when individuals are mentioned by name, their birth and death dates are usually supplied, although some dates, especially death dates, have been impossible to discover—people sometimes make significant contributions and then fade away into obscurity. Second, the entries are far more extensively cross-referenced than has been customary in earlier dictionaries. For example, the entry under **visual illusion** includes cross-references to every particular visual illusion described (and often illustrated) elsewhere in the dictionary, and the entry under **cranial nerve** is cross-referenced to all twelve of the human cranial nerves, each of which has its own separate entry. The purpose of the cross-references is to enable a reader who has looked up a word to obtain additional information that is either directly or indirectly relevant to it, and in general to encourage

the use of the dictionary as an aid to serious scholarship.

The selection of headwords for this dictionary was not an easy task. I had to discard many words that could have gone in, and hard choices had to be made. Dilemmas were resolved by asking the following two questions: Is the word used in psychological books and articles? Are readers likely to want to look it up? Speaking on BBC radio in September 1999, the England football coach, Kevin Keegan, commented memorably: 'Picking the team isn't difficult; what's difficult is deciding which players to leave out.' I faced the same problem picking headwords for this dictionary; the difficult part was deciding which words to leave out.

The headwords that were finally selected include the core terminology of psychology, together with technical words that originate from other disciplines but are often used by psychologists. Psychology is a uniquely diverse discipline, ranging from biological aspects of behaviour to social psychology, and from basic research to various applied professional fields, such as clinical and counselling psychology, educational and school psychology, industrial/organizational and occupational psychology, and forensic and criminological psychology. Many of the technical terms of psychiatry, psychoanalysis, neuroanatomy, neurophysiology, pharmacology, computing, optometry, ethology, genetics, statistics, philosophy, linguistics, sociology, and anthropology have migrated into psychology and become partly naturalized there, and the most important ones are included in this dictionary.

Mental disorders are covered systematically and comprehensively, and definitions in this area are based on the widely accepted criteria of the American Psychiatric Association's *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5) and the World Health Organization's *Diagnostic Criteria for Research* (ICD-10).

The basic vocabulary of psychoanalysis is included in this dictionary, although—in fact, partly because—other dictionaries of psychology omit most psychoanalytic terms and concepts altogether and treat the ones that are included only superficially. In this dictionary, terms introduced by Sigmund Freud are defined in sufficient detail to convey their meanings without trivialization, and key terms coined by subsequent psychoanalysts, including Jung, Adler, Erikson, Klein, Fairbairn, Winnicott, Kohut, Lacan, and Reich, are also included. Citations of Freud's writings are given by reference to *The Standard Edition of the Complete Psychological Works of Sigmund Freud*,

*****ebook converter DEMO Watermarks*****

translated and edited by James Strachey, using the usual convention in Freud scholarship of roman numerals for volume numbers and arabic numerals for page numbers, and citations of Jung's writings are referenced to *The Collected Works of C. G. Jung*, edited by Read, Fordham, and Adler, using arabic volume and paragraph numbers, as is conventional in Jungian literature.

Appendix I, at the back of the dictionary, contains a list of phobias and phobic stimuli, with etymologies, that is, as far as I am aware, the most comprehensive available. Appendix II contains an extensive list of over 800 abbreviations and symbols commonly used in psychology, cross-referenced to corresponding entries in the main body of the dictionary. Appendix III contains the list of web links mentioned earlier. They were selected with great care and will be useful to any serious student of psychological concepts and terminology.

The definitions in the main body of the dictionary include occasional comments about careful usage: see, for example, **adrenalin rush** (based on a misconception), **anorexia** (not the same as **anorexia nervosa**), **basal ganglia** (best reserved for ganglia involved in voluntary movement), **innate** (not the same as **hereditary**), **monosynaptic reflex** (a physical impossibility), **narcotic** (not just an addictive drug), **paradox** (more than something merely surprising), **phi phenomenon** (not just any form of apparent movement), and so on. Occasional suggestions are made for renaming concepts that seem to be misnamed. For example, this dictionary suggests the term **Dircks's ghost** instead of the misnomer **Pepper's ghost**, **Luckiesh illusion** instead of **Sander parallelogram**, and **Merkel's law** instead of **Hick's law**, for reasons that are explained in the relevant entries, though it seems too late to change **TAT** back to its original name.

Scattered throughout the dictionary are suggestions for practical demonstrations of dramatic or interesting psychological phenomena that can be observed under home conditions. The following entries, among others, include easy demonstrations, some trivial and others illustrating profound ideas: **afterimage**, **Aristotle's illusion**, **Aubert effect**, **Bidwell's ghost**, **blind spot**, **chequer-shadow illusion**, **Cheshire Cat effect**, **conservation**, **Craik-O'Brien effect**, **Dollar Auction game**, **Emmert's law**, **experimentally induced false memory**, **filling-in illusion**, **flight of colours**, **floating-finger illusion**, **Gelb effect**, **hole-in-the-hand illusion**, **hollow-face illusion**, **Kohnstamm effect**, **lightness**, **Moses illusion**, **nine-dot problem**, **phi**

movement, Pulfrich effect, Purkinje figure, Purkinje shift, randomization, rubber hand phenomenon, sensory saltation, size–weight illusion, Stroop effect, successive contrast, teacup illusion, thermal grill illusion, three–seven effect, tilt aftereffect, visual search, winner's curse, wug test.

Friends, relatives, and colleagues have asked me where I found the headwords and the information used to define them. The answer is—everywhere. In some cases I managed to access the required information close to home in my own long-term memory store; more often, I looked in journal articles, textbooks, and reference works; in many cases I asked leading authorities in the relevant research areas for help; and increasingly often I have used the internet. I wrote this dictionary in circumstances that were difficult for me at work, and I am lucky to have had a lot of support and advice. Acknowledgements to people who helped me are provided elsewhere in these preliminary pages, though I take responsibility for errors that have no doubt remained. A list of the textbooks and reference works that I found most useful is provided at the back of the dictionary.

Andrew M. Colman

Advisory Editors

The following acted as advisory editors for the first edition:

Biological aspects of psychology: Daniel P. Kimble, University of Oregon

Cognitive psychology: Robert J. Sternberg, Yale University

Mental disorders: Robert L. Spitzer, Columbia University

Neurology and cognitive neuropsychology: Andrew Mayes, University of Manchester

Psychoanalysis: Richard Stevens, The Open University

Psychopharmacology: Leonard W. Hamilton, Rutgers University

Sensation and perception: Harvey R. Schiffman, Rutgers University

Illustration Acknowledgements

The author and publisher wish to thank Market House Books Ltd for the use of the following illustrations from *A Dictionary of Biology*, 4th ed., and *A Dictionary of Science*, 4th ed. (both Oxford University Press).

A Dictionary of Biology

- Autonomic nervous system: The parasympathetic and sympathetic systems
- Ear: Main structures of the mammalian ear
- Genetic code
- Lipid bilayer
- Meiosis: Stages in a cell containing two pairs of homologous chromosomes
- Mitosis: The stages of mitosis in a cell containing two pairs of homologous chromosomes
- Pyramid of numbers: A woodland food chain
- Retina: Basic structure (light enters from the bottom of the diagram)
- Skin: Structure of mammalian skin
- Synapse: Basic structure

A Dictionary of Science

- DNA: Molecular structure
- Eye: Main structures of the vertebrate eye
- Harmonic: Fundamental and two overtones
- Motor neuron
- RNA: Molecular structure
- Sensory neuron

General Acknowledgements

Thanks are due to Rob Hemmings, Kathy Smith, Phil Duke, Philip W. Lee, and Angela Chorley for help with the preparation of the figures, most of which were created from scratch, and to Janice Smith for further technical assistance. Kathy Smith and Caroline Salinger also provided other forms of help and support for which I am especially grateful.

In addition to the Advisory Editors, who corrected errors, pointed out gaps or omissions, and made numerous other useful suggestions for improvement, and the copy-editor Linda Antoniow, who was also responsible for many substantive improvements, the following deserve thanks for helping with specific definitions or obscure factual information: Lyn Abramson (University of Wisconsin), Sally Blount (University of Chicago), Tamsin Carlisle (Dow Jones Canada/The Wall Street Journal), Rachel Charnock (University of Aberdeen), Edward Crossman (University of California, Berkeley), David Crystal (University of Wales, Bangor), Roy Davies (University of Leicester), Joanne Dunham (University of Leicester Medical Sciences Library), Susan Dye (Sun Bank), Walter Ehrenstein (Institut für Arbeitsphysiologie, Dortmund), Elaine Engst (Cornell University), Nigel Foreman (University of Middlesex), Pumla Gobodo-Madikizela (University of the Transkei), Gabriele Griffin (Kingston University), Horst Gundlach (Institut für Geschichte der Psychologie, Universität Passau), Michel Jouvett (Université Claude Bernard), Bob Lockhart (University of Toronto), George Loewenstein (Carnegie-Mellon University), Geoff Lowe (University of Hull), Helmut Lück (FernUniversität Hagen), Howard Margolis (University of Chicago), Jack Mayer (University of New Hampshire), Michael Molnar (Freud Museum), Serge Moscovici (University of Paris), Kazuo Ohya (Nagoya University), John Palmer (University of Washington), Stephen Palmer (University of California, Berkeley), Angus Phillips (Oxford University Press), Ian Pountney (Oracle Corporation UK Ltd), Briony

Pulford (University of Wolverhampton), Richard Rawles (University College London), Roddy Roediger (Washington University), Lee Ross (Stanford University), Karl Rumelhart (Stanford University), Sverker Runeson (University of Uppsala), Peter Salovey (Yale University), Dan Schacter (Harvard University), Francine Shapiro (EMDR Institute, Pacific Grove, California), Ann Silver (University of Cambridge), John Simpson (Oxford University Press), Peter Smith (Stanford University), Gerhard Stemberger (Österreichische Arbeitsgemeinschaft für Gestalttheoretische Psychotherapie, Vienna), David Stretch (University of Leicester), Susan Sutcliffe (Greenhill College), Stephen Taylor (Vision Consultants), Peter Thompson (York University), Anne Treisman (Princeton University), John Vandenberg (North Carolina State University), Neil Weinstein (Rutgers University), Gary Wells (Iowa State University), Wes Whitten (Australian National University), Margaret Woodhouse (University of Wales, Cardiff), and Marisa Zavalloni (Université de Montréal).

For the second edition, additional thanks are due to the following: Ted Adelson (Massachusetts Institute of Technology), Joshua Aronson (New York University), Elisha Babad (Hebrew University of Jerusalem), Yoram Bonne (Smith-Kettlewell Eye Research Institute, San Francisco), Hermann Brandstätter (Johannes Kepler University, Linz), Gavin Brelstaff (Center for Advanced Studies, Research and Development, Sardinia), Dennis Cook (University of Minnesota), Clare Davies (University of Leicester), Lüder Deecke (University of Vienna), Sergio Della Sala (University of Aberdeen), Peter DeScioli (University of Pennsylvania), Donald A. Dewsbury (University of Florida), Mark R. Edwards (TEAMS International and Arizona State University), Henrik Ehrsson (University College London), Tom Erickson (IBM), Jennifer Freyd (University of Oregon), Tim Grant (University of Leicester), R. John Irwin (University of Auckland), Tim Jackins (International Re-evaluation Counseling Communities), Siegfried Jaeger (Freie Universität Berlin), Archie Levey (formerly Medical Research Council Applied Psychology Unit, Cambridge, UK), Matthew Lieberman (University of California, Los Angeles), David Lykken (University of Minnesota), Herb Marsh (University of Western Sydney), Mark Mattson (Fordham University), T. Stuart Meloy (Piedmont Anesthesia & Pain Consultants), John Nelson (Williams Syndrome Foundation), Klaus-Jürgen Neumärker (DRK Kliniken, Berlin), David E. Nichols (Purdue University), Kevin Ochsner (Stanford University), David P. Phillips (University of

California, San Diego), Baingio Pinna (University of Sassari, Italy), Harrison G. Pope, Jr (Harvard University), Lars S. Rasmussen (Copenhagen University Hospital, Denmark), Pat Rentowl (University of Leicester), Russell Revlin (University of California, Santa Barbara), Tamaki Saito (Sofukai Sasakibyoin, Japan), Viktor Sarris (Johann Wolfgang Goethe-Universität, Frankfurt), Graham L. Staines (National Development and Research Institutes, Inc., New York), Claude Steele (Stanford University), Lydia Temoshok (University of Maryland, Baltimore), John Tooby (University of California, Santa Barbara), Margaret Walker (Makaton Vocabulary Development Project), Marc Wilkins (Bioinformatics, Proteome Systems Ltd), and S. P. Wong (Memphis State University).

For the third and fourth editions, additional thanks are due to Michael C. Anderson (MRC Cognition and Brain Sciences Unit, Cambridge), Antoine Bechara (University of Southern California), Thomas Brothen (University of Minnesota), Trygve Danielsen (University of Bergen), Eddy de Waal (independent researcher, The Hague), Paul Eling (Radboud University), Chris French (Goldsmiths, University of London), Julia Gibbs (consulting educational psychologist), Simon Grant (Maidstone Hypnosis and Hypnotherapy Practice), Peter Jones (Centre for Orgonomic Research and Education), Jeff Karpicke (Purdue University), Nobuyuki Kayahara (Media-Pulsar Co., Ltd, Tokyo), Pat Keating (UCLA), Fred Kingdom (McGill University), Kenton Kroker (York University, Toronto), Kibeom Lee (University of Calgary), Aude Oliva (Massachusetts Institute of Technology), Bruce Overmier (University of Minnesota), Diana Pinto (University of Leicester), Briony Pulford (University of Leicester), Robert Rosenthal (University of California, Riverside), Steve Savons (University of Essex), Philippe G. Schyns (University of Glasgow), Mike Scott (private consulting psychologist), Mary Sissons Joshi (Oxford Brookes University), Jonathan Stirk (University of Nottingham), Fritz Strack (University of Würzburg), Steve Stradling (Napier University), Michael Thalbourne (University of Adelaide), Sarah White (University of Leicester).

Layout of Entries

1. Every headword is printed in boldface type. Alphabetization is strictly letter by letter, ignoring spaces between words and punctuation marks. Numbers are listed as if they were spelt out in words: for example, **16PF** is positioned as if it were written ‘sixteen PF’, between **situationist critique** and **size constancy**. In Appendix II, however, symbols and numbers are listed first.

2. The headword is followed by an abbreviation in italic type indicating the part of speech and occasionally (when there is likely to be confusion) whether it is singular or plural. The abbreviations are *abbrev.* (abbreviation), *adj.* (adjective), *adv.* (adverb), *conj.* (conjunction), *n.* (noun), *pl.* (plural), *sing.* (singular), and *vb.* (verb).

3. If the headword has two or more sharply distinct senses, then they are separated and labelled with boldface numerals (**1**, **2**, and so on), but closely related meanings are defined together without numbering. When two or more senses are defined, the one that is most common in the literature of psychology is generally defined first.

4. Within a definition, an asterisk attached to a word or phrase indicates a cross-reference, directing readers to a separate entry that will help them to understand the definition or provide more information about the term or concept. Only cross-references that are thought to be especially helpful are asterisked, and terms are often used in the definitions without asterisks although they are included as headwords elsewhere in the dictionary. A degree of cross-referential integrity has been maintained: obscure or technical words that are used in the definitions are usually asterisked and included elsewhere as headwords with their own definitions, to ensure that the dictionary is reasonably self-contained.

5. In some cases, synonyms or alternative names for the concept and alternative or variant spellings are given after the definition, in italic type.

6. After the definition and its synonyms and alternative spellings, additional entries that should be consulted for further information are introduced with one of the following directions in italic type: *See*, *See also*, or *Compare*.

7. Next, derivative or subsidiary forms are occasionally listed in boldface type, usually in alphabetical order. For example, under the headword **mesomorph** are listed the derivative forms **mesomorphic** and **mesomorphy**, and under **meme** are listed **memeplex**, **meme pool**, **memetic**, **memetic engineering**, and **memetics**. As a general rule, the most common form of the word appears as the headword and the less common forms as derivatives or subsidiaries: thus, **diploid** appears as a headword, although it is an adjective, and the noun **diploidy** is listed under it as a subsidiary form, because the adjectival form is far more common in psychological usage. If the term has a common abbreviation, it is shown in boldface type and marked *abbrev*.

8. A partial or full etymology is provided at the end of an entry, in square brackets, if it illuminates or clarifies the headword. The study of etymologies is often helpful in fixing the meaning of a word such as **migraine** and helping with spelling by, for example, insulating against the surprisingly common misspelling of a word such as **autotopagnosia**. Etymologies are omitted where the word is familiar or its derivation is obvious or implicit in the definition, or has not been determined with confidence.

Greek Alphabet

<i>Letter name</i>	<i>Greek letter</i>	<i>English equivalent</i>
alpha	A α	A a
beta	B β	B b
gamma	Γ γ	G g
delta	Δ δ	D d
epsilon	E ε	E e
zeta	Z ζ	Z z
eta	H η	E e
theta	Θ θ	TH th
iota	I ι	I i
kappa	K κ	K k
lambda	Λ λ	L l
mu	M μ	M m
nu	N ν	N n
xi	Ξ ξ	X x
omicron	O ο	O o
pi	Π π	P p
rho	P ρ	R r
sigma	Σ σ	S s
tau	T τ	T t
upsilon	Υ υ	U u
phi	Φ φ	PH ph
chi	X χ	CH ch
psi	Ψ ψ	PS ps
omega	Ω ω	O o

abaissement du niveau mental *n.* In **analytical psychology*, a reduced state of concentration and attention, accompanied by a loosening of inhibitions and relaxation of restraints, in which unexpected contents may emerge from the **unconscious* (2). It usually occurs spontaneously but can be deliberately encouraged in preparation for **active imagination*. Carl Gustav Jung (1875–1961) borrowed the term from his teacher, the French psychologist and neurologist Pierre Janet (1859–1947). [French: literally reduction of mental level]

abasia *n.* Inability to walk. Compare *DYSBASIA*. [From Greek *a-* without + *basis* a step, from *bainein* to step or go + *-ia* indicating a condition or quality]

abbreviated reaction time *n.* Another name for **central reaction time*.

ABC *abbrev.* 1. A model used in ** rational emotive behaviour therapy* (REBT) for analysing a client's problems systematically into: *A*, the **activating event*; *B*, the mediating evaluative **beliefs*; and *C*, behavioural and emotional consequences. It is sometimes extended to *ABCDE*, with the addition of: *D*, disputing; and *E*, effect of practising rational thinking. 2. Shorthand for the sequence of effects in **behaviour therapy*: antecedent, behaviour, consequence.

abderite *n.* A simpleton. [Named after Abdera, a town in the ancient country of Thrace whose inhabitants were reputed to be stupid]

abducens nerve *n.* Either of the sixth pair of **cranial nerves* controlling

the lateral ***rectus muscles** of the eyes, turning the eye outwards for a sidelong direction of gaze. Paralysis of this nerve causes convergent squint of the affected eye. Also called the *pathetic nerve* . [From Latin *abducere* to lead away, from *ab* away + *ducere* to lead or carry]

aberration *n.* 1. A deviation from what is normal, usual, or right. *See also* CHROMOSOMAL ABERRATION. 2. A temporary lapse of behaviour or mental function. 3. A defect of the ***crystalline lens** of the eye, or of any other lens or mirror, also called *astigmatism* or *dioptric aberration* , in which rays of light do not all converge on to a single focal point. In *chromatic aberration*, different wavelengths of light are refracted through different angles and focused at different distances, leading to blurred images with coloured fringes—*see also* ACHROMATIC (2), refraction. In *spherical aberration* light passing through the lens near its edge is focused at a different point from light passing near the lens's centre, resulting in a distorted visual image, the defect arising from the surface of the lens being spherical. [From Latin *aberrare* to wander away, from *ab* away + *errare* to wander + *-ation* indicating a process or condition]

ability *n.* Developed skill, competence, or power to do something, especially (in psychology) existing capacity to perform some function, whether physical, mental, or a combination of the two, without further education or training, contrasted with ***capacity**, which is latent ability. *See also* COGNITIVE ABILITY. *Compare* APTITUDE. [From Latin *habilitas* ability, from *habilis* able, from *habere* to have or to hold]

ability test *n.* A test that measures a person's current level of performance or that estimates future performance. The term sometimes denotes an ***achievement test**, sometimes an ***aptitude test**, and sometimes an ***intelligence test**.

abiogenesis *n.* The generation of living from non-living matter. *Compare* BIOGENESIS. [Coined in 1870 by the English biologist Thomas Henry Huxley (1825–95), from Greek *a-* without + English *biogenesis*]

abiosis *n.* Absence of life. **abiotic** *adj.* Lifeless or inanimate. [From Greek *a-* without + *bios* life + *-osis* indicating a process or state]

*****ebook converter DEMO Watermarks*****

ablation *n.* Surgical removal of a structure or part of the brain or other organ of the body. **ablate** *vb.* [From Latin *ab* from + *latum* taken + *-ion* indicating an action, process, or state]

ablation experiment *n.* A basic research method of physiological psychology based on ***ablation**, especially during the first three-quarters of the 20th century, in which an attempt is made to determine the functions of a specific region of the nervous system by examining the behavioural effects of its surgical removal. It was pioneered in 1824 by the French physiologist Marie Jean Pierre Flourens (1794–1867) and is also called a *lesion experiment*.

ableism *n.* Discrimination against people who are not able-bodied, or an assumption that it is necessary to cater only for able-bodied people. The term was coined by US feminists in the 1980s and was later used by the Council of the London Borough of Haringey in a press release in 1986. Also spelt *ablism*. Compare **AGEISM**, **ETHNOCENTRISM**, **FATTISM**, **HETEROSEXISM**, **RACISM**, **SEXISM**, **SPECIESISM**. **ableist** or **ablist** *n.* 1. One who practises or advocates ableism. *adj.* 2. Of or relating to ableism. [From *able* + Greek *-ismos* indicating a state or condition, on the model of words such as *ageism*]

Abney effect *n.* 1. The slight change in the ***hue** of ***monochromatic** light when its ***lightness** changes as a result of white light being added to it. 2. A perceptual phenomenon whereby a large surface that is suddenly illuminated appears to brighten first near its centre and then near its edges, and if the illumination is suddenly extinguished it appears to darken first near its edges and then near its centre. [Named after the English chemist and physicist Sir William de Wiveleslie Abney (1843–1920)]

Abney's law *n.* The principle according to which the total luminance of light composed of several wavelengths is equal to the sum of the luminances of its ***monochromatic** components. [Named after the English chemist and physicist Sir William de Wiveleslie Abney (1843–1920)]

abnormal *adj.* Departing from what is usual or what is the rule or ***norm** (1, 2). [From Latin *ab* from + *norma* a rule + *-alis* of or relating to]

abnormality *n.* Anything that is **abnormal*. A psychological abnormality is a manifestation of **cognition*, **emotion*, or **behaviour* that deviates from an accepted norm or is a **sign (1)* or **symptom* of a **mental disorder*. See also ABNORMAL PSYCHOLOGY.

abnormal psychology *n.* A branch of psychology devoted to the study of the classification, aetiology, diagnosis, treatment, and prevention of **mental disorders* and disabilities. Also called *psychopathology*. Compare CLINICAL PSYCHOLOGY.

abortion *n.* An operation to terminate a pregnancy prematurely (also called an *induced abortion*), or a premature expulsion of an embryo or foetus occurring naturally (also called a *spontaneous abortion*). **abort** *vb.* [From Latin *ab-* badly or wrongly + *oriri* to appear or arise + *-ion* indicating an action, process, or state]

ABO system See BLOOD GROUP.

aboulia *n.* A variant spelling of **abulia*.

Abraham Lincoln effect *n.* The tendency for a **block portrait* to be difficult to recognize as a meaningful image when viewed close up but to become more recognizable when viewed from a distance or when blurred by half closing the eyes, for example, loss of information paradoxically increasing the recognizability of the image. See BLOCK PORTRAIT (and accompanying illustration). [Named by the US biomedical engineer Leon D(avid) Harmon (1922–82) after Abraham Lincoln (1809–65), the 16th US president, whose image he used to construct the first block portrait, published in a technical report in 1971 and in an article in *Scientific American* magazine in 1973]

abreaction *n.* In **psychoanalysis*, a release or discharge of emotional energy following the recollection of a painful memory that has been repressed. It can occur spontaneously or during psychotherapy, especially under **hypnosis*, and may lead to **catharsis*. As a therapeutic procedure, it was discovered in 1880–82 by the Austrian physician Josef Breuer (1842–

1925), and during the infancy of psychoanalysis it was believed to be therapeutic in itself. *See also* [PRINCIPLE OF CONSTANCY](#). [From German *abreagieren* to abreact or (metaphorically) let off steam, from Latin *ab* from + German *reagieren* to respond, coined in 1893 by Breuer and Sigmund Freud (1856–1939) in an article ‘On the Psychical Mechanism of Hysterical Phenomena: Preliminary Communication’ (*Standard Edition*, II, pp. 3–17)]

absence *n.* The state or condition of being away from a place. In abnormal psychology and neurology, a brief period of loss of attention or consciousness, often followed by **amnesia* for the period of absence, characteristic of minor (formerly called *petit mal*) **epilepsy*. *Compare* [TONIC–CLONIC](#).

absent-mindedness *n.* Preoccupation to the point of being inattentive to one's own behaviour and surroundings, often characterized by **action slips* arising from **open-loop control* of actions that demand **closed-loop control* for accurate implementation. *See also* [COGNITIVE FAILURES QUESTIONNAIRE](#).

absolute acuity *n.* The maximum keenness or sharpness of a sense organ to detect weak stimuli, usually expressed in terms of the **absolute threshold*. *See also* [ACUITY](#). *Compare* [DIFFERENTIAL ACUITY](#).

absolute error *n.* In **psychophysics*, the difference between the judged value of a stimulus and its true value, ignoring the direction of the difference. *Compare* [RELATIVE ERROR](#). [Alluding to the mathematical sense of *absolute*, referring to a magnitude disregarding its positive or negative sign]

absolute judgement method *See* [METHOD OF ABSOLUTE JUDGEMENT](#).

absolute limen *n.* Another name for the **absolute threshold*. [From Latin *limen* a threshold]

absolute pitch *n.* The ability to identify the **pitch* of a musical tone, or to produce a specified tone at its correct pitch, without reference to another tone. *See also* [PERFECT PITCH](#). *Compare* [RELATIVE PITCH](#).

absolute reflex *n.* The name given on occasions by the Russian physiologist Ivan Petrovich Pavlov (1849–1936) to what is usually called the *unconditioned response.

absolute refractory period *n.* A *refractory period (2), lasting up to 2 milliseconds after the onset of an *action potential, during which no *stimulus (5) can initiate another nerve impulse in the neuron. *Compare* RELATIVE REFRACTORY PERIOD.

absolute scale *n.* In statistics and measurement theory, a *ratio scale in which the unit of measurement is fixed. In practice, values on an absolute scale are usually if not always obtained by counting. *See also* MEASUREMENT LEVEL, SCALE (1). *Compare* INTERVAL SCALE, LOG-INTERVAL SCALE, NOMINAL SCALE, ORDINAL SCALE, RATIO SCALE.

absolute thinking *n.* Interpreting personal fears and desires in absolutes (for example, describing oneself as being absolutely devastated by a setback); regarded in some branches of *counselling as a cognitive error that limits *insight (3).

absolute threshold *n.* In *psychophysics, the smallest intensity of a sensory stimulus that can be detected or can reliably evoke a sensation, a typical example being the average human absolute threshold for sound intensity at 1,000 hertz (about two octaves above Middle C), which is an intensity of about 6.5 dB SPL (see DECIBEL). The original concept of a sharply defined limit below which nothing can be perceived was discredited and largely abandoned after the development of *signal detection theory, the absolute threshold being redefined as the magnitude that can be detected on a specified proportion of presentations (often 50 or 75 per cent, though other percentages are sometimes used). Also called the *absolute limen* or *Reiz limen* (RL). *See also* ACUITY, AUDIBILITY FUNCTION, AUDIOGRAM, BONE CONDUCTION THRESHOLD, CONTRAST SENSITIVITY FUNCTION, CONTRAST THRESHOLD, DARK ADAPTATION, DECIBEL, HEIMDALLR SENSITIVITY, LIGHT ADAPTATION, PIPER'S LAW, PSYCHOPHYSICS, RICCO'S LAW, SUBLIMINAL. *Compare* DIFFERENCE THRESHOLD.

absorbance *See* REFLECTANCE.

abstinence *n.* **1.** Avoidance of alcohol or some other drug of dependence, or more generally self-restraint from some indulgence. *See also* [ABSTINENCE SYNDROME](#), [WITHDRAWAL](#). **2.** In psychodynamic counselling and therapy, the practice of the counsellor or therapist of holding back from uninhibited interaction and conversation with the client or patient. [From Latin *abstinere* to abstain]

abstinence rule *n.* In **psychoanalysis*, the organization of treatment to minimize the substitutive satisfaction of needs related to symptoms that the patient finds outside the analytic situation, in spite of the frustration and suffering that can result. Sigmund Freud (1856–1939) introduced the rule in an article on ‘Observations on Transference-Love’ (1915): ‘I shall state it as a fundamental principle that the patient's need and longing should be allowed to persist in her, in order that they may serve as forces impelling her to do work and to make changes, and that we must beware of appeasing these forces by means of surrogates’ (*Standard Edition*, XII, pp. 159–71, at p. 165).

abstinence syndrome *n.* A pattern of signs and symptoms associated with **withdrawal* in a drug-dependent person who is suddenly deprived of a regular supply of the drug and is forced to practise **abstinence* (1).

abstract attitude *n.* A term introduced by the German psychiatrist Kurt Goldstein (1878–1965) to denote the ability to use conceptual categories in order to classify things according to their attributes and to think symbolically rather than concretely. This ability is impaired in many forms of brain damage and mental disorder. Also called *categorical attitude* .

abstraction *n.* **1.** The act or process of formulating a general concept by identifying common **features* (1) from specific instances or examples, or a concept formed in this way. **2.** A state of **absent-mindedness* or preoccupation. **3.** In general, the act of withdrawing or removing something. [From Latin *abstractus* drawn off, from *ab* away from + *trahere*, *tractum* to draw + *-ion* indicating an action, process, or state]

abstract measurement theory *n.* Another name for **axiomatic measurement theory*.

absurdity test *n.* Any psychological test in which the respondent attempts to identify what is wrong or illogical about a verbal or a pictorial stimulus, such as a missing leg in a drawing of a spider or a missing numeral in a drawing of a clock face. It is often included as an item or subtest of an **IQ test*.

abulia *n.* A deficit of will or motivation, often leading to an inability to make decisions or plans. [From Greek *a-* without + *boule* will + *-ia* indicating a condition or quality]

abuse (alcohol, child, elder, spouse, substance) *See* ALCOHOL ABUSE, CHILD ABUSE, ELDER ABUSE, SPOUSE ABUSE, SUBSTANCE ABUSE.

ABX paradigm *n.* In **psychophysics*, a method of determining a **difference threshold* by presenting two stimuli (A and B) and a third (X) that is the same as one of the others, the observer's task being to decide whether it matches A or B.

academic problem *n.* A **learning difficulty*, usually in a schoolchild, that does not amount to a **learning disability*.

academic skills disorders *n.* An alternative name for **learning disabilities*.

acalculia *n.* Impairment of ability to do arithmetic. *See also* AGRAPHIA, ALEXIA, SPECIFIC DISORDER OF ARITHMETIC SKILLS, SPECIFIC LEARNING DISORDER. *Compare* DYSCALCULIA. [From Greek *a-* without + Latin *calcularē* to count, from *calculus* a stone, diminutive of *calx* limestone + *-ia* indicating a condition or quality]

acatamathesia *n.* An obscure synonym for **agnosia*; an inability to comprehend sensory information. Also spelt *akatamathesia*. *Compare* AGNOSIA. [From Greek *a-* without + *katamanthanein* to observe or understand, from *kata* thoroughly + *manthanein* to learn + *-ia* indicating a condition or quality]

accent *n.* 1. A characteristic pronunciation of a language, especially one associated with a geographical region or social group, to be distinguished from a **dialect*. 2. The **stress* (2) or prominence given to a spoken syllable, usually through a rise in pitch, loudness, or sound quality, or a written mark to indicate this. [From Latin *ad* to + *cantus* a song]

acceptance and commitment therapy *n.* A technique of **psychotherapy* based on **mindfulness* and acceptance in which clients are encouraged to acquiesce in or assent to the reality of situations in which they find themselves, including those that are unpleasant or uncomfortable, without attempting to change them, to protest against them, or to exit from them. Originally called *comprehensive distancing*, the technique was developed in the late 1980s by the US psychologists Steven C. Hayes (born 1948), Kelly G. Wilson (born 1954), and Kirk D. Strosahl (born 1950), and practitioners consider it an advanced form of **cognitive behaviour therapy*. Hayes claimed controversially in 2006 that acceptance implies that 'happiness isn't normal'. The technique is frequently referred to by its initials, pronounced like the word *act*. Compare DIALECTICAL BEHAVIOUR THERAPY. **ACT** *abbrev.*

acceptor *n.* A chemical substance that receives and combines with another substance, as in an oxidation-reduction reaction where the oxygen is the acceptor of the substance that is oxidized and hydrogen is the acceptor of the substance that is reduced.

access consciousness *n.* According to a distinction introduced by the US philosopher Ned J(oel) Block (born 1942) in a co-edited book entitled *The Nature of Consciousness* (1997), a non-**phenomenal* category of consciousness involving **cognitions* and **representations* that are poised or ready for use in **controlled processing*. A state is A-conscious if it is not experienced directly but is poised for the control of thought and action, as might occur if a thirsty person with **blindsight* responded spontaneously (without prompting) by reaching for a drink perceived without conscious visual experience. Representations that would be available for use if re-activated are not necessarily access-conscious unless they are poised and ready to control behaviour. Also called *A consciousness*. Compare PHENOMENAL CONSCIOUSNESS. **access-conscious** or **A-conscious** *adj.* [From

*****ebook converter DEMO Watermarks*****

Latin *accessus* an approach, from *accedere* to agree, from *ad* to + *cedere* to yield + English *consciousness*]

accessibility *n.* **1.** In cognitive psychology, the ease with which information in long-term memory can be retrieved. An *accessible memory* is one that can be retrieved without **cues* (3) or **prompts*. Compare *AVAILABILITY*. **2.** In **modal logic*, the property of a **possible world* of being open to scrutiny from some other world in such a way that the truth value of **propositions* (1) about it can be known. **3.** In general, the ease with which something can be approached, reached, or obtained. **accessible** *adj.* [From Latin *accessus* an approach + *-ibilitas* capacity, from *habilis* able]

accessory cell *n.* Any of a number of cells in the nervous system that contribute to the support, maintenance, and repair of **neurons*. See *ASTROCYTE*, *EPENDYMAL CELL*, *MICROGLIA*, *OLIGODENDROCYTE*, *SCHWANN CELL*.

accessory nerve *n.* Either of two pairs of eleventh **cranial nerves*, the motor nerves arising partly from the lateral walls of the medulla oblongata and partly from the cervical (neck) region of the spinal cord, divided into the cranial accessory nerves, distributed by the **vagus nerve* to the muscles of the larynx and pharynx, and the spinal accessory nerves, supplying muscles in the neck, shoulder, and upper back.

accidence *n.* Inflections of words or changes in the forms of words to indicate different grammatical functions, as in *write*, *wrote*, *writing*. [From Latin *accidentia* accidental matters]

accidental sample *n.* A **non-probability sample* drawn haphazardly from a population by a procedure such as stopping the first hundred passers-by on a particular street corner. See also *CONVENIENCE SAMPLE*, *OPPORTUNITY SAMPLE*, *QUOTA SAMPLE*, *SELF-SELECTED SAMPLE*, *SNOWBALL SAMPLE*. Compare *CLUSTER SAMPLE*, *PROBABILITY SAMPLE*, *RANDOM DIGIT DIALLING*, *SIMPLE RANDOM SAMPLE*, *STRATIFIED RANDOM SAMPLE*.

accommodation *n.* **1.** The voluntary or involuntary adjustment of the curvature of the **crystalline lens* of the eye to keep an image focused on the fovea with changes in the distance of the object being viewed; more
*****ebook converter DEMO Watermarks*****

specifically, one of the monocular cues of visual **depth perception*, the degree of curvature of the lenses providing information about the distances of objects focused on the retinas. Also called *visual accommodation*. *See also* ACCOMMODATION REFLEX, DARK FOCUS, FAR POINT, NEAR POINT, PURKINJE–SANSON IMAGE, RANGE OF ACCOMMODATION. **2.** In the writings of the Swiss psychologist Jean Piaget (1896–1980) and his followers, a form of **adaptation* (3) in which psychological structures or processes are modified to fit the changing demands of the environment, as when an infant adapts its perceptual processes and behavioural repertoire to a new toy that is introduced into its milieu. *See also* EQUILIBRATION. *Compare* ASSIMILATION (2). **3.** A decrease in a neuron's propensity to produce an **action potential*, the reduced responsiveness being caused by repeated stimulation. **accommodate** *vb.* **accommodative** *adj.* *Compare* ASSIMILATION (2). [From Latin *accommodare* to accommodate, from *ad* to + *commodus* fitting + *-ation* indicating a process or condition]

accommodation reflex *n.* A reflex adjustment of the eyes for **near vision* that occurs in response to an object appearing suddenly in front of the face and that consists of pupillary constriction, ocular convergence, and increased convexity of the lenses. *See also* ACCOMMODATION (1), CILIARY REFLEX.

acculturation *n.* The process of assimilating the ideas, beliefs, customs, values, and knowledge of another culture through direct contact with it, usually after migration from one place to another.

acculturation difficulty *n.* Any problem of **acculturation* that falls short of being an **adjustment disorder*.

accumbens nucleus *n.* Another name for the **nucleus accumbens*.

accuracy test *n.* Any test in which the correctness of responses, rather than the speed of performance, is measured. *Compare* POWER TEST.

acephalous *adj.* Headless, or having only an indistinct or degenerate head, like certain insect larvae. Figuratively, without a ruler or leader. [From Greek *a-* without + *kephale* a head + *-ous* having or characterized by]

*****ebook converter DEMO Watermarks*****

acetaldehyde *n.* A colourless volatile noxious liquid that accumulates in the body of a person who drinks alcohol while taking the drug **Antabuse*, resulting in nausea, vomiting, pounding of the heart, shortness of breath, and other unpleasant symptoms. Formula CH_3CHO . *See also* *PARALDEHYDE*. [From Latin *acet(um)* vinegar + *al(cohol)* *dehy-d(rog)e(natum)* dehydrogenated alcohol]

acetic acid *n.* A colourless pungent-tasting liquid that occurs in the fermentation of alcohol, and as a **metabolite* of **acetylcholine* and **serotonin*. It can be diluted with water to form vinegar and is widely used in the manufacture of vinyl acetates, plastics, and pharmaceuticals. *See also* *ACETYL*. [From Latin *acetum* vinegar]

acetyl *n.* The **radical* (2) group —COCH_3 formed by removing —OH from **acetic acid*. [From *acet(ic) acid* + *-yl* indicating a chemical group or radical, from Greek *hyle* wood]

acetylcholine *n.* A **neurotransmitter* substance secreted from the ends of many neurons and functioning as the main chemical messenger for **motor neurons* in the **peripheral nervous system*, including the **autonomic nervous system*, and as a significant neurotransmitter in the **central nervous system*, functioning to excite **skeletal muscles* and to inhibit **cardiac muscle*, remaining in existence only long enough for the impulse to cross from one cell to another before being broken down by **acetylcholinesterase* into acetic acid and choline. *See also* *ALZHEIMER'S DISEASE*, *CARBACHOL*, *CHOLINERGIC*, *CHOLINOMIMETIC*, *MUSCARINE*, *MUSCARINIC RECEPTOR*, *NICOTINIC RECEPTOR*, *VAGUSSTOFF*. **ACh** *abbrev.* [From Latin *acetum* vinegar + Greek *hyle* wood or material + *chole* bile + *-ine* indicating an organic compound]

acetylcholinesterase *n.* An enzyme that hydrolyses **acetylcholine* to acetic acid and choline. By destroying acetylcholine after its release from the terminal **boutons* of **presynaptic* neurons and from **postsynaptic receptors* after a nerve impulse has been triggered, it stops further postsynaptic nerve impulses. Also called *cholinesterase*. *See also* *NERVE GAS*, *PHYSOSTIGMINE*. **AChE** *abbrev.* [From *acetylcholine* + *ester* + *-ase* denoting an enzyme, from Greek *diastasis* separation]

acetylsalicylic acid *n.* The chemical name for **aspirin*.

achievement motivation *n.* Another name for **need for achievement*.

achievement test *n.* Any test of acquired ability or skill, a typical example being a test of scholastic attainment. *See also* *COMPETENCY TEST*. *Compare* *ABILITY TEST*, *APTITUDE TEST*.

Achilles tendon reflex *n.* A **deep tendon reflex* occurring in response to a tap on the Achilles tendon at the back of the ankle. It is often absent in people with diabetes, diseases of the peripheral nervous system, pyramidal tract disease, or hyperthyroidism. Also called the *ankle reflex*.

achromatic *adj.* 1. Without **hue*, or represented in black, white, and grey. An *achromatic colour*, also called a *neutral grey* or *neutral colour*, is a mixture of black and white without any **chroma* and is the **lightness* component of any colour. *See also* *HERING GREY*, *SATURATION (1)*. 2. Capable of refracting or reflecting light without chromatic **aberration (3)*. [From Greek *a-* without + *chroma* colour]

achromatic interval *n.* For light of a particular **hue*, the range of light intensities from its **absolute threshold* to the lowest intensity at which its hue can be detected; analogously, for a **pure tone* of a particular frequency, the range of **amplitudes* from its absolute threshold to the lowest intensity at which its pitch can be detected.

achromatic system *n.* In the **opponent-process theory* of colour vision, the pathway that carries information about an object's lightness. *Compare* *CHROMATIC SYSTEM*.

achromatopsia *n.* Total **colour-blindness* resulting from lesions, usually in areas V2 and V4 of the **visual cortex*, resulting in an inability to see colours, with an intact ability to see shapes and movement. People who acquire this condition usually lose the ability even to imagine colours. *See also* *AGNOSIA (COLOUR)*, *DYSCHROMATOPSIA*, *MONOCHROMATISM*, *PARACHROMATOPSIA*. *Compare* *CHROMATOPSIA*. **achromatopsic** *adj.* [From Greek

a- without + *chroma* colour + *ops* an eye + *-ia* indicating a condition or quality]

acid *n.* **1.** Any substance that when dissolved in water releases positively charged hydrogen **ions* and produces a corrosive solution having a **pH* of less than 7. *Compare* *ALKALI*. **2.** A common street name for **LSD*. **acidic** *adj.* Of, relating to, or consisting of an acid (1). **acidity** *n.* The degree to which a solution is acidic. [From Latin *acidus* sharp or sour]

acid odour *n.* One of the primary odours in the **Crocker–Henderson system*. US *acid odor*.

A consciousness *See* *ACCESS CONSCIOUSNESS*.

acoustic *adj.* Of or relating to sound. Also called *acoustical*. **acoustics** *n.* The study of sound. [From Greek *akoustikos* of or relating to sound, from *akouein* to hear + *-ikos* of, relating to, or resembling]

acoustic coding *n.* Remembering something by storing the sound of its verbal expression rather than its meaning or the physical movements required to articulate it. *Compare* *ARTICULATORY CODING*, *SEMANTIC CODING*.

acoustic confusion *n.* Erroneous perception or memory resulting from the substitution of an incorrect but similar-sounding word, as when someone mishears or misremembers *it's my turn to cook* when in fact it is that person's turn to *book* theatre tickets. *Compare* *SEMANTIC CONFUSION*.

acoustic cue *n.* **1.** An acoustic property of a speech sound, such as a **formant*, used to identify the sound and to distinguish it from other speech sounds. *See also* *DISTINCTIVE FEATURE*, *MINIMAL PAIR*, *NEUTRALIZATION*. **2.** A **cue* (3) that prompts recall of a remembered word by evoking its sound.

acoustic feature *n.* Any physical property or **feature* (1) of a sound, such as its **fundamental frequency* or its **amplitude*. *Compare* *ACOUSTIC CUE* (1), *DISTINCTIVE FEATURE*.

acoustic generalization *n.* *Stimulus generalization of auditory stimuli, as when a response to a sound (such as a word or a tune) that has been learned, is evoked by a similar sound.

acoustic-mnestic aphasia *See* APHASIA.

acoustic nerve *n.* Another name for the *vestibulocochlear nerve.

acoustic reflex *n.* An involuntary contraction of the *tensor tympani and *stapedius muscles within the middle ears, occurring simultaneously in both ears in response to intense noise presented to either ear, stiffening the eardrum and restricting movements of the *ossicles, causing a *temporary threshold shift and protecting against damage to the organs of hearing. It is similar to the pupillary light reflex in response to bright light. Also called the *tympanic reflex*.

acoustic similarity effect *n.* The tendency for lists of similar-sounding words to be more difficult to remember than lists of dissimilar-sounding words.

acoustic store *n.* A general term for the *postcategorical acoustic store and the *precategorical acoustic store, though there is some doubt about their existence. More generally, a hypothetical repository of memories produced by *acoustic coding. *Compare* SUBVOCAL REHEARSAL LOOP.

acquaintanceship knowledge *n.* A category of *knowledge that is distinct from both *declarative knowledge (knowing that) and *procedural knowledge (knowing how). It consists of knowledge of people, places, and things, and although it may include declarative knowledge it need not necessarily do so, as when one knows a colour, or a smell, or a face, but cannot state any facts about it. This class of knowledge was discussed by the Welsh philosopher Bertrand (Arthur William) Russell (1872–1970) in *The Problems of Philosophy* (1912) and is poorly understood in psychology.

acquiescence response set *n.* In psychometrics, a consistent tendency to respond to yes/no questionnaire items by answering Yes,

irrespective of the content of the questions. Properly constructed questionnaires generally control for this response set by **counterbalancing* (2). Also called *acquiescence response style*. See also *BALANCED SCALE*, *COUNTERBALANCING* (2), *RESPONSE SET* (2).

acquired distinctiveness *n.* A learnt differentiation or discrimination between items that were previously indistinguishable, as when a person attends a wine-tasting course and acquires the ability to discriminate wines that previously tasted the same. Compare *ACQUIRED SIMILARITY*.

acquired dyslexia *n.* One of the two major categories of **dyslexia*, this form of the disorder resulting directly from brain damage, usually to the left cerebral hemisphere. See also *COGNITIVE NEUROPSYCHOLOGY*, *DEEP DYSLEXIA*, *SURFACE DYSLEXIA*. Compare *DEVELOPMENTAL DYSLEXIA*. [From Greek *dys-* bad or abnormal + *lexis* a word + *-ia* indicating a condition or quality]

acquired similarity *n.* A tendency for items that were previously perceived as dissimilar to be perceived as the same as a result of learning to use them for the same purpose or to classify them in the same category or with the same label. For example, in Japanese, /r/ and /l/ are **allophones* that do not give distinct meanings to different words, and as a result Japanese speakers often lack the ability to distinguish between them, but this causes problems for native Japanese speakers of English, because in English /r/ and /l/ distinguish **minimal pairs* such as *right* and *light* and are therefore different **phonemes*. Compare *ACQUIRED DISTINCTIVENESS*.

acrasia See *AKRASIA*.

acrolect *n.* The most prestigious variety of a language within a speech community, such as **Received Pronunciation* in Britain. See also *DIALECT*, *IDIOLECT*, *LECT*. Compare *BASILECT*, *MESOLECT*. [From Greek *akros* highest + *legein* to speak]

acromegaly *n.* Enlargement of the bones in the head, hands, and feet, caused by an excessive secretion of growth hormone by the pituitary gland, sometimes associated with **cerebral gigantism*. **acromegalic** *adj.* [From Greek *akros* highest + *megas* big]

*****ebook converter DEMO Watermarks*****

acronym method *n.* A memory aid based on acronyms. See **MNEMONIC**.
[From Greek *akros* topmost + *onoma* a name]

acroparaesthesia *n.* A persistent sensation of numbness, tingling, or pins and needles in the extremities (hands or feet), sometimes caused by compression or inflammation of nerves in the affected area. US *acroparesthesia*. See also **PARAESTHESIA**. [From Greek *akron* extreme, alluding to the hands and feet (extremities) + *para* beside or beyond + *aisthesis* sensation + *-ia* indicating a condition or quality]

acrotomophilia *n.* A ***paraphilia** characterized by recurrent sexually arousing fantasies, sexual urges, or behaviour associated with having a partner with an amputated leg. It is found among both heterosexual and homosexual men and women and should be carefully distinguished from ***apotemnophilia**. People with acrotomophilia often refer to themselves as *devotees*. Also called *monopede mania*, *monopedophilia*, or *unipedophilia*, but the latter two forms are liable to cause confusion with *paedophilia*. [From Greek *akron* a tip + *tome* a cut + *morphe* a form or shape + *philos* loving, from *philein* to love + *-ia* indicating a condition or quality]

ACT See **ACCEPTANCE AND COMMITMENT THERAPY**.

ACT* *abbrev.* (pronounced act-star). Adaptive Control of Thought, an advanced version of a ***network model** of ***information** processing first put forward in 1976 by the Canadian-born US psychologist John R(obert) Anderson (born 1947). It includes two distinct ***long-term memory** stores: (a) a ***declarative memory**, modelled by a semantic network of interconnected ***concepts** represented by ***nodes** (2), containing ***declarative knowledge**, the active part of the declarative memory system constituting ***working memory**; and (b) a ***procedural memory**, modelled by a ***production system**, containing the system's procedural knowledge. See also **FAN EFFECT**.

actigraphy *n.* A technique for monitoring human activity through an *actigraph* or activity monitor that measures gross motor activity by continually recording gross movements of a bodily area such as the hip or wrist. It is useful for determining a person's level of potentially calorie-

burning activity and for studying **dyssomnias*, **eating disorders*, and **chronic fatigue syndrome*. Software applications are available for using phones as actigraphs. [From Latin *actus* an act + Greek *graphein* to write]

actin *n.* A protein that interacts with **myosin* to form the contractile protein **actomyosin* in muscles and is also involved in other physiological processes. [From *act* + Latin *-in(a)* indicating an organic compound]

acting in *n.* A term sometimes used in **psychoanalysis* to denote **acting out* (1, 2) when it occurs within an analytic session rather than in ordinary life.

acting out *n.* 1. In **psychoanalysis*, the enactment rather than recollection of past events, especially enactments relating to the **transference* during therapy. It is often impulsive and aggressive, and it is usually uncharacteristic of the patient's normal behaviour. The concept was introduced by Sigmund Freud (1856–1939) in *An Outline of Psycho-Analysis* (1938/40): the patient ‘acts it [the past event] before us, as it were, rather than reporting it to us’ (*Standard Edition*, XXIII, pp. 144–207, at p. 176). *See also* **ACTING IN**. 2. A **defence mechanism* in which unconscious emotional conflicts or impulses are dealt with by actions, including **parapraxes*, rather than thought or contemplation. **act out** *vb.*

action *n.* In social psychology and the social sciences generally, any **behaviour* that is characterized by **intentionality* (2) and is therefore subjectively understandable, according to a distinction introduced by the German economist and sociologist Max Weber (1864–1920) in the first chapter of his book *Wirtschaft und Gesellschaft* (Economy and Society), published posthumously in 1922. For example, burping involuntarily at a dinner party is behaviour, whereas apologizing afterwards is action. *See also* **VERSTEHEN**. More generally, the process of doing something, or an instance of something done. [From Latin *actio* action, from *agere* to do or to act + *-ion* indicating a process]

action, drug *See* **DRUG ACTION**.

action potential *n.* The momentary change in the voltage difference
*****ebook converter DEMO Watermarks*****

across the membrane of a ***neuron**, usually triggered by nerve impulses from several other neurons at ***synapses (1)**, characterized by an influx of positively charged sodium ions through the cell membrane, resulting in an impulse being propagated along the neuron's ***axon**, reversing its ***resting potential** of approximately -70 millivolts (mV), the inner surface being negative relative to the outer surface and the membrane more permeable to potassium ions than to sodium ions, and changing it to approximately $+40$ mV, increasing the permeability of the membrane to sodium ions and resulting in the influx of positively charged ions, thereby propagating the potential from the ***axon hillock** down the axon at a speed ranging from about 0.1 to 10 metres per second. Also called a *nerve impulse*. See also ALL-OR-NONE LAW, DEPOLARIZATION, EXCITATORY POSTSYNAPTIC POTENTIAL, INHIBITORY POSTSYNAPTIC POTENTIAL, REFRACTORY PERIOD (2), SALTATION (1), SODIUM PUMP. Compare GRADED POTENTIAL.

action research *n.* A term coined in the 1940s by the German–US psychologist Kurt Lewin (1890–1947) for a form of ***applied research** in which experimental techniques are combined with programmes of social action to bring about desired social changes. See also PARTICIPATORY ACTION RESEARCH. Compare BASIC RESEARCH, DESCRIPTIVE RESEARCH, EVALUATION RESEARCH, EXPLORATORY RESEARCH.

action slip *n.* An unintended action or behavioural sequence, often resulting from failure of attention in ***absent-mindedness**, and generally involving ***open-loop control** of an action that requires ***closed-loop control** for its correct implementation. See also PARAPRAXIS.

activated gene *n.* A gene whose expression has been enhanced by a ***gene activator**.

activating event *n.* In ***rational emotive behaviour therapy (REBT)**, something that is believed to happen, to have happened, or to be about to happen, and that triggers irrational beliefs leading to emotional problems. See also ABC (1).

activator gene *n.* A ***regulator gene** that synthesizes a ***gene activator** capable of binding to a ***gene operator** and enhancing the expression of a
*****ebook converter DEMO Watermarks*****

***structural gene** by increasing the synthesis of its protein product. *Compare* REPRESSOR GENE.

active analysis *n.* A style of ***psychoanalysis** in which the analyst offers frequent ***interpretations** (2). *Compare* PASSIVE ANALYSIS.

active avoidance conditioning *n.* Learning to respond in a way that results in the avoidance of a punishing or aversive stimulus, as when a rat is trained to jump over a barrier whenever a light comes on in order to avoid electric shock that follows shortly after. Also called *active avoidance learning*. *Compare* ESCAPE CONDITIONING, PASSIVE AVOIDANCE CONDITIONING. *See also* AVOIDANCE CONDITIONING.

active imagination *n.* In ***analytical psychology**, a term introduced by Carl Gustav Jung (1875–1961) in the Tavistock lectures, delivered in London in 1935, to denote a process of allowing ***fantasies** (2) to run free, as if dreaming with open eyes. He had expounded the concept (though not the terminology) earlier (*Collected Works*, 6, paragraphs 712–14, 723*n*). *See also* ABAISSEMENT DU NIVEAU MENTAL.

active sleep *n.* Another name for ***REM sleep**.

active technique *n.* In ***psychoanalysis**, a set of technical procedures presented by the Hungarian psychoanalyst Sandor Ferenczi (1873–1933) to the 1920 Psychoanalytic Congress in The Hague, with the approval of Sigmund Freud (1856–1939), in which the analyst is encouraged to go beyond ***interpretation** (2) and on occasions to issue instructions and prohibitions to patients.

active transport *n.* The movement of particles up an electrochemical potential gradient, such as the movement of sodium ions across a ***cell membrane** from a region where they are in a low concentration to a region of high concentration. This process requires metabolic energy and is assisted by ***enzymes**, often called pumps when they serve this function. *See* CARRIER PROTEIN, IONOPHORE, SODIUM PUMP.

active vocabulary *n.* The set of words that a person uses in speech and writing. *Compare* [PASSIVE VOCABULARY](#).

activity monitor *See* [ACTIGRAPHY](#).

activity wheel *n.* A drum, suspended horizontally and free to rotate, into which an animal may be placed to measure arousal or activity.

actomyosin *n.* A protein synthesized from [*actin](#) and [*myosin](#) in skeletal muscles that, when stimulated, shrinks and causes muscle contraction, the energy being supplied by [*ATP](#).

actor–observer difference *n.* An [*attributional bias](#) tending to cause people to attribute their own actions to situational factors and observers to attribute those same actions to internal personality dispositions. It is explained partly by the greater amount of information available to actors than observers, partly by differences between actors and observers in perceptual focus, and partly by motivational factors that might induce actors to emphasize external causes and observers internal causes. The phenomenon was first reported in 1972 by the US psychologists Edward Ellsworth Jones (1926–93) and Richard E. Nisbett (born 1941). *See also* [ATTRIBUTION](#), [ATTRIBUTION THEORY](#).

act psychology *n.* A doctrine, first propounded by the German psychologist and philosopher Franz Brentano (1838–1917), according to which psychology should study not merely the elements of consciousness as in [*structuralism \(2\)](#) but also mental acts and the way they are directed towards entities other than themselves. Brentano published his ideas in 1874 in his book *Psychologie vom empirischen Standpunkt* (Psychology from an Empirical Standpoint), and was an important forerunner of [*phenomenology](#). *See also* [INTENTIONALITY \(1\)](#). *Compare* [CONTENT PSYCHOLOGY](#).

actualization *n.* The realization of latent potential. *Compare* [SELF-ACTUALIZATION](#). **actualize** *vb.* [From Latin *actualis* of or relating to acts, from *actus* an act + Greek *-izein* cause to become or to resemble]

actual neurosis *n.* In **psychoanalysis*, a form of **neurosis* that does not have its origin in infantile conflicts but in the present, the **symptoms* resulting directly from the absence or inadequacy of sexual satisfaction and not appearing as symbolic forms of expression. Sigmund Freud (1856–1939), who introduced the concept in 1898 in an article on ‘Sexuality in the Aetiology of the Neuroses’ (*Standard Edition*, III, pp. 263–85, at p. 279), originally identified anxiety neurosis (**generalized anxiety disorder*) and **neurasthenia* as the actual neuroses, and he later added **hypochondria*. Compare *PSYCHONEUROSIS*. [From German *aktual* present-day]

actuarial prediction *n.* Any prediction of behaviour based on purely statistical information and not subjective judgement. It is characterized by mechanical processing of information, leading to probabilities representing empirically determined relative frequencies, as when psychometric test scores are compared with tables of **normative (2)* data to make a prediction that the probability is p that an individual will succeed on a training programme, reoffend when released from prison, develop a certain mental disorder, or commit suicide, the prediction being based on the relative frequencies of such outcomes among people with similar test scores. It was first systematically analysed and compared with **clinical prediction* by the US psychologist Paul Everett Meehl (1920–2003) in his book *Clinical Versus Statistical Prediction: A Theoretical Analysis and a Review of the Evidence* (1954). Meehl was the first to point out that it is almost always more accurate than clinical prediction. Also called *statistical prediction*. See also *BOOTSTRAPPING*. [From Latin *actuarius* a keeper of records, from *acta* chronicles or records]

actus reus *n.* A legal term denoting a criminal act in contradistinction to a criminal intent and knowledge of the wrongness of the criminal act, which in turn is called **mens rea*. For a defendant to be convicted of a crime, both an actus reus and a mens rea must normally be proved. [From Latin *actus* act + *reus* guilty]

acuity *n.* Keeness or sharpness, especially of sensation. See also *ABSOLUTE ACUITY*, *ABSOLUTE THRESHOLD*, *ACUITY GRATING*, *AUDIOGRAM*, *DIFFERENCE THRESHOLD*, *DIFFERENTIAL ACUITY*, *DYNAMIC VISUAL ACUITY*, *KÖNIG BARS*, *LANDOLT CIRCLE*, *MINIMUM AUDIBLE ANGLE*, *MINIMUM AUDIBLE FIELD*, *MINIMUM SEPARABLE*, *MINIMUM VISIBLE*, *RECEIVER OPERATING CHARACTERISTIC*, *SIGNAL DETECTION THEORY*,
*****ebook converter DEMO Watermarks*****

SNELLEN FRACTION, STEREOSCOPIC ACUITY, TWO-POINT THRESHOLD, VERNIER ACUITY, VISUAL ACUITY. [From Latin *acutus* sharp, from *acus* a needle]

acuity grating *n.* A device for measuring **visual acuity* by displaying a light background with a set of evenly spaced dark bars whose width and distance apart can be reduced simultaneously until the **minimum separable* is reached. *See also* GRATING, KÖNIG BARS, VERNIER ACUITY.

acupuncture *n.* A technique of Chinese origin for inducing anaesthesia or treating various disorders by inserting needles into the skin at carefully specified points to stimulate nerve impulses. Also called *stylostixis*. *See also* GATE-CONTROL THEORY. [From Latin *acus* a needle + English *puncture*]

acute *adj.* Sharp or pointed; penetrating or piercing; important or critical; of or relating to sensation or perception that is finely discriminating; of or relating to a disorder or symptom that begins abruptly and subsides quickly. *Compare* CHRONIC. [From Latin *acutus* sharpened, from *acuere* to sharpen]

acute confusional state *n.* 1. A form of **delirium* characterized by **amnesia*, **clouding of consciousness*, and problems of orientation. 2. An **acute stress disorder*, especially during adolescence, resulting from a sudden change in circumstances or the environment.

acute pain *n.* Severe short-term **pain* often following injury, surgery, dental problems, or heart attack (myocardial infarction). *Compare* CHRONIC PAIN.

acute stress disorder *n.* In **DSM-5*, a **trauma- and stressor-related disorder* following exposure to a traumatic event, with a similar pattern of symptoms to **post-traumatic stress disorder*, including **dissociation* (such as **dissociative amnesia*, **depersonalization*, **derealization*), but occurring within four weeks of the traumatic event. If the symptoms persist beyond four weeks, then a diagnosis of post-traumatic stress disorder may be considered. To meet the diagnostic criteria of DSM-5, the traumatic event must be persistently re-experienced either in recurrent images, thoughts, dreams, illusions, flashback episodes, or sensations of reliving the experience; or as distress when reminded of the event. There must also be evidence of marked
*****ebook converter DEMO Watermarks*****

avoidance of reminders of the trauma, and the disturbance must have persisted for at least two days. *See also* [TRAUMA- AND STRESSOR-RELATED DISORDERS](#). **ASD** *abbrev.* [From Latin *acutus* sharpened, from *acuere* to sharpen, from *acus* a needle]

acute stress reaction *n.* A form of [*acute stress disorder](#) in which exposure to the [*psychosocial stressor](#) is followed immediately (within one hour) by the onset of the symptoms, which begin to subside after no more than eight hours.

Adam *n.* A common street name of [*ecstasy \(2\)](#). [A near-anagram of [*MDMA](#)]

adaptation *n.* **1.** In the theory of [*evolution](#), a feature of an organism's structure, physiology, or behaviour that solves a problem in its life or helps it to pass its genes on to the next generation. **2.** In physiology and sensation, a temporary reduction in the responsiveness of a [*sensory receptor](#) other than a [*pain receptor](#) as a result of repeated or continuous stimulation. Also called *sensory adaptation*. *See also* [AUDITORY ADAPTATION](#), [CHROMATIC ADAPTATION](#), [CROSS-ADAPTATION](#), [DARK ADAPTATION](#), [LIGHT ADAPTATION](#), [ODOUR ADAPTATION](#), [PRISM ADAPTATION](#), [THERMAL ADAPTATION](#), [TRANSIENT TRITANOPIA](#), [VISUAL ADAPTATION](#). **3.** In the writings of the Swiss psychologist Jean Piaget (1896–1980), the modification of an organism's psychological structures or processes in response to environmental demands, comprising [*accommodation \(2\)](#) and [*assimilation \(2\)](#). *See also* [EQUILIBRATION](#). **4.** A general term for any process whereby behaviour or subjective experience alters to fit in with a changed environment or circumstances or in response to social pressure. Often mistakenly written or pronounced as *adaption*. *See also* [ALLOPLASTIC](#), [AUTOPLASTIC](#). **adaptive** *adj.* [From Latin *adaptare* to adjust or to fit, from *ad* to + *aptus* fitting + *-ion* indicating an action, process, or state]

adaptation level *n.* A hypothesized neutral position or region in a bipolar stimulus dimension, functioning as a reference point for subjective judgements, stimuli above the adaptation level being judged to have a particular [*attribute](#) (such as large, heavy, or loud), stimuli below it being judged to have the opposite or complementary attribute (small, light, or soft), and stimuli in its vicinity being judged to be neutral with respect to the

*****ebook converter DEMO Watermarks*****

attribute. *See also* [ADAPTATION-LEVEL THEORY](#). **AL** *abbrev.*

adaptation-level theory *n.* A theory proposed by the US psychologist Harry Helson (1898–1977) in an article in the *American Journal of Psychology* in 1947, according to which the [*adaptation level](#) is determined for a class of stimuli by members of the class already sampled or attended to, by stimuli having a background or contextual influence, and by recollections of past judgements of similar stimuli, the adaptation level being the logarithm of the mean of the relevant stimuli, weighted according to their effectiveness in terms of nearness, recency, salience, and so on. According to the theory, subjective judgements are necessarily relative to the prevailing norm or adaptation level, so that a 4 ounce (113 gram) pen is heavy, but a baseball bat must weigh over 40 ounces (1.13 kilograms) to be judged heavy. The phenomenon is a type of [*context effect](#). Also called *AL theory*. *See also* [HEDONIC TREADMILL](#), [PROSPECT THEORY](#). *Compare* [ASSIMILATION–CONTRAST THEORY](#).

adaptation syndrome *See* [GENERAL ADAPTATION SYNDROME](#).

adaptive control of thought *See* [ACT*](#).

adaptive radiation *n.* The evolutionary process whereby species that are descended from a common ancestor diverge to exploit different [*ecological niches](#).

adaptive testing *n.* A sequential testing procedure in which successive test items are selected for administration to a respondent on the basis of that person's responses to earlier items.

adaptor *n.* Something or someone that adapts or adjusts to a changed situation or helps a person or other organism to adjust, especially (in social psychology) a [*gesture \(1\)](#), usually involving self-touching, that helps one to cope with an emotional reaction, typical examples being self-grooming behaviour, covering the eyes for fear, or putting a hand over the mouth for surprise. *See also* [DISPLACEMENT ACTIVITY](#), [KINESICS](#).

addiction *n.* A state of dependency on a chemical substance, especially on a drug such as **alcohol*, **nicotine*, or **caffeine*, or a narcotic such as **morphine* or **heroin*, characterized by a strong physiological and/or psychological need and a compulsive inability to resist taking the drug despite anticipation of probable adverse consequences, **withdrawal*, if there is an abrupt deprivation of the substance, and in some cases drug **tolerance* (3). *See also* [DEPENDENCE \(2\)](#), [INCENTIVE–SENSITIZATION THEORY](#), [NUCLEUS ACCUMBENS](#), [SUBSTANCE DEPENDENCE](#), [SUBSTANCE-RELATED AND ADDICTIVE DISORDERS](#). **addictive** *adj.* [From Latin *addictus* given over, from *addicere* to assign to, from *ad* to + *dicere* to say + *-ion* indicating an action, process, or state]

additive alleles *n.* A pair of **alleles* combining to produce a **heterozygote* that is phenotypically the average of the two corresponding **homozygotes*.

additive colour mixture *n.* A colour formed by the combination of **additive primaries*, or the process of forming such a colour. US *additive color mixture*. *See also* [COLOUR MIXING](#). *Compare* [SUBTRACTIVE COLOUR MIXTURE](#).

additive model *n.* Any statistical or mathematical model in which an effect can be expressed as a weighted sum of **independent variables*, so that the portion of the effect contributed by one independent variable does not depend on the value of any other independent variable. A classic example of a linear additive model is **multiple regression*. *See also* [ADDITIVITY](#). *Compare* [MULTIPLICATIVE MODEL](#).

additive primary *n.* Any of the shades of red, green, or blue that can be mixed to form white and to match all other **spectral colours* and also certain **non-spectral colours* such as purple. Primary red, green, and blue are often defined as light with wavelengths of 670, 535, and 470 nanometres respectively, but any three shades may be used, provided that none is equivalent to a combination of the other two. Also called a *primary colour*, though that term is ambiguous. *See also* [CIE COLOUR SYSTEM](#), [CHROMATICITY](#), [COLOUR EQUATION](#), [GRASSMANN'S LAWS \(PERCEPTION\)](#), [PRIMARY COLOUR \(1\)](#), [RAYLEIGH EQUATION](#), [TRISTIMULUS VALUES](#). *Compare* [PSYCHOLOGICAL PRIMARY](#),
*****ebook converter DEMO Watermarks*****

SECONDARY COLOUR, SUBTRACTIVE PRIMARY.

additivity *n.* In * [analysis of variance \(ANOVA\)](#), the property of having only *[main effects](#) and no *[interaction effects](#) and thus being represented by an *[additive model](#) without multiplicative terms. In *[axiomatic measurement theory](#), a property of a quantitative *[attribute](#) such that for any two levels of the attribute, a third always exists such that the greatest of the three levels is the sum of the other two. The absence of this property is called *non-additivity*. **additive** *adj.*

addressed phonology *n.* The sound of a word or verbal expression as it is stored in memory. *Compare* [ASSEMBLED PHONOLOGY](#).

adelphogamy *n.* 1. A form of *[polyandry](#) in which two or more brothers share the same wife or wives. 2. Marriage between brothers and sisters, as occurred in royal families in ancient Egypt, or mating between brothers and sisters, as occurs in some ants. [From Greek *adelphos* a brother + *gamos* marriage]

adenine *n.* One of the constituent *[bases \(1\)](#) of ATP and the nucleic acids, having an affinity for thymine in DNA and uracil in RNA. **A** *abbrev.* [From Greek *aden* a gland + *-ine* indicating an organic compound]

adenohypophysis *n.* The anterior lobe of the hypophysis (pituitary gland), usually called the *[anterior pituitary](#). *Compare* [NEUROHYPOPHYSIS](#). [From Greek *aden* a gland + *hypophysis* an attachment underneath, from *hypo* under + *phyein* to grow]

adenosine *n.* A compound of *[adenine](#) and *[ribose](#), present in all cells in a combining form and functioning in the nervous system as a *[neurotransmitter](#). *See also* [ADP](#), [AMP](#), [ATP](#). [A blend of *adenine* and *ribose* + Greek *-ine* indicating an organic compound]

adenosine diphosphate *See* [ADP](#).

adenosine monophosphate *See* [AMP](#).

adenosine triphosphate See [ATP](#).

adenylate cyclase *n.* An enzyme in a cell membrane that responds to a hormone by initiating the conversion of [*ATP](#) to [*cyclic AMP](#) as a [*second messenger](#). [From *aden-yl(ic acid)* + *-ate* indicating a salt or ester of an acid + *cycl(ic AMP)* + Greek *-ase* denoting an enzyme, from *diastasis* separation]

adenylic acid *n.* Another name for [*AMP](#).

adequate stimulus *n.* The type of [*stimulus \(1\)](#) to which a specified sensory receptor is adapted to respond, such as visible light for the photoreceptors or audible sound for the auditory receptors in the organ of Corti. Compare [INADEQUATE STIMULUS](#).

adiadochokinesia *n.* An inability, sometimes classified as a form of [*apraxia](#), to perform rapid rhythmic movements such as finger tapping, often indicative of damage to the [*cerebellum](#). Compare [DYSADIADOCHOKINESIA](#). [From Greek *a-* without + *diadochos* a successor + *kinesis* movement + *-ia* indicating a condition or quality]

adipose *adj.* Of, relating to, or consisting of fat. [From Latin *adiposus* fatty, from *adeps* fat]

adipose tissue *n.* Structures in a human or animal body composed of fat cells.

adipsia *n.* Absence of thirst or abstention from drinking. Compare [POLYDIPSIA](#). [From Greek *a-* without + *dipsa* thirst + *-ia* indicating a condition or quality]

adjacency pair *n.* Any sequence of a single stimulus utterance followed by a single response utterance, as in a question and answer.

Adjective Check List *n.* In psychometrics, any list of adjectives that can be marked as applicable or not applicable to oneself, to one's ideal self, to another person, or to some other entity or concept. When written with initial

uppercase letters, the term denotes more specifically a measure consisting of a list of 300 adjectives, from *absent-minded* to *zany*, selected by the US psychologist Harrison G. Gough (1921–2014) and introduced as a commercial test in 1952. The test yields 24 scores, including measures of personal adjustment, self-confidence, self-control, lability, counselling readiness, some **response styles*, and 15 personality needs, such as achievement, dominance, and endurance. Gough discussed its psychometric properties in an article in the journal *Psychological Reports* in 1960. Also called the *Gough Adjective Check List* . **ACL** abbrev.

adjustment *n.* Adaptation, (in psychology) especially behavioural adaptation to a particular environment or set of circumstances.

adjustment disorders *n.* A class of **trauma- and stressor-related disorders* in **DSM-5*, the essential feature of which is the development of clinically significant emotional or behavioural symptoms as a reaction to an identifiable **psychosocial stressor* (such as termination of a romantic relationship, marked business problems, marital difficulties, a natural disaster, failing to attain an important goal, or becoming unemployed), involving greater distress than would normally be expected from the stressor and significant impairment in social, occupational, or academic functioning. *See also* CULTURE SHOCK, GRIEF REACTION, TRAUMA- AND STRESSOR-RELATED DISORDERS.

adjustment method *n.* Another name for the **method of average error*.

Adlerian *adj.* Of or relating to the school of **psychoanalysis*, called **individual psychology*, founded in 1911 by the Austrian psychiatrist Alfred Adler (1870–1937). *See* COMPENSATION, DIANA COMPLEX, FICTIONAL FINALISM, GUIDING FICTION, INFERIORITY COMPLEX, LIFE LIE, MASCULINE PROTEST, NEUROTIC CHARACTER, WILL TO POWER.

admissible alternative/strategy *n.* In decision theory and game theory, an alternative or **strategy* (2) that is not dominated by a **dominant alternative/strategy*.

adolescence *n.* The period of development from the onset of **puberty* to
*****ebook converter DEMO Watermarks*****

the attainment of adulthood, beginning with the appearance of ***secondary sexual characteristics**, usually between 11 and 13 years of age, continuing through the teenage years, and terminating legally at the age of majority, usually 18 years of age. [From Latin *adolescentia* adolescence, from *adolescere* to grow up, from *ad* to + *alescere* to grow, from *alere* to feed or nourish]

adolescent *n.* 1. A person in a period of ***adolescence**. *adj.* 2. Of, relating to, or peculiar to ***adolescence**, or in a state or period of adolescence.

Adonis complex *n.* Anxiety and insecurity experienced by boys and men about their appearance or ***body images**. In extreme cases, the complex can meet the criteria of ***body dysmorphic disorder**. The term was introduced in 2000 by the US psychiatrist Harrison G. Pope, Jr (born 1947) in the title of his book, *The Adonis Complex: The Secret Crisis of Male Body Obsession*. See also **MUSCLE DYSMORPHIA**, **SOMATIC DELUSION**. [Named after Adonis in Greek mythology, an incomparably handsome young man, from Phoenician *adoni* my lord]

adoption study *n.* In behaviour genetics, an investigation of the correlations between adopted children and either their natural parents or their adoptive parents (or both) on a measurable ***trait** in order to estimate the ***heritability** of that trait, the assumption being that the higher the heritability of the trait, the greater will be the correlation with natural parents, and the lower the heritability the greater will be the correlation with adoptive parents. Since the late 1970s some adoption studies have examined correlations between natural and adoptive siblings within the same households, the assumption being that if the heritability of the trait is high, then the natural children's scores will correlate more highly with those of other natural children, who share half their genes, than with the scores of the adoptive children to whom they are not genetically related, whereas if heritability is low, the reverse should hold. Compare **KINSHIP STUDY**, **TWIN STUDY**.

ADP *abbrev.* Adenosine diphosphate, a (nucleotide) compound formed when stored energy is released from ***ATP** by ***ATPase** in the performance of muscular contractions or the transmission of nerve impulses.

adrenal cortex *n.* The outermost layer of the ***adrenal gland**, which releases ***corticosteroid** hormones such as ***cortisol** (hydrocortisone) into the bloodstream in response to ***stress** (1). *See also* ADRENOCORTICOTROPHIC HORMONE (ACTH), DHEA, ZONA FASCICULATA, ZONA GLOMERULOSA, ZONA RETICULARIS. [From the Latin *ad* at + *renes* kidneys + *cortex* bark or outer layer]

adrenal gland *n.* An ***endocrine gland** situated just above each kidney, secreting ***adrenalin** (epinephrine), ***noradrenalin** (norepinephrine), and other ***hormones** into the bloodstream. *See also* ADRENAL CORTEX, ADRENAL MEDULLA.

adrenalin *n.* A ***biogenic amine** and ***hormone** belonging to the group of ***catecholamines**, also functioning as a ***neurotransmitter**, synthesized from tyrosine in the presence of the cofactor vitamin C and secreted by the ***chromaffin cells** of the ***adrenal medulla** and by nerve fibres in the ***sympathetic nervous system**, causing an increase in blood pressure, accelerated heart rate, deepened respiration, sweating, dilation of the pupils, release of sugar from stores in the liver, diversion of blood from the intestines to the skeletal muscles, closure of the sphincter of the bladder leading to retention of urine, and other physiological reactions typical of ***fear**, ***anxiety**, or ***stress** (1). Formula: $(\text{HO})_2\text{C}_6\text{H}_3\text{CH}(\text{OH})\text{CH}_2\text{NHCH}_3$. Also spelt *adrenaline*. Also called *epinephrine*, especially in the US. *See also* ADRENERGIC, FIGHT-OR-FLIGHT RESPONSE, SYMPATHIN. *Compare* NORADRENALIN. [From the Latin *ad* at + *renes* kidneys + *-in(a)* indicating an organic or chemical substance]

adrenalin rush *n.* A sudden increase in competitive drive displayed by an athlete or sports competitor, supposedly associated with the release of ***adrenalin** into the bloodstream. This expression is based on a misunderstanding of the effects of adrenalin and is avoided in careful usage: *noradrenalin rush* or even *serotonin rush* would be marginally more apt.

adrenal medulla *n.* The inner part of the ***adrenal gland**, containing ***chromaffin cells** that release ***adrenalin** (epinephrine) and ***noradrenalin** (norepinephrine) into the bloodstream in response to fear or stress.

adrenergic *adj.* Releasing ***adrenalin** (epinephrine) or a similar substance; also activated by or responding to adrenalin or a similar substance, this extended usage being widespread but consistently rejected by the English physiologist Sir Henry Hallet Dale (1875–1968), who coined the suffix *-ergic*, and by many other authorities. *Compare* **CHOLINERGIC**, **DOPAMINERGIC**, **GABAERGIC**, **NORADRENERGIC**, **SEROTONERGIC**. [From *adrenalin* + Greek *ergon* work + *-ikos* of, relating to, or resembling]

adrenergic receptor *n.* Either of two types of ***neuroreceptor** for ***adrenalin** (epinephrine) and ***noradrenalin** (norepinephrine) situated on a neuron, muscle, or gland. Alpha-adrenergic (or α -adrenergic) receptors, which are found in smooth muscles that line blood vessels, can raise blood pressure by constricting them, and beta-adrenergic (or β -adrenergic) receptors, which are found in membranes surrounding the heart muscle and the smooth muscles of the lungs and intestines, function by activating slightly different ***second messenger** pathways. In most cases, alpha receptors are associated with excitation of the smooth muscles, and beta receptors with inhibition, but the muscles of the heart have beta receptors that are excitatory and some of the alpha receptors in the intestines are inhibitory.

adrenocorticotrophic hormone *n.* A ***hormone** secreted by the ***anterior pituitary** that stimulates the ***adrenal cortex** to secrete ***steroid hormones** such as ***cortisol** (hydrocortisone) into the bloodstream, especially in response to ***stress (1)** or injury. Also spelt *adrenocorticotropic hormone*. Also called *adrenocorticotrop (h)in* or *corticotrop (h)in*. *See also* **DEXAMETHASONE**, **POMC**. **ACTH** *abbrev.*

adultomorphic fallacy *n.* The error of attributing to infants and children the thoughts and feelings of adults. [From *adult* + Greek *morphe* a form or shape + *-ikos* of, relating to, or resembling]

advantage by illness *n.* Another name for ***secondary gain**.

adverse (drug) reaction *n.* Another name for a ***side-effect**.

adynamia *n.* Flaccid paralysis resulting from muscular weakness.

adynamic *adj.* [From Greek *a-* without + *dynamis* strength + *-ia* indicating a condition or quality]

aerial perspective *n.* One of the monocular cues of visual ***depth perception**, a form of ***perspective** closely related to ***linear perspective** and ***texture gradient**, great distances being suggested by a haziness of outline and surface detail (***sfumato**) coupled with diminution of colour intensity or a bluish haze, effects that are caused by the scattering of light by dust and vapour particles in the atmosphere. Also called *atmosphere perspective*. See also **AUBERT–FÖRSTER PHENOMENON**. [From Greek *aerios* of or relating to air, from *aer* air]

aerobic *adj.* Of or relating to the generation of energy by a form of metabolism requiring oxygen or air. See also **GLYCOLYSIS**, **KREBS CYCLE**. Compare **ANAEROBIC**. [From Greek *aer* air + *bios* life + *-ikos* of, relating to, or resembling]

aerophagia *n.* Spasmodic swallowing of air, a nervous habit resulting in stomach pains and belching. [From Greek *aer* air + *phagein* to consume + *-ia* indicating a condition or quality]

aesthesiometer *n.* A device for measuring sensory discrimination, especially a device for determining the ***two-point threshold**. US *esthesiometer*. [From Greek *aisthesis* sensation, from *aisthanesthai* to feel + *metron* a measure]

aetiology *n.* The cause of a particular disorder, or the study of the causes of disorders in general. US *etiology*. **aetiological** *adj.* US *etiological*. [From Greek *aitia* cause + *logos* word, discourse, or reason]

affect *n.* Emotion or subjectively experienced feeling, such as happiness, sadness, fear, or anger. *Blunted affect* is emotional expression that is significantly reduced in intensity; *flat affect* is absence or near absence of emotional expression and is also called *flattening of affect* or *affective flattening*; *inappropriate affect* or *incongruity of affect* is a mismatch between emotional expression and what one is speaking or thinking about; *labile affect* is instability or fluctuation of emotions; and *restricted affect* or *****ebook converter DEMO Watermarks*****

constricted affect is diminution in the range of emotional expression. See also EMOTION, PRIMARY EMOTIONS. Compare MOOD. **affective** *adj.* [From Latin *affectus* past participle of *afficere* to influence, from *ad* to + *facere* to do]

affect display *n.* A form of *non-verbal communication in which an *emotion or *affect is communicated, chiefly in humans by a *facial expression. See also DISPLAY RULE, EXPRESSIVE BEHAVIOUR, KINESICS, PRIMARY EMOTIONS.

affectional bond *n.* The emotional tie between an infant and its mother or carer, forming the basis of the relationship with which *attachment theory is concerned.

affective disorder *n.* Another name for a *mood disorder.

affective flattening *n.* Reduced or absent expression of *affect, associated with certain mental disorders, notably some forms of *schizophrenia, indicated by unchanging and unresponsive facial expression, *aprosodia, avoidance of eye contact, and diminished body language.

afferent *adj.* Towards the centre; of or relating to a nerve impulse from a *sense organ to the *central nervous system, or to a neuron or nerve that transmits such impulses. See also SENSORY NERVE. Compare EFFERENT. [From Latin *afferre* to carry to, from *ad* to + *ferre* to carry]

affiliation need *n.* Another name for *need for affiliation.

affirming the antecedent *n.* In *conditional reasoning, arguing validly from a hypothetical proposition of the form *If p then q* that, because *p* therefore *q*. For example, given the proposition *If the burglars entered by the front door, then they forced the lock*, it is valid to deduce from the fact that the burglars entered by the front door that they must have forced the lock. Also called *modus ponens*. Compare AFFIRMING THE CONSEQUENT, DENYING THE ANTECEDENT, DENYING THE CONSEQUENT.

affirming the consequent *n.* In *conditional reasoning, arguing

invalidly from a hypothetical proposition of the form *If p then q* that, because *q* therefore *p*. For example, given the proposition *If the burglars entered by the front door, then they forced the lock*, it is invalid to conclude from the fact that the burglars forced the lock that they must have entered by the front door. Compare [AFFIRMING THE ANTECEDENT](#), [DENYING THE ANTECEDENT](#), [DENYING THE CONSEQUENT](#).

affordance *n.* A term coined in 1977 by the US psychologist James Jerome Gibson (1904–79), to refer to a resource or support provided by the environment to an organism, furnishing or affording the organism with an opportunity to act in a particular way. Examples of affordances include a surface that affords physical support, an edible substance that affords an opportunity to eat, and the positioning of an outstretched hand that affords the prospect of shaking hands. See also [DIRECT PERCEPTION](#).

affricate *n.* A complex [*consonant](#) speech sound the [*articulation](#) of which involves a [*plosive](#) followed immediately by a [*fricative](#) at the same place of articulation. English has two affricate [*phonemes](#), the first and last sounds in *church*, which is the unvoiced affricate, and the first and last phonemes in *judge*, which is the voiced affricate. See also [MANNER OF ARTICULATION](#). [From Latin *affricare* to rub against, from *fricare* to rub]

aftereffect *n.* Any phenomenon occurring some time after its cause, especially (in psychology) a delayed sensory or perceptual experience. See also [AFTERIMAGE](#), [AUBERT EFFECT](#), [CONTINGENT AFTEREFFECT](#), [FIGURAL AFTEREFFECT](#), [MCCOLLOUGH EFFECT](#), [MOTION AFTEREFFECT](#), [POSTURAL AFTEREFFECT](#), [SPIRAL AFTEREFFECT](#), [SUCCESSIVE CONTRAST](#), [TILT AFTEREFFECT](#), [VISUAL AFTEREFFECT](#), [WATERFALL ILLUSION](#).

afterimage *n.* A sensory experience, especially a visual image, that persists after the stimulus has ceased, also called a *primary afterimage*, or one that appears after a primary afterimage. The first in the sequence of visual afterimages following brief exposure to a bright stimulus is called a [*Hering image](#) and is normally a [*positive afterimage](#), dark areas of the original image appearing dark, and light areas appearing light, usually appearing in the same colours as the original stimulus but sometimes colourless, and persisting for only a fraction of a second. The subsequent

*****ebook converter DEMO Watermarks*****

***Purkinje image** is a ***complementary afterimage**, colours of the original stimulus appearing in approximate complementary colours in the image, and it is more persistent than the Hering image but also tends to disappear if the gaze is shifted, though it can often be briefly restored by blinking. The third afterimage is positive and is called a ***Hess image**. These effects can be demonstrated by adapting one's eyes to darkness for at least 15 minutes and then setting off a camera's electronic flash, which for safety reasons should not be looked at directly with dark-adapted eyes, or by briefly switching on a bright light. *See also* **AFTERSENSATION**, **AUBERT EFFECT**, **BIDWELL'S GHOST**, **EMMERT'S LAW**, **FLIGHT OF COLOURS**, **ICONIC STORE**, **McCOLLOUGH EFFECT**, **VISUAL ILLUSION**. *Compare* **EIDETIC IMAGE**.

aftersensation *n.* Any ***sensation** persisting after the cessation of the ***stimulus** (1, 3), especially an ***afterimage** or an ***aftertaste**.

aftertaste *n.* A sensation of ***taste** or ***flavour** that lingers after a sapid (tastable) food or drink has been in the mouth. The term is also used metaphorically for any lingering impression, especially a nasty one.

agape *n.* Brotherly or Christian ***love**. [From Greek *agape* brotherly love]

agapic love *n.* A secondary type of brotherly love that is altruistic and selfless and is a combination of ***erotic love** and ***storgic love**. *Compare* **LUDIC LOVE**, **MANIC LOVE**, **PRAGMATIC LOVE**.

age-equivalent score *n.* A measure of a person's ability, skill, or knowledge, expressed in terms of the age at which the average person attains that level of performance. Also called an *age score*. *Compare* **GRADE-EQUIVALENT SCORE**.

ageing male syndrome *n.* Another name for ***irritable male syndrome**. US *aging*. **AMS** *abbrev.*

ageism *n.* The belief in the intrinsic superiority of people within a certain age range, often accompanied by ***prejudice**, ***stereotyping**, and discrimination on the basis of age, usually against old people. Also spelt

agism , especially in the US. Compare [ABLEISM](#), [ETHNOCENTRISM](#), [FATTISM](#), [HETEROSEXISM](#), [RACISM](#), [SEXISM](#), [SPECIESISM](#). **ageist** or **agist** *n.* 1. One who practises or advocates ageism. *adj.* 2. Of or relating to ageism. [Coined in 1969 by the US gerontologist Robert N(eil) Butler (1927–2010) from *age* on the model of *racism*]

agenesis of the corpus callosum *n.* A rare [*neurological](#) disorder, easily diagnosed by [*brain imaging](#), with reported incidence somewhere between 0.5 and 70 in 10,000 births, in which the [*corpus callosum](#) is either partially or entirely absent at birth. In the absence of other abnormalities, the associated [*disconnection syndrome](#) may be mild, but when other brain abnormalities are present, the condition may be accompanied by [*mental retardation](#), [*seizures](#), [*spasms](#), and [*hydrocephalus](#). The [*savant](#) Kim Peek (1951–2009), played by Dustin Hoffman (born 1937) in the 1988 film *Rain Man*, had agenesis of the corpus callosum, together with other brain disorders. **AgCC** or **ACC** *abbrev.* [From Greek *a-* without + *genesis* birth or origin + Latin *corpus* a body + *callosus* callous]

age of acquisition *n.* The age at which something is first learned. The *age of acquisition effect* is the tendency for words and other items of information learned early in life to be better retained than those learned later. **AoA** *abbrev.*

age regression *n.* The adoption of a pattern of behaviour characteristic of an earlier stage of development, observed occasionally in certain forms of mental disorder. In *hypnotic age regression* this occurs as a direct response to suggestions from the hypnotist. [From *age* + Latin *regressus* a retreat, from *regradi* to go back, from *re-* again + *gradi* to go + *-ion* indicating an action, process, or state]

age-related cognitive decline *n.* Diminution in cognitive functions occurring naturally as part of the ageing process. See also [AGE-RELATED MEMORY IMPAIRMENT](#).

age-related memory impairment *n.* A form of age-related cognitive decline, the predominant symptom of which is a decline in memory occurring naturally as part of the ageing process.

*****ebook converter DEMO Watermarks*****

age scale *n.* In psychometrics, any measuring scale that yields **age-equivalent* scores.

age score *n.* In psychometrics, another name for an **age-equivalent* score.

ageusia *n.* Absence of the sense of taste. *Compare* CACOGEUSIA, DYSGEUSIA, HYPERGEUSIA, HYPOGEUSIA, PARAGEUSIA, TASTE BLINDNESS. **ageusic** *adj.* [From Greek *a-* without + *geusis* taste + *-ia* indicating a condition or quality]

agglomerative hierarchical clustering *n.* In statistics, any technique of **cluster analysis* in which each individual or case starts out as a cluster, and at each step of the analysis clusters are combined until all cases belong to a single cluster. Once formed, a cluster cannot be split but can be combined with other clusters.

agglutinative language *n.* A language such as Finnish, Japanese, Turkish, or Swahili in which grammatical relationships are indicated by building up words out of long sequences of units, each of which indicates a particular grammatical meaning. Also called an *agglutinating language* . *Compare* INFLECTING LANGUAGE, ISOLATING LANGUAGE. [From Latin *agglutinare* to glue together, from *ad* to + *gluten* glue]

aggression *n.* Behaviour whose primary or sole purpose or function is to injure another person or organism, whether physically or psychologically. *See also* DISPLACED AGGRESSION, ESCALATED FIGHTING, FRUSTRATION-AGGRESSION HYPOTHESIS, HOT SAUCE TASK, IRRITABLE MALE SYNDROME, POINT SUBTRACTION AGGRESSION PARADIGM, QUIET-BITING ATTACK, ROAD RAGE, ROID RAGE, ROSENZWEIG PICTURE-FRUSTRATION STUDY, SHAM RAGE, SUBLIMATION, TAYLOR AGGRESSION PARADIGM, TESTOSTERONE, THANATOS, TYPE A, VENTROMEDIAL HYPOTHALAMUS. [From Latin *aggre**di*, *aggressus* to attack, from *ad* to + *gradi* to step + *-ion* indicating an action, process, or state]

aggression, displaced *See* DISPLACED AGGRESSION.

aggression, instinctual *See* THANATOS.

agitated depression *n.* A form of *[depression](#) accompanied by *[psychomotor agitation](#).

agitation *See* [PSYCHOMOTOR AGITATION](#).

agnosia *n.* A term introduced in 1891 by the Austrian neurologist and founder of psychoanalysis Sigmund Freud (1856–1939), nowadays denoting an *[impairment](#) of ability to recognize or identify familiar objects, entities, or people, usually as a result of a *[neurological](#) deficit or disorder. The major forms are: *ahylognosia* (impaired ability to discriminate by touch such physical properties of objects as their weight, density, or texture; *compare* [AMORPHOGNOSIA](#), [TACTILE AGNOSIA](#)); *amorphognosia* (impaired ability to recognize by touch the size and shape of objects; *compare* [AHYLOGNOSIA](#), [TACTILE AGNOSIA](#)); *anosognosia* (impaired ability or refusal to recognize that one has a sensory or motor impairment or, in some cases following a massive *[stroke](#) and *[hemiplegia](#), even to recognize part of one's body as one's own); *apperceptive agnosia* (impaired ability to identify and discriminate between objects, usually associated with right hemisphere brain damage, also called *visual shape agnosia* , in contrast to associative agnosia); *asomatagnosia* (impaired ability to recognize one's own body or part of it; *compare* [ANOSOGNOSIA](#), [AUTOTOPAGNOSIA](#)); *associative agnosia* (impaired ability to interpret or give meaning to objects, as in failing to understand that a 4-inch-long hollow cylinder, closed at one end, with a loop attached to the outside, is a mug, in contrast to apperceptive agnosia); *auditory agnosia* (impaired ability to recognize or identify familiar sounds or spoken words); *autotopagnosia* (see also separate entry; impaired ability to identify parts of one's own body, often indicative of lesions in the pathway between the thalamus and the parietal lobes; *compare* [ASOMATAGNOSIA](#), [FINGER AGNOSIA](#), [TOPAGNOSIA](#)); *colour agnosia* (impaired ability to recognize or identify colours in spite of intact colour discrimination and adequate language skills; *compare* [ACHROMATOPSIA](#)); *finger agnosia* (see also separate entry; impaired ability to recognize, identify, differentiate, name, select, or indicate individual fingers of either hand, hence a form of autotopagnosia); *gustatory agnosia* (impaired ability to recognize or identify tastes); *haptic agnosia* (another name for *[tactile agnosia](#)); *horologagnosia* (impaired ability to tell the time); *integrative agnosia* (intact ability to recognize elements of perceptual forms with impaired ability to integrate the elements into perceptual wholes);

*****ebook converter DEMO Watermarks*****

logagnosia (another name for Wernicke's [*aphasia](#)); *object blindness* (impaired ability to identify objects that are clearly perceived); *olfactory agnosia* (impaired ability to recognize or identify smells); *optic agnosia* (impaired ability to identify objects by sight, with intact ability to identify them by touch); *phonagnosia* (see also separate entry; impaired ability to identify people by their voices); *prosopagnosia* (see also separate entry; impaired ability to recognize or identify previously familiar faces, sometimes even those of close relatives, such faces being identified as faces but not as belonging to particular known people, this form of agnosia usually being associated with damage to the posterior right hemisphere); *simultanagnosia* (see also separate entry; impaired ability to perceive more than one object at the same time, often occurring as a symptom of [*Bálint's syndrome](#)); *tactile agnosia* (see also separate entry; impaired ability to recognize or identify objects by touch alone, also called *haptic agnosia*, *tactoagnosia*, *compare* *ahylognosia*, *amorphognosia*); *topagnosia* (impaired ability to identify which part of one's body has been touched, *compare* [AUTOTOPAGNOSIA](#)); *topographagnosia* (see also separate entry; impaired ability to find one's way around, read maps, draw plans, and perform similar tasks, often associated with damage to the right hemisphere parietal lobe, comparable to [*visuospatial](#) agnosia); *transformational agnosia* (impaired ability to recognize objects viewed from unusual angles, such as a tennis racket seen from its side, based on the assumption that the impairment derives from a deficit in the ability to transform the major or minor axis—length or width—when it appears foreshortened, often associated with damage to the right parietal lobe, also called *apperceptive agnosia*); *visual agnosia* (impaired ability to recognize or identify visual images or stimuli); *visual shape agnosia* (impaired ability to identify and discriminate between objects, usually associated with right hemisphere brain damage, also called *visual apperceptive agnosia* , in contrast to [*associative](#) agnosia); *visuospatial agnosia* (impaired ability to count a small number of scattered objects, coupled with peculiar alignment of handwriting, such as confining the words to only one half of a page, impairment in reading ability, impaired ability to copy simple drawings, often associated with damage to the right hemisphere at the junction of the occipital and parietal lobes, *compare* [TOPOGRAPHAGNOSIA](#)). Also called *acatamathesia* . [From Greek *a-* without + *gnosis* knowledge + *-ia* indicating a condition or quality]

agnosticism *n.* A belief that nothing is or can be known about God. More loosely, a belief that the existence of God cannot be known with certainty, but this sense is avoided in careful usage. **agnostic** *adj. n.* (Of or pertaining to) one who espouses agnosticism. *Compare* ATHEISM, DEISM, PANTHEISM, THEISM. [Coined in 1869 by the English biologist Thomas Henry Huxley (1825–95), from Greek *a-* without + *gnostos* known + *-ismos* indicating a state or condition]

agonist *n.* 1. A person or animal engaged in a struggle. *Compare* ANTAGONIST (1). 2. A muscle that contracts in the same direction as another. *Compare* ANTAGONIST (2). 3. A substance that binds to **neuroreceptors* and has the same effects in exciting or inhibiting the **postsynaptic* cells as the **neurotransmitter* that would otherwise bind to those sites. *See also* SYNERGIST. *Compare* ANTAGONIST (3). [From Greek *agon* a festival of competitions, from *agein* to lead]

agoraphobia *n.* An **anxiety disorder* in **DSM-5* associated with **anxiety* or fear of leaving home, being in a crowd, visiting public places such as shopping areas, travelling alone in buses, trains, or aircraft, or being in other situations from which escape might be awkward or where a **panic attack* would be difficult to handle. It is sometimes regarded as a **specific phobia*, but some classifications (such as **ICD-10*) assign it to a subcategory on its own. *See also* HIKIKOMORI. [From Greek *agora* a marketplace + *phobos* fear + *-ia* indicating a condition or quality]

agrammatism *n.* A form of **aphasia* in which there is an impairment in ability to arrange words in their correct order, to use **function words* properly, and/or to use **accidence* appropriately in an **inflecting language*. There is evidence to suggest that these deficits can occur separately.

agraphia *n.* An impairment in the ability to write, resulting from neurological damage to the language centres in the brain. The major forms are: *apraxic agraphia* (impaired ability to write in spite of an ability to spell words orally); *agraphia for numbers* (impaired ability to write numbers, also called *agraphic acalculia*); *ideational agraphia* (impaired ability to select appropriate letter forms in spite of an ability to copy written text); *orthographical agraphia* (impaired ability to translate spoken sounds into
*****ebook converter DEMO Watermarks*****

appropriate written forms, also called *lexical agraphia*); *phonological agraphia* (impaired ability to spell by sound, coupled with over-reliance on established spelling vocabulary); *spatial agraphia* (impaired ability to arrange and orient writing appropriately on a page); *surface agraphia* (spelling by sound coupled with an impaired ability to spell irregular words). See also [DYSGRAPHIA](#). [From Greek *a-* without + *graphein* to write + *-ia* indicating a condition or quality]

agraphic acalculia See [AGRAPHIA](#).

agreeableness *n.* The quality of being pleasant. Also, one of the **Big Five* personality factors, characterized by **traits* such as kindness, generosity, warmth, unselfishness, and trust. Also called *pleasantness* . See also [ALPHA PERSONALITY FACTOR](#), [GENERAL FACTOR OF PERSONALITY](#). **agreeable** *adj.*

agrypnia *n.* An unusual name for **insomnia*. [From Greek *agrypnos* wakeful, from *agrein* to pursue + *hypnos* sleep + *-ia* indicating a condition or quality]

aha experience *n.* The feeling that accompanies sudden **insight* (2). Also called an *aha reaction* or a *eureka moment* .

ahedonia *n.* A variant form of **anhedonia*.

ahylognosia *n.* Impaired ability to discriminate by touch such physical properties as weight, density, or texture, with intact ability to recognize size and shape. Also spelt *ahylagnosia* . See also [AGNOSIA](#). Compare [AMORPHOGNOSIA](#), [TACTILE AGNOSIA](#). [From Greek *a-* without + *hyle* matter + *gnosis* knowledge + *-ia* indicating a condition or quality]

AIDS *abbrev.* Acquired immune (or immuno-) deficiency syndrome, a disorder believed to be caused by the **HIV* retrovirus and transmitted by infected blood entering the body, especially through transfusion or the sharing of needles by injecting drug users, by sexual intercourse, or from a mother to her unborn child via the placenta. It is characterized by destruction of **T lymphocytes* and consequent loss of immunity to opportunistic

infections. Almost half of all AIDS patients develop ***HIV dementia**. Also written as *Aids* .

AIDS dementia complex *n.* Another name for ***HIV dementia**. **ADC** *abbrev.*

AIDS-related complex *n.* A cluster of flu-like symptoms that are often premonitory of full-blown ***AIDS**: inflammation of lymph nodes, night sweats, persistent fevers, coughs, throat infection, and prolonged diarrhoea. **ARC** *abbrev.*

aim-inhibition *n.* In ***psychoanalysis**, the quality of an ***instinct (3)** that fails to achieve its direct mode of satisfaction or ***instinctual aim** but that obtains partial satisfaction from remote approximations of the behaviour or activity that would satisfy it. Sigmund Freud (1856–1939) introduced the concept in 1921 in his book *Group Psychology and the Analysis of the Ego* (*Standard Edition*, XVIII, pp. 69–143, at pp. 138–9) to explain the origin of sociable feelings of affection, the assumption being that if friendships and affection between relatives were not subject to aim-inhibition, then they would be overtly sexual. **aim-inhibited** *adj.*

aim of instinct *See* **INSTINCTUAL AIM**.

air crib *n.* A closed, electrically heated, sound-insulated compartment, about the size of an ordinary crib, in which a baby can be kept without clothing or blankets, one wall containing a panel of safety glass that can be opened like a window and across which a curtain can be drawn to darken the compartment, the floor consisting of tightly stretched moveable canvas operated like a roller towel, stored on a spool outside the compartment on one side and passing into a wire hamper on the other. Toys, including musical boxes, can be placed in the compartment, within which the baby is protected from airborne infections, dust, and allergens, and an advantage claimed for the air crib is that, because the baby's crying is almost inaudible from the outside and there are no hazards within it, ***reinforcement (1)** of crying is unlikely to occur. The device was invented by the US psychologist B(urrhus) F(rederic) Skinner (1904–90), who raised his second daughter Deborah in it and described the results in an article in the *Ladies Home Journal* in October

*****ebook converter DEMO Watermarks*****

1945. The device attracted a great deal of controversy, but a study of 50 former air-crib babies and their parents, published in 1995, reported wholly positive results. Also called a *Skinner crib* .

air encephalogram *n.* Another name for a [*pneumoencephalogram](#).

air theory *n.* A term used by the US psychologist James Jerome Gibson (1904–79) to refer to any theory of perception that explains perceptual phenomena such as object and space perception without reference to the surrounding context in which perceptions are embedded. *See also* [DIRECT PERCEPTION](#). [Alluding to something suspended in mid air without support]

akatamathesia *See* [ACATAMATHESIA](#).

akathisia *n.* Restless [*psychomotor agitation](#), indicated by fidgeting, inability to sit or stand still, pacing up and down, or rocking from foot to foot when standing, usually as a side-effect of [*neuroleptic \(1\)](#) medication. [From Greek *a-* not + *kathizein* to sit still + *-ia* indicating a condition or quality]

akinaesthesia *n.* Absence of [*kinaesthesia](#) or muscle sense, usually resulting from damage to the central nervous system. Also called *akinaesthesia* . US *akinesesthesia*, *akinesesthesia* . [From Greek *a-* without + *kineein* to move + *aisthesis* sensation, from *aisthanesthai* to feel + *-ia* indicating a condition or quality]

akinesia *n.* A decrease in spontaneous motor activity and a reduction in normal gestures, sometimes caused by a lesion in the supplementary motor area (see [MOTOR CORTEX](#)). *See also* [NEUROLEPTIC-INDUCED](#), [PARKINSONISM](#). *Compare* [BRADYKINESIA](#). [From Greek *a-* not + *kinesis* movement + *-ia* indicating a condition or quality]

akinetic apraxia *See* [APRAXIA](#).

akinetopsia *n.* A perceptual defect characterized by an inability to perceive motion, objects being visible while at rest but movement causing them to disappear, invariably associated with a lesion in Area V5 (also called

MT) of the ***visual cortex**, towards the back of the ***middle temporal gyrus**. **akinetopsic** *adj.* [From Greek *a-* without + *kinetikos* of or relating to motion, from *kinein* to move + *opsis* sight, from *ops* an eye + *-ia* indicating a condition or quality]

akrasia *n.* Weakness of will, or acting against one's better judgement. The concept was discussed at length by the Greek philosopher Aristotle (384–322 BC) in *Nicomachean Ethics* (Book 7), where he contrasted *akrasia* and its corresponding virtue, self-control, with self-indulgence and its corresponding virtue, temperance. Aristotle illustrated the distinction with an example of eating sweet foods: 'The one [the self-indulgent person] is led on in accordance with his own choice, thinking that he ought always to pursue the present pleasure; while the other [the *akrates*] does not think so but yet pursues it' (Bekker edition, p. 1146b). Also spelt *acrasia*. **akratic** *adj.* Acting against one's better judgement. **akrates** or **akratic** *n.* An akratic person. [From Greek *a-* without + *kratos* power + *-ia* indicating a condition or quality]

alarm call *n.* A vocal ***alarm signal**.

alarm pheromone *n.* A ***pheromone** that is released by an animal as an ***alarm signal** and that induces a fear or fright response in members of the same species.

alarm reaction *n.* The first stage of the ***general adaptation syndrome** to ***stress** (1), characterized by an initial fall in body temperature and blood pressure, followed by a countershock phase during which hormones such as ***cortisol** (hydrocortisone), ***adrenalin** (epinephrine), and ***noradrenalin** (norepinephrine) are secreted into the bloodstream and a biological defensive reaction begins. *See also* EXHAUSTION STAGE, RESISTANCE STAGE.

alarm signal *n.* A sound or other communication that is emitted by a bird or an animal in response to a danger or threat and that is recognized by other members of the same species as a signal to take evasive action. It is sometimes classified as a type of ***altruism**, because it draws attention to the individual giving the alarm signal and sometimes exposes it to added danger. *See also* ALARM CALL, ALARM PHEROMONE.

*****ebook converter DEMO Watermarks*****

albedo *n.* Reflectivity, indexed by the proportion of incident light that an object reflects. [From Latin *albedo* whiteness, from *albus* white]

alcohol *n.* Ethyl alcohol, a colourless volatile liquid and central nervous system **depressant drug* that is produced by fermentation of sugar and is the psychoactive constituent of intoxicating beverages. Its pharmacological action, though not fully understood, is in part at least through the facilitation of the inhibitory neurotransmitter **GABA*, probably through stimulation of the GABA receptor complex. Although the absorption and **bioavailability* of alcohol depends on body weight, sex, how recently one has eaten, plus several other factors, roughly one unit of alcohol (one half pint of beer, one glass of wine, or one measure of spirits) taken by an average 150 lb (68 kg) person generally leads to a ** blood alcohol concentration (BAC)* of about 20 mg/dl and produces measurable deterioration in performance on complex hand–eye coordination tasks; two units taken in quick succession (alcohol normally being metabolized at about one unit per hour) leads to a BAC of 40 mg/dl and produces in addition a deterioration in visual acuity; three units leads to BAC 60 mg/dl and a loss of coordination; seven units leads to 140 mg/dl and confusion, slurred speech, and **ataxia*; 12 units leads to BAC 240 mg/dl and coma; and 14 units leads to 280 mg/dl and death. When a person drinks alcohol, inhibitory processes decline first, resulting in an exaggeration of spinal reflexes and the appearance of forms of behaviour (talkative, boisterous, aggressive) that are normally under the influence of social inhibition—this accounts for the mistaken notion that it is a central nervous system stimulant. Also called *ethanol*. Formula C_2H_5OH . **alcoholic** *adj.* **1.** Of or relating to alcohol. *n.* **2.** A person addicted to alcohol. **alcoholism** *n.* Addiction to alcohol. *See also* ALCOHOL-RELATED DISORDERS, DRINK-DRIVING. [From Arabic *al-koh'l*, antimony sulphide, a powder used in the Middle East as a cosmetic to darken the eyelids, from *al* the + *koh'l* finely divided, alluding to the fine vapour given off by liquids containing alcohol]

alcohol abuse *n.* A form of **substance abuse* associated specifically with drinking alcohol, leading to serious problems of functioning at home, school, or work. When there is evidence of **tolerance (3)*, **withdrawal*, or compulsive drinking, **alcohol dependence* rather than alcohol abuse may be diagnosed. Preferred usage *alcohol misuse*.

alcohol amnestic disorder *n.* Another name for ***Korsakoff's psychosis**. Also called *alcohol amnesic syndrome* .

alcohol dependence *n.* A form of ***substance dependence** in which physiological ***dependence (2)** on alcohol is manifested by ***tolerance (3)** and ***withdrawal** symptoms. Also called *alcoholism* . Compare **DIPSOMANIA**.

alcohol hallucinosis *n.* An organic disorder characterized by auditory ***hallucinations** without ***clouding of consciousness**, usually during the first few days of ***withdrawal** from alcohol following prolonged alcohol misuse. Compare **DELIRIUM TREMENS**, **HALLUCINOSIS**, **ORGANIC HALLUCINOSIS**.

alcohol-related disorders *n.* ***Substance-related and addictive disorders** in ***DSM-5** associated specifically with drinking alcohol, including ***alcohol abuse**, ***alcohol dependence**, ***Korsakoff's psychosis**, and a range of alcohol-induced disorders. DSM-5 distinguished alcohol use disorder, alcohol intoxication, and alcohol withdrawal as separate disorders. See also **SUBSTANCE-INDUCED DISORDERS**.

aldehyde dehydrogenase *n.* An enzyme that is involved in the metabolism of ***alcohol** and is blocked by the drug ***Antabuse** (disulfiram), leading to the accumulation of ***acetaldehyde** in the body.

aldosterone *n.* A ***corticosteroid** hormone belonging to the ***mineralocorticoid** group, secreted by the adrenal cortex in response to the kidney hormone ***angiotensin II**, involved in the regulation of mineral and water balance by its reciprocal action in causing the kidneys to retain sodium and excrete potassium while forming urine from venous blood. [From *ald(ehyde)* + *ster(ol)* + *(ket)one*]

alethia *n.* Inability to forget. [From Greek *a-* without + *lethe* forgetfulness + *-ia* indicating a condition or quality]

Alexander technique *n.* A technique for improving posture, bodily movements, and breathing, thereby reducing stress and increasing confidence, popular especially with actors, musicians, and other performing

artists. *See also* [BODY THERAPIES](#). [Named after the Australian actor and physiotherapist Frederick Mathias Alexander (1869–1955) who developed and promoted it in the 1930s]

alexia *n.* An inability to read written or printed words, usually called **dyslexia*, also called *visual aphasia* or (non-technically) *word blindness* . *See also* [DYSLEXIA](#). [From Greek *a-* without + *lexis* a word + *-ia* indicating a condition or quality]

alexia acalculia *n.* Selective impairment in ability to read numbers, also called *alexia for numbers* .

alexithymia *n.* A disturbance of affect and cognition indicated by difficulty in describing or recognizing one's own emotions, and a reduced affective and fantasy life. [From Greek *a-* without + *lexis* a word + *thymos* spirit + *-ia* indicating a condition or quality]

algaesthesia *n.* Sensitivity to pain. Also written *algaesthesia* . US *algesthesia* , *algesthesis* . [From Greek *algesis* the sense of pain, from *algos* pain + *aisthesis* feeling + *-ia* indicating a condition or quality]

algesia *n.* The pain sense. [From Greek *algesis* the sense of pain, from *algos* pain + *-ia* indicating a condition or quality]

algometer *n.* An instrument for measuring the acuteness of **pain* sensations, usually by means of a needle that can be inserted into the skin to varying measured depths until a specified pain response is evoked. *See also* [COLD PRESSOR PAIN](#), [DOLORIMETER](#), [ISCHAEMIC PAIN](#). [From Greek *algesis* the sense of pain, from *algos* pain + *metron* a measure]

algolagnia *n.* Another name for **somasochism*. Also called *algophilia* . [From Greek *algos* pain + *lagneia* lust + *-ia* indicating a condition or quality]

algorithm *n.* Any well-defined computational procedure that takes a value or set of values as input and, after a finite sequence of computational steps, produces a value or set of values as output. Computer programs are the most

familiar examples of algorithms, and another useful definition of an algorithm is any operation that can be carried out by a [*Turing machine](#). Also, more generally and informally, any step-by-step procedure for finding the unique solution to a problem. *Compare* [HEURISTIC](#). [From Arabic *al-Khwārazmī* a native of Khwārazm (Khiva), the name by which the ninth-century Arab mathematician Abu Ja'far Mohommed ben Musa came to be known]

algorithmic *adj.* Of or relating to an [*algorithm](#), or more generally having a definite path to a solution.

aliasing *n.* In a visual or auditory signal or any periodic or oscillating variable or time series, a distortion resulting from insufficiently high resolution when the variable is sampled at a frequency that is too low in relation to the signal's frequency, a familiar cinematographic example being the [*wagon wheel illusion](#) in which the wheels of a stagecoach appear to turn slowly one way, then slowly the other way as it gathers speed. A sine wave of 1,000 hertz would appear stationary if it were sampled exactly once per millisecond (thousandth of a second) or once every two milliseconds, and so on, and it would appear to be cycling very slowly if sampled at a frequency very close to once per millisecond. *See also* [STROBOSCOPE](#). [Coined by the US statistician John Wilder Tukey (1915–2000) from Latin *alias* at another time, from *alius* other]

alienation *n.* **1.** Turning away; inducing someone to become indifferent or hostile or causing their affections to be diverted. **2.** The state of being an outsider or feeling detached from society. **3.** A state in which one's emotions are experienced as foreign so that the self and the outside world appear unreal. *See also* [DEPERSONALIZATION](#), [DEREALIZATION](#). [From Latin *alienus* foreign, from *alius* other + *-ation* indicating a process or condition]

alien hand sign *n.* A form of [*apraxia](#), usually resulting from a lesion in the [*corpus callosum](#), in which a hand (usually the left) is experienced as not belonging to its owner and performs actions independent of, though not against, its owner's will. It is a sign of [*disconnection syndrome](#) associated with lesions in the posterior corpus callosum and [*parietal lobe](#) and is a form of [*agnosia](#). *Compare* [ANARCHIC HAND](#), [RUBBER HAND PHENOMENON](#).

*****ebook converter DEMO Watermarks*****

alienist *n.* An old-fashioned word for a **psychiatrist*.

alimentary *adj.* Pertaining to nutrition or providing nourishment. [From Latin *alimentum* food or nourishment, from *alere* to nourish]

alimentary canal *n.* The tubular passage from the mouth to the anus through which food passes and within which digestion takes place, comprising the **pharynx*, **oesophagus*, **stomach*, **small intestine*, and **large intestine*. Also called the *digestive tract* or *gastrointestinal tract*.

alimentation *n.* Nourishment, sustenance, or support.

aliphatic *adj.* Fatty, belonging to the class of non-aromatic methane derivatives or open-chain organic compounds. Aliphatic and **aromatic* hydrocarbons in petrol or gasoline, glue, paint thinners, and some aerosol propellants are **psychotropic* when inhaled. *See also* *INHALANT*, *INHALANT-RELATED DISORDERS*, *SOLVENT ABUSE*. [From Greek *aleiphar*, *aleiphatos* oil + *-ikos* of, relating to, or resembling]

alkali *n.* Any substance that when dissolved in water accepts positively charged hydrogen **ions* and produces a corrosive solution having a **pH* value more than 7. *See also* *BASE (1)*. *Compare* *ACID*. **alkaline** *adj.* **alkalinity** *n.* The degree to which a solution is alkaline. [From Arabic *al-qili* the ashes]

alkaloid *n.* Any of a group of physiologically active and often **psychotropic* nitrogenous **bases (1)* occurring naturally in plants, being usually colourless, crystalline in structure, and bitter-tasting, including **apomorphine*, **atropine*, **belladonna*, **bromocriptine*, **capsaicin*, **cocaine*, **codeine*, **crack*, **ergot*, **hyoscyamine*, the **indole alkaloids* (psilocybin and DMT), **mescaline*, **morphine*, **muscarine*, **nicotine*, **physostigmine*, **quinine*, **reserpine*, **scopolamine*, **strychnine*, and the **xanthine* derivatives (caffeine, theobromine, and theophylline). [From *alkali* + *-oid* indicating likeness or resemblance, from Greek *eidos* shape or form]

allaesthesia *n.* A disturbance of body **schema* in which tactile stimulation on one side of the body is perceived on the other, usually as a

result of a lesion in the cerebral cortex, brainstem, or spinal cord. Also spelt *allesthesia*. Also called *allochiria*. [From Greek *allos* other + *aisthesis* sensation, from *aisthanesthai* to feel + *-ia* indicating a condition or quality]

Allais paradox *n.* A **paradox* of decision making that usually elicits responses inconsistent with **expected utility theory*. First, a choice is made between

A \$500,000 with probability 1 (certainty)

B \$2,500,000, \$500,000, or \$0 with probabilities 10 per cent, 89 per cent, and 1 per cent respectively.

Second, a choice is made between

C \$500,000 or \$0 with probabilities 11 per cent and 89 per cent

D \$2,500,000 or \$0 with probabilities 10 per cent and 90 per cent respectively.

Most people prefer A to B, because they prefer the certainty of winning a large amount to the small probability of winning an even larger amount coupled with a risk of winning nothing at all. But most of the same people prefer D to C, because the chances of winning are nearly the same in both cases but the prize is much larger in D than in C. Writing $u(2,500,000)$, $u(500,000)$, and $u(0)$ for the utilities that a person attaches to the corresponding amounts of money, the first preference implies that

$$.11u(500,000) > .10u(2,500,000) + .01u(0),$$

and the second implies that

$$.11u(500,000) < .10u(2,500,000) + .01u(0),$$

a contradiction, showing that expected utility theory does not accurately describe human choice behaviour. See also [REVEALED PREFERENCE](#), [RISK AVERSION](#). Compare [COMMON RATIO EFFECT](#), [ELLSBERG PARADOX](#), [MODIFIED ELLSBERG PARADOX](#), [ST PETERSBURG PARADOX](#). [Named after the French economist Maurice (Félix Charles) Allais (1911–2010) who formulated it in 1953]

allegro speech *n.* Rapid speaking exhibiting features typical of fluent, casual, connected speech, such as *strue* for *it's true*. See also [ELISION](#),

*****ebook converter DEMO Watermarks*****

HAPLOLOGY, INTRUSION. Compare LENTO SPEECH. [From Italian *allegro* rapid, from Latin *alacer* brisk]

allele *n.* Short for allelomorph, one of two or more alternative versions of a *gene that can occupy a particular locus on a chromosome, each responsible for a different characteristic or *phenotype, such as a different eye colour. A pair of alleles are often represented by upper-case and lower-case forms of the same roman letter, such as *A* and *a*. See also ADDITIVE ALLELES, ANTIMORPH, BALANCED POLYMORPHISM, COMPLEMENTATION, DOMINANT GENE, EPISTASIS, GENETIC POLYMORPHISM, HARDY–WEINBERG LAW, HETEROZYGOUS, HOMOZYGOUS, RECESSIVE GENE, SEGREGATION OF ALLELES. [From Greek *allel* one another]

allergen *n.* Any substance, usually a foreign protein, that functions as an *antigen and causes an allergic reaction. See ALLERGY. [From Greek *allos* other + *ergon* activity or work]

allergy *n.* An acquired hypersensitivity of the body to certain *antigens or *allergens. A typical example is hay fever, which is an allergy to certain types of pollen. Also, colloquially, any aversion or dislike. **allergic** *adj.* [From Greek *allos* other + *ergon* activity or work]

allesthesia See ALLAESTHESIA.

alliaceous *adj.* Of or relating to the taste or smell of garlic or onion. [From Latin *allium* garlic + *-aceus* of a certain kind, related to, or resembling]

allochiria *n.* Another name for *allaesthesia. [From Greek *allos* other + *cheir* a hand + *-ia* indicating a condition or quality]

allocortex *n.* All parts of the *cerebral cortex that do not belong to the six-layered *neocortex. See ARCHAEOCORTEX, MESOCORTEX, PALAEOCORTEX. [From Greek *allos* other + Latin *cortex* bark or outer layer]

allo-erotism *n.* In *psychoanalysis, sexual satisfaction through an external *instinctual object, in contrast to *auto-erotism. Also called *allo-*

eroticism . [From Greek *allos* other + *eros* love or sexual desire + *-ismos* indicating a state or condition]

allomone *n.* Any of a number of chemical substances with communicative functions, secreted externally by an organism and affecting the behaviour or physiology of members of one or more other species. *See also* [KAIROMONE](#). *Compare* [PHEROMONE](#). [From Greek *allos* other + *horman* to stimulate]

allomorph *n.* One of the variant forms assumed by a single [*morpheme](#) in different circumstances, such as each of the forms of the negating prefix *in-* in the words *indirect*, *irreducible*, *improbable*, and *ignoble*. **allomorphic** *adj.* [From Greek *allos* other + *morphe* form]

allopathy *n.* Orthodox pharmacological therapy for physical and mental disorders, using drugs having effects that are opposite to those of the disorder, in contradistinction to [*homeopathy](#). [From Greek *allos* other + *pathos* suffering]

allophone *n.* One of the variant forms of a single [*phoneme](#), such as the voiced non-fricative form of the phoneme /r/ in the word *row* or the voiceless fricative form of the same phoneme in the word *tree*. Further examples are the allophones of the phoneme /t/ in *tip* (aspirated), *stay* (unaspirated), *button* (nasalized), and *bottle* (laterally articulated). *See also* [PHONE](#). **allophonic** *adj.* [From Greek *allos* other + *phone* a sound]

alloplastic *adj.* Of or relating to [*adaptation \(1\)](#) through alteration of the external environment. *Compare* [AUTOPLASTIC](#). [From Greek *allos* other + *plastikos* mouldable, from *plassein* to form + *-ikos* of, relating to, or resembling]

all-or-none law *n.* A fundamental proposition about nerve impulses according to which the strength or intensity of a [*stimulus \(1\)](#) does not affect the properties of an [*action potential](#) that it initiates, although it may affect the frequency with which action potentials occur. Also called the *all-or-none principle* or the *all-or-nothing law* or *principle* . *See also* [RELATIVE REFRACTORY PERIOD](#).

Allport–Vernon–Lindzey Study of Values *n.* A test designed to measure the relative strengths of the six basic values identified by the German psychologist and educator Eduard Spranger (1882–1963) in his book *Lebensformen* (1914, English translation *Types of Men*, 1928), namely theoretical, economic, aesthetic, social, political, and religious. It consists of a series of multiple-choice questions referring to alternative activities or occupations from which the respondent chooses the ones that are most appealing. It is often interpreted as essentially an **interest inventory*. Also called the *Study of Values* . [Named after the US psychologist Gordon W(illard) Allport (1897–1967), the English psychologist Philip E(wart) Vernon (1905–87), and the US psychologist Gardner Lindzey (1920–2008) who published it jointly in its revised version in 1951, a preliminary version having been published by Allport and Vernon in 1931]

alogia *n.* Literally wordless, but usually (in relation to one of the **negative symptoms* of schizophrenia, for example) taken to mean impoverishment of thought inferred from **poverty of speech* or **poverty of content*. [From Greek *a-* without + *logia* words, from *logos* word + *-ia* indicating a condition or quality]

alpha-adrenergic receptor *See* ADRENERGIC RECEPTOR.

alpha blocking *n.* Suppression of the **alpha wave* in an **EEG* trace of a person who pays **attention* to or concentrates on something.

alpha element *n.* In **psychoanalysis*, a term introduced by the Indian-born British psychoanalyst Wilfred R(uprecht) Bion (1897–1979) to denote any mental element that is available for transformation by the **alpha function* into a **beta element*.

alpha fibre *n.* A large-diameter, thickly myelinated type of **efferent* somatic nerve fibre, such as the fibre supplying a **skeletal muscle*, composed of alpha motor neurons and having high conduction velocity. US *alpha fiber*. Also written *α fibre* . *Compare* C FIBRE, GAMMA FIBRE, IA FIBRE, IB FIBRE, II FIBRE. [From *alpha* (α) the first letter of the Greek alphabet]

alpha-foetoprotein *n.* A protein produced in the liver of a human foetus. Unusually low levels in the amniotic fluid or blood of an expectant mother may indicate **Down's syndrome* in the foetus, and unusually high levels of spina bifida. *See also* AMNIOCENTESIS. Also spelt *alpha-fetoprotein* . **afp** *abbrev.*

alpha function *n.* In **psychoanalysis*, a term introduced by the Indian-born British psychoanalyst Wilfred R(uprecht) Bion (1897–1979) to denote the process whereby the raw material of sensory experience, namely **beta elements*, are transformed into elements suitable for mental 'digestion' in the form of **alpha elements*.

alpha male *n.* The highest-ranked male member of a **dominance hierarchy*, **hook order*, or **pecking order*. Also written *α male* .

alpha-methylparatyrosine *n.* A chemical closely related to **tyrosine* that attaches to the enzyme **tyrosine hydroxylase*, preventing the enzyme from metabolizing tyrosine into **dopa*, causing a decrease in the synthesis of dopa, and therefore also of the **catecholamines* dopamine, adrenalin (epinephrine), and noradrenalin (norepinephrine). **AMPT** *abbrev.*

alpha motor neuron *n.* The largest type of spinal **motor neuron*, supplying **skeletal muscles* and forming **alpha fibres*. Also called an *alpha motoneuron* . *Compare* GAMMA MOTOR NEURON, RENSCHAW CELL.

alpha movement *n.* A form of **apparent movement* that is produced when stimuli of different sizes, such as bars of different lengths, are presented in an alternating pattern with an interstimulus interval of about 60 milliseconds, the visual illusion being created of a single object increasing and decreasing in size. Also called *alpha motion* . *See also* KORTE'S LAWS. *Compare* BETA MOVEMENT, DELTA MOVEMENT, GAMMA MOVEMENT.

alphanumeric *adj.* Of or relating to a character set, data set, or variable, consisting of letters of the alphabet, numerals, and usually a few other symbols such as punctuation marks and basic mathematical symbols. *See also* BYTE. [From *alphabet* + *numeric*]

alpha personality factor *n.* A higher-order factor, arising from the *Big Five personality factors, suggested by the US psychologist John Digman (1923–98) in an article in the *Journal of Personality and Social Psychology* in 1997. It combines *agreeableness, *conscientiousness, and (with negative weighting) *neuroticism. Digman suggested that it may represent social desirability or communion with other people. The US psychologist Colin G. DeYoung (born 1976) and others have suggested that it represents stability. *See also* BETA PERSONALITY FACTOR.

alpha receptor *n.* Another name for an alpha *adrenergic receptor.

alpha reliability coefficient *n.* Another name for *Cronbach's alpha.

alpha wave *n.* A high-amplitude *EEG wave with a frequency of 8–12 hertz, characteristic of relaxed wakefulness, usually in a person whose eyes are closed. Also called an *alpha rhythm*. *See also* ALPHA BLOCKING.

alprazolam *n.* A member of the *benzodiazepine group of drugs, used as a sedative and anxiolytic. Also called *Xanax* (trademark). *See also* SEDATIVE-, HYPNOTIC-, OR ANXIOLYTIC-RELATED DISORDERS.

altered state of consciousness *n.* Any abnormal form of *consciousness, including *derealization, *depersonalization, *hypnosis, *oceanic feeling, *peak experience, or intoxication with a *hallucinogen or *euphoriant drug. **ASC** *abbrev.*

alternating personality *n.* Another name for *multiple personality disorder. *See* DISSOCIATIVE IDENTITY DISORDER.

alternating perspective *n.* A *perspective reversal, or change in the apparent angle from which something is being viewed, that occurs while viewing certain *ambiguous figures such as the *Necker cube, *Schröder staircase, or *Scripture's blocks.

alternative forms *n.* In psychometrics, two or more similar versions of a psychometric test. If they are similar in content but have not been shown to

have similar psychometric properties, then they are also called *comparable forms*; if they have similar **means*, **standard deviations*, and **correlations* with other tests, then they are also called *parallel forms*; and if they are similar in all important psychometric properties, then they are also called *equivalent forms*. Also, especially in the US, called *alternate forms*.

alternative hypothesis *n.* In statistics, a hypothesis that functions as an alternative to the **null hypothesis* and typically asserts that the **independent variable* has an effect on the **dependent variable* that cannot be explained by chance alone. Also called an *experimental hypothesis*.

altricial *adj.* Of or relating to species of birds whose young are hatched naked, blind, and dependent on their parents for feeding in the nest. *Compare* *PRECOCIAL*. **altrices** *n.* Altricial birds. [From Latin *altrices* nurses, from *altrix* a nurse, from *alere* to nourish]

altruism *n.* In social psychology and sociobiology, behaviour that benefits another individual or other individuals in terms of direct advantages or chances of survival and reproduction at some cost to the benefactor. *See also* *ALARM SIGNAL*, *PROSOCIAL BEHAVIOUR*, *RECIPROCAL ALTRUISM*. **altruist** *n.* One who acts with altruism. **altruistic** *adj.* *Compare* *SELFISH*. [French *altruisme*, from Italian *altrui* others, from Latin *alteri huic* to this other]

altruistic suicide *See* *SUICIDE*.

alveolar *adj.* Pertaining to the alveolar ridge, the hard, bony part of the palate immediately behind the upper front teeth, and descriptive of speech sounds articulated with the tongue tip against the alveolar ridge, such as the initial sounds in the words *date*, *late*, *name*, *say*, *tea*, and *zoo*. *See also* *PLACE OF ARTICULATION*. **alveolus** *n.* [From Latin *alveolus* a small depression, referring to the tooth sockets]

Alzheimer's disease *n.* A degenerative brain disease, classified by **DSM-5* as a **neurocognitive disorder*, with insidious onset beginning before 65 years of age, followed by slow development over several years, characterized by **dementia* called *dementia of the Alzheimer type (DAT)*, loss of memory, and emotional instability, accompanied by postmortem evidence
*****ebook converter DEMO Watermarks*****

of **amyloid plaques*, **neurofibrillary tangles*, and other brain pathology, usually leading to death between four and twelve years after the onset of the disease. Some authorities believe that the amyloid plaques are responsible for the symptoms and that the neurofibrillary tangles are secondary; others believe that the neurofibrillary tangles are primary and the amyloid plaques are secondary. The disorder is associated with a deficit of the neurotransmitter **acetylcholine* and may be caused by **mutations* in **mitochondrial DNA*, by a defect in **chromosome* 14, 19, or 21, or by a **prion*. *See also* CLOCK DRAWING TEST, DOWN'S SYNDROME, MILD COGNITIVE IMPAIRMENT, MINI-MENTAL STATE EXAMINATION, NEUROGENESIS, NUCLEUS BASALIS OF MEYNERT. *Compare* PICK'S DISEASE, SDAT. **AD** *abbrev.* [Named after the German neurologist Alois Alzheimer (1864–1915) who first described the brain lesions associated with it in 1907]

amacrine *adj.* Lacking a conspicuous **axon*, referring especially to neurons in the middle layer of the **retina* that link **bipolar cells* and retinal **ganglion cells* and that make only lateral connections, their cell bodies lying in the **inner nuclear layer* and connecting with other cells in the **inner plexiform layer*. There are many different kinds, the functions of which are not well understood. *Compare* HORIZONTAL CELL. [From Greek *ama* as soon as + *krinein* to separate]

amafufunyane *n.* The plural form of the word **ufufunyane* in Nguni languages; a **culture-bound syndrome* found mainly among young women in Xhosa-speaking communities of southern Africa, exhibiting the same signs and symptoms as *ufufunyane*, and distinguished locally from *thwasa* (*see* SPELL). [From Xhosa *amafufunyane* characters or voices that have entered and taken control of a person, from *ukufuya* to possess (such things as herds of cattle) or to treat a person as a possession]

Amanita muscaria *n.* The **fly agaric* mushroom, sometimes eaten for its **psychedelic* effects. *See also* HALLUCINOGEN, MAGIC MUSHROOM, TEONANACTYL. *Compare* COHOBA. [Latin]

amantadine *n.* Amantadine hydrochloride, an antiviral drug that blocks the uptake of **dopamine* in the brain, increasing the amount that remains available, and is used in the treatment of **Parkinson's disease* and

*****ebook converter DEMO Watermarks*****

***neuroleptic-induced** conditions. Also called *Symmetrel* (trademark). See also **ANTIPARKINSONIAN**, **BORNA DISEASE VIRUS**. [An anagram of *adamantine* impregnable, impenetrable, or unbreakable]

amaurosis *n.* ***Blindness** without damage to the eyes, usually associated with lesions in the optic nerves. Compare **AMBLYOPIA**, **ANOPIA**. **amaurotic** *adj.* [From Greek *amauros* dark]

amaurotic familial idiocy *n.* Another name for ***Tay–Sachs disease**.

ambient system *n.* The aspect of vision that governs spatial orientation, using information from both ***central vision** and ***peripheral vision**. Compare **FOCAL SYSTEM**. [From Latin *ambiens* going around, from *ambi-* round or about + *ire* to go]

ambiguity aversion *n.* In decisions involving risk or uncertainty, a tendency to choose options for which the probabilities associated with the possible outcomes are known in preference to options for which the probabilities are unknown. The classic demonstration of this phenomenon is the ***Ellsberg paradox**. Also called *ambiguity avoidance* or the *ambiguity effect*. [From Latin *ambigere* to waver, from *ambi-* both ways + *agere* to drive]

ambiguity tolerance See **INTOLERANCE OF AMBIGUITY**.

ambiguous figure *n.* An image such as the ***duck-rabbit**, ***Mach illusion**, ***Necker cube**, ***reversible goblet**, ***Schröder staircase**, ***Scripture's blocks**, or ***young girl/old woman figure**, the perception of which appears to oscillate or flip involuntarily between (usually) two alternatives, one perception or interpretation completely excluding the other while it persists. Although such figures are not strictly illusory, they are almost invariably included in discussions of visual illusions. Also called an *oscillating figure* or a *reversible figure*. See also **FIGURE–GROUND REVERSAL**, **PERSPECTIVE REVERSAL**, **SPINNING DANCER ILLUSION**, **TOP-DOWN PROCESSING**, **VISUAL ILLUSION**. Compare **HYBRID IMAGE**, **IMPOSSIBLE FIGURE**.

ambilingual *adj.* **1.** Able to speak two languages equally fluently. *n.* **2.** A person who can speak two languages with equal facility. Also called a *balanced bilingual*. Compare **UNBALANCED BILINGUAL**. [From Latin *ambi-* both + *lingua* tongue + *-alis* of or relating to]

ambivalence *n.* The coexistence in one person of two opposing emotions, desires, beliefs, or behavioural tendencies directed towards the same ***instinctual object**, especially love and hate. The term was coined in 1910 by the Swiss psychiatrist Eugen Bleuler (1857–1939), who considered ambivalence to be a major sign of ***schizophrenia**, and Sigmund Freud (1856–1939) introduced it into ***psychoanalysis** in an article in 1912 on ‘The Dynamics of Transference’ (*Standard Edition*, XII, pp. 98–108). See also **DEFUSION OF INSTINCTS**, **DEPRESSIVE POSITION**, **PARANOID–SCHIZOID POSITION**. **ambivalent** *adj.* [From Latin *ambi-* both + *valens* being strong, from *valere* to be strong]

amblyacusia *n.* Any impairment of the sense of hearing. Also spelt *amblyacousia*. Also called *amblyacosis* or *amblyacousis*. **amblyacusic** *adj.* [From Greek *amblys* dull + *akousis* hearing, from *akouein* to hear + *-ia* indicating a condition or quality]

amblyaphia *n.* Any impairment of the sense of touch. [From Greek *amblys* dull + *haphe* touch + *-ia* indicating a condition or quality]

amblygeusia *n.* Any impairment of the sense of taste. [From Greek *amblys* dull + *geusis* taste + *-ia* indicating a condition or quality]

amblyopia *n.* Impaired vision without any apparent damage to the eye or the optic nerve. Compare **AMAUROSIS**, **ANOPIA**. [From Greek *amblys* dull + *ops* an eye + *-ia* indicating a condition or quality]

amblyopia ex anopsia *n.* ***Amblyopia** caused by disuse of an eye, especially monocular blindness associated with ***strabismus** and consequent suppression of the image from one eye through ***binocular rivalry**, the most common cause of amblyopia and of ***blindness** in general. Also spelt *amblyopia ex anoopsia*. Also called *suppression amblyopia*. [From Greek,

literally dull vision from sightlessness]

amenorrhoea *n.* Pathological absence of menstruation. US *amenorrhea*. [From Greek *a-* without + *men* month + *rhoia* a flow, from *rhein* to flow]

amentia *n.* Severe **intellectual disability*. Compare **DEMENTIA**. [From Latin *a-* without + *mens, mentis* a mind + *-ia* indicating a condition or quality]

American College Testing Program *n.* An **achievement test*, designed to measure academic ability, used to select candidates for admission to some colleges and universities in the US. It comprises four subtests in English, mathematics, natural sciences, and social sciences. Compare **SCHOLASTIC ASSESSMENT TEST**. **ACTP** *abbrev.*

American Sign Language *n.* A communication system for deaf people in the US in which meaning is conveyed by hand signals and the positions of the hands relative to the upper part of the body. See also **SIGN LANGUAGE**. Compare **BRITISH SIGN LANGUAGE**. Also called *Ameslan*. **ASL** *abbrev.*

Ameslan *n.* Another name for **American Sign Language*.

Ames room *n.* A distorted room that appears almost normal when viewed with one eye through a peephole in one of its walls, but the floor, ceiling, and side walls of which are actually trapezium-shaped (US *trapezoidal*) rather than rectangular, resulting in visual illusions relating to the sizes of objects or people within the room. Some viewers experience an ineffable strangeness that is believed to result from trying to accommodate the focal length of the eye to the far corners of the room that appear to be the same distance from the peephole but are not. Also called the *Ames illusion* or the *distorted-room illusion*. See also **HONI PHENOMENON**, **TRANSACTIONALISM**. Compare **TRAPEZOIDAL WINDOW**. [Named after the US painter and psychologist Adelbert Ames, Jr (1880–1955) who constructed the first such room in 1946, although the idea had been conceived in the late 19th century by the German physiologist, physicist, and mathematician Hermann Ludwig Ferdinand von Helmholtz (1821–94)]

Ames window *n.* Another name for the ***trapezoidal window**.

ametropia *n.* An imperfection in the refractive properties of the ***crystalline lens** of the eye, resulting in an inability to focus images on the retina and causing partial blindness. [From Greek *ametros* unmeasured, from *a-* without + *metron* a measure + *ops* an eye + *-ia* indicating a condition or quality]

amfetamine *See* AMPHETAMINE.

amimia *n.* Inability to make meaningful ***gestures (1)** or to understand the gestures of others. *See also* KINESICS. [From Greek *a-* without + *mimos* mime + *-ia* indicating a condition or quality]

amine *n.* An organic compound formed from ammonia by replacing one or more of the hydrogen atoms with one or more hydrocarbon ***radicals (2)**. Amines such as ***adrenalin** (epinephrine), ***noradrenalin** (norepinephrine), ***dopamine**, ***histamine**, ***serotonin**, and ***tryptamine** are of special importance in neurobiology because of their function as ***neurotransmitters**. *See also* BIOGENIC AMINE, CATECHOLAMINE, IMIDAZOLEAMINE, INDOLEAMINE, MONOAMINE. [From *am(monia)* + *-ine* indicating an organic compound]

amino acid *n.* Any of a group of organic compounds containing at least one amino group (NH₂) and one carboxyl group (COOH), just 20 of which from among more than 100 that occur in nature forming the component molecules of all ***peptides**, ***polypeptides**, and ***proteins** of which living cells are composed. They include non-essential amino acids, which can be synthesized in the body, and essential amino acids, which cannot be synthesized in the body and must therefore be supplied in the diet. *See* ASPARTIC ACID, CREATINE, DOPA, GLUTAMIC ACID, GLYCINE, PHENYLALANINE, TRYPTOPHAN, TYROSINE. *See also* CODON, GENETIC CODE.

Amitril *n.* A proprietary name for the tri-cyclic antidepressant drug ***amitriptyline**. [Trademark]

amitriptyline *n.* Amitriptyline hydrochloride, one of the most commonly

*****ebook converter DEMO Watermarks*****

prescribed of the ***tricyclic antidepressant** drugs, used in the treatment of depression, and of anorexia nervosa and bulimia nervosa when accompanied by depression, and as an adjunctive treatment of neurogenic pain. It acts by blocking the reuptake mechanism of amine ***neurotransmitters**, allowing them to accumulate at ***synapses (1)** in the central nervous system. Also called *Amitril*, *Elavil*, *Endep*, *Laroxyl*, *Saroten*, and *Triptafen* (trademarks). Formula: C₂₀H₂₃N.

Ammon's horn *n.* Another name for the main part of the ***hippocampus**. The entire hippocampal formation includes not only Ammon's horn but also the subiculum and the dentate gyrus. Also called *cornu ammonis*. [Named after the Egyptian deity Ammon, often depicted with a ram's head, somewhat resembling the shape of the hippocampus]

amnesia *n.* Loss of memory, the most common forms generally affecting ***declarative memory** rather than ***procedural memory**. See also ANTEROGRADE AMNESIA, CONFABULATION, GLOBAL AMNESIA, INFANTILE AMNESIA, MNEMONIC, RETROGRADE AMNESIA, SOURCE AMNESIA, TRANSIENT GLOBAL AMNESIA. Compare HYPERMNESIA. [From Greek *amnesia* oblivion, from *a-* without + *mnasthai* to remember + *-ia* indicating a condition or quality]

amnesic syndrome See AMNESTIC DISORDER.

amnesic disorder *n.* A ***mental disorder** characterized by a significant decline in the capacity to learn and recall new information, and often also a decline in the recall of previously learnt information or experiences, leading to impairment in social or occupational functioning, the symptoms not occurring exclusively during delirium or dementia. The disorder may result from a ***general medical condition**, including head injury, medication, or exposure to a toxin, and there is a variant form of substance-induced persisting amnesic disorder often caused by a deficiency of vitamins (especially thiamine) following prolonged alcohol misuse. Also called *amnesic syndrome*. See also COGNITIVE DISORDERS. [From Greek *amnestos* forgetting, from *a-* not + *mnasthai* to remember]

amniocentesis *n.* Extraction of a small amount of amniotic fluid through

a hollow needle from the uterus of a pregnant woman to detect foetal abnormalities such as **Down's syndrome*. See also *ALPHA-FOETOPROTEIN*. [From Greek *amnion* the innermost membrane enveloping an embryo + *kentesis* a puncture, from *kentein* to prick]

amobarbital *n.* Amylobarbitol sodium, a short-acting **barbiturate* drug and central nervous system **depressant*, used as a sedative and hypnotic drug, and sometimes taken as a street drug. Also called *amylobarbitone*. *Amytal* (trademark). Formula $C_{11}H_{18}N_2O_3Na$. [From *amyl*, from Greek *amylon* starch + *hyle* matter, *amyl* having been originally synthesized from starch + *barbit(uric) (acid)* + *-al* indicating a pharmaceutical product]

amodal completion *n.* Perceptual **filling-in* of an occluded region of an object or image. Compare *MODAL COMPLETION*, *PHONEMIC RESTORATION*. [From Latin *a* from or away from + *modus* a measure or manner + *-alis* of or relating to]

amok *n.* A **culture-bound syndrome* originally reported in Malaysia but later also in Indonesia, Laos, the Philippines, Papua New Guinea, Polynesia, Puerto Rico, and among the Navajo in North America, characterized by a period of hostile brooding, often precipitated by a perceived insult or affront, followed by an outburst of uncontrolled aggression directed at people and objects in the vicinity (*running amok*) with **paranoid ideation* and **automatism*, followed by exhaustion and **amnesia* for the violent behaviour. It is often interpreted in Western cultures as a **dissociative disorder*. Also called *amuck*. See also *CAFARD*, *IICH'AA*, *MAL DE PELEA*. [From Malay *amok* a furious assault]

amorphognosia *n.* Impaired ability to recognize by touch the size and shape of objects. Also called *amorphognosis*. See also *AGNOSIA*. Compare *AHYLOGNOSIA*, *TACTILE AGNOSIA*. [From Greek *a-* without + *morphe* form + *gnosis* knowledge + *-ia* indicating a condition or quality]

AMP *abbrev.* Adenosine monophosphate, a constituent **nucleotide* of **DNA* and **RNA* consisting of **adenine*, **deoxyribose*, and a **phosphate* group. Also called *adenylic acid*. See also *CYCLIC AMP*.

amphetamine *n.* A synthetic **sympathomimetic* drug that is often used as a street drug and as a medication to control the symptoms of narcolepsy in adults and attention-deficit/hyperactivity disorder and hyperkinetic disorders in children, and that acts as a central nervous system **stimulant*, causing the release of **noradrenalin* (norepinephrine) and **dopamine* from noradrenergic and dopaminergic neurons and blocking the reuptake of dopamine, leading to feelings of euphoria that can last for several hours, with occasional unpleasant side-effects such as panic, anxiety, paranoia, and insomnia. Also called *Benzedrine* (trademark) or *speed* (street name). Formula: C₉H₁₃N. See also AMPHETAMINE-RELATED DISORDERS, DEXTROAMPHETAMINE, METHAMPHETAMINE, METHYLPHENIDATE. Compare COCAINE, ECSTASY (2), MEPHEDRONE. [From its chemical composition *a*(lpha) + *m*(ethyl) + *ph*(enyl) + *et*(hyl) + *amine*]

amphetamine psychosis *n.* A condition resembling **schizophrenia* caused by an overdose of **amphetamine*.

amphetamine-related disorders *n.* **Substance-related* and **addictive disorders* associated specifically with **amphetamine* and amphetamine-like substances such as **dextroamphetamine* and **methamphetamine* (speed). Included among these disorders are amphetamine misuse, amphetamine dependence, and a range of amphetamine-induced disorders. See also SUBSTANCE-INDUCED DISORDERS.

amphiboly *n.* Ambiguity arising from alternative ways of parsing a sentence or interpreting its structure. For example, a sentence such as *Ann is married, and Bob is single, or Charles is divorced* may mean that Ann is married and either Bob is single or Charles is divorced; or it may mean that either both Ann is married and Bob is single, or else Charles is divorced. Amphiboly cannot arise in formal **logic*, a provable result that is sometimes called ‘unique readability’. Also called *amphibology*. **amphibolies** or **amphibologies** *pl.* **amphibolic**, **amphibological**, or **amphibolous** *adj.* [From Greek *amphibolos* ambiguous, from *amphi* both ways + *ballein* to throw]

amphipathic *adj.* Pertaining to a molecule that has one hydrophilic end (attracted to water) and one hydrophobic end (repulsed by water), such as are found in the **lipid* components of **cell membranes* and in detergents. See

also [LIPID BILAYER](#). [From Greek *amphi* both + *pathos* feeling + *-ikos* of, relating to, or resembling]

amplification *n.* Enlargement: expressing an idea more expansively, or increasing the [*amplitude](#) of a sound. In [*analytical psychology](#), [*interpretation](#) (2) of a dream-image through [*directed association](#) and exploration of mythology, mysticism, folklore, and cultural symbols. [From Latin *amplificare* to make more copious]

amplitude *n.* Size, extent, or magnitude, especially of a vibratory movement or the displacement of a periodic oscillation or wave, its *instantaneous amplitude* being its displacement at a specific moment from the zero or mean position and its *peak amplitude* being the maximum displacement that it attains, peak amplitude usually being implied when the term is unqualified. It is the physical counterpart of the psychological sensations of loudness in a sound wave and of lightness or brightness in a light wave. See also [DECIBEL](#). [From Latin *amplitudo* breadth, from *amplus* spacious]

ampulla *n.* A small vessel such as a miniature two-handled ancient Roman flask; also any membranous [*vesicle](#), especially the bulge in each [*semicircular canal](#) with its crest-shaped inner surface or crista containing [*hair cells](#). It is part of the [*vestibular system](#) and plays a part in sensations of body orientation. [From Latin *ampulla* a small flagon, irregular diminutive of *amphora* a flagon]

amputee See [ACROTOMORPHILIA](#), [APOTEMNOPHILIA](#).

amuck See [AMOK](#).

amurakh See [LATAH](#).

amusia *n.* Inability to recognize or reproduce tunes. Congenital amusia affects between 4 and 5 per cent of people and is believed to arise from a genetic defect in the ability to perceive the pitch structure of music. Famous people with this handicap include the Argentine-born Latin American

revolutionary Ernesto (Che) Guevara (1928–67) and the US economist and Nobel laureate Milton Friedman (1912–2006). Compare [ASONIA](#), [DYSMELODIA](#), [DYSMUSIA](#). [From Greek *a-* without + *mousika* (*teckne*) musical art, from *mousa* a muse]

amygdala *n.* An almond-shaped brain structure in the [*limbic system](#) at the base of the inside of each [*temporal lobe](#), contiguous with the olfactory cortex, controlling the experience and expression of emotion and involved in motivation, aggression, feeding, and (through its links with the hippocampus) long-term memory. Electrical stimulation of this area usually produces an intense emotion of fear. Ablation of the amygdala has been used to treat [*intermittent explosive disorder](#) or other forms of [*impulse-control disorder](#). Also called the *amygdaloid body* or *amygdaloid complex*. See also [KINDLING](#). **amygdalae** *pl.* [From Latin *amygdala* an almond, from Greek *amygdale* an almond]

amygdalohippocampectomy *n.* A neurosurgical procedure that is used for the treatment of certain forms of [*temporal lobe epilepsy](#) and that involves the removal of most of the [*amygdala](#) and the [*anterior](#) part of the [*hippocampus](#), the brain structures where the focus of the epilepsy is located.

amyl nitrite *n.* The best known of the [*nitrite inhalants](#), an amber-coloured, fruity-smelling liquid that acts as a peripheral [*vasodilator](#), functioning for some users as an [*aphrodisiac](#), and that also causes a decrease in oxygen in the brain. A common street name for amyl nitrite capsules is *poppers*. [From Greek *amylon* starch + *hyle* matter, amyl having been originally synthesized from starch + *nitrite* a salt or ester of nitrous acid]

amylbarbitone *n.* See [AMOBARBITAL](#).

amyloid plaque *n.* A deposit of insoluble beta-amyloid protein ([BAP](#)) occurring in the brains of most people over 70 years old, causing degeneration of neurons, and found abundantly in people with [*Alzheimer's disease](#), especially in the cerebral cortex, hippocampus, amygdala, and entorhinal cortex. The protein is made up of approximately 40 amino acids and is an abnormal breakdown product of a larger precursor protein that is encoded by a gene on chromosome 21 and is present in healthy brains,

*****ebook converter DEMO Watermarks*****

though with an unknown function. Also called a *senile plaque*. See also [NEUROFIBRILLARY TANGLE](#), [PROGRESSIVE SUPRANUCLEAR PALSY](#). [Named in 1853 by the German pathologist Rudolf Ludwig Karl Virchow (1821–1902) from Greek *amylon* starch + *-oeides* denoting resemblance of form, from *eidos* shape or form, based on the false assumption that it consists of a starchy substance]

amyotrophic lateral sclerosis *n.* A type of [*motor neuron disease](#) beginning in middle age and progressing rapidly, causing death within five years, characterized by weakness and [*atrophy](#) of the muscles initially of the hands, forearms, and legs, but spreading to most of the body and face, with [*dysarthria](#) and [*dysphagia](#). Also called *Lou Gehrig's disease*. **ALS** abbrev. [From Greek *a-* without + *mys* muscle + *trophe* nourishment]

Amytal *n.* A proprietary name for the short-acting barbiturate drug [*amobarbital](#) (amylobarbitone). [Trademark]

anabolic androgenic steroid See [ANABOLIC STEROID](#). **AAS** abbrev.

anabolic steroid *n.* Any of several synthetic [*steroid hormones](#) used clinically and by athletes to promote muscle tissue growth, with side-effects including [*mood](#) (1) swings, [*hallucinations](#), [*paranoia](#), liver damage, and elevated blood pressure. They sometimes induce a sense of euphoria and exaggerated self-importance, but after repeated use this may give way to listlessness, irritability, and general dysphoria. Among the most common are [*nandrolone](#) (injectable, slow-acting), [*drostanalone](#) (taken orally, fast-acting), [*oxymethalone](#) (taken orally), and [*stanozolol](#) (taken orally and popular with women because of its relatively low [*androgenic](#) potency). Also called an *anabolic androgenic steroid*. See also [PERFORMANCE ENHANCER](#), [ROID RAGE](#), [SUBSTANCE ABUSE](#), [SUBSTANCE-RELATED AND ADDICTIVE DISORDERS](#). Compare [STEROID](#). [From Greek *anabole* a heaping up, from *ana* up + *bole* a throw + *sterol* + *-oeides* denoting resemblance of form, from *eidos* shape]

anabolism *n.* A constructive form of [*metabolism](#) involving the synthesis of proteins and storage of energy. Compare [CATABOLISM](#). **anabolic** *adj.* [From Greek *anabole* a heaping up, from *ana* up + *bole* a throw + *-ismos* indicating a state or condition]

*****ebook converter DEMO Watermarks*****

anaclitic *adj.* In **psychoanalysis*, of, relating to, or characterized by strong emotional dependence on another person, exemplified by the behaviour of an infant at the mother's breast. Sigmund Freud (1856–1939) introduced the concept in 1905 in his book *Three Essays on the Theory of Sexuality* (*Standard Edition*, VII, pp. 130–243, at pp. 181–5). *See also* *ANACLITIC DEPRESSION*, *ANACLITIC OBJECT-CHOICE*. **anaclisis** *n.* The state or condition of being anaclitic. [From Greek *anaklitos* leaning up against, from *ana* up + *klinein* to lean + *-ikos* of or relating to]

anaclitic depression *n.* A form of **depression* manifested by infants, usually triggered by sudden separation from a parent after having had a normal relationship for at least six months, characterized by crying, apprehension, withdrawal, **anorexia*, and **dyssomnias*. The disorder was introduced and named in 1946 by the Austrian psychoanalyst René A(rpad) Spitz (1887–1974). *See also* *ANACLITIC*, *ATTACHMENT THEORY*, *HOSPITALISM*, *MATERNAL DEPRIVATION*, *SEPARATION ANXIETY*, *SEPARATION ANXIETY DISORDER*.

anaclitic object-choice *n.* In **psychoanalysis*, a form of **object-choice* in which one chooses a love-object to resemble a parental figure, being attracted to people who have the ability to feed, care, and protect one. It is usually explained by the fact that the sexual instinct initially develops **anaclitically* on the instinct of self-preservation. The concept was introduced in 1914 by Sigmund Freud (1856–1939) in an article ‘On Narcissism: An Introduction’ (*Standard Edition*, XIV, pp. 73–102, at pp. 87–90). *See also* *ANACLITIC*. *Compare* *NARCISSISTIC OBJECT-CHOICE*.

anacoluthon *n.* A sentence showing a lack of grammatical sequence, or a grammatical construction in which one part of a sentence does not fit grammatically with another, such as the following utterance: *The main reason for my feeling of guilt—and I'm not the sort of person given to wallowing in guilt, although I have had periods in my life when I felt depressed, probably because both my parents tended to be depressives.* **anacolutha** *pl.* **anacoluthic** *adj.* [From Greek *an-* not + *akolouthos* following]

anacusia *n.* Total **deafness*. Also spelt *anacousia*. Also called *anacusis* or *anacousis*. **anacusic** *adj.* [From Greek *an-* without + *akousis* hearing, from
*****ebook converter DEMO Watermarks*****]

akouein to hear + *-ia* indicating a condition or quality]

anaerobic *adj.* Of or relating to the generation of energy by a form of **metabolism* not requiring oxygen or air. *See also* [FAST GLYCOLYTIC FIBRE](#), [GLYCOLYSIS](#). *Compare* [AEROBIC](#). [From Greek *an-* without + *aer* air + *bios* life + *-ikos* of, relating to, or resembling]

anaesthesia *n.* Absence of sensation or feeling, often resulting from a disorder or induced by **anaesthetic* (1) drugs or **hypnosis*, called *general anaesthesia* when it involves loss of consciousness and *local anaesthesia* when it affects only a restricted area of the body. US *anesthesia*. *See also* [ACUPUNCTURE](#), [BATHYANAESTHESIA](#), [CONVERSION SYMPTOM](#), [EPIDURAL ANAESTHETIC](#), [GATE-CONTROL THEORY](#), [GLOVE ANAESTHESIA](#), [NARCOTIC](#), [PALLANAESTHESIA](#), [RAUSCH](#), [SHOE ANAESTHESIA](#), [STOCKING ANAESTHESIA](#). *Compare* [ANALGESIA](#). [Coined in 1846 by the US anatomist and writer Oliver Wendell Holmes (1809–94) from Greek *anaesthesia* absence of sensation, from *an-* without + *aisthesis* feeling + *-ia* indicating a condition or quality]

anaesthetic *n.* 1. Any drug or substance that induces **anaesthesia*. *adj.* 2. Inducing or characterized by **anaesthesia*. US *anesthetic*.

Anafranil *n.* A proprietary name for the drug **clomipramine*. [Trademark]

anaglyph *n.* A stereoscopic image composed of two separate images of the same object or scene, taken from slightly different positions, represented in two different colours, usually red and green or cyan (blue–green) that, when viewed through spectacles having one lens of each colour, merge to produce a three-dimensional effect. The term is also applied to any artwork such as a cameo that is designed to stand out in low relief. *See also* [CYCLOPEAN PERCEPTION](#), [RANDOM-DOT STEREOGRAM](#), [STEREOPSIS](#), [VISUAL ILLUSION](#). **anaglyphic**, **anaglyphical**, **anaglyptic**, or **anaglyptical** *adj.* [From Greek *anaglyphe* carved in low relief, from *ana-* backwards or up + *glyphe* an engraving or carving, from *glyphein* to engrave or carve]

anaglyptoscope *n.* An instrument that alters the angle of incident light on a three-dimensional object, reversing the areas of light and shadow, used in research into **chiaroscuro*. [From *anaglyph* + Greek *skopeein* to view]

*****ebook converter DEMO Watermarks*****

anagogic interpretation *n.* In **psychoanalysis*, a mode of **interpretation* of dreams, myths, and other symbolic representations in order to reveal their higher allegorical or spiritual meaning. It is considered to be the opposite of ordinary analytic interpretation, which on the contrary reduces such material to its basic and often sexual content. Carl Gustav Jung (1875–1961) incorporated anagogic interpretation into his **analytical psychology*, but Sigmund Freud (1856–1939) rejected it as merely a reversion to pre-analytic notions ('Dreams and Telepathy', 1922, *Standard Edition*, XVIII, pp. 197–220, at p. 216). [From Greek *anagoge* a lifting up, from *ana* up + *agein* to lead]

anal character *n.* In **psychoanalysis*, a personality pattern determined by **fixation* (2) at the **anal stage* and characterized by the adult personality traits of orderliness, frugality, and obstinacy, sometimes called the three *Ps*: pedantry, parsimony, and petulance. Also called the *anal personality*. See *ANAL TRIAD*. See also *OBSESSIVE–COMPULSIVE PERSONALITY DISORDER*.

analeptic *adj.* 1. Restorative or invigorating. *n.* 2. A restorative or invigorating drug, especially one that helps to restore consciousness after a general anaesthetic. See also *PSYCHOANALEPTIC*. [From Greek *analeptikos* restorative, from *analambanein* to take up, from *ana* up + *lambanein* to take + *-itikos* resembling or marked by]

anal erotism *n.* In **psychoanalysis*, sensuous pleasure derived from stimulation of the anus, and focusing of **libido* on the anus during the **anal stage*. Also called *anal eroticism*. **anal-erotic** *adj.*

anal-expulsive phase *n.* A subdivision of the **anal stage* suggested in 1924 by the German psychoanalyst Karl Abraham (1877–1925) in his book *Versuch einer Entwicklungsgeschichte der Libido* (A Study of the Developmental History of the Libido). In this first phase, **anal erotism* is linked to evacuation of the bowels, and the sadistic instinct is satisfied through destruction of faeces; whereas in the second **anal-retentive phase*, anal erotism is associated with retention of faeces, and the sadistic instinct is linked to possessive control. Abraham believed that the progression from the first to the second of these two phases is crucial for the later development of the ability to form loving relationships. Also called the *anal-expulsive stage*.

*****ebook converter DEMO Watermarks*****

analgesia *n.* Absence or diminution of **pain* sensation, often induced by **analgesic* drugs or **hypnosis*. See also AUDIOANALGESIA, HIDDEN OBSERVER, NEODISSOCIATION THEORY, THERMOANALGESIA. Compare ANAESTHESIA. [From Greek *an-* without + *algesis* sense of pain, from *algos* pain + *-ia* indicating a condition or quality]

analgesic *n.* 1. Any drug or substance that induces **analgesia*. See ASPIRIN, BETA-ENDORPHIN, CARBAMAZEPINE, CODEINE, NARCOTIC ANALGESIC, QUININE. See also PHENYLQUININE WRITHING TEST. *adj.* 2. Inducing or characterized by **analgesia*.

analogies test *n.* A type of **intelligence test* item requiring logical thinking, usually presented in the form *A is to B as C is to...*, sometimes followed by a number of alternatives from which a selection must be made, the right answer in this example being *D*. Another easy example is *Bird is to air as fish is to...*, the right answer being *water*. A typical hard example with response alternatives is: *C is to X as F is to...(M, U, L, V, or H)*. Although arguments could be developed to justify various answers, the ‘right’ answer to this item is *U*, because *C* and *X* are three letters from either end of the alphabet, and *F* and *U* are six letters from either end.

analogue *n.* 1. Something that is seen as comparable to another; specifically, a physical representation, such as a pointer on a dial, of a quantity being measured; an organ or body part resembling another; an organic compound related to another by the replacement of hydrogen atoms by alkyl groups. *adj. n.* 2. (Of or pertaining to) a form of **knowledge representation* in which continuously varying dimensions or relations between elements of the thing being represented correspond to continuously varying dimensions or relations between parts of the representation, so that the representations resemble the things that they represent. Also spelt *analog*, especially in the US, where it is a variant form, and in computing terminology. Compare DIGITAL, SYMBOLIC REPRESENTATION. **analogical** or **analogic** *adj.* [From Greek *analogos* proportionate, from *ana* up + *logos* word, discourse, or reason]

anal-retentive phase *n.* The second phase of the **anal stage* according

*****ebook converter DEMO Watermarks*****

to a suggestion made in 1924 by the German psychoanalyst Karl Abraham (1877–1925) in his book *Versuch einer Entwicklungsgeschichte der Libido* (A Study of the Developmental History of the Libido). In the first ***anal-expulsive phase**, ***anal erotism** is linked to evacuation of the bowels and the sadistic instinct is satisfied by destruction of faeces, whereas in this second anal-retentive phase, anal erotism is associated with retention of faeces, and the sadistic instinct is satisfied by possessive control. Also called the *anal-retentive stage*.

anal sadistic stage *n.* Another name for the ***anal stage**.

anal stage *n.* According to the theory of ***psychoanalysis** of Sigmund Freud (1856–1939), the second ***libidinal stage** of ***psychosexual development**, from about 2 to 3 years of age, characterized by a focusing of ***libido** on the anal ***erotogenic zone**, an investment of ***object-relationships** with meanings associated with faeces and defecation, and a strengthening of ***sadomasochistic tendencies**. In an article entitled ‘The Disposition to Obsessional Neurosis’ (1913), Freud mentioned it for the first time: ‘And now we see the need for yet another stage to be inserted before the final shape is reached—a stage in which the component instincts have already come together for the choice of an object and that object is already something extraneous in contrast to the subject's own self, but in which the primacy of the genital zones has not yet been established’ (*Standard Edition*, XII, pp. 317–26, at p. 321). When in 1915 Freud revised his book *Three Essays on the Theory of Sexuality* (1905, *Standard Edition*, VII, pp. 130–243), he placed the anal stage between the ***oral stage** and the ***phallic stage**. In his 1917 article ‘On Transformations of Instinct as Exemplified in Anal Erotism’ (*Standard Edition*, XVII, pp. 127–33), he famously interpreted the symbolic meaning of giving and withholding: faeces = gifts (to parents or carers), and gifts = money, hence such phrases as *filthy lucre*. Also called the *anal-sadistic stage* or *phase*. See **ANAL-EXPULSIVE PHASE**, **ANAL-RETENTIVE PHASE**. See also **ANAL CHARACTER**, **GENITAL STAGE**, **LATENCY PERIOD**.

anal triad *n.* In ***psychoanalysis**, the three personality ***traits** of orderliness, parsimony (or meanness), and obstinacy, first identified by Sigmund Freud (1856–1939) as the distinctive adult traits associated with imperfect negotiation of the ***anal stage** of development (‘Character and Anal

*****ebook converter DEMO Watermarks*****

Erotism', 1908, *Standard Edition*, IX, pp. 169–75). The traits are sometimes called the three *Ps*: pedantry, parsimony, and petulance. See also ANAL CHARACTER, FIXATION (2), OBSESSIVE–COMPULSIVE PERSONALITY DISORDER.

analysand *n.* A person undergoing *psychoanalysis. [From *analysis* + *-and*, following the model of *multiplicand*, a number that is to be multiplied]

analysis *n.* The action or process of analysing; also, an abbreviated name for *psychoanalysis.

analysis by synthesis *n.* A recognition process in which hypotheses are formulated and compared with input data until one of the hypotheses produces a match. This is how experienced crossword-puzzle solvers often identify words with missing letters, for example, if the clue is *Via the middle route in South America*, a solver who knows that the answer is a four-letter word with the form — E — U may be unable to work out the logic of the clue but may guess that the answer is the name of a South American city or country and may test various hypotheses until finding one that fits, namely *PERU*. It involves both *bottom-up processing and *top-down processing.

analysis of covariance *n.* In statistics, a technique of data analysis based on *analysis of variance (ANOVA) that uses statistical control to remove the effect of an *extraneous variable, known or assumed to be correlated with the *dependent variable, and analyses the portion of the variance in the dependent variable explained by one or more *independent variables excluding the extraneous variable. In psychology, it is often used to suppress extraneous subject variables such as intelligence or age that cannot be controlled by *randomization. See also ANALYSIS OF COVARIANCE STRUCTURES, COVARIATE. ANCOVA *abbrev.*

analysis of covariance structures *n.* A statistical method, combining techniques of *factor analysis and *multiple regression, for analysing *causal models derived from *correlational studies. It generally involves *structural equation modelling and sometimes *path diagrams. See also ANALYSIS OF COVARIANCE (ANCOVA).

analysis of variance *n.* A statistical procedure for testing the
*****ebook converter DEMO Watermarks*****

significance of differences among several group means by partitioning the total variance in the **dependent variable* into effects due to the **independent variable* (in *one-way ANOVA*) or each of the two or more independent variables (in *multifactorial ANOVA*) plus error variance. In multifactorial designs the proportion of the total variance due to **interaction effects* involving two or more independent variables is also estimated. The term was introduced by the English statistician and geneticist Ronald Aylmer Fisher (1890–1962) in an article in the journal *Eugenics Review* in 1918. *See also* *A POSTERIORI TEST*, *MULTIPLE COMPARISONS*, *PLANNED COMPARISON*, *REPEATED-MEASURES ANALYSIS OF VARIANCE*. *Compare* *ANALYSIS OF COVARIANCE (ANCOVA)*, *MULTIVARIATE ANALYSIS OF VARIANCE (MANOVA)*. **ANOVA** *abbrev.*

analyst *n.* One who analyses. In **psychoanalysis*, another name for a **psychoanalyst*.

analytical psychology *n.* A term introduced by Carl Gustav Jung (1875–1961) in 1913, the year he left the **psychoanalytic* movement, to denote the new approach that he saw as having evolved out of psychoanalysis under his leadership. Also called *Jungian analysis*. *See* *ABAISSEMENT DU NIVEAU MENTAL*, *ACTIVE IMAGINATION*, *AMPLIFICATION*, *ANAGOGIC INTERPRETATION*, *ANIMA*, *ANIMUS* (3), *ARCHETYPAL FORM*, *ARCHETYPE* (2), *COLLECTIVE UNCONSCIOUS*, *COMPLEX INDICATOR*, *DIRECTED ASSOCIATION*, *DIRECTED THINKING*, *ELECTRA COMPLEX*, *ENANTIODROMIA*, *EXTRAVERSION*, *FANTASY THINKING*, *FUNCTION TYPE*, *GOD-IMAGE*, *HORME*, *IMAGO* (1), *INDIVIDUATION*, *INFLATION OF CONSCIOUSNESS*, *INTROVERSION*, *MANA*, *MANDALA*, *NUMINOSUM*, *OBJECTIVE PSYCHE*, *PARTICIPATION MYSTIQUE*, *PERSONA* (1), *PERSONAL UNCONSCIOUS*, *PRIMORDIAL IMAGE*, *PSYCHOID*, *PSYCHOPOMP*, *PUER AETERNUS*, *REDUCTIVE INTERPRETATION*, *SHADOW* (2), *SYNCHRONICITY*, *SYZYGY*, *UROBOROS*, *WORD-ASSOCIATION TEST*.

analytic language *n.* Another name for an **isolating language*.

analytic statement *n.* In **logic*, a declarative statement in which the predicate is contained in the subject. Such a statement cannot be confirmed or refuted by observation or experience, and its negation is either directly or implicitly self-contradictory. One example is the statement *All bachelors are unmarried*; another is *God is omnipotent*, provided that omnipotence is part

*****ebook converter DEMO Watermarks*****

of the definition of God. The truth or falsity of an analytic statement or proposition is ***a priori**. Also called an *analytic proposition*. Compare **SYNTHETIC STATEMENT**. [From Greek *analytikos*, analytic, from *analyzein* to break down or dissolve, from *ana-* down + *lyein* to loosen]

anamnesis *n.* 1. ***Reminiscence**, or the ability to recall past experiences. 2. The account of a patient or client of the antecedents and course of a disorder. Compare **CATAMNESIS**. **anamneses** *pl.* **anamnestic** *adj.* Easily recalled. [From Greek *anamimneskein* to recall, from *ana* up + *mimneskein* to remind]

anamorphic *adj.* Of, relating to, or consisting of a distorted image that regains its correct proportions when viewed from a particular angle or in a curved mirror. An anamorphic picture or image is usually so distorted that it is difficult or impossible to interpret with normal viewing, but when examined with an *anamorphoscope* (usually a polished cylinder or cone), or when viewed at a steep slant, the distortion is corrected and the normal proportions of the image are restored, the most famous example in fine art being *The Ambassadors* painted in 1533 by the German artist Hans Holbein the Younger (1497–1543), which contains an elongated human skull that becomes recognizable only when the painting is viewed from its edge at a downward angle of 27 degrees. [From Greek *ana* back or again + *morphe* a shape or form + *-ikos* of, relating to, or resembling]

anandamide *n.* A naturally occurring substance in the brain that stimulates the same receptors as the psychotropic substances in ***cannabis**. [From Sanskrit *ananda* perfect bliss, from *a-* intensive prefix + *nandi* joy + *amide* an organic compound containing the group —CONH₂, from *am(monia)* + *-ide* indicating membership of a particular group of chemical compounds]

anankastic neurosis See **OBSESSIVE—COMPULSIVE DISORDER**. [From Greek *ananke* necessity]

anankastic personality disorder *n.* Another name for ***obsessive—compulsive personality disorder**.

anaphase *n.* The third phase of cell division by [*mitosis](#), when the paired chromosomes move apart to the poles of the spindle, or either of the two phases when this occurs during [*meiosis \(1\)](#). [From Greek *ana* up + *phasis* an aspect, from *phainein* to show]

anaphia *n.* Absence of the sense of touch. [From Greek *a-* without + *haphe* touch + *-ia* indicating a condition or quality]

anaphora *n.* In speaking or writing, the use of a pronoun or other word to refer back to something already mentioned in the sentence. In the sentence *When Wundt founded the world's first psychological laboratory in 1879, he did it in Leipzig*, the words *he*, *did*, and *it* all exemplify anaphora, because they refer back to *Wundt*, *founded*, and *founded the world's first psychological laboratory*, respectively. See also [DEIXIS](#). Compare [CATAPHORA](#).
anaphoric *adj.* [From Greek *ana-* backwards + *pherein* to carry]

anaphrodisiac *adj. n.* (Of or relating to) any substance that diminishes sexual desire. Many therapeutic drugs, including the [*selective serotonin reuptake inhibitors](#) such as Prozac, have anaphrodisiac side-effects. Compare [APHRODISIAC](#). [From Greek *an-* without + *aphrodisiakos* aphrodisiac, from *Aphrodite* the Greek goddess of love]

anaphylactic shock *n.* A form of [*traumatic shock](#) caused by [*anaphylaxis](#).

anaphylaxis *n.* Heightened sensitivity to a foreign substance, such as penicillin or bee sting, often but not necessarily a [*protein](#), resulting from earlier exposure to it. [From Greek *ana* back + *phylaxis* protection]

anarchic hand *n.* A rare [*neurological](#) condition, leading to complex, goal-directed actions performed by a person's hand involuntarily and against its owner's will. It is associated with lesions in the anterior [*corpus callosum](#) and the [*supplementary motor area](#) in the opposite cerebral hemisphere to the anarchic hand and is a symptom of [*disconnection syndrome](#). It was first reported by the German psychiatrist Kurt Goldstein (1878–1965) in the journal *Neurologische Centralblatt* in 1909 and named by the Italian

neurologist Sergio Della Sala (born 1955) and two colleagues in an article in the journal *Neuropsychologia* in 1991. Also called *Dr Strangelove syndrome*, after the eponymous rocket scientist played by Peter Sellers in Stanley Kubrick's 1964 film, *Dr Strangelove or: How I Learned to Stop Worrying and Love the Bomb*, who struggles constantly to prevent his right hand from giving Nazi salutes. Compare [ALIEN HAND SIGN](#), [RUBBER HAND PHENOMENON](#). **AH** abbrev. [From Greek *anarchia* lawlessness or leaderlessness, from *an-* not + *arche* government + *-ikos* of, relating to, or resembling]

anarthria *n.* Inability to speak coherently. [From Greek *an-* without + *arthron* articulation + *-ia* indicating a condition or quality]

anchoring and adjustment *n.* A judgemental [*heuristic](#) through which a person makes an estimate by starting from an initial value and then adjusting it to yield a final estimate, the adjustment typically being insufficient and the estimate therefore biased towards the initial value. The initial value may be suggested by the formulation of the problem, as in a classic experiment in which people were asked to estimate the number of African countries in the United Nations by first indicating whether a number suggested by the experimenter was too high or too low and then estimating the actual number; those who began from a suggested number of 10 gave a median estimate of 25 (too low), and those who began from 65 gave a median estimate of 45 (too high). Alternatively, the initial value may result from partial computation, as in another classic experiment in which high school students who were given five seconds to estimate the value of the product $1 \times 2 \times 3 \times 4 \times 5 \times 6 \times 7 \times 8$ produced a median estimate of 512 (too low), whereas those asked to estimate the product $8 \times 7 \times 6 \times 5 \times 4 \times 3 \times 2 \times 1$ produced a median estimate of 2,250 (too high), apparently because members of both groups calculated the first few steps and then extrapolated without sufficient adjustment. When [*revealed preferences](#) are determined empirically, the technique of asking decision makers whether they prefer various gambles to a fixed alternative tends to lead to anchoring and adjustment on the probability scale, whereas asking them how much they would be willing to stake on the gamble tends to lead to anchoring and adjustment on the money scale. The heuristic was first introduced in 1971 by the US psychologists Paul Slovic (born 1938) and Sarah C. Lichtenstein (born 1933). See also [OVERCONFIDENCE EFFECT](#), [PREFERENCE REVERSAL \(1\)](#).

*****ebook converter DEMO Watermarks*****

anchor test *n.* In psychometrics, a common set of test items administered in combination with two or more **alternative forms* of the test with the aim of establishing the equivalence of the scores on the alternative forms.

ancient mariner effect *n.* A tendency for people to be more willing to disclose intimate details of their lives to strangers than to acquaintances. Also called the *passing stranger effect*. [Named after Samuel Taylor Coleridge's poem *The Rime of the Ancient Mariner* (1798), in which the aged sailor tells his horrific story over and over again to strangers]

androgen *n.* A male sex hormone such as **testosterone* or **androsterone* that is produced by the testes and that promotes the development of male sexual organs and masculine **secondary sexual characteristics*, or a synthetic substance with a similar pharmacological action. **androgenic** *adj.* Of or relating to androgens. [From Greek *andros* a man + *genes* born or produced]

androgen decline in the ageing male *n.* A form of **irritable male syndrome*. US *aging*. **ADAM** *abbrev.*

androgenization *n.* The process whereby exposure to **androgens* causes male sex organs to develop in an embryo.

androgenous *adj.* Producing only male offspring. Often confused with **androgynous*, which has a different meaning and a different etymology. [From Greek *andros* a man + *genes* born or produced + *-ous* having or characterized by]

androgynous *adj.* Having both male and female characteristics. Often confused with **androgenous*. See also *BEM SEX ROLE INVENTORY*, *EPICENE (1)*.

androgyny *n.* The condition or state of being androgynous. [From Greek *andros* a man + *gyne* a woman + *-ous* having or characterized by]

andromania *n.* Another name for **nymphomania*. [From Greek *andros* a man + *mania* madness + *-ia* indicating a condition or quality]

andropause *n.* A male counterpart of the female **menopause*, caused

chiefly by a decline in the level of ***testosterone** in the blood, typically about 1 per cent per annum from age 40 onwards. Symptoms include decreased ***libido**, ***asthenia**, ***impotence**, and ***depression**. See also **IRRITABLE MALE SYNDROME**. [From Greek *andros* a man + *pausis* a halt]

androsterone *n.* An ***androgen** steroid hormone, less active than ***testosterone**, produced in the testes and detectable in men's urine, synthesized artificially from cholesterol. [From *andro(gen)* + *ster(ol)* + (*horm*)one]

anecdotal evidence *n.* Evidence obtained informally from isolated observations rather than from systematic investigation, seldom collected with sufficient care or reported in sufficient detail to be trusted as a basis for generalization, but often a source of hypotheses for further investigation.

anechoic room *n.* A room specially designed to minimize the penetration of sounds from outside and reflections of sounds from surfaces on the inside. [From Greek *an-* without + *echo* a sound + Latin *-icus* of, relating to, or resembling]

anergasia *n.* Loss of function, especially in relation to ***organic disorders**. [From Greek *an-* without + *ergasia* work or business]

anergia *n.* Listlessness or lack of activity. **anergic** *adj.* [From Greek *an-* without + *ergon* work + *-ia* indicating a condition or quality]

anesthesia See **ANAESTHESIA**.

aneurysm *n.* An abnormal dilation of a blood vessel at a point where its wall is weakened, either in the brain (where it can lead to a ***stroke**) or elsewhere in the body. Also spelt *aneurism*. [From Greek *aneurysma* an aneurysm, from *ana* up + *eurys* wide]

angel dust *n.* A common street name for the depressant drug ***phencyclidine**.

angina *n.* Short for angina pectoris, a sudden and intense chest pain, generally following physical exertion, often radiating towards the left shoulder and arm and accompanied by feelings of suffocation, caused by an inadequate blood supply to the heart muscle. *See also* [REFERRED PAIN](#). [From Latin *angina* quinsy, from Greek *anchone* a strangling]

angiogram *n.* An X-ray image of the blood vessels of the brain or other organ made after injecting a contrast medium, usually containing iodine, that is opaque to X-rays. *See also* [BRAIN IMAGING](#). **angiography** *n.* The process of producing angiograms. [From Greek *angeion* a (blood) vessel + *gramme* a line]

angiotensin II *n.* A polypeptide hormone that causes constriction of the blood vessels, raising blood pressure, precipitates [*adrenalin](#) release and blocks its reuptake, and stimulates the release of [*aldosterone](#), thereby promoting sodium retention. The hormone [*renin](#), which is secreted by the kidneys in response to a decline in blood pressure, converts a plasma protein to angiotensin I, and this in turn is converted to angiotensin II by angiotensin converting enzyme. [From Greek *angeion* a (blood) vessel + Latin *tensus* tight, from *tendere* to stretch + *-in(a)* indicating an organic compound]

angst *n.* **1.** An unfocused feeling of anxiety. **2.** In [*existentialism](#) in general and [*existential therapy](#) in particular, the dread arising from the realization that one's existence leads to an undetermined future, the emptiness of which must be filled by freely chosen actions. **3.** In [*psychoanalysis](#), anxiety, which is distinguished from fright (*Schreck*), and fear (*Furcht*) according to Sigmund Freud (1856–1939) in his book *Beyond the Pleasure Principle* (1920). Anxiety ‘describes a particular state of expecting the danger or preparing for it, even though it may be an unknown one’; fright ‘is the name we give to the state a person gets into when he has run into danger without being prepared for it’; and fear ‘requires a definite object of which to be afraid’ (*Standard Edition*, XVIII, pp. 7–64, at pp. 12–13). **angsty** *adj.* [From German *Angst* fear]

angstrom *n.* One ten billionth of a metre (10^{-10} metre) or one ten millionth of a millimetre, used mainly for expressing wavelengths of light and other electromagnetic radiation. The [*visible spectrum](#) extends from
*****ebook converter DEMO Watermarks*****

approximately 3,900 angstroms at the violet end of the spectrum to 7,400 angstroms at the red end. Also called an *angstrom unit*, but that usage is obsolescent. Also written *Ångström*, *Ångström unit*. Compare [NANOMETRE](#). [Named after the Swedish physicist Anders Jonas Ångström (1814–74) who introduced it]

angular gyrus *n.* The **gyrus* immediately behind **Wernicke's area* that curves round the back of the **lateral sulcus* of each cerebral hemisphere, on the border of the parietal and temporal lobes. It is implicated in the control of visual gaze, and in the left hemisphere it has a specialized language function, lesions in this area being associated with nominal aphasia (see [APHASIA](#)). See also [DEFAULT MODE NETWORK](#).

angular size *n.* The magnitude of an object or image expressed in terms of the **visual angle* that it subtends at the eye. See also [SIZE CONSTANCY](#).

anhedonia *n.* Inability to experience pleasure or interest in formerly pleasurable activities. Compare [HYPOHEDONIA](#). **anhedonic** *adj.* [From Greek *an-* without + *hedone* pleasure + *-ia* indicating a condition or quality]

aniconia *n.* Absence of mental imagery. [From Greek *an-* without + *eikon* an image + *-ia* indicating a condition or quality]

anima *n.* In **analytical psychology*, the feminine principle as represented in the male unconscious, an **archetype* (2) forming part of the **collective unconscious*, representing the feminine aspect of human nature, characterized by imagination, fantasy, and play, manifesting itself in personified form in dreams and fantasies, and acting as a **psychopomp* connecting the **ego* and the unconscious. As Carl Gustav Jung (1875–1961) described it: ‘Every man carries with him the eternal image of woman, not the image of this or that particular woman, but a definitive feminine image. This image is fundamentally unconscious, an hereditary factor of primordial origin engraved in the living organic system of the man, an imprint or “archetype” of all the ancestral experiences of the female, a deposit, as it were, of all the impressions ever made by woman’ (*Collected Works*, 17, paragraph 338). See also [IMAGO](#) (1), [SYZYGY](#). Compare [ANIMUS](#) (3). [From Latin *anima* air, breath, or spirit]

*****ebook converter DEMO Watermarks*****

animal magnetism *n.* A term introduced in 1779 by the Viennese physician Franz Anton Mesmer (1734–1815) for a substance resembling ordinary magnetism (believed also to be a substance) that he claimed to have discovered in human bodies and that could be channelled, stored, and transmitted between people. Two Royal Commissions in France, where Mesmer was then practising, investigated this claim in 1784 and declared that the effects that Mesmer had reported were in fact due to touch, imagination, and imitation. Mesmer's work is often cited as the basis for later research into **hypnosis*, but animal magnetism was not hypnosis, and there is no evidence that Mesmer ever hypnotized anyone. Also called *mesmerism*.

animal psychology *n.* The study of animal behaviour through laboratory experimentation. *See also* *COMPARATIVE PSYCHOLOGY*. *Compare* *ETHOLOGY*.

animism *n.* 1. The ascription of psychological **attributes* such as desires and intentions to plants, inanimate objects, or natural phenomena. The term was first used in this sense by the British social anthropologist Sir Edward Burnett Tylor (1832–1917) in his book *Primitive Culture* (1871) to describe the beliefs of the 'runder tribes' of India, who believed, for example, that the sun shines in order to provide warmth. Although the French anthropologist Lucien Lévy-Bruhl (1857–1939) criticized such usage in 1910 in his book *Les Fonctions Mentales dans les Sociétés Inférieures* (translated into English under the less provocative title *How Natives Think*), the Swiss psychologist Jean Piaget (1896–1980) adopted the term to describe the thinking of children who have not yet learned to distinguish animate from inanimate objects and popularized this usage in his book *La Représentation du Monde chez l'Enfant* (The Child's Conception of the World), first published in 1926. According to Piaget, animistic thinking undergoes four stages of development: first, between 4 and 6 years of age, children believe that everything is alive; second, between 6 and 7 years, they believe that everything that moves is alive; third, between 8 and 10 years, they believe that everything that moves by itself is alive; and fourth, from about 11 years, they distinguish correctly between animate and inanimate objects. The ascription of specifically human attributes to non-human animals and objects is a form of animism called **anthropomorphism*. 2. The doctrine that the soul is the vital principle (*anima mundi*) on which all organic development depends, propounded most

*****ebook converter DEMO Watermarks*****

influentially by the German physician Georg Ernst Stahl (1660–1734) in his book *Theoria Medica Vera* in 1707. **3.** A doctrine promoted by the Greek philosophers Pythagoras (?580–?500 BC) and Plato (?427–?347 BC) according to which an immaterial force organizes and animates the material world. **animist** *n.* One whose thinking is characterized by animism. **animistic** *adj.* [From Latin *anima* air, breath, or soul + *-ismus* indicating a state or condition]

animus *n.* **1.** Antipathy or animosity. **2.** Intention, purpose, or motivation. **3.** In **analytical psychology*, the masculine principle present as an **archetype* (2) in the female **collective unconscious*, characterized by focused consciousness, authority, and respect. It is the counterpart of the **anima* in the male unconscious, and it functions as a **psychopomp* connecting the **ego* and the unconscious. According to Carl Gustav Jung (1875–1961), ‘In its primary *unconscious* form the animus is a compound of spontaneous, unpremeditated opinions which exercise a powerful influence on the woman's emotional life’ (*Collected Works*, 16, paragraph 521). See also *IMAGO* (1), *SYZYGY*. [From Latin *animus* mind or spirit]

anion *n.* A negatively charged **ion* such as **chloride*. Compare *CATION*. [From Greek *ana* up + *ion* going, from *ienai* to go]

anion channel *n.* An **ion channel* across a cell membrane permitting the transport of **anions* across it.

anisotropic *adj.* Having different physical properties in different directions or with respect to different axes. Compare *ISOTROPIC*. **anisotropy** or **anisotrophy** *n.* [From Greek *anisos* unequal, from *an-* without + *isos* equal or the same + *tropos* a turn, from *trepein* to turn]

ankle reflex *n.* Another name for the **Achilles tendon reflex*.

Anna O *n.* The name used by the Austrian physician Josef Breuer (1842–1925) to refer to his patient Bertha Pappenheim (1860–1936), the first person ever to undergo **psychoanalysis*. She suffered from various symptoms of **hysteria*, which were made to disappear by enabling her under **hypnosis* to recall the traumatic events that precipitated them, her recollections of these
*****ebook converter DEMO Watermarks*****

events being accompanied by violent outbursts of emotion that Breuer labelled **catharsis*. Breuer described the case in 1895 in *Studies on Hysteria*, co-authored with Sigmund Freud (1856–1939) (*Standard Edition*, II, at pp. 21–47), but the veracity of the account, and in particular the claim that Anna O was cured, have been questioned by later researchers.

annealing *n.* 1. In **connectionism* (1) and **parallel distributed processing*, the use of random shocks to alter the states of units in a network of connected units until they are all responding as consistently as possible to signals received from one another and no further adjustments in connections and firing rates can lead to further improvements. The random shocks are designed to overcome the problem of entrapment in local minima after **gradient descent* or in local maxima after **hill climbing* procedures. The technique is analogous to tapping or shaking a toaster to get the crumbs to fall to the bottom. Compare RELAXATION TECHNIQUE (2). 2. In **genetic engineering*, heating double-stranded **DNA* so that the strands separate and then allowing them to cool in the presence of single strands from another organism to form **heteroduplex DNA*. See also DNA HYBRIDIZATION, HYBRIDIZATION, RECOMBINANT DNA. **anneal** *vb.* [Alluding to *annealing*, making metal easier to work by heating it and allowing it to cool slowly, thereby removing internal stresses and realigning the molecules or crystals within the microstructure of the material, from Old English *onaelan* to set on fire, from *on* on + *aelan* to burn, from *al* fire]

anniversary reaction *n.* An emotional reaction on the anniversary of a traumatic event or experience such as a **bereavement*.

anoesia *n.* An obsolescent term for **intellectual disability*. US *anesia*. Also called *anoia*. [From Greek *anoesia* want of understanding, from *a-* not or without + *noein* to understand]

anomaloscope *n.* A device for mixing light from the red and green parts of the **visible spectrum* and comparing the result with a standard yellow to measure defects in colour vision according to the **Rayleigh equation*. [So called because it is used to detect **colour anomalies*]

anomalous dichromacy *n.* A form of **colour-blindness* caused by a

*****ebook converter DEMO Watermarks*****

defect in the functioning of one of the three ***visual pigments** in the cones of the retina, leading to a form of colour vision in which only two of the three ***primary colours** (1) can be perceived and therefore any spectral hue can be matched by only two primary colours, the most common form being ***deutanopia**. Also called *anomalous dichromasy*, *anomalous dichromatism*, *anomalous dichromatopsia*, *anomalous dichromopsia*. See also **PROTANOPIA**, **TRITANOPIA**. Compare **ANOMALOUS TRICHRMACY**. **anomalous dichromat** *n.* A person with anomalous dichromacy.

anomalous myopia *n.* A transient form of ***myopia** caused by the temporary absence of adequate stimuli for ***accommodation** (1). See also **DARK FOCUS**.

anomalous sentence *n.* A sentence that is syntactically well formed but semantically meaningless. The best-known example, suggested by the US linguist and philosopher (Avram) Noam Chomsky (born 1928), is *Colourless green ideas sleep furiously*.

anomalous trichromacy *n.* A form of ***colour-blindness** in which the proportions of three ***primary colours** (1) that are mixed to match a comparison colour deviate from the normal. Also called *anomalous trichromasy*, *anomalous trichromatism*, *anomalous trichromatopsia*, *anomalous trichromopsia*. See also **RAYLEIGH EQUATION**. Compare **ANOMALOUS DICHROMACY**. **anomalous trichromat** *n.* A person with anomalous trichromacy.

anomia *n.* Inability to name common objects or pictures of common objects; another name for anomic ***aphasia**. [From Greek *a-* without + *onomia* a name + *-ia* indicating a condition or quality]

anomic aphasia See **APHASIA**.

anomic suicide See **SUICIDE**.

anomie *n.* A state of society in which rules and standards of belief and conduct have weakened or broken down, or an analogous condition in an

individual, characterized by hopelessness, disorientation, loss of belief and sense of purpose, and social isolation. The concept was introduced by the French sociologist Émile Durkheim (1858–1917), who provided evidence in his book *Suicide* (1897) of correlations between suicide rates and indicators of anomie such as divorce rates. Also spelt *anomy*. **anomic** *adj.* [From French *anomie*, from Greek *anomia* lawlessness or normlessness, from *a-* without + *nomos* a law + *-ia* indicating a condition or quality]

anoopsia *n.* ***Strabismus**, especially the common form in which one or both eyes are deviated upwards. Also spelt *anopsia*. Also called *hypertropia*. See also [AMBLYOPIA EX ANOPSIA](#). [From Greek *ano* upwards, from *ana* up + *ops* an eye + *-ia* indicating a condition or quality]

anopia *n.* ***Blindness**, especially when caused by a defect in one or both eyes. Also called *anopsia*. See also [AMBLYOPIA](#), [HEMIANOPIA](#), [HOMONYMOUS HEMIANOPIA](#), [NYCTALOPIA](#), [OBJECT BLINDNESS](#). Compare [AMAUROSIS](#). [From Greek *an-* without + *ops* an eye + *-ia* indicating a condition or quality]

anopsia *n.* 1. A variant spelling of ***anoopsia**. 2. A variant form of ***anopia**. [From Greek *ano* upwards or *an-* without + *ops* an eye + *-ia* indicating a condition or quality]

anorexia *n.* Absence of appetite, distinguished in careful usage from the disorder ***anorexia nervosa**, which should not be shortened to *anorexia*. See also [APHAGIA](#), [DYSPHAGIA](#). Compare [PSEUDOANOREXIA](#). **anorectic** *adj.* [From Greek *an-* not or without + *orexis* appetite + *-ia* indicating a condition or quality]

anorexia nervosa *n.* An ***eating disorder** in ***DSM-5** usually (but not exclusively) occurring in adolescent girls and young women, characterized by intense fear of becoming fat even though underweight, a refusal to maintain body weight at a normal level (at least 85 per cent of expected weight for sex, age, and height), disturbances in body image, and sometimes amenorrhoea. People with the disorder avoid eating even though hungry, and it is distinguished in careful usage from ***anorexia**. It is popularly (and misleadingly) known as the *slimmers' disease*. See also [LANUGO](#), [PRO-ANA](#). Compare [BULIMIA NERVOSA](#). **AN** *abbrev.* [From Greek *an-* not or without +

*****ebook converter DEMO Watermarks*****

orexis appetite + Latin *nervus* a nerve]

anorgasmia *n.* Failure of orgasmic response during sexual activity. Also called *anorgasmy*. See [FEMALE ORGASMIC DISORDER](#), [MALE ORGASMIC DISORDER](#).

anorthopia *n.* Abnormal or defective vision. [From Greek *an-* without + *orthos* right + *ops* an eye + *-ia* indicating a condition or quality]

anorthoscope *n.* A 19th-century device for studying **anorthoscopic* perception, consisting of a pair of circular discs mounted one behind the other, capable of rotating at different speeds and in opposite directions, enabling images attached to the rear disc to be viewed through a slit in the front disc.

anorthoscopic *adj.* Abnormally viewed, of or relating to perception of a figure that is revealed one section at a time through a narrow slit behind which the figure moves. If images such as simple geometric shapes or letters of the alphabet are presented anorthoscopically, form perception occurs and the shapes of the images are clearly perceived in spite of the absence of any retinal image of the corresponding shapes. The other major example of form perception without a corresponding retinal image is a **Kanizsa triangle*. See also [ANORTHOSCOPE](#), [ILLUSORY CONTOUR](#), [RETINAL PAINTING](#). Compare [VOID MODE](#). [From Greek *an-* without + *orthos* right + *skopeein* to view + *-ikos* of, relating to, or resembling]

anosmia *n.* Absence of the sense of smell. See also [SPECIFIC ANOSMIA](#). Compare [CACOSMIA](#), [DYSOSMIA](#), [HYPEROSMIA](#), [HYPOSMIA](#), [PAROSMIA](#). [From Greek *an-* without + *osme* a smell + *-ia* indicating a condition or quality]

anosognosia *n.* Impaired ability or refusal to recognize that one has a sensory or motor impairment or, in some cases following a massive **stroke* and **hemiplegia*, even to recognize part of one's body as one's own. Also spelt *anosagnosia*. See also [ANTON'S SYNDROME](#), [AGNOSIA](#). [From French *anosognosi*, named in 1914 by the French neurologist Josef F(rançois) F(élix) Babinski (1857–1932), from Greek *an-* without + *nosos* a disorder + *gnosis* knowledge + *-ia* indicating a condition or quality]

Antabuse *n.* A proprietary name for the drug disulfiram that is used in the treatment of **alcohol dependence*. It interferes with the normal metabolism of ethyl alcohol by blocking the action of the enzyme **aldehyde dehydrogenase* that normally converts it into acetic acid, allowing the noxious metabolite **acetaldehyde* to accumulate, resulting in nausea, vomiting, pounding of the heart, shortness of breath, and other unpleasant symptoms. [Trademark]

antagonist *n.* 1. An opponent or adversary in a struggle. *Compare* AGONIST (1). 2. A muscle that opposes the action of another. *Compare* AGONIST (2). 3. A substance that depresses the effect of an **agonist* (3) either by acting at different **neuroreceptor* sites from those of the agonist (a **non-competitive antagonist*) or by binding to the same neuroreceptors as the agonist without exciting or inhibiting the **postsynaptic* neurons (a competitive antagonist, also called a *receptor blocker*), a typical example being the narcotic antagonist **naloxone*, which binds to neuroreceptors in the brain that would otherwise be occupied by morphine, and thereby prevents morphine from exerting its usual effects. *See also* DOPAMINE ANTAGONIST. *Compare* AGONIST (3). [From Greek *anti* against + *agon* a festival of competitions, from *agein* to lead]

antecedent *See* CONDITIONAL REASONING.

antedating of consciousness *See* LIBET'S DELAY.

anterior *adj.* In front or before. *Compare* POSTERIOR. [From Latin *anterior* in front, from *ante* before]

anterior cingulate cortex *n.* The upper frontal part of the **cingulate gyrus*, implicated in decisions between competing responses, language processing, and monitoring of performance. It shows activity when a person experiences social exclusion or distress. **ACC** *abbrev.* [From Latin *anterior* in front, from *ante* before + *cingulatus* belted, from *cingulus* a belt, from *cingere* to surround or gird + *cortex* bark or outer layer]

anterior commissure *n.* A round bundle of nerve fibres connecting the

anterior or front parts of the left and right [*temporal lobes](#) and [*olfactory bulbs](#). See also [COMMISSURE](#). [From Latin *commissura* a joining together, from *com-* together + *mittere* to send]

anterior funiculus See [FUNICULUS](#).

anterior horn *n.* Either of the two [*ventral](#) ends of the H-shaped column of grey matter that runs throughout the length of the spinal cord and to which most of the motor neurons are attached. Compare [POSTERIOR HORN](#).

anterior pituitary *n.* The front part or lobe of the [*pituitary gland](#) that, in response to hormones from the [*hypothalamus](#), secretes [*trophic hormones](#) controlling most of the other [*endocrine glands](#) in the body, and that also acts directly on [*somatic cells](#) by secreting [*growth hormone](#), affecting bodily growth and [*metabolism](#), and [*melanocyte-stimulating hormone](#), affecting skin and other pigmentation. Also called the *adenohypophysis*. See [ADRENOCORTICOTROPHIC HORMONE \(ACTH\)](#), [BETA-ENDORPHIN](#), [BETA-LIPOTROPIN](#), [FOLLICLE-STIMULATING HORMONE](#), [LUTEINIZING HORMONE](#), [PROLACTIN](#), [THYROID-STIMULATING HORMONE](#). Compare [POSTERIOR PITUITARY](#).

anterior prefrontal cortex *n.* The foremost part of the [*frontal lobe](#), [*Brodmann Area 10](#). See [FRONTOPOLAR CORTEX](#). **APFC** abbrev. [From Latin *anterior* in front, from *ante* before]

anterograde amnesia *n.* Loss of memory for events or experiences after the traumatic event or incident that caused the amnesia. It generally affects [*declarative memory](#) but not [*procedural memory](#). See also [GLOBAL AMNESIA](#), [TRANSIENT GLOBAL AMNESIA](#). Compare [RETROGRADE AMNESIA](#). [From Latin *anterior* previous + *gradus* a step]

anterograde degeneration *n.* Another name for [*Wallerian degeneration](#). [From Latin *anterior* in front or forward + *gradi* to go]

anterograde transport *n.* The movement of freshly synthesized components of neurons along [*microtubules](#) into [*axons](#) and [*dendrites](#).

Compare [RETROGRADE TRANSPORT](#).

anthrax *n.* A highly infectious disease of warm-blooded animals, especially cattle and sheep, caused by the bacterium *Bacillus anthracis*, transmissible to humans and formerly called *wool sorter's disease*, occasionally stockpiled as a potential biological weapon. [From Greek *anthrax* coal, charcoal, or a carbuncle, alluding to the dark scabs that form on the skin of an infected person]

anthropic principle *n.* An umbrella term for several variants of the idea that theories of the universe are constrained by the necessity to allow for human existence. The most widely accepted *weak anthropic principle* asserts that physical and cosmological constants, including the age of the universe, are fine-tuned to allow carbon-based life to evolve. For example, if the strong nuclear force were even slightly stronger than it is, then all the hydrogen would be converted to helium, hence there would be no water for life to evolve, and if it were slightly weaker, then atoms with multiple protons would not hold together, hence hydrogen would be the only element in the universe. This explains why conditions happen to be just right for the existence of intelligent life at the present time: if the constants were slightly different, then we would not be here to observe them. Stronger (and more debatable) versions of the principle have been used to support theories of creationism or intelligent design. The principle was named by the Australian theoretical physicist Brandon Carter (born 1942) in a paper entitled 'Large Number Coincidences and the Anthropic Principle in Cosmology' delivered at a symposium in 1973 and published in the proceedings in 1974, although he later claimed that a better name would have been the 'cognizability principle'. See also [GOLDILOCKS EFFECT](#). [From Greek *anthropos* man or the human species + *-ikos* of, relating to, or resembling]

anthropobiology *n.* The biology of human beings. [From Greek *anthropos* man or the human species + English *biology*]

anthropocentrism *n.* Viewing or considering an issue from a narrowly human perspective, especially when disregarding or disdaining other animals, or an exaggerated conception of the significance of the human species in the universe. Compare [ANTHROPOMORPHISM](#). **anthropocentric** *adj.* [From Greek

*****ebook converter DEMO Watermarks*****

anthropos man or the human species + *kentron* the centre]

anthropogenic *adj.* Of or relating to the origins of the human species.
anthropogenesis or **anthropogeny** *n.* The study of the origins of the human species. [From Greek *anthropos* man or the human species + *genesis* birth or origin + *-ikos* of, relating to, or resembling]

anthropography *n.* The study of the geographical distribution of humans. [A blend of Greek *anthropo(s)* man or the human species and English *(geo)graphy*]

anthropoid *adj.* 1. Resembling the human species in form, applied especially to the **Anthropoidea* or higher primates (humans, apes, and monkeys) or more narrowly to the highest apes (gorillas, chimpanzees, orangutans, and gibbons). *n.* 2. An anthropoid primate or ape. *Compare* *PROSIMIAN*. [From Greek *anthropos* man or the human species + *-oeides* denoting resemblance of form, from *eidos* shape]

Anthropoidea *n.* A suborder of higher primates, including humans, apes, and monkeys, within the order of Primates. *See also* *ANTHROPOID* (1, 2). *Compare* *PROSIMIAN*.

anthropology *n.* The study of humans, including their origins, physical attributes, and cultures. *See also* *CULTURAL ANTHROPOLOGY*, *ETHNOGRAPHY* (1, 2), *ETHNOLOGY*, *PHYSICAL ANTHROPOLOGY*, *SOCIAL ANTHROPOLOGY*.
anthropological *adj.* **anthropologist** *n.* One who practises anthropology. [From Greek *anthropos* man or the human species + *logos* word, discourse, or reason]

anthropomorphism *n.* The attribution of human characteristics to non-human entities, especially animals. In literature, art, and philosophy, attribution of human emotions to inanimate entities is often called the **pathetic fallacy*. *See also* *ANIMISM* (1). *Compare* *ANTHROPOCENTRISM*.
anthropomorphic *adj.* Of, relating to, or characterized by anthropomorphism. **anthropomorphize** *vb.* To attribute human characteristics to non-human entities, especially animals. [From Greek *anthropos* man or the human species + *morphe* a form or shape + *-ismos*]
*****ebook converter DEMO Watermarks*****

indicating a state or condition]

anthroponomastics *n.* The study of personal names. The study of names in general is called *onomastics*, and it is usually divided into *anthroponomastics* and *toponomastics* or *toponymy*, the study of place names. [From Greek *anthropos* man or human + *onoma* name]

anthropophagus *n.* A cannibal. **anthropophagi** *pl.* **anthropophagous** *adj.* Cannibalistic. **anthropophagy** *n.* Cannibalism. [From Greek *anthropos* man or the human species + *phagein* to eat]

anthropophonics *n.* The study of the full range of speech sounds of which the human vocal apparatus is capable, irrespective of the sounds actually used in **natural languages*. [From Greek *anthropos* man or human + *phone* sound]

anthroposophy *n.* The spiritualistic and mystical doctrine of the Austrian philosopher Rudolf Steiner (1861–1925), emphasizing the educational and psychological value of creative activities, such as the types of myth-making that played a larger part in life in earlier times. [From Greek *anthropos* man or the human species + *sophia* wisdom]

anti-anxiety drug *n.* Another name for an **anxiolytic* drug.

antibody *n.* A protein of the **immunoglobulin* class, produced in the blood of an organism in response to the presence of an **antigen*. By attaching itself to an antigen, it may render the antigen innocuous or cause it to be destroyed by other cells of the immune system. *See also* **B LYMPHOCYTE**, **IMMUNE RESPONSE**, **T LYMPHOCYTE**.

anticathexis *n.* Another name for **countercathexis*.

anticholinergic *adj.* Of or relating to any drug such as **atropine* or **scopolamine* that blocks nerve impulses in the **parasympathetic nervous system* or counteracts the effects of **acetylcholine*, such blocking also resulting from the action of certain **antiparkinsonian* drugs, **neuroleptics*

(1), and ***tricyclic antidepressants**. Effects include dilation of the pupils of the eyes and preparation for far vision, dry mouth, quickening of the heart, reduction of gastric juice secretion, and retention of urine. *See also* BENZTROPINE, BIPERIDEN, CYCLOPLEGIA, PROCYCLIDINE, TRIHEXYPHENIDYL. *Compare* CHOLINERGIC. [From *anti* + (acetyl)cholin(e) + Greek *erg(on)* work + -ik(os) of, relating to, or resembling]

anticholinesterase *n.* A drug such as ***physostigmine** or ***sarin** that blocks the action of ***acetylcholinesterase** in mopping up ***acetylcholine** in the ***peripheral nervous system**. ***Nerve gases** are based on such agents. [From *anti* + (acetyl)cholin(e) + *ester* + Greek -ase denoting an enzyme, from *diastasis* separation]

anticipation method *n.* Another name for the ***serial anticipation method**.

anticipatory socialization *n.* Adoption of attitudes and values of a group to which one does not belong, serving the twin functions of facilitating a move into that group and easing the process of adjustment after becoming a member of it. The concept was popularized by the US sociologist Samuel A(ndrew) Stouffer (1900–60) and several co-authors of the monumental study of the US Army entitled *The American Soldier* (1949), in which it was reported that privates in the army who accepted the attitudes and values of the officer ranks were more likely than others to be promoted, and it was subsequently analysed in detail, in relation to ***reference groups**, by the US sociologist Robert K(ing) Merton (1910–2003) in his book *Social Theory and Social Structure* (1957). Subsequent researchers found evidence that the working-class parents of children who are destined to be upwardly mobile within the class structure tend to hold, and to pass on to their children, the attitudes and values of the class into which the child is destined to move. *See also* SOCIALIZATION (1).

anticonformity *n.* Behaviour that deliberately goes against the ***norms** (1) or social pressure of a group. It differs from independence inasmuch as the person responds to the group pressure rather than remaining unaffected by it. *Compare* CONFORMITY.

anticonvulsant *adj. n.* (Of or relating to) a drug such as **phenytoin*, **carbamazepine*, or any of the **benzodiazepines* that prevents or reduces the severity of epileptic or other **convulsions* or **seizures*. See also *HEMERALOPIA*. Compare *CONVULSANT*.

antidepressant *adj. n.* (Of or relating to) any drug that tends to alleviate **depression* and that is used in the treatment of **mood disorders*, including the **monoamine oxidase inhibitors* (MAOIs), the **tricyclic antidepressants* and **tetracyclic antidepressants*, the **selective serotonin reuptake inhibitors* (SSRIs), and **St John's wort*. Also called a *thymoleptic*. See also *GHB*, *INOSITOL*, *STIMULANT DRUG*.

antidiuretic hormone *n.* Another name for **vasopressin*. **ADH** *abbrev.*

antidromic *adj.* Of or relating to a nerve impulse conducted in the opposite direction to normal, towards the cell body rather than away from it, as when the axon of a sensory neuron responds to injury of the skin by sending impulses backwards to branching points, triggering the release of **substance P*. See *AXON REFLEX*. Compare *ORTHODROMIC*. [From Greek *anti* against + *dromos* a course or run + *-ikos* of, relating to, or resembling]

antigen *n.* Any entity or substance, including a **bacterium*, **virus*, or **toxin*, that mobilizes an **antibody* when it enters or invades an organism, or a protein on the surface of an invading entity that has such an effect. [From *anti(body)* + Greek *gen(es)* born or produced]

antigen–antibody response *n.* Another name for an **immune response*.

antihistamine *n.* Any substance that counteracts the physiological and pharmacological effects of **histamine*, including non-prescription drugs that block histamine receptors without stopping the release of histamine and that are used for the treatment of allergies (including hay fever) and the prevention of **motion sickness*. **antihistaminic** *adj.*

anti-intraception *n.* A dislike of subjectivity and imagination. See **F SCALE**. [From Greek *anti* against + Latin *intra* within + *capere*, *ceptum* to take + *-ion* indicating an action, process, or state]

antimanic *adj. n.* (Of or relating to) a drug such as ***lithium carbonate** or ***carbamazepine** that is used in the treatment of acute ***manic episodes** and ***bipolar disorders**. Compare **MOOD STABILIZER**.

antimorph *n.* A ***mutant (2)** gene that has the opposite effect to its normal ***allele** and competes with it in a ***heterozygous** organism. [From *anti* against + Greek *morphe* a form or shape]

anti-Müllerian hormone *n.* Another name for ***Müllerian inhibiting substance**. **AMH** *abbrev.*

antinomy *n.* A type of ***paradox** consisting of a contradiction between two apparently unassailable propositions. **antinomic** *adj.* [From Greek *anti* against + *nomos* a law]

antiparkinsonian *adj. n.* (Of or relating to) any drug that alleviates ***parkinsonism** or the pseudo-parkinsonian side-effects of neuroleptic drugs such as the ***phenothiazines**. In particular, ***L-dopa** or ***bromocriptine** compensates for the shortfall of dopamine in the substantia nigra and striatum of the brains of people with ***Parkinson's** disease; ***deprenyl** inhibits the action of a monoamine oxidase enzyme that destroys cells in the substantia nigra in people with Parkinson's disease; the antiviral drug ***amantadine** is believed to increase ***dopamine** release; and ***anticholinergic** drugs such as ***benztropine**, ***biperiden**, ***procyclidine**, and ***trihexyphenidyl** counteract the relative overabundance of ***acetylcholine** in the striatum.

antipsychiatry *n.* A radical critique of traditional (especially medical) approaches to mental disorders, influenced by ***existentialism** and ***sociology**, popularized by the Scottish psychiatrist Ronald D(avid) Laing (1927–89), the South African psychiatrist David (Graham) Cooper (1931–86), and others during the 1960s and 1970s. [The term was first used, though not defined, by Cooper in his book *Psychiatry and Anti-Psychiatry* (1967)]

antipsychotic *n.* Another name for a ***neuroleptic** (1).

anti-Semitism scale *n.* Any scale designed to measure prejudice against Jews, especially the ***A–S scale**.

antisocial personality disorder *n.* A ***personality disorder** in ***DSM-5**, also coded as a ***disruptive**, ***impulse-control**, and ***conduct disorder**, characterized by a pervasive pattern of disregard for and violation of the rights of others, beginning in childhood or early adolescence and continuing into adulthood, with such signs and symptoms as failure to conform to social norms, manifested by repeated unlawful behaviour; deceitfulness, as indicated by repeated lying or swindling for pleasure or personal gain; impulsivity or failure to plan ahead; irritability and aggressiveness involving frequent assaults or fights; reckless disregard for the safety of self or others; consistent irresponsibility involving failure to hold down jobs or to honour financial obligations; and lack of remorse for the mistreatment of others, as indicated by indifference and rationalization. Also called *sociopathy* or (in ***ICD-10** and elsewhere) *dissocial personality disorder*. Compare **CONDUCT DISORDER**, **PSYCHOPATHY**, **XXX SYNDROME**. **APD** *abbrev.*

Anton's syndrome *n.* A rare form of ***anosognosia** in which a person who is totally blind, usually as a result of extensive damage to the visual cortex or the optic nerves, is unaware of the blindness, typically either guessing at the appearance of objects from non-visual cues while believing that they are being perceived visually, or believing that for some reason the surroundings are plunged in darkness. Also called *blindness denial*. Compare **BLINDSIGHT** (which may be interpreted as the inverse of Anton's syndrome). [Named after the Czech neurologist and psychiatrist Gabriel Anton (1858–1933) who first described it in a case study published in 1899 in the journal *Wiener klinische Wochenschrift*, translated into English in the journal *Cognitive Neuropsychology* in 1993]

antonym *n.* A word that has the opposite meaning to another word, such as *high*, which is an antonym of *low*. Some authorities, notably the British linguist John Lyons (born 1932), reserve the term for *graded antonyms*, such as the example just given, in which degrees of difference exist, and refer to
*****ebook converter DEMO Watermarks*****

ungraded antonyms—words that are either/or opposites, such as *male* and *female*, or *single* and *married*—as *complementaries*. See also [ANTONYM TEST](#). Compare [SYNONYM](#). **antonymous** *adj.* **antonymy** *n.* The relationship between words that are antonyms. [From Greek *anti* against + *onoma* a name]

antonym test *n.* A type of [*intelligence test](#) item in which the respondent is presented with a word and is asked to supply a word with the opposite meaning to it, often by choosing from a set of response alternatives. Also called an *opposites test*. See also [ANTONYM](#). Compare [SYNONYM TEST](#).

anvil *n.* A non-technical name for the [*incus](#) of the middle ear. See also [HAMMER](#). [So called because of its resemblance to a blacksmith's anvil]

anxiety *n.* A state of uneasiness, accompanied by dysphoria and somatic signs and symptoms of tension, focused on apprehension of possible failure, misfortune, or danger. See also [ANXIETY DISORDERS](#), [ANXIOLYTIC](#), [AUTOMATIC ANXIETY](#), [NEUROTIC ANXIETY](#), [PERFORMANCE ANXIETY](#), [PRIMAL ANXIETY](#), [PRIMARY ANXIETY](#), [REALISTIC ANXIETY](#), [SEPARATION ANXIETY](#), [SIGNAL ANXIETY](#), [STATE ANXIETY](#), [STRANGER ANXIETY](#), [TRAIT ANXIETY](#). [From Latin *anxietas* anxiety, from *angere* to press tightly]

anxiety disorders *n.* A class of [*mental disorders](#) in [*DSM-5](#) in which [*anxiety](#) features prominently. See [AGORAPHOBIA](#), [GENERALIZED ANXIETY DISORDER](#), [PANIC DISORDER](#), [SELECTIVE MUTISM](#), [SEPARATION ANXIETY DISORDER](#), [SOCIAL ANXIETY DISORDER](#), [SPECIFIC PHOBIA](#). See also [ANXIOLYTIC](#), [ACUTE STRESS DISORDER](#), [OBSESSIVE—COMPULSIVE DISORDER](#), [OVERANXIOUS DISORDER](#), [POST-TRAUMATIC STRESS DISORDER](#), [PROLONGED DURESS STRESS DISORDER](#).

anxiety hysteria *n.* In [*psychoanalysis](#), a [*neurosis](#) with a [*phobia](#) as its central symptom. The term was introduced in 1908 by the Austrian psychiatrist Wilhelm Stekel (1868–1940) in his book *Nervöse Angstzustände und ihre Behandlung* (Neurotic Anxiety States and their Treatment) specifically to emphasize its structural resemblance to conversion hysteria (now called [*dissociative disorder](#)). See also [TRANSFERENCE NEUROSIS \(1\)](#).

anxiety neurosis *n.* Another name for [*generalized anxiety disorder](#). The term was introduced by Sigmund Freud (1856–1939) in the title of an
*****ebook converter DEMO Watermarks*****

article in 1894 ‘On the Grounds for Detaching a Particular Syndrome from Neurasthenia Under the Description “Anxiety Neurosis” ’ (*Standard Edition*, I, pp. 315–44), in which he distinguished it from **neurasthenia*, because of the predominance of anxiety, and from **hysteria*, because unlike hysteria, he interpreted it as an **actual neurosis*.

anxiolytic *adj. n.* (Of or relating to) any of the drugs that reduce **anxiety* or tension, especially the **benzodiazepines* and **buspirone*. Also called an *anti-anxiety* drug, and formerly called a *minor tranquillizer*. *See also* SEDATIVE-, HYPNOTIC-, OR ANXIOLYTIC-RELATED DISORDERS. [From *anxiety* + Greek *lysis* dissolution, from *lyein* to loose + *-itikos* resembling or marked by]

anxious personality disorder *n.* Another name for **avoidant personality disorder*.

apathy *n.* Absence of emotion, interest, or enthusiasm. [From Greek *apatheia* indifference, from *a-* without + *pathos* feeling]

Apgar score *n.* An index of the physical and psychological condition of a newborn infant obtained by adding points (0, 1, or 2) for heart rate, respiratory effort, muscle tone, response to stimulation, and skin coloration, a score of 10 representing perfect condition on the test. [Named after the US anaesthesiologist Virginia Apgar (1909–74) who introduced it in an article in the journal *Current Research in Anesthesia and Analgesia* in 1953, notwithstanding a popular folk etymology in medical circles according to which it is an abbreviation for ‘activity, pulse, grimace, appearance, and respiration’]

aphagia *n.* Inability or lack of desire to eat, sometimes caused by damage to the **glossopharyngeal nerve* or **hypoglossal nerve*, making swallowing difficult or impossible, or a lesion in the **lateral hypothalamic feeding centre*, and sometimes due to **psychogenic* causes. *See also* LATERAL HYPOTHALAMIC SYNDROME. *Compare* ANOREXIA, DYSPHAGIA. [From Greek *a-* without + *phagein* to consume + *-ia* indicating a condition or quality]

aphakia *n.* Absence of the **crystalline lens* of an eye resulting in severe
*****ebook converter DEMO Watermarks*****

***hyperopia**, whether congenital or due to some other cause, such as surgical removal of the lens to treat a ***cataract**. [From Greek *a-* without + *phakos* a lentil + *-ia* indicating a condition or quality]

aphanisis *n.* A term used in ***psychoanalysis** to denote the disappearance of sexual desire. It was coined in 1927 by the Welsh psychoanalyst Ernest Jones (1879–1958) in his *Papers on Psycho-Analysis* (5th ed., pp. 438–50). [From Greek *aphanes* invisible]

aphasia *n.* An ***impairment** of expression or comprehension of language caused by injury or disease in the language centres of the brain. The major forms related specifically to speech (*see also* **AGRAPHIA**, **DYSLEXIA**) are: *acoustic–mnestic aphasia* (impaired ability to recall lists of words or to repeat long sentences, caused by a lesion in the left ***temporal lobe** of the brain); *agrammatism* (impairment in ability to arrange words in their correct order, to use ***function words** properly, and/or to use ***accidence** appropriately in an ***inflecting language**); *amnesic aphasia* (impaired ability to retrieve words that are required for fluent speech, also written *amnestic aphasia*); *anomic aphasia* (impaired ability to name objects or representations of objects, also called *anomia*; compare *amnesic aphasia*); *aphemia* (another name for Broca's aphasia); *ataxic aphasia* (another name for Broca's aphasia); *auditory aphasia* (another name for Wernicke's aphasia); *Broca's aphasia* (impaired ability to speak, with intact ability to comprehend speech, associated with damage to ***Broca's area** of the brain); *conduction aphasia* (impaired ability to repeat spoken words, together with errors in word selection in spontaneous speech, resulting from damage to the links between auditory and motor areas of the brain; compare **TRANSCORTICAL APHASIA**, **TRANSCORTICAL MOTOR APHASIA**, **TRANSCORTICAL SENSORY APHASIA**; *see also* **ARCUATE FASCICULUS**); *dynamic aphasia* (a variant of non-fluent aphasia characterized by almost total failure to initiate speech but an intact ability to name objects, to read, and to repeat sentences); *dysprosody* (impaired ability to produce the appropriate ***prosody** required in speech); *expressive aphasia* (another name for Broca's aphasia); *fluent aphasia* (any form of aphasia, such as Wernicke's aphasia or conduction aphasia, in which speech flows without difficulty, but either language comprehension is impaired or the speech is unintelligible); *ideomotor aphasia* (a generic term for transcortical motor aphasia, transcortical sensory aphasia, and mixed transcortical aphasia); *jargon*

aphasia (copious unintelligible speech); *laloplegia* (a form of aphasia resulting from paralysis of the muscles of the ***vocal tract** and not those of the tongue); *mixed transcortical aphasia* (a blend of transcortical motor aphasia and transcortical sensory aphasia, with impaired spontaneous speech but intact ability to repeat spoken language; *compare* **CONDUCTION APHASIA**); *motor aphasia* (another name for Broca's aphasia); *nominal aphasia* (a form of amnesic aphasia in which there is an impaired ability to retrieve the names of people or things); *non-fluent aphasia* (any form of aphasia, such as Broca's aphasia, in which speech is impaired); *optic aphasia* (selective impairment in ability to name objects presented visually, with intact ability to name them after touching them); *paraphasia* (habitual substitution of one word for another); *receptive aphasia* (another name for Wernicke's aphasia); *sensory aphasia* (another name for Wernicke's aphasia); *spasmophemia* (speech that is impaired by ***spasms** of the muscles in the vocal tract); *standard aphasia* (sparse speech with ***content words** but few ***function words**); *syntactic aphasia* (impaired ability to arrange words in grammatical sequence); *tactile aphasia* (selective impairment in ability to name objects by touch alone, with intact ability to name them after seeing them); *transcortical motor aphasia* (any form of aphasia resulting from disconnection of fibre tracts across the cortex to motor areas, resulting in impaired spontaneous speech but intact ability to repeat spoken language; *compare* **CONDUCTION APHASIA**); *transcortical sensory aphasia* (any form of aphasia resulting from disconnection of fibre tracts across the cortex to sensory areas, resulting in impaired spontaneous speech but intact ability to repeat spoken language; *compare* **CONDUCTION APHASIA**); *visual aphasia* (another name for ***alexia**); *Wernicke's aphasia* (impaired ability to understand speech, with intact ability to speak fluently, though not always intelligibly, associated with damage to ***Wernicke's area** in the brain). *Compare* **DYSPHONIA**, **MUTISM**, **SELECTIVE MUTISM**. [From Greek *a-* without + *phasis* speech, from *phanai* to speak + *-ia* indicating a condition or quality]

aphemia *n.* Loss of ability to speak; Broca's aphasia (see **APHASIA**). [From Greek *a-* without + *phanai* to speak + *-ia* indicating a condition or quality]

aphonia *n.* Loss of the voice resulting from damage to the vocal tract. If the inability to speak is of psychological origin or caused by a lesion in the central nervous system, then the condition is not properly called *aphonia*.

*****ebook converter DEMO Watermarks*****

[From Greek *a-* without + *phone* voice + *-ia* indicating a condition or quality]

aphorism *n.* A succinct, pithy adage or maxim expressing a universal truth, such as *Procrastination is the thief of time* or, more pointedly, *Punctuality is the thief of time*. [From Greek *aphorizein* to define, from *apo* from + *horos* a limit]

aphrasia *n.* Another name for ***mutism**. [From Greek *a-* without + *phrazein* to express + *-ia* indicating a condition or quality]

aphrodisiac *adj. n.* (Of or relating to) any substance such as ***amyl nitrite**, ***bufotenin**, ***cantharides**, ***ginkgo**, ***ginseng**, ***L-dopa**, or ***yohimbine** that stimulates or excites sexual desire. A central nervous system ***depressant drug** such as alcohol tends to lower sexual inhibitions, ***cannabis** generally increases the intensity of sensations, including sexual sensations, and ***empathogens** such as ***ecstasy (2)** or ***GHB** cause people to feel intensely benevolent to one another, but such substances are not true aphrodisiacs, because they do not directly affect sexual desire. Compare **ANAPHRODISIAC**. [From Greek *aphrodisiakos* aphrodisiac, from *Aphrodite* the Greek goddess of love]

Aplysia *n.* The sea hare, a marine snail approximately 25 centimetres long with only a vestigial shell, widely studied in neuroscience because of its large ***neurons** and comparatively simple neural circuits. [From Greek *aplytos* unwashed, from *a-* without + *plynein* to wash + *-ia* indicating a condition or quality]

apnoea *n.* Cessation of breathing. US *apnea*. See also **OBSTRUCTIVE SLEEP APNOEA** **HYPOPNOEA**, **SLEEP APNOEA**. Compare **HYPOPNOEA**. [From Greek *apnoia* cessation of breathing, from *a-* without + *pnein* to breathe]

apocrine *adj.* Of or relating to a gland such as the mammary, the secretion of which contains part of the secreting cell. Compare **HOLOCRINE**, **MEROCRINE**. [From Greek *apo* off + *krinein* to separate]

Apollonian *adj.* Rational and controlled; in the philosophy of the German

philosopher Friedrich Wilhelm Nietzsche (1844–1900), of or relating to static qualities of form, reason, harmony, and sobriety. *Compare* [DIONYSIAN](#). [Named after Apollo, the Greek god of light, poetry, music, healing, and prophecy]

apomorphine *n.* An [*alkaloid](#) that is prepared by dehydrating [*morphine](#) and that acts as a [*dopaminomimetic](#) drug, used as a powerful emetic, expectorant, and hypnotic. [From Greek *apo* from + English *morphine*]

apoplexy *n.* Abrupt loss of consciousness, often followed by paralysis, usually caused by a rupture or thrombosis of a blood vessel in the brain. **apoplectic** *adj.* Of, relating to, or resembling apoplexy; colloquially (arising from a misapprehension of the nature of the disorder), enraged or infuriated. [From Greek *apoplexia* paralysis from a stroke, from *apo* away + *plessein* to strike]

apoptosis *n.* Programmed cell death, an active process requiring RNA and protein synthesis, that in the nervous system sometimes results from cytotoxic substances or a decrease in nerve growth factor, but that also occurs naturally as part of neuronal [*pruning](#) during development and growth. *See also* [NEURAL DARWINISM](#). [From Greek *apo* off + *ptosis* a falling, from *piptein* to fall + *-osis* indicating a process or state]

apostatic selection *n.* A [*frequency-dependent](#) form of [*natural selection](#) in which a [*predator](#) selects the most common type in a population of [*prey](#). *See also* [DISRUPTIVE SELECTION](#). *Compare* [STABILIZING SELECTION](#). [From Greek *apo* off + *stasis* a standing]

a posteriori *adj. adv.* Of, relating to, or denoting [*propositions](#) (1), arguments, or [*concepts](#) that proceed from observation or experience rather than from theoretical deduction; proceeding from observation rather than inference. *See* [A PRIORI](#). *See also* [SYNTHETIC STATEMENT](#). [Latin: from what comes after]

a posteriori test *n.* A statistical test that was not planned before the data were collected, especially a [*multiple comparison](#) corrected for the bias that can arise when tests are made of differences that emerge from inspecting
*****ebook converter DEMO Watermarks*****

data. Also called a *post hoc test*. See [BONFERRONI CORRECTION](#), [DUNCAN'S MULTIPLE RANGE TEST](#), [LEAST-SIGNIFICANT DIFFERENCE TEST](#), [NEWMAN-KEULS TEST](#), [SCHEFFÉ TEST](#), [TUKEY-HSD TEST](#). Compare [PLANNED COMPARISON](#). [From Latin *a* from + *posteriori* the latter]

apostrophe *n.* 1. A [*figure of speech](#) involving a sudden deviation from the ordinary course of speech to address an object, a place, or a person present or absent, dead or alive, as in *Milton! Thou shouldst be living at this hour* (William Wordsworth, *Written in London, Sept. 1802*, I.13). 2. A typographical mark usually indicating the omission of letters in the contraction of a word, as in the formation of genitive or possessive case (*John's*, a contraction of *John his* or *John is*). [From Greek *apo* from + *strophe* a turn]

apotemnophilia *n.* A [*paraphilia](#) characterized by recurrent sexually arousing fantasies, sexual urges, or behaviour associated with having one of one's own limbs (usually a leg) amputated. It should be carefully distinguished from [*acrotomophilia](#). Also (preferably) called *xenomelia*. [From Greek *apo* away + *temnein* to cut + *philos* loving, from *philein* to love + *-ia* indicating a condition or quality]

apparent movement *n.* A sensation of movement in the absence of actual movement, especially a class of visual illusions that arise when two visual stimuli a few centimetres apart are exposed or displayed in an alternating pattern, first studied systematically in 1912 by the German Gestalt psychologist Max Wertheimer (1880–1943), who distinguished the following stages (*Stadien*). If each stimulus is exposed for about 50 milliseconds, then with an [*interstimulus interval](#) below about 25 milliseconds the stimuli, though possibly flickering, appear to be simultaneous (this is called the *Simultanstadium*); with an interstimulus interval over about 400 milliseconds there is no illusion and the stimuli are seen to alternate (the *Sukzessivstadium*); but between approximately 25 and 400 milliseconds, under certain conditions defined by [*Korte's laws](#), powerful illusions of movement are created: first [*partial movement](#) when the interstimulus interval is relatively short, then [*optimal movement](#) when the interval is increased, and finally [*phi movement](#) when the interval is increased further. These phenomena underlie the effects created by illuminated signboards with

*****ebook converter DEMO Watermarks*****

arrows or other elements that appear to move, and they also explain the motion pictures of cinema and television. The concepts of **alpha movement*, **beta movement*, **gamma movement*, and **delta movement*, denoting different forms of apparent movement, were introduced by other German Gestalt psychologists between 1913 and 1915. Apparent movement is also called *apparent motion*, *phenomenal motion*, or the *phi phenomenon*, but in careful usage this latter term is reserved for the phenomenon of phi movement in particular. *See also* [AUTOKINETIC EFFECT](#), [ICONIC STORE](#), [MOTION CAPTURE](#), [PHANTOM GRATING](#), [RANDOM-DOT KINEMATOGRAM](#), [TERNUS PHENOMENON](#), [VECTION](#), [WATERFALL ILLUSION](#).

appeasement behaviour *n.* Submissive behaviour of an animal, discouraging an attack by a hostile aggressor. US *appeasement behavior*. [From Old French *apeser* to bring peace, from Latin *ad* to + *pax* peace]

apperception *n.* The process of comprehending a **perception* by integrating it with similar or related perceptions or previously acquired knowledge; also, the awareness of the act or experience of perceiving, or self-consciousness in contrast to perception—first used in this sense by the German philosopher and mathematician Gottfried Wilhelm von Leibniz (1646–1716). *See also* [APPERCEPTIVE MASS](#), [TAT](#). **apperceive** *vb.* **apperceptive** *adj.* [From Latin *ad* to + *percipere*, *perceptum* to perceive, from *per* through or thoroughly + *capere*, *ceptum* to take + *-ion* indicating an action, process, or state]

apperceptive agnosia *See* [AGNOSIA](#).

apperceptive mass *n.* The previously acquired perceptions and knowledge with which a new perception is integrated in the process of **apperception*.

apestat *n.* A mechanism in the **hypothalamus* that is sensitive to **glucose* levels in the blood and that regulates eating. It is located in the **lateral hypothalamic feeding centre*, where stimulation of it increases eating and destruction inhibits eating, and in the **ventromedial hypothalamus*, where stimulation inhibits eating and destruction increases eating. [From *appetite* + Greek *statikos* causing to stand, from *histanai* to stand + *-ikos* of,

*****ebook converter DEMO Watermarks*****

relating to, or resembling]

appetite *n.* Desire for food; more generally, desire to satisfy any physical craving; more generally still, any enthusiasm or inclination, such as an appetite for war. [From Latin *appetitus* a craving, from *appetere* to desire ardently]

appetitive behaviour *n.* Behaviour motivated by desire for food or drink. US *appetitive behavior*.

appetitive phase *n.* The first phase of the **sexual response cycle*.

apples *n.* An edible fruit; also, a branded version of the stimulant designer drug **ecstasy* (2). [Identified by a symbol of an apple]

applied behaviour analysis *n.* Application of principles of **learning* (1) and especially **operant conditioning* to behavioural problems in everyday settings, including hospitals, clinics, schools, and factories. Research and practice in this field is described by its practitioners as applied, behavioural, analytic, and technological. *See also* *BEHAVIOUR THERAPY*. US *applied behavior analysis*. **ABA** *abbrev.*

applied psychology *n.* An umbrella term covering various branches of psychology in which research findings are applied to practical problems. In **clinical psychology* and **counselling psychology*, research into mental disorders is applied with the ultimate aim of helping people with those disorders. In **educational psychology* and **school psychology*, research into problems of learning, adjustment, and behaviour among schoolchildren is applied in an effort to provide practical help to children, their parents, and their teachers. In **occupational psychology* and **industrial/organizational psychology*, the results of research into the well-being and efficiency of people in work is used to tackle problems arising in the workplace and in organizations generally. In **forensic psychology* and **criminological psychology*, problems associated with criminal behaviour, criminal investigation, and legal processes in court are addressed. In **health psychology*, research findings are applied to psychological aspects of health promotion and the prevention and treatment of illness. *See also* *COACHING*

*****ebook converter DEMO Watermarks*****

PSYCHOLOGY, OCCUPATIONAL HEALTH PSYCHOLOGY.

applied research *n.* Research undertaken with the primary goal of solving practical problems, often contrasted with ***basic research**. See **ACTION RESEARCH**, **EVALUATION RESEARCH**. See also **DESCRIPTIVE RESEARCH**, **EXPLORATORY RESEARCH**.

apprehension span See **SPAN OF APPREHENSION**.

approach–approach conflict *n.* A choice between two or more equally attractive goals, one of the three main types of conflict identified in 1931 by the German–US psychologist Kurt Lewin (1890–1947), though he did not name any of the types. He published his classification in a monograph that was translated into English and issued in 1935 under the title *A Dynamic Theory of Personality*. Lewin mentioned ***Buridan's ass** as a typical example of this type of conflict. See also **APPROACH–AVOIDANCE CONFLICT**, **AVOIDANCE–AVOIDANCE CONFLICT**.

approach–avoidance conflict *n.* Ambivalence towards a goal that embodies both positive and negative characteristics, one of the three main types of conflict identified in 1931 by the German–US psychologist Kurt Lewin (1890–1947), though he did not name any of the types. When a goal is simultaneously satisfying and threatening, pleasant and unpleasant, attractive and anxiety-arousing, people's behaviour tends to vacillate at a point near but not too near the goal. Further from the goal the tendency to approach predominates, nearer the goal the tendency to avoid predominates, and equilibrium occurs where the approach and avoidance functions cross. See also **APPROACH–APPROACH CONFLICT**, **AVOIDANCE–AVOIDANCE CONFLICT**, **ROSENCRANTZ AND GUILDENSTERN EFFECT**.

approximant *n.* A ***consonant** speech sound in which the organs of articulation approach each other, but not so closely as to cause audible friction. There are two major classes of approximants: ***semivowels** such as the initial ***phonemes** in the English words *win* and *yes*, and ***liquids** such as the initial phonemes in the English words *love* and *road*. [From Latin *proximare* to draw near or approach]

approximate answers See [GANSER SYNDROME](#).

approximation to language *n.* A random string of words in which the relative frequencies of words or word sequences correspond to their relative frequencies in the language. A *zero-order approximation* is a random string of words that takes no account of relative frequencies; in a *first-order approximation*, the relative frequencies of words correspond to their relative frequencies in the language, so that the most common words, such as *the* and *is* in English, occur relatively frequently; in a *second-order approximation*, the relative frequencies of word pairs correspond to their relative frequencies in the language, and so on. The US psychologist George A(rmitage) Miller (1920–2012) and the English-born US psychologist Jennifer A(nne) Selfridge (born 1929) introduced a psychological technique, published in the *American Journal of Psychology* in 1950, for constructing a slightly different type of approximation: for a zero-order approximation, words are selected at random from a dictionary (*Combat callous irritability migrates depraved temporal prolix...*); for a first-order approximation, words are selected from published word counts in proportion to their frequencies (*Day to is for they have proposed I the it materials of are...*); for a second-order approximation, a word is chosen at random and is shown to a person, who is asked to suggest the most likely word to follow it, then this second word alone is shown to another person, who suggests the most likely word to follow it, and so on (*Gone down here is not large feet are the happy days and so what is dead weight that many were constructed...*); for a third-order approximation, each person sees the two preceding words (*Happened to see Europe again is that trip to the end is...*); and for a fourth-order approximation, each person sees the three preceding words (*We are going to see him is not correct to chuckle loudly and depart for home...*). Each successive order of approximation is more meaningful and is easier to learn, to recall after learning, and to hear when spoken softly or with background noise. See also [STYLOSTATISTICS](#).

appurtenance *n.* In [*Gestalt psychology](#), the mutual influence of parts of the [*visual field](#), a typical example being the influence of two adjacent patches of colour on each other in simultaneous [*colour contrast](#), other areas of the visual field not affecting the phenomenon. [From Old French *apertenir* to appertain, from Latin *appertinere* to appertain, from *ad* to + *pertinere* to belong]

*****ebook converter DEMO Watermarks*****

apraxia *n.* A loss or diminution in ability, caused by neurological impairment usually in the left hemisphere of the brain, to perform purposeful bodily movements or ***gestures (1)** on request, though often with apparently unimpaired ability to perform them when they arise in natural contexts (such as when circumstances call for waving goodbye to someone), the impairment not being due to paralysis or poor comprehension. The major forms are: *akinetic apraxia* (impaired ability to perform a spontaneous gesture); *amnesic apraxia* (impaired ability to perform purposeful bodily movements or gestures on request because of amnesia for the request, also written *amnestic apraxia*); *constructional apraxia* (impaired ability to copy simple drawings or patterns); *dressing apraxia* (impaired ability to dress); *gait apraxia* (impaired ability to walk); *ideational apraxia* (impaired ability to repeat previously well-established actions); *ideomotor apraxia* (impaired ability to imitate unfamiliar actions, also called *motor apraxia* or *ideokinetic apraxia*); *left-sided apraxia* (impaired ability to carry out verbal requests with the left side of the body, resulting from damage to the ***corpus callosum** preventing impulses from the left hemisphere reaching the right motor cortex, also called *callosal apraxia*, *sympathetic apraxia*, *unilateral limb apraxia*); *oculomotor apraxia* (impaired ability to make eye movements, also called *ocular apraxia* or *optic apraxia*); *oral apraxia* (impaired ability to perform actions of the mouth and tongue, such as opening the mouth or protruding the tongue); *paramimia* (impaired ability to gesture); *sensory apraxia* (another name for ideational apraxia); *speech apraxia* (impaired ability to speak, without other language impairments). See also **ADIADOCHOKINESIA**, **ALIEN HAND SIGN**, **KINESICS**. [From Greek *apraxia* inaction, from *a-* without + *praxis* a deed or action + *-ia* indicating a condition or quality]

a priori *adj. adv.* Of, relating to, or denoting ***propositions (1)**, arguments, or ***concepts** that proceed from theoretical deduction rather than from observation or experience, hence being based on inference rather than observation. An a priori proposition can be known to be true or false without reference to observation or experience, whereas the truth or falsity of an ***a posteriori** proposition is contingent and can be established only by ***empirical** test. An a priori argument seeks to deduce conclusions from a priori premises, whereas an a posteriori argument proceeds from a posteriori premises. An a priori concept is one that is not derived from experience: the ***empiricist** philosophers claimed that all concepts are empirical and a

*****ebook converter DEMO Watermarks*****

posteriori, but the Greek philosopher Plato (?427–?347 BC) and [*rationalists](#) such as the German philosopher and mathematician Gottfried Wilhelm von Leibniz (1646–1716) claimed that some concepts, such as those of substance, cause, equality, likeness, and difference, are a priori, and the German idealist philosopher Immanuel Kant (1724–1804) argued that observation and experience themselves presuppose a priori knowledge. The terms *a priori* and *a posteriori* were introduced by scholastic philosophers of the late medieval period and were popularized in the 17th century by Leibniz and the French philosopher René Descartes (1596–1650). *See also* [ANALYTIC STATEMENT](#). *Compare* [A POSTERIORI](#). [Latin: from what comes before]

a priori probability *n.* Another name for a [*prior probability](#) (2).

a priori test *n.* Another name for a [*planned comparison](#).

a priori validity *n.* Another name for [*face validity](#).

aprosexia *n.* Inability to concentrate. *Compare* [HYPERPROSEXIA](#), [HYPOPROSEXIA](#). [From Greek *a-* without + *prosexis* heedfulness, from *prosechein* to heed + *-ia* indicating a condition or quality]

aprosodia *n.* A flat, unmodulated speaking voice, lacking the normal range of [*prosody](#), often indicative of [*affective flattening](#) or a lesion in the [*frontal lobe](#) of the right [*cerebral hemisphere](#). *Compare* [DYSPROSODY](#). [From Greek *a-* without + *prosoidia* a song set to music, from *pros* towards + *oide* a song + *-ia* indicating a condition or quality]

aptitude *n.* Suitability, natural ability, or capacity to learn; especially (in psychology) potential rather than existing capacity to perform some function, whether physical, mental, or a combination of the two, given the necessary education or training. *See also* [APTITUDE TEST](#). *Compare* [ABILITY](#). [From Latin *aptus* suitable or adapted, from *apere* to fasten + *-tudo* indicating a state or condition]

aptitude test *n.* A test designed to measure an [*aptitude](#). *See also* [VOCATIONAL APTITUDE TEST](#). *Compare* [ABILITY TEST](#), [ACHIEVEMENT TEST](#).

aptronym *n.* A name that befits a person's nature, occupation, or activities. Examples relevant to psychology include the Austrian neurologist Sigmund Freud (1856–1939), who based his theory of psychoanalysis on the ***pleasure principle** (pleasure is *Freude* in German), his rival the Swiss psychologist Carl Gustav Jung (1875–1961), who was almost 30 years younger than Freud (young is *jung* in German), and his feminist disciple, the German-born US psychoanalyst Karen Horney (1885–1952), who rejected his theory of ***penis envy**. Other aptronyms include Sir Henry Head, the English neurologist; Iris C. Love, the US archaeologist who excavated the temple of Aphrodite (the Greek goddess of love) at Cnidus in Turkey in 1969; Gay Search, author of *The Last Taboo: Sexual Abuse of Children* (1988); and J. J. C. Smart, the clever Australian philosopher. *See also* **FOLK ETYMOLOGY (2)** for the aptronym *Crapper*, nominative determinism. [Irregular formation from Latin *aptus* fitting + Greek *onoma* or *onyma* a name]

aqueduct of Sylvius *n.* Another name for the ***cerebral aqueduct**. [From Latin *aqua* water + *ducere, ductum* to lead, named after the French anatomist Sylvius (1478–1555), also called Jacques Dubois, who discovered it]

aqueous humour *n.* The watery fluid in the space between the cornea and crystalline lens of the eye. US *aqueous humor*. *See also* **GLAUCOMA**. *Compare* **VITREOUS HUMOUR**. [From Latin *aqua* water + *-osus* having or characterized by + *umor* bodily fluid, from *umere* to be moist]

arachnoid membrane *n.* The middle of the three ***meninges**, being a thin, transparent, non-vascular membrane covering the brain and spinal cord, attached tightly to the dura mater. Sometimes called the *arachnoid layer* or the *arachnoid mater*. *Compare* **DURA MATER**, **PIA MATER**. [From the Greek *arachne* a spider, alluding to its delicate weblike structure]

arachnoid space *n.* The space, filled with ***cerebrospinal fluid**, between the ***arachnoid membrane** and the inner ***pia mater**.

Arago phenomenon *n.* The relatively greater sensitivity of ***peripheral vision** as compared to ***central vision** in dim light, owing to the physiological

characteristics of [*scotopic](#) vision, in particular the distribution of [*rods](#) on the retina. Ancient astronomers were the first to notice that when observing the night sky, stars can be seen in peripheral vision that disappear when fixated directly. See [FOVEA](#). [Named after the French astronomer and physicist (Dominique) François (Jean) Arago (1786–1853) who first examined it in detail]

arboreal *adj.* 1. Tree-like in form or appearance. 2. Tree-dwelling. [From Latin *arbor* a tree]

arborization *n.* Any branching tree-like formation or structure. [From Latin *arbor* a tree + *-izare* from Greek *-izein* to cause to become + *-ation* indicating a process or condition]

archaecortex *n.* The type of cortex that is found mainly in the [*hippocampus](#) and that evolved in humans earlier than any other part of the human [*cerebral cortex](#). Also spelt *archicortex* or *archecortex*. Also called the *archaepallium* or *archipallium*. See also [NEOCORTEX](#). Compare [MESOCORTEX](#), [PALAEOCORTEX](#). [From Greek *archaios* ancient, from *arche* beginning + Latin *cortex* bark or outer layer]

archetypal form *n.* In [*analytical psychology](#), an image, motif, pattern, or theme associated with an [*archetype](#) (2), the archetype itself not being susceptible to direct representation. See [GOD-IMAGE](#), [MANDALA](#), [PRIMORDIAL IMAGE](#). See also [COLLECTIVE UNCONSCIOUS](#).

archetype *n.* 1. A perfect or typical example of its class, or another name for a [*prototype](#) (2). 2. In [*analytical psychology](#), an inherited mental structure or pattern, forming part of the [*collective unconscious](#), observable only through its manifestations in behaviour, especially that associated with ancient and universal experiences such as birth, marriage, motherhood, and death. Carl Gustav Jung (1875–1961) introduced the term into his technical vocabulary in 1919 and later defined it as ‘an irrepresentable, unconscious, pre-existent form that seems to be part of the inherited structure of the psyche and can therefore manifest itself spontaneously anywhere, at any time’ (*Collected Works*, 10, paragraph 847). Also (originally) called a *primordial image*. See also [ANIMA](#), [ANIMUS](#) (3), [ARCHETYPAL FORM](#), [COLLECTIVE UNCONSCIOUS](#),

*****ebook converter DEMO Watermarks*****

IMAGO (1), PRIMORDIAL IMAGE, PUER AETERNUS, SHADOW (2). **archetypal** *adj.* [From Greek *archetypon* an original, from *arche* the beginning + *typos* a model]

Archimedes spiral *n.* A plane curve whose equation is $r = a\theta$ in polar coordinates, meaning that the length of the curve's radius r from its centre is always a constant ratio of the angle that the radius forms with a fixed axis, and as a consequence the coils of the spiral are a constant distance apart like the grooves of old-fashioned vinyl phonograph records, which are in fact Archimedes spirals. The term is sometimes used as a synonym for a ***Plateau spiral**, but this is avoided in careful usage because a Plateau spiral is merely a device based on it and often on some other spiral. Also called an *Archimedean spiral*. [Named after the ancient Greek mathematician and physicist Archimedes of Syracuse (?287–212 BC) who was the first to study it and whose treatise *On Spirals* is devoted mainly to it]

arctic hysteria See PIBLOKTOQ.

arcuate fasciculus *n.* A small bundle of nerve fibres in each cerebral hemisphere that curves round the back of the lateral sulcus and that in the (usually) left hemisphere connects ***Broca's area** with ***Wernicke's area**. Lesions to it often result in conduction aphasia (see **APHASIA**). See also **DISCONNECTION SYNDROME**. [From Latin *arcuatus* bent like a bow, from *arcuare* to bend like a bow, from *arcus* a bow + *fasciculus* a little bundle, diminutive of *fasculus* a bundle]

arcuate nucleus *n.* A small nucleus near the base of the ***hypothalamus** containing the cell bodies that produce hypothalamic ***hormones**.

area postrema *n.* An area of the brain in the roof of the fourth ***ventricle** at its posterior tip, outside the ***blood–brain barrier**, functioning as a chemoreceptor trigger area and controlling the vomiting reflex, also containing ***serotonergic** nerve fibres. [From Latin *postremus* hindmost]

Areas V1, V2, V3, V4, V5, V6, V7, V8 See **VISUAL CORTEX**. Compare **BRODMANN AREA**.

argot *n.* A secretive form of **jargon* (1) or **slang* peculiar to a specific group, originally a band of thieves. *See also* BACK SLANG, CANT (2), REGISTER (2), RHYMING SLANG. [French, origin unknown]

Argyll Robertson pupil *n.* A **pupil* of the eye that manifests **accommodation* (1) by constricting when watching a finger that is brought close to the face but does not respond to light by constricting, a neurological sign of damage to the midbrain relays of the **oculomotor nerve*. It is a specific sign of neurological damage caused by syphilis, a sexually transmitted disease. Also called *prostitute pupil*. **ARP** *abbrev.* [Named after the Scottish physician Douglas M. C. L. Argyll Robertson (1837–1909) who drew attention to it]

ARIMA *abbrev.* Autoregressive integrated moving average, a widely used class of models developed in 1970 by the British statisticians George Edward Pelham Box (1919–2013) and Gwilym Meirion Jenkins (1933–82) for **time-series analysis*, also called *Box–Jenkins models*. *See also* TYPE III ERROR. [Named after the three components of the model, namely the *autoregression*, *integration* (differencing), and *moving average* coefficients]

Aristotle's illusion *n.* A **tactile illusion* that is created when the eyes are closed, two fingers of one hand are crossed, and a small object such as an acorn is pressed (especially by another person) into the cleft between the tips of the crossed fingers. The sensation is that of touching two objects rather than one. The first written account of it was given by the Greek philosopher Aristotle (384–322 BC) in the essay *On Dreams* in the *Parva Naturalia*: ‘When the fingers are crossed, one object seems to be two; but yet we deny that it is two; for sight is more authoritative than touch. Yet, if touch stood alone, we should actually have pronounced the one object to be two’ (Chapter 2). Aristotle mentioned it also in *Metaphysics*: ‘Touch says there are two objects when we cross our fingers, while sight says there is one’ (Book 4, Chapter 6). The explanation for the illusion, apparently overlooked by Aristotle, is that when the fingers are crossed the outsides of two fingers are touched simultaneously, and in ordinary circumstances and past experience that requires stimulation by two separate objects. This explanation was first advanced in *Problems*, a spurious work often attributed to Aristotle, probably written by one of his followers: ‘When we hold the hand in its natural

*****ebook converter DEMO Watermarks*****

position, we cannot touch an object with the outer sides of two fingers' (Book 35, Chapter 10). Further references to the illusion are to be found in Book 31, Chapters 11 and 17 of *Problems*. Also called *Aristotle's experiment*. See also [DIPLAESTHESIA](#).

arithmetic mean *n.* In descriptive statistics, the average value, calculated (for a finite set of scores) by adding the scores together and then dividing the total by the number of scores. Often referred to simply as the *mean*, this is the most commonly used measure of [*central tendency](#). See also [LAKE WOBEGON EFFECT](#), [MEDIAN](#), [MODE](#), [TRIMMED MEAN](#). Compare [GEOMETRIC MEAN](#), [HARMONIC MEAN](#). **M** *abbrev.* [From Old French *moien*, from Latin *medianus* median]

armchair experiment *n.* Another name for a [*Gedankenexperiment](#).

arms race *n.* A competition between military powers building up armaments; hence figuratively in evolutionary theory, a sequence of evolutionary changes in two (or more) species competing for survival and reproduction, often a [*predator](#) and its [*prey](#), in which each advantageous [*adaptation](#) (1) in one is countered by a corresponding adaptation in the other.

Army Alpha and Beta tests *n.* The first [*group tests](#) of intelligence, providing the prototypes of many that were to follow, intended to improve selection, placement, and training for specific occupations within the US army during the First World War, constructed by a group of US psychologists under the leadership of Robert Mearns Yerkes (1876–1956), including Lewis Madison Terman (1877–1956), and applied to approximately 1,750,000 recruits in just over one year. The test and the results that it generated were kept secret until the war ended, eventually being published by the National Academy of Sciences in 1921 in a book edited by Yerkes entitled *Psychology Examining in the United States Army*, and in 1919 Yerkes published a version of the tests called the *National Intelligence Test*, which was widely used by schools, universities, and commercial companies. The Army Alpha test included the earliest examples of [*analogies tests](#), [*number-completion tests](#), [*synonym tests](#), and [*antonym tests](#), and the Army Beta test, designed specifically for people who were illiterate, introduced the first [*incomplete-](#)

*****ebook converter DEMO Watermarks*****

pictures test and *coding test, all the subtests being strictly timed.

Army General Classification Test *n.* An *intelligence test used during the Second World War and after, suitable for literate adults. **AGCT** *abbrev.*

aromatic *adj.* Spicy or fragrant, belonging to the class of benzene derivatives or closed-chain organic compounds. *Aliphatic and aromatic hydrocarbons in petrol or gasoline, glue, paint thinners, and some aerosol propellants are *psychotropic when inhaled. *See also* INHALANT-RELATED DISORDERS, SOLVENT ABUSE. [From Greek *aroma*, *aromatos* spice + *-ikos* of, relating to, or resembling]

arousal *n.* Short for physiological arousal: excitation of the *ascending reticular activating system, leading to a condition of alertness and readiness to respond, as evidenced by such physiological signs as increased heart rate and blood pressure, *galvanic skin response (GSR), and *desynchronized EEG activity. *See also* AROUSAL PHASE, COGNITIVE-APPRAISAL THEORY, YERKES–DODSON LAW.

arousal phase *n.* The second phase of the *sexual response cycle, when sexual excitement develops.

arrangement problem *n.* A measure of problem-solving ability in which the respondent tries to arrange a number of elements in the correct sequence, the most common version being a *picture-arrangement test.

Arrow's impossibility theorem *n.* A theorem introduced in 1951 by the US economist Kenneth J(oseph) Arrow (born 1921) and modified in 1963 to correct an error that had been found in it, showing that no voting system or any other social choice function could ever guarantee to aggregate the individual preferences of a group into a collective preference ranking so as to satisfy the following four seemingly necessary but mild conditions of fairness. (U) *Unrestricted domain*: the social choice function must generate a collective preference order from any logically possible set of individual preference orders; (P) *Pareto condition*: whenever all individuals prefer an alternative *x* to another *y*, *x* must be preferred to *y* in the collective preference

*****ebook converter DEMO Watermarks*****

order; (I) *Independence of irrelevant alternatives*: the collective preference order of any pair of alternatives x and y must depend solely on the individuals' preferences between these alternatives and not on their preferences for other (irrelevant) alternatives; (D) *Non-dictatorship*: the collective preference order must not invariably correspond to the preferences of any single individual, regardless of the preferences of the others. The proof of the theorem relies on the profile of individual preferences that gives rise to **Condorcet's paradox* of **intransitive preferences* and shows that any social choice function that satisfies U , P , and I necessarily violates D and is therefore dictatorial. Also called *Arrow's paradox*.

artefact *n.* 1. An article, such as a tool or a work of art, made by a person or people. 2. Something that is observed in an empirical investigation and is not a natural occurrence but a by-product of the investigation itself. Also (especially in US) spelt *artifact*. **artefactual** or **artifactual** *adj.* [From Latin *arte* by art, from *ars* skill or art + *factum* made, from *facere* to make]

arteriogram *n.* Another name for an **angiogram*. **arteriography** *n.* Another name for **angiography*. [From Greek *arteria* an artery + *gramme* a line]

arteriosclerosis *n.* Hardening or **sclerosis* of the arteries. *See also* *ATHEROSCLEROSIS*, *CEREBRAL ARTERIOSCLEROSIS*. **arteriosclerotic** *adj.* **arteriosclerotic dementia** *n.* Another name for **vascular dementia* or **multi-infarct dementia*. [From Greek *arteria* an artery + *sklerosis* a hardening, from *skleros* hard + *-osis* indicating a process or state]

articulation *n.* The production of speech sounds by using the speech organs to modify the airstream, usually from the lungs. **Consonants* are classified chiefly by **place of articulation* and **manner of articulation*. [From Latin *articulus* a little joint, hence *articulare* to provide with joints + *-ation* indicating a process or condition]

articulation disorder *n.* Another name for **phonological disorder*.

articulatory coding *n.* Remembering something by storing the physical movements required to produce its verbal expression, rather than by storing
*****ebook converter DEMO Watermarks*****

its sound or its meaning. *Compare* [ACOUSTIC CODING](#), [SEMANTIC CODING](#).

articulatory loop *n.* Another name for a [*subvocal rehearsal loop](#). Also called an *articulatory rehearsal loop*.

articulatory store *n.* Another name for a [*subvocal rehearsal loop](#).

artifact *See* [ARTEFACT](#).

artificial insemination *n.* Introduction of sperm into the [*vagina](#) or uterus by any method other than coitus.

artificial intelligence *n.* The design of hypothetical or actual computer programs or machines to do things normally done by minds, such as playing chess, thinking logically, writing poetry, composing music, or analysing chemical substances. The most challenging problems arise in attempting to simulate functions of intelligence that are largely unconscious, such as those involved in vision and language. The term was introduced in 1956 by the US computer engineer John McCarthy (1927–2011). *See* [STRONG AI](#), [WEAK AI](#). *See also* [CASE GRAMMAR](#), [CHINESE ROOM](#), [COMPUTER VISION](#), [DEFAULT REASONING](#), [EXPERT SYSTEM](#), [FRAME \(2\)](#), [FRAME PROBLEM](#), [FUZZY LOGIC](#), [GENERAL PROBLEM SOLVER](#), [GÖDEL'S THEOREM](#), [KNOWLEDGE REPRESENTATION](#), [NEURAL NETWORK](#), [NON-MONOTONIC REASONING](#), [OPTICAL CHARACTER RECOGNITION](#), [PANDEMONIUM](#), [SHRDLU](#), [TURING MACHINE](#), [TURING TEST](#). Also called *machine intelligence*. **AI** *abbrev.*

artificial language *n.* A language deliberately invented or constructed, especially as a means of communication in computing or information technology. *See also* [LANGUAGE \(1\)](#). *Compare* [NATURAL LANGUAGE](#).

artificial neural network *n.* Another name for a [*neural network](#). Also called an *artificial neural net*. **ANN** *abbrev.*

artificial pupil *n.* Another name for a [*reduction screen](#).

artificial scotoma *n.* A [*scotoma](#) induced by a pattern of randomly twinkling visual spots against a grey background, such as is produced by a

television receiver tuned to an open channel, against which a small uniform grey square is displayed a short distance from the observer's **fixation* (1) point. After about five seconds, on average, the square vanishes and is filled in with the twinkling pattern of the background. If the twinkling spots are displayed against a coloured background and the small square is grey, then the colour fills in first, followed by the twinkling movement. If the whole display is replaced by a uniform grey (non-twinkling) display, then a small twinkling square appears for two to three seconds in the area previously occupied by the grey square. **Filling-in* is thus not explained by observers merely failing to notice the missing information but involves active neural representation of it. The phenomenon was first studied in detail by the Indian-born US psychologist and neuroscientist Vilayanur S. Ramachandran (born 1951) and the English psychologist Richard L(angton) Gregory (1923–2010) and reported in a letter to the journal *Nature* in 1991. See also *FILLING-IN ILLUSION*, *MODAL COMPLETION*, *MOTION-INDUCED BLINDNESS*, *TROXLER EFFECT*. [From English *artificial* + Greek *skotoma* dizziness, from *skotos* darkness + *-oma* indicating an abnormality]

art therapy *n.* A form of **psychotherapy* in which clients or patients are encouraged to express their feelings and inner conflicts through art.

ascending reticular activating system *n.* The ascending fibres of the **reticular formation* in the brainstem, defined functionally rather than anatomically according to their control of the level of physiological **arousal* or activation of the cerebral cortex, essential for wakefulness, attention, and concentration. Also called the *reticular activating system* (*RAS*). See also *CERVEAU ISOLÉ*. Compare *DESCENDING RETICULAR FORMATION*. **ARAS** *abbrev.*

Asch experiment *n.* A classic experiment on **conformity* introduced in 1951 by the Polish-born US psychologist Solomon E(lliott) Asch (1907–96) and subsequently used by numerous researchers. A group of people (usually seven to nine in Asch's original series) were seated around a table and told that they were to take part in an experiment on visual discrimination. They were shown 18 pairs of cards, and in each case were asked to say out loud, one at a time, which of the three lines on one card was the same length as the comparison line on the other. The task was deliberately made sufficiently easy to ensure that errors were virtually zero when people were tested alone,

*****ebook converter DEMO Watermarks*****

without any conformity pressure, but in the experiment there was only one real subject or participant in the group, usually sitting at the end of the row and therefore having to formulate judgements after hearing those of the other group members, and the rest of the group were accomplices of the experimenter, trained to give unanimous wrong answers on 12 critical trials out of the 18. About 37 per cent of judgements on critical trials were conforming responses—the real subject going along with the incorrect unanimous majority. The experience was rather stressful for those who remained independent, and conformity was found to increase with the size of the unanimous majority ranged against the real subject, but only up to a majority of three against one, after which further increases produced no significant increases in conformity.

ascorbic acid See [VITAMIN C](#).

asemia *n.* Impaired ability to encode or comprehend signs such as [*gestures](#) (1) or the spoken and written signs and symbols of human languages. Also called *asemasia* or *asymbolia*. [From Greek *a-* without + *semeion* a sign + *-ia* indicating a condition or quality]

asexual reproduction *n.* Procreation as it occurs in some species without formation of male or female [*gametes](#), usually by [*fission](#) (2). In careful usage it is distinguished from [*parthenogenesis](#).

askable parent *n.* A parent who is willing to answer a child's questions about sex. [The term appeared in print for the first time in an article by the *New York Times* journalist Eleanor Charles (1923–2012) on 11 January 1981]

asonia *n.* Impaired ability to discriminate between tones of different pitches. Also (non-technically) called *tone deafness*. See also [AMUSIA](#), [DYSMUSIA](#). [From Latin *a-* away or away from + *sonus* a sound]

aspartame *n.* The intensely sweet non-carbohydrate crystalline compound $C_{14}H_{18}N_2O_5$ formed from the amino acids [*phenylalanine](#) and [*aspartic acid](#), used as an artificial sweetener that is 200 times sweeter than sucrose (table sugar). [From *aspart(ic) (acid)* + *(phenyl)a(lanine)* + *me(thyl)*

(ester)]

aspartate *n.* Another name for **aspartic acid*.

aspartic acid *n.* A non-essential **amino acid* that is a component molecule of proteins and that functions as a **neurotransmitter*. Also called *aspartate*. See also *ASPARTAME*. **Asp** *abbrev.* [From *aspar(agus)*, in which it is found, + Greek *-ikos* of, relating to, or resembling]

Asperger's disorder *n.* A relatively mild form of **autism spectrum disorder*. A **pervasive developmental disorder* characterized by severe and sustained impairment in social interaction together with restricted, repetitive, or stereotyped patterns of behaviour, interests, or activities, causing clinically significant impairment in everyday living, without the language and cognitive deficits characteristic of more severe forms of autism spectrum disorder but in other ways similar to it, usually found in males. Compare *SCHIZOID PERSONALITY DISORDER*. [Named after the Austrian psychiatrist Hans Asperger (1906–80) who first described it in 1944]

aspiration *n.* 1. A hope, desire, or ambition to achieve a specified goal. Hence an *aspiration level* or *level of aspiration* is a goal or target that a person sets for future achievement. 2. Audible breath that may accompany the articulation of a speech sound. For example, in most **accents* (1) of English, the initial **consonants* in the words *pen*, *ten*, and *ken* are followed by a brief sound like /h/ before the voicing of the vowel begins, but when /p/, /t/, or /k/ is preceded by /s/, as in *spy*, *sty*, and *sky*, it is not aspirated. See also *GRASSMANN'S LAW (LINGUISTICS)*. **aspirate** *vb.* 1. To pronounce a speech sound with aspiration. *n.* 2. A speech sound pronounced with aspiration. [From Latin *aspirare* to aspire to achieve something, from *ad* to + *spirare* to breathe + *-ation* indicating a process or condition]

aspirin *n.* Acetylsalicylic acid, a white, crystalline compound originally derived from the bark of the willow tree *Salix alba*, identified and first synthesized by the German chemist Felix Hoffmann (1868–1946) at the Bayer division of the German chemical company I. G. Farben in 1898, widely used as an **analgesic* (1). It consists of an acetyl group linked to a salicylic acid group, and its powerful anti-inflammatory and antipyretic

*****ebook converter DEMO Watermarks*****

(fever-reducing) effects result from its inhibition of **prostaglandin* synthesis. When it enters the molecule prostaglandin H₂ synthase or *PGHS*, the enzyme that produces prostaglandins, its acetyl group binds to a site within the enzyme and blocks the channel through which arachidonic acid from the **endoplasmic reticulum* is converted to prostaglandins. It also shuts down forms of the PGHS enzyme that protect the lining of the stomach. Signs and symptoms of aspirin overdose include gastrointestinal bleeding, dizziness, sweating, thirst, tinnitus, visual disturbances, confusion, drowsiness, breathlessness, nausea, vomiting, coma, and death. Formula: CH₃COOC₆H₄COOH. *See also* *OTOTOXIC*. [The original proprietary name given to it by Bayer, from *a(cetyl)* + German *Spir(säure)* spiraeic (now salicylic) acid + *-in(e)* indicating an organic compound]

A/S ratio *abbrev.* Association/sensation ratio, an index of the comparative **intelligence* of mammalian species formulated by the Canadian psychologist Donald O(lding) Hebb (1904–85), defined as brain volume devoted to **association areas* divided by brain volume devoted to sensory and motor areas. *Compare* *ENCEPHALIZATION QUOTIENT*, *PROGRESSION INDEX*.

A–S Reaction Study *n.* An early personality inventory designed to measure ascendance versus submissiveness in everyday social relationships, constructed by the US psychologists Gordon W(illard) Allport (1897–1967) and Floyd H(enry) Allport (1890–1978) and published in their book *The A–S Reaction Study* (1928). Not to be confused with the **A–S scale*.

A–S scale *abbrev.* A scale to measure anti-Semitism (prejudice against or hostility to Jews), especially the scale first published by the German philosopher, sociologist, and psychologist Theodor W(iesengrund) Adorno (1903–69) and several colleagues in the book *The Authoritarian Personality* (1950). Not to be confused with the **A–S Reaction Study*. *See also* *AUTHORITARIANISM*.

assembled phonology *n.* The sound of a word or verbal expression as it is built up from knowledge of the usual sounds of letters and sequences of letters. This method fails with irregular words such as *yacht* in English, but in regular languages such as German or Spanish the correct pronunciation can

always be worked out in this way. *Compare* [ADDRESSED PHONOLOGY](#).

assertiveness training *n.* A form of [*counselling](#) or [*psychotherapy](#) developed in 1949 by the US psychologist Andrew Salter (1914–96) in which people learn to express their needs, wishes, and feelings frankly, honestly, and directly, in a way that causes others to take them into account. Also called *assertion training*. *See also* [MODELLING](#), [SOCIAL SKILLS TRAINING](#).

assimilation *n.* **1.** Absorption or incorporation of information or of a substance, or more generally the act or process of making things similar or alike. **2.** In the writings of the Swiss psychologist Jean Piaget (1896–1980) and his followers, a form of [*adaptation \(3\)](#) in which novel experiences are incorporated into existing psychological structures or processes, as when an infant responds to a new toy that is introduced into its environment by treating it like an already familiar object, interpreting it on the basis of past experience as something to be grasped, shaken, put in the mouth, and so on. *See also* [EQUILIBRATION](#). *Compare* [ACCOMMODATION \(2\)](#). **3.** The influence on a speech sound by one of its neighbours, making the two sounds more alike than they would otherwise be. For example, the plural-forming /s/ is pronounced with a voiced [z] [*allophone](#) when it follows a voiced [*consonant](#), as in the English word *dogs*, but with a voiceless [s] allophone when it follows a voiceless consonant as in *cats*. *See also* [WUG TEST](#). **4.** Decreasing the discrepancy between one's own attitude and that of a persuasive source or message. *See also* [ASSIMILATION–CONTRAST THEORY](#), [FALSE-CONSENSUS EFFECT](#). *Compare* [CONTRAST \(4\)](#). **5.** The distortion of a memory through making it similar to already existing memories, a phenomenon that also occurs in [*serial reproduction](#) and [*rumour](#) transmission. *Compare* [LEVELLING \(1\)](#), [SHARPENING](#). **6.** A tendency for the perception of objects or images to take on perceptual characteristics of adjacent objects or images. *See* [COLOUR ASSIMILATION](#). **assimilate** *vb.* **assimilative** *adj.* [From Latin *assimilare* to make similar or alike, from *ad* to + *similis* like + *-ation* indicating a process or condition]

assimilation–contrast theory *n.* A theory of judgement and [*attitude change](#) according to which a judge's initial judgement or attitude acts as an anchor, so that items of information or persuasive communications that are not very discrepant from the anchor and that therefore fall within the

person's *latitude of acceptance* are assimilated, the person's judgement or attitude changing in the direction of the communication, whereas items of information or persuasive communications that are highly discrepant produce either minimal change if they fall within the person's *latitude of neutrality* or produce contrast effects if they fall within the *latitude of rejection*, the person's judgement or attitude changing in the opposite direction. Attitudes associated with high ***ego involvement** tend to have narrow latitudes of acceptance and wide latitudes of rejection, and the reverse applies to attitudes of low ego involvement. A consequence of this theory is that an extreme and ego-involving judgement or attitude tends to be polarized (to become even more extreme) in response to most types of information or persuasive communications. The theory was formulated in 1961 by the US-based Turkish psychologist Muzafer Sherif (1906–88) and the US psychologist Carl I(vor) Hovland (1912–61). *See also* **BOOMERANG EFFECT**, **CONTRAST (5)**, **DISCREPANCY EFFECTS**, **FALSE-CONSENSUS EFFECT**. *Compare* **ADAPTATION-LEVEL THEORY**.

association area *n.* Another name for a ***tertiary projection area**, or more loosely any area of the cerebral cortex not devoted to primary sensory or motor functions, or to primary and secondary sensory or motor functions (usage is not consistent). Also called an *association centre* or an area of the *association cortex*.

association fibre *n.* Any of the nerve fibres that pass from one ***gyrus** to another within or between lobes of the same cerebral hemisphere. US *association fiber*.

association, free *See* **FREE ASSOCIATION**.

associationism *n.* A psychological doctrine concerning the attraction between mental elements or ideas, first suggested in a chapter entitled 'Of the Association of Ideas' that the English empiricist philosopher John Locke (1632–1704) added in 1700 to a new edition of his *Essay Concerning Human Understanding*, originally published in 1690, the doctrine later being elaborated by the Scottish philosopher James Mill (1773–1836) and his English son John Stuart Mill (1806–73). According to the Mills, mental experiences consist of elementary *sensations* when sense organs are

*****ebook converter DEMO Watermarks*****

stimulated, and *ideas* are thoughts and memories experienced in the absence of sensory stimulation. Ideas have a tendency to become associated with one another: complex ideas arise from the association of simple ideas, and once two ideas have become associated, it is then difficult to experience one without the other, as when the idea of redness, associated in most people's minds with warmth, tends to come to mind whenever we think of warmth. James Mill believed that the single **contiguity law* (elements become associated when they are close to one another in time or space) explained all mental associations and complex ideas. John Stuart Mill added the **similarity law* (similar ideas tend to become associated), and the **frequency law* (the more frequently ideas occur together, the more strongly they become associated), and also introduced what he called **mental chemistry*, according to which simple ideas combine to form complex ideas that are qualitatively different from their constituent elements. The Scottish mental philosopher Alexander Bain (1818–1903) was the first to suggest that behavioural actions can also form associations with ideas. *See also* [GROUPING LAW](#). *Compare* [CONNECTIONISM \(2\)](#).

association/sensation ratio *See* [A/S RATIO](#).

association test *n.* Another name for the **word-association test*. Also called the *association method*.

association value *n.* A property of **nonsense syllables* and other materials that are themselves meaningless or of being, to varying degrees, suggestive of meaningful words or ideas. For example, according to empirical studies, the nonsense syllables *BAL*, *FUT*, and *MOD* have very high association value, whereas *CIJ*, *VAF*, and *XEJ* have very low association value.

associative illusion *n.* Any **visual illusion* in which one part of an image or object is misperceived because of the effect of another. Also called a *geometric illusion*. *See* [BALDWIN ILLUSION](#), [CHEQUER-SHADOW ILLUSION](#), [CRAIK-O'BRIEN EFFECT](#), [CURVATURE ILLUSION](#), [DELBOEUF ILLUSION](#), [EBBINGHAUS ILLUSION](#), [EHRENSTEIN'S BRIGHTNESS ILLUSION](#), [EHRENSTEIN'S SQUARE ILLUSION](#), [FILLED-SPACE ILLUSION](#), [FILLING-IN ILLUSION](#), [FRASER SPIRAL](#), [GELB EFFECT](#), [HELMHOLTZ ILLUSION](#), [HERING ILLUSION](#), [HERMANN GRID](#), [HOLLOW SQUARES](#)

*****ebook converter DEMO Watermarks*****

ILLUSION, HORIZONTAL–VERTICAL ILLUSION, IRRADIATION ILLUSION, JASTROW ILLUSION, KARDOS EFFECT, LAND EFFECT, MARGARET THATCHER ILLUSION, MORINAGA MISALIGNMENT ILLUSION, MÜLLER-LYER ILLUSION, MÜNSTERBERG ILLUSION, ORBISON ILLUSION, OUCHI ILLUSION, PATTERN-INDUCED FLICKER COLOUR, POGGENDORFF ILLUSION, PONZO ILLUSION, SANDER PARALLELOGRAM, STAR ILLUSION, TEACUP ILLUSION, TOP HAT ILLUSION, TWISTED-CORD ILLUSION, WUNDT ILLUSION, ZANFORLIN ILLUSION, ZÖLLNER ILLUSION. *See also* CONTEXT EFFECT, FIELD EFFECT, VISUAL INDUCTION.

associative interference *n.* An umbrella term for **proactive interference* and **retroactive interference*. Also called *associative inhibition*.

associative laws *n.* The principles governing **associative learning*. *See also* ASSOCIATIONISM.

associative learning *n.* The learning of contingencies between events such as occurs in **conditioning* (1). In **classical conditioning*, associations between **conditioned stimuli* and **unconditioned stimuli* are learned; in **operant conditioning*, associations between **responses* and **reinforcers* are learned. *See also* AUTOSHAPING, EVALUATIVE CONDITIONING, SHAPING (1).

associative memory *n.* Memory for links or connections between items, often studied through **paired-associate learning*.

associative priming *See* PRIMING (1).

assortative mating *n.* Preference for sexual partners with similar **phenotypes*, as when humans select mates who tend to resemble themselves in wealth, social class, intelligence, or attractiveness, or when other organisms choose mates that resemble themselves on specific criteria. *See also* HERITABILITY, POPULATION GENETICS. *Compare* DISASSORTATIVE MATING. [From French *assortir* to classify, from Latin *ad* to + *sors*, *sortis* a lot]

astereognosis *n.* Inability to identify or recognize objects by touch, often resulting from a lesion in the somatosensory association area (see SOMATOSENSORY CORTEX). The unimpaired ability is called *stereognosis*. [From

Greek *a-* without + *stereos* solid + *gnosis* knowledge]

asthenia *n.* Listlessness, debility, or tendency to fatigue. *See also* NEURASTHENIA. **asthenic** *adj.* [From Greek *astheneia* weakness, from *a-* without + *sthenos* strength + *-ia* indicating a condition or quality]

asthenic body type *n.* A slender, long-limbed **somatotype* believed by the German psychiatrist Ernst Kretschmer (1888–1964) and his followers to be prone to **schizophrenia*. *See also* KRETSCHEMER CONSTITUTIONAL TYPE. *Compare* ATHLETIC BODY TYPE, DYSPLASTIC BODY TYPE, PYKNIC BODY TYPE. [From Greek *a-* without + *sthenos* strength]

astigmatism *n.* A defect in a lens or mirror in which rays of light from a single point do not all focus at the same point but are drawn into a line; hence a visual defect resulting from astigmatism of the **crystalline lens* of the eye, characterized by lines oriented in a certain direction being perceived more distinctly than lines in the transverse direction. *See also* ABERRATION (3). [From Greek *a-* without + *stigma*, *stigmatos* a point or focus]

astonishing hypothesis *n.* The name given in 1994 by the Nobel prizewinning English molecular biologist Francis H(arry) C(ompton) Crick (1916–2004) to the proposition that a person's mental experiences are entirely explained by the behaviour of neurons, glial cells, and the atoms, ions, and molecules that constitute and influence them.

astrocyte *n.* Any of the large **neuroglial* cells shaped like many-pointed stars that support the rigid structure of the brain, mop up **potassium* ions during periods of intense neuronal activity, recycle glutamate and GABA after release, function as phagocytes by engulfing debris from decaying cells, and possibly play a role in the **blood–brain barrier* by surrounding capillaries in the brain with the terminal boutons of their dendrites. Also called *astroglia*. *See also* GLIOSIS. [From Greek *astron* a star + *kytos* a vessel or hollow]

astrocytoma *n.* A tumour in the central nervous system composed of proliferating **astrocytes*, the main type of brain tumour in humans. [From Greek *astron* a star + *kytos* a vessel or hollow + *-oma* indicating an
*****ebook converter DEMO Watermarks*****

abnormality]

asymbolia *n.* Another name for ***asemia**. [From Greek *a-* without + *symbolon* a token, from *syn* together + *ballein* to throw]

asyndeton *n.* A form of sentence construction in which a conjunction is omitted for economy of expression or rhetorical effect. A double asyndeton occurs in the usual English translation of Julius Caesar's sentence: *I came, I saw, I conquered*. [From Greek *a-* not or without + *syndetos* bound together, from *syn* together + *detos* bound or tied]

ataque de nervios *n.* A ***culture-bound syndrome** found mainly among Latino communities in the Caribbean, but also in many Latin American and Mediterranean cultures, characterized by outbursts of uncontrollable shouting, crying, trembling, a sensation of heat in the chest rising to the head, and aggression, both verbal and physical, accompanied by a sense of loss of control, generally precipitated by a ***psychosocial stressor** such as bereavement, divorce, or a family conflict. It is sometimes interpreted as a form of ***panic attack**. **ataques de nervios** *pl.* [From Spanish *ataque* attack + *de* of + *nervios* nerves, hence literally an attack of nerves]

ataraxia *n.* Tranquillity or freedom from anxiety. **ataractic** *adj.* Capable of calming or tranquillizing. An ataractic drug is a ***tranquillizer**. [From Greek *ataraktos* undisturbed, from *a-* without + *tarassein* to trouble + *-ia* indicating a condition or quality]

ataxia *n.* Diminution or loss of the ability to coordinate voluntary movements, caused by a lesion in the ***cerebellum** or another area of the ***central nervous system**. See **GAIT ATAXIA**, **LOCOMOTOR ATAXIA**, **OPTIC ATAXIA**, **SENSORY ATAXIA**. See also **DRAVET SYNDROME**, **POSTUROGRAPHY**, **ROMBERG'S SIGN**. Compare **DYSTAXIA**, **PSEUDOATAXIA**. [From Greek *a-* without + *taxis* order + *-ia* indicating a condition or quality]

ateleiosis *n.* Dwarfism without loss of proportion between body parts. [From Greek *a-* without + *telos* an end + *-osis* indicating a process or state]

atheism *n.* Rejection of belief in God. **atheist** *n.* One who rejects belief in God. *Compare* AGNOSTICISM, DEISM, PANTHEISM, THEISM. **atheistic** or **atheistical** *adj.* [From Greek *a-* without + *theos* a god + *-ismos* indicating a state or condition]

atherosclerosis *n.* The major form of **arteriosclerosis*, involving **sclerosis* and thickening of the inner walls of the arteries through the deposit of **cholesterol* and other fatty substances. In the coronary arteries, this may lead to coronary heart disease; in the brain, to **neurological* impairments such as **vascular dementia* or multi-infarct dementia. [From Greek *athera* porridge or gruel + *sklerosis* a hardening, from *skleros* hard + *-osis* indicating a process or state]

athetosis *n.* A neuromuscular condition characterized by involuntary, slow, writhing movements, especially of the fingers, hands, head, and tongue, associated with some forms of **cerebral arteriosclerosis*, **cerebral palsy*, lesions in the **basal ganglia*, or **tardive dyskinesia*. **athetoid** *adj.* [From Greek *athetos* not in place, from *a-* not + *tithenai* to place + *-osis* indicating a process or state]

athletic body type *n.* A muscular, well-built **somatotype* believed by the German psychiatrist Ernst Kretschmer (1888–1964) and his followers to be prone to **schizophrenia*. *See also* KRETSCHMER CONSTITUTIONAL TYPE. *Compare* ASTHENIC BODY TYPE, DYSPLASTIC BODY TYPE, PYKNIC BODY TYPE. [From Greek *athletes* an athlete, from *athlos* a contest]

Ativan *n.* A proprietary name for the benzodiazepine drug **lorazepam*. [Trademark]

atmosphere effect *n.* In **person perception*, the tendency for one characteristic of a person to influence the way the person's other characteristics are perceived by others. *See* HALO EFFECT, TRAIT CENTRALITY.

atmosphere hypothesis *n.* The conjecture that errors in judging the validity of **syllogisms* sometimes arise from a bias in favour of judging a conclusion as valid if it contains the same **quantifiers* (1, 2) or other logical

terms as the premises. For example, the following syllogism is often wrongly judged to be valid: *Some professors are logicians; Some logicians are absent-minded; Therefore, some professors are absent-minded.* The reasons for the plausibility of this invalid syllogism are the repetition of the form *Some P are Q* and the fact that the conclusion seems plausible. Compare BELIEF-BIAS EFFECT, CONVERSION HYPOTHESIS.

atmosphere perspective *n.* Another name for **aerial perspective*.

atomoxetine *n.* The generic name of a drug for the treatment of **attention-deficit/hyperactivity disorder (ADHD)*, developed by Eli Lilly and first marketed in January 2003. It is administered in the form atomoxetine hydrochloride, and some doctors and patients prefer it to **methylphenidate* (Ritalin) because it has milder side-effects, being a selective **noradrenalin reuptake inhibitor* and not a **stimulant drug*, and because it is suitable for use by adults as well as children. Formerly named *tomoxetine*. Commonly called *Strattera* (trademark). Formula: C₁₇H₂₁NO.

atonia *n.* Absence of normal muscle **tonus*. Also called *atony*. See also CATAPLEXY (1, 2), DYSTONIA, REM ATONIA, SLEEP PARALYSIS. [From Greek *a-* without + *tonos* tension or tone + *-ia* indicating a condition or quality]

ATP *abbrev.* Adenosine triphosphate, a nucleotide synthesized in the mitochondria of all animal and plant cells during the **Krebs cycle*. Its main function is to store energy, which it liberates when it is converted by **ATPase* to **ADP* during nerve impulses or muscular contractions. It is also converted by **adenylate cyclase* into **cyclic AMP*, which functions as a **second messenger*.

ATPase *abbrev.* (pronounced ay-tee-pee-aze). Adenosine triphosphatase, an **enzyme* that converts **ATP* to **ADP* when energy is consumed in a nerve impulse or muscular contraction. It consumes ATP and uses the resulting energy to pump proteins across the cell membrane, maintaining the **pH* level within the cell. It also manufactures ATP by means of a motor located in the **cell membrane* that rotates a shaft attached to a head. The head protrudes into the **cytoplasm*, synthesizing ATP as it spins. [From ATP

+ Greek *-ase* denoting an enzyme, from *diastasis* separation]

atrophy *n.* Degeneration or wasting away of an organ, structure, or body part through disease, inadequate nutrition, or disuse. *Compare* [HYPERTROPHY](#). [From Greek *a-* without + *trophe* nourishment]

atropine *n.* A poisonous [*alkaloid](#) obtained from the deadly nightshade plant *Atropa belladonna*, being a [*muscarine](#) [*antagonist](#) (3) that blocks the action of [*acetylcholine](#) in the parasympathetic nervous system, paralysing smooth muscles, and is used as a pre-anaesthetic medication and an antidote to chemical nerve agents. It was popular with medieval poisoners, and because a few drops of it in the eyes cause the pupils to dilate, it has been used throughout history by women as a cosmetic and is still used medicinally for eye examinations. *See also* [BELLADONNA](#), [BZ GAS](#), [HYOSCYAMINE](#), [LOMOTIL](#), [METHYL ATROPINE](#), [MUSCARINIC RECEPTOR](#). *Compare* [CURARE](#), [SCOPOLAMINE](#), [STRYCHNINE](#). [From Greek *Atropos* the eldest of the three Fates and the one who cuts the thread of life, from *atropos* that may not be turned away from, from *a-* without + *tropos* a turn, from *trepein* to turn]

attachment disorder *See* [REACTIVE ATTACHMENT DISORDER](#).

attachment theory *n.* A theory advanced in 1951 by the English psychiatrist (Edward) John (Mostyn) Bowlby (1907–90) according to which an infant has an inborn biological need for close contact with its mother (or other main carer), a normal bond developing within the first 6 months of life through the mother's responsiveness to these needs, and [*maternal deprivation](#) during this critical period having adverse effects on psychological development. *See also* [ANACLITIC DEPRESSION](#), [HOSPITALISM](#), [LOVE](#), [SEPARATION ANXIETY](#), [SEPARATION ANXIETY DISORDER](#). *Compare* [IMPRINTING](#).

attensity *n.* A term introduced by the English psychologist Edward Bradford Titchener (1867–1927) for the type of sensory clarity distinguishing a sensation that is the focus of attention from one that is not. [From *at(tributive)* + *tensity* stretching, from Latin *tendere*, *tensus* to stretch]

attention *n.* Sustained concentration on a specific stimulus, sensation, idea, thought, or activity, enabling one to use information-processing systems
*****ebook converter DEMO Watermarks*****

with limited capacity to handle vast amounts of information available from the sense organs and memory stores. *See also* [ALPHA BLOCKING](#), [ATTENTION OPERATING CHARACTERISTIC](#), [ATTENTION SPAN \(1, 2\)](#), [ATTENUATION THEORY](#), [AUTOMATIC PROCESSING](#), [BOTTLENECK THEORY](#), [COCKTAIL PARTY PHENOMENON](#), [CONTROLLED PROCESSING](#), [DUAL-TASK PERFORMANCE](#), [FILTER THEORY](#), [FLANKER COMPATIBILITY EFFECT](#), [HYPERCATHESIS](#), [INATTENTIONAL BLINDNESS](#), [LATE SELECTION](#), [MARGINAL CONSCIOUSNESS](#), [VISUAL SEARCH](#). *Compare* [ATTENTIVITY](#), [CONSCIOUSNESS](#). [From Latin *attentio* attention, from *attendere* to apply the mind to something, from Latin *tendere*, *tensus* to stretch]

attentional dyslexia *n.* A rare form of [*dyslexia](#) characterized by normal reading of individual words and naming of individual letters presented in isolation but an impaired ability to read more than one word or to name more than one letter when two or more are presented simultaneously on the page. *See also* [HYPERLEXIA](#).

attention-deficit/hyperactivity disorder *n.* A [*neurodevelopmental disorder](#) in [*DSM-5](#) affecting about 5 per cent of children and 2.5 per cent of adults, more common in boys than girls, characterized by persistent inattention, hyperactivity, or impulsivity, with some signs and symptoms appearing before the age of 12, causing problems at school or work and in the home, and interfering significantly with social, academic, or occupational functioning. Inattention is manifested by drifting off task, losing focus, or lacking persistence; hyperactivity by fidgeting, tapping, running around unnecessarily, and feeling restless when inactive; and impulsivity by hasty decision making without forethought, risky behaviour, social intrusiveness, and pursuit of immediate rather than [*deferred gratification](#). The disorder may be manifested as a predominantly inattentive subtype, a predominantly hyperactive–impulsive subtype, or a combined subtype, and it has substantial [*heritability](#). It is not a disorder of attention per se, as was formerly believed, but a developmental failure in areas of the brain responsible for inhibition and self-control, especially the [*caudate nucleus](#), the [*globus pallidus](#), the [*prefrontal cortex](#), and the [*vermis](#) of the cerebellum, areas that use [*dopamine](#) to communicate with one another and that tend to be shrunken in people with the disorder. Also called *attention-deficit disorder (ADD)*, *minimal brain dysfunction (MBD)*. *See also* [ATOMOXETINE](#), [METHYLPHENIDATE](#). *Compare* [HYPERKINESIS](#), [HYPERKINETIC](#)

DISORDERS, INTERMITTENT EXPLOSIVE DISORDER, OPPOSITIONAL DEFIANT DISORDER.
ADHD *abbrev.*

attention operating characteristic *n.* A type of **performance operating characteristic* used in the study of **attention*, consisting of a graph in which the level of performance of one task is plotted against the level of performance of the other, the tasks being performed simultaneously and attention shifted periodically from one task to the other. **AOC** *abbrev.*

attention span *n.* 1. The length of time for which a person can attend to something. 2. Another name for the **span of apprehension*. *See also* CHUNKING, MAGICAL NUMBER SEVEN.

attenuation *n.* Reducing the force, effect, or value of something. In statistics, a reduction in the magnitude of a **correlation* below its theoretical true value as a result of measurement error in one or both of the sets of scores entering into the relationship. A widely used *correction for attenuation*, which assumes that the errors are uncorrelated with the true scores and with each other, states that the true correlation is equal to the correlation between the observed scores divided by the **geometric mean* of their **reliabilities*. [From Latin *attenuare* to make thin, from *ad* to + *tenuis* thin + *-ation* indicating a process or condition]

attenuation theory *n.* Any theory of **attention* according to which information that is not attended to is processed, though at a shallower **level of processing* than the information receiving attention. The mechanism that implements this process is called an *attenuating filter*. The theory was formulated in 1960 by the US-based English psychologist Anne (Marie) Treisman (born 1935). *See also* COCKTAIL PARTY PHENOMENON, FILTER THEORY, SELECTIVE ATTENTION. *Compare* BOTTLENECK THEORY. [From Latin *attenuare* to make thin or to weaken, from *tenuis* thin]

attitude *n.* 1. An enduring pattern of evaluative responses towards a person, object, or issue. According to a frequently quoted classical definition, it is a more or less consistent pattern of affective, cognitive, and **conative* or behavioural responses (or of feeling, thinking, and behaving) towards a psychological object, but the consistency implied by this definition is a
*****ebook converter DEMO Watermarks*****

supposition that is frequently unmatched by reality, and it is possible to have an attitude towards something without ever having the opportunity to express it in behaviour. *See also* [ATTITUDE CHANGE](#), [ATTITUDE SCALE](#), [DUAL-PROCESS MODEL](#), [ELABORATION LIKELIHOOD MODEL](#), [EXPECTANCY-VALUE THEORY](#), [IMPLICIT ATTITUDE](#), [SELF-PERCEPTION THEORY](#), [THEORY OF PLANNED BEHAVIOUR](#), [THEORY OF REASONED ACTION](#). **2.** A bodily posture, especially one indicative of a mental state (*She assumed an attitude of dejection, holding her head in her hands*). **3.** Informally, truculent or cheeky demeanour or behaviour (*My teenage son was sulking and gave me nothing but attitude*). **attitudinal** *adj.* Of or relating to an attitude (1, 2) or to attitudes. [From Italian *attitudine* disposition, from Latin *aptitudo* fitness, from *aptus* fit or apt]

attitude change *n.* The process whereby an [*attitude \(1\)](#) towards a person, object, or issue becomes more or less favourable, usually as a consequence of [*persuasion](#). *See also* [ASSIMILATION-CONTRAST THEORY](#), [BALANCE THEORY](#), [COGNITIVE CONSISTENCY THEORY](#), [CONGRUITY THEORY](#), [ELABORATION LIKELIHOOD MODEL](#), [FORCED COMPLIANCE](#), [GROUP POLARIZATION](#), [INGRATIATION](#), [INOCULATION THEORY](#), [LAW OF SOCIAL IMPACT](#), [RHETORIC \(1\)](#), [SLEEPER EFFECT](#).

attitude scale *n.* An instrument for measuring [*attitudes \(1\)](#), often but not necessarily consisting of some form of [*questionnaire](#). *See* [GUTTMAN SCALE](#), [LIKERT SCALE](#), [SEMANTIC DIFFERENTIAL](#), [THURSTONE SCALE](#), [UNFOLDING TECHNIQUE](#), [UNOBTRUSIVE MEASURE](#).

attitude similarity hypothesis *n.* The proposition that people tend to be attracted to others who share their attitudes and values in important areas. This hypothesis has received strong and consistent support from empirical investigations. Also called the *similarity-attraction hypothesis*. *Compare* [NEED COMPLEMENTARITY HYPOTHESIS](#).

attribute *n.* A quality, property, aspect, or [*feature \(1\)](#) of any [*phenomenon](#), whether an object, event, [*concept](#), [*schema](#), or person. *See* [INTEGRAL ATTRIBUTE](#), [SEPARABLE ATTRIBUTE](#). [From Latin *attribuere* to associate with, from *ad* to + *tribuere* to give]

attribution *n.* The assignment of causes to behaviour, or the perception or
*****ebook converter DEMO Watermarks*****

inference of the causes of behaviour, such causes including personal dispositional factors and external situational factors. The term was introduced in this sense in 1958 by the Austrian-born US psychologist Fritz Heider (1896–1988). *See also* ACTOR–OBSERVER DIFFERENCE, ATTRIBUTIONAL BIAS, ATTRIBUTION THEORY, COVARIATION PRINCIPLE, FALSE-CONSENSUS EFFECT, FUNDAMENTAL ATTRIBUTION ERROR, KELLEY'S CUBE, PERSON PERCEPTION, POSITIVITY BIAS (1), SELF-SERVING BIAS. **attributional** *adj.*

attributional bias *n.* Any systematic distortion in the assignment of causes to behaviour or in inferring the causes of behaviour. The most important ones so far discovered are the *actor–observer difference, *base-rate fallacy, *fundamental attribution error, *positivity bias (1), and *self-serving bias. *See also* ATTRIBUTION, ATTRIBUTION THEORY.

attribution error *See* FUNDAMENTAL ATTRIBUTION ERROR.

attribution theory *n.* A theory designed to explain how people perceive, infer, or ascribe causes to their own and other people's behaviour. Basic research in this area has established that we tend to attribute another person's behaviour to internal, dispositional causes rather than external, situational causes if the behaviour seems different from how other people would behave in the same situation but characteristic of that person's behaviour in similar and dissimilar situations in the past; but if the behaviour seems similar to that of others in the same situation but uncharacteristic of that person's past behaviour in similar and different situations, then we are likely to attribute it to external causes. The theory was first formulated by the Austrian-born US psychologist Fritz Heider (1896–1988) in articles published in 1944 and 1946 and in his book *The Psychology of Interpersonal Relations* in 1958, and it was developed from the 1960s onwards especially by the US psychologists Edward Ellsworth Jones (1926–93) and Harold H(arding) Kelley (1921–2003), the most influential theory being *Kelley's cube. *See also* ACTOR–OBSERVER DIFFERENCE, ATTRIBUTIONAL BIAS, CAUSAL SCHEMA, COGNITIVE-APPRAISAL THEORY, COVARIATION PRINCIPLE, FALSE-CONSENSUS EFFECT, FUNDAMENTAL ATTRIBUTION ERROR, IMPRESSION FORMATION, PERSON PERCEPTION, POSITIVITY BIAS (1), SELF-PERCEPTION THEORY, SELF-SERVING BIAS. **AT** *abbrev.*

attributive *adj.* Of or relating to an adjective or adjectival phrase

*****ebook converter DEMO Watermarks*****

occurring within the same noun phrase as the noun that it modifies. For example, the adjective *good* is attributive in the phrase *the good terrorist*, but it is ***predicative** in *the terrorist is good*. [From Latin *attribuere* to associate with + *-ivus* indicating a tendency, inclination, or quality]

attuition *n.* A hypothetical form of apprehension lower than human ***perception** but higher than simple ***sensation**. Compare **INTUITION**. [From Latin *ad* towards + *intuitio* a contemplation, from *intueri* to gaze at, from *tueri* to look or gaze at]

atypical antipsychotic *n.* Any of a class of drugs that are used in the treatment of ***schizophrenia** and other psychotic disorders and that have fewer ***neuroleptic-induced** side-effects than conventional ***neuroleptic** (1) drugs. See **CLOZAPINE**, **OLANZAPINE**, **RISPERIDONE**, **SERTINDOLE**.

Aubert effect *n.* The phenomenon that occurs after fixating one's gaze on an illuminated vertical bar in a dark room for a minute or two and then tilting one's head to one side through an angle of 30 degrees or more. This creates the illusion that the bar is tilted in the opposite direction and shows that the ***semicircular canals** of the vestibular system provide insufficient information for full orientation in the vertical dimension. A stimulus for demonstrating this effect is most easily constructed by placing a battery torch or flashlight in a cardboard box with a vertical slit cut into one of its sides and covered with tissue paper to diffuse the light. [Named after the German physiologist and psychologist Hermann Ludimar (Rudolf) Aubert (1826–92) who first drew attention to it]

Aubert–Fleischl paradox *n.* The tendency for a moving stimulus to appear to move more slowly when the eyes track it with ***smooth eye movements** than when the gaze is fixated on the static background. It is a slightly surprising phenomenon rather than a true ***paradox**. [Named after the German physiologist and psychologist Hermann Ludimar (Rudolf) Aubert (1826–92) and the Austrian physiologist Marxow Ernst Fleischl (1846–91) who discovered it]

Aubert–Förster law *n.* The proposition that the minimum size at which a stimulus such as a printed letter of the alphabet is just recognizable is
*****ebook converter DEMO Watermarks*****

directly proportional to its angular distance from the **fixation* (1) point or, equivalently, to the distance from the **fovea* of its projection on the **retina*. The law holds from 2 to 40 angular degrees. *Compare* AUBERT–FÖRSTER PHENOMENON. [Named after the German physiologist and psychologist Hermann Ludimar (Rudolf) Aubert (1826–92) and the German ophthalmologist Carl Friedrich Richard Förster (1825–1902) who formulated it and published it briefly in 1856 and fully in 1857]

Aubert–Förster phenomenon *n.* The proposition that near objects are perceived with greater acuity than objects further away, even if they subtend the same **visual angle*. Also called the *Förster phenomenon*. *See also* AERIAL PERSPECTIVE. *Compare* AUBERT–FÖRSTER LAW.

auction game *See* DOLLAR AUCTION GAME.

audibility function *n.* A graph depicting a listener's **absolute threshold* for sound intensity across the range of audible frequencies. **AF** *abbrev.*

audibility range *n.* The frequencies of sound waves that a listener can hear as **tones* (1), between the *audibility limits* of the lowest to the highest frequencies that can be perceived. For a person with normal hearing, the range is more than 10 **octaves*, from 16 hertz to about 20,000 hertz, but for most people the upper audibility limit decreases sharply throughout adulthood. Also called the *auditory spectrum*. *See also* FREQUENCY THEORY, GALTON WHISTLE, INFRASOUND, ULTRASOUND.

audible thought *n.* A **hallucination* in which one hears one's own thoughts being spoken.

audience effect *n.* The effect of passive onlookers or spectators on an individual's task performance. Depending on the nature of the task, the effect on performance may be positive or negative. *See also* DRIVE THEORY OF SOCIAL FACILITATION, NEXT-IN-LINE EFFECT, OVERLEARNING, RESPONSE COMPETITION, SOCIAL FACILITATION. *Compare* COACTION EFFECT.

audile *adj.* 1. Another word for **auditory*. *n.* 2. A person whose

characteristic style of mental imagery is auditory rather than visual, tactile, or motor. Compare [MOTILE \(2\)](#), [TACTILE \(2\)](#), [VISUALIZER](#).

audioanalgesia *n.* Diminished sensation of [*pain](#) during exposure to loud sounds; also, the use of music to distract a person's attention from pain, as during dentistry. See also [ANALGESIA](#). [From Latin *audio* I hear, from *audire* to hear + Greek *an-* without + *algos* pain + *-ia* indicating a condition or quality]

audiogenic seizure *n.* A [*convulsion](#) brought about by prolonged exposure to high-frequency sounds, especially in rats, mice, hamsters, and rabbits. See also [INFRASOUND](#), [ULTRASOUND](#). [From Latin *audio* I hear, from *audire* to hear + *generare* to produce]

audiogram *n.* A graphic record of a listener's [*absolute threshold](#) for [*pure tones](#) as a function of the frequency of the tones, a full description of auditory acuity as measured by an [*audiometer](#). It is often plotted in terms of hearing loss (deviations from average thresholds) in decibels as a function of frequency. [From Latin *audio* I hear, from *audire* to hear + Greek *gramme* a line]

audiogravic illusion *n.* An error in [*sound localization](#) arising from the body being tilted out of the upright position in the absence of visual cues, resulting in the sound source being perceived where it would be in relation to the body if the body were upright. Compare [AUDIOGYRAL ILLUSION](#). [From Latin *audio* I hear, from *audire* to hear + *gravis* heavy + *-icus* of, relating to, or resembling]

audiogyral illusion *n.* An error in [*sound localization](#) that occurs when a sound source on the end of a boom attached rigidly to a listener's head is thus kept at a fixed point relative to the head, usually a few feet in front of the nose, even when the head is turned from side to side, the invariable consequence being that the sound is heard as coming from a point directly overhead. A second version of the same illusion occurs when a person is seated on a slowly rotating platform and a sound source some distance in front rotates with the person's body, again creating the illusion that the sound source is directly overhead. A closely related version occurs when a person

*****ebook converter DEMO Watermarks*****

sits motionless inside a slowly rotating striped drum that induces **vection*, a sensation that the body is rotating in the opposite direction, and a sound source is located at a fixed point outside the drum, creating the illusion once again that the sound source is directly overhead. The illusion in its various forms was discovered by the German-born US psychologist Hans Wallach (1904–98) and published in the *Journal of Experimental Psychology* in 1940. It is explained by the fact that in ordinary circumstances rotation of the body or head produces changes in **transient disparities*, **phase delays*, and **sonic shadows*, except when the sound originates from directly above or below, and experience teaches us that in such circumstances, because we are terrestrial creatures, it almost invariably originates from above. *See also* [SOUND LOCALIZATION](#). *Compare* [AUDIOGRAVIC ILLUSION](#). [From Latin *audio* I hear, from *audire* to hear + *gyrus* a circle + *-alis* of or relating to]

audiokinetic response *n.* An automatic movement of the eyes in response to a change in the position of the body relative to a continuous sound source, its effect being to maintain fixation of gaze on an object of potential interest. [From Latin *audio* I hear, from *audire* to hear + *kinetikos* of or relating to motion, from *kineein* to move + *-ikos* of, relating to, or resembling]

audiometer *n.* A device for measuring a person's auditory acuity across a range of sound intensities and frequencies. *See also* [AUDIOGRAM](#). **audiometric** *adj.* [From Latin *audio* I hear, from *audire* to hear + Greek *metron* a measure]

audiometric zero *n.* The normal or average intensity threshold for sound of a specified frequency.

audiometry *n.* The measurement of auditory acuity with an **audiometer*.

audio-oculogyric reflex *n.* A **reflex* turning of the head and eyes towards a sudden or unexpected sound. [From Latin *audio* I hear, from *audire* to hear + *oculus* the eye + *gyrus* a circle or turning + *-icus* of, relating to, or resembling]

audition *n.* 1. The act or experience of **hearing*. 2. A trial performance by
*****ebook converter DEMO Watermarks*****

a musician or other performing artist applying to join a group, gain a place on a course, or take part in a performance. [From Latin *auditis*, -onis a hearing, from *audire* to hear + -ion indicating an action, process, or state]

auditory *adj.* Of or relating to the sense of hearing or **audition* (1). Also called *audile*. [From Latin *auditorius* relating to hearing, from *audire* to hear]

auditory acuity *n.* Keeness or sharpness of hearing. *See also* *ACUITY*, *AUDIOGRAM*, *AUDIOMETER*.

auditory adaptation *n.* Transient loss of hearing sensitivity to tones of certain frequencies following prolonged exposure to an unchanging sound wave. When the sound that causes the effect is loud and the hearing loss is more than transient it is usually called *auditory fatigue*. *See also* *ADAPTATION* (2).

auditory agnosia *See* *AGNOSIA*.

auditory aphasia *See* *APHASIA*.

auditory association cortex *See* *AUDITORY CORTEX*.

auditory beat *n.* The periodic waxing and waning of sound, produced when two tones with slightly different **frequencies* (1) are sounded simultaneously, caused by wave interference as the two tones alternately reinforce and cancel each other's amplitude, as when a tone of 256 hertz (Middle C) is sounded simultaneously with a tone of 260 hertz, generating a beat frequency of 4 hertz (cycles per second). Piano tuners work by counting beats. Beats occur even if the tones are presented separately to the two ears via headphones (*see* *BINAURAL BEAT*).

auditory canal *n.* Either of two passages in each ear, the *external auditory canal* (also called the *external meatus*) leading from the **outer ear* to the **tympanic membrane*, and the *internal auditory canal* (also called the *internal meatus*) located in the **temporal bone* and containing the **vestibulocochlear nerve* that transmits impulses from the **inner ear* to the

brain. When unspecified, the external canal is usually meant, but such ambiguity is avoided in careful usage. *Compare* [EUSTACHIAN TUBE](#).

auditory cortex *n.* Areas of the [*cerebral](#) cortex, namely the primary auditory cortex and the auditory association cortex, devoted to processing information from the organs of hearing. In each cerebral hemisphere, the primary auditory cortex occupies [*Heschl's gyrus](#), a small gyrus running transversely across the superior temporal gyrus, the upper gyrus of the temporal lobe (temporal operculum). It is divided into separate bands responding to particular tonal frequencies, and projections from the [*basilar](#) membranes of both ears are represented in a [*tonotopic map](#) in each hemisphere. In the (usually) left hemisphere it includes [*Wernicke's area](#), and the auditory association cortex is adjacent to it in the superior temporal gyrus. *See also* [INFERIOR COLLICULUS](#), [MEDIAL GENICULATE NUCLEUS](#).

auditory egocentre *n.* The point in the centre of the skull where auditory sensations are perceived or felt to converge. US *auditory egocenter*. *See also* [EGOCENTRE](#).

auditory fatigue *n.* Temporary loss of hearing sensitivity resulting from exposure to a loud tone, the loss usually extending from the frequency of the fatiguing tone to about one [*octave](#) above it. *Compare* [AUDITORY ADAPTATION](#).

auditory flutter *n.* The sensation produced by sound that is periodically interrupted at a rate below the frequency of [*auditory](#) flutter fusion and that can therefore be heard as intermittent by the listener. Also called *auditory flicker*. *Compare* [FLICKER](#).

auditory flutter fusion *n.* The lowest interruption frequency at which a listener ceases to hear [*auditory](#) flutter and begins to hear a continuous sound. Also called *auditory flicker fusion*. *Compare* [CRITICAL FLICKER FREQUENCY](#). **AFF** *abbrev.*

auditory fusion *n.* Hearing two or more sounds as one. When the sounds are presented to different ears it is also called *binaural fusion*. *Compare* [PRECEDENCE EFFECT](#).

auditory hallucination *n.* A **hallucination* of a sound, usually of voices speaking. The definition sometimes (but not in **DSM-5* or **ICD-10*) excludes sounds perceived as emanating from inside the head.

auditory illusion *n.* Any **illusion* of **hearing*. See AUDIOGRAVIC ILLUSION, AUDIOGYRAL ILLUSION, AUDITORY STAIRCASE ILLUSION, BINAURAL SHIFT, MELODIC PARADOX, MISSING FUNDAMENTAL ILLUSION, PHONEMIC RESTORATION, SEMITONE PARADOX, TRITONE PARADOX, VENTRILOQUISM EFFECT, VERBAL TRANSFORMATION EFFECT. See also DOPPLER EFFECT (which is not strictly illusory). Compare POSTURAL AFTEREFFECT, TACTILE ILLUSION, VISUAL ILLUSION.

auditory localization See SOUND LOCALIZATION.

auditory masking *n.* The obscuring of one sound, sometimes called a *test stimulus*, by another, called a *masking stimulus*, causing the **absolute threshold* of the test stimulus to increase or its perceived **loudness* to decrease. The masking stimulus is presented either before the test stimulus (**forward masking*), at the same time as the test stimulus (**simultaneous masking*), or after the test stimulus (**backward masking*), and backward or forward masking has been found to occur when the masking stimulus is presented within 100 milliseconds of the test stimulus. See also CENTRAL MASKING, CRITICAL BAND, MASKING.

auditory meatus *n.* Another name for the external or internal **auditory* canal. [From Latin *meatus* a course]

auditory nerve *n.* Another name for the **vestibulocochlear nerve*.

auditory receptive field *n.* An area of space around the head from which auditory stimuli elicit responses from a specified auditory neuron, the spatial area being the auditory neuron's receptive field. The auditory cortex and midbrain of the barn owl, which is capable of more accurate **sound localization* than any other species that has been tested, have been found to contain neurons that respond only to sounds in very specific spatial areas. See also RECEPTIVE FIELD.

auditory receptor *n.* A **sensory* receptor consisting of **hair cells* in the **basilar* membrane of the **organ of Corti* that translate sound waves—pressure waves with frequencies between 16 hertz and 20,000 hertz—into nerve impulses. Also called a *phonoreceptor*.

auditory space perception *n.* Another name for **sound localization*.

auditory spectrum *n.* Another name for the **audibility range*. [So called by analogy with the spectrum of visible light]

auditory staircase illusion *n.* A sound equivalent of the **staircase illusion*, discovered in 1964 by the US psychologist Roger N(ewland) Shepard (born 1929) in the perception of musical tones that are clearly defined in terms of pitch class (the twelve tones of the octave that are usually labelled C, C#, D,..., B) but are ambiguous as regards the octaves to which they belong, each tone being composed of equal-intensity **sinusoidal* waves from several octaves. If a sequence of such tones moving up or down through the twelve tones of the octave is played repeatedly, then instead of hearing a sequence of twelve tones being repeated, listeners hear a single sequence apparently rising or descending endlessly. Also called the *illusion of circular pitch*. See also *MELODIC PARADOX*, *SEMITONE PARADOX*, *TRITONE PARADOX*.

auditory suffix effect *n.* The impairment of memory for a list of words caused by the presentation at the end of the list, during the learning process, of further words or speech sounds that need not be committed to memory. Non-speech sounds do not normally produce such an effect. See also *PRECATEGORICAL ACOUSTIC STORE*.

auditory system *n.* A generic name for the totality of structures in the nervous system that are involved in hearing.

auditory tube *n.* Another (informal) name for the Eustachian tube.

Aufgabe *n.* A task or assignment, whether self-imposed or resulting from external instructions or an experimental manipulation, that creates a particular mental set or behavioural predisposition. See also *EINSTELLUNG*, *SET (2)*, *WATER-*

JAR PROBLEM. [From German *Aufgabe* task, job, or assignment, from *auf* on + *Gabe* something given, from *geben* to give]

aura *n.* 1. A distinctive ambience or quality generated by a person or thing. 2. A brief sensation, such as a flash of light (**phosphene*), a blind spot (**scotoma*), or a sound, experienced as a **prodromal* warning of an attack of (especially) **epilepsy* or **migraine*. 3. In occultism and **parapsychology*, an emanation supposedly surrounding a person or other living thing and said to be visible only to a person with a special psychic ability or gift. [From Latin *aura* a breeze]

aural *adj.* Of, relating to, or perceived through the ear. [From Latin *auris* an ear]

aural harmonic *n.* A **harmonic* generated by the auditory system.

auricle *n.* 1. Another name for the **pinna* or external part of the ear. 2. The atrium or upper chamber of the heart, or a small sac in the atrium of the heart. 3. Any ear-shaped biological structure. **auricular** *adj.* [From Latin *auricula* the external ear, from *auris* an ear]

australopithecine *adj. n.* (Of or relating to) any member of the extinct genus of human-like **hominids* *Australopithecus*, believed to have lived between 4 million and 1 million years ago in southern and eastern Africa, including *Australopithecus africanus*, *A. robustus*, and *A. afarensis*. [From Latin *australis* southern + Greek *pithekos* ape]

authoritarianism *n.* A personality characteristic associated with a potentiality for fascism first identified in 1950 by the German philosopher, sociologist, and psychologist Theodor W(iesengrund) Adorno (1903–69) and several colleagues in a monumental study entitled *The Authoritarian Personality*, usually measured with the **F scale* or a modification of it. It correlates positively with anti-Semitism, **ethnocentrism*, political and economic conservatism, and **intolerance of ambiguity*. See also *A–S SCALE*, *E SCALE*, *PEC SCALE*. **authoritarian** *adj.*

autism *n.* 1. A pathological self-absorption and preoccupation with the self to the exclusion of the outside world, characteristic of some forms of **autistic disorder* and **schizophrenia*. 2. An alternative name for **autism spectrum disorder*. See also *AUTISTIC DISORDER*, *MIRROR NEURON*. **autistic** *adj.* [From Greek *autos* self + *-ismos* indicating a state or condition]

autism spectrum disorder *n.* A **neurodevelopmental disorder* in **DSM-5* characterized by gross and sustained impairment of social interaction and communication; restricted and stereotyped patterns of behaviour, interests, and activities; symptoms present in early development but possibly not fully manifest until later in social development, language acquisition, or play; clinically significant impairment in social, occupational, or other areas of life; the symptoms not being attributable to **intellectual disability* or general developmental delay. Symptoms may include emotional non-responsiveness, lack of reciprocity in social interaction, failure to develop peer relations, delay or failure of speech development, stereotyped and idiosyncratic language or non-verbal behaviour (including **gaze aversion*), insistence on sameness, and ritualized mannerisms. According to DSM-5, the **prevalence* in the US and other countries is about 1 per cent in both child and adult samples. The disorder was first described in 1943 by the Austrian-born US child psychiatrist Leo Kanner (1894–1981) and in 1944 by the Austrian psychiatrist Hans Asperger (1906–80). Also called *autism*, *autistic disorder*, *childhood autism*, *infantile autism*, *Kanner's syndrome*. See also *ASPERGER'S DISORDER*, *IDIOT SAVANT*, *THEORY OF MIND*. Compare *ATTENTION-DEFICIT/HYPERACTIVITY DISORDER*, *RETT'S DISORDER*, *SCHIZOPHRENIA*, *SELECTIVE MUTISM*. **ASD** *abbrev.*

autistic disorder *n.* A term formerly used (in **DSM-IV*) for what was later renamed **autism spectrum disorder*.

autobiographical memory *n.* Another name for **episodic memory*.

autochthonous *adj.* Indigenous; originating from within a person or an organ rather than from external stimulation. It is applied to functions such as heartbeat that originate within the organ and also to psychological phenomena such as an *autochthonous Gestalt* that is generated by the perceiver rather than being inherent in the stimulus. [From Greek *autochthon*

*****ebook converter DEMO Watermarks*****

from the Earth, from *autos* self + *chthon* the Earth + *-ous* having or characterized by]

autocorrelation *n.* A **correlation* between values of a **time series* and values of the same time series shifted backwards or forwards by a fixed amount, called a *lag*. A typical example would be a correlation between a migraine patient's daily ratings of headache severity with the ratings one day earlier, each rating being paired with the one given on the previous day. In this case, the rating on the first day is paired with the rating on the second day, the rating on the second day with the rating on the third day, and so on. This is called the *first-order autocorrelation*, and it tends to be positive if score *t* tends to be predictive of score *t* + 1. The autocorrelation of scores *t* with scores *t* + 2 is the *second-order autocorrelation*, and so on. *See also* *AUTOREGRESSION*, *CORRELOGRAM*. [From Greek *autos* self + English *correlation*]

auto-erotic *adj.* Of or relating to sexual stimulation of one's own body or **masturbation*. In **psychoanalysis*, of or relating to **auto-erotism*.

auto-erotism *n.* In **psychoanalysis*, a form of behaviour characteristic of early infancy in which an **instinct* (3) is satisfied without recourse to an external **instinctual object*. The word was first used in 1898 by the English sexologist Havelock Ellis (1859–1939) in his book *Studies in the Psychology of Sex* (vol. 1), where he defined it as ‘spontaneous sexual emotion generated in the absence of an external stimulus proceeding, directly or indirectly, from another person’ (p. 110). Also called *auto-eroticism*. *See also* *ALLO-EROTISM*, *NARCISSISM*. [From Greek *autos* self + *eros* love or sexual desire + *-ismos* indicating a state or condition]

autogenic training *n.* A form of **psychotherapy* in which the client is taught self-hypnosis and **biofeedback* as techniques of managing stress. It involves a sequence of graded mental exercises (concentrating in turn on feelings of heaviness in the limbs, a sense of warmth in the limbs, heart rate, breathing, warmth of the upper abdomen, and coolness of the forehead) designed to promote physical relaxation. It was developed in Germany from the 1930s to the 1950s and popularized by the German psychiatrist and neurologist Johann Heinrich Schultz (1884–1970). Also called *autogenics*. [From German *das autogene Training*, from Greek *autogenes* self-generated,

*****ebook converter DEMO Watermarks*****

from *autos* self + *genein* to produce]

autogynephilia *n.* A **paraphilia* characterized by sexual arousal in a person born male caused by thinking about being a woman. [From Greek *autos* self + *gyne* a woman + *philos* loving, from *phileein* to love + *-ia* indicating a condition or quality]

autohypnosis *n.* Self-induced **hypnosis*. Also called *self-hypnosis*. [From Greek *autos* self + *hypnos* sleep + *-osis* indicating a process or state]

autointoxication *n.* Self-poisoning by a substance produced within the body. [From Greek *autos* self + Latin *intoxicare* to poison, from *toxicum* a poison + *-ation* indicating a process or condition]

autokinetic effect *n.* The **apparent movement* of a stationary point of light when viewed in a totally dark environment, resulting from **physiological nystagmus* that the visual system cannot compensate for in the absence of any visible frame of reference. Also called the *autokinetic phenomenon* or the *autokinetic illusion* (AKI). [Coined in 1887 by the German physiologist and psychologist Hermann Aubert (1826–92) from Greek *autos* self + *kinetikos* of or relating to motion, from *kineein* to move or *kinesis* movement + *-ikos* of, relating to, or resembling]

autological *adj.* Of or relating to an adjective that is self-descriptive, such as the adjective *short* (which is short), *English* (which is English), and *polysyllabic* (which is polysyllabic). See also *GRELLING'S PARADOX*. Compare *HETEROLOGICAL*. [From Greek *autos* self + *logos* a word + Latin *-icalis* of, relating to, or resembling]

automatic anxiety *n.* In **psychoanalysis*, an infant's psychological feeling of helplessness, arising from biological helplessness, experienced as a form of **anxiety*, or a reproduction of such anxiety in an older child or an adult when confronted with a situation with which it is difficult to cope. The concept was introduced by Sigmund Freud (1856–1939) in his book *Inhibitions, Symptoms and Anxiety* (1926, *Standard Edition*, XX, pp. 77–175, at p. 138). See also *ANXIETY*.

automaticity See [AUTOMATIC PROCESSING](#), [AUTOMATISM](#).

automatic priming See [PRIMING \(1\)](#).

automatic processing *n.* Any [*information](#) processing that occurs involuntarily and without conscious intention or control, as in the performance of well-practised activities such as seeing, reading, riding a bicycle, playing a game, or driving a car. Compared to [*controlled processing](#), automatic processing is generally much faster, can be carried out with less effort, is less easily impaired by fatigue or alcohol, and can involve parallel processing of information from more than one sensory channel, but its development is slower and involves much more practice than controlled processing, and once established it is less controllable. The [*Stroop effect](#) provides a dramatic illustration of automatic processing. Also called *automaticity*, *preconscious processing*, or *pre-attentive processing*. See also [ABSENT-MINDEDNESS](#), [ATTENTION](#), [CENTIPEDE EFFECT](#), [DUAL-PROCESS MODEL](#), [HUMPHREY'S LAW](#), [HYPER-REFLECTION](#), [MINDLESSNESS](#), [OPEN-LOOP CONTROL](#), [PRINCIPLE OF LEAST EFFORT](#), [TOP-DOWN PROCESSING](#).

automatism *n.* Behaviour executed without conscious awareness or control, as for example in [*sleepwalking](#), [*hypnosis](#), [*fugue](#) states, and certain forms of [*epilepsy](#). Also called *automaticity*. See also [DISSOCIATION THEORY](#).

automaton *n.* A machine or mechanical device that can perform tasks intelligently; a person who behaves mechanically, without emotion, like a robot. See also [ZOMBIE \(1\)](#). **automata** *pl.* [From Greek *automatos* self-moving, from *autos* self]

automnesia *n.* Spontaneous revival of memories from an earlier phase of life. [From Greek *autos* self + *mneme* memory + *-ia* indicating a condition or quality]

automorphic perception *n.* A tendency to perceive others as physically more similar to oneself than they actually are. An example from fine art is the work of the Italian painter and sculptor Amedeo Modigliani

(1884–1920) who depicted, and therefore presumably perceived, most of his subjects with elongated features resembling his own. *See also* [EGOCENTRISM](#), [FALSE-CONSENSUS EFFECT](#). [From Greek *autos* self + *morphe* a form or shape]

autonoetic *adj.* Self-knowing, used in relation to [*consciousness](#) of something personally experienced. In an article in the journal *Canadian Psychologist* in 1985, the Estonian-born Canadian psychologist Endel Tulving (born 1927) first put forward the idea that consciousness is not always autonoetic, because a person can know what happened, and when and where it happened, without conscious [*episodic memory](#) of the event. For example, most people know when and where they were born without autonoetic conscious recollection of the birth. Autonoetic consciousness is the subjective re-experiencing of a past event. *See also* [MENTAL TIME TRAVEL](#).

autonoesis *n.* [From Greek *autos* self + *noetikos* of or relating to the rational mind, from *noesis* thought, from *noein* to think + *-ikos* of, relating to, or resembling]

autonomic *adj.* **1.** Self-governing or self-regulating. **2.** Of or relating to the autonomic nervous system. [From Greek *autonomos* living under one's own laws, from *autos* self + *nomos* a law + *-ikos* of, relating to, or resembling]

autonomic arousal disorder *n.* A disorder characterized by persistent or recurrent signs and symptoms mediated by the [*autonomic](#) nervous system, excluding pain but including palpitation, hyperventilation, or nausea. It is not diagnosed if it is caused by a [*general medical condition](#).

autonomic nervous system *n.* The largely self-regulating division of the [*nervous](#) system of vertebrates, controlling the involuntary and vegetative cardiovascular, digestive, reproductive, and respiratory functions of the body, itself subdivided into the [*sympathetic nervous system](#) and the [*parasympathetic nervous system](#) (see [illustration](#)). *Compare* [SOMATIC NERVOUS SYSTEM](#). **ANS** *abbrev.*

Autonomic nervous system. The parasympathetic and sympathetic systems.

autonomous speech *n.* An invented language understood only by its inventor(s), such as the secret languages sometimes used by twins, especially in their second year of life. Also called *idioglossia* or *cryptophasia*.

*****ebook converter DEMO Watermarks*****

autonomy, functional See FUNCTIONAL AUTONOMY.

autonomy versus shame and doubt *n.* One of the crises in the developmental theory of the German-born *ego psychologist Erik H. Erikson (1902–94). See DEVELOPMENTAL CRISES.

autopagnosia *n.* A common misspelling of *autotopagnosia.

autoplastic *adj.* Of or relating to *adaptation (1) through alteration of the self. Compare ALLOPLASTIC. [From Greek *autos* self + *plastikos* mouldable, from *plassein* to form + *-itikos* resembling or marked by]

autopsy, psychological See PSYCHOLOGICAL AUTOPSY.

autoradiograph *n.* A photograph produced by *autoradiography.

autoradiography *n.* A technique for showing the distribution of radioactively labelled molecules in a tissue specimen by exposing a photographic plate to radiation from the specimen. [From Greek *autos* self + English *radiography*]

autoreceptor *n.* A *neuroreceptor for a *neurotransmitter located on the neuron that secretes it, such as one of the receptors that are located in the membranes of *presynaptic cells and that monitor the amount of neurotransmitter synthesized and secreted.

autoregression *n.* A property of a *time series in which each score is a linear function of the preceding score (first-order autoregression) or of more than one of the preceding scores (higher-order autoregression). Such a series, even with only first-order autoregression, has a memory in the sense that each score is correlated with all preceding scores. See also ARIMA, AUTOCORRELATION. **autoregressive** *adj.* [From Greek *autos* self + English *regression*]

autoregressive integrated moving average model See ARIMA.

autoscopic phenomena *n.* Hallucinatory experiences in which one perceives one's face or body in front of one like a mirror reflection, though usually colourless and transparent. [From Greek *autos* self + *skopeein* to watch]

autoshaping *n.* A type of **conditioning* (1) that occurs when an animal learns to respond to a **stimulus* without **reinforcement* (1) of the response but with **associative learning* of a contingency between a **conditioned stimulus* and the reinforcement. For example, in pigeons, brief illumination of a plastic key before the delivery of food results in the pigeon learning to peck the key whenever it is illuminated. *Compare* *SHAPING* (1).

autosomal disorder *n.* A disorder such as Huntington's disease or phenylketonuria that is **genetic* but not **sex-linked*, the relevant gene being carried on an **autosome*.

autosome *n.* Any **chromosome* other than the X and Y **sex* chromosomes. **autosomal** *adj.* [From Greek *autos* self + *soma* a body]

autotopagnosia *n.* A form of agnosia involving an impaired ability to identify parts of one's own body, often indicative of a lesion in the pathway between the **thalamus* and the **parietal lobe*. Often misspelt *autopagnosia*. *See also* *AGNOSIA*, *FINGER AGNOSIA*. *Compare* *asomatagnosia* (*see* *AGNOSIA*), *TOPAGNOSIA*. [From Greek *autos* self + *topos* place + *a-* without + *gnosis* knowing + *-ia* indicating a condition or quality]

availability *n.* The property of being accessible or obtainable, especially (in cognitive psychology) the property of information in long-term memory of being retrievable provided that **cues* (3), **prompts*, or appropriate retrieval strategies can be implemented. An *available memory* is one that can potentially be retrieved. *See also* *AVAILABILITY HEURISTIC*. *Compare* *ACCESSIBILITY* (1). [From Latin *ad* to + *valere* to be strong or to prevail + *-abilitas* capacity, from *habilis* able]

availability heuristic *n.* A cognitive **heuristic* through which the frequency or probability of an event is judged by the number of instances of

it that can readily be brought to mind. It can generate biased or incorrect judgements, as when people are asked whether the English language contains more words beginning with the letter *k* or more words with *k* as the third letter, most people finding it easier to think of instances of words beginning with *k* and therefore concluding that there are more words beginning with *k*, whereas in fact a typical long text contains twice as many words with *k* as the third letter. The heuristic was first identified in 1973 by the Israeli-American psychologists Amos Tversky (1937–96) and Daniel Kahneman (born 1934). See also [ILLUSORY CORRELATION](#), [SIMULATION HEURISTIC](#).

available memory *n.* A memory that potentially can be retrieved. See [AVAILABILITY](#).

average *n.* An informal term for a score or value that is typical of a group or distribution of scores or values. When a precise meaning is attached to this term, it is usually the [*arithmetic mean](#). [From Arabic *awariyah* damaged goods, referring to damage to ships or their cargoes leading to losses that were shared equally among traders]

average error method See [METHOD OF AVERAGE ERROR](#).

average evoked potential *n.* The fluctuation in amplitude of an [*evoked potential](#), averaged over a large number of separate readings to eliminate random [*noise](#) (2). Also called an *average evoked response* (AER). See also [EVENT-RELATED POTENTIAL](#), [N140](#), [N400](#), [P50](#), [P200](#), [P300](#), [P600](#), [STRING LENGTH](#). **AEP** *abbrev.*

average heterozygosity *n.* A measure of the genetic variability within a population, being the average proportion of organisms that are [*heterozygous](#) for a specified set of [*gene](#) loci. Low genetic variability, such as is found for example among cheetahs in Africa, can result from an [*evolutionary bottleneck](#) and can make the species vulnerable to extinction.

average linkage between groups method *n.* In statistics, a popular technique of [*cluster analysis](#) in which the distance between two clusters is defined as the average of the distances between all pairs of individuals or cases formed by taking one from each cluster. In contrast to
*****ebook converter DEMO Watermarks*****

single and complete linkage methods, it uses information about all pairs of distances, not just the nearest or the furthest. Also called the *unweighted pair-group method using arithmetic averages* ([UPGMA](#)).

average linkage within groups method *n.* In statistics, a technique of [*cluster analysis](#) in which clusters are combined in such a way that the average distance between all individuals or cases in the resulting cluster is minimized. Also, the distance between two clusters is defined as the average distance between all possible pairs of individuals in the cluster that would result if they were combined.

aversion therapy *n.* A technique of [*behaviour](#) therapy used to eliminate undesirable habits, like cigarette smoking, by repeatedly pairing unpleasant or painful stimuli such as electric shock, or responses such as nausea (induced by a drug such as [*Antabuse](#)), with the unwanted behaviour or associated stimuli. [From Latin *aversus* turned away, from *avertere* to turn away, from *vertere* to turn]

aversive *n.* Tending to repel or deter; unpleasant. [From Latin *aversus* opposed, from *avertere* to turn from, from *ab* from + *vertere* to turn + *-ivus* indicating a tendency, inclination, or quality]

avoidance–avoidance conflict *n.* Conflict arising from the simultaneous presence of two or more approximately equal threats, one of the three main types of conflict identified in 1931 by the German–US psychologist Kurt Lewin (1890–1947), though he did not name any of the types. Such conflicts tend to be stable and to remain unresolved, because approach towards one of the horns of the dilemma increases the tendency to retreat towards the other, and fear or anxiety is therefore minimized at a point where distances from both are greatest. *See also* [APPROACH–APPROACH CONFLICT](#), [APPROACH–AVOIDANCE CONFLICT](#), [DOUBLE BIND](#).

avoidance conditioning *n.* In [*operant](#) conditioning, a form of [*negative reinforcement](#) in which an organism avoids an aversive stimulus by making a particular response. Typically, a rat is placed in a long, narrow alleyway with a grid floor that becomes electrified and delivers a shock a few seconds after the presentation of a [*conditioned stimulus](#) such as a light, and

*****ebook converter DEMO Watermarks*****

the rat can avoid the painful stimulation by running to the end of the alley and stepping into a non-electrified goal box in the time interval between the signal and the shock. In *active avoidance conditioning* the organism has to make a positive response in order to avoid the aversive stimulus, whereas in *passive avoidance conditioning* it has to abstain from making the response in order to avoid the aversive stimulus. Also called *avoidance learning*. See also [KAMIN EFFECT](#), [SIDMAN AVOIDANCE CONDITIONING](#), [TWO-WAY AVOIDANCE CONDITIONING](#). Compare [ESCAPE CONDITIONING](#).

avoidant personality disorder *n.* A [*personality disorder](#) in [*DSM-5](#) characterized by a pervasive pattern of social inhibition, feelings of inadequacy, and hypersensitivity to criticism, disapproval, or rejection, beginning by early adulthood and indicated by such signs and symptoms as avoidance of work involving significant interpersonal contact; unwillingness to associate with people unless certain of being liked; restraint in intimate relationships for fear of being shamed or ridiculed; preoccupation with criticism or rejection; inhibition in new social situations arising from feelings of inadequacy; self-image as inept, unappealing, and inferior to others; and reluctance to engage in activities carrying the risk of embarrassment. Also called *anxious personality disorder*. Compare [SCHIZOID PERSONALITY DISORDER](#).

avoidant/restrictive food intake disorder *n.* An [*eating disorder](#) in [*DSM-5](#) characterized by an apparent lack of interest in food or eating, leading to significant weight loss, nutritional deficiency, dependence on nutritional supplements, and marked impairment of psychosocial functioning. The diagnosis is made only if the symptoms are not explained by [*anorexia nervosa](#), [*bulimia nervosa](#), or any other mental disorder or medical condition, and if there is no evidence of any disturbance in the experience of body shape or weight.

avolition *n.* Inability to initiate or sustain purposeful activities; one of the [*negative symptoms](#) of [*schizophrenia](#). [From Greek *a-* without + English *volition* the exercise of will, from Latin *volo* I will]

axiom *n.* A statement or proposition that can be accepted without proof or evidence and that may therefore occur as a premise but not the conclusion of an argument. In formal proofs in logic and mathematics, axioms are

*****ebook converter DEMO Watermarks*****

stipulated as true for the purposes of the chain of argument that follows. Also called a *postulate*. **axiomatic** *adj.* [From Greek *axioma* a self-evident truth, from *axioein* to consider worthy, from *axios* worthy]

axiomatic measurement theory *n.* A branch of mathematics and mathematical psychology concerned with the correspondence between measurements of psychological or other **attributes* and the attributes themselves. Also called *abstract measurement theory*. See also [ADDITIVITY](#), [MEASUREMENT](#), [MEASUREMENT LEVEL](#), [MEASUREMENT MODEL](#), [MULTIPLICATIVE MODEL](#), [SCALE \(1\)](#). Compare [CONJOINT MEASUREMENT THEORY](#).

axoaxonic *adj.* Of or relating to a comparatively rare type of **synapse (1)* between the **axon* of an **inhibitory* neuron and the axon of a neuron that it inhibits. Compare [AXODENDRITIC](#), [AXOSOMATIC](#), [DENDRODENDRITIC](#). **A-A** *abbrev.*

axodendritic *adj.* Of or relating to a **synapse (1)* between the **axon* of one **neuron* and the **dendrite* of another, usually excitatory in its effect on the target neuron. Compare [AXOAXONIC](#), [AXOSOMATIC](#), [DENDRODENDRITIC](#). **A-D** *abbrev.*

axolemma *n.* Another name for a **neurolemma*.

axon *n.* A long, threadlike **process (2)* or extending fibre of a **neuron*, capable of conducting a nerve impulse away from the cell body towards the neuron's terminal **bouton*, from where it is transmitted via a **synapse (1)* to another neuron, a muscle, or a gland. Also called a *nerve fibre*. See also [MICROTUBULE](#). Compare [DENDRITE](#). **axonal** *adj.* [From Greek *axon* an axis]

axonal transport *n.* The movement of chemical substances such as **neurotransmitters* and sometimes small objects such as **organelles* along the **axon* of a neuron, either away from the cell body (anterograde axonal transport) or towards it (retrograde axonal transport). See also [MICROTUBULE](#).

axon hillock *n.* The small protuberance on the cell body of a neuron where the **axon* arises and where a nerve impulse is normally (except in certain large neurons) initiated.

axon reflex *n.* A ***reflex** response to scratching of the skin with a sharp object: a red line appears within seconds, followed by a red flare in the surrounding skin, and finally a white weal, these phenomena constituting the *triple response*. The weal and flare result from the activity of ***pain** receptors that transmit impulses along their ***axons** not only in the normal ***orthodromic** direction towards the central nervous system but also in the ***antidromic** direction from axon forking nodes into the neighbouring skin, where the free nerve endings respond by releasing ***substance P**, which binds to artery walls causing them to dilate and to produce the flare response, and which also binds to ***mast cells** and stimulates them to release ***histamine**, resulting in the accumulation of fluid that constitutes the weal response.

axosomatic *adj.* Of or relating to a ***synapse (1)** between an ***axon** and a ***soma (1)** or cell body, usually inhibitory in its effect on the target neuron. *Compare* AXOAXONIC, AXODENDRITIC, DENDRODENDRITIC. **A–S** *abbrev.*

azimuth *n.* The direction of an object or image in the horizontal plane, relative to a fixed point such as an object immediately in front or to the north pole. *Compare* ZENITH DISTANCE. [From Arabic *as-sumūt* azimuth, from *al* the + *sumūt* directions, from *samt* direction]

babbling *n.* The speech sounds, generally characterized by repeated syllables such as *bababa* and *dada*, produced by infants immediately before the onset of recognizable speech, restricted largely to **phonemes* of the language being acquired. *Compare* *COOING*.

Babinski reflex *n.* The involuntary fanning of the toes when the sole of the foot is stroked with a hard object such as a metal key, observed in normal infants below 2 years of age but considered an abnormal neurological sign in older children and adults, suggestive of a lesion in the **corticospinal tract*. It is normally replaced around 2 years of age by the **plantar response*, which is a curling inwards of the toes. The *Babinski sign* is the presence of the Babinski reflex in a person over 2 years of age, an indication of neurological damage. [Named after the French neurologist Josef F(rançois) F(élix) Babinski (1857–1932) who is credited with having discovered it]

baby talk *n.* An ambiguous term referring both to the style of speech used by young children and that of older people when speaking to them. *See also* *CARETAKER SPEECH*, *MOTHERESE*.

back cross *n.* In genetics, a cross between a **hybrid (1)* of the first generation and one of its parents, or the offspring resulting from such a mating.

back formation *n.* The creation of a new word on the basis of a familiar word that is mistakenly assumed to be derived from it. For example, the verb *to edit* is a back formation from the noun *editor*, which is not derived from the verb but is a Latin word meaning producer, derived from the prefix *e-* out

and the word *datum*, meaning given, from the verb *dare* to give; similarly to *burgle* is a back formation from *burglar*, to *peddle* from *pedlar* or *peddler*, and to *sculpt* from *sculptor*. Compare [FOLK ETYMOLOGY \(2\)](#), [METANALYSIS](#).

back mutation *n.* The restoration of a [*mutant \(2\)](#) phenotype to the normal form by a further mutation of the same gene. Also called a *reversion* .

backprop *n.* A colloquial name for the [*back-propagation algorithm](#).

back-propagation algorithm *n.* In [*parallel distributed processing](#), a method of adjusting the output of a multi-layered [*neural](#) network to produce a desired state for a given input, by first checking the input and computing the required output for that input, then comparing the current output to the required output and adjusting the connection weights to reduce the discrepancy between the required output and the current output, and then repeating this process of adjustment for the next level down in the system and for each lower level of the system in turn down to the lowest level, thus causing the system to learn to produce the required output. It implements a method of learning by [*gradient descent](#). It was discovered simultaneously and independently by several researchers in 1982 and became well known after an influential publication by the US psychologist David E(verett) Rumelhart (1942–2011) and his colleagues in 1986, the term itself having been introduced in 1962 by the US psychologist Frank Rosenblatt (1928–71) in connection with his work on the [*perceptron](#). Also called *backward propagation* or *backprop* . See [DELTA RULE](#). See also [ALGORITHM](#), [CONNECTIONISM](#).

back slang *n.* A secret language in which words are spelt and spoken backwards or approximately backwards. A familiar British example is *yob* instead of *boy*, and less well-known examples include *tekram* instead of *market* and *tenip* instead of *pint*. Back slang has been reported in the UK among soldiers, labourers, shopkeepers, thieves, and public school pupils, and it has also been found in several other parts of the world, including France, Java, and Thailand. See also [SLANG](#).

back vowel *n.* A [*vowel](#) (see the diagram accompanying that entry) articulated towards the back of the mouth with the back of the tongue raised,

*****ebook converter DEMO Watermarks*****

such as the vowels in *goose*, *lot*, *thaw*, and *heart*. Compare [CENTRAL VOWEL](#), [FRONT VOWEL](#).

backward association *n.* A learned association between a [*stimulus](#) (1) and either another stimulus or a [*response](#) occurring before it in time. Also called a *retroactive association*. Compare [FORWARD ASSOCIATION](#).

backward conditioning *n.* A modified form of [*classical conditioning](#) in which the [*conditioned stimulus](#) does not precede the [*unconditioned stimulus](#) but follows it. Compare [FORWARD CONDITIONING](#).

backward masking *n.* A form of [*masking](#) that occurs when perception of a stimulus called the *test stimulus* is reduced or eliminated by the presentation of a second stimulus called the *masking stimulus* which, in the case of [*visual masking](#), follows the test stimulus up to 500 milliseconds later—as when a row of printed letters is exposed for 50 milliseconds, long enough to make them easily legible in normal circumstances, and this is followed after 150 milliseconds by a dark ring surrounding the position of one of the letters, completely masking the letter and causing it to vanish from the array. When the test stimulus and masking stimulus do not overlap spatially, the phenomenon is called [*metacntrast](#). See also [AUDITORY MASKING](#), [LIBET'S DELAY](#). Compare [FORWARD MASKING](#), [SIMULTANEOUS MASKING](#).

backward propagation See [BACK-PROPAGATION ALGORITHM](#).

backward referral of sensation See [LIBET'S DELAY](#).

backward span *n.* A test of [*short-term memory](#) in which the respondent is presented with a sequence of items, usually numbers, and then tries to repeat them back in reverse order. The [*Wechsler scales](#) include both backward span and [*ordered recall](#) subtests.

bacteria *n. pl.* Unicellular or threadlike micro-organisms that reproduce by [*fission](#) (2) and are often parasitic and liable to cause diseases. **bacterial** *adj.* **bacterium** *sing.* [From Greek *bakterion* a little rod, diminutive of *baktron* a rod]

bad breast See GOOD BREAST.

bad faith *n.* In the **existentialism* of the French philosopher Jean-Paul Sartre (1905–80), a form of self-deception and deception of others in which people refuse to acknowledge responsibility for their own freely chosen actions and perceive or depict themselves as the passive victims of circumstance. See also EXISTENTIAL THERAPY.

bad object See GOOD OBJECT.

bah tschi See LATAH.

balanced bilingual *n.* Another name for an **ambilingual* (2). Compare UNBALANCED BILINGUAL. [From *balanced* + Latin *bis* two + *lingua* a tongue + *-alis* of or relating to]

balanced polymorphism *n.* A type of **genetic polymorphism* characterized by a relatively permanent equilibrium with different **alleles* of a gene present at fixed relative frequencies in the population. Also called a *Hardy–Weinberg equilibrium*. See also HARDY–WEINBERG LAW, HETEROSIS. Compare TRANSIENT POLYMORPHISM.

balanced scale *n.* In psychometrics, any scale designed to control for potential sources of bias by **counterbalancing* (2); especially a questionnaire that controls for **acquiescence response set* by ensuring that half the items are keyed positively, affirmative answers increasing a respondent's score on the attribute being measured, and half the items are scored negatively, negative answers increasing the score, the net effect being that scores on the test are not biased systematically in either direction by acquiescence.

balance theory *n.* A **cognitive* consistency theory of **person perception* and **attitude* change in which the elements, often depicted as vertices of a triangle, are a person (*p*), another person (*o*), and an attitude object (*x*), the relations between the three elements, represented by the sides of the triangle, being either positive or negative according to *p*'s attitudes and beliefs. The model represents *p*'s cognitions, and it can exist in a state of

either *balance*, if none of the relations is negative or if two are negative, or *imbalance*, if just one of the relations is negative. In some later versions of the theory, the state of the model with three negative relations is considered ambiguous or *non-balanced*. According to the theory, an imbalanced state of the model, with just one negative relation, is dynamically unstable and has a tendency to become balanced, which means that one or more of the relations tends to change. For example, if Peter (*p*) hates classical music (*x*) but falls in love with Olivia (*o*), who tells him that she loves classical music, then there is one negative and two positive relations, and Peter's attitude towards either classical music or Olivia is likely to change, unless he can change her attitude towards classical music or his belief about her attitude. The theory was developed by the Austrian-born US psychologist Fritz Heider (1896–1988), first published in an article in 1946, and later presented in his book *The Psychology of Interpersonal Relations* in 1958, and the US psychologist Theodore M(ead) Newcomb (1903–84) contributed to its development in 1953. See also [POSITIVITY BIAS \(2\)](#).

Baldwin illusion *n.* A visual illusion in which a line spanning the distance between two large squares appears shorter than a line of the same length spanning the distance between two smaller squares (see [illustration](#)). It is a close relative of the Zanolini illusion. [Named after the US psychologist James Mark Baldwin (1861–1934) who first drew attention to it]

Baldwin illusion. The horizontal lines between the squares are equal in length.

Bálint's syndrome *n.* A syndrome caused by bilateral brain damage in the area where the [*parietal](#) and [*occipital lobes meet](#), characterized by

**optic ataxia*, ocular **apraxia* (inability to shift gaze on command), and **simultanagnosia*. [Named after the Hungarian physician Rezsoe (Rudolph) Bálint (1874–1929) who first described it in 1907]

ballism *n.* A condition usually resulting from damage to the **subthalamic nucleus* characterized by involuntary violent flailing of the limbs, resembling throwing movements, which are exhausting and incapacitating. *Compare* *HEMIBALLISM*. [From Greek *ballein* to throw]

ballistic movement *n.* A movement such as a **saccade* that cannot be controlled once it has been initiated and that is thought to be programmed by the **cerebellum*. *See also* *OPEN-LOOP CONTROL*. *Compare* *RAMP MOVEMENT*. [From Latin *ballista* a Roman military weapon for projecting heavy objects, from Greek *ballein* to throw]

band-pass filter *n.* A type of **filter* (2) for screening light, sound, alternating current, or other oscillating signals and transmitting frequencies only or mainly within a specified range. A *high-pass filter* transmits frequencies above a specified threshold, and a *low-pass filter* those below a specified threshold.

bandwagon effect *n.* An accelerating diffusion through a group or population of a pattern of behaviour, the probability of any individual adopting it increasing with the proportion who have already done so. It occurs in situations in which people believe that their interests are served by joining a fashionable movement, as when soldiers decide during a revolution or civil war to defect to the rebel faction because many others have already defected. [So called because a bandwagon is a vehicle that carries the band in a circus procession and drums up popular support]

bandwidth *n.* The range of frequencies over which a sense organ or any other communication channel functions or responds. Thus the human auditory system responds within a bandwidth corresponding to the **audibility range* from about 16 hertz to 20,000 hertz (cycles per second). *See also* *SPECTRUM*.

bar aesthesia *n.* The sensation of pressure. US *baresthesia*. [From Greek
*****ebook converter DEMO Watermarks*****]

baros weight + *aisthesis* sensation, from *aisthanesthai* to feel + *-ia* indicating a condition or quality]

baragnosis *n.* An impaired ability to judge weight with the cutaneous and muscle senses. Often confused with **barognosis*. [From Greek *baros* weight + *a-* without + *gnosis* knowledge]

Bárány nystagmus *n.* Another name for **caloric nystagmus*. See *BÁRÁNY TEST*.

Bárány test *n.* A method for detecting diseases of the **semicircular canals* by irrigating the ears alternately with warm water or air and cold water or air, the stimulus eliciting **caloric nystagmus* towards the stimulated side if the stimulus is warm and away from the stimulated side if it is cold. Also called the *caloric test*. [Named after the Nobel prizewinning Austrian physician Robert Bárány (1876–1936) who devised it]

barber's paradox *n.* A close relative of **Russell's paradox*, expressed in terms of a village in which there is a barber who shaves all and only those men who do not shave themselves. From this it follows that if this barber shaves himself, then he does not, and if he does not, then he does. It was first published in 1918 by the Welsh philosopher Bertrand (Arthur William) Russell (1872–1970), who attributed it to an unnamed source.

barber's pole effect *n.* The phenomenon whereby a rotating pole painted with spiral stripes of alternating colours, if viewed through a horizontal slit, is seen as marks moving horizontally, and if viewed through a vertical slit as marks moving vertically, although the movement of the stripes themselves is the same in both cases.

barbiturate *n.* Any of a number of drugs derived from barbituric acid, including the long-acting **phenobarbital* and the short-acting **amobarbital*, **pentobarbital*, **secobarbital*, and **thiopental*, that generally act as central nervous system **depressants* (although stimulant barbiturates have also been synthesized) by stimulating the **GABA* receptor complex and are used as **sedative–hypnotic* drugs or **anaesthetics* (1) and are frequently taken as street drugs. Street names for barbiturates in general include *barbs*, *candy*,
*****ebook converter DEMO Watermarks*****

dolls, goofers. See also [SEDATIVE-, HYPNOTIC-, OR ANXIOLYTIC-RELATED DISORDERS](#); [TRUTH DRUG](#). [From German *Barbitursäure*, from the name *Barbara* + *uric* + *Säure* acid, coined by the German chemist Adolf von Bayer (1835–1917) who discovered the drug on Saint Barbara's Day, 4 December 1864]

barbiturism *n.* Acute or chronic poisoning by a [*barbiturate](#), leading to depressed respiration, disorientation, bluish discoloration of the skin and mucous membranes caused by a deficiency of haemoglobin in the blood, and possibly coma and death.

barbs *n.* A street name for [*barbiturate](#) drugs in general.

bar chart *n.* In descriptive statistics, a graph resembling a [*histogram](#) but having a base (usually horizontal) axis representing values of a qualitative variable such as gender or religion rather than a quantitative variable such as age. Also called a *block diagram*. [From Latin *barra* a bar or rod + *c(h)atra* a paper, from Greek *chartes* a leaf of papyrus]

Bard–Cannon theory *n.* Another name for the [*Cannon–Bard theory](#).

bar detector *n.* A type of cell in the [*primary visual cortex](#) (Area V1) that responds maximally to a bar (lighter than the surround for some cells, darker than the surround for others) oriented at a particular angle on the retina, the response being strongest for a moving bar-shaped stimulus. *See also* [COMPLEX CELL](#), [END-STOPPED RECEPTIVE FIELD](#), [FEATURE DETECTOR](#), [HYPERCOMPLEX CELL](#), [SIMPLE CELL](#). *Compare* [EDGE DETECTOR](#).

Barnum effect *n.* A tendency for people to accept vague, ambiguous, and generalized statements as being accurate descriptions of their own personalities. The effect was first demonstrated empirically in 1949 by the US psychologist Bertram R(obin) Forer (1914–2000), who constructed a personality profile consisting of the following 13 statements, drawn largely from an astrology book: ‘You have a great need for other people to like and admire you. You have a tendency to be critical of yourself. You have a great deal of unused capacity which you have not turned to your advantage. While you have some personality weaknesses, you are generally able to compensate

*****ebook converter DEMO Watermarks*****

for them. Your sexual adjustment has presented problems for you. Disciplined and self-controlled outside, you tend to be worrisome and insecure inside. At times you have serious doubts as to whether you have made the right decision or done the right thing. You prefer a certain amount of change and variety and become dissatisfied when hemmed in by restrictions and limitations. You pride yourself as an independent thinker and do not accept others' statements without satisfactory proof. You have found it unwise to be too frank in revealing yourself to others. At times you are extraverted, affable and sociable, while at other times you are introverted, wary and reserved. Some of your aspirations tend to be pretty unrealistic. Security is one of your major goals in life.' People who are presented with this profile and are told that it is based on a personality test, handwriting analysis, or some other plausible data typically rate it quite highly as being applicable to them personally. In Forer's original experiment, the profile was supposedly based on a personality questionnaire that a group of 39 students had filled in a week earlier. The students were asked to 'rate on a scale of zero to five the degree to which the personality description reveals the basic characteristics of your personality', and most of them chose 4 or 5, with a mean of 4.26. They were also asked to 'check each statement as true or false about yourself'; the average number of statements accepted as true was 10.23 out of 13. See also [ILLUSORY CORRELATION](#). [The term *Barnum effect* was introduced in 1956 in an article in the journal *American Psychologist* by the US psychologist Paul Everett Meehl (1920–2003), quoting an unpublished comment by the US psychologist Donald G(ildersleeve) Paterson (1892–1962) about 'personality description after the manner of P. T. Barnum', alluding to the US showman P(hineas) T(aylor) Barnum (1810–91), co-founder of the Barnum and Bailey circus, and by implication to one or both of the following quotations attributed to him: 'My secret of success is always to have a little something for everyone' and 'There's a sucker born every minute']

barognosis *n.* The sense of weight or the ability to judge lifted weights. Often confused with [*baragnosis](#). [From Greek *baros* weight + *gnosis* knowledge]

baroreceptor *n.* Any of the pressure-sensitive receptors in the right atrium of the heart and in certain large blood vessels that respond to

decreases in blood volume or pressure, resulting from loss of extracellular fluid, by sending impulses to the **hypothalamus*, leading to the release of **angiotensin II* and a sensation of **thirst*. Also called a *baroreceptor*. *See also* HYPOVOLAEMIC THIRST, SUBFORNICAL ORGAN. *Compare* BLOOD-FLOW RECEPTOR. [From Greek *baros* weight + English *receptor*]

Bartholin's gland *n.* Either of a pair of **exocrine glands* in a woman's vagina that secrete a lubricating mucus when she is sexually aroused. [Named by its discoverer, the Danish anatomist Caspar Bartholin (1655–1738), in honour of his father, Thomas]

Bartlett–Box F test *n.* In statistics, a test that several groups come from populations with the same **variance*. For sufficiently large sample sizes, a non-significant probability allows a researcher to reject the hypothesis that the variances differ. The test assumes that the observations come from **normal distributions*. [Named after the English statisticians Maurice Stevenson Bartlett (1910–2002) and George Edward Pelham Box (1919–2013) and the **F statistic* that it uses]

basal forebrain *n.* An ill-defined region at the bottom of the forebrain, dorsal to the hypothalamus, including the **preoptic nucleus*, **septum pellucidum*, and the **nucleus basalis of Meynert*.

basal ganglia *n. pl.* Structures containing clusters of neuron cell bodies in and around the thalamus near the base of the brain, sometimes taken to include the amygdala and claustrum, but in careful usage restricted to structures involved in the control of voluntary movement, namely the **caudate nucleus*, **lenticular nucleus* (including the **putamen* and **globus pallidus*), **subthalamic nucleus*, and **substantia nigra*. The caudate nucleus and putamen together constitute the **striatum*. Lesions in these areas can lead to movement disorders such as **athetosis*, **ballism*, **chorea*, **dystonia*, **hemiballism*, **Huntington's disease*, **Parkinson's disease*, **tardive dyskinesia*, and **tremor*. **basal ganglion** *sing.* [From Greek *ganglion* a cystic tumour]

basal metabolic rate *n.* The rate at which **metabolism* occurs in the body at rest, 12 to 14 hours after eating, usually measured in kilocalories of
*****ebook converter DEMO Watermarks*****

heat generated per square metre of body surface area per hour. *See also* [CALORIE](#). **BMR** *abbrev.*

base *n.* **1.** An [*alkaline](#) chemical compound that reacts with an acid to form a salt and water; in biochemistry often denoting the constituent nitrogenous bases of DNA and RNA, namely [*adenine](#), [*cytosine](#), [*guanine](#), and either [*thymine](#) (in DNA) or [*uracil](#) (in RNA). *See also* [PURINE](#), [PYRIMIDINE](#). **2.** In biology, the part of an organ closest to its point of attachment. **3.** The bottom, root, or supporting foundation of anything. **basal** or **basilar** *adj.* Pertaining to the bottom or root. **basic** *adj.* Of, relating to, or consisting of a chemical base, or pertaining to the bottom, root, or supporting foundation of anything. [From Latin *basis* a pedestal]

basement effect *n.* Another name for the [*floor effect](#).

base pairing *n.* Another name for [*complementary base pairing](#).

base rate *n.* The natural value or level of a [*variable](#) when it is unaffected by any special or unusual influences, especially the [*prior probability](#) (1) of an event, or the average number of times an event occurs in a given time period divided by the maximum number of times it could occur. *See also* [BASE-RATE FALLACY](#).

base-rate fallacy *n.* A failure to take account of the [*base rate](#) or [*prior probability](#) (1) of an event when subjectively judging its [*conditional probability](#). A classic experiment in 1973 by the Israeli-American psychologists Daniel Kahneman (born 1934) and Amos Tversky (1937–96) showed that people's judgements as to whether a student who was described in a personality sketch was more likely to be a student of engineering or of law tended to ignore the additional information that the student was drawn randomly from a group of 70 engineering students and 30 law students or from a group of 30 engineering students and 70 law students, although that information was highly relevant to the question in hand. The fallacy is usually explained by the use in problems of this kind of the [*representativeness heuristic](#), which is insensitive to prior probabilities. *See also* [ATTRIBUTIONAL BIAS](#), [BAYESIAN INFERENCE](#), [TAXICAB PROBLEM](#), [WELLS EFFECT](#). *Compare* [CONJUNCTION FALLACY](#), [SAMPLE SIZE FALLACY](#).

*****ebook converter DEMO Watermarks*****

base sequence *n.* Another name for a **DNA sequence*. [So called because it is made up of bases]

BASIC-ID *abbrev.* Behaviours, affective processes, sensations, images, cognitions, and interpersonal relationships springing from drugs or biological factors. This acronym summarizes the core elements of human life and basic modalities of response to situations in **multimodal therapy*, according to which an intervention is most likely to be effective if it follows the order of the response pattern of the patient or client. Thus, if the first-order anxiety response is in the sensory modality (for example, churning of the stomach), then sensory techniques such as relaxation or biofeedback are used as initial treatments.

basic-level category *n.* The level of specificity/generality of a **concept* within a conceptual hierarchy at which most people tend naturally to categorize it, usually neither the most specific nor the most general available category but the one with the most **attributes* distinctive of the concept in question. Thus, in most ordinary circumstances a cat is conceptualized and referred to as a *cat* rather than a *quadruped* (which would include dogs and other four-legged animals) or a *tabby cat* (which would exclude ginger toms and other cats). Also called a *basic-level concept*, a *natural-level category* or *concept*, or a *natural category*, but this latter term is avoided in careful usage. *See also* [PROTOTYPE THEORY](#).

basic mistrust *n.* In **psychoanalysis*, an initial relationship lacking trust, developed by an infant with its mother or carer as a result of bad mothering when basic trust does not develop. Also called *basic distrust*. *See* [BASIC TRUST VERSUS BASIC MISTRUST](#).

Basic Orthographic Syllabic Structure *See* [BOSS](#).

basic period of information processing *See* [BIP](#) in the main body of the dictionary.

basic research *n.* Research undertaken with the primary goal of contributing to knowledge or understanding of some phenomenon or

phenomena by testing explicit **hypotheses*, generally contrasted with **applied research*. Also called *theoretical research*. Compare ACTION RESEARCH, DESCRIPTIVE RESEARCH, EVALUATION RESEARCH, EXPLORATORY RESEARCH.

basic rest–activity cycle *n.* A **biological rhythm* of waxing and waning alertness with a period of approximately 90 minutes in humans. During sleep it controls the cycles of **REM* and **slow-wave sleep*. Also called the *rest–activity cycle*. **BRAC** *abbrev.*

basic rule of psychoanalysis *n.* Another name for the **fundamental rule of psychoanalysis*.

basic trust versus basic mistrust *n.* One of the crises in the developmental theory of the German-born **ego psychologist* Erik H. Erikson (1902–94). The English psychoanalyst Donald Woods Winnicott (1896–1971), and the British-based Hungarian psychiatrist Michael Balint (1896–1970), among others, also use the term *basic trust* to denote the initial trusting relationship normally developed by an infant with its mother or carer. See DEVELOPMENTAL CRISES. Compare BASIC MISTRUST.

basilar *adj.* Situated at the base.

basilar artery *n.* An unpaired artery at the base of the brain, supplying the pons, cerebellum, posterior part of the cerebrum, and inner ears.

basilar membrane *n.* The membrane of the **organ of Corti* in the inner ear, containing **hair cells* that convert sound waves into nerve impulses. See also PLACE THEORY, TRAVELLING WAVE.

basilect *n.* The least prestigious variety of a language within a speech community, or the variety furthest away from the **acrolect*. See also DIALECT, IDIOLECT, LECT. Compare ACROLECT, MESOLECT. [From Greek *basis* bottom + *legein* to speak]

Baskerville effect *n.* Death resulting directly from extreme fear or psychological stress. The term was coined by the South African-born US

sociologist David P. Phillips (born 1943) and several co-authors in an article in the *British Medical Journal* in 2001, reporting the results of a study of the death certificates of 200,000 people of Chinese and Japanese descent in the US from 1973 to 1998. The study capitalized on a superstition about the number four, which is considered unlucky among these ethnic communities and is often omitted in Chinese and Japanese room and floor numbering, partly because the words for death and four are pronounced similarly in Mandarin, Cantonese, and Japanese. The results revealed a 13 per cent increase in cardiac deaths on the fourth day of the month, relative to the chance baseline, and the increase was 27 per cent above chance in California, where Chinese and Japanese communities are largest and relatively well established, but no such increase was found in a comparison group of 47 million non-Asian US deaths. *See also* [NOCEBO EFFECT](#), [VOODOO DEATH](#). [Named after Sir Charles Baskerville, who died of a heart attack and turned out to have been literally frightened to death by a hound in *The Hound of the Baskervilles* (1902) by the Scottish detective story writer and physician Sir Arthur Conan Doyle (1859–1930)]

basket cell *n.* Any of a class of inhibitory [*interneurons](#) found in the [*cerebral](#) cortex and the [*cerebellum](#), having a short axon that divides into a large number of processes and forms basket-like networks round the cell bodies of numerous [*Purkinje cells](#), whose action it inhibits. *Compare* [GOLGI CELL](#), [STELLATE CELL](#).

basulca *n.* Coca paste, a crude extract of the coca plant, consumed as a drug in cocaine-producing countries in South America. *See* [COCAINE](#). [Spanish]

Bateman's principles *n.* A set of three principles put forward by the English geneticist Angus J(ohn) Bateman (1919–96) in an article in the journal *Heredity* in 1948 that, if correct, lead to the conclusion that [*natural selection](#) should always favour ‘an indiscriminating eagerness in the males and a discriminating passivity in the females’ to obtain mates. The principles are:

- (1) Males show greater variance in number of offspring than females;
- (2) Males show greater variance in number of sexual partners than females;

and

- (3) There is a stronger relationship between reproductive success and mating success among males than females.

The fundamental ideas are that females generally invest more energy in producing offspring than males do, and that females are a resource over which males compete; this leads to competition among males, and the resulting **sexual selection* generates greater variability in reproductive success among males than females. Although Bateman's own research with fruit flies was flawed, biologists generally accept his principles and the implication that males tend to be promiscuous and indiscriminating, whereas females tend to be coy and choosy, although there are exceptions in some species, and the relevance to humans is controversial. *See also* [PARENTAL INVESTMENT](#).

Batesian mimicry *n.* A form of **mimicry* in which a species that is harmless or palatable to a **predator* is protected from predation by its resemblance in shape or coloration to a harmful or unpalatable species. *Compare* [MÜLLERIAN MIMICRY](#). [Named after the English naturalist and explorer Henry Walter Bates (1825–92) who first described it in 1861]

bathyaesthesia *n.* Sensation from receptors inside the body. US *bathyesthesia*. Also called *bathaesthesia* or *bathesthesia*. *Compare* [BATHYANAESTHESIA](#). [From Greek *bathys* deep + *aisthesis* sensation, from *aisthanesthai* to feel + *-ia* indicating a condition or quality]

bathyanaesthesia *n.* Impairment or loss of sensation from receptors within the body. US *bathyanesthesia*. Also called *bathanaesthesia* or *bathanesthesia*. *See also* [ANAESTHESIA](#). *Compare* [BATHYAESTHESIA](#). [From Greek *bathys* deep + *anaesthesia* absence of sensation, from *an-* without + *aisthesis* feeling + *-ia* indicating a condition or quality]

battered baby syndrome *n.* A term coined by the German-born US paediatrician C(harles) Henry Kempe (1922–84) in an article in the *Journal of the American Medical Association* in 1962 to denote the pattern of physical and psychological injuries inflicted on a baby by intentional neglect or repeated excessive beating by a parent or carer. *See also* [BATTERED CHILD](#)

SYNDROME, CHILD ABUSE. *Compare* BATTERED WIFE SYNDROME.

battered child syndrome *n.* An extension of the term **battered baby syndrome*, used when the victim is an older child. **BCS** *abbrev.*

battered wife syndrome *n.* A non-technical term used loosely to denote the physical and psychological consequences of physical abuse, usually of a woman by her husband or partner, sometimes involving **post-traumatic stress disorder* or **prolonged duress stress disorder*. *See also* SPOUSE ABUSE. *Compare* BATTERED BABY SYNDROME. **BWS** *abbrev.*

battery *See* TEST BATTERY.

baud *n.* A unit of information transmission speed corresponding to one unit or **bit* per second. *See also* INFORMATION (2). **Kbaud** or **kilobaud** *n.* Thousands of bits or units per second. [Named after the French engineer and inventor of the first successful teleprinter, Jean-Maurice-Émile Baudot (1845–1903)]

Bayesian inference *n.* A form of statistical reasoning in which **prior probabilities* (2) are modified in the light of data or empirical evidence in accordance with **Bayes' theorem* to yield **posterior* probabilities, which may then be used as prior probabilities for further updating in the light of subsequent data. Bayesian inference is often based on **subjective probabilities*, and the following example shows how Bayesian updating is done. Suppose a physician begins with a prior probability $P(H)$ that a certain patient has HIV infection. This prior probability may be the base rate of HIV infection in the community or may be a subjective estimate derived from anywhere; let us assume that it is .001. The physician then observes a relevant symptom, dementia, and needs to determine the posterior probability $P(H|D)$ that the patient has HIV infection, given this new datum. Using Bayes' theorem, the physician multiplies the prior probability $P(H)$ by $P(D|H)/P(D)$, which is the **likelihood ratio* (1) of the subjective probability of the symptom occurring if the patient has the disorder (let us say .50) divided by the subjective probability of the symptom irrespective of the disorder—let us say .002. Thus the posterior probability $P(H|D) = (.001)(.50/.002) = .25$, and the physician's subjective probability that the patient has HIV infection has

*****ebook converter DEMO Watermarks*****

risen from .001 to .25. This posterior probability can then be used as a prior probability for updating in the light of further evidence, and so on. Also called *Bayesian statistics* or *conditioning*. See also [INSUFFICIENT REASON](#).

Bayes' rule *n.* The proposition that the [*conditional probability](#) of an event H , given another event D , is equal to the joint probability of both events divided by the probability of the conditioning event: $P(H | D) = P(H \text{ and } D)/P(D)$. It follows immediately from the fourth of [*Kolmogorov's axioms](#) of probability, and in spite of its apparent triviality it is important because [*Bayes' theorem](#) is easily derived from it, eliminating the necessity to memorize Bayes' theorem. [Named after the English mathematician and Presbyterian clergyman Thomas Bayes (1702–61) who introduced it]

Bayes' theorem *n.* In statistics, a theorem, easily proved from [*Bayes' rule](#), expressing the [*conditional probability](#) of an event H given an event D , written $P(H | D)$, in terms of the conditional probability of D given H , written $P(D | H)$, the probability of D , and the probability of H . In its simplest form, $P(H | D) = P(D | H)P(H)/P(D)$. The theorem enables the [*prior probability](#) (2) of a hypothesis (H) to be updated repeatedly to produce [*posterior](#) probabilities in the light of data (D) derived from observation or experience, and it underpins the whole edifice of [*Bayesian inference](#). In its most general form, the theorem states that if H_n is one of a set H_i of mutually exclusive and exhaustive events, then $P(H_n | D) = P(D | H_n)P(H_n)/\sum_i [P(D | H_i)P(H_i)]$. [Named after the English mathematician and Presbyterian clergyman Thomas Bayes (1702–61) and published posthumously in 1763]

Bayley Scales of Infant Development *n.* A popular instrument for measuring infant development, comprising three subscales: a mental scale, measuring memory, perception, and other cognitive functions; a motor scale, measuring the quality of motor performance; and an infant behaviour scale, measuring social behaviour, persistence, and other general factors. [Named after the US psychologist Nancy Bayley (1899–1994) who introduced an early version of the scales in 1924 and a revised version in 1965]

B cell *n.* Another name for a [*B lymphocyte](#).

beat, auditory See AUDITORY BEAT.

Beck Depression Inventory *n.* A widely used questionnaire, originally designed to be administered by a trained test administrator but widely used as a self-report scale, comprising 21 items, each describing a behavioural manifestation of *depression together with between four and six self-evaluative statements from which the respondent is asked to choose the one that is most applicable. The questionnaire provides a total score between 0 and 60 indicating the depth of the respondent's depression. A revised version called the Beck Depression Inventory-II was published in 1993. Other Beck inventories designed to measure suicide ideation, hopelessness, and anxiety have also been constructed. Compare HAMILTON DEPRESSION RATING SCALE. **BDI** or **BDI-II** *abbrev.* [Named after the US psychiatrist Aaron (Temkin) Beck (born 1921) who, together with four colleagues, first discussed it in an article in the *Archives of General Psychiatry* in 1961]

bed-wetting *n.* Urinating in bed. See ENURESIS, NOCTURIA.

bee dance See ROUND DANCE, WAGGLE DANCE.

behaviour *n.* The physical activity of an *organism, including overt bodily movements and internal glandular and other physiological processes, constituting the sum total of the organism's physical *responses to its environment. The term also denotes the specific physical responses of an organism to particular *stimuli or classes of stimuli. US *behavior*. Compare ACTION (1). **behavioural** (US **behavioral**) *adj.* [From Old French *havoir* to have, from Latin *habere* to have]

behavioural cardiology *n.* Another name for *psychocardiology. US *behavioral cardiology*.

behavioural contagion *n.* Another name for *social contagion, especially when applied to overt behaviour such as *yawning. US *behavioral contagion*.

behavioural decision theory *n.* An approach to judgement and

decision making focusing on **subjective expected utility* and on departures from **normative (1)* theories such as **Bayes' theorem* and **utility theory*. It was first put forward by the US psychologist Ward (Dennis) Edwards (1927–2005) in an influential article in 1954, and many authorities interpret it to include **psychological decision theory*. US *behavioral decision theory*. Compare *DECISION THEORY*. **BDT** abbrev.

behavioural ecology *n.* A branch of study devoted to understanding behaviour in terms of **natural selection* and **adaptation (1)*. US *behavioral ecology*. See also *ECOLOGY (1)*, *EVOLUTIONARY PSYCHOLOGY*.

behavioural oscillation *n.* In **Hullian learning theory*, momentary fluctuations in an organism's propensity to respond to a **stimulus (1)*. US *behavioral oscillation*. *_SO_R* abbrev.

behavioural pharmacology *n.* The branch of **pharmacology* concerned with the study of the effects of drugs on behaviour, with particular emphasis on the development and classification of drugs. US *behavioral pharmacology*.

behavioural science *n.* The application of scientific principles to the study of the behaviour of organisms. The term is applied to disciplines such as psychology, anthropology, sociology, behavioural zoology, and any other discipline devoted to studying behaviour scientifically. The term was coined by the US psychologist James G(rier) Miller (1916–2002) in a privately circulated memo in 1949. US *behavioral science*.

behaviour contrast *n.* The phenomenon whereby if an organism is given a small reward for a particular response, and then the reward is increased, the organism's rate of responding tends to increase to a level higher than it would have been if the larger reward had been given from the start. Also, if a large reward is replaced by a smaller one, the rate of responding tends to fall below the level that would have occurred if the smaller reward had been given from the outset, but this version of the phenomenon is less robust. In its positive form it is also called the *elation effect* or the *Crespi effect*. US *behavior contrast*.

behaviour control *n.* In the **interdependence theory* of the US social psychologists Harold H(arding) Kelley (1921–2003) and John W(alter) Thibaut (1917–86), expounded in their book *The Social Psychology of Groups* (1959) and developed further in *Interpersonal Relations: A Theory of Interdependence* (1978), an interpersonal situation involving two people, A and B, in which ‘A’s control over B’s outcomes is contingent on what B does; therefore, they jointly affect B’s outcomes’ (1978, p. 31). US *behavior control*. Compare *FATE CONTROL*. **BC** abbrev.

behaviour genetics *n.* An interdisciplinary field of study concerned with the **genetic* or hereditary bases of animal and human behaviour. US *behavior genetics*. Also called *behavioural genetics* or *behavioral genetics*. See *ADOPTION STUDY*, *DF EXTREMES ANALYSIS*, *KINSHIP STUDY*, *TWIN STUDY*.

behaviourism *n.* A school of psychology launched in 1913 by the US psychologist John B(roadus) Watson (1878–1958) with the theoretical goal of the ‘prediction and control of behavior’, representing a radical break with the classical experimental psychology of **structuralism* (2), which emphasized neither prediction nor control nor behaviour. Watson considered the introspective methods of structuralism to be unscientific, he excluded everything except behaviour from psychology, and he borrowed the doctrine of **operationalism* from **logical positivism*, defining the meaning of psychological concepts as literally the operations through which they are measured. According to behaviourism, virtually all behaviour can be explained as the product of **learning* (1), and all learning consists of **conditioning* (1). The contemporary work on **classical conditioning* of the Russian physiologist Ivan Petrovich Pavlov (1849–1936), of which Watson was apparently unaware, added further impetus to the behaviourist movement when it became known in the US. The most influential proponent of neobehaviourism since the 1940s was the US psychologist B(urrhus) F(rederic) Skinner (1904–90), who initiated the study of **operant conditioning*. As a complete explanation of all forms of behaviour, the doctrines of classical and operant conditioning have lost much of their force in the face of mounting attacks from various sources and the decline of positivist dogmas, but neobehaviourism is still influential in the English-speaking world. US *behaviorism*. See also *ASSOCIATIONISM*, *CONNECTIONISM* (2). **behaviourist** or **behaviorist** *adj. n.* (Of or relating to) a member or follower

*****ebook converter DEMO Watermarks*****

of the school of behaviourism or one who advocates or practises behaviourism.

behaviour modification *n.* Another name for **behaviour therapy*. US *behavior modification*.

behaviour therapy *n.* A collection of **psychotherapeutic techniques* aimed at altering maladaptive or unwanted behaviour patterns, especially through the application of principles of **conditioning (1)* and **learning (1)*, the basic assumptions being that most forms of mental disorder can be interpreted as maladaptive patterns of behaviour, that these patterns result from learning processes, and that the appropriate treatment involves the unlearning of these behaviour patterns and the learning of new ones. US *behavior therapy*. Also called *behaviour modification*. See *ABC (2)*, *AVERSION THERAPY*, *CONTINGENCY MANAGEMENT*, *FLOODING*, *MODELLING*, *PARADOXICAL INTENTION*, *RECIPROCAL INHIBITION*, *SHAPING (1)*, *SYSTEMATIC DESENSITIZATION*, *TOKEN ECONOMY*. Compare *COGNITIVE BEHAVIOUR MODIFICATION*, *MULTIMODAL THERAPY*. [The terms 'behaviour therapy' and 'behaviour therapist' were introduced by the South African psychiatrist Arnold A(IIan) Lazarus (1932–2013) in an article in the *South African Medical Journal* in 1958.]

bel *n.* A unit for comparing the intensity of any two power levels, given by the logarithm to the base 10 of the ratio of the two levels. Hence a ratio of 10 : 1 corresponds to 1 bel and a ratio of 100 : 1 to 2 bels. For sound measurements, the more common unit is the **decibel*, which is equal to one-tenth of a bel. [Named after the Scottish-born US scientist Alexander Graham Bell (1847–1922), inventor of the telephone]

belief *n.* Any **proposition (1)* that is accepted as true on the basis of inconclusive evidence. A belief is stronger than a baseless **opinion* but not as strong as an item of **knowledge*. More generally, belief is conviction, faith, or confidence in something or someone. **believe** *vb.*

belief-bias effect *n.* A key finding in support of **dual-process models* of reasoning, produced by creating a conflict between logical reasoning and prior beliefs. For example, in the following invalid **syllogism*, the conclusion conflicts with prior beliefs, and only about 10 per cent of

*****ebook converter DEMO Watermarks*****

undergraduate students accept it as valid: *No millionaires are hard workers; Some rich people are hard workers; Therefore, some millionaires are not rich people.* In contrast, when the same argument is couched in the following terms, in which the conclusion conforms to prior beliefs, more than 70 per cent accept it as valid: *No addictive things are inexpensive; Some cigarettes are inexpensive; Therefore, some addictive things are not cigarettes.* This shows that people tend to be influenced by both the logic of arguments and the believability of their conclusions. The term was introduced in 1980 in an article in the journal *Memory and Cognition* by the US psychologist Russell Revlin (born 1943) and others. Compare [ATMOSPHERE HYPOTHESIS](#).

belladonna *n.* Either of two [*alkaloid](#) drugs, [*atropine](#) or [*hyoscyamine](#), extracted from the leaves and roots of the deadly nightshade plant *Atropa belladonna*. [From Italian *bella donna* fair lady, because one of its pharmacological effects is to enlarge the pupils of the eyes, thereby enhancing a woman's sexual attractiveness]

bell curve *n.* A colloquial name for the [*normal distribution](#), so called because of its appearance, though many other probability distributions are also approximately bell-shaped.

belle indifférence, la See [LA BELLE INDIFFÉRENCE](#).

Bellevue–Wechsler scales *n.* Another name for the Wechsler–Bellevue scales. See [WECHSLER SCALES](#).

Bell–Magendie law *n.* The principle that [*afferent](#) neurons enter the spinal cord dorsally (from the back), whereas [*efferent](#) neurons issue from the spinal cord ventrally (from the front). See also [DORSAL ROOT](#), [VENTRAL ROOT](#). [Named after the Scottish anatomist Sir Charles Bell (1774–1842) who discovered it in 1811 and the French physiologist François Magendie (1783–1855) who rediscovered it independently in 1822]

Bell's palsy *n.* Paralysis of one side of the face caused by inflammation of the [*facial nerve](#), often accompanied by [*hyperacusis](#) on the affected side owing to loss of the nerve's dampening effect on the [*stapedius](#) muscle. It is temporary in 80 per cent of cases. Compare [MÖBIUS SYNDROME](#). [Named after
*****ebook converter DEMO Watermarks*****]

the Scottish anatomist Sir Charles Bell (1774–1842), who first described it]

Bem Sex Role Inventory *n.* A questionnaire designed to measure psychological **androgyny*, developed by the US psychologist Sandra (Lipsitz) Bem (1944–2014) and published in articles in the *Journal of Consulting and Clinical Psychology* in 1974 and the *Journal of Personality and Social Psychology* in 1975. It is based on the finding that masculinity–femininity is not a single bipolar dimension but is better conceptualized as two unipolar dimensions: people with high scores on the measure of masculinity and low scores on the measure of femininity are labelled *masculine*, and those with high scores on the measure of femininity and low scores on the measure of masculinity are labelled *feminine*; but some people obtain high scores on both measures and are labelled *androgynous*, and some score low on both measures and are labelled *undifferentiated*. Bem reported evidence that androgynous people are able to act in a masculine fashion when circumstances demand, such as maintaining independence when subjected to pressures to conform, and in a feminine fashion in situations requiring femininity, such as playing with a kitten.

Bender Gestalt Test *n.* A neurological test, designed to help in the diagnosis of loss of function and organic brain damage in children and adults, consisting of nine geometrical figures that are copied by the respondent, the drawings being evaluated according to the overall quality of the reproductions, their organization in relation to Gestalt **grouping laws*, and the errors made. It was constructed by the US neurologist Lauretta Bender (1897–1987) and first described by her in an article in the *American Orthopsychiatric Association Research Monographs* in 1938. It is sometimes used as a **projective test*. Also called the *Bender Visual–Motor Gestalt Test* or the *Visual–Motor Gestalt Test*. **BGT** abbrev.

benefit–cost analysis *n.* Another name for **cost–benefit analysis*.

benefit–cost ratio *n.* The ratio of total present benefits (*B*) to total present costs (*C*), sometimes used in **cost–benefit analysis* with the assumption that a project is worthwhile if and only if *B/C* is greater than 1, but this ratio leads to ambiguities. Consider a proposed wind farm that is judged to produce benefits worth 5m (in any currency), to result in

*****ebook converter DEMO Watermarks*****

environmental damage worth 2m, and to cost 1m to build. If the environmental damage is classified as a negative benefit, then $B = 5m - 2m = 3m$, $C = 1m$, and the benefit–cost ratio $B/C = 3/1 = 3$, suggesting that the project is very worthwhile. But if the environmental damage is classified as a positive cost, then $B = 5m$, $C = 2m + 1m = 3m$, and the benefit–cost ratio $B/C = 5/3 = 1.67$, and the project is much less worthwhile. The *net benefit index* $B - C = 5m - 3m = 2m$ without any ambiguity. Also written *benefit/cost ratio* or *benefit : cost ratio*.

Benham's top *n.* A black-and-white patterned disc that induces perceptions of colours, called * [pattern-induced flicker colours](#) (PIFCs), when rotated in white or monochromatic light. The basic design (on which there are many variations) consists of a disc divided into black and white halves, with a triplet of concentric black arcs in each of three equal sectors of the white half, the arcs in the first sector being close to the circumference, and the arcs in each of the succeeding sectors being closer to the centre than the arcs in the previous sector (see [illustration](#)). The top produces visual illusions of bright colours, especially when rotated at 5–10 hertz (cycles per second), the colours of the arcs from the circumference to the centre being either red, green, blue, and violet; or violet, blue, green, and red, depending on the direction of rotation. The top stimulates adjacent areas of the retina at the same frequency but with slight phase differences, black following white at different points in each revolution of the top, and the perception of colours is believed to originate from retinal neurons that form lateral connections between such areas and are phase-sensitive, although research using *[dichoptic](#) stimuli has shown that brain processes may also play a part. The top was marketed as a toy in Victorian England. Also called *Benham's wheel*. See also [COLOUR INDUCTION](#), [FECHNER–BENHAM COLOURS](#). [Named after the English amateur scientist and polymath Charles Edwin Benham (1860–1929), whose ‘artificial spectrum top’ was discussed in the journal *Nature* in 1894, although unknown to Benham it had already been discovered by the German philosopher, physician, psychologist, and mystic Gustav Theodor Fechner (1801–87), who published his findings in 1838, and before him, in 1826, by the Swiss-born French scientist and philosopher Isaac Bénédict-Prévost (1755–1819)]

Benham's top. Bright colours appear when it rotates.

bennies *n.* A street name for **benzodiazepine* drugs.

Benzedrine *n.* A proprietary name for **amphetamine*. [Trademark]

benzilic acid *See* BZ GAS.

benzodiazepine *n.* Any member of a class of drugs with chemical structures based on 1,4-benzodiazepine or 1,2-imidazo-benzodiazepine that all have **anxiolytic*, **hypnotic* (1), **anticonvulsant*, **muscle relaxant*, and **anaesthetic* (2) effects and are sometimes taken as street drugs. They have a strong affinity for **neuroreceptors* belonging to the **GABA receptor*

*****ebook converter DEMO Watermarks*****

complex, and they lower arousal by virtue of their interaction with neurons that release GABA, thereby acting as central nervous system ***depressants**. Common street names for benzodiazepines include *bennies* and *benzos*. See **ALPRAZOLAM** (Xanax), **CHLORDIAZEPOXIDE** (Librium), **DIAZEPAM** (Valium), **FLUNITRAZEPAM** (Rohypnol), **LORAZEPAM** (Ativan), **TEMAZEPAM** (Restoril), **TRIAZOLAM** (Halcion). See also **SEDATIVE-, HYPNOTIC-, OR ANXIOLYTIC-RELATED DISORDERS**. Compare **BUSPIRONE**, **PICROTOXIN**. [From *benzo-* of or relating to benzene + *di-* two, from Greek *dis* twice + *az-* denoting nitrogen, from Greek *a-* not + *zaein* to live + *ep(oxide)* a compound containing oxygen joined to other atoms, from Greek *epi* on or above + *oxide* a compound of oxygen and another element]

benzos *n.* A street name for ***benzodiazepine drugs**.

benztropine *n.* Benztropine mesylate, an ***anticholinergic** and ***antihistaminic drug** that is used in the treatment of ***parkinsonism**. See also **ANTIPARKINSONIAN**. [From *benz(o)-* of or relating to benzene + (*a*)*tropine*]

bereavement *n.* Loss of a relative or friend through death; the ***grief reaction** that often follows such a loss. [From Old English *bereafian* to plunder]

Bereitschaftspotential *n.* The original German name for the ***readiness potential**. **BP** abbrev.

Bernoulli trial *n.* In the theory of probability, any of a sequence of independent random experiments each of which has two possible outcomes, often labelled success (*S*) or failure (*F*), with unchanging probabilities, a standard example being a sequence of coin tosses. See also **BINOMIAL TEST**. [Named after the Swiss mathematician Jacob (or Jacques or James) Bernoulli (1654–1705) who developed it in his book *Ars Conjectandi* (1713)]

Bernreuter Personality Inventory *n.* The first multi-score personality questionnaire, published by the US psychologist Robert Gibbon Bernreuter (1901–95) in his book *The Personality Inventory* (1931). It comprises 125 items to be answered Yes, No, or ? and yields scores on six variables: Neurotic Tendency, Self-Sufficiency, Introversion–Extraversion, *****ebook converter DEMO Watermarks*****

Dominance–Submission, Sociability, and Confidence. Compare [PERSONAL DATA SHEET](#).

Bertrand's box paradox See [MONTY HALL PROBLEM](#).

bestiality *n.* 1. A [*paraphilia](#) characterized by sexual intercourse between a person and an animal. Also called *zoophilia* or *zooerasty*. 2. Brutal or savage behaviour or character. **bestial** *adj.* [From Latin *bestia* a beast]

beta-adrenergic receptor See [ADRENERGIC RECEPTOR](#).

beta-blocker *n.* A drug such as [*propranolol](#) that inhibits the action of neurons that respond to [*adrenalin](#) (epinephrine) by blocking their (beta-) [*adrenergic receptors](#), and thus subdues the activity of the heart; used as a medication in the treatment of cardiac arrhythmias, hypertension, migraine, tremor caused by anxiety, [*akathisia](#) caused by neuroleptic medication, [*social anxiety disorder](#), [*panic disorder](#), and [*withdrawal](#) from alcohol and other substances; also used by musicians and actors to suppress the effects of [*performance anxiety](#) and by athletes as a [*performance](#) enhancer to moderate excessive arousal.

beta coefficient *n.* In [*multiple regression](#), a name for a standardized regression coefficient, calculated after first transforming the independent variable into [*standard scores](#) or [*z scores](#). This makes the regression coefficients more comparable by removing differences due to differing units of measurement of the independent variables. When the independent variables are uncorrelated with one another, beta coefficients are equal to the simple correlations with the [*dependent variable](#). Beta coefficients are sometimes called *beta weights* or *standardized regression coefficients*. Symbol: β .

beta element *n.* In [*psychoanalysis](#), a term introduced by the Indian-born British psychoanalyst Wilfred R(uprecht) Bion (1897–1979) to denote any of the raw elements of [*emotion](#) that are transformed by the [*alpha function](#) into [*alpha elements](#) suitable for mental ‘digestion’.

beta-endorphin *n.* An **endogenous opioid*, secreted by the **anterior pituitary*, that is more powerfully **analgesic (2)* than morphine, also causing rigidity and alterations of mood and behaviour. It occurs both in free form and as a terminal polypeptide chain of 31 amino acids in a **beta-lipotropin molecule*. Also written β -endorphin. *See also* ENDORPHIN, POMC.

beta-lipotropin *n.* A lipotropin (a fat-mobilizing protein hormone) that is released by the anterior pituitary and that contains **beta-endorphin* as the final sequence of 31 amino acids of its polypeptide chain. Also written *beta-lipotrophin*, β -lipotropin, or β -lipotrophin.

beta movement *n.* A form of **apparent movement* that is produced when identical stimuli are presented in an alternating pattern with an interstimulus interval of about 60 milliseconds, the visual illusion being created of a single object moving back and forth. Also called *beta motion*, *optimal movement*, or *stroboscopic movement*. *See also* KORTE'S LAWS. *Compare* ALPHA MOVEMENT, GAMMA MOVEMENT, DELTA MOVEMENT.

beta personality factor *n.* A higher-order factor arising from the **Big Five* personality factors, suggested by the US psychologist John M. Digman (1923–98) in an article in the *Journal of Personality and Social Psychology* in 1997. It combines **extraversion* and **openness to experience*, and Digman suggested that it may represent personal growth, or agency in the sense of striving for power and mastery. The US psychologist Colin G. DeYoung (born 1976) and others have suggested that it represents plasticity. *See also* ALPHA PERSONALITY FACTOR.

beta receptor *n.* Another name for a beta **adrenergic receptor*. [From *beta* (β) the second letter of the Greek alphabet]

beta wave *n.* A low-voltage **EEG* wave with a frequency of 13–30 hertz, usually occurring in a state of arousal. Also called a *beta rhythm*.

betel *n.* The leaf of the betel pepper *Piper betle* or the nut of the betel palm *Areca catechu*, sometimes chewed, especially by people of the Indian subcontinent and South-East Asia, as a digestive and for its **psychotropic*

effects of mild euphoria. *See also* [EUPHORIAN](#). [Portuguese, from Malayalam *vettila*]

between-groups variance *n.* In ** analysis of variance* (ANOVA), the part of the total **variance* in the **dependent variable* that can be explained by differences between group means.

between-subjects design *n.* Any research design in which different groups of research participants or subjects are tested under different **treatment conditions*. *Compare* [SPLIT-PLOT DESIGN](#), [WITHIN-SUBJECTS DESIGN](#).

Betz cell *n.* Any of the giant **pyramidal cells* in the primary **motor cortex*, the axons of which form the major part of the **corticospinal tract* involved in voluntary movements. [Named after the Russian anatomist Vladimir Aleksandrovich Betz (1834–94) who discovered it in 1874]

Bezold–Brücke phenomenon *n.* The shift in hue with a change in the physical intensity of illumination, objects and images appearing relatively red or green in dim light and relatively blue or yellow in bright light, the **psychological primary* colours themselves being largely unaffected. *See also* [PURKINJE SHIFT](#). [Named after the German meteorologist Wilhelm von Bezold (1837–1907), who described it briefly in 1873, and the German physiologist Ernst Wilhelm von Brücke (1819–92) who studied it thoroughly in 1878]

bhang *n.* The dried leaves, flowering tops, and young stems of the female **cannabis* plant, used as a psychotropic drug, usually prepared as an infusion and taken as a drink. Also spelt *bang* . [From Hindi *bhang*, from Sanskrit *bhanga*]

bibliotherapy *n.* Any form of **psychotherapy* in which the reading of prescribed texts forms an important part of the therapeutic process. [From Greek *biblion* a book]

biceps reflex *n.* A **deep tendon reflex* occurring in response to a tap on the tendon of the biceps muscle near the elbow. [Named after the biceps brachii muscle, from Latin *bis* twice + *caput* a head, alluding to the fact that it

has two heads at its origin]

biconditional *n.* In logic and mathematics, a statement of the form *p if and only if q*. This means that *q* is a necessary and sufficient condition of *p*, and it is sometimes written *p iff q*. An example is: *A number is prime iff it can be evenly divided only by itself and 1*. It is called a biconditional because it is equivalent to the double (bi-) statement *If p then q and if q then p*. A biconditional is true if both of its component statements are true or if both are false, and otherwise it is false.

bidialectal *adj.* Proficient in the use of two **dialects*.

Bidwell's ghost *n.* An afterimage trailing behind a moving spot of light that is observed with dark-adapted eyes and fixated gaze in a dimly lit room. Behind the moving spot, with a delay of about 0.2 second, there appears to follow a ghost light leaving a trail that glows for several seconds. If the original stimulus is white, blue, or green, then the ghost is violet; if the original stimulus is orange or yellow, then the ghost is blue or blue–green; and if the original stimulus is red, then no clear ghost appears. The effect can be demonstrated by adapting one's eyes in darkness for 15 minutes and then moving a spot of light from a small torch or flashlight rapidly over a light-coloured surface while keeping the gaze fixated rather than tracking the movement of the spot; if the spot is moved through a tortuous path, the ghost will follow the same tortuous path one-fifth of a second later. The term is also used loosely as a synonym for a static **afterimage* or a **Purkinje image*, but in careful usage it is reserved for the moving afterimage described by Bidwell. [Named after the English physicist and barrister Shelford Bidwell (1848–1909) who described it in his book *Curiosities of Light and Vision* (1899)]

big-fish-little-pond effect *n.* The tendency for equally able schoolchildren to show lower academic **self-esteem* when attending a school in which the average ability level of the other children is high than when it is low. The effect is believed to result from **social comparison* processes, and it implies that children tend to have lower academic self-esteem in academically selective schools than in non-selective schools. The concept was introduced by the Australian educational psychologist Herbert W. Marsh

*****ebook converter DEMO Watermarks*****

(born 1946) and a colleague in an article in the *Journal of Personality and Social Psychology* in 1984 and strongly corroborated by a survey of 4,000 15-year-olds in 26 countries published by Marsh and a colleague in the journal *American Psychologist* in 2003. Also called the *frog-pond effect* . **BFLPE** abbrev. [From the expression *big fish in a little pond*, referring to a person who ranks highly in a relatively small group or community]

Big Five *n.* The following factors, derived from **factor analysis* and widely accepted since the 1980s as the fundamental dimensions of human personality: **extraversion*, **agreeableness*, **conscientiousness*, **neuroticism*, and **openness to experience* or intellect. The evidence for the Big Five was reviewed by the US psychologist Lewis Robert Goldberg (born 1932) in an influential article in the journal *American Psychologist* in 1993. Also called the *five-factor model (FFM)* . See also *ALPHA PERSONALITY FACTOR*, *BETA PERSONALITY FACTOR*, *GENERAL FACTOR OF PERSONALITY*, *IPIP*, *LITTLE THIRTY*, *NEO*. Compare *HEXACO*.

Big One *n.* Another name for the **general factor of personality*.

bigorexia *n.* A non-technical name for **muscle dysmorphia*. The word was first used in *People* magazine on 12 August 1985, and the US psychiatrist Harrison G. Pope Jr (born 1947) and several colleagues referred to it in an article in 1993 but initially renamed it *reverse anorexia nervosa*, before coining the term *muscle dysmorphia* a few years later. [From *big* + (*an*)*orexia*, from Greek *an-* not or without + *orexis* appetite + *-ia* indicating a condition or quality]

bilabial *adj.* Of, relating to, or denoting a speech sound articulated with the lower lip touching the upper lip, as in the initial **phonemes* in *may*, *pay*, and *bay*. See also *PLACE OF ARTICULATION*. [From Latin *bis* twice + *labium* a lip + *-alis* of or relating to]

bilateral transfer *n.* **Transfer of training* from one side of the body to the other, as when practising a skill with one hand improves its performance with the other. [From Latin *bis* twice + *lateralis* situated on the side, from *latus* the side]

bile *n.* A viscous bitter greenish or golden brown alkaline fluid secreted by the liver, stored in the gall bladder, and discharged into the duodenum during digestion for the emulsification and absorption of fats. *See also* HUMOUR (3). [From Latin *bilis* bile]

bilingual *adj.* 1. Able to speak two languages. *Compare* AMBILINGUAL (1). *n.* 2. A bilingual person. **bilingualism** *n.* [From Latin *bis* twice + *lingua* a tongue + *-alis* of or relating to]

bilis *n.* A **culture-bound syndrome* found in many Latin American communities, characterized by intense anger or rage, accompanied by acute nervous tension, headache, trembling, screaming, stomach upset, and even loss of consciousness, often followed by chronic fatigue or asthenia, interpreted locally as a result of a disturbance in the balance of **humours* (3) in the body. Also called *colera* or *muina* . [Spanish *bilis* bile, from Latin *bilis* bile]

bimodal distribution *n.* Any **probability* distribution or **frequency* distribution with two **modes*, therefore appearing visually with two peaks, indicating a clustering of scores around two different values.

binary code *n.* A system of representing information by using the digits 0 and 1, so that each number, letter, or other item of information is represented by a unique sequence of **bits*.

binary colour *n.* Another name for a **secondary colour*. US *binary color*.

binaural *adj.* Of, relating to, or involving the simultaneous use of two ears or the presentation of the same audible stimulus to both ears. Often confused with **dichotic*. *Compare* MONAURAL. [From Latin *bis* twice, *bini* two by two + *auris* an ear + *-alis* of or relating to]

binaural beat *n.* An **auditory beat* that is heard when two tones with slightly different **frequencies* (1) are presented separately to the two ears via headphones, proving that the waves can reinforce and cancel each other in the auditory cortex rather than in the ear. *Compare* CENTRAL MASKING.

binaural cue *n.* In **sound localization*, a **cue* (2) that helps to determine the location of a sound source and that depends on **binaural* information. See INTERAURAL INTENSITY DIFFERENCE, INTERAURAL TIME DIFFERENCE, PHASE DELAY, SONIC SHADOW, TRANSIENT DISPARITY.

binaural disparity *n.* Any difference in the sound reaching the two ears from a single source, providing a **binaural* cue for **sound localization*.

binaural fusion *n.* Hearing sounds presented to different ears as a single sound. See also AUDITORY FUSION.

binaural intensity difference *n.* Another name for a **sonic shadow*. Also called an *interaural intensity difference* .

binaural ratio *n.* The relative sound intensities reaching the two ears from a single source affected by a **sonic shadow* cast by the listener's head.

binaural shift *n.* An **auditory illusion* that arises when two low-pitched tones with frequencies close to each other are presented separately to the two ears, resulting in the impression of a single sound source whose location seems to swing periodically from one side to the other as the **phase delay* and **transient disparity* changes continuously.

binaural sound localization See SOUND LOCALIZATION.

binaural summation *n.* The relatively greater perceived loudness of a sound that is heard binaurally rather than monaurally, the **absolute threshold* for loudness being 3 dB lower when it is heard binaurally.

binaural time difference *n.* A generic name for **phase delay* and/or **transient disparity*. Also called an *interaural time difference* .

binaural unmasking *n.* A phenomenon in which a **monaural* sound that masks another monaural sound loses its masking property when it is heard **binaurally*. See also AUDITORY MASKING, MASKING.

binding *n.* Tying, securing, or constraining. In **psychoanalysis*, an operation tending to restrict the flow of **libidinal energy*, usually by the **ego* exerting a restraining influence on the **primary process*. For example, in an article on 'Project for a Scientific Psychology', published in 1895, Sigmund Freud (1856–1939) cited the example of a painful memory that needs to be tamed: 'particularly large and repeated binding from the ego is required before this facilitation to unpleasure can be counterbalanced' (*Standard Edition*, I, pp. 177–397, at pp. 380–1). Freud developed the idea further in his book *Beyond the Pleasure Principle* (1920, *Standard Edition*, XVIII, pp. 7–64), and in *An Outline of Psycho-Analysis* (1938/40, *Standard Edition*, XXIII, pp. 144–207, at p. 148) he described binding as a preservative operation that is a primary aim of **Eros*, in contrast to **Thanatos*, whose primary aim is to destroy things. *See also* [BOUND ENERGY](#).

binding problem *n.* Within the field of **knowledge representation*, the problem of how to represent conjunctions. In visual perception, in order to pick out a blue square from a display including a collection of red squares and blue triangles, it is not enough to isolate its non-unique shape or its non-unique colour; it is necessary to bind each shape to its colour and then to isolate the unique conjunction (blue + square). In language comprehension, in order to understand a sentence such as *The cause of Mary's hatred of John, in Peter's opinion, was John's betrayal of her trust*, it is necessary to bind the noun phrase *John's betrayal of her trust* to *The cause of Mary's hatred of John*. The problem of binding underlies symbolic representation in general. *See also* [FEATURE INTEGRATION THEORY](#), [GOVERNMENT AND BINDING](#).

Binet–Simon scale *n.* The first **standardized* (2) **intelligence* test, constructed in 1905 by the French psychologists Alfred Binet (1857–1911) and Théodore Simon (1873–1961). It included items designed to measure ability to follow instructions, to exercise judgement, and to solve a wide variety of problems. The final version contained 54 items arranged in order of difficulty, from following the movement of a lighted match with the eyes, through pointing to named parts of the body and counting backwards from 20, to working out what time a clock face would show if the hour and minute hands swapped places. Also called the *Binet scale*, though this is unfair to Simon, who played a major part in its development. *See also* [MENTAL AGE](#), [STANFORD–BINET INTELLIGENCE SCALE](#).

*****ebook converter DEMO Watermarks*****

binge-eating disorder *n.* An **eating disorder*, introduced in **DSM-5*, characterized by recurrent episodes of eating much more than normal within a two-hour period, with a feeling of loss of control, at least once a week for three months. Binge-eating episodes cause significant distress, may be associated with eating more quickly than normal, even when not hungry, often alone or in secret, and may be followed by guilt, self-disgust, and depression. The condition has similar signs and symptoms to **bulimia nervosa* but without the compensatory behaviour intended to prevent weight gain, such as self-induced vomiting, misuse of laxatives or diuretics, enemas, fasting, or excessive exercise. [Probably from Lincolnshire dialect English *binge* to soak]

binocular *adj.* Of, relating to, or involving the simultaneous use of both eyes. *Compare* *DICHOPTIC*, *MONOCULAR*. [From Latin *bis* twice, *bini* two by two + *oculus* an eye]

binocular cell *n.* A neuron in the **visual cortex* that receives inputs from both eyes. Approximately half the neurons in the **primary visual cortex* are binocular. *See also* *DISPARITY-SELECTIVE CELL*, *OCULAR DOMINANCE*.

binocular cue *n.* Either of the **cues* (2) of distance, known as **ocular convergence* and **stereopsis*, that contribute towards visual **depth perception* and that depend on integration of information from both eyes. *Compare* *MONOCULAR CUE*.

binocular disparity *n.* The slight discrepancy between the two retinal images of a three-dimensional object or scene, caused by **binocular parallax* and providing the basis for **stereopsis*, certain **disparity-selective cells* in Areas V1, V2, and V5 (MT) of the **visual cortex* responding selectively to particular disparities and thus being selectively tuned to stimuli at specific distances. If the disparity lies within **Panum's fusion area*, then **binocular fusion* occurs and stereopsis results, whereas if the disparity is greater, then **diplopia* occurs. Binocular disparity is usually expressed in terms of the difference between the **visual angles* subtended by points on the object or surface being viewed, the visual system being capable of responding with sensations of three-dimensional depth to retinal disparities as small as 2 seconds of arc, corresponding to 1/1,800 of a degree, and near the fovea the
*****ebook converter DEMO Watermarks*****

maximum binocular disparity resulting in fusion corresponds to a visual angle of about 10 minutes of arc or 1/6 of one degree. Also called *retinal disparity* or *visual disparity* . See also [ANAGLYPH](#), [CORRESPONDENCE PROBLEM](#), [CORRESPONDING RETINAL POINTS](#), [HOROPTER](#), [PANUM'S LIMITING CASE](#), [RANDOM-DOT STEREOGRAM](#), [STEREOBLINDNESS](#), [STEREOSCOPIC ACUITY](#).

binocular fusion *n.* Merging of slightly different images from the two eyes, arising from **binocular disparity*, into a single stereoscopic perception. Also called simply *fusion* or *binocular interaction* . See also [CORRESPONDING RETINAL POINTS](#), [HOROPTER](#), [PANUM'S FUSION AREA](#), [PANUM'S LIMITING CASE](#). Compare [BINOCULAR RIVALRY](#).

binocular interaction *n.* Another name for **binocular fusion*.

binocular parallax *n.* The disparity between the two retinal images of a three-dimensional object or scene arising from the slightly different vantage points of the two eyes, such **binocular disparity* functioning as one of the binocular cues of visual **depth perception* and providing the basis for **stereopsis*. See also [CORRESPONDING RETINAL POINTS](#), [DISPARITY-SELECTIVE CELL](#), [PARALLAX](#). Compare [MONOCULAR PARALLAX](#).

binocular rivalry *n.* Inability to perceive two markedly different images presented to the left and right eyes simultaneously, one invariably dominating over the other for the whole or part of the percept at any particular time. Also called *binocular suppression* or *retinal rivalry* . See also [AMBLYOPIA EX ANOPSIA](#), [CHESHIRE CAT EFFECT](#), [HOLE-IN-THE-HAND ILLUSION](#). Compare [BINOCULAR FUSION](#).

binocular summation *n.* Stimulation of corresponding areas of the two retinas with light, the perceived **lightness* being approximately the average lightness of the two stimuli perceived monocularly. See also [FECHNER'S PARADOX](#).

binocular suppression *n.* Another name for **binocular rivalry*.

binomial test *n.* In inferential statistics, a simple test of whether a sample

of dichotomous scores, labelled success/failure (or male/female, remember/don't remember, and so on) comes from a binomial probability distribution. The binomial distribution represents the probability, given a sequence of **Bernoulli trials* with a fixed probability of success on each trial, of achieving a number of successes as extreme as the number observed in a specified number of trials. For example, a string of guesses (hits/misses) with a pack of 25 ESP or Zener cards, which contains five cards with each of five different symbols, entails a 1/5 probability of a hit on each trial. Application of the binomial test shows that, for a statistically significant result (conventionally, a probability of less than $p < .05$), leading to a rejection of the null hypothesis that the scores come from a binomial distribution, more than eight (or fewer than two) hits in 25 guesses would be required. [From Latin *bis* twice, *bini* two by two + *nomen* a name]

bioacoustics *n.* The study of the relation between organisms and sound. [From Greek *bios* life + *akoustikos* of or relating to sound, from *akouein* to hear + *-ikos* of, relating to, or resembling]

bioavailability *n.* The proportion of a drug or of its active ingredient that is absorbed and that therefore becomes available at its target **neuroreceptor* sites after ingestion or administration. It is usually estimated by comparing the concentration of the drug in the blood after intravenous injection (full bioavailability) with its concentration after administration by the usual route, such as eating or swallowing, drinking in an infusion, snorting, or smoking.
bioavailable *adj.*

biodata *n.* **1.** Biographical information, such as the personal details about research participants or subjects recorded by researchers, or similar information recorded by personnel officers about employees. **2.** Sometimes, especially in Indian English usage, a curriculum vitae. [From *bio(graphical) data*, from Greek *bios* life + *graphein* to write, + Latin *data* things given, from *dare* to give]

biodemography *n.* The science dealing with the interface between **ecology* (1) and **population genetics*. [From *bio(logy)* + *demography*]

bioenergetics *n.* **1.** The study of energy relationships in living
*****ebook converter DEMO Watermarks*****

organisms. 2. A technique of **psychotherapy* developed by the US psychiatrist Alexander Lowen (1910–2008), influenced by **psychoanalysis* and Reichian **orgone therapy*. See also BODY THERAPIES. [From Greek *bios* life + *energeia* activity, from *ergon* work + *-itikos* resembling or marked by]

bioengineering *n.* The design and provision of devices such as artificial limbs, hearing aids, and spectacles to replace lost bodily functions or to rectify or supplement defective functioning of body parts or organs. Also called *biological engineering* .

biofeedback *n.* A technique whereby a person learns to control a normally involuntary **autonomic* response (such as blood pressure, heart rate, or alpha wave EEG activity) by attending to the output of a device that monitors the response continuously (such as a blood pressure monitor, an electrocardiograph, or an electroencephalograph, respectively). It is sometimes used to treat stress disorders such as **migraine* headaches, hypertension, and **attention-deficit/hyperactivity disorder*. It can be traced back to an experiment carried out by the US medical psychologist Joe Kamiya (born 1925), who in 1958 trained a volunteer to recognize and increase his output of **alpha wave* brain activity. In 1965, the US neurobiologist M(aurice) Barry Stermann (born 1935) used **operant* conditioning techniques to train cats to increase **sensorimotor rhythm* activity, and he later discovered that, when these cats were exposed to toxic rocket fuel, they responded significantly less often with **seizures* and had better survival rates than cats that had not had such training. This led to the clinical application of similar methods to reduce seizures in patients with **epilepsy* and other disorders. [From Greek *bios* life + English *feedback*]

bioflavonoids See VITAMIN P.

biogenesis *n.* The biological principle according to which living organisms originate from parent organisms similar to themselves, in contrast to the 19th century doctrines of spontaneous generation and **abiogenesis*. [From Greek *bios* life + *genesis* birth]

biogenic amine *n.* Any member of a group of **amines* that are produced in the body and that play important roles in nervous system functioning,

*****ebook converter DEMO Watermarks*****

including catecholamines such as **dopamine*, **adrenalin* (epinephrine), and **noradrenalin* (norepinephrine); indoleamines such as **serotonin*; and imidazoleamines such as **histamine*. *See also* [NEUROTRANSMITTER](#). [From Greek *bios* life + *genein* to produce, referring to the fact that they are produced naturally in the body, unlike amines such as amphetamine]

bioinformatics *n.* The use of computational methods in genetics and genomics, and more generally the science of information and information flow in biological systems. [From Greek *bios* life + Russian *informatika* information science]

biological clock *n.* Any mechanism or process responsible for a **biological rhythm*. *See also* [PACEMAKER NEURON](#), [SUPRACHIASMATIC NUCLEUS](#), [TELOMERE](#), [ZEITGEBER](#).

biological engineering *n.* Another name for **bioengineering*.

biological motion *n.* Another name for the perception created by a **point-light display*. Also called *biological movement* or *biomechanical motion*.

biological rhythm *n.* Any periodic, more-or-less regular fluctuation or cycle in a biological system or process that is not wholly under the control of environmental cues but is controlled centrally by a **biological clock*. It may be an **ultradian rhythm* such as a **circannual rhythm* or a **menstrual cycle*; a **circadian rhythm* such as the **sleep–wake cycle*; or an **infradian rhythm* such as an **alpha wave*, **basic rest–activity cycle*, **beta wave*, **delta wave*, **gamma wave*, **sensorimotor rhythm*, or **theta wave*. *See also* [CHRONOBIOLOGY](#), [PACEMAKER NEURON](#), [SUPRACHIASMATIC NUCLEUS](#), [ZEITGEBER](#). *Compare* [BIORHYTHM](#).

biology *n.* The study of living **organisms*; or a generic term for the life sciences, including botany, zoology, anatomy, physiology, biochemistry, and related disciplines. [From Greek *bios* life + *logos* word, discourse, or reason]

bioluminescence *n.* The emission of light by certain living organisms,

including insects such as fireflies, certain bacteria and fungi, and especially deep-sea marine organisms. It is achieved by the oxidation of the light-producing compound **luciferin* by the enzyme **luciferase*. **bioluminescent** *adj.* [From Greek *bios* life + Latin *lumen* light]

biomechanical motion *n.* Another name for the perception created by a **point-light display*. Also called *biomechanical movement* or *biological motion* .

Bio-Medical Data Package *See* [BMDP](#).

biometry *n.* The statistical analysis of biological data. Also called *biometrics* . **biometric** *adj.* [From Greek *bios* life + *metron* a measure]

bionics *n.* The study of brain functions and other biological processes applied to the design of electronic devices such as computers that can perform similar operations; or the process of replacing or augmenting the function of body parts with artificial (especially electronic) devices. **bionic** *adj.* Of, relating to, or resembling bionics. [From *bio(logical) (electro)nics*]

biophilia *n.* Love of life and living things. The word gained prominence when it was used by the German-born US psychoanalyst Erich Fromm (1900–80) in his book *The Heart of Man: Its Genius for Good and Evil* (1965), although he had already used it in an article in the magazine *The Saturday Review* (4 January, 1964, pp. 22–25): ‘There is an orientation which we may call love of life (*biophilia*); it is the normal orientation among healthy persons. But there is also to be found in others a deep attraction to death which, following Unamuno's classic speech made at the University of Salamanca (1938), I call necrophilia. It is the attitude which a Franco general, Millán Astray, expressed in the slogan “Long live death,” thus provoking Unamuno's protest against this necrophilous and senseless cry’ (p. 22). The US sociobiologist Edward O(sborne) Wilson (born 1929) popularized the term in the title of his book *Biophilia* (1984), defining it as an instinctive bond or sense of affinity of human beings with nature, or ‘an innate tendency to focus on life and lifelike processes’ (p. 1). *Compare* [BIOPHOBIA](#) (*see* [Appendix I](#)), [NECROPHILIA](#). **biophilic**, **biophilous**, or **biophilistic** *adj.* **biophile** *n.* A person manifesting biophilia. [From Greek *bios* life + *philos* loving,

*****ebook converter DEMO Watermarks*****

from *phileein* to love + *-ia* indicating a condition or quality]

biophysics *n.* The physics of biological processes, and the application of the techniques and concepts of physics to biology.

biopsychology *n.* A branch of biology or psychology that deals with the interaction of mind and body and the effects of this interaction.

biorhythm *n.* According to a discredited doctrine developed by the German ear, nose, and throat specialist Wilhelm Fliess (1858–1928), any of three precisely periodic rhythms of 23 days (physical cycle), 28 days (emotional cycle), and 33 days (intellectual cycle), supposedly fixed at the time of birth for a person's entire life, the interaction between the three cycles determining critical days on which problems are likely to occur throughout life. *Compare* BIOLOGICAL RHYTHM.

biosonar *n.* A system of object detection, location, identification, and ranging by means of **echolocation*, the emission of sound or **ultrasound* and the analysis of returning echoes. It has evolved independently in two groups of bats and also in dolphins, whales, oilbirds (*Steatornis caripensis*) of South America and Trinidad, and cave swiftlets of the Asian genus *Collacalia*, and is also used in a primitive form and to a small extent by shrews, rats, seals, and blind human beings (see FACIAL VISION). In its most sophisticated form as used by dolphins, whales, and some bats, the time delay of an echo provides information about the distance of the target object; **transient disparities*, **phase delays*, and **sonic shadows* enable the target's direction to be pinpointed; the amplitude of an echo indicates the target's overall size; the amplitudes of the echo's component frequencies provide clues as to the sizes of the target's features; and the **Doppler effect* indicates whether the target is coming closer or moving away. The bottlenose dolphin (*Tursiops truncatus*) can detect a steel ball the size of a walnut under water at a range of 64 metres (210 feet). [From Greek *bios* life + English *sonar* an acronym for *so(und) na(vigation and) r(anging)*]

biostatics *n.* The branch of biology devoted to studying the structure of organisms in relation to their function. **biostatic** *adj.* [From Greek *bios* life + *stasis* a standing + *-itikos* resembling or marked by]

*****ebook converter DEMO Watermarks*****

biotechnology *n.* 1. The industrial use of living organisms, especially bacteria, to manufacture substances such as beer, wine, cheese, antibiotics, hormones, or vaccines, to recycle waste, or to create energy. *See also* MONOCLONAL ANTIBODY. 2. In the US, another name for **ergonomics*.

biotin *See* VITAMIN H.

biotope *n.* A small ecological environment or microhabitat, such as the bark of a tree, that supports a distinct biological community. [From Greek *bios* life + *topos* place]

BIP *abbrev.* Basic period of information processing, generally taken to be equal to about 62.5 milliseconds ever since the US inventor and scientist Thomas (Alva) Edison (1847–1931) discovered that 16 frames per second was the minimum rate for critical flicker fusion ($62.5 = 1/16 \times 1,000$), though some psychologists have claimed that the precise figure varies slightly, depending on the observer's IQ. The concept was introduced in an article by the German psychologists Siegfried Lehrl (born 1943) and Bernd Fischer (born 1939) in the *European Journal of Personality* in 1990.

biperiden *n.* A synthetic **anticholinergic* drug that is used in the treatment of **Parkinson's disease*, biperiden hydrochloride being administered orally and biperiden lactate by intramuscular or intravenous injection. *See also* ANTIPARKINSONIAN.

bipolar *adj.* Having two poles, as in a **bipolar cell* or bipolar neuron; or more generally having two extremes or extremities, as in a bipolar adjective pair such as *good–bad*, frequently used in rating scales.

bipolar affective disorder *See* BIPOLAR DISORDERS.

bipolar cell *n.* A **neuron*, usually a sensory nerve cell, with two **processes* (2), an **axon* and a **dendrite*, extending in opposite directions from its cell body or soma. It is found abundantly in the middle layer of the **retina*, where retinal bipolar cells with **centre-surround receptive fields*—the centre being supplied by direct inputs from **photoreceptors* and the

surround by [*horizontal cells](#), or vice versa—relay information to retinal [*ganglion cells](#), but in general it is the least common type of neuron in the nervous system, although it is the one usually depicted in the standard textbook diagram of a supposedly typical neuron. Also called a *bipolar neuron*. See also [OFF-CENTRE CELL](#), [ON-CENTRE CELL](#).

bipolar disorders *n.* A class of [*mood disorders](#) characterized by [*manic episodes](#) or [*mixed episodes](#) and usually, but not necessarily, also [*major depressive episodes](#). Some classifications, including [*DSM-5](#), also distinguish bipolar I disorders, characterized by major depressive episodes together with manic episodes, from bipolar II disorders with major depressive episodes together with [*hypomanic episodes](#) rather than manic episodes. The third major form of bipolar disorder is [*cyclothymic disorder](#). Bipolar disorders are also called *manic–depressive psychoses*. See also [ANTIMANIC](#), [BORNA DISEASE VIRUS](#), [MOOD STABILIZER](#). Compare [CYCLOTHYMIA](#), [DISRUPTIVE MOOD DYSREGULATION DISORDER](#). [From Latin *bis* twice + *polaris* of or relating to a pole, from *polus* a pole]

bipolar rating scale *n.* Any [*rating scale](#) in which the response alternatives provided for each item are anchored with pairs of opposites or [*antonyms](#), often adjective pairs such as *good*———*bad*, or *useful*———*useless*. See also [SEMANTIC DIFFERENTIAL](#).

birth trauma *n.* The supposedly distressing aspect of the process of being born, according to the Austrian psychoanalyst Otto Rank (1884–1939) and later therapists, including the US psychoanalyst Phyllis Greenacre (1894–1989) and the US psychologist Arthur Janov (born 1924). Rank argued in his book *The Trauma of Birth* (1929) that the shock of birth creates a reservoir of anxiety and that all neuroses stem from birth anxiety. See also [PRIMAL ANXIETY](#).

bisection method See [METHOD OF BISECTION](#).

bisexual *n.* 1. A person who is sexually attracted to both men and women. Compare [HETEROSEXUAL \(1\)](#), [HOMOSEXUAL \(1\)](#). *adj.* 2. Being sexually attracted to both men and women. Compare [HETEROSEXUAL \(2\)](#), [HOMOSEXUAL \(2\)](#). 3. Of, relating to, or showing characteristics of both sexes, [*androgynous](#), or having

*****ebook converter DEMO Watermarks*****

both male and female reproductive organs. See [HERMAPHRODITE \(2\)](#). See also [DIGIT RATIO](#). **bisexuality** or, especially in the US, **bisexualism** *n.* Attraction to or sexual activity with members of both sexes. [From Latin *bis* twice + *sexus* sex + *-alis* of or relating to]

bit *n.* In computer technology, a single digit in binary notation symbolized by either 0 or 1, represented by a switch that is either off or on, a location on a disk or a tape that is either not magnetized or magnetized, or the absence or presence of an electrical or electronic pulse. In [*information theory](#), it is the standard unit of [*information \(2\)](#), representing the information required to specify one of two alternatives, the number of bits in a given signal being defined by the minimum number of binary digits required to encode it. The binary equivalents of the decimal digits 0, 1, 2, 3, 4, 5, 6, 7, 8, and 9 are 0, 1, 10, 11, 100, 101, 110, 111, 1000, and 1001, respectively; therefore, if the information specifies a choice of one out of just two alternatives, then one bit of information is sufficient to encode the information, three or four alternatives require two bits, five to eight alternatives require three bits, nine or ten alternatives require four bits, and so on. See also [BAUD](#), [BINARY CODE](#), [BOOLEAN](#), [BYTE](#), [NYBBLE](#). [A blend of *b(inary)* and *(dig)it*, named in the 1940s by the US statistician John Wilder Tukey (1915–2000)]

bite bar *n.* A device containing a hollow mould of a person's teeth that can be bitten on to in order to keep the head completely still during an experiment.

bitter *n.* One of the primary tastes in [*Henning's tetrahedron](#), the characteristic taste of [*quinine](#) or orange peel.

bivariate statistics *n.* The branch of statistics devoted to analysing the relationship between pairs of variables when neither is an [*independent variable](#) in an experiment. The prototypical example of bivariate statistics is the [*product–moment correlation coefficient](#). Compare [MULTIVARIATE STATISTICS](#), [UNIVARIATE STATISTICS](#). [From Latin *bis* twice + English *variate*]

black bile See [HUMOUR \(3\)](#).

blackboard memory *n.* Another name for a [*buffer store](#).

*****ebook converter DEMO Watermarks*****

Black English Vernacular *n.* A speech style, nowadays thought to be *creole in origin, characteristic of inner-city African-American communities in the United States, recognizable through such expressions as: *It's just the same old same old* (It's just the same old thing); *I be done fed the baby soon*; *I been know your address, mister*; *They real fine*; *Don't nobody understand me?* Also called *Ebonics* or (colloquially) *soul talk* . See also [VERNACULAR](#). **BEV** abbrev. [From Latin *vernaculus* belonging to a household slave, from *verna* a household slave]

blacking out *n.* Another name for [*falling out](#).

Blacky pictures *n.* A [*projective test](#) resembling the [*TAT](#) but designed for children, comprising a series of twelve cartoon drawings in which a dog called Blacky, designated as male or female to match the sex of the respondent, is depicted playing human roles with other dogs called Mama and Papa and a sibling of indeterminate age and sex called Tippy. The respondent is asked to make up a vivid, imaginative story about each picture and then to respond to a series of multiple-choice and short-answer questions about the picture. The test was constructed by the US psychologist Gerald S. Blum (born 1922) in the course of postgraduate research and first published by him in the journal *Genetic Psychology Monographs* in 1949. Also called the *Blacky Test* . Compare [CHILDREN'S APPERCEPTION TEST](#).

blaming the victim *n.* A pervasive tendency to assume that a person who has suffered a misfortune must have done something wrong to deserve it. It is explained by the [*just world hypothesis](#).

blastocyst *n.* An early form of an embryo, consisting of a hollow ball of cells one cell thick, that develops from a [*morula](#). See also [EMBRYO](#), [FOETUS](#), [ZYGOTE](#). [From Greek *blastos* a bud + *kystis* a bladder]

blend *n.* A word formed by joining the end of one word on to the beginning of another, or more generally part of one word on to part of another, typical examples being *brunch*, which is formed from the beginning of *breakfast* and the end of *lunch*, *moped* from *motor* and *pedal*, *motel* from *motorcar* and *hotel*, *napalm* from *naphthene* and *palmitate*, *prissy* from *prim* and *sissy*, and

smog from *smoke* and *fog*. Also called a *portmanteau word* .

blending inheritance *n.* A once-popular doctrine, subsequently discredited following the general acceptance of **Mendelian* genetics, that the intermediate characteristics of **hybrids* (1) result from a physical merging or mixing of the substances carrying the parental characteristics rather than from the recombination of unchanged particulate hereditary factors (genes). Compare *PARTICULATE INHERITANCE*.

blindness *n.* Inability to see. Total blindness, which is a comparatively rare condition, is unambiguously defined as an inability to perceive light in either eye; partial blindness in which there is some residual vision is comparatively common, affecting approximately 90 per cent of registered blind people in the US and the UK, and is variously defined. The American Foundation for the Blind proposed a twofold criterion: either a **Snellen fraction* of 20/200 or less in the better eye with maximum correction (spectacles), or **tunnel vision* limiting the visual field to a **visual angle* of no more than 20 degrees. Blindness is usually an acquired condition, congenital causes accounting for only about one per cent of registered blind people, the major cause among registered blind people in the US and the UK being **diabetes*, although blindness in one eye, among people not usually registered blind, is most often caused by **amblyopia* ex anopsia. Also called *visual impairment* , especially when there is some residual vision. See also AMAUROSIS, AMETROPIA, ANOPIA, ANTON'S SYNDROME, BLINDSIGHT, BRAILLE, CATARACT, CHANGE BLINDNESS, CHARLES BONNET SYNDROME, CHROMATOPSIA, COLOUR-BLINDNESS, CONVERSION SYMPTOM, CORTICAL BLINDNESS, FACIAL VISION, GLAUCOMA, HEMERALOPIA, HEMIANOPIA, HOMONYMOUS HEMIANOPIA, INATTENTIONAL BLINDNESS, NYCTALOPIA, OBJECT BLINDNESS, OPTACON, OPTOHAPT, RETINITIS PIGMENTOSA, SCOTOMA, SPATIAL NEGLECT, STEREOBLINDNESS, STRABISMUS, TADOMA METHOD, TAY–SACHS DISEASE, THERMOFORM, VISUAL SEARCH. **blind** *adj.* [From Old English *blind* and Old Norse *blindr* sightless, cognate with Old Norse *blunda* to close one's eyes]

blindness denial *n.* Another name for **Anton's syndrome*.

blindsight *n.* Residual vision in the absence of a functioning **primary visual cortex* in primates and possibly other animals. More specifically, a

*****ebook converter DEMO Watermarks*****

capacity possessed by some people who appear to be totally blind, owing to lesions in the primary visual cortex, to respond to visual stimuli. Such people have no conscious experience of vision, but if forced to guess they can correctly direct their eyes towards light sources, identify objects moving in particular directions, or even discriminate between simple visual shapes, and they are often surprised that their guesses are correct. This phenomenon is explained by small but direct connections, bypassing the primary visual cortex, between the **lateral geniculate nuclei* and areas of the prestriate **visual cortex* that are specialized for colour, movement, and form perception. The term was introduced in 1974 by the US-born British neuropsychologist Lawrence Weiskrantz (born 1926) and several colleagues in a case report of a patient with the condition, and became widely known after the publication of Weiskrantz's book *Blindsight: A Case Study and Implications* (1986). Also written *blind sight*. Compare *ANTON'S SYNDROME* (which may be interpreted as the inverse of blindsight).

blind spot *n.* **1.** A small oval area on the **retina* of each eye, approximately 2 millimetres in diameter, where the ganglion cells in the inner retinal layer, nearest the front of the eye, feed backwards through the retina into the optic nerve, and where there are therefore no photoreceptors and vision is absent. Squids and octopuses do not have blind spots, because their eyes have evolved with the retinal layers arranged the other way round, with the ganglion cells in the outer retinal layer at the back of the eye. A person is not ordinarily aware of a blind spot because the gap is covered by vision from the other eye, and if one eye is closed it is not noticed because of the **filling-in* phenomenon, but its location can be mapped as follows. Gaze fixedly at a distant object with one eye, keeping the other eye closed, and hold a small distinctive stimulus such as a cotton bud or Q-tip at arm's length directly in front of the object, then slowly move the stimulus horizontally outwards from the direction of gaze until it vanishes approximately 18 degrees out—about the width of one's hand at arm's length. Also called an *optic disc*. **2.** Any part of the visual field in which vision is absent. Also called a *scotoma*. **3.** Any place where vision, hearing, or reception of broadcast signals is difficult or impossible. **4.** A topic on which a person is notably ignorant or lacking in insight or ability.

blind study *n.* A research design planned so that, in order to control for

the influence of **demand characteristics*, the research participants or subjects do not know the details of the investigation or the **experimental hypothesis* being tested, at least until after the data have been collected. See *DOUBLE-BLIND STUDY*, *RANDOMIZED DOUBLE-BLIND EXPERIMENT*, *SINGLE-BLIND STUDY*.

blind watchmaker *n.* A term coined in 1986 by the British ethologist Richard Dawkins (born 1941) to denote **natural selection*, alluding to the Argument from Design, an argument for the existence of God put forward in 1802 by the theologian William Paley (1743–1805). Paley argued that if he found a watch while crossing a heath he would conclude that it must have had a maker, because it is too intricate and precise to have arisen by accident, and that for the same reason the intricacy and precision of the works of nature forced him to conclude that they too must have had a maker, namely God; but Dawkins argued that natural selection operates like a blind watchmaker in fashioning the complicated structures of nature.

blink reflex *n.* An involuntary reflex blinking of both eyes when an object or puff of air touches the cornea of one eye. The **afferent* pathway is the **trigeminal nerve* and the **efferent* pathway is the **facial nerve*.

blivet See *IMPOSSIBLE TRIDENT*.

blob *n.* Any of the ovoid (egg-shaped) areas in the **primary visual cortex* (Area V1), about a quarter of a millimetre in diameter and separated by half-millimetre interblobs, containing neurons with **double-opponent receptive fields* sensitive to light of a specific wavelength (red–green and blue–yellow), and others with ordinary **centre-surround receptive fields* (white–black), not at all sensitive to shape or movement, responsible for perception of colours including **achromatic* shades of black, white, and grey. Blobs are found in layers 2 and 3 of the primary visual cortex, receiving projections from sublayers 4C α and 4C β and projecting to Area V2 of the **visual cortex*, which in turn projects to Area V4 in the **fusiform gyrus*, an area specialized for colour vision. See also *W CELL*. [So called because it shows up as a blob when the cerebral cortex is stained for the enzyme cytochrome oxidase]

Bloch's law *n.* Another name for the **Bunsen–Roscoe law*.

block design test *n.* A type of [*intelligence](#) test item or subtest in which the respondent tries to arrange a number of painted wooden blocks to copy a design formed by the examiner or shown on a diagram.

block diagram *n.* Another name for a [*bar chart](#), a [*histogram](#), or a [*flow chart](#).

blocking memory *n.* A memory that intrudes into consciousness and impedes or obstructs retrieval of a different though related memory. See [UGLY SISTER EFFECT](#). Compare [SCREEN MEMORY](#).

block portrait *n.* A degraded image, usually of a face, divided into large rectangles or blocks, the lightness of each block being set to the average of the image in that region, so that a block overlaying an area of dark hair becomes uniformly black, a block overlaying an area of light skin becomes uniformly light, and a block straddling light skin and a dark eyebrow becomes uniformly grey (see [illustration](#)). Coarse block portraits, made up of approximately 16×16 rectangles using eight or sixteen lightness values or shades of grey, have information of high [*spatial frequency](#) filtered out and are impossible to recognize when viewed close up in clear detail, but they are easy to recognize when viewed from a distance or blurred by half-closing the eyes or overlaying the portrait with tissue paper or frosted glass, the resulting loss of information paradoxically increasing the recognizability of the image. The first block portrait was constructed by the US biomedical engineer Leon D(avid) Harmon (1922–84) and published in a technical report in 1971, followed by an article in *Scientific American* magazine in 1973. See also [ABRAHAM LINCOLN EFFECT](#). Compare [HYBRID IMAGE](#).

Block portrait

blood *n.* The fluid that is pumped through the arteries and veins by the heart to supply the tissues of the body with nutrients and oxygen, to remove waste products, and to transport **hormones* and other substances. In vertebrates it is red and is composed of a pale yellow fluid called **plasma* (1) in which are suspended **erythrocytes*, **leucocytes*, and **platelets*. See also [BLOOD—BRAIN BARRIER](#), [BLOOD GROUP](#), [ERYTHROPOIETIN](#), [HUMOUR](#) (3).

blood alcohol concentration *n.* The amount of alcohol in a given volume of blood, usually expressed in units of mass per units of volume, as milligrams or grams of alcohol per decilitre (100 millilitres) of blood. See also [ALCOHOL](#), [DRINK-DRIVING](#). Also called *blood alcohol level* (BAL). **BAC**

*****ebook converter DEMO Watermarks*****

abbrev.

blood alcohol level *See* [BLOOD ALCOHOL CONCENTRATION](#).

blood–brain barrier *n.* A protective mechanism that allows blood to flow freely to the brain but prevents most substances in the bloodstream from reaching the brain tissue. It is effected through the unique structure of the capillaries that supply blood to the brain, such capillaries being composed of [*endothelial cells](#) sealed together in continuous tight junctions to form solid walls not found anywhere else in the body. These capillaries are also almost completely encircled by [*astrocytes](#), forming a jigsaw pattern on their outer walls and providing [*glial sheaths](#) around them. [*Lipid](#)-soluble substances such as [*alcohol](#), [*nicotine](#), [*caffeine](#), and [*heroin](#) easily cross the barrier and enter the brain, because the [*cell](#) membranes and glial sheaths are composed of lipid molecules, whereas water-soluble substances are generally kept out, but certain water-soluble substances such as [*glucose](#) (in its dextral form only), [*phenylalanine](#), and [*L-dopa](#) are carried across the barrier by specialized [*active transport](#) processes. *See also* [CIRCUMVENTRICULAR ORGAN](#). **BBB** *abbrev.*

blood-flow receptor *n.* Any of a number of sensory receptors in the kidneys that respond to a decrease in blood flow by releasing [*renin](#), which acts as an [*enzyme](#) for the synthesis of [*angiotensin II](#).

blood group *n.* Any of the blood types identified by the many classification systems, especially one of the four types of the ABO system based on the presence or absence of two genetically determined [*antigens](#), A and B, on the surface of red blood cells. Type A shows the A antigen and an [*antibody](#) to the B antigen called anti-B agglutinin, Type B shows the B antigen and anti-A agglutinin, Type AB shows both antigens and neither agglutinin, and Type O shows neither antigen and both agglutinins. Also called *blood type* . *See also* [RACE \(2\)](#).

blue–yellow cell *n.* A neuron that is located in the visual system and is excited by blue light and inhibited by yellow light or vice versa. Such [*opponent-process cells](#) are not found in the retina, where the [*trichromatic theory](#) applies, but at higher levels in the visual system. *See also* [RED-GREEN](#)

*****ebook converter DEMO Watermarks*****

CELL. Compare CONE.

blunted affect See AFFECT.

B lymphocyte *n.* A type of *lymphocyte that is synthesized in bone marrow and secreted from the spleen and that mobilizes *antibodies of *immunoglobulin and plays an important part in the *immune system. Also called a *B cell* . See also MONOCLONAL ANTIBODY, STEM CELL. Compare T LYMPHOCYTE. [From *b(one marrow) lymphocyte*]

BMDP *abbrev.* Bio-Medical Data Package, a suite of statistical computer programs often used by psychologists, distributed by the University of California Press, USA. Compare SAS, SPSS, SYSTAT.

boarding school syndrome *n.* A pattern of emotional and behavioural adjustment acquired as a protective shell by young children at boarding schools but persisting into adult life and manifesting itself in problems associated with intimacy. People displaying this syndrome may appear outwardly confident but find intimate relationships threatening, and typically enter into deeply dependent relationships only to abandon their loved ones abruptly, either emotionally or physically. [The term was introduced by the English analytical psychotherapist Joy Schaverien (born 1943) in an article in the *British Journal of Psychotherapy* in 2011, followed by a book entitled *Boarding School Syndrome: Broken Attachments and Hidden Trauma* (2015)]

body adjustment test *n.* Another name for the *tilting-room test. **BAT** *abbrev.*

body cell *n.* A somatic cell as opposed to a *germ cell.

body dysmorphic disorder *n.* A *mental disorder in *DSM-5 characterized by a pathological preoccupation with an imagined or exaggerated defect in physical appearance. Also called *dysmorphophobia* . See also ADONIS COMPLEX, MUSCLE DYSMORPHIA, SOMATIC DELUSION, TAIJIN KYOFUSHO. **BDD** *abbrev.* [From Greek *dys-* bad or abnormal + *morphe* form]

body image *n.* A mental representation of one's own physical appearance, based partly on self-observation and partly on the reactions of others. See also [IMAGE \(3\)](#), [SCHEMA](#).

body language *n.* Another name for [*kinesics](#) or, loosely speaking, of [*non-verbal communication](#) in general.

body ownership illusion See [RUBBER HAND PHENOMENON](#).

body therapies *n.* Techniques of [*psychotherapy](#) that emphasize physical approaches to psychological problems, especially [*Alexander technique](#), [*bioenergetics](#), [*orgone therapy](#), [*primal therapy](#), and [*rolfing](#).

Bogardus social distance scale *n.* Another name for a [*social distance scale](#).

bogus pipeline *n.* A technique designed to reduce [*response](#) bias in self-report measures of attitudes or emotions by convincing the respondent that the researcher has a reliable and valid means, usually in the form of a sham [*lie detector](#) attached to the respondent's body, of checking the truthfulness of the verbal responses. The technique was introduced by the US psychologists Edward Ellsworth Jones (1926–93) and Harold Sigall (born 1943) in an article in the journal *Psychological Bulletin* in 1971. See also [NON-REACTIVE MEASURE](#).

bondage *n.* 1. Slavery, servitude, or (in medieval Europe) the obligation of peasants to supply labour and other services in return for small landholdings. 2. A common form or aspect of [*sexual sadism](#) and [*sexual masochism](#) in which the participants derive pleasure from physically binding each other or being bound or restrained. [From Old Norse *band*, cognate with Old High German *bant* a fetter + Old French *-age* indicating a process or action, from Latin *agere* to do]

bonding *n.* The formation of close personal attachment, especially by an infant or child with its mother. See [ATTACHMENT THEORY](#).

bone conduction *n.* The transmission of sound waves to the auditory receptors in the inner ear through the bones of the skull rather than through the air in the outer ear, eardrum, and middle ear. **bone-conducted** *adj.*

bone conduction threshold *n.* The **absolute threshold* of **bone-conducted* sound, bypassing the outer ear and middle ear and therefore used to determine whether hearing loss is caused by damage to the inner ear.

Bonferroni correction *n.* In statistics, a procedure whereby the significance level of a statistical test is adjusted in order to protect against **Type I errors* when **multiple comparisons* are being made. Thus if 10 **t tests* need to be performed on a set of scores, a researcher may use a Bonferroni-corrected significance level of $.05/10=.005$ instead of the conventional $.05$. This procedure is extremely conservative inasmuch as it may lead to **Type II errors*, but it is safe, easy to understand, and can be used with a wide variety of tests. A Bonferroni-corrected *t* test is sometimes called simply a *Bonferroni t test* or a *modified LSD test*. A Bonferroni-corrected **Mann–Whitney U test* is sometimes called a *Bonferroni Mann–Whitney U test*, and so on. Compare DUNCAN'S MULTIPLE RANGE TEST, LEAST-SIGNIFICANT DIFFERENCE TEST, NEWMAN–KEULS TEST, SCHEFFÉ TEST, TUKEY-HSD TEST. [Named after the Italian mathematician Carlo Emilio Bonferroni (1892–1960) who, in 1935 and 1936, published inequalities on which the procedure is based]

bong *n.* A water pipe used for smoking **cannabis* and other drugs. [From Thai *baung* a wooden cylinder]

Bonnet syndrome See CHARLES BONNET SYNDROME.

bony labyrinth *n.* The cavity in the temporal bone that contains the **membranous labyrinth* of the inner ear, with the **vestibular system* and the **semicircular canals*, and the **cochlea* with the **organ of Corti*. Also called the *osseous labyrinth*.

Boolean *adj.* Of, relating to, or comprising a system of algebra or symbolic logic in which **propositions (1)* are represented by the binary digits 0 (false)

and 1 (true), used especially in computing and electronics. A *Boolean algebra* comprises a set of elements together with two binary operations (the *Boolean sum* denoted by the symbol + and the *Boolean product* denoted by .) obeying certain axioms. In *Boolean set theory* the Boolean sum is interpreted as set union, the Boolean product as set intersection, 0 as the null set, and 1 as the universal set; in *Boolean logic* the Boolean sum is interpreted as *or*, the Boolean product as *and*, 0 as *false*, and 1 as *true*, so that $0 + 0 = 0$, $0 + 1 = 1$, $1 + 1 = 1$, $0 \cdot 0 = 0$, $0 \cdot 1 = 0$, and $1 \cdot 1 = 1$. Boolean set theory and Boolean logic are **isomorphic*. See also [BIT](#), [FUZZY LOGIC](#), [SET THEORY](#). [Named after the English mathematician George Boole (1815–64) who formulated the ideas in his books *Mathematical Analysis of Logic* (1847) and *An Investigation of the Laws of Thought* (1854)]

boomerang effect *n.* An attitude change in a direction opposite to that of a persuasive message, supposedly resulting from the persuasive message being too discrepant from the target person's original attitude. It is often feared by persuasive communicators but seldom if ever occurs in practice. See also [ASSIMILATION—CONTRAST THEORY](#), [DISCREPANCY EFFECTS](#).

bootstrapping *n.* Constructing a **linear model* of a judge's predictions of a criterion variable and then using the linear model instead of the judge to make further judgements or predictions. Such linear models consistently outperform the judges from whose judgements they are derived, because the coefficient weights are distillations of the judges' underlying principles, free of the extraneous variables that inevitably influence each of their specific judgements. This technique became widely known in the early 1970s under the leadership of the US psychologists Lewis Robert Goldberg (born 1932) and Robyn Mason Dawes (1936–2010). In one typical study, a group of judges studied ten background, aptitude, and personality measures taken from graduate students and predicted the students' grade point averages in the first year of graduate study. Linear models of every one of the judges performed better than the judges themselves in predicting the students' grade point averages. See also [ACTUARIAL PREDICTION](#). **bootstrap** *adj. vb.* [So called because it is reminiscent of lifting oneself up by one's own bootstraps]

borderline intelligence *n.* An **IQ* in the range from 71 to 84. [So called because it is just above the margin of **intellectual disability*]

*****ebook converter DEMO Watermarks*****

borderline personality disorder *n.* A **personality disorder* in **DSM-5* characterized by a pervasive pattern of impulsivity and unstable personal relationships, self-image, and affect, beginning in early childhood, and indicated by such signs and symptoms as frantic attempts to avoid real or imagined abandonment; intense and unstable personal relationships; continuously fluctuating self-image; impulsivity (in spending, unsafe sex, substance abuse, reckless driving, binge eating, and the like); recurrent suicidal or self-mutilating gestures or behaviour; emotional instability; chronic feelings of emptiness; intense and inappropriate anger (such as frequent outbursts of temper); and transient, stress-related **paranoid* ideation or **dissociation*. See also DIALECTICAL BEHAVIOUR THERAPY. **BPD** *abbrev.* [So called because it cannot easily be assigned to any of the other personality disorders]

Boring figure *n.* Another name for the most familiar version of the **young girl/old woman figure*. [Named after the US psychologist Edwin Garrigues Boring (1886–1968) who published it in 1930, although he did not create it]

Borna disease virus *n.* An **RNA* virus, transmitted through saliva and nasal secretions, causing **neurological* disorders in a wide range of species, and in humans appearing to be associated with **bipolar disorders*, **chronic fatigue syndrome*, **depression*, **dysthymic disorder*, **schizophrenia*, and other mental disorders. Treatment is most effective with antiviral drugs such as **amantadine*. **BDV** *abbrev.* [Named after Borna, a town in Saxony, Germany, where sad horse disease, as it was called, was first observed]

BOSS *abbrev.* The initial syllable of a word as it is pronounced, such as the syllable *ne-* in the word *nevertheless*. [From *B(asic) O(rthographic) S(yllabic) S(tructure)*, a model of syllabic recognition]

bottleneck, evolutionary See BOTTLENECK THEORY, EVOLUTIONARY BOTTLENECK.

bottleneck theory *n.* Any theory of **attention* according to which all incoming information is subjected to some **level of processing* before a

portion of it is selected for attention. *See also* [COCKTAIL PARTY PHENOMENON](#), [FILTER THEORY](#), [SELECTIVE ATTENTION](#). [So called because the quantity of incoming information is narrowed like the neck of a bottle]

bottom-up processing *n.* Any form of [*information](#) processing that is initiated, guided, and determined by input and that proceeds in sequential stages, with each stage coming closer to a final interpretation than the last, as in [*computational theories](#) of vision that proceed from raw sensory data to more abstract cognitive operations. A clear example of bottom-up processing is provided by [*feature detection theory](#). This form of processing allows the possibility of learning from experience during the processing procedure. *Bottom-up theories* of perception are theories according to which low-level sensory [*features](#) (1) of a stimulus are first recognized and then built up, with the help of memory and existing [*schemata](#), into higher-order perceptions. The term was introduced in 1975 by the US psychologists Donald A(rthur) Norman (born 1935) and David E(verett) Rumelhart (1942–2011). Also called *data-driven processing*. *See also* [ANALYSIS BY SYNTHESIS](#). Compare [TOP-DOWN PROCESSING](#).

bouffée délirante *n.* A [*culture-bound syndrome](#) of Francophone West Africa and Haiti, characterized by sudden outbursts of violent behaviour, accompanied by confusion, [*psychomotor agitation](#), and sometimes also [*paranoid ideation](#) and [*hallucinations](#). It is sometimes interpreted as a [*brief psychotic disorder](#). [From French *bouffée* explosion + *délirante* raving]

boulimia *n.* A variant spelling of [*bulimia](#).

bounded rationality *n.* A concept introduced in influential articles in 1955 and 1956 by the US political scientist and decision theorist Herbert A(lexander) Simon (1916–2001) to refer to human cognitive capacities and decision processes that are not strictly [*rational](#) and are therefore not guaranteed to produce optimal results. The bounds on human rationality arise from limitations of our information-processing abilities and the costs involved in exhaustive comparison of all available options; furthermore, perfectly rational choice is often impossible to achieve in practice, as (for example) in the [*travelling salesman problem](#). Cognitive [*heuristics](#), including Simon's own [*satisficing](#), and [*elimination by aspects](#) are among

*****ebook converter DEMO Watermarks*****

the most thoroughly investigated bounded-rationality choice procedures. See also [PSYCHOLOGICAL DECISION THEORY](#).

bound energy *n.* In [*psychoanalysis](#), psychic energy in the [*secondary process](#), contained and accumulating within particular groups of neurons, its flow being subject to checks and controls through [*binding](#). Sigmund Freud (1856–1939) attributed the concept to the Austrian physician Josef Breuer (1842–1925), but Breuer, although he discussed a related concept, never used the term, and the version of the concept that Freud published in 1895 in his ‘Project for a Scientific Psychology’ (*Standard Edition*, I, pp. 177–397) is quite different from Breuer's, although both based their notions on the [*principle of constancy](#). See also [NIRVANA PRINCIPLE](#), [REALITY PRINCIPLE](#). Compare [FREE ENERGY](#).

bound form *n.* A [*morpheme](#) that cannot occur on its own as a word, such as the prefix *un-* or the suffix *-tion* in English. Also called a *bound morpheme*. Compare [FREE MORPHEME](#).

bouton *n.* The swollen tip of an [*axon](#) that forms a [*synapse](#) (1) with part of another nerve fibre, muscle, or gland. Also called a *synaptic terminal*, *terminal bouton*, *end foot*, or *end bulb*. [From French *bouton* a button, alluding to its appearance]

bovine spongiform encephalopathy *n.* The full name of the disease [*BSE](#). [From Latin *bos*, *bovis* an ox or cow + *spongia* a sponge + *forma* form + Greek *enkephalos* brain, from *en* in + *kephale* head + *pathos* suffering]

bow-wow theory *n.* A dismissive name for the [*onomatopoeic theory](#) of the origin of language. Also called the *ding-dong theory*. [From the sound of a dog barking]

box-and-whisker plot *n.* In statistics, a graph representing the distribution of a variable, showing a box to represent the [*interquartile range](#), with a mark inside it representing the [*median](#), and from each end of the box a line (whisker) extending as far as the smallest and largest scores (see [illustration](#)). Also called a *box plot* or *boxplot*. See also [FIVE-NUMBER SUMMARY](#).

*****ebook converter DEMO Watermarks*****

Compare [ERROR BAR](#).

Box-and-whisker plot

boxcar design *n.* A type of [*experimental design](#) in which each research participant or subject is exposed to a series of alternating levels of an [*independent variable](#). It is widely used in fMRI research (see [MRI](#)), a typical example being a study in which experimental trials, in which participants look at pictures of faces, are alternated with control trials, in which they look at neutral images, and brain activity in these two conditions is compared. It is a special type of [*within-subjects design](#). [Named after the resemblance of a graph of the independent variable to the alternating up and down shape of a railway train consisting of boxcars or closed freight wagons]

Box-Jenkins model *n.* Another name for an [*ARIMA](#) model. [Named after the British statisticians George Edward Pelham Box (1919–2013) and Gwilym Meirion Jenkins (1933–82), who co-authored a book describing the model, entitled *Time-Series Analysis: Forecasting and Control* (1970)]

box plot *n.* Another name for a [*box-and-whisker plot](#).

brachygraphy *n.* An obsolescent form of shorthand writing. Compare [STENOGRAPHY](#), [TACHYGRAPHY](#). [From Greek *brachys* short + *graphein* to write]

*****ebook converter DEMO Watermarks*****

brachymetropia *n.* Another name for **myopia*. [From Greek *brachys* short + *metron* a measure + *ops* an eye + *-ia* indicating a condition or quality]

bracketing *n.* Another name for **epoche*.

bradycardia *n.* Abnormally slow pulse, often defined as less than 60 beats per minute. *Compare* **TACHYCARDIA**. [From Greek *bradys* slow + *kardia* the heart]

bradykinesia *n.* Abnormal slowing of bodily movements, notably as a feature of **Parkinson's disease* and of **parkinsonism*. *See also* **NEUROLEPTIC-INDUCED**. *Compare* **AKINESIA**. [From Greek *bradys* slow + *kinesis* movement + *-ia* indicating a condition or quality]

bradykinin *n.* A **kinin* that is formed in injured tissue in human and animal bodies, causing contraction of most smooth muscles but dilation of blood vessels. [From Greek *bradys* slow + *kineein* to move, so called because it causes slow muscle contractions]

Braille *n.* A writing system designed for blind people in which text is encoded in raised dots that can be read by touch, each dot or group of dots standing for a letter, numeral, or punctuation mark. *Compare* **OPTACON**, **OPTOHAPT**. [Named after Louis Braille (1809–52), French musician and teacher, blind from an early age, who invented the system in 1829]

brain *n.* The part of the **central nervous system* that is enclosed within the skull, comprising, from the top down, the **cerebrum*, **midbrain*, **cerebellum*, **pons*, and **medulla oblongata*. The remainder of the central nervous system is the **spinal cord*. The adult human brain weighs 1,300–1,400 grams (about 3 pounds), contains about 80 billion neurons (50 billion of them in the **cerebral cortex*), each typically forming **synapses* (1) with hundreds or thousands of other neurons, and consumes about 20 per cent of the body's total oxygen intake. *See also* **CEREBRAL CORTEX**. [From Old English *brægen* a brain, cognate with Greek *bregma* the front part of the head]

brain fag *n.* A **culture-bound syndrome* originally reported among

English-speaking school and university students in West Africa, who attributed it to overwork, characterized by loss of ability to concentrate, learn, remember, or think, usually accompanied by sensations of pain, pressure, or tightness around the head or neck and blurred vision. [From *fag* in the sense of being fagged out or exhausted, perhaps from *flag* to droop]

brain imaging *n.* Any of several techniques for imaging or visualizing the structure or function of the brain, including electroencephalography or **EEG*, computed tomography or **CT scans*, magnetic resonance imaging or **MRI*, **magnetoencephalography*, positron emission tomography or **PET scans*, and single photon emission computed tomography or **SPECT scans*. *See also* *ANGIOGRAM*, *NUCLEAR MAGNETIC RESONANCE*, *RADIOISOTOPE SCAN*, *REGIONAL CEREBRAL BLOOD FLOW*, *ULTRASOUND*.

brainstem *n.* The stalklike structure at the bottom of the brain between the cerebral hemispheres and the spinal cord, consisting of the **midbrain*, the **pons*, and the **medulla oblongata*, containing the nuclei of most of the cranial nerves and controlling consciousness and certain vegetative functions such as breathing and the operation of the heart and lungs. Also written *brain stem*.

brainstem reticular formation *n.* Another name for the **reticular formation*. **BSRF** *abbrev.*

brainstorming *n.* A method of generating ideas and solving problems through the encouragement of intensive spontaneous group discussion.

brain tissue transplantation *See* *FOETAL BRAIN TRANSPLANTATION*.

brainwashing *n.* The process of attempting to produce radical changes in a person's attitudes or beliefs through the application of techniques such as **sensory deprivation*, sleep deprivation, induced hunger, pain, extreme physical discomfort, and the alternation of interrogations by kind and cruel inquisitors. The word was first used in print by the US journalist and (as it transpired) CIA agent Edward Hunter (1902–78) in an article in the *Miami News* entitled “‘Brain-Washing’ Tactics Force Chinese into Ranks of Communist Party’ on 24 September 1950 and widely adopted after the
*****ebook converter DEMO Watermarks*****

publication in 1951 of Hunter's book, *Brain-washing in Red China: The Calculated Destruction of Men's Minds*. [From Mandarin Chinese *xǐ-nǎo* brain-washing, from *xǐ* to wash or bathe + *nǎo* brain]

Brazelton assessment *n.* Another name for the **Neonatal Behavioral Assessment Scale*. Also called the *Brazelton scale*. [Named after the US paediatrician Thomas Berry Brazelton (born 1918)]

breakage and reunion *n.* In genetics, another name for **crossing over*.

breathing-related sleep disorders *n.* An umbrella term used in **DSM-5* to cover **obstructive sleep apnoea hypopnoea*, **central sleep apnoea*, and **sleep-related hypoventilation*. See also *SLEEP-WAKE DISORDERS*.

breeding size *n.* The number of animals in a population actively involved in breeding.

bregma *n.* The point at the top of the skull where the **coronal sutures* meet the **sagittal suture*, or where the frontal bone joins the two parietal bones; in infants it corresponds to the anterior **fontanelle*. **bregmata** *pl.* [From Greek *bregma* the front of the head]

bricolage *n.* A term used especially in writings on **qualitative research* to characterize the use of multiple diverse research methods, such as observation, interviewing, interpretation of textual material, and introspection, together with multiple theoretical approaches. **bricoleur** *n.* One who practises bricolage. [From French *bricolage* DIY (do-it-yourself) or the hobby of constructing and repairing household objects and systems, first applied to research by the French social anthropologist Claude Lévi-Strauss (1908–2009) in a publication in 1966]

bridge of Varolius *n.* An obsolescent name for the **pons*. [Named after the Italian anatomist Costanzo Varolius (?1543–75) who first identified it]

brief psychotherapy *n.* Any form of **psychotherapy* limited to a small number of sessions (often 15), usually aimed at dealing with a circumscribed

symptom or achieving a narrow and specific objective. *See also* [COGNITIVE—ANALYTIC THERAPY](#), [CRISIS INTERVENTION](#), [FOCAL THERAPY](#).

brief psychotic disorder *n.* A [*mental disorder](#) in [*DSM-5](#) characterized by the sudden appearance of [*delusions](#), [*hallucinations](#), [*disorganized speech](#), [*disorganized thinking](#), or grossly disorganized behaviour such as [*catatonia](#), the episode lasting at least one day but less than four weeks. *Compare* [SCHIZOPHRENIA](#).

bright light therapy *See* [PHOTOTHERAPY](#).

brightness *n.* The experienced or subjective intensity of light; also another name for [*lightness](#), but some authorities believe that this second sense confuses two distinct though closely related phenomena. *See also* [LUMINANCE](#).

brightness constancy *n.* Another name (avoided in careful usage) for [*lightness constancy](#).

brightness contrast *n.* Another name (avoided in careful usage) for [*lightness contrast](#).

brightness enhancement *n.* The greater brightness of a light flickering at about 10 hertz than the same light presented with steady luminance, the phenomenon being explained by the fact that there is more activity in retinal [*ganglion](#) cells stimulated by light flickering below the [*critical flicker frequency](#) than by light flickering above this frequency or by continuous light.

brightness masking *n.* [*Visual masking](#) with a flash of bright light.

bril *n.* A unit of [*brightness](#) in which light of 1 millilambert (see [LAMBERT](#)) is arbitrarily assigned a value of 100 bril.

Briquet's syndrome *n.* Another name for [*somatization disorder](#) or [*somatic symptom disorder](#). [Named after the French psychiatrist Paul

Briquet (1796–1881), who described it in 1859]

British Ability Scales *n.* An **intelligence test*, first published in 1979, designed for use with children and adolescents up to 17 or 18 years of age, comprising a set of 23 subtests designed to measure a wide diversity of mental abilities and yielding three scores: visual IQ, verbal IQ, and general IQ. Its subtests are designed to measure the following six mental processes: speed of information-processing, reasoning, spatial imagery, perceptual matching, short-term memory, and retrieval and application of knowledge. The correlations between the subtests are all moderate or high, and general IQ scores derived from the test correlate well with independent measures of scholastic and academic attainment. *See also* [RASCH SCALE](#). **BAS** *abbrev.*

British Sign Language *n.* A communication system for deaf people in the UK in which meaning is conveyed by hand signals and the positions of the hands relative to the upper part of the body. *See also* [MAKATON](#), [SIGN LANGUAGE](#). *Compare* [AMERICAN SIGN LANGUAGE](#). **BSL** *abbrev.*

broad heritability *See* [HERITABILITY](#).

Broca's aphasia *See* [APHASIA](#).

Broca's area *n.* A region of the **cerebral* cortex towards the back of the inferior (lowest) gyrus of the frontal lobe, immediately anterior to the tip of the temporal lobe, usually in the left cerebral hemisphere in both left-handed and right-handed people, involved in the production of spoken and written language. Lesions in this area are associated with Broca's aphasia, also called *expressive aphasia* or *motor aphasia* (*see* [APHASIA](#)). Also called *Broca's centre* or *Broca's speech centre*. *Compare* [WERNICKE'S AREA](#). [Named after the French surgeon and anthropologist Paul Broca (1824–80), who discovered its function in 1861]

Brodmann area *n.* Any of the 47 numbered areas of the **cerebral cortex*, such as Area 17, the primary visual cortex, in the most widely used reference map of the brain (*see* [illustration](#)). It was constructed as a **cytoarchitectonic map* based on differences in cell layers and structures, but the areas turned out in general to correspond to different psychological functions. **BA** *abbrev.*

*****ebook converter DEMO Watermarks*****

[Named after the German neurologist Korbinian Brodmann (1868–1918), who developed an early version of it in 1903 and published it in an influential book in 1909]

Lateral surface

Medial surface

Brodman areas

bromocriptine *n.* Bromocriptine mesylate, an **alkaloid* drug derived from **ergot* that mimics the activity of **dopamine* and is used in the treatment of **Parkinson's disease* and is also used to treat certain forms of amenorrhoea and female infertility, because it selectively inhibits the secretion of **prolactin* by the anterior pituitary. Also called *Parlodel* (trademark). See also *ANTIPARKINSONIAN*, *DOPAMINOMIMETIC*. [From Greek *bromos* a bad smell + English *ergocryptine* a type of ergot, from *ergot* + Greek *kryptos* hidden + *-ine* indicating an organic compound]

Bruce effect *n.* The failure of a recently mated female mouse to produce offspring if housed near a strange male, although the presence of her own stud male or a strange castrated male does not have this effect. The destruction of the female's olfactory bulbs eliminates the effect, because it is caused by the presence in the strange male's urine of a **pheromone* that inhibits the female's secretion of prolactin and implantation of the fertilized ovum. Also called *pregnancy blockage*. [Named after the British reproductive biologist Hilda M(argaret) Bruce (1903–74), who first reported it in 1959]

brujería *n.* A name for [*rootwork](#) in Spanish-speaking communities of the Caribbean and the southern United States, where it is also called *mal puesto* . [Spanish *brujería* witchcraft, from *bruja* a witch]

Brunswik faces *n.* Schematic drawings of faces, with simplified representations of eyes, nose, and mouth that can be varied from one face to another, used for research into perceptual discrimination and cognitive categorization. [Named after the Hungarian-born US psychologist Egon Brunswik (1903–55), who introduced them]

Brunswikian *adj.* Of, relating to, or resembling the theory of perception introduced by the Hungarian-born US psychologist Egon Brunswik (1903–55). *See also* [BRUNSWIK FACES](#), [BRUNSWIK RATIO](#), [ECOLOGICAL CRITERION](#), [ECOLOGICAL FALLACY](#), [ECOLOGICAL VALIDITY \(2\)](#), [ECOLOGY \(2\)](#), [LENS MODEL](#), [PROBABILISTIC FUNCTIONALISM](#), [RATIOMORPHIC](#).

Brunswik ratio *n.* An index of [*perceptual constancy](#) given by $(R-S)/(A-S)$, where R is the physical magnitude or intensity of the stimulus chosen as a match, S is the physical magnitude or intensity for a stimulus match with zero constancy, and A is the physical magnitude or intensity that would be chosen under 100 per cent constancy. The ratio is equal to zero when there is no perceptual constancy and 1 when there is perfect constancy. Because sensation increases as the logarithm of physical magnitude or intensity, according to [*Fechner's law](#), a modified version called the [*Thouless ratio](#) was introduced in 1931. *See also* [BRUNSWIKIAN](#). [Named after the Hungarian-born US psychologist Egon Brunswik (1903–55), who introduced it in 1929]

brute force algorithm *n.* A method of [*problem solving](#) in which every possibility is examined and the best one (or a best one) is chosen. It is often implemented by computers, but it cannot be used to solve complex problems such as the [*travelling salesman problem](#) or the game of chess, because the number of alternatives is too large for any computer to handle.

bruxism *n.* The habit of grinding the teeth, either unconsciously while awake or in Stage II [*NREM sleep](#). [From Greek *brychein* to gnash]

BSE *abbrev.* Bovine spongiform encephalopathy, a progressive and ultimately fatal disease that attacks the nervous system of cattle and may infect human beings, causing new-variant **Creutzfeldt–Jakob disease*. It is believed by most authorities to be a **prion disease*, but according to an alternative theory it is an autoimmune disease, similar to **multiple sclerosis*, caused by the immune system's reaction to the bacterium *Acinetobacter*, a common microbe found in water, soil, sewage, and in the skin of cattle and human beings, where it infects open wounds and cuts and mimics the molecular structure of a brain tissue protein, causing the immune system to attack both the bacteria and normal brain tissue. Its non-technical name is *mad cow disease* .

buccal *adj.* Of or relating to the cheek or mouth. [From Latin *bucca* a cheek]

buffer store *n.* A temporary memory store that holds information for short periods, for example the **phonological loop* or the **visuospatial sketchpad* of **working memory*. Also called *blackboard memory* .

bufotenin *n.* A psychoactive drug found in **cohoba* snuff, in the mushroom **Amanita muscaria*, and in the poisonous secretions from the skin glands of toads. It is an **indole* alkaloid and an analogue of **serotonin*, but unlike true serotonin it has **psychedelic* or **hallucinogenic* effects and also functions as an **aphrodisiac*. The metabolism of serotonin into bufotenin instead of 5-hydroxyindoleacetic acid is believed to be of significance in the aetiology of schizophrenia. Also spelt *bufotenine* . *See also* PHANTASTICANT. [From Latin *bufo* a toad + *-ten* origin unknown, perhaps from Latin *tenu* a snare + *-ine* indicating an organic compound]

bulbar *adj.* Of, relating to, or attached to the **medulla* oblongata or the medulla oblongata and the **pons*. [From Greek *bolbos* an onion or garlic bulb, so called because of the bulbous appearance of these structures]

bulimia *n.* 1. Pathologically voracious appetite, including cases caused by a brain lesion. Also called *hyperorexia*, *hyperphagia* , or loosely speaking *polyphagia* .

2. A shortened name for ***bulimia nervosa**. [From Greek *boulimia* bulimia, from *bous* ox + *limos* hunger + *-ia* indicating a condition or quality, indicating the condition of someone who is hungry enough to eat an ox, not (as often stated) one who is as hungry as an ox, the ox being a creature not known for its voracity]

bulimia nervosa *n.* An ***eating disorder** in ***DSM-5** characterized by recurrent episodes of binge eating, often carried out in secret, accompanied by a sense of loss of control, followed by feelings of shame and compensatory behaviour intended to prevent weight gain, such as self-induced vomiting, misuse of laxatives or diuretics, enemas, fasting, or excessive exercise, together with undue emphasis attached to body shape and weight in self-evaluation. *See also* BULIMIA (1, 2), PRO-MIA. *Compare* ANOREXIA NERVOSA, BINGE-EATING DISORDER. **BN** *abbrev.* [From *bulimia* + Latin *nervus* a nerve]

bundle hypothesis *n.* The notion, attacked in ***Gestalt psychology**, that a complex perception is nothing more than the sum of its component elements.

Bunsen–Roscoe law *n.* A basic principle of photochemistry according to which the reaction of any light-sensitive pigment, including a ***visual pigment** in the retina of the eye, is a multiplicative function of the intensity of the light exposure and its duration, the photochemical effect on pigment molecules depending simply on the total number of incident light quanta. It is usually expressed as $I \times t = k$, where I is the physical intensity of the flash, t is its duration, and k is a constant. It is valid up to about 100 milliseconds for ***absolute thresholds** and ***difference thresholds** or just noticeable differences in visual sensations, and is valid over a far wider range of durations for photographic emulsions. Also called *Bloch's law*. [Named after the German chemist Robert Wilhelm Eberhard Bunsen (1811–99) and the English chemist Henry Enfield Roscoe (1833–1915) who formulated it]

buprenorphine *n.* Buprenorphine hydrochloride, an ***opiate** partial ***antagonist** (3) that acts by binding to opiate ***neuroreceptors** in the brain, causing ***analgesia**, ***euphoria**, and other effects. Though much less potent than ***heroin** and other narcotic antagonists, it remains attached to the

*****ebook converter DEMO Watermarks*****

receptors long after it has disappeared from the bloodstream, making it useful in the treatment of **addiction* to heroin and other opiates. At low doses, it enables addicted people to avoid such drugs without experiencing **withdrawal* symptoms. In 2002, the US Food and Drug Administration approved it as a medication for the treatment of drug addiction. Formula: $C_{29}H_{41}NO_4HCl$. Also called *Buprenex* or *Subutex* (trademarks). *See also* *SUBOXONE*. [Named after *morphine*]

Buridan's ass *n.* A problem of decision making typified by a hungry ass standing between two equidistant and equally attractive bales of hay who starves to death because **reason* provides no grounds for choosing one rather than the other. *See also* *APPROACH—APPROACH CONFLICT*. [Named after the French scholastic philosopher Jean Buridan (?1295–1358) to whom the example is attributed]

burnout *n.* An **acute stress disorder* or reaction characterized by exhaustion resulting from overwork, with anxiety, fatigue, insomnia, depression, and impairment in work performance.

burnt odour *n.* One of the six primary odours in **Henning's prism*, and one of the four in the **Crocker–Henderson system*, resembling the odour of tar oil. US *burned odor*.

buspirone *n.* Buspirone hydrochloride, an **anxiolytic* drug that is chemically unrelated to most other anxiolytic drugs in common use (the benzodiazepines) and does not manifest **cross-tolerance* with them. Its pharmacological action is poorly understood but is known to involve **serotonin* receptors. Also called *Buspar* (trademark).

butyrophenone *n.* Any of a small number of **neuroleptic* (1) drugs with **dopamine antagonist* action, especially **haloperidol*, **droperidol*, and **spiroperidol*, used in the treatment of **schizophrenia*, **Huntington's disease*, and **Tourette's disorder*. [From Greek *boutyron* fat, from *bous* ox + *tyros* cheese + English *phene* an old name for benzene, from Greek *phainein* to show, alluding to its use in manufacturing illuminating gas + *-one* indicating a ketone, from Greek *-one* a feminine name suffix]

bystander effect *n.* The reluctance of bystanders to intervene in an emergency, especially when a person appears to be in distress or when a crime is being committed. Scores of experiments have shown that people are much less likely to intervene in an emergency, and are generally slower to respond, when other people are present than when they are alone, and this phenomenon is sometimes called *group inhibition of helping* . It was discovered by the US psychologists Bibb Latané (born 1937) and John M(cConnon) Darley (born 1938), who reported an experiment in the *Journal of Personality and Social Psychology* in 1968 in which people found themselves either alone or in a group in a waiting-room when smoke started billowing through a vent in the wall, quickly filling the room and making breathing difficult. Of the people who were alone when the smoke appeared, 55 per cent reported the fire within 2 minutes of first noticing it, and 75 per cent reported it within 6 minutes; but when groups of three were tested together, in only 12 per cent of cases did any of the three report the fire within 2 minutes, and in only 38 per cent of cases within 6 minutes. Also called the *bystander apathy* effect. See also [DIFFUSION OF RESPONSIBILITY](#).

byte *n.* A measure of [*information \(2\)](#) equivalent to (usually) eight [*bits](#), sufficient to encode a character from a basic set of letters, numbers, and other symbols. Compare [NYBBLE](#). [Named in 1956 by the German computer engineer Werner Buchholz (born 1922) while working for IBM. An arbitrary formation, based on *bit* and *bite*, possibly influenced by *b(inar)y (digi)t e(ight)*]

BZ gas *abbrev.* Benzilic acid gas, an [*atropine](#)-like substance that when inhaled produces incapacitating physical and psychological effects. See also [INCAPACITANT](#). Compare [CN GAS](#), [CS GAS](#), [MACE](#), [PEPPER SPRAY](#), [TEAR GAS](#).

cachexia *n.* General debilitation resulting from any chronic disorder. [From Greek *kakos* bad + *hexis* condition + *-ia* indicating a condition or quality]

cachinnation *n.* Loud, raucous laughter, without appropriate cause, most often found in **hebephrenic schizophrenia*. **cachinnate** *vb.* [From Latin *cachinnare* to laugh loudly + *-ation* indicating a process or condition]

cacogeusia *n.* The **hallucination* or **illusion* of an unpleasant taste in the mouth, often found in people with idiopathic **epilepsy*, people receiving **tranquillizer* therapy, and some people with **delusional disorders*. *Compare* AGEUSIA, DYSGEUSIA, HYPERGEUSIA, HYPOGEUSIA, PARAGEUSIA, TASTE BLINDNESS. [From Greek *kakos* bad + *geusis* taste + *-ia* indicating a condition or quality]

cacography *n.* Bad handwriting or incorrect spelling. *Compare* ORTHOGRAPHY (1). [From Greek *kakos* bad + *graphein* to write]

cacology *n.* Bad or faulty speech or choice of words. [From Greek *kakos* bad + *logos* a word or discourse]

cacophony *n.* Unpleasant, harsh, or discordant sounds, especially disagreeable speech sounds. [From Greek *kakos* bad + *phone* sound]

cacosmia *n.* The **hallucination* or **illusion* of an unpleasant smell in the nostrils. Also spelt *kakosmia* . *See also* ANOSMIA, DYSOSMIA, HYPEROSMIA, HYPOSMIA, PAROSMIA, SPECIFIC ANOSMIA. [From Greek *kakos* bad + *osme* a smell + *-ia* indicating a condition or quality]

*****ebook converter DEMO Watermarks*****

cafard *n.* A variant name for ***amok** in Polynesia. Also called *cathard* .
[From French *cafard* a cockroach or hypocrite]

cafeteria feeding *n.* A procedure in which organisms are permitted to choose from a range of different foods. It is used to study their ability to select a balanced diet or to correct for dietary deficiencies.

cafe wall illusion *n.* Another name for the ***Münsterberg illusion**, so called because a cafe in Bristol city, England, is tiled on the outside with the pattern that creates a vivid example of the illusion (see [illustration](#)). *See also* [LAVATORY WALL ILLUSION](#). [Named by the English psychologist Richard L(angton) Gregory (1923–2010) in an editorial in the journal *Perception* in 1972]

Cafe wall illusion. The horizontal lines are all parallel.

*****ebook converter DEMO Watermarks*****

caffeine *n.* The white crystalline ***alkaloid** central nervous system ***stimulant** that is present in coffee, tea, cocoa, cola, chocolate, and many analgesic and tonic medicines and that dilates blood vessels and prevents adenosine from inhibiting glutamate release. It is the most common and the most potent of the three pharmacologically active ***xanthine** derivatives, the others being ***theobromine** and ***theophylline**. Its major psychological effects when taken in moderate dosages include a decrease in fatigue and drowsiness, an increase in speed and efficiency, and a reduction in the number of errors (especially in an overlearned task such as typing); large dosages cause insomnia, tachycardia, diuresis, tremor, and possibly cardiovascular and respiratory failure, and there is evidence of caffeine ***dependence** (2), abrupt discontinuation after repeated and regular moderate or high dosages tending to lead to headaches, drowsiness, depression, and sometimes nausea and vomiting. Formula $C_8H_{10}N_4O_2$. **caffeinated** *adj.* Containing caffeine. **caffeinism** or **caffeism** *n.* Addiction to caffeine, or habitual excessive caffeine ingestion. **decaffeinated** *adj.* With all or most of the caffeine removed. Also spelt *caffein* . *See also* **CAFFEINE-RELATED DISORDERS**. [From German *Kaffee* coffee + *-ine* indicating an organic compound]

caffeine-related disorders *n.* ***Substance-related** and addictive disorders in ***DSM-5** associated specifically with the consumption of ***caffeine**, including caffeine ***intoxication**, caffeine-induced ***anxiety disorder**, and caffeine-induced ***sleep–wake disorder**. DSM-5 distinguishes caffeine intoxication and caffeine withdrawal as separate disorders. *See also* **SUBSTANCE-INDUCED DISORDERS**, **SUBSTANCE-RELATED AND ADDICTIVE DISORDERS**, **SUBSTANCE USE DISORDERS**.

CAGE *abbrev.* A four-item questionnaire constructed in 1970 by the Scottish-born US psychiatrist John A. Ewing (1923–2006) and the US epidemiologist Beatrice A. Rouse (1936–2010) as a quick screening device for ***alcohol dependence**: (1) Have you ever felt you should *Cut* down on your drinking? (2) Have people *Annoyed* you by criticizing your drinking? (3) Have you ever felt *Guilty* about your drinking? (4) Have you ever used a drink as an *Eye-opener* first thing in the morning?

Calabar bean *n.* The dark brown poisonous seed of the tropical African plant *Physostigma venenosum* from which the drug ***physostigmine** is extracted. [Named after Calabar, the Nigerian port that is the capital of the Cross River state where it grows abundantly]

calcarine sulcus *n.* A deep horizontal groove that bisects the inner or ***medial surface** of the ***occipital lobe** of each ***cerebral hemisphere**, running from the ***parieto-occipital sulcus** to the back of the lobe. The ***gyri** on both sides of this sulcus are occupied by the ***primary visual cortex** (Area V1). Also called the *calcarine fissure* . [From Latin *calcar*, *calcaris* a spur, alluding to the wishbone or spur shape formed by both calcarine sulci taken together]

calcitonin *n.* A hormone that is secreted by the ***thyroid gland** and that regulates the level of ***calcium** in the blood and restricts the loss of calcium from the bones of the skeleton resulting from the effects of ***parathyroid hormone**.

calcium *n.* A white–grey metallic element found in sea water, limestone, chalk, marble, and gypsum; an essential constituent of teeth and bones, occurring most often in the form of calcium carbonate, required as an ***electrolyte** for human physiology. *See also* **CALCITONIN**, **CALCIUM CHANNEL**, **CALPAIN**, **PARATHYROID HORMONE**. **Ca** *abbrev.* [From Latin *calx*, *calcis* lime or limestone]

calcium channel *n.* An ***ion channel** across a cell membrane allowing the passage of calcium ions and believed to be implicated in the ***long-term potentiation** of memory traces.

California F scale *n.* Another name for the ***F scale**. **California A–S scale** *See* **A–S SCALE**. **California E scale** *See* **E SCALE**. **California PEC scale** *See* **PEC SCALE**.

California Psychological Inventory *n.* A widely used ***personality** test in the form of a ***self-report** questionnaire containing 434 (originally 480, then 462) yes/no questions (including 12 duplicates), such as ‘I enjoy social

gatherings just to be with people', constructed by the US psychologist Harrison G. Gough (1921–2014) and first published in 1956/57. It is designed to measure the lay concepts that are used in personality description in everyday life, and originally yielded 18 scores: Dominance (Do), Capacity for status (Cs), Sociability (Sy), Social presence (Sp), Self-acceptance (Sa), Sense of well-being (Wb), Responsibility (Re), Socialization (So), Self-control (Sc), Tolerance (To), Good impression (Gi), Community (Cm), Achievement via conformance (Ac), Achievement via independence (Ai), Intellectual efficiency (Ie), Psychological-mindedness (Py), Flexibility (Fx), and Femininity (Fe). In 1987 Independence (In) and Empathy (Em) were added to the scale. **CPI** *abbrev.*

callosal apraxia *n.* Another name for ***left-sided apraxia**. See also **APRAXIA**.

caloric nystagmus *n.* A form of ***nystagmus** resulting from the introduction of warm or cold fluid into the ear, stimulating the ***dynamic** labyrinth and eliciting a rotation of the eyeballs towards the stimulated side if the stimulating fluid is warm, and away from the stimulated side if it is cold. Also called *Bárány nystagmus*. See also **BÁRÁNY TEST**, **VESTIBULO-OCULAR REFLEX**. [From Latin *calor* heat + Greek *nystagmos* nystagmus, from *nystazein* to nap]

caloric test *n.* Another name for the ***Bárány test**.

Calorie *n.* A unit of heat, energy, or food value, equal to 1,000 calories (with lower-case initial *c*, see below). Also (preferably) called a *kilocalorie*, a *large calorie*, or a *kilogram calorie*. **Cal.** or **kcal** *abbrev.* **calorie** *n.* Formerly defined as the heat required to raise the temperature of one gram of water by one degree centigrade, now defined in standard SI units as 4.1868 joules. Also called a *small calorie* or *gram calorie*. **cal.** *abbrev.* There is much confusion, *calorie* often being written when *Calorie* is meant. In psychology, and in writing about food and nutrition, *calorie* usually denotes *kilocalorie*. **caloric** or **calorific** *adj.* [From Latin *calor* heat]

calpain *n.* A protein that is activated by ***calcium** ions found in some synapses and that has been hypothesized to erode the membranes of
*****ebook converter DEMO Watermarks*****

***postsynaptic** neurons, allowing pre-existing ***dendritic** spines to emerge, or bringing hidden receptors to the surface of dendritic spines, thus strengthening certain synaptic connections and providing a physical substrate for ***long-term potentiation** and memory ***consolidation** without requiring any new neural growth, which does not normally occur in the central nervous system. It is synthesized from papain, a proteolytic enzyme present in papaya latex, and is used as a protein digestant and meat tenderizer. [From *cal(cium)* + *(pa)pain*]

calque *n.* A word or phrase borrowed from another language by translating its component parts separately and literally, such as the English word *superman* taken from the German word *Übermensch*, or the English phrase *power politics* taken from the German word *Machtpolitik*. Also called a *loan translation*. [From French *calque* a tracing, from Latin *calcare* to tread, from *calx* a heel]

canalizing selection *n.* A form of ***natural selection** that is relatively insensitive to fluctuations in the environment.

cancellation heuristic *n.* A judgemental and decision-making ***heuristic** that involves discarding the components that are shared by the available alternatives. The Israeli-American psychologists Daniel Kahneman (born 1934) and Amos Tversky (1937–96), who introduced the heuristic in 1979, illustrated it with the following two-stage game. In the first stage, there was a .75 probability of the game terminating without any prize and a .25 probability of moving on to the second stage. Participants who reached the second stage had a choice between (a) 3,000 Israeli pounds with certainty, and (b) a .80 probability of winning 4,000 Israeli pounds, but they had to make their decisions for the second stage before the result of the first stage was known. Most ignored the first stage, which is common to both alternatives, and 80 per cent preferred (a), which they considered a certainty in spite of the chance element in the first stage. But in (a) there is a $.25 \times 1.00 = .25$ probability of winning 3,000 Israeli pounds, and in (b) there is a $.25 \times .80 = .20$ probability of winning 4,000 Israeli pounds, and when the choice was framed in this way, 65 per cent of the research participants chose (b). In fact, the expected payoff is higher in (b). See also **FRAMING EFFECT**.

cancellation method *n.* A technique for measuring the subjective loudness of a ***combination tone** by delivering a real tone, of the same frequency as the combination tone but with exactly opposite phase, called a *cancellation tone*, and increasing its intensity until the combination tone is no longer heard.

cancer-prone behaviour See **TYPE C**. US *cancer-prone behavior*.

candela *n.* A basic unit of ***luminous intensity**, equal to that of a source emitting monochromatic light of frequency 540×10^{12} hertz in a given direction with a radiant intensity in that direction of 1/683 watts per steradian—a stereo radian or solid angle with its vertex at the centre of a sphere cutting off an area of the sphere's surface equal to the square of its radius. See also **BRIL**, **LUMEN**, **LUMINANCE**, **LUMINOUS FLUX**. **cd** *abbrev.* [From Latin *candela* a candle]

candlepower *n.* A unit of luminous intensity, now replaced by the ***candela**.

candy *n.* 1. Confectionary in general. 2. A street name for ***barbiturate** drugs. [From Old French *sucre candi* candied sugar, from Arabic *qandi* candied, from *qand* cane sugar, from Dravidian]

cannabis *n.* The ***psychotropic** drug ***delta-9-tetrahydrocannabinol** (THC) and related substances called *cannabinoids* that are found in the leaves, flowering tops, and young stems of the female common hemp plant *Cannabis sativa*, and whose biochemical action remains largely unknown. The earliest record of its use as a drug is found in a compendium of medicines of the Chinese Emperor Shen Nung dated 2737 BC, and it is now a popular street drug, inducing euphoria, relaxation of inhibitions, and intensification of perceptions, with potential medicinal benefits, alleviating painful muscular spasms in people with multiple sclerosis, reducing the nausea and vomiting accompanying chemotherapy for cancer, and reducing intra-ocular pressure in people with glaucoma. The cut and dried leaves, tops, and stems of the plant, rolled into cigarettes and smoked, are generally called *marijuana*; the dried resinous exudate of the flowering tops of the female hemp plant and the

undersides of its leaves, when smoked with tobacco or added to foods and eaten, is called *hashish* ; and the drink made from an infusion of cannabis is called *bhanga* . The common street names of cannabis include *dope*, *ganja*, *grass*, *joint*, *pot*, *reefer*, *spliff*, and *weed* (see separate entries for specific meanings). See also [ANANDAMIDE](#), [CANNABIS-RELATED DISORDERS](#), [ENDOCANNABINOID](#), [SKUNK](#), [SUBSTANCE ABUSE](#), [SUBSTANCE-RELATED AND ADDICTIVE DISORDERS](#). [From Latin *Cannabis* the biological name of the common hemp genus, perhaps from an expression used in ancient Mesopotamia *kah nah bah* cane with two, denoting a cane-like plant with male and female forms]

cannabis-related disorders *n.* *Substance-related and addictive disorders in *DSM-5 associated specifically with the use of *cannabis. DSM-5 distinguishes cannabis use disorder, cannabis intoxication, and cannabis withdrawal as separate disorders. See also [SUBSTANCE-INDUCED DISORDERS](#), [SUBSTANCE-RELATED AND ADDICTIVE DISORDERS](#), [SUBSTANCE USE DISORDERS](#).

cannibal *n.* A human being who eats the flesh of other human beings, or an animal that eats the flesh of others of its own species (conspecifics). **cannibalism** *n.* The act or practice of eating flesh of one's own species. **cannibalistic** *adj.* [From Spanish *Canibales*, the word used by the Italian-born navigator Christopher Columbus (1451–1506) for the Carib people of Cuba and Haiti]

cannibalistic stage *n.* Another name for the *oral sadistic phase.

Cannon–Bard theory *n.* The proposition that the quality of an emotion is determined by the pattern of stimulation sent from the *thalamus to the *cerebral cortex, and that the bodily expression of emotion is governed by signals from the thalamus to muscles and glands. Also called *Cannon's theory* or the *Bard–Cannon theory* . Compare [JAMES–LANGE THEORY](#). [Named after the US physiologist Walter Bradford Cannon (1871–1945) and the US psychologist Philip Bard (1898–1977) who were the first to suggest it in the 1930s]

canonical correlation *n.* A statistical procedure that seeks to discover and describe the relationship between a set of *predictor variables and a set of *dependent variables. Pairs of linear combinations of the two sets of
*****ebook converter DEMO Watermarks*****

variables are found that are maximally correlated, and the proportion of the total ***variance** in the criterion set that is explained by the predictor set is extracted. Compare **DISCRIMINANT FUNCTION ANALYSIS**, in which there is usually only one dependent variable. [From Greek *kanon* rule, measuring rod, standard, related to *kanna* a reed + *correlation*]

canonical sequence *n.* In genetics, another name for a ***consensus sequence**. [From Latin *canonicus* living under a rule, from *canon* a rule, from Greek *kanon* a rule or measuring rod]

cant *n.* **1.** Insincere or hypocritical speech or the repetition of trite phrases that have lost their original meanings. **2.** The ***argot** of a particular social group, such as thieves, journalists, lawyers, or gypsies. **3.** A rare word for the sing-song, mewling style of speech occasionally used by people pleading for something.

[From Latin *cantare* to sing]

cantharides *n.* A poisonous urogenital irritant and diuretic made from the dried bodies of the blister-beetle *Lytta vesicatoris* belonging to the family Meloidae, and not Cantharidae as often stated, used mainly as a blistering agent or ***aphrodisiac**. Also called *Spanish fly*. **cantharis** *sing.* [From Greek *kantharis* Spanish fly]

capacity *n.* The ability to contain or the amount that can be contained or absorbed. In psychology, it usually refers to latent ***ability** or the capability to learn. [From Latin *capacitas* capacity, from *capax* spacious, from *capere* to take]

Capgras syndrome *n.* A ***delusional misidentification** of familiar people, usually relatives or friends, who are believed to have been replaced by exact doubles or impostors; thus a delusion of underidentification, in contrast to ***Frégoli syndrome**, which involves overidentification. The poet John Cowper was afflicted with Capgras syndrome, believing as he did that his friend, the Reverend John Newton, had been supplanted by an impersonator. Also called *l'illusion de sosies* or the *illusion of doubles*. Compare **DOPPELGÄNGER**, **INTERMETAMORPHOSIS**, **REDUPLICATIVE PARAMNESIA**.

*****ebook converter DEMO Watermarks*****

[Named after the French psychiatrist Jean Marie Joseph Capgras (1873–1950) who, together with the French psychiatrist Jean Marie Joseph Reboul-Lachaux (1894–1935), first described it in 1923]

caprylic odour *n.* One of the primary odours in the ***Crocker–Henderson system**, goat-like or putrid. US *caprylic odor*. [From Latin *caper* a goat, cognate with *Capricorn* the Goat, the tenth sign of the zodiac]

capsaicin *n.* A bitter ***alkaloid** present in capsicums, hot peppers, and chillis that excites peripheral nerve endings of the ***trigeminal nerve** and causes certain neurons to release ***substance P**. *See also* **COMMON CHEMICAL SENSE**. [From Latin *capsa* a box or case + *-in(a)* indicating an organic compound]

carbachol *n.* A synthetic drug that acts as a ***parasympathomimetic** and ***cholinergic** agent but is immune to the inactivating effects of ***acetylcholinesterase**. It is used in the treatment of urinary retention, abdominal distention, and glaucoma. *See also* **CHOLINOMIMETIC**. [From its chemical name *carba(moyl)-chol(ine) (chloride)*]

carbamate *n.* A salt or ester of carbamic acid, used in certain ***psychotropic** medications, including ***glutethimide** (Doriden) and ***meprobamate** (Miltown). [From *carbamic* + *-ate* indicating chemical compound]

carbamazepine *n.* An ***antimanic**, ***anticonvulsant**, and ***analgesic** (2) drug that is often used instead of or in addition to ***lithium carbonate** in the treatment of acute manic episodes, bipolar disorders, neuralgia affecting the trigeminal nerve, and epilepsy. Also called *Tegretol* (trademark). [From its chemical name *carbam(oyl) + -azepine* as in *benzodiazepine*]

carcinogen *n.* Any substance or agent that causes cancer. **carcinogenic** *adj.* [From Greek *karkīnoma* a cancer, from *karkinos* a crab + *genein* to produce]

carcinoma *n.* A type of malignant tumour originating in epithelial tissue;

more loosely, any cancer, but this meaning is avoided in careful usage. [From Greek *karkinoma* a cancer, from *karkinos* a crab + *-oma* indicating a tumour]

cardiac muscle *n.* A specialized type of involuntary striated muscle that is found only in the heart and that is exceptional inasmuch as involuntary muscles are generally smooth. It consists of contractile fibres that resemble those of **skeletal muscles* but are much smaller in diameter. *Compare* SMOOTH MUSCLE, STRIPED MUSCLE. [From Greek *kardia* the heart]

cardiac psychology *n.* Another name for **psychocardiology*.

cardinal humour *See* HUMOUR (3).

cardinal vowels *n.* A set of idealized speech sounds devised by the British phonetician Daniel Jones (1881–1967), usually represented by their location in a *vowel quadrilateral* representing the mouth (*see* VOWEL), used as reference points to classify the vowel sounds of any language. *See also* BACK VOWEL, CENTRAL VOWEL, CLOSE VOWEL, FRONT VOWEL, MID VOWEL, OPEN VOWEL.

caretaker speech *n.* A speech style often used by adults and older children when talking to infants or young children, characterized by shortened sentences, simplified grammar, restricted vocabulary, slow speech with many repetitions, diminutive and reduplicative words, such as *doggy* and *choo-choo*, raised pitch and exaggerated pitch variation, and many utterances ending in questions with a rising tone (*some more?*, *go walkies?*). Also called *child-directed speech*, *motherese* (misleadingly, because it is not restricted to mothers) and *baby talk* (ambiguously, because it is used by adults).

caricature advantage *n.* The enhanced recognizability of caricatured images of familiar faces relative to undistorted or veridical images of the same faces, the distorted images being paradoxically easier to recognize. Like the **differential inversion effect*, it is not confined exclusively to faces but is found also with other classes of stimuli that differ only in configuration provided that the viewers have expert knowledge of the stimuli, as when bird-watchers view images of songbirds.

carnivore *n.* Any animal of the order Carnivora of flesh-eating mammals, including dogs, cats, bears, raccoons, hyenas, civets, and weasels. *Homo sapiens* is not a carnivore but an omnivore. *See also* **PREDATOR**. *Compare* herbivore, omnivore. **carnivorous** *adj.* Flesh-eating. [From Latin *caro*, *carnis* flesh + *vorare* to devour]

carpentered world *n.* The built environment of industrial societies, containing numerous ***artefacts (1)** constructed from straight lines and right angles. The absence of such objects in tribal cultures of sub-Saharan Africa was put forward in 1967 by the South African psychologist William Hudson (born 1914) as an explanation for the apparent inability of tribal Africans to interpret ***linear perspective** in ***pictorial depth** perception and their relative lack of susceptibility to the ***Müller-Lyer illusion** and related visual illusions, this notion being called the *carpentered-world hypothesis*.

carrier (genetic) *n.* In genetics and pathology, an organism that does not itself manifest a particular trait or disease but is capable of passing it on to others.

carrier protein *n.* Any ***protein** in a cell membrane that binds to molecules and transports them across the membrane. *See also* **ACTIVE TRANSPORT**, **IONOPHORE**.

carrying capacity *n.* In ***ecology (1)** and the theory of ***evolution**, the maximum number of individuals that a habitat or area can support indefinitely, the limit usually being determined by the available food supply.

Cartesian *adj.* Of or relating to the writings or doctrines of the French philosopher René Descartes (1596–1650). *See* **A PRIORI**, **CARTESIAN DUALISM**, **MIND–BODY PROBLEM**, **RATIONALISM (1)**.

Cartesian dualism *n.* An approach to the ***mind–body problem** introduced by the French philosopher René Descartes (1596–1650), who believed that mental experiences are functions of the soul and, because the soul is immaterial, that they cannot be located in any particular organ of the body, but that the soul and the body influence each other, and that the seat of

soul–body interaction is the ***pineal gland**. Descartes' reasons for choosing the pineal gland were that it is close to the centre of the head, that it was believed at the time to be found only in human beings—and that human beings are the only creatures with rational souls—and that the pineal gland is the only part of the main structure of the brain that is not divided into two halves and that therefore seemed to Descartes to be the only organ capable of integrating the images from the two eyes into a single percept. He believed that the pineal gland operates like a valve, controlling the flow of 'vital spirits' through the body, enabling the soul and body to influence each other. Descartes appears to have been oblivious to the philosophical problem underlying this conception until it was pointed out to him in 1643 by Princess Elizabeth of Bohemia (1596–1662), the daughter of King James I of England and VI of Scotland, in a letter that has survived.

cascade processing *n.* The implementation of later stages of ***information** processing before the completion of earlier stages. For example, in retrieving the meaning of a printed word, a person may have to identify all the letters and match the word against an internal ***lexicon** (2) in order to extract its meaning. According to ***discrete processing** models, information is not passed on to the next stage until processing at the current stage is complete, but in a cascade processing model a word may, for example, be matched against items in the lexicon, by way of hypotheses or guesses, before all the letters have been identified, and conjectures about meaning may be made before a complete lexical match has been established. The concept was introduced in 1979 by the US cognitive scientist James L(oyd) McClelland (born 1948) and has been influential in ***connectionist models** of information processing. *See also* **PARALLEL PROCESSING**, **SERIAL PROCESSING**.

case grammar *n.* A form of ***generative grammar** introduced in the late 1960s by the US linguist Charles J. Fillmore (1929–2014) in which linguistic elements are categorized according to their ***semantic** roles. In the theory, the ***deep-structure** cases of noun phrases do not correspond to the ***surface structure** or the ***syntax**. The cases originally suggested were *agentive* (a person or entity causing a verb's action to be performed), *instrumental* (an inanimate entity causally involved in a verb's action), *dative* (a person or animal affected indirectly by a verb's action), *factitive* (an entity resulting from a verb's action), *locative* (the location of a verb's action), and *objective*

(an entity affected directly by a transitive verb's action). Later, further cases were suggested: *source* (the place from which something moves), *goal* (the place to which something moves), *counter-agent* (the force of resistance against which a verb's action is performed), *experiencer* (a person or thing affected by a verb's action, replacing dative), and *result* (an entity or state resulting from a verb's action, replacing factitive). For example, in the sentence *The child opened the door with a key*, the noun phrase *the child* is agentive, *the door* is objective, and *a key* is instrumental. Case grammar has been incorporated in some [*artificial intelligence](#) programs designed to accept [*natural language](#) input.

case study *n.* A research method involving a detailed investigation of a single individual or a single organized group, used extensively in clinical psychology and also, though less often, in other branches of the discipline. In case studies of organized groups, [*participant observation](#) is often used. Also called a *single-case design*.

castrate *vb.* To emasculate or remove the testicles from; or, figuratively, to deprive of power. **castration** *n.* The act or process of castrating. **castrato** *n.* A male singer castrated before puberty to preserve his unbroken soprano or alto voice, especially in the 17th and 18th centuries (**castrati** *pl.*). [From Latin *castrare* to emasculate or geld]

castration complex *n.* In [*psychoanalysis](#), a [*complex](#) (2), closely linked with the [*Oedipus complex](#), focusing on fantasies of one's penis being cut off, evoked in a child by the discovery of the anatomical difference between the sexes. In a boy, it induces anxiety about being castrated and initiates the [*latency period](#); in a girl, it is experienced as a loss that she has suffered and initiates a desire for the paternal penis and attempts to deny or compensate for the loss. Sigmund Freud (1856–1939) introduced the concept in 1908 in an article 'On the Sexual Theories of Children' (*Standard Edition*, IX, pp. 209–26, at pp. 215–17) and developed it further in his famous case of [*Little Hans](#), 'Analysis of a Phobia in a Five-Year-Old Boy', first published in 1909 (*Standard Edition*, X, pp. 5–149). See also [PHALLIC STAGE](#).

catabolism *n.* A destructive form of [*metabolism](#) in which complex molecules are broken down into simpler ones with the release of energy.

*****ebook converter DEMO Watermarks*****

Compare [ANABOLISM](#). **catabolic** *adj.* **catabolite** *n.* Any substance produced by catabolism. [From Greek *kataballein* to throw down, from *kata* down + *ballein* to throw]

catachresis *n.* Any misuse or wrong application of a word, often by assuming its meaning to be that of a word with a similar sound, as in the utterance *I suffer from prostrate trouble*, seeming to imply that I can't get up from a lying position, when *prostate* is meant. Compare [MALAPROPISM](#). [From Greek *katachresis* a misuse, from *kata* down + *chresthai* to use]

catalepsy *n.* A state of myotonia in which a person's muscles are partly rigid, sometimes manifested in [*hypnosis](#), in people with [*catatonia](#), and in people with certain forms of brain damage, notably [*cerebellar](#) lesions. People in such a state tend to leave their arms, legs, or bodies in whatever positions they are placed by another person. Sometimes confused with [*cataplexy](#) (1). Also called *cerea flexibilitas*. See also [MYOTONIA](#), [TONUS](#). Compare clasp-knife rigidity, cogwheel rigidity. **cataleptic** *adj.* [From Greek *kata* down + *lepsis* a seizure, from *lambanein* to seize]

catalexia *n.* A form of [*dyslexia](#) in which the same word or phrase is read repeatedly. [From Greek *kata* down + *lexis* a word + *-ia* indicating a condition or quality]

catamnesis *n.* The follow-up medical history of a patient or client after recovery from a disorder. Compare [ANAMNESIS](#) (2). **catamneses** *pl.* **catamnestic** *adj.* [From Greek *kata* back + *mnesis* memory]

cataphora *n.* In speaking or writing, the use of a pronoun or other word to refer forward to something mentioned later in a sentence or linguistic expression. In the sentence *When I was questioned, this is what I told the police: I heard a loud argument at about midnight*, the word *this* exemplifies cataphora, because it refers forward to *I heard a loud argument at about midnight*. See also [DEIXIS](#). Compare [ANAPHORA](#). **cataphoric** *adj.* [From Greek *kata* down + *pherein* to carry]

cataplexy *n.* 1. A sudden loss of muscle [*tonus](#), without loss of [*consciousness](#), leading to collapse, immobility, and a state closely
*****ebook converter DEMO Watermarks*****

resembling ***REM sleep** without loss of consciousness, induced by laughter or strong emotions such as fear, anger, or surprise, sometimes confused with ***catalepsy**. A propensity for cataplexy is genetic in origin, and strains of cataplexic dogs have been bred. *Compare* **NARCOLEPSY**. **2.** A death-like state of immobility adopted by some animals to deter predators. **cataplectic** or **cataplexic** *adj.*

[From Greek *kata* down + *plessein* to strike]

cataract *n.* A waterfall or downpour, hence figuratively a partial or total opacity of the ***crystalline lens** of the eye leading to ***blindness**, characterized by a greyish white appearance of the lens visible through the pupil, usually caused by degenerative changes after 45 years of age, treated by excision of the lens and the prescription of spectacles or contact lenses. *See also* **APHAKIA**, **CORNEA**. [From Latin *cataracta* a waterfall, from Greek *katarrhaktes* a waterfall]

catastrophe theory *n.* A mathematical theory, developed by the French mathematician René Frédéric Thom (1923–2002) and first published in 1972, devoted to the classification of surfaces according to their shape. Aspects of the theory that describe abrupt changes occurring when gradually changing variables reach critical points, as when the locus of a point moving along the topmost fold of a smoothly folded surface suddenly drops to the surface below, have been used to model psychological phenomena such as gradually increasing anger abruptly erupting into a temper tantrum.

catastrophism *n.* **1.** A theory that gradual processes of ***evolution** have been modified by the effects of great natural cataclysms. Also (preferably) called *neocatastrophism* to distinguish it from sense 2. **2.** An obsolete theory of biological and geological development, widely accepted in the 18th and 19th centuries, according to which the fossil record represents a series of sudden abrupt changes brought about by divine creations and extinctions rather than gradual evolutionary processes.

[From Greek *katastrephein* to overturn, from *kata* down + *strephein* to turn + *-ismos* indicating a state or condition]

catathymia *n.* A state in which mental processes are under the control of the emotions. **catathymic** *adj.* [From Greek *kata* according to + *thymos* spirit or temper + *-ia* indicating a condition or quality]

catathymic amnesia *n.* Another name for **episodic amnesia*.

catatonia *n.* A **mental disorder* in **DSM-5* characterized by marked abnormality of muscle **tonus* or behaviour including motor immobility, excessive and apparently purposeless motor activity, **catalepsy* or cerea flexibilitas, extreme **negativism (1)* or **mutism*, posturing or stereotyped movements, **echolalia*, or **echopraxia*. See CATATONIC DISORDER DUE TO ANOTHER MEDICAL CONDITION, SCHIZOPHRENIA SPECTRUM AND OTHER PSYCHOTIC DISORDERS. **catatonic** *adj.* [From Greek *kata* down + *tonos* tension, from *teinein* to stretch + *-ia* indicating a condition or quality]

catatonic disorder due to another medical condition *n.* A form of **catatonia* arising as a secondary or symptomatic effect of a **general medical condition*, characterized by catatonic signs such as motor immobility, excessive and purposeless motor activity, **catalepsy* or cerea flexibilitas, extreme **negativism (1)* or **mutism*, peculiarities of voluntary movement, **echolalia*, or **echopraxia*.

catatonic schizophrenia *n.* One of the major types of **schizophrenia*, the essential feature of which is pronounced **psychomotor* disturbance, manifested as physical immobility evidenced by **catalepsy* or cerea flexibilitas, **stupor*, excessive (apparently purposeless) motor activity or peculiarities of voluntary movement, **negativism (1)*, **mutism*, and **echolalia*, or **echopraxia*.

catch trial *n.* In a series of trials used to determine an **absolute threshold* in **psychophysics*, a trial in which no stimulus is presented, usually included a number of times to estimate the individual's baseline tendency to give positive responses. See also SIGNAL DETECTION THEORY.

catecholamine *n.* A group of **biogenic amines* that are derivatives of catechol (2-hydroxyphenol) and that also contain an **amine* group, including

the **neurotransmitters* **adrenalin* (epinephrine), **noradrenalin* (norepinephrine), and **dopamine*. **CA** *abbrev.* [From *catechol* a substance found in resins and lignins, named after the *Acacia catechu* tree + English *amine*]

catechol-o-methyl-transferase *n.* An **enzyme* that metabolizes free **catecholamines* in the space between and around synapses. *Compare* MONOAMINE OXIDASE (MOA). **COMT** *abbrev.*

Catego *n.* Computer software for processing **SCAN* data according to categories of **signs* (1) and **symptoms*, introduced by the English psychiatrist John Kenneth Wing (1923–2010) and several co-authors in their book *The Description and Classification of Psychiatric Symptoms* (1974). [From *catego(ries)*]

categorical attitude *n.* Another name for **abstract attitude*.

categorical imperative *n.* A principle of morality first formulated in 1785 by the German idealist philosopher Immanuel Kant (1724–1804) in *Grundlegung zur Metaphysik der Sitten* (Foundations of the Metaphysics of Morals). His first formulation, most often quoted is: ‘Act only on such a maxim that you can at the same time will to become a universal law’ (*Immanuel Kants Werke*, Volume IV, p. 52). According to Kant, a *maxim* is a personal rule of conduct, and it is a hypothetical imperative if it takes the form ‘If you want *X*, then do *Y*’, assuming that *Y* is the only or the best means of obtaining *X* and the reason for doing *Y* is actually contingent on your desire for *X*. A maxim is a categorical imperative if it takes the form ‘Always do *Y*’, where the reason for doing *Y* is not contingent on any desire in the sense of being your means of obtaining some end that you desire. A categorical imperative is intended not only to be rational, but also to serve as a fundamental principle of morality. Only certain maxims can be categorical imperatives. Kant’s clearest example of one that cannot is: ‘Always borrow money when in need and promise to pay it back without any intention of keeping the promise’ (p. 54). One cannot rationally will this maxim to be a universal law, because it cannot be universalized without generating a contradiction. If everybody habitually broke promises, then there could be no promises; nobody would believe them, because a promise needs a promisee

*****ebook converter DEMO Watermarks*****

as well as a promiser, and there would be no promisees.

categorical perception *n.* Perception of stimuli as belonging to two or more distinct classes when in physical terms they vary along a **continuum*, as when light varying in wavelength within the **visible spectrum* is perceived as four (or sometimes five, six, or seven) qualitatively different colours, in contrast to musical tones varying in wavelength within the **audibility range*, which are heard by most listeners as points on a continuum. The perception of **phonemes* tends to be categorical, so that if voicing is gradually added to the unvoiced initial consonant in the word *tie*, the listener hears no significant change until a critical point at which the word abruptly changes to *die*. See also *METATHETIC STIMULUS DIMENSION*, *TYPE FALLACY*.

categorical syllogism *n.* A conventional **syllogism* of the type introduced by the Greek philosopher Aristotle (384–322 BC), and used by almost all his successors, in which the **propositions (1)* are expressed in terms of category membership, using the four standard categorical proposition forms *All S are P*, *No S are P*, *Some S are P*, and *Some S are not P*. Examples of propositions that might be used in a categorical syllogism are *All men are mortal*, *No wombats play tennis*, *Some thunderstorms are thrilling*, and *Some swans are not white*. A categorical syllogism cannot express a logical argument containing non-categorical propositions such as *Elizabeth is the mother of Charles*. See also *MODAL LOGIC*.

categorical variable *n.* In statistics, any **discrete variable* that has a limited number of distinct values, such as gender—which has two values, namely male and female. Compare *CONTINUOUS VARIABLE*.

category mistake *n.* A statement about something that belongs to one category but is intelligible only of something belonging to another category, as when the mind is referred to as if it were a physical entity. The concept was introduced by the English philosopher Gilbert Ryle (1900–76) on page 17 of his book *The Concept of Mind* (1949), where he used the example of someone who can see a university library, lecture halls, and other university buildings but wonders where the university is. Ryle described **Cartesian dualism* as the dogma of ‘the ghost in the machine’.

*****ebook converter DEMO Watermarks*****

catharsis *n.* A word used by the Greek philosopher Aristotle (384–322 BC) to denote the purging of emotions that results from watching a staged performance of a tragedy. The key passage is as follows: ‘A tragedy, then, is the imitation of an action that is serious and also, as having magnitude, complete in itself; in language with pleasurable accessories, each kind brought in separately in the parts of the work; in a dramatic, not in a narrative form; with incidents arousing pity and fear, wherewith to accomplish its catharsis of such emotions’ (*Poetics*, Chapter 6, Bekker edition, p. 1449b). Aristotle may well have returned to this topic in the lost Book 2 of this work. In ***psychoanalysis**, catharsis is the bringing to consciousness of repressed ideas, accompanied by the expression of emotions, thereby relieving tension. The Austrian physician Josef Breuer (1842–1925) first investigated it in the context of therapy in his case of ***Anna O**, after which he and Sigmund Freud (1856–1939) imported the concept into psychoanalysis in 1895 in *Studies on Hysteria* (*Standard Edition*, II, pp. 21–47), and it became a therapeutic technique designed to produce ***abreaction**. It was at first closely associated with ***hypnosis**, but Freud soon began to use ***free association** as a basic therapeutic procedure instead of hypnosis, and as a consequence catharsis receded into the background. The term has been used loosely in psychology to denote the supposed reduction of aggressive urges resulting from exposure to violence enacted in television programmes, films, or computer games. **cathartic** *adj.* [From Greek *katharsis* purgation, from *kathairein* to purge or purify]

cathexis *n.* In ***psychoanalysis**, the emotional charge associated with an ***instinct** (3), or the process of investing psychic energy in a part of the body or an ***instinctual object**. The Austrian physician Josef Breuer (1842–1925) and Sigmund Freud (1856–1939) introduced the concept in 1895 in their book *Studies on Hysteria* (*Standard Edition*, II). The original German word used by Breuer and Freud was *Besetzung*, an everyday word meaning occupation; the word *cathexis* was coined in 1922 by Freud’s translator James Strachey (1887–1967), who revealed that Freud considered it too technical (*Standard Edition* III, p. 63, note 2). A word more in harmony with the German is *investment*. See also **ECONOMIC**, **HYPERCATHEXIS**. Compare **COUNTERCATHEXIS**, **DECATHEXIS**. **cathect** *vb.* To load with psychic energy through cathexis. [From Greek *kathexis* occupation, from *kathechein* to hold fast]

cation *n.* A positively charged ***ion** such as an ion of sodium, potassium, or calcium. *Compare* **ANION**. [From Greek *kata* down + *ion* going, from *ienai* to go]

cation channel *n.* An ***ion channel** across a cell membrane permitting the transport of ***cations** across it. *See also* **SODIUM CHANNEL**. *Compare* **ANION CHANNEL**.

catnip *n.* A herb belonging to the family Lamiaceae (the mint family), the smell of which has the effect on cats of a euphoriant and intoxicant. Its main active ingredient is ***nepetalactone**, whose structure resembles a ***sex pheromone** in the urine of female cats and happens to fit the ***neuroreceptors** for this pheromone in the cat's ***vomeronasal organ**. In the presence of catnip, most cats roll around in it, paw it, lick and chew it, purr, and meow for several minutes. The response is genetically determined, approximately a quarter of cats being unaffected. When consumed by humans, usually in the form of an infusion, it can occasionally produce mild sedative effects. Also called *catmint* or *catnep*. [From Latin *Nepeta cataria*, its botanical name]

Cattell Culture-Fair Test *n.* An ***intelligence** test designed specifically to avoid the ***test bias** assumed to affect scores on more conventional tests, such as the ***Wechsler scales** and the ***Stanford–Binet test**, by excluding items requiring linguistic skills and general knowledge. *See also* **CULTURE-FAIR**. *Compare* **RAVEN'S PROGRESSIVE MATRICES**. **CCFT** *abbrev.* [Named after the English-born US psychologist Raymond B(ernard) Cattell (1905–98) who first published it in the *Journal of Educational Psychology* in 1940, describing it as 'culture-free']

Cattell 16-PF *See* **16PF**.

caudal *adj.* Towards the tail or the ***posterior** part of the body, organ, or part or, in the human brain, towards the brainstem. *Compare* **ROSTRAL**. [From Latin *cauda* a tail]

caudate *adj.* Having a tail or a tail-like appendage. [From Latin *cauda* a tail]

caudate nucleus *n.* One of the ***basal ganglia** in the ***corpus striatum**: a crescent-shaped mass of grey matter in each cerebral hemisphere, near the thalamus, concerned with inhibitory control of movement. *See also* **ATTENTION-DEFICIT/HYPERACTIVITY DISORDER**. [From Latin *cauda* a tail, alluding to its shape]

caudatolenticular *adj.* Of or belonging to the ***caudate nucleus** and ***lenticular nucleus** of the basal ganglia in the brain.

causal *adj.* Of, relating to, or acting as something that brings about a particular result. [From Latin *causalis* causal, from *causa* a cause]

causal effect *n.* A change in a ***dependent variable** brought about directly by an ***independent variable**.

causalgia *n.* A condition in which burning pain is experienced along the course of a peripheral nerve without the application of heat. Also called *thermalgia* . [From Greek *kausos* fever + *algos* pain + *-ia* indicating a condition or quality]

causal inference *n.* A conclusion based on evidence and reasoning that an event or process brought about a certain consequence.

causal schema *n.* A concept introduced in 1958 by the Austrian-born US psychologist Fritz Heider (1896–1988) to denote a conceptual organization of a sequence of events in which some are identified as causes and others as effects. The concept was elaborated in 1977 by the Israeli-American psychologists Amos Tversky (1937–96) and Daniel Kahneman (born 1934), whose conceptual schemas include causal data (perceived as causes of the events of interest), diagnostic data (perceived as consequences of the events of interest), and also incidental data (perceived as neither causes nor consequences of the events of interest). *See also* **ATTRIBUTION THEORY**, **COVARIATION PRINCIPLE**, **KELLEY’S CUBE**, **SCHEMA**.

causal texture *n.* A term introduced in 1935 by the US psychologist Edward C(hace) Tolman (1886–1959) and the Hungarian-born US

psychologist Egon Brunswik (1903–55) to denote the regular pattern of dependency of events in the environment on one another.

causal variable *n.* An **independent variable* that produces a **causal effect*.

cautious shift *See* RISKY SHIFT.

CCC trigram *abbrev.* Another name for a **consonant trigram*. [An acronym of *c(onsonant) c(onsonant) c(onsonant)*]

ceiling effect *n.* In statistics and measurement theory, an artificial upper limit on the value that a **variable* can attain, causing the distribution of scores to be skewed. For example, the distribution of scores on an ability test will be skewed by a ceiling effect if the test is much too easy for many of the respondents and many of them obtain perfect scores. *Compare* FLOOR EFFECT.

celestial illusion *n.* Another name for the **moon illusion*, especially when referring to other heavenly bodies apart from the moon. [From Medieval Latin *celestialis*, of or relating to the heavens, from *caelum* heaven]

cell *n.* The smallest independently functioning unit of an **organism*, consisting of a **nucleus* (1) containing genetic information, surrounded by a **cytoplasm* containing various organelles including **mitochondria*, **ribosomes*, and **lysosomes*, bounded by a **cell membrane*. *See also* EUKARYOTE, PROKARYOTE. **cellular** *adj.* [From Latin *cella* a room, from *celare* to hide]

cell assembly *n.* A collection of neurons that have become functionally interrelated, through repeated excitation, into a circuit capable of responding as a unit, providing a neural basis for perception, learning, and other mental activities, according to a hypothesis of the Canadian psychologist Donald O(lding) Hebb (1904–85). *See also* HEBB SYNAPSE, PHASE SEQUENCE, REVERBERATING CIRCUIT.

cell body *n.* The central part of a neuron or other cell containing the

***nucleus (1)** and other structures that keep the cell alive, as distinct from a cell ***process (2)**. Also called a *soma* (1).

cell division *n.* The process whereby a cell splits into two new cells by ***fission (2)** in bacteria and other prokaryotes and by ***mitosis** or ***meiosis (1)** during growth or reproduction, respectively, in other organisms.

cell membrane *n.* A double layer of ***amphipathic *lipid** molecules (a lipid bilayer), plus various protein molecules, punctured by tiny pores approximately 60 nanometres (billionths of a metre) in diameter, forming a ***semipermeable membrane** that segregates the fluid inside a cell from the fluid outside it and maintains the structural integrity of the cell. Molecules smaller than the pores can cross the membrane by passive diffusion; larger molecules that are lipid soluble can dissolve in the membrane and cross it by diffusion; and larger molecules that are not lipid soluble can cross the membrane only by ***active transport**. Also called a *plasma membrane*. See also **OSMOSIS**, **SODIUM PUMP**. [From Latin *membrana* a thin skin]

cellular automaton *n.* A mathematical ***model** of self-replication and destruction, usually represented by a checkerboard of either fixed or infinite dimensions, each cell of which has a finite number of states, usually including a quiescent or empty state, and a finite set of neighbouring cells that can influence its state, the pattern of changes being determined by transition rules that apply simultaneously to all cells in each discrete time unit. The concept was introduced in the early 1950s by the Hungarian-born US mathematician John von Neumann (1903–57), whose cellular automata incorporated universal ***Turing machines** and whose articles on the subject were published posthumously under the title *Theory of Self-Replicating Automata* (1966). See also **MICROTUBULE**. **cellular automata** *pl.* [From Greek *automatos* spontaneous or self-moving, from *autos* self]

censored variable *n.* In statistics, any ***variable** showing a ***floor effect** or a ***ceiling effect** owing to the fact that observations could not be made beyond the most extreme value.

censorship *n.* The policy or practice of examining publications, television programmes, or other forms of communication with a view to suppressing or

*****ebook converter DEMO Watermarks*****

altering those that are considered unacceptable or offensive. In ***psychoanalysis**, the suppression of unconscious wishes and their modification before entering consciousness. Sigmund Freud (1856–1939) first used the term in its psychoanalytic sense in a letter to Fliess in 1897 (*Standard Edition*, I, p. 273), and he developed the concept further in his book *Interpretation of Dreams* (1900, *Standard Edition*, IV–V), where he used it to explain the distortion of meaning in dreams. According to Freud, the *first censorship* operates between the ***unconscious** (2) and the ***preconscious**, and the *second censorship* between the preconscious and ***consciousness**: ‘To every transition from one system to that immediately above it (that is, every advance to a higher stage of psychical organization) there corresponds a new censorship’ (p. 192). *See also* **FREE ASSOCIATION**.

centile *n.* Another name for a ***percentile**.

centipede effect *n.* A term occasionally used to denote ***hyper-reflection**. It alludes to the following poem, usually attributed to Anonymous but in fact published in 1871 by the English poet Katherine (Margaret) Craster *née* Broadwood (1841–74): ‘The Centipede was happy quite, / Until a Toad in fun / Said, “Pray, which leg goes after which?” / And worked her mind to such a pitch, / She lay distracted in a ditch / Considering how to run.’ *See also* **HUMPHREY’S LAW**.

central alveolar hypoventilation syndrome *n.* A ***breathing-related** ***sleep–wake disorder** in DSM-IV. *See* **CENTRAL SLEEP APNOEA**. [From Latin *alveolus* a small depression, referring to the terminal air cavities in the lungs + Greek *hypo* under + Latin *ventilare* to ventilate, from *ventus* a wind]

central auditory processing disorder *n.* An impairment in the interpretation of sound stimuli in the absence of any peripheral hearing loss, usually caused by a lesion in the ***brainstem** or ***auditory** cortex, usually resulting in reading or learning difficulties in children with this disorder. Also called *central deafness* or *cortical deafness* . **CAPD** *abbrev.*

central canal *n.* A narrow duct filled with ***cerebrospinal fluid** running through the length of the ***spinal cord**. *See also* **LUMEN** (2).

central deafness *n.* Another name for **central auditory processing disorder*.

central dogma *n.* In genetics, the principle according to which genetic information is transferred from DNA to the proteins that it encodes, and not from protein to DNA, therefore implying that although genes can influence the form of an organism's body or its behaviour, the form of the organism's body or its behaviour cannot influence its genes. In a stronger formulation of the dogma, information supposedly flows unidirectionally from DNA to RNA and from RNA to proteins, but that version had to be abandoned with the discovery of **retroviruses*. See also *WEISMANNISM*.

central dyslexias *n.* A general term for forms of **dyslexia* that are thought to depend on cognitive processing operations occurring in the central nervous system after the words have been visually analysed. One major subtype of central dyslexias is **surface dyslexia*; another is **deep dyslexia*.

central executive *n.* A part of **working memory* containing both a short-term memory store and an executive processor that operates on and briefly stores information and plays an important part in language comprehension. It is aided by two **buffer stores*, a **phonological loop* and a **visuospatial sketchpad*.

central fissure *n.* Another name for the **central sulcus*. [From Latin *fissus* split, from *findere* to split]

central grey matter *n.* Another name for the **periaqueductal grey matter*. US *central gray matter*.

centralized communication network *n.* A **communication network* in which one group member has access to more communication channels than any other and therefore tends to process more **information* (2) than the peripheral group members. Compare *DECENTRALIZED COMMUNICATION NETWORK*.

central limit theorem *n.* In statistics, a theorem showing (roughly)

that the sum of any sufficiently large number of unrelated variables tends to be distributed according to the ***normal distribution**, irrespective of how the individual variables are distributed, except in certain special cases. It explains why psychological and biological variables that are due to the additive effects of numerous independently acting causes are often distributed approximately normally. The earliest version of it was proved in 1818 by the French mathematician Pierre Simon Marquis de Laplace (1749–1827).

central masking *n.* A form of ***auditory** masking in which the test stimulus is presented to one ear and the masking stimulus to the other, the masking being interpreted as central because it cannot be ascribed to any peripheral process occurring in the ear but must arise centrally at or beyond the point where information from the two ears is combined. Also, an analogous form of ***visual masking** usually called ***dichoptic masking** that leads to similar conclusions. *Compare* **BINAURAL BEAT**.

central nervous system *n.* The part of the ***nervous** system that in humans and other vertebrates comprises the ***brain** and ***spinal cord**. *Compare* **PERIPHERAL NERVOUS SYSTEM**. **CNS** *abbrev.*

central nystagmus *n.* A form of ***nystagmus** resulting from damage to a ***vestibular nerve** or one of its nuclei.

central processing unit *n.* The part of a computer that executes programs. Also called a *central processor* . **CPU** *abbrev.*

central processor *n.* 1. Another name for a ***central processing unit**. 2. In ***cognition**, a ***hypothetical construct** analogous to the ***central processing unit** of a computer that receives information, allocates resources to subsystems, takes decisions, and controls voluntary behaviour. *See also* **FILTER THEORY**.

central reaction time *n.* According to an analysis introduced in 1868 by the Dutch ophthalmologist Franciscus Cornelius Donders (1818–89), the fraction of ***reaction time** that remains after subtracting the time taken up by the passage of a nerve impulse from the ***sensory** receptor to the brain and for another nerve impulse from the brain to the muscle. *Compare* **PHYSIOLOGICAL**

*****ebook converter DEMO Watermarks*****

TIME. Also called *abbreviated reaction time* or *reduced reaction time* .

central sleep apnoea *n.* A **breathing-related sleep disorder* in **DSM-5* involving **sleep apnoea*, occurring usually in elderly people, in which the episodes of breathing cessation during sleep are not associated with any obstruction to the upper airway or loud snoring but arise from cardiac or neurological disorders. US *central sleep apnea* . See *OBSTRUCTIVE SLEEP APNOEA HYPOPNOEA*. See also *ONDINE'S CURSE*.

central sulcus *n.* The deep vertical cleft in each of the two cerebral hemispheres separating the **frontal lobe* from the **parietal lobe*. Also called the *central fissure* , the *fissure of Rolando* , or the *Rolandic fissure* . [From Latin *sulcus* a furrow]

central tendency *n.* In descriptive statistics, the middle or typical value of any **probability distribution* or set of scores, usually measured by the **arithmetic mean*, **median*, or **mode*.

central trait See *TRAIT CENTRALITY*.

central vision *n.* Vision that results from stimuli in the centre of the field of vision, the images of which fall on the **macula lutea* of the retina. See also *AMBIENT SYSTEM*, *ARAGO PHENOMENON*. Compare *PERIPHERAL VISION*.

central vowel *n.* A **vowel* (see the diagram accompanying that entry) produced in the middle of the mouth with the central part of the tongue raised, such as the vowel in *girl* or the initial vowel in *alone*, which is phonetically the same as the vowel in *the* and is called a schwa. Compare *BACK VOWEL*, *FRONT VOWEL*.

centration *n.* A term introduced by the Swiss psychologist Jean Piaget (1896–1980) to refer to the tendency of young children to focus attention on only one salient aspect of an object, situation, or problem at a time, to the exclusion of other potentially relevant aspects. A classic example is provided by an experiment first described by Piaget in 1941 in *The Child's Conception of Number* in which a child watches while a number of objects are set out in a

row and then moved closer together, and the child is asked whether there are now more objects, fewer objects, or the same number of objects. Most children in the **pre-operational stage* of development focus on the relative lengths of the rows without taking into account their relative densities or the fact that nothing has been added or taken away, and conclude that there are fewer objects than before. The process of cognitive development by which a child develops from centration to a more objective way of perceiving the world is called *decentration* , *decentring* , or *decentering* . See also CONSERVATION.

centre-surround receptive field *n.* A type of **receptive field* characteristic of retinal **ganglion cells* and **bipolar cells* with a central ON area in which stimulation tends to excite neural responses and a surrounding OFF area in which stimulation tends to suppress neural responses by **lateral inhibition*, so that the strongest response occurs when only the central region is stimulated; the term also applies to a receptive field with a central OFF area and a surrounding ON area. US *center-surround receptive field*. See also BLOB, DOUBLE-OPPONENT RECEPTIVE FIELD, HERMANN GRID, OFF-CENTRE CELL, ON-CENTRE CELL, OUCHI ILLUSION.

centring *n.* Another name for **centration*.

centroid method *n.* In statistics, a technique of **cluster analysis* in which the distance between two clusters is defined as the distance between their means.

centromere *n.* The part of a **chromosome* that attaches to a **nuclear spindle* during **mitosis*. Like a **telomere*, it consists of hundreds of stuttering units of **repetitive DNA*. [From German *Zentromer* a centromere, from Latin *centrum* the middle, from Greek *kentron* a sharp point + *meros* a portion]

cephalic *adj.* Of, relating to, or situated in or near the head. [From Greek *kephale* a head + *-ikos* of, relating to, or resembling]

cephalic index *n.* A numerical indication of the broadness of a head, obtained by dividing its maximum breadth by its maximum length and then
*****ebook converter DEMO Watermarks*****

multiplying by 100. The cephalic index of long (*dolichocephalous*) heads is below 76, of medium (*mesocephalous*) heads is between 76 and 80, and of broad (*brachycephalous*) heads is above 80. Compare [CRANIAL INDEX](#) (which is a measure of narrowness).

cephalocaudal *adj.* From the head to the tail, referring to the development of an embryo, and also later stages of development, in which growth is fastest at the head and progressively slower in parts of the body distant from the head. Compare [PROXIMODISTAL](#). [From Greek *kephale* a head + *cauda* a tail]

cerea flexibilitas *n.* A wax-like malleability of the body, sometimes manifested in [*hypnosis](#) and in people with [*catatonia](#) and certain forms of brain damage, notably [*cerebellar](#) lesions. People in such a state tend to leave their arms, legs, or bodies in whatever positions they are placed by another person. Also called *catalepsy*, *flexibilitas cerea*. Compare [COGWHEEL RIGIDITY](#), [CLASP-KNIFE RIGIDITY](#). [From Latin *cera* wax + *flexus* bent, from *flectere* to bend]

cerebellar developmental delay *n.* A condition characterized by incomplete development of the connections between the [*cerebellum](#) and the [*cerebrum](#). **CDD** *abbrev.*

cerebellar peduncle *n.* Any of three paired bundles of nerve fibres connecting the [*cerebellum](#) to the midbrain and the medulla oblongata. The superior, middle, and inferior cerebellar peduncles receive afferent inputs from most of the external sense organs (touch, vision, and hearing) and the vestibular system and send efferent outputs to the thalamus and various nuclei in the midbrain and brainstem. Compare [CEREBRAL PEDUNCLE](#). [From Latin *pedunculus*, a corruption of *pediculus* a little foot, from *pes*, *pedis* a foot]

cerebellar syndrome *n.* A pattern of signs and symptoms associated with damage to the [*cerebellum](#), including unsteady body movements, a characteristic cerebellar gait with feet wide apart and difficulty turning, [*ataxia](#), [*adiadochokinesia](#), [*dysmetria](#), [*intention tremor](#), [*postural tremor](#), and mispronunciation of words. Also called *Nonne's syndrome*. See also

*****ebook converter DEMO Watermarks*****

GERSTMANN–STRÄUSSLER–SCHEINKER SYNDROME, VESTIBULOCEREBELLUM.

cerebellospinal tract *n.* A bundle of motor nerve fibres running from the cerebellum to the spinal cord, concerned with the regulation of muscle tonus and posture. *Compare* SPINOCEREBELLAR TRACT.

cerebellum *n.* One of the main structures in the brain, situated at the back of the skull, behind the brainstem and beneath the back of the cerebrum, consisting of two deeply fissured lateral hemispheres separated by a narrow central girdle, the **vermis*, connected to the brainstem by three pairs of **cerebellar peduncles*. The vermis on the upper surface, containing an inverted **topographic map* of the body, is involved in trunk and eye movements; the intermediate zones and hemispheres on either side of the vermis, containing separate topographic maps (not inverted) of each side of the body, regulate limb movements by the same side; and the **flocculonodular lobe*, separated by a deep fissure from the base of the cerebellum, is concerned chiefly with posture, balance, and **ballistic movements*. Unlike the cerebral hemispheres, each hemisphere of the cerebellum is associated with the same side of the body. Lesions in the cerebellum produce deficits of movement and balance but do not affect sensory functions. See NEOCEREBELLUM, SPINOCEREBELLUM, VESTIBULOCEREBELLUM. See also ADIADOCHOKINESIA, BASKET CELL, CATALEPSY, CEREAL FLEXIBILITAS, CEREBELLAR DEVELOPMENTAL DELAY, CEREBELLAR SYNDROME, CEREBELLOSPINAL TRACT, CLIMBING FIBRE, DENTATE NUCLEUS, DYSMETRIA, FOLIUM, GAIT ATAXIA, GERSTMANN–STRÄUSSLER–SCHEINKER SYNDROME, GLOMERULUS, GOLGI CELL, GRANULE CELL, MEDULLOBLASTOMA, METENCEPHALON, MOSSY FIBRE, PARALLEL FIBRE, PURKINJE CELL, SPINOCEREBELLAR TRACT, STELLATE CELL. **cerebellar** *adj.* [From Latin *cerebellum* a little brain, diminutive of *cerebrum* a brain]

cerebral *adj.* Of or relating to the **cerebrum*, or more loosely to the brain as a whole. [From Latin *cerebrum* the brain + *-al*, from *-alis* of or relating to]

cerebral angiogram *n.* An **angiogram* of the brain. Also called a *cerebral arteriogram*. [From Greek *angeion* a (blood) vessel + *gramme* a line]

cerebral angiography *n.* The process of producing ***angiograms** of brains. Also called *cerebral arteriography* .

cerebral aqueduct *n.* A canal filled with cerebrospinal fluid connecting the third and fourth ventricles of the brain. Also called the *aqueduct of Sylvius* or *Sylvian aqueduct* . [From Latin *aqua* water + *ducere, ductum* to lead]

cerebral arteriogram *n.* Another name for a ***cerebral angiogram**. [From Greek *arteria* an artery + *gramme* a line]

cerebral arteriography *n.* Another name for ***cerebral angiography**.

cerebral arteriosclerosis *n.* An ***organic disorder** involving ***arteriosclerosis** of the brain, the signs and symptoms of which may be neurological (such as ***aphasia**, ***athetosis**, ***chorea**, ***dementia**, ***parkinsonism**), or cognitive and affective (such as ***amnesia**, ***delusions**, ***affective flattening**), or both. [From Latin *cerebrum* the brain + Greek *arteria* an artery + *sklerosis* a hardening, from *skleros* hard + *-osis* indicating a process or state]

cerebral blood flow *n.* The flow of blood to specific parts of the brain to fuel the functions being performed there, generally accepted as an index of ***synaptic** activity. Studies of ***regional cerebral blood flow** are used to localize brain functions. **CBF abbrev.**

cerebral cortex *n.* The outer layer of ***grey matter** covering the ***cerebrum**, largely responsible for sensory, motor, emotional, and integrative functions, divided into two ***cerebral** hemispheres each subdivided into the ***frontal lobe**, ***parietal lobe**, ***temporal lobe**, and ***occipital lobe**. It varies in thickness from 2 millimetres to 4 millimetres, covers a surface area of approximately 1.4 square metres (roughly equivalent to 15 square feet, the upper surface area of a large umbrella), mostly hidden within the walls of the ***sulci**, and it contains approximately 50 billion ***neurons** and 500 billion ***neuroglial** cells. *See also* **ALLOCORTEX**, **ANGULAR GYRUS**, **ARCHAECORTEX**, **ASSOCIATION AREA**, **AUDITORY CORTEX**, **BROCA'S AREA**, **BRODMANN AREA**, **CAUDATE**

NUCLEUS, CINGULATE GYRUS, FASCICULUS, HESCHL'S GYRUS, LONGITUDINAL FISSURE, MESOCORTEX, MOTOR CORTEX, NEOCORTEX, NIGROSTRIATAL BUNDLE, OLFACTORY CORTEX, PALAEOCORTEX, PARAHIPPOCAMPAL GYRUS, PIRIFORM CORTEX, PLANUM TEMPORALE, POSTCENTRAL GYRUS, PRECENTRAL GYRUS, RHINENCEPHALON, SOMATOSENSORY CORTEX, STRIATUM, SULCUS, SUPERIOR TEMPORAL GYRUS, TELEENCEPHALON, VISUAL CORTEX, WERNICKE'S AREA. [From Latin *cerebrum* a brain + *cortex* bark]

cerebral dominance *n.* The tendency for one of the **cerebral* hemispheres of the brain to dominate certain functions, as when the left hemisphere predominates for language functions, or when it predominates for voluntary motor control in a person who is right-handed, or when the right hemisphere predominates, perhaps in the same person, for spatial and musical functions. *See also* HANDEDNESS (1), HEMISITY, LATERALITY, SPINNING DANCER ILLUSION, WADA TEST. [From Latin *cerebrum* brain + *dominari* to be master]

cerebral gigantism *n.* A congenital disorder characterized by large size and weight at birth, accelerated growth in infancy and childhood, **acromegalic* features, and neurological disorder usually accompanied by moderate **intellectual disability*. Also called *Sotos syndrome*, after the US paediatrician Juan Fernandez Sotos (born 1927) who, with four colleagues, first described it in 1964.

cerebral hemisphere *n.* Either of the two halves of the **cerebrum*, separated by the **longitudinal fissure*, having slightly different functions in humans. Also called simply a *hemisphere*. *See also* CEREBRAL DOMINANCE, LATERALITY. [From Latin *cerebrum* brain + *hemi-* half + *sphaira* a sphere or globe]

cerebral palsy *n.* A form of congenital **paralysis* with muscular discoordination, caused by brain injury during birth, viral infection, or lack of oxygen in the brain before, during, or immediately after birth, often associated with some degree of **mental retardation*. [Corruption of *cerebral paralysis*]

cerebral peduncle *n.* Either of two large bundles of white nerve fibres in front of the brainstem, connected to the sides of the **pons*, arising from the

*****ebook converter DEMO Watermarks*****

cerebral hemispheres and carrying descending fibres of the ***corticospinal tract**. Compare **CEREBELLAR PEDUNCLE**. [From Latin *cerebrum* the brain + *pedunculus*, a corruption of *pediculus* a little foot, from *pes, pedis* a foot]

cerebral ventricle See **VENTRICLE**.

cerebrospinal *adj.* Of or relating to the brain and spinal cord.

cerebrospinal fluid *n.* The clear colourless fluid that fills the ***subarachnoid** space, thereby immersing the entire ***central nervous system**, and that circulates through the ***ventricles** of the brain, within which it is secreted, before flowing passively into the venous bloodstream, the total volume of fluid (about 150 millilitres) being replaced in an adult human being every three or four hours. Also called *neurolymph* . See also **CHOROID PLEXUS**, **EPENDYMA**, **EPENDYMAL CELL**, **HYDROCEPHALUS**. **CSF** *abbrev.*

cerebrovascular *adj.* Of or relating to the blood vessels of the ***cerebrum**. [From *cerebrum* + Latin *vasculum* a little vessel, diminutive of *vas* a vessel]

cerebrovascular accident *n.* Another name for a ***stroke**. **CVA** *abbrev.*

cerebrum *n.* The largest brain structure, comprising the ***diencephalon** and the ***cerebral hemispheres**, the outer layer or ***cerebral** cortex of which controls most sensory, motor, and cognitive processes in humans. [Latin *cerebrum* a brain]

certainty effect *n.* The tendency of human judges to overweight outcomes that are certain relative to outcomes that are merely probable. Thus, if given a choice between \$1,000 and gamble in which a fair coin is tossed and the prize is \$2,010 if the coin falls heads and nothing if it falls tails, most people prefer the certainty of \$1,000, although the ***expected value** of the gamble is \$1,005. This phenomenon arises from ***risk aversion**.

ceruminous deafness *n.* Loss of hearing caused by the build-up of

earwax in the **external auditory canal* of the outer ear. *See also* CONDUCTIVE DEAFNESS. [From *cerumen* earwax, from Latin *cer(a)* wax + (*alb*)*umen* egg white, from *albus* white]

cerveau isolé *n.* A surgical preparation in which the brainstem is severed between the diencephalon and the hindbrain, or between the superior colliculi and the inferior colliculi. Because it separates the brain from the **ascending reticular activating system*, cats operated on in this way show chronic somnolence, with only **delta wave* activity in their **EEGs*, their **pupils* are constricted, and no eye movements occur. *See also* DECEREBRATE RIGIDITY. *Compare* ENCÉPHALE ISOLÉ. [From French *cerveau* the cerebrum + *isolé* isolated]

C fibre *n.* A very small unmyelinated type of **afferent* nerve fibre with low conduction velocity (1 to 2 metres per second), found especially in the **autonomic nervous system* and in receptors for dull pain and temperature. US *C fiber*. *See also* AXON REFLEX. *Compare* ALPHA FIBRE, DELTA FIBRE, GAMMA FIBRE, IA FIBRE, IB FIBRE, II FIBRE.

chained reinforcement schedule *n.* A **compound reinforcement schedule* in which **reinforcement* (1) is delivered after an organism has completed two or more **simple reinforcement schedules* in succession, a signal being given to indicate to the organism which schedule is operating at any particular time. Also called a *chained schedule*. *See also* REINFORCEMENT SCHEDULE. *Compare* TANDEM REINFORCEMENT SCHEDULE.

chain ganglia *n.* Another name for a **sympathetic ganglionic chain*.

chairwork *n.* Another name for the **empty-chair technique*.

chandelier cell *n.* A type of inhibitory neuron found in the cerebral cortex, the axons of which form synapses with numerous pyramidal cells. [So called because of its appearance]

change blindness *n.* Failure to notice a change in the **visual field* occurring during a **saccade* or when vision is otherwise interrupted.

Compare [INATTENTIONAL BLINDNESS](#), [MOTION-INDUCED BLINDNESS](#).

change of life *n.* A euphemism or non-technical name for the [*climacteric](#) or [*menopause](#).

channel of communication See [COMMUNICATION CHANNEL](#) (1, 2).

character *n.* **1.** The aggregate or combination of psychological [*traits](#) that distinguish a person from others. In his influential book *Personality: A Psychological Interpretation* (1937), the US psychologist Gordon W(illard) Allport (1897–1967) established [*personality](#) as the preferred term in psychology and rejected the word ‘character’ because of its ethical connotations: ‘The psychologist does not need the term at all; personality alone will serve. *Character is personality evaluated, and personality is character devaluated*’ (p. 52, italics in original). **2.** Any genetically determined structure, function, or phenotypic characteristic of an organism. **3.** A symbol, such as a letter of the alphabet, used in a system of writing; or in computer technology, any unit of information in the form of a symbol that can be represented by a unique binary code.

[From Latin *character* a distinguishing mark, from Greek *charakter* an engraver’s tool, from *charassein* to cut or engrave]

character convergence *n.* A form of interaction between the evolution of two species in which they come to resemble each other more closely in one or more characters or traits. Compare [CHARACTER DISPLACEMENT](#).

character disorders *n.* Another name for [*personality disorders](#). Also called *character neuroses*, misleadingly in view of the fact that symptoms of personality disorders are not typically [*ego-dystonic](#).

character displacement *n.* A form of interaction between the evolution of two species in which they diverge from each other in one or more characters or traits. Compare [CHARACTER CONVERGENCE](#).

characteristic features *n.* In [*prototype theory](#), the [*features](#) (1) or [*attributes](#) of a prototypical instance of a concept or of a prototypical member

*****ebook converter DEMO Watermarks*****

of a category, shared by many or most but not all instances or members, and providing a basis for assigning meaning to the concept or category. *Compare* [DEFINING PROPERTIES](#).

characteristic frequency *n.* The frequency of a sound at which the threshold of a single fibre of an auditory nerve is lowest and to which it is therefore most responsive. *See also* [TUNING CURVE](#). **CF** *abbrev.*

character neurosis *n.* In [*psychoanalysis](#), a type of [*neurosis](#) in which psychological conflict manifests itself in the form of character traits or patterns of behaviour rather than clearly identifiable [*signs](#) (1) or [*symptoms](#). It is exemplified in articles by Sigmund Freud (1856–1939) in 1908 on ‘Character and Anal Erotism’ (*Standard Edition*, IX, pp. 169–75), in 1916 on ‘Some Character Types Met With in Psycho-Analytic Work’ (*Standard Edition*, XIV, pp. 311–33), and in 1931 on ‘Libidinal Types’ (*Standard Edition*, XXI, pp. 215–20). It was used extensively in the theories of the Austrian-born (later US-based) psychiatrist Wilhelm Reich (1897–1957), especially in his book *Charakteranalyse* (Character Analysis) published in 1933.

Charcot–Marie–Tooth syndrome *n.* A hereditary form of muscular atrophy characterized by slowly progressive wasting and weakness of muscles of the arms and feet, caused by degeneration of the peripheral nerves. Symptoms, including loss of reflexes, diminished [*cutaneous senses](#), and raised foot arches leading to a high-stepping gait, usually develop in childhood or adolescence and progress slowly. It is usually inherited through an [*autosomal](#) [*dominant gene](#), but some forms are passed on by [*recessive](#) and [*X-linked genes](#), the latter occurring mostly in boys. It is the most common inherited disorder of the [*nervous system](#), affecting one in 2,500 people in the US. Type I (or hypertrophic) CMT, generally associated with a dominant gene on [*chromosome](#) 17, is characterized by a thickening of the [*myelin](#) sheath surrounding [*neurons](#) in the [*white matter](#) of the [*central nervous system](#), whereas Type II (neuronal) CMT is characterized by degeneration of the [*axons](#) of peripheral nerves. *Compare* [MULTIPLE SCLEROSIS](#), [MUSCULAR DYSTROPHY](#). **CMT** *abbrev.* [Named after the French neurologists Jean-Martin Charcot (1825–93) and Pierre Marie (1853–1940), who published a classic description of five cases of the disorder in *Revue de*

*****ebook converter DEMO Watermarks*****

Médecine in 1886, and the English postgraduate medical student Howard H(enry) Tooth (1856–1925) who completed an MD thesis on the disorder in the same year]

Charles Bonnet syndrome *n.* Visual [*hallucinations](#) in people who have lost their vision, experienced most commonly during the first year to 18 months after becoming blind, sometimes with [*micropsia](#). It is a common condition, experienced by many (perhaps most) people who suffer significant visual loss, and those who are not prepared for it are sometimes alarmed, believing that they are losing their sanity. It is named after the Swiss naturalist and philosopher Charles Bonnet (1720–93) whose grandfather, almost blind from [*cataracts](#) in both eyes, hallucinated men, women, birds, carriages, buildings, tapestries, and other objects, as first described by Bonnet in his *Essai analytique sur les facultés de l'âme* (1760, pp. 426–8), although it was not widely known in English-speaking countries until 1982, when an article describing it appeared in the journal *Age and Ageing*. **CBS** *abbrev.*

Charlie *n.* A street name for [*cocaine](#).

Charpentier bands *n.* Illusory black spokes that are seen when a black disc with a white sector is rotated slowly. [Named after the French physician (Pierre Marie) Augustin Charpentier (1852–1916) who discussed them]

Charpentier's illusion *n.* Another name for the [*size–weight illusion](#). [Named after the French physician (Pierre Marie) Augustin Charpentier (1852–1916) who published an article on it in 1891, although the German psychologists Georg Elias Müller (1850–1934) and Friedrich Schumann (1863–1940) had already discovered and reported the illusion in 1889]

cheating husbands problem *See* [MUDDY CHILDREN PROBLEM](#).

checker–shadow illusion *See* [CHEQUER–SHADOW ILLUSION](#).

cheese effect *n.* An acute attack of hypertension that can occur in a person taking a [* monoamine oxidase inhibitor \(MAOI\)](#) drug who eats cheese, caused by an interaction of the MAOI with [*tyramine](#), formed in ripe

cheese when bacteria provide an enzyme that reacts with the amino acid **tyrosine* in the cheese. Other foods and drinks that produce the same effect include pickled herring, yeast extract, and certain red wines. Also called the *cheese reaction* .

chemically gated ion channel *n.* An **ion channel*, the permeability of which is regulated by a **neurotransmitter*; different neurotransmitters sometimes opening and closing different ion channels in the cell membrane. *Compare* VOLTAGE-GATED ION CHANNEL.

chemical sense *n.* A sensory system that responds to chemical stimuli, especially the sense of **taste* or **smell* mediated by **chemoreceptors*. See also COMMON CHEMICAL SENSE, REDINTEGRATION.

chemoaffinity hypothesis *n.* The proposition that molecules of specific chemical substances guide neurons in the formation of appropriate **synapses* (1) during development and regeneration. [From *chem(ical)* + *affinity*]

chemoreceptor *n.* A **sensory receptor* in a biological cell membrane specialized to allow the binding of molecules from external chemical stimuli, leading to the generation of sensations of **taste* or **smell*. Also called a *chemoceptor* .

chemorepellant *n.* Any chemical substance that causes organisms to move away from it or to avoid it.

chemotaxis *n.* Responses of a micro-organism or a cell to a chemical stimulus by moving towards or away from it. **chemotactic** *adj.* [From Greek *taxis* order]

chequer-shadow illusion *n.* An image of an object casting a shadow across a chequer-board, the same colour or shade being used to depict one of the 'dark' squares outside the shadow and one of the 'light' squares inside it (see *illustration*). The visual system discounts for the shadow, even if the viewer does not notice it consciously, causing the 'dark' square to appear

much darker than the 'light' square. This shows that the perceived **lightness* of an object or surface is not determined simply by its physical **luminance* but is subject to **context effects*, the visual system responding primarily to lightness contrasts between adjacent regions of the visual field. The illusion, devised by the US vision scientist Edward Adelson (born 1952) and first published on the World Wide Web in 1995, is so powerful as to be almost unbelievable, and it persists even after the viewer knows that the shades are actually identical. Many people are willing to bet large sums of money on the 'dark' square being physically darker than the 'light' square. US *checker-shadow illusion*. Compare *GELB EFFECT*, *KARDOS EFFECT*. [From Old French *eshec* check, originally used in the game of chess to indicate that the king is under attack, through Arabic from Persian *shah* a king + Old English *sceadu* shade, cognate with Greek *skotos* darkness]

Chequer-shadow illusion. Almost incredibly, the shade of grey is identical in the squares marked A and B in the top image. This can be verified by examining the bottom image.

cherology *n.* A term coined in the 1960s, by analogy with **phonology*, to denote the study of **sign language*. See also *AMERICAN SIGN LANGUAGE*, *BRITISH SIGN LANGUAGE*. [From *chereme* a basic contrastive unit in a sign language + Greek *logos* word, discourse, or reason]

Cheshire Cat effect *n.* A form of **binocular rivalry* in which a moving

*****ebook converter DEMO Watermarks*****

object seen by one eye renders invisible a stationary object in the same region of the visual field seen by the other eye. The effect can be demonstrated vividly by dividing the visual field with a mirror held edge-on in front of the nose at a slight angle, so that one eye looks straight at a stationary object, such as a sleeping cat, while the other sees a reflection of stationary objects in another part of the environment. If a hand is then waved about on the mirror side, in the region of the visual field where the cat is seen with the other eye, then part or the whole of the cat disappears. [Named after an episode at the end of Chapter 6 of *Alice's Adventures in Wonderland* by Lewis Carroll, the pen name of Charles Lutwidge Dodgson (1832–98), in which the Cheshire Cat ‘vanished quite slowly, beginning with the end of the tail, and ending with the grin, which remained some time after the rest of it had gone’]

Chevreul pendulum *n.* A device consisting of a weight attached to a length of about 35 or 40 centimetres of string. A person holds the string in one hand, suspending the weight above the centre of a diagram depicting a circle superimposed on a cross, while being asked a series of questions, having been told that the pendulum will sway from left to right if the answer is yes, up and down if the answer is no, and in a circle if the answer is unknown. The pendulum often reveals true answers, as a result of unconscious muscular movements made by the respondent. The device is sometimes used to measure [*suggestibility](#) or [*hypnotic susceptibility](#) and has occasionally been used as a crude [*lie detector](#). [Named after the French chemist Michel Eugène Chevreul (1786–1889) who first described it in *De la Baquette Divinatoire, du Pendule Dit Explorateur et des Tables Tournantes* (1854) as an instrument for analysing unconscious responses and discussed it in relation to a possible explanation of the phenomenon of table-turning at spiritualist séances]

chiaroscuro *n.* The disposition of areas of light and shade in an image; specifically one of the monocular cues of visual [*depth perception](#), patterns of shadow and highlight providing information about depth (see [illustration](#)). The human visual system usually interprets such information on the unconscious assumption that the light source is above. Also called *shading*. See also [ANAGLYPTOSCOPE](#), [HOLLOW-FACE ILLUSION](#). [From Italian *chiaro* clear + *oscuro* obscure or dark]

Chiaroscuro. Most of the shapes in the upper panel appear convex and most of those in the lower panel concave, because the visual system assumes by default that the light source is above. But the upper panel is merely an inverted copy of the lower one, as can be confirmed by turning the page upside down.

chiasm *n.* A crossing over or **decussation* of two structures, as in the fibres of the nerves in the **optic chiasm*, which in humans and other animals with forward-pointing eyes and therefore overlapping visual fields are only partly crossed or decussated. Also called a *chiasma* . **chiasms**, **chiasmata**, or **chiasmas** *pl.* **chiasmic** or **chiasmal** *adj.* [From Greek *chiasma* a cross, named after the shape of the upper-case letter chi (X)]

chiasmus *n.* A **figure of speech* in which the main elements are repeated in a reversed order to create a symmetrically balanced structure, as in *Ask not what your country can do for you; ask what you can do for your country* (The

inaugural address of John F. Kennedy, 1917–63, 35th US president, 20 January 1961). Two of the best psychological examples are *I'd rather have a full bottle in front of me than a full-frontal lobotomy* and the following mordant comment on achieving something that makes others jealous: *It's champagne for my real friends and real pain for my sham friends*. **chiasmi pl. chiasmic** *adj.* [From Greek *chiasmōs* a crisscross arrangement, from *chiasma* a cross, named after the shape of the upper-case letter chi (X) + *ismos* indicating a state or condition]

Chicken game *n.* A two-person strategic ***game** (1), generally considered to be the prototype of a dangerous game. In its canonical interpretation, two motorists speed towards each other. Each has the option of swerving to avoid a head-on collision or driving straight ahead. If both swerve, the outcome is a draw with second-best payoffs to each; if both drive straight ahead, they risk annihilation and each receives the worst (fourth-best) payoff; but if one chickens out by swerving while the other exploits the co-player's caution by driving straight on, then the swerver loses face and earns the third-best payoff, and the 'exploiter' wins a prestige victory and earns the best payoff. The game provides a strategic model of brinkmanship. Written accounts of Chicken can be traced at least as far back as the 8th century BC when the Greek epic poet Homer described in *The Iliad* (p. 273 of Rouse's translation) a version played with chariots that Antilochos won against Menelaos, but the game was first analysed and studied empirically in the early 1960s. *See also* **HAWK–DOVE GAME**. [Named and first described in its canonical interpretation in 1959 by the Welsh philosopher Bertrand (Arthur William) Russell (1872–1970) in *Common Sense and Nuclear Warfare* (p. 30), from a slang sense of *chicken*, a cowardly person, which became popular after the release in 1955 of Nicholas Ray's film *Rebel Without a Cause* starring James Dean, in which teenagers played a slightly different version of the game involving driving cars over a cliff and jumping out at the last moment]

child abuse *n.* Any form of physical, mental, or sexual exploitation of or cruelty towards a child by a parent or other adult, causing significant harm to its victim. *See also* **BATTERED BABY SYNDROME**, **BATTERED CHILD SYNDROME**, **CHILD SEXUAL ABUSE**, **FACTITIOUS DISORDER IMPOSED ON ANOTHER**, **SEXUAL ABUSE**.

child-directed speech *n.* Another name for **caretaker speech*.

childhood amnesia *n.* Another name for **infantile amnesia*.

childhood autism *n.* An alternative name for **autism spectrum disorder*.

childhood disintegrative disorder *n.* A term used in **DSM-IV* for a **pervasive developmental disorder* characterized by at least two years of apparently normal development followed by significant loss of language abilities, social skills, bowel or bladder control, motor skills, or play, together with impairment in social interaction and communication, or restricted, repetitive, or stereotyped mannerisms, interests, or activities. In DSM-5 it falls under **autism spectrum disorder*. Also called *dementia infantilis*, *disintegrative disorder*, or *Heller's syndrome*, after the Austrian neuropsychiatrist Theodor O. Heller (1869–1938) who first described it in an article entitled 'Dementia Infantilis' in the *Zeitschrift für die Erforschung und Behandlung des jugendlichen Schwachsinn*s in 1908. **CDD** abbrev.

childhood-onset fluency disorder *n.* A **communication disorder* introduced in **DSM-5*, characterized by disturbed fluency and rhythm of speech, involving repetitions of sounds or syllables, prolonged **consonants* and **vowels*, words broken by pauses, word substitutions to avoid problem words, and excessive physical tension in pronouncing words, the symptoms causing **anxiety* and affecting social, academic, or occupational functioning, with onset in early development (2 to 6 years in most cases), not attributable to **deafness*, **neurological* impairment, a **side-effect of medication*, **general medical condition*, or another mental disorder, such as **Tourette's disorder*. Also (informally) called *stuttering* or *stammering*.

Children's Apperception Test *n.* A version of the **TAT* designed specifically for children, consisting of 10 pictures in which animals take the place of human beings in all cases on the assumption that children are likely to empathize more easily with animal figures. The test was constructed by the Austrian-born US psychoanalyst Leopold Bellak (1916–2000) and Sonia Sorel Bellak (born 1918) and published in 1949; Leopold Bellak described it

in his book *The Thematic Apperception Test and the Children's Apperception Test in Clinical Use* (1954). Compare [BLACKY PICTURES](#). **CAT** abbrev.

child sexual abuse *n.* A form of [*sexual abuse](#) in which the victim is a child. **CSA** abbrev.

chimera *n.* **1.** An organism composed of two or more genetically distinct tissue types or created by combining genes from two or more different individuals or species. Also called a *mosaic* . Also spelt *chimaera* . **2.** In Greek mythology, a fire-breathing monster with a lion's head, a goat's body, and a serpent's tail. **chimeric** or **chimaeric** *adj.*

[From Greek *chimaira* a she-goat]

chimeric face *n.* A facial portrait made by combining the left and right halves of the faces of two different people, used to study the functions of the cerebral hemispheres, especially in [*split-brain preparations](#), because [*fixation \(1\)](#) on the midpoint leads to each half of the image being represented in the opposite cerebral hemisphere.

China white *n.* A street name for the drug [*fentanyl](#).

Chinese room *n.* A [*Gedankenexperiment](#) first proposed by the US philosopher John Searle (born 1932) in the journal *Behavioral and Brain Sciences* in 1980 as a refutation of the [*strong AI](#) proposition that a computer capable of passing the [*Turing test](#) by responding to inputs in a manner indistinguishable from a human being would necessarily have a mind and be capable of thought. Searle's Chinese room contains a person who understands no Chinese but has detailed and comprehensive instructions for the mechanical processing (without translation) of Chinese symbols to generate meaningful responses to written messages. Anyone who delivers a message in Chinese to the room receives a reply in Chinese and has no way of knowing that the person in the room does not understand a word (or a [*logograph](#)) of Chinese. Searle argued that an [*artificial intelligence](#) machine or program is analogous to the Chinese room, and that passing the Turing test would not prove that it had a mind or that it could think, because a computational simulation of a phenomenon is very different from the

*****ebook converter DEMO Watermarks*****

phenomenon itself. If valid, the argument undermines **weak AI* as well as strong AI. Compare *GÖDEL'S THEOREM*.

chi-square distribution *n.* In statistics, a **probability* distribution used to obtain an approximate measure of the discrepancy between sets of observed and expected scores and to perform a **chi-square test*. If a set of values distributed according to the **normal distribution* are squared and then summed, the resulting scores are distributed according to the chi-square distribution. Symbol: χ^2 . [Named after the square of *chi* the 22nd letter of the Greek alphabet]

chi-square test *n.* In statistics, a test based on the **chi-square distribution* to test for a possible association between two variables measured on **nominal scales* (called the *chi-square test of association*) or to determine the **goodness of fit (1)* of observed frequencies to a theoretical **frequency* distribution (called the *chi-square goodness of fit test*), the same formula being used for both types of test. In both cases, researchers most commonly use the Pearson chi-square test, the formula for calculating the test statistic being $\chi^2 = \Sigma(O-E)^2/E$, where *O* represents an observed frequency, *E* an expected frequency under the **null hypothesis*, and the summation is over all pairs of observed and expected frequencies. The main alternative is the **likelihood ratio* chi-square test. See also *NON-PARAMETRIC STATISTICS*. Compare *LOG-LINEAR ANALYSIS*. Symbol: χ^2 .

chloral hydrate *n.* A colourless crystalline compound that acts as a central nervous system **depressant* and is used as a sedative–hypnotic drug. Also called *Noctec* (trademark). [So called because it is produced by mixing the aldehyde chloral with water]

chlordiazepoxide *n.* A member of the **benzodiazepine* group of drugs, used as an anxiolytic, sedative, and muscle relaxant, and in the treatment of **alcohol-related disorders*. In its hydrochloride form it is usually called *Librium* (trademark). See also *SEDATIVE-, HYPNOTIC-, OR ANXIOLYTIC-RELATED DISORDERS*. **CDP** *abbrev.* [From *chlor-* denoting chlorine + *di-* two, from Greek *dis* twice + *az-* denoting nitrogen, from Greek *a-* not + *zaein* to live + *ep(oxide)* a compound containing oxygen joined to other atoms, from Greek

epi on or above + *oxide* a compound of oxygen and another element, from French *oxy(gène)* + (*ac*)*ide*]

chloride *n.* Any of the salts of hydrochloric acid or any compound containing a chlorine atom.

chloroacetophenone See [CN GAS](#).

chlorpromazine *n.* Chlorpromazine hydrochloride, a [*neuroleptic](#) (1) drug that stabilizes the autonomic nervous system during stress by blocking [*dopamine](#) neuroreceptors and is effective in reducing psychotic symptoms, originally developed in 1950 as the first of the [*phenothiazines](#). Also called *Largactil* or *Thorazine* (trademark). See also [DOPAMINE ANTAGONIST](#). **CPZ** *abbrev.* [From *chlor-* denoting chlorine + *pro(pyl)* containing the monovalent group C_3H_7 + (*a*)*m(ine)* + *azine* denoting an organic compound with a six-member ring and at least one nitrogen atom]

choice of neurosis *n.* In [*psychoanalysis](#), the combination of processes that determine which particular [*neurosis](#) a patient develops. The notion that a patient in some sense chooses a neurosis was first mentioned by Sigmund Freud (1856–1939) in a letter to his friend, the German physician Wilhelm Fliess (1858–1928) in 1896 (*Standard Edition*, I, pp. 220–1) and was developed fully in 1913 in an article on ‘The Disposition to Obsessional Neurosis’ (*Standard Edition*, XII, pp. 317–26). See also [COMPROMISE FORMATION](#), [RETURN OF THE REPRESSED](#), [SYMPTOM FORMATION](#).

choice reaction time *n.* [*Reaction time](#) in a situation in which there are two or more possible stimuli requiring different responses. The usual measure involves a home button surrounded by eight other buttons, arranged in a semicircle around it, each accompanied by a small light. The person being tested places a finger or a stylus on the home button and then attempts to move it as quickly as possible to press whichever of the other buttons is lit up on each trial. It is negatively correlated with psychometric measures of intelligence. Also called *complex reaction time* or *compound reaction time*. See also [FLANKER COMPATIBILITY EFFECT](#), [HICK’S LAW](#), [PROCESSING SPEED](#), [SIMON EFFECT](#). Compare [DISCRIMINATION REACTION TIME](#), [SIMPLE REACTION TIME](#). **CRT**

abbrev.

choice shift *n.* Another name for the ***risky shift** phenomenon or, more generally the ***group polarization** phenomenon.

cholecystokinin *n.* A hormone secreted in the ***duodenum** that causes the ***gall bladder** to contract and that stimulates the secretion of enzymes by the ***pancreas**, also present in the central nervous system, where it acts as a ***neurotransmitter**, amplifying the effects of ***dopamine** in the brain. *See also* **KININ**. **CCK** *abbrev.* [From Greek *chole* bile + *kystis* a bladder + English *kinin*]

cholesterol *n.* A ***sterol** present in all animal tissues, blood, bile, and fat, involved in the transport of lipids in the bloodstream and in the formation of ***steroid** hormones. High levels of cholesterol in the blood may sometimes cause ***atherosclerosis**, leading to coronary heart disease, and may be implicated in neurological impairments such as ***vascular dementia** (multi-infarct dementia). [From Greek *chole* bile + *stereos* solid]

choline *n.* An alcohol present in ***bile**, synthesized from lecithin, and a precursor in the synthesis of ***acetylcholine** in the body. *See also* **MUSCARINE**. [From Greek *chole* bile + *-ine* indicating an organic compound]

cholinergic *adj.* Releasing ***acetylcholine**; also activated by or responding to acetylcholine, this extended usage being widespread but consistently rejected by the English physiologist Sir Henry Hallet Dale (1875–1968), who coined the suffix *-ergic*, and by many other authorities. The term applies especially to nerve fibres such as those in the ***parasympathetic nervous system** or in the ***nucleus basalis of Meynert** that use acetylcholine as their ***neurotransmitter**, or any drug that stimulates the activity of the parasympathetic nervous system, causing such effects as constriction of the pupils of the eyes and preparation for close-up vision, salivation, slowing of the heart, secretion of gastric juices, and voiding of urine. *See also* **MUSCARINIC RECEPTOR**, **NICOTINIC RECEPTOR**. *Compare* **ADRENERGIC**, **ANTICHOLINERGIC**, **DOPAMINERGIC**, **GABAERGIC**, **NORADRENERGIC**, **SEROTONERGIC**. [From (*acetyl*)*cholin(e)* + Greek *ergon* work + *-ikos* of, relating to, or resembling]

*****ebook converter DEMO Watermarks*****

cholinesterase *n.* Another name for **acetylcholinesterase*. [From *choline* + *ester* + Greek *-ase* denoting an enzyme, from *diastasis* separation]

cholinoceptor *n.* A **neuroreceptor* for **acetylcholine*. See also MUSCARINIC RECEPTOR, NICOTINIC RECEPTOR.

cholinomimetic *adj. n.* (Of or relating to) any substance, such as **carbachol* or **methacholine*, that mimics the action of **acetylcholine* in the nervous system. See also MUSCARINE, NICOTINE. [From (*acetyl*)*choline* + Greek *mimesis* imitation, from *mimeisthai* to imitate]

Chomskyan *adj.* Of, relating to, or resembling the theory of language of the US linguist and philosopher (Avram) Noam Chomsky (born 1928). See ANOMALOUS SENTENCE, COMPETENCE (2), DEEP STRUCTURE, GENERATIVE GRAMMAR, LANGUAGE ACQUISITION DEVICE, PERFORMANCE (2), SURFACE STRUCTURE, TRANSFORMATIONAL GRAMMAR, UNIVERSAL GRAMMAR.

chorda tympani *n.* One of the branches of the **facial nerve*, running through the cavity of the middle ear, supplying efferent impulses to two of the salivary glands and receiving afferent impulses from the anterior (front) two-thirds of the tongue, responsible for all of the sweet and some of the sour and salty taste sensations. In spite of its name, it is not involved in hearing. [From Latin *chorda* a string + *tympanum* a drum, so called because it crosses the eardrum in the middle ear]

chorea *n.* Involuntary, rapid, jerky, non-repetitive, purposeless movements, such as flexing and extending the fingers, raising and lowering the shoulders, or grimacing, characteristic especially of **Huntington's disease*. [From Greek *choreia* a dance]

chorea minor *n.* Another name for **Sydenham's chorea*.

choreiform *adj.* Resembling the rapid, jerky movements of **chorea*.

chorionic gonadotrophin *n.* A **gonadotrophin* secreted by the placenta in humans and other mammals, stimulating the release of

***progesterone** by the ***corpus luteum**. A measure of its presence in the urine is used as a pregnancy test. Also spelt *chorionic gonadotropin* . [From Greek *chorion* an afterbirth]

choroid *n.* The vascular ***membrane** between the outer ***sclera** and the ***retina** of the eye. [From Greek *chorion* the membrane surrounding an embryo or foetus]

choroid plexus *n.* A collection of small, reddish tufts of vascular membrane that project into the cerebral ***ventricles**, secrete ***cerebrospinal fluid**, and act like a ‘kidney’ for the brain, maintaining the chemical stability of the fluid as the kidneys do the blood. *See also* EPENDYMA, EPENDYMAL CELL, PLEXUS. [From Greek *chorioeides* resembling a placenta, from *chorion* an afterbirth]

chroma *n.* The quality or hue of a colour irrespective of the ***achromatic** (1) black/ grey/white colour present. *See also* MUNSELL COLOUR SYSTEM, SATURATION (1). [From Greek *chroma* colour]

chromaesthesia *n.* A form of ***synaesthesia** (1) in which stimuli not normally associated with colour, such as musical tones or numbers, elicit sensations of colour. When the stimuli are auditory it is also called *chromatic audition*, *colour audition*, *coloured audition*, *colour hearing* , or *coloured hearing* . US *chromesthesia* . [From Greek *chroma* colour + *aisthesis* feeling + *-ia* indicating a condition or quality]

chromaffin cell *n.* A type of cell that is abundantly present in the ***adrenal medulla** and that synthesizes ***adrenalin** (epinephrine) from tyrosine in the presence of the cofactor vitamin C, stores it in vesicles, and secretes it into the bloodstream together with various other proteins and peptides in response to fear, anxiety, or stress. About 10 per cent of chromaffin cells synthesize and secrete the closely related substance ***noradrenalin** (norepinephrine). [From *chromium* + Latin *affinis* related to, alluding to the propensity of adrenalin to stain brown when exposed to chromium salts]

chromatic *adj.* 1. Of, relating to, or having colour. A *chromatic colour* is a colour having ***chroma**, in contradistinction to an ***achromatic** colour
*****ebook converter DEMO Watermarks*****

without chroma. **2.** Pertaining to musical tones that are sharpened or flattened without changing the key of the passage, or the musical scale containing all twelve **semitones* of the octave, also called the *chromatic scale* . Compare *DIATONIC*.

[From Greek *chromatikos* of or relating to colour, from *chroma*, -atos colour + -ikos of, relating to, or resembling]

chromatic aberration See *ABERRATION* (3).

chromatic adaptation *n.* **1.** A form of **adaptation* (2) resulting from continuous exposure to light of a particular colour or hue and consequent bleaching of the associated **visual pigment*, causing a gradual loss of **saturation* (1) of the perceived colour and the appearance of its **complementary colour* if a white surface is viewed. See also *XANTHOPSIA*. **2.** More generally, an alteration of the balance of pigments in a biological membrane in response to the colour and intensity of the ambient light. Also called *colour adaptation* .

chromatic audition *n.* Another name for **colour hearing*.

chromaticity *n.* The quality of colour or light in terms of the purity of its dominant wavelength, involving both **hue* and **saturation* (1). The *chromaticity coordinates* of a colour are the three **tristimulus values*, symbolized by *x*, *y*, and *z*, representing the proportions of the three **additive primaries* that when mixed match the given colour. Also called *chromaticness* . See also *PRIMARY COLOUR* (1, 2, 3).

chromaticness *n.* Another name for **chromaticity*.

chromatic system *n.* In the **opponent-process theory* of colour vision, the pathway that carries information about an object's **hue*. Compare *ACHROMATIC SYSTEM*.

chromatic threshold *n.* The minimal stimulus, depending on the wavelength of the light, that induces a sensation of colour or hue.

chromatic vision *n.* Normal vision in which colours are perceived and distinguished, in contradistinction to **colour-blindness*.

chromatid *n.* Either of the two threadlike strands formed when a **chromosome* divides longitudinally during **mitosis*. [From *chromatin*]

chromatin *n.* The part of a cell nucleus that contains **DNA*, **RNA*, and **proteins* and is readily stained with basic dyes: see *BASE (1)*. [From Greek *chroma*, *chromatos* colour]

chromatopsia *n.* A form of partial blindness characterized by loss or serious impairment of all aspects of vision except colour perception, resulting in a form of misidentification exemplified by guessing that a blue vehicle in a television picture is sky in spite of its different form, relative size, and movement. The condition is occasionally found in people who suffer the effects of smoke inhalation during fires, resulting in carbon monoxide poisoning and oxygen deprivation, causing widespread damage to most areas of the **visual cortex* apart from **blobs* in Area V1 and the associated thin stripes in Area V2, both of which mediate colour perception and are more richly supplied with blood vessels than other areas of the visual cortex and therefore more likely to survive such conditions. Compare *ACHROMATOPSIA*.

chromatopsic *adj.* [From Greek *chroma*, *chromatos* colour + *opsis* sight, from *ops* an eye + *-ia* indicating a condition or quality]

chromesthesia See *CHROMAESTHESIA*.

chromophore *n.* The group of atoms in a chemical compound that are responsible for its colour, including the atoms in the **visual pigments* of the eye's photoreceptors. [From Greek *chroma* colour + *phoros* bearing, from *pherein* to bear]

chromosomal aberration *n.* Any visible or gross abnormality in the number or structure of a set of **chromosomes*. See *KLINEFELTER'S SYNDROME*, *TRISOMY*, *TURNER'S SYNDROME*, *XXX SYNDROME*, *XYY SYNDROME*. Compare *WILLIAMS SYNDROME*.

chromosome *n.* A microscopic rod-shaped structure in the nucleus of every **cell*, containing **DNA* that encodes the **genes* and determines hereditary characteristics. There are 46 chromosomes in every human **somatic cell*, 22 pairs of **autosomes* and one pair of **sex chromosomes*, whereas each of the sex cells or **gametes* carries only 23 chromosomes—one member of every pair. **chromosomal** *adj.* [From Greek *chroma* colour + *soma* a body, so called because they stain deeply with basic dyes]

chronic *adj.* Lasting a long time; of or relating to a disorder or a symptom that develops slowly and either persists or recurs frequently. *Compare* *ACUTE*. [From Greek *chronikos* of or relating to time, from *chronos* time + *-ikos* of, relating to, or resembling]

chronic fatigue syndrome *n.* A cluster of disorders first identified and named in an article by the US physician Gary P(aul) Holmes (born 1956) and 14 co-authors in the *Annals of Internal Medicine* in 1988 and redefined in an influential article in the same journal in 1994, characterized by persistent or recurrent **fatigue* (1) experienced for at least four to six months, not resulting from unusual exertion or any identifiable medical cause and not significantly relieved by rest, resulting in a marked decline in occupational, educational, social, and everyday activities. Some authorities believe that it is often triggered by a viral infection. *See also* *ACTIGRAPHY*, *BORNA DISEASE VIRUS*, *MYALGIC ENCEPHALOMYELITIS*, *POST-VIRAL FATIGUE SYNDROME*. **CFS** *abbrev.*

chronic motor or **vocal tic disorder** *n.* Another name (used in **DSM-IV*) for **provisional tic disorder*.

chronic pain *n.* Prolonged or lasting **pain*, defined in the *Classification of Nursing Diagnoses* (1994) of the North American Nursing Diagnosis Association as a condition in which an individual experiences pain that continues for more than six months. *Compare* *ACUTE PAIN*.

chronobiology *n.* The branch of biology concerned with **biological rhythms*. *See* *BIOLOGICAL CLOCK*, *BIOLOGICAL RHYTHM*. *See also* *ALPHA WAVE*, *BASIC REST–ACTIVITY CYCLE*, *BETA WAVE*, *CIRCADIAN RHYTHM*, *CIRCANNUAL RHYTHM*, *DELTA WAVE*, *GAMMA WAVE*, *INFRADIAN RHYTHM*, *MENSTRUAL CYCLE*, *SENSORIMOTOR*

RHYTHM, SLEEP–WAKE CYCLE, SUPRACHIASMATIC NUCLEUS, TELOMERE, THETA WAVE, ULTRADIAN RHYTHM, *ZEITGEBER*. [From Greek *chronos* time + English *biology*]

chronological age *n.* A person's actual age, in terms of time elapsed since birth, in contrast to **mental age*. See also DEVELOPMENTAL QUOTIENT, IQ. Compare SOCIAL AGE. **CA** *abbrev.* [From Greek *chronos* time + *logos* word, discourse, or reason + Latin *-icalis* of, relating to, or resembling]

chunking *n.* The grouping together of a number of items of information so that they are processed cognitively as a single entity called a *chunk*, as when the letters *c, h, u, n, k, i, n,* and *g* are perceived, interpreted, and easily remembered as a single word, whereas without the key the same letters presented alphabetically as *c, g, h, i, k, n, n, u* would be difficult to memorize for more than a few seconds. The limitation of **short-term memory* to about seven items of information can be overcome by chunking because, as first pointed out in 1956 by the US psychologist George A(rmitage) Miller (1920–2012), the limitation applies to chunks. In 1974 the US political scientist and decision theorist Herbert A(lexander) Simon (1916–2001) suggested that the capacity of short-term memory is about five chunks, but that as the number of elements per chunk increases, the number of chunks that can be remembered decreases slightly. Simon found that he could not recall the following nine words after one quick reading: *Lincoln, milky, criminal, differential, address, way, lawyer, calculus, Gettysburg*; but when they were arranged into the following four chunks, he could remember them easily: *Lincoln's Gettysburg address, milky way, criminal lawyer, differential calculus*. See also MAGICAL NUMBER SEVEN, SPAN OF APPREHENSION, SUBITIZE.

CIE colour system *n.* An internationally accepted system put forward in 1931 by the Commission Internationale de l'Éclairage (the French International Lighting Commission) for specifying any spectral colour precisely in terms of the proportions (**tristimulus values*) of three **additive primary* colours *x, y,* and *z* required by a standard observer to match it. Also called the *XYZ system*. The *CIE colour diagram* (see *illustration*) shows the colour that results from mixing any pair of spectral colours with each other or with purple or white.

CIE colour diagram. The spectral locus (curve) is shown, together with purple and white. To predict the appearance of a mixture of two colours, draw a straight line connecting them and locate the point on the line corresponding to the proportion of each. Thus an equal mixture of green at 550 nm with red at 630 nm is equidistant between these two points, matching yellow at 580 nm; and an equal mixture of blue–green at 505 nm with green at 550 nm yields a point in the interior matching a mixture of three parts green at 520 nm with one part white.

cilia *n. pl.* The hairlike structures projecting from the surface of a cell or membrane, the rhythmic beating of which causes the surrounding liquid to move or, in certain organisms, including protozoans such as **paramecia* and flatworms, causes the organism itself to move. *See also* *KINOCILIUM*, *MICROTUBULE*, *STEREOCILIUM*. **cilium** *sing.* [From Latin *cilium* an eyelash]

ciliaris *n.* Another name for the **ciliary muscle*.

ciliary body *n.* The thickened vascular tunic of the eye between the **choroid* and the **iris*, including the **ciliary muscle*. [From Latin *cilium* an eyelash]

ciliary muscle *n.* The circular ring of smooth muscle fibres that is attached to the ***choroid** and ***crystalline lens** of the eye and that reduces the convexity of the lens when it contracts. Also called the *ciliaris* . *See also* CYCLOPLEGIA.

ciliary reflex *n.* A reflex relaxation of the ***ciliary muscles** of the eyes in response to an object appearing suddenly in front of the face. It causes the convexity of the lenses to increase, preparing the eyes for ***near vision**, and it is part of the ***accommodation reflex**.

ciliary zonule *n.* Another name for the ***zonule of Zinn**.

cingulate gyrus *n.* A gyrus within the ***longitudinal fissure** above and almost surrounding the ***corpus callosum**. It is part of the ***limbic system** and is involved in ***pain** sensations, control of visceral responses associated with emotions, and the planning of motor actions. Also called the *cingulate cortex* . *See also* ANTERIOR CINGULATE CORTEX, DEFAULT MODE NETWORK. [From Latin *cingere* to gird + Greek *gyros* a circle or ring, alluding to the way it partly encircles the corpus callosum]

cingulum *n.* The ***white matter** within the ***cingulate gyrus**.

circadian rhythm *n.* Any ***biological rhythm** or cycle, such as the ***sleep–wake cycle** in humans, that occurs or fluctuates at intervals of approximately 25 hours in controlled environments from which day/night cues have been eliminated. Also called a *diurnal rhythm* . *See also* BIOLOGICAL CLOCK, CHRONOBIOLOGY, CIRCADIAN RHYTHM SLEEP–WAKE DISORDERS, PINEAL GLAND, SUPRACHIASMATIC NUCLEUS, ZEITGEBER. *Compare* CIRCANNUAL RHYTHM, INFRADIAN RHYTHM, ULTRADIAN RHYTHM. [From Latin *circa* about + *dies* a day]

circadian rhythm sleep–wake disorders *n.* Any of several ***sleep–wake disorders** in ***DSM-5**, characterized by persistent or recurrent disruption of sleep, resulting in ***hypersomnia** or ***insomnia**, caused by a mismatch between the exogenous environmental sleep–wake schedule and the person’s endogenous ***circadian rhythm**. The disorder may arise from a persistent pattern of late sleeping, ***jet lag**, or shift working. Also called

desynchronized sleep rhythm . Compare [DELAYED SLEEP-PHASE SYNDROME](#).

circannual rhythm *n.* Any [*biological rhythm](#) involving a biological or psychological process that occurs or fluctuates at intervals of approximately one year, even in controlled environments from which seasonal cues have been eliminated, such as the seasonal changes in behaviour of some migratory birds, which persist even under constant laboratory conditions from which fluctuations in temperature, daylight, and other seasonal cues have been excluded. See also [BIOLOGICAL CLOCK](#), [CHRONOBIOLOGY](#), [ZEITGEBER](#). Compare [CIRCADIAN RHYTHM](#), [INFRADIAN RHYTHM](#), [ULTRADIAN RHYTHM](#). [From Latin *circa* about + *annus* a year]

circaseptan rhythm *n.* Any [*biological rhythm](#) with a period of approximately seven days. [From Latin *circa* about + *septem* seven]

circling dance *n.* Another name for the honey-bee's [*round dance](#).

circular pitch illusion *n.* Another name for the [*auditory staircase illusion](#).

circumstantiality *n.* A speech style that is logical and does not involve [*loosening of associations](#) but is difficult to follow because it dwells on irrelevant details and takes an inordinate length of time coming to the point. Compare [GANSER SYNDROME](#), [TANGENTIALITY](#). [So called because it is circumstantial in the sense of being filled with minute details]

circumvallate papilla *n.* Any of the dozen or so large [*papillae](#) arranged in an inverted V formation near the back of the [*tongue](#), each surrounded by a ridge on its upper margin and studded near its base with [*taste buds](#), mainly responsive to bitter tastes. Compare [FILOFORM PAPILLA](#), [FOLIATE PAPILLA](#), [FUNGIFORM PAPILLA](#). **circumvallate papillae** *pl.* [From Latin *circumvallatus* surrounded with a wall, from *circumvallare* to surround with a wall, from *circum* around + *vallum* a rampart]

circumventricular organ *n.* Any of a small number of brain structures, most importantly the [*subfornical organ](#), [*posterior pituitary](#), and

***pineal gland**, that lie adjacent to the ventricular system of the brain and outside the ***blood–brain barrier** and are therefore able to monitor substances in the bloodstream that are inaccessible in other areas of the brain.

Cirpam(il) *n.* A proprietary name for the antidepressant drug ***citalopram**.
[Trademark]

cisterna *n.* A hollow space containing a bodily fluid such as ***cerebrospinal fluid** or ***lymph**, especially several ***subarachnoid** pockets or pools of cerebrospinal fluid at the base of the brain, the most prominent of which are the *cisterna magna* between the ***cerebellum** and the bottom of the ***medulla oblongata**, the *superior cisterna* above the ***midbrain**, and the *lumbar cisterna* in the lower spinal area. Also called a *cistern* . [From Latin *cisterna* an underground tank, from *cista* a box]

cis–trans complementation test *n.* A test to determine the unit of genetic function and to provide a criterion for defining a ***cistron** by examining whether two independent recessive mutations giving the same abnormal ***phenotype** are located on the same or different genes. A cross is made between ***homozygotes** of each mutation, and the ***heterozygous** offspring are examined. If the mutations are in different genes, then neither mutation will be expressed in the heterozygous offspring because of ***complementation** (each mutant ***allele** being compensated for by the normal allele received from the other parent), whether the mutations are on the same chromosome (in *cis* position) or on different chromosomes (in *trans* position); but if the mutations are in the same gene, then the mutation will be expressed in the offspring, but only if the mutations lie in *trans* position, because in that case both alleles at the specified locus will be mutants. Also called the *cis–trans test* or *complementation test*. [From Latin *cis* in this side + *trans* across, over, or beyond]

cistron *n.* A sequence of DNA constituting a single functional gene or coding for a single ***polypeptide**; defined more rigorously by the ***cis–trans complementation test**, two recessive mutations within a single cistron failing to complement each other in a ***heterozygous** phenotype when on different chromosomes but showing complementation when on the same chromosome. *See also* **OPERON**. [From *cis–trans*, on the model of *codon*]

*****ebook converter DEMO Watermarks*****

citalopram *n.* An **antidepressant* drug belonging to the group of **selective serotonin reuptake inhibitor (SSRI)* agents. Also called *Cipram*, *Cipramil*, *Elopram*, or *Seropram* (trademarks).

citation form *n.* The pronunciation of a word in isolation, often quite different from the way it is pronounced in any linguistic context.

citric acid cycle *n.* Another name for the **Krebs cycle*. [So called because citric acid is formed during the process]

clairaudience *n.* A conjectural **paranormal* ability to sense sounds that are beyond the range of normal hearing. *See also* *EXTRA-SENSORY PERCEPTION (ESP)*. *Compare* *CLAIRVOYANCE*. [From French *clair* clear, from Latin *clarus* clear + *audientia* hearing, from *audire* to hear]

clairvoyance *n.* **Extra-sensory visual perception* of objects or events, a conjectural **paranormal* phenomenon. When the objects or events are far away it is also called *remote viewing*. *Compare* *CLAIRAUDIENCE*, *PRECOGNITION*, *TELAESTHESIA*, *TELEGNOSIS*, *TELEPATHY*. **clairvoyant** *adj.* [From French *clair* clear, from Latin *clarus* clear + French *voir* to see, from Latin *videre* to see]

clamon *n.* Any secret behavioural strategy or device for the entrapment of wrongdoers or miscreants, such as the use of an ultraviolet security marker to label personal property with an inscription that is invisible under ordinary light, or the insertion of a **digital* signature into text to deter plagiarism. [From *cla(ndestine) mon(ition)*, a furtive or concealed warning, from Latin *clandestinus* concealed or hidden, from *clam* secretly + *monere*, *monitum* to warn or advise]

clang association *n.* An association made between words or phrases based on their similar sound rather than their associated meaning, as between *claustrophobia* and *close to February*. **clanging** *n.* Speaking or thinking according to clang associations rather than meaningful associations.

clasp-knife rigidity *n.* A form of muscular spasm or exaggerated muscle **tonus* in a limb or body part that resists passive movement and then

suddenly gives way, in the manner of a jackknife. It is indicative of a lesion in the **corticospinal tract*. See also DECEREBRATE RIGIDITY. Compare CATALEPSY, CEREAL FLEXIBILITAS, COGWHEEL RIGIDITY.

class *n.* 1. Members of a society sharing a similar social rank and certain economic and cultural characteristics in common, also called a *social class* or a *socio-economic class* ; in Marxist theory, members of a society sharing a common relationship to the means of production, the three major classes being capitalists, landlords, and workers or proletarians. 2. In biology, any **taxonomic* group into which a **phylum* is divided, containing one or more **orders* (3). Examples are the classes of Amphibia, Mammalia, and Reptilia within the phylum Chordata.

[From Latin *classis* a class or rank]

classical conditioning *n.* One of the two major forms of **conditioning* (1), being the process of **learning* (1) through which an initially neutral **stimulus* (1), such as the ticking of a metronome, comes to elicit a particular **response*, such as salivation, as a consequence of being paired repeatedly with an **unconditioned stimulus*, such as food. Also called *Pavlovian conditioning* . See also BACKWARD CONDITIONING, DELAYED CONDITIONING, EVALUATIVE CONDITIONING, FEATURE NEGATIVE LEARNING, FEATURE POSITIVE LEARNING, FORWARD CONDITIONING, HIGHER-ORDER CONDITIONING, LATENT INHIBITION, OVERSHADOWING. Compare OPERANT CONDITIONING, REFLEXOLOGY (2).

classical receptive field See RECEPTIVE FIELD.

classical test theory *n.* A statistical approach to the theory of psychological testing in which an individual's measured score is assumed to be equal to the true score plus random measurement error. The measurement error is usually assumed to have a **mean* of zero and to be uncorrelated with the true score. Within this theoretical framework, the **reliability* of a test item is defined as the proportion of the total **variance* in scores that is due to variance in the true scores. Also called *classical measurement theory* . The principal alternative is **item response theory*.

claustrum *n.* Either of two thin sheets of grey matter, composed chiefly of

*****ebook converter DEMO Watermarks*****

spindle cells, separating the **internal capsule* from the **insula*, situated on either side of the **lenticular nucleus* at the base of the brain. [From Latin *claustrum* a bar]

Clérambault's syndrome See DE CLÉRAMBAULT'S SYNDROME.

Clever Hans *n.* The most famous of the **Elberfeld horses*, trained by the retired German mathematics teacher Wilhelm von Osten (1838–1909) in 1901 and displayed in Berlin for several years, appearing to have a good knowledge of spoken and written German and an ability to tell the time and carry out mental arithmetic, among other equally unlikely capabilities. Clever Hans (*der kluge Hans*) answered yes/no questions by tapping its hoof on the ground according to a prearranged code, and fraud seemed unlikely, because von Osten allowed anyone to watch the horse perform and even to put questions to the horse in his absence, but the psychologist Oskar Pfungst (1874–1932) studied the horse experimentally and discovered that its abilities were illusory. Clever Hans could not respond intelligently when no one within its visual field knew the right answer to the question being asked: for example, if one person whispered a number into its left ear and another person a different number into its right ear, then if Clever Hans was asked to add the two numbers, it was stumped. Pfungst concluded that Clever Hans had learnt to respond to **non-verbal communication*: it began tapping whenever people standing nearby adopted expectant postures and turned their attention to its hoof, and it stopped as soon as the onlookers (probably unwittingly) gave anticipatory head and eye movements when the correct number of taps was reached. Von Osten usually wore a wide-brimmed hat, which had the effect of amplifying small head movements and making the horse's task easier, but he was probably unaware of this. In 1907 Pfungst published an account, the English translation of which was entitled *Clever Hans (the Horse of Mr von Osten): A Contribution to Experimental and Animal Psychology* (1911). See also FACILITATED COMMUNICATION.

client *n.* A person in receipt of a professional service, including a person being treated by a professional psychologist, psychiatrist, psychoanalyst, or counsellor. Also called a *patient*.

client-centred therapy *n.* A technique of **counselling* or
*****ebook converter DEMO Watermarks*****

***psychotherapy** developed by the US psychologist Carl Rogers (1902–87) from the 1940s onwards, in which therapists or counsellors deliberately refrain from interpreting what their clients say but try instead to convey an attitude of *unconditional positive regard* in the context of a permissive, accepting, non-threatening relationship, and to help by clarifying, rephrasing, and ***reflecting back** the feelings or emotions that lie behind the clients' words and behaviour, the assumption being that people are capable of identifying the sources of their own emotional problems and of working out solutions for themselves once they are freed from feelings of anxiety and insecurity. US *client-centered therapy*. Also called *client-centred counselling*, *person-centred therapy* or *counselling*, *non-directive therapy* or *counselling* .

climacteric *n.* Another name for the ***menopause**; by analogy, a supposed period in a man's life corresponding to the female menopause, characterized by diminished sexual activity and energy, also called a *male menopause* ; more generally, any critical phase of development when major bodily changes occur. *See also* **ANDROPAUSE**, **IRRITABLE MALE SYNDROME**. [From Greek *klimakterikos* a critical event or period, from *klimakter* a rung of a ladder, from *klimax* a ladder + *-ikos* of, relating to, or resembling]

climbing fibre *n.* One of the two types of afferent neurons conveying signals to the ***cerebellum**, projecting from the contralateral ***inferior olivary nucleus** and forming multiple synapses with single ***Purkinje cells** of the cerebellar cortex. US *climbing fiber*. *Compare* **MOSSY FIBRE**.

Clinical History Schedule *n.* A semi-structured clinical interview, designed for the objective evaluation of patients with mental disorders, forming part of the ***SCAN** system. **CHS** *abbrev.*

clinical prediction *n.* Prediction based on subjective judgement or intuition, as when a psychologist uses clinical experience to formulate a prediction informally, on the basis of interview impressions, other life-history data, and possibly psychometric test data, about how an individual is likely to behave or respond to treatment. The first systematic analysis and comparison of clinical prediction and ***actuarial prediction** was made by the US psychologist Paul Everett Meehl (1920–2003) in his book *Clinical and Statistical Prediction: A Theoretical Analysis and a Review of the Evidence*

*****ebook converter DEMO Watermarks*****

in 1954.

clinical psychology *n.* One of the major professions of psychology, concerned with the nature, diagnosis, classification, treatment, and prevention of **mental disorders* and disabilities, to be distinguished in careful usage from **abnormal psychology*, which is the scientific study of mental disorders. *See also* *PSYCHIATRY*. **clinical psychologist** *n.* One who practises clinical psychology.

clinical trial *n.* A research investigation designed to provide objective information on the therapeutic efficacy of a drug or other form of treatment, the most important type of clinical trial being the ** randomized controlled trial* (RCT).

clipping *n.* Pronouncing a **vowel* more quickly than normal, without changing its sound quality, as in the pronunciation of the vowel in the word *rice* compared with the same vowel in the word *rise*. In English, a vowel is clipped when followed by a **fortis* consonant rather than a **lenis* consonant within the same syllable, and this phenomenon is called pre-fortis clipping: compare *beat/bead*, *loose/lose*, *rate/raid*.

clique *n.* A small, exclusive group of friends or associates. In a **sociogram*, a subgroup of members within a larger group, each more positively attracted to members of the subgroup than to other members of the larger group. [From Old French *clique*, a latch or a clicking sound, from *cliquer* to click]

clitic *n.* A linguistic item that resembles a word but cannot function independently because of its dependence on an adjoining word and can never be stressed. A clitic is thus intermediate between a word and an affix (prefix or suffix). The usual examples are the French pronouns *je* and *tu*, but the English negative *-n't* (in words like *shouldn't*) is another example. *See also* *ENCLITIC*, *PROCLITIC*. [Back formation from *enclitic* and *proclitic*]

clitoridectomy *n.* Surgical removal of the external tip of the **clitoris* in female circumcision. *See also* *FEMALE GENITAL MUTILATION*. [From Greek *kleitoris* a clitoris + *ectome* an excision, from *tome* a cut]

*****ebook converter DEMO Watermarks*****

clitoris *n.* An elongated erotically sensitive erectile organ visible near the front of a woman's ***vulva** and extending far into her body. It is much larger than is generally realized and as is shown in standard diagrams, and it is homologous with the male ***penis**. See also **CLITORIDECTOMY**. **clitoral** *adj.* [New Latin, from Greek *kleitoris* a clitoris, perhaps from *kleithria* a keyhole, from *kleis* a key, from *kleiein* to close]

cloacal theory *n.* In ***psychoanalysis**, a sexual theory, often adopted by children, that confuses the female vagina and the anus, recognizing only one orifice that is believed to function as a birth canal and also for defecation and coitus. Sigmund Freud (1856–1939) first referred to it in 1908 in an article 'On the Sexual Theories of Children' (*Standard Edition*, IX, pp. 209–26). According to Freud, children of both sexes tend to believe that 'the baby must be evacuated, like a piece of excrement, like a stool' (p. 219). Also called *cloaca theory*. [From *cloaca* the pelvic cavity of most vertebrates, apart from higher mammals, into which both the alimentary canal and the genital ducts open, from Latin *cloaca* a sewer, from Greek *klyzein* to wash out]

Clock Drawing Test *n.* A quick and easy test of visuospatial ability, often used as a screening test for ***Alzheimer's disease** or ***dementia**. The respondent is asked to draw a traditional (analogue) clock face with all the numbers in place and the hands pointing to 11:10 or ten minutes past eleven. The following 10-point scoring system is typical: 10: hands correctly positioned, minute hand longer than hour hand, all numbers correct; 9: hands slightly incorrect, or one number incorrect; 8: one hand significantly misplaced by one number, or numbers poorly spaced; 7: hands misplaced by more than one number, or numbers very poorly spaced; 6: hands or numbers inappropriately depicted, or numbers crowded or reversed; 5: hands not clearly pointing to numbers, or numbers wrongly depicted; 4: hands or numbers absent, or outside clock face, or numbers in wrong sequence; 3: hands missing, or numbers and clock face unconnected; 2: only vague representation of clock face; 1: irrelevant drawing or no attempt. Scores between 7 and 10 are considered normal, 6 is borderline (scored by about 13 per cent of normal respondents and almost 90 per cent of patients with Alzheimer's disease), and scores of 5 and below are rare in normal populations (less than 1 per cent) but common in Alzheimer's patients. The

*****ebook converter DEMO Watermarks*****

origin of the test is uncertain, but it may have been introduced in the 1920s by the English neurologist Sir Henry Head (1861–1940). **CDT** *abbrev.*

clomipramine *n.* Clomipramine hydrochloride, a **tricyclic antidepressant* drug, closely related to **imipramine*, that is a potent **selective serotonin reuptake inhibitor*, and is used chiefly in the treatment of obsessive-compulsive disorder. Also called *Anafranil* (trademark). [From *c(h)lo(ro)*-denoting chlorine + *(i)mipramine*]

clone *n.* **1.** An organism with identical genetic constitution to one or more others, descended from a common parent or ancestor by a form of asexual reproduction or created artificially. **2.** A segment of **DNA* that has been isolated and copied by **genetic engineering*. *vb.* **3.** To replicate as a clone (1, 2) or clones. **cloning** *n.* Producing clones (1, 2).

[From Greek *klon* a shoot or bud]

clonic convulsion *n.* An involuntary rhythmic alternation between contraction and relaxation of skeletal muscles. Also called a *clonic spasm*. Compare *TONIC–CLONIC*, *TONIC CONVULSION*. [From Greek *klonos* contraction]

closed head injury *n.* A blow to the head causing brain damage without penetrating the skull.

closed-loop control *n.* In **cybernetics*, a control process in which a system's output is returned to its input as **feedback*, this being characteristic of **controlled processing* and all **homeostatic* processes. Compare *OPEN-LOOP CONTROL*.

closed node *n.* A **node* (2) that has been processed. Compare *OPEN NODE*.

closed question *n.* A question to which an answer must be selected from a limited set. Questionnaire items with fixed **response categories* are closed questions, and questions in interviews or informal conversations can be open or closed. *Are you angry about that?* is a closed question, because it implies a yes/no answer, whereas *How do you feel about that?* is an **open-ended question*, because the range of possible answers is unlimited. Open-

*****ebook converter DEMO Watermarks*****

ended questions are more effective in breaking the ice or drawing out responses in tense or awkward social situations. Also called a *close-ended question* .

close-ended question *n.* Another name for a **closed question*.

close vowel *n.* A **vowel* (see the diagram accompanying that entry) produced at a high position in the mouth with the body of the tongue raised towards the roof of the mouth, such as the vowels in *seen* and *soon*. Also called a *high vowel* . Compare MID VOWEL, OPEN VOWEL.

closure grouping law *n.* One of the four original **grouping laws* of **Gestalt psychology*, formulated in 1923 by the German psychologist Max Wertheimer (1880–1943) to explain the organization of parts into wholes by the visual system. According to the law, elements that are perceived to form a closed contour tend to be grouped together, so that the array [] [] [] [] tends to be perceived as four rectangular units rather than eight separate elements. See also CLOZE PROCEDURE, COMMON FATE, COMMON REGION, CONNECTEDNESS GROUPING LAW, LANDOLT CIRCLE, *PRÄGNANZ*. Compare GOOD CONTINUATION, PROXIMITY GROUPING LAW, SIMILARITY GROUPING LAW.

clouding of consciousness *n.* A state of consciousness affecting **thinking*, **attention*, and **perception*, in which one is confused about, or not fully aware of, one's immediate surroundings.

Cloud nine *n.* A street name for **ephedrine*.

clozapine *n.* A **dibenzodiazepine* drug that belongs to the group of **atypical antipsychotics* and that acts as a receptor antagonist of both **serotonin* and **dopamine* and is used in the treatment of schizophrenia, having fewer **neuroleptic-induced* side-effects than are associated with conventional **neuroleptic* (1) drugs. Also called *Clozaril* (trademark). See also DOPAMINE ANTAGONIST. [From *c(h)lo(ro)-* denoting chlorine + *(ben)z(odi)a(ze)pine*]

cloze procedure *n.* A method for testing a person's ability to

comprehend written text by guessing missing words that have been deleted at regular intervals from the text. [From to *close* in the sense of to complete, alluding to the **closure grouping law* of Gestalt psychology]

cluster analysis *n.* A statistical technique, introduced in 1935 by the US psychologist Robert Choate Tryon (1901–67) for assigning a set of individual people or other items to groups called *clusters* on the basis of one or more measurements of the individuals, so that individuals within the same cluster are in some sense closer or more similar to one another than to individuals in another cluster. For example, measurements of a cross-section of the population on variables such as age, income, and number of books in the home, if subjected to cluster analysis, may reveal distinct and recognizable clusters such as students, pensioners, and unemployed people. There are many different methods of cluster analysis, including **agglomerative hierarchical clustering*, **average linkage between groups method*, **average linkage within groups method*, **complete linkage clustering*, **divisive hierarchical clustering*, **nearest neighbour method*, **single-linkage clustering*, and (perhaps most popular) **Ward's method*. *See also* DENDROGRAM, HORIZONTAL ICICLE PLOT. *Compare* FACTOR ANALYSIS, PRINCIPAL-COMPONENTS ANALYSIS. **cluster-analytic** *adj.*

clustering *n.* In **free recall*, a tendency for items that are conceptually related to be remembered consecutively whether or not they were grouped together during the learning phase. For example, if the names of cities, trees, and animals are learnt in random order, the cities will tend to be recalled together in one group, the trees in another group, and the animals in a third group.

cluster sample *n.* A **probability sample* used when there is no suitable **sampling frame* of the population but a sampling frame for subgroups is available. Thus, to survey hospital patients throughout an entire country, an investigator may be able to select a random sample of hospitals from a list of all hospitals in the country and could then apply a questionnaire to all patients in the selected hospitals. *See also* MULTISTAGE CLUSTER SAMPLING, RANDOM DIGIT DIALLING, SIMPLE RANDOM SAMPLE, STRATIFIED RANDOM SAMPLE. *Compare* ACCIDENTAL SAMPLE, CONVENIENCE SAMPLE, NON-PROBABILITY SAMPLE, OPPORTUNITY SAMPLE, QUOTA SAMPLE, SELF-SELECTED SAMPLE, SNOWBALL SAMPLE.

*****ebook converter DEMO Watermarks*****

cluster suicides *n.* Multiple suicides occurring in the same area at about the same time, usually assumed to involve **social contagion*.

clysmaphilia *n.* An alternative spelling of **klysmaphilia*.

CN gas *abbrev.* Chloroacetophenone gas, a chlorine compound used as a **tear gas*. [So called because it is a chlorine derivative of acetophenone]

coaching psychology *n.* A branch of **applied psychology* that emerged in the early 2000s, defined in 2005 in the first issue of *The Coaching Psychologist* (p. 7), and in 2006 in the first issue of the *International Coaching Psychology Review* (p. 8) as the application of psychological techniques for ‘enhancing well-being and performance in personal life and work domains underpinned by models of coaching grounded in established adult learning or psychological approaches’. [From French *coche* a wagon or coach, from Hungarian *kocsi szekér* a wagon of Kocs, a Hungarian village where coaches were first made, alluding figuratively to the idea that coaching involves carrying pupils along a road]

coaction effect *n.* The effect on an individual’s task performance of the presence of other individuals engaged in the same activity. Depending on the nature of the task, the effect on performance may be positive or negative. *See also* *DRIVE THEORY OF SOCIAL FACILITATION*, *SOCIAL FACILITATION*. *Compare* *AUDIENCE EFFECT*, *SOCIAL LOAFING*. [From Latin *co-* together + *agere, actum* to do]

coactor *n.* Any organism engaging in joint action with another or engaging in the same behaviour in the same place as another.

cocaine *n.* A highly addictive **sympathomimetic* **alkaloid* substance obtained from the Andean coca shrubs *Erythroxylon coca* and *E. truxillense*, consumed as a drug in various forms, including coca leaves, which are chewed by native populations in parts of Central and South America, coca paste (**basulca*), which may be smoked, and cocaine hydrochloride, which is either snorted through the nostrils in powder form or dissolved in water and injected intravenously. It is the prototypic local anaesthetic drug, though no

longer used for that purpose owing to the risk of its being abused if readily available in medicine cabinets. It also blocks the amine reuptake mechanism of noradrenergic and dopaminergic neurons, thereby causing **noradrenalin* (norepinephrine) and **dopamine* to accumulate at **synapses* (1) in the central nervous system, resulting in mood elevation, and it acts as a central nervous system **stimulant* by increasing the release of **catecholamines*, high doses producing visual, auditory, and sometimes tactile hallucinations, together with paranoia and disruption of thought processes. Until 1904 it was one of the ingredients of Coca Cola. Its street names include *Charlie*, *coke*, and *snow*. Formula $C_{17}H_{21}NO_4$. *See also* ADDICTION, COCAINE-RELATED DISORDERS, CRACK, DEPENDENCE (2), SPEEDBALL, SUBSTANCE DEPENDENCE, SUBSTANCE-INDUCED DISORDERS, SUBSTANCE-RELATED AND ADDICTIVE DISORDERS, SUBSTANCE USE DISORDERS. *Compare* AMPHETAMINE, TRICYCLIC ANTIDEPRESSANT. [From *coca* + *-ine* indicating resemblance, from Latin *-inus* resembling or consisting of]

cocaine bug *n.* A name given to **formication* when it occurs as a **withdrawal* symptom in cocaine users. Also called the *Magnan sign*.

cocaine-related disorders *n.* **Substance-related and addictive disorders* associated specifically with the consumption of **cocaine* or **crack*. *See* SUBSTANCE ABUSE, SUBSTANCE DEPENDENCE, SUBSTANCE-INDUCED DISORDERS, SUBSTANCE USE DISORDERS.

coccygeal nerve *n.* Either of a pair of **spinal nerves* attached to the bottom of the spinal cord, serving the **striped muscles*, the skin, and the **autonomic nervous system*. [From Greek *kokkyx* the cuckoo, from the resemblance of the coccyx to a cuckoo's beak]

cochlea *n.* The spiral bony tube in the inner ear containing the **organ of Corti* with its **basilar membrane* on which are situated **hair cells* that respond to sound waves by converting them into nerve impulses. *See also* SCALA. **cochleae** *pl.* **cochlear** *adj.* [From Latin *cochlea* a snail or spiral, from Greek *kochlias* a snail]

cochlear canal *n.* A spiral tunnel within the **cochlea* of the inner ear, narrowing gradually in diameter towards the apex of the cochlea,

communicating through one opening with the **middle ear*, through a second with the **vestibular system*, and through a third with a tiny canal on the inner surface of the temporal bone. *See also* *OVAL WINDOW*, *ROUND WINDOW*, *SCALA*. Also called the *cochlear duct* .

cochlear duct *n.* Another name for the **cochlear canal*.

cochlear emissions *n.* Sounds generated by vibrations originating within the **cochlea*.

cochlear implant *n.* An electronic device surgically inserted into the **cochlea* of a deaf person, feeding electrical signals from a transmitter outside the scalp into the **vestibulocochlear nerve*. It does not transmit speech clearly but restores some awareness of sound in a totally deaf person.

cochlear microphonic *n.* The summated electrical activity of large numbers of neurons in the **cochlea*, recorded from flat metal electrodes attached to the skin in the vicinity of the ear, analogous to the **EEG* or the **electroretinogram*. Also called a *cochleogram* . **CM** *abbrev.*

cochlear nerve *n.* One of the two major branches of the **vestibulocochlear nerve*, transmitting auditory information from the **organ of Corti* in the cochlea of the inner ear to the brain. *See also* *VESTIBULAR NERVE*.

cochlear nucleus *n.* Either of the nuclei of the **cochlear nerves* in the floor of the fourth ventricle of the brain, the first relay station for auditory nerve fibres.

cochlear window *n.* Another name for the **round window*.

cochleogram *n.* Another name for the **cochlear microphonic*.

cochleotopic map *n.* Another name for a **tonotopic map*.

Cochrane review *n* A **systematic review* of research into the effects of

a healthcare intervention, designed to inform and guide practical decision making. A Cochrane review adheres to a structured format described in the *Cochrane Handbook for Systematic Reviews of Interventions* published by the Cochrane Collaboration, an international organization established in 1993. [Named after the Scottish epidemiologist Archie L(eman) Cochrane (1909–88) who promoted the use of systematic reviews of randomized controlled trials]

Cochran's C *n.* In statistics, a test of the assumption of **homogeneity of variance* required by procedures such as ** analysis of variance (ANOVA)*, namely that several groups come from populations with the same variance. Cochran's *C* test is based on the ratio of the largest group variance to the sum of all the group variances. [Named after the Scottish statistician William Gemmell Cochran (1909–80) who developed the test in 1947]

Cochran's Q *n.* In statistics, a test of the null hypothesis that several related dichotomous variables, measured on the same individual or on matched individuals, have the same mean. Cochran's *Q* is an extension of the **McNemar test* to the *k*-sample case. [Named after the Scottish statistician William Gemmell Cochran (1909–80) who developed the test in 1950]

cockney *n.* A working-class native of the East End of London, traditionally within earshot of the bells of St Mary-le-Bow church, and the associated **dialect* of English, incorporating the **glottal stop* and **rhyming slang*. [From Middle English *cokeney* a cock's egg, hence an oddity, or perhaps from French *coquin* a rogue]

cocktail party phenomenon *n.* A phenomenon of selective **attention* in speech perception that enables a listener to attend to one among several equally loud conversations occurring simultaneously, factors such as voice quality and directional cues facilitating the task. Recordings of conversations under similar circumstances are very much harder to understand. The term was introduced in 1957 by the British telecommunications engineer Colin Cherry (1914–79). *See also* ATTENUATION THEORY, BOTTLENECK THEORY, FILTER THEORY, SELECTIVE ATTENTION.

co-counselling *n.* A technique of do-it-yourself **counselling* or
*****ebook converter DEMO Watermarks*****

***psychotherapy** in which people work in pairs, taking turns at playing the role of counsellor and client. It was developed in the 1950s by the US counsellor (Carl) Harvey Jackins (1916–99). US *co-counseling*. Also called *re-evaluation counsel(l)ing*. Compare **CO-FACILITATOR**.

coda *n.* **1.** A concluding passage of a musical composition, dance, or other work, separate from the basic structure of the work. **2.** The ***consonant** at the end of a syllable, if one exists. The main part of a syllable is almost invariably a ***vowel**, and if nothing follows it, as in all Japanese syllables, then the vowel is said to have zero coda. In English up to four consonants can be present in a coda, as in the word *sixths*.

[From Latin *cauda* a tail]

codeine *n.* A white crystalline ***alkaloid** and ***narcotic analgesic** drug, synthesized partly from ***morphine** and having similar, though much milder, effects. See also **OPIOID-RELATED DISORDERS**. [From Greek *kodeia* the head of a poppy + *-ine* indicating resemblance, from Latin *-inus* resembling or consisting of]

co-dependency *n.* A relationship or partnership in which two or more people support or encourage each other's unhealthy habits, especially substance dependencies.

coding test *n.* Any ***intelligence** test item or subtest in which the respondent has to encode information according to a specified rule. Also called a *recoding test*, a *symbol-substitution test*, or a *substitution test*. See **DIGIT—SYMBOL TEST**.

codon *n.* A triplet of ***bases (1)** in a ***DNA** molecule, or a corresponding triplet in an ***RNA** molecule, that either codes for a single ***amino acid** during ***protein** synthesis or is interpreted as a marker for the beginning or end of a segment of nucleic acid to be translated. See also **EXON**, **GENETIC CODE**, **INTRON**, **START CODON**, **STOP CODON**. [A blend of *cod(ing)* and *(regi)on*]

codon family *n.* A set of ***codons** all coding for the same ***amino acid** or signalling the end of a genetic message, such as the set of ***RNA** codons

*****ebook converter DEMO Watermarks*****

GGU, GGC, GGA, and GGG, all coding for the amino acid **glycine*, or the set UAA, UAG, and UGA, all reserved as **stop codons*. With only 20 amino acids involved in the synthesis of proteins and four bases to encode them, there is redundancy in the **genetic code*, because there are 64 possible triplets of four bases; consequently, every amino acid apart from **tryptophan* (UGG) is encoded by at least two different codons.

coefficient alpha *n.* Another name for **Cronbach's alpha*.

coefficient of consanguinity *n.* The probability, symbolized by F_{ij} or f_{ij} , that a pair of **alleles* belonging to different individuals are the same, given their degree of common ancestry. Also called the *coefficient of kinship*. Compare COEFFICIENT OF RELATIONSHIP.

coefficient of determination *n.* In statistics, a measure of the **goodness of fit (1)* of a set of scores to a **linear model*. It is defined as the proportion of the variance in the **dependent variable* that is explained by the model. It can range in value from 0 to 1, with 1 indicating perfect fit. Symbol: R^2 .

coefficient of kinship *n.* Another name for the **coefficient of consanguinity*.

coefficient of relationship *n.* The proportion of **alleles* that are the same in two related individuals, symbolized by r . Compare COEFFICIENT OF CONSANGUINITY.

coefficient of reliability See RELIABILITY COEFFICIENT.

coefficient of validity See VALIDITY COEFFICIENT.

coenaesthesia *n.* The general feeling of bodily existence arising from the sum of bodily sensations as distinct from the particular sensations themselves; the vital sense. Also called *coenesthesia*. US *cenesthesia*, *cenesthesia*. [From Greek *koinos* common + *aisthesis* feeling]

co-evolution *n.* A process in which the simultaneous evolution of two or more organisms, such as a **predator* and its **prey*, is dependent on or influenced by their mutual interaction or relationship.

co-facilitator *n.* A counsellor or therapist who works in conjunction with another, especially in leading a **group therapy* session. Also called a *co-therapist*.

cognate languages *n.* Languages sharing a common source, such as Italian and Spanish, which both come from Latin.

cognition *n.* The mental activities involved in acquiring and processing **information* (1). Its study includes **cognitive psychology*, **psycholinguistics*, **artificial intelligence*, and **cognitive neuropsychology*. A cognition is an item of knowledge or belief. *See also* *INFORMATION PROCESSING*. [From Latin *cognoscere* to get to know, from *com-* together + *noscere* to know]

cognitive *adj.* Of, relating to, or involving **cognition*.

cognitive ability *n.* An ability to perform any of the functions involved in **cognition*; more generally, another name for **intelligence*.

cognitive-analytic therapy *n.* A form of **brief psychotherapy* based on **object relations* theory, **personal construct theory*, and aspects of **behaviour therapy* and **cognitive therapy*.

cognitive-appraisal theory *n.* A theory of **emotions* according to which **arousal* provides the basis for any emotion, but the quality of the emotion is provided by the person's interpretation of its cause, the specific emotion that is felt depending on the person's interpretation and explanation of the felt arousal. The theory, proposed in 1964 by the US psychologist Stanley Schachter (1922–97), is a type of **attribution* theory based on the **James–Lange theory* but taking into account the main criticism of it—that different emotions tend to share the same bodily responses. In a famous experiment in 1962 by Schachter and the US psychologist Jerome E(verett)

Singer (1929–2010), participants were injected with adrenalin, and some of them were led to interpret the resulting arousal as a purely physiological side-effect of the injection. The participants were then placed in situations designed to elicit either euphoria or anger, and those who had been led to attribute the arousal to the injection expressed less emotion than those who attributed it to the situations they were placed in, although the results were not entirely clear-cut. Also called the *cognitive-evaluation theory* . See also [FACIAL FEEDBACK HYPOTHESIS](#). Compare [CANNON–BARD THEORY](#).

cognitive balance See [BALANCE THEORY](#).

cognitive behaviour modification *n.* A form of [*psychotherapy](#) based on [*cognitive](#) therapy and [*behaviour](#) modification, in which the client or patient learns to replace dysfunctional self-speech (such as *I knew I'd never be able to cope with this job*) with adaptive alternatives (*The job's not going well, but I am capable of working out a plan to overcome the problems*). Its applications include anger control, stress management, coping with anxiety, and developing social skills. US *cognitive behavior modification*. Also called *cognitive behaviour therapy* (CBT) or *cognitive behavioural therapy* . See also [ACCEPTANCE AND COMMITMENT THERAPY](#), [DIALECTICAL BEHAVIOUR THERAPY](#), [MINDFULNESS-BASED COGNITIVE THERAPY](#), [THOUGHT STOPPING](#). Compare [BEHAVIOUR THERAPY](#). **CBM** abbrev.

cognitive behaviour therapy *n.* Another name for [*cognitive behaviour modification](#). **CBT** abbrev..

cognitive consistency theory *n.* Any of a number of theories of [*attitude](#) (1) and [*attitude change](#) according to which people strive to maintain consistency between their cognitions. The most prominent are [*balance theory](#), [*congruity theory](#), and [*cognitive dissonance](#) theory.

cognitive derailment *n.* A pattern of [*thinking](#), closely related to [*loosening of associations](#), in which ideas tend to slide from one track on to an unrelated or only indirectly related track. It is manifested in speech by idiosyncratic shifts between meaningful sentences or clauses, rather than within them. See also [DISORGANIZED SPEECH](#), [DISORGANIZED THINKING](#). Compare [INCOHERENCE](#).

*****ebook converter DEMO Watermarks*****

cognitive development *n.* The growth of cognitive abilities and capacities from birth to old age.

cognitive disorders *n.* A group of ***mental disorders**, the predominant symptoms of which are clinically significant deficits in an aspect or aspects of ***cognition**. See **AMNESTIC DISORDER**, **DELIRIUM**, **DEMENTIA**, **NEUROCOGNITIVE DISORDERS**.

cognitive dissonance *n.* A deceptively simple ***cognitive consistency theory**, first proposed in 1957 by the US psychologist Leon Festinger (1919–89), concerned with the effects of inconsistent cognitions—interpreted as items of knowledge or belief. If one of a pair of cognitions follows from the other, then the two are consonant; if one follows from the converse of the other, then they are dissonant; and if neither follows from the other or from its converse, then they are irrelevant to each other. The ‘follows from’ criterion is psychological rather than logical, consonance being said to exist if an outside observer would consider it more likely that a person who held one of the cognitions would also hold the other, rather than its converse. The dissonance relation is a motivating state of tension that tends to generate three kinds of dissonance-reducing behaviour: changing one of the cognitions, decreasing the perceived importance of dissonant cognitions, and/or adding further (justifying) cognitions. The standard example of a dissonance relation is the pair of cognitions *I smoke cigarettes* and *Cigarette smoking damages my health*. People who hold both cognitions can reduce the dissonance in three ways: changing the first cognition by giving up smoking or convincing themselves that they have given up, but this is difficult because this cognition is behaviourally anchored; changing the second cognition by rejecting, ignoring, or playing down the evidence linking cigarette smoking to ill health, but it is difficult in this case because of the overwhelming evidence; or adding justifying cognitions such as *But I smoke only low-tar brands*, *But I’m more likely to die in a car accident than from the effects of smoking*, and so on, which is the easiest and commonest method of dissonance reduction. The theory generates counter-intuitive predictions relating to the effects of free choices, resisting temptations, and telling lies. Also called *dissonance theory*. See also **ENDOWMENT EFFECT**, **EQUITY THEORY**, **FORCED COMPLIANCE**, **REACTANCE**, **SELF-PERCEPTION THEORY**.

cognitive economy *n.* The tendency for cognitive processes to minimize processing effort and resources. For example, we do not squander memory capacity on storing the information *has two legs* for every individual we know; instead, we store this fact as a general *default assumption* for people in general and add a separate memory *has one leg* or *has no legs* only in exceptional cases in which the default does not apply. *See also* COGNITIVE MISER, DEFAULT REASONING, PRINCIPLE OF LEAST EFFORT.

cognitive enhancer *n.* Another name for a **smart drug*.

cognitive-evaluation theory *n.* Another name for the **cognitive-appraisal theory*.

Cognitive Failures Questionnaire *n.* A questionnaire first published in 1982 by the English psychologist Donald E(ric) Broadbent (1926–93) and several colleagues, in which respondents answer questions about lapses such as forgetting to buy certain items when shopping. It is designed to measure forgetfulness and **absent-mindedness* in everyday life. CFQ *abbrev.*

cognitive heuristic *n.* Another name for a **heuristic*.

cognitive illusion *n.* An **illusion* in the cognitive domain, one of the best known examples being the **size–weight illusion*, although it is also a tactile illusion. *See also* EXPERIMENTALLY INDUCED FALSE MEMORY, FILLED-DURATION ILLUSION, ILLUSORY CORRELATION, MOSES ILLUSION, RUBBER HAND PHENOMENON, RUMPELSTILTSKIN PHENOMENON, TYCHO’S ILLUSION, YOLK PHENOMENON.

cognitive impairment *n.* Any diminution in the quality or strength of **cognitive* functioning, especially **amnesia*, **dementia*, or **delirium*. *See also* MILD COGNITIVE IMPAIRMENT.

cognitive impairment no dementia *n.* Another name for **mild cognitive impairment*. CIND *abbrev.*

cognitive interview *n.* A structured form of interviewing developed in 1984 by the US psychologist R(alph) Edward Geiselman (born 1949) and colleagues as an investigative tool in **forensic psychology* to maximize the amount of reliable information that witnesses can recall. It incorporates several memory-enhancing features, such as reinstating the context of the episode to be recalled (see *STATE-DEPENDENT MEMORY*) and encouraging the interviewee to think about the events in different sequences and from different perspectives.

cognitive invention *n.* A term introduced by the US psychologist Irvin Rock (1922–95) to denote the process by which **illusory contours* arise.

cognitive map *n.* A mental representation of a portion of the physical environment and the relative locations of points within it. Cognitive maps are generally distorted by simplifying assumptions and preconceptions: in people's cognitive maps roads tend to join at right angles even when they do not in reality, and in the cognitive maps of most British people, Bristol lies to the west of Edinburgh, presumably because of knowledge that Bristol is on the west coast and Edinburgh on the east coast, whereas on a cartographer's map the reverse is true. Humans and animals, including birds, navigate partly by cognitive maps and partly by heading vectors (travelling in a fixed direction towards the goal), the former but not the latter being controlled by the **hippocampus*. The term was introduced in an article in the journal *Psychological Review* in 1948 by the US psychologist Edward C(hace) Tolman (1886–1959), who described an experiment in which he trained a group of rats to run through a maze to a goal box, then blocked off the path that the rats were using and observed that most of the rats unhesitatingly chose alternative paths heading in the right general direction. Also called a *conceptual map* or a *mental map* .

cognitive miser *n.* An interpretation of **stereotypes* as psychological mechanisms that economize on the time and effort spent on **information* processing by simplifying social reality, which would otherwise overwhelm our cognitive capacities with its complexity. The concept was introduced by the US journalist Walter Lippmann (1899–1974) in his book *Public Opinion* in 1922. A more general term for essentially the same phenomenon is **cognitive economy*. See also *DUAL-PROCESS MODEL*, *PRINCIPLE OF LEAST EFFORT*.

*****ebook converter DEMO Watermarks*****

cognitive neuropsychology *n.* The study of *deficits or *impairments in human *cognitive function resulting from brain damage. Alongside *cognitive psychology and *artificial intelligence, it is one of the three main approaches to cognition and has been especially fruitful in research into processes such as reading and writing. For example, it has established that different routes exist for translating written words into speech, because some brain-damaged patients with *surface dyslexia are able to read only by translating each letter into its corresponding sound and have great difficulty with orthographically irregular words like *yacht*, whereas others with *deep dyslexia or *phonological dyslexia can read only by whole-word recognition and have difficulty with simple non-words like *bink*, because they cannot translate letters into sounds. *See also* NEUROLINGUISTICS.

cognitive penetrability *n.* The degree to which a cognitive process is unconsciously influenced by assumptions and expectations. For example, research has shown that if one imagines shifting one's gaze from a lighthouse to a bridge, then the time taken is not related to the imagined distance, whereas if one imagines walking or running from the lighthouse to the bridge, or imagines an object moving between these locations, then the time taken is proportional to the imagined distance, suggesting that these cognitive processes are unconsciously influenced by assumptions and expectations about physical movement and are therefore cognitively penetrable. The concept was introduced and named in articles in 1978 and 1979 by the Canadian psychologist Zenon Walter Pylyshyn (born 1937), who carried out the lighthouse-bridge experiment and who also argued that the reason why the time taken for *mental rotation increases in direct proportion to the angle through which the image is rotated, is that mental rotation is cognitively penetrable inasmuch as it is influenced by the assumption that the object rotates smoothly through intermediate positions.

cognitive psychology *n.* The branch of psychology concerned with all forms of *cognition, including *attention, *perception, *learning (1, 2), *memory, *thinking, *problem solving, *decision making, and *language (1). *See also* INFORMATION PROCESSING.

cognitive restructuring *n.* Any form of *cognitive therapy, especially *rational emotive behaviour therapy, in which clients are encouraged and
*****ebook converter DEMO Watermarks*****

helped to adopt more rational or constructive ways of thinking about their problems.

cognitive schema *See* [SCHEMA](#).

cognitive science *n.* An umbrella term for an interdisciplinary enterprise, embracing cognitive psychology, psychobiology, anthropology, computer science, artificial intelligence, linguistics, and philosophy, concerned with information acquisition and processing. It includes research into language, learning, perception, thinking and problem solving, and knowledge representation. The term was introduced in 1973 by the English theoretical chemist and computer scientist H(ugh) Christopher Longuet-Higgins (1923–2004) in a review of [*artificial intelligence](#) included in a document entitled *Artificial Intelligence: A Paper Symposium* published by the Science Research Council of the UK.

cognitive set *n.* A temporary readiness to think or to interpret information in a particular way. *See also* [AUFGABE](#), [SET \(2\)](#).

cognitive slippage *n.* A form of [*thought disorder](#) characterized by a disturbing sense of discontinuity with respect to time and person; a tendency to interpret experiences according to symbols and meanings rather than facts; and an impaired ability to generalize from one situation to another analogous one. It is most commonly referred to as a characteristic of [*schizotypy](#) or [*schizotypal \(personality\) disorder](#).

cognitive style *n.* A characteristic and self-consistent mode of intellectual and perceptual functioning. The earliest classification of cognitive styles was suggested in 1923 by the Swiss psychologist Carl Gustav Jung (1875–1961), and a modified form of it is assessed through the [* Myers–Briggs Type Indicator \(MBTI\)](#). *See also* [CONVERGENCE–DIVERGENCE](#), [FIELD DEPENDENCE–INDEPENDENCE](#), [INTOLERANCE OF AMBIGUITY](#), [LOCUS OF CONTROL](#), [REFLECTION–IMPULSIVITY](#).

cognitive therapy *n.* A form of [*psychotherapy](#) aimed at modifying people's beliefs, expectancies, assumptions, and styles of thinking, based on the assumption that psychological problems often stem from erroneous
*****ebook converter DEMO Watermarks*****

patterns of thinking and distorted perceptions of reality (such as overgeneralizations of the type, *People are always letting me down*) that can be identified and corrected. It has been applied especially to the treatment of depression. The first widely used form of cognitive therapy, not labelled as such, was *rational emotive therapy (RET), and the most influential proponent of a later and more complex form of cognitive therapy was the US psychiatrist Aaron (Temkin) Beck (born 1921). Beck was the first to suggest in his book *Depression: Clinical, Experimental, and Theoretical Aspects* (1967) that depression-prone people tend to have negative *self-schemas revolving around assumptions of inadequacy, failure, loss, and worthlessness; Beck assumed that these beliefs are unrealistic and biased, but research into *depressive realism suggests the opposite. See also COGNITIVE BEHAVIOUR MODIFICATION, COGNITIVE RESTRUCTURING, DEPRESSIVE REALISM, MINDFULNESS-BASED COGNITIVE THERAPY.

cognitivism *n.* A psychological perspective according to which the study of cognition is likely to lead to a broad understanding of human psychology.

cogwheel rigidity *n.* A form of myotonia or muscular rigidity characteristic of *Parkinson's disease, in which pushing on an arm causes it to move in jerky increments rather than smoothly. Compare CATALEPSY, CEREAL FLEXIBILITAS, CLASP-KNIFE RIGIDITY.

Cohen's d *n.* A measure of *effect size, the most familiar form being the difference between two means (M_1 and M_2) expressed in units of *standard deviations: the formula is $d = (M_1 - M_2)/\sigma$, where σ is the pooled standard deviation of the scores in both groups. A value of d below 0.20 is considered small, 0.50 medium, and 0.80 large. [Named after the US psychologist Jacob (Jack) Cohen (1923–98) who devised it and popularized it in his book *Statistical Power Analysis for the Behavioral Sciences* (1969, 1988)]

Cohen's kappa coefficient See KAPPA STATISTIC.

cohesive self *n.* In *self-psychology, a coherent structure representing the normally functioning self.

cohoba *n.* A psychotropic snuff containing ***bufotenin**, derived from the seeds of the South American tree *Piptadenia peregrina*. Compare **AMANITA MUSCARIA**, **FLY AGARIC**. [From Latin American Spanish *cojoba* cohoba, derived from native Arawakan]

cohort *n.* A group of people who share some experience or demographic ***trait** in common, especially that of being the same age (an age cohort). A *cohort study* is a type of research design in which a cohort of individuals is investigated repeatedly over an extended period. A *cohort effect* is a potentially misleading conclusion about developmental changes derived from a ***cross-sectional study**, such as the conclusion that individual IQs decline precipitately from about 20 years of age, a finding that is in fact due to younger cohorts having higher average IQs than older ones (see **FLYNN EFFECT**). [From Latin *cohors* company of soldiers]

coitus *n.* Sexual intercourse. Also called *coition* . [From Latin *coitus* uniting, from *coire* to meet, from *co-* together + *ire* to go]

coitus interruptus *n.* Sexual intercourse deliberately interrupted by withdrawing the penis before ejaculation.

coitus reservatus *n.* Sexual intercourse in which ejaculation is deliberately delayed or avoided altogether.

coke *n.* A common street name for ***cocaine**.

cold pressor pain *n.* Pain induced by immersing a hand and forearm in circulating ice water close to freezing point, used in experimental studies of pain because it causes no permanent tissue damage. Pain begins to mount immediately and typically becomes unbearable after approximately 40 seconds. See also **ALGESIMETER**, **DOLORIMETER**, **HIDDEN OBSERVER**, **ISCHAEMIC PAIN**.

cold spot *n.* A small area of the skin supplied by ***free nerve endings** that transmit sensations of coldness when touched by cold stimuli. See also **PARADOXICAL COLD**, **PARADOXICAL HEAT**. Compare **WARM SPOT**.

cold turkey *n.* A slang term for the signs and symptoms, often including shivering and goose pimples, that are brought about by abrupt drug **withdrawal*.

colera *n.* Another name for **bilis*. [Spanish *colera* bile]

collective unconscious *n.* In **analytical psychology*, a part of the **unconscious* (2) additional to the **personal unconscious*, containing memories, instincts, and experiences that are shared by all people. According to Carl Gustav Jung (1875–1961), these mental elements are inherited and often organized into **archetypes* (2), and they become manifest in dreams and in fairy tales, myths, religions, and other cultural phenomena. Also called the *objective psyche*, *racial memory*, or *racial unconscious*. See also *ANIMA*, *ANIMUS* (3), *ARCHETYPAL FORM*, *INNATE IDEA*, *PSYCHOID*.

colliculus *n.* A small elevation or prominence, especially any one of the four prominences on the **tectum* of the midbrain, which are collectively called the *corpora quadrigemina*. See *INFERIOR COLLICULUS*, *SUPERIOR COLLICULUS*. **colliculi** *pl.* [From Latin *colliculus* a small hill, from *collis* a hill]

colorimeter *n.* An instrument for determining or specifying the quality of colours by comparing them with standard colours or combinations of colours. **colorimetric** *adj.* Of or relating to colorimetry. **colorimetry** *n.* The science of determining and specifying colours by using a colorimeter. [From Latin *color* a colour or hue + Greek *metron* a measure]

colour *n.* The distinctive visual sensation induced by light in the **visible spectrum* having a particular wavelength, not in absolute value but relative to the wavelengths emitted by or reflected from objects or surfaces in other parts of the visual field. Its dimensions are **hue*, **saturation* (1), and **lightness*. US *color*. See *COLOUR-BLINDNESS*, *CONE*, *LAND EFFECT*, *MUNSELL COLOUR SYSTEM*, *PRIMARY COLOUR* (1, 2, 3), *SPECTRUM*. See also *BENHAM'S TOP*, *BEZOLD-BRÜCKE PHENOMENON*, *CATEGORICAL PERCEPTION*, *CHROMA*, *CHROMAESTHESIA*, *CHROMATIC* (1), *CHROMATIC ADAPTATION* (1), *CHROMATICITY*, *CHROMATOPSIA*, *CIE COLOUR SYSTEM*, *COLORIMETER*, *COLOUR ASSIMILATION*, *COLOUR CIRCLE*, *COLOUR CONSTANCY*, *COLOUR CONTRAST*, *COLOUR INDUCTION*, *COLOUR SOLID*, *COLOUR TRIANGLE*, *COLOUR*

ZONE, COMPLEMENTARY COLOURS, CONE PIGMENT, FILM COLOUR, FLIGHT OF COLOURS, GRASSMANN'S LAWS (PERCEPTION), ISOLUMINANT, LADD-FRANKLIN THEORY, MAXWELL DISC, MCCOLLOUGH EFFECT, METAMER, OPPONENT-PROCESS THEORY, PATTERN-INDUCED FLICKER COLOUR, RAYLEIGH EQUATION, RETINEX THEORY, STROOP EFFECT, SURFACE COLOUR, TALBOT'S LAW, TRICHROMACY, TRICHROMATIC THEORY, TRISTIMULUS VALUES, YOUNG-HELMHOLTZ THEORY. [From Old French *colour* colour, from Latin *color* a colour or hue, cognate with *celare* to cover or conceal]

colour adaptation *n.* Another name for **chromatic adaptation* (1, 2). US *color adaptation*.

colour anomaly *n.* A defect in colour vision, the term usually being reserved for relatively mild forms of **colour-blindness*. US *color anomaly*. Also called *colour weakness*.

colour assimilation *n.* A tendency for a colour to become tinged with a different colour that is juxtaposed with it, as when an area of colour such as grey is surrounded by an area of another colour such as red that is not its **complementary colour*. US *color assimilation*. See also ASSIMILATION (6). Compare COLOUR CONTRAST.

colour audition *n.* Another name for **colour hearing*. US *color audition*. Also called *coloured audition* or *colored audition*.

colour-blindness *n.* Inability to distinguish some colours from others under bright illumination, a condition affecting between 7 and 8 per cent of men and 0.4 per cent of women, the major form being **daltonism*, characterized by a defective ability to distinguish reds from greens, rather than **achromatopsia* (total colour-blindness) or **monochromatism*. Everyone is totally colour-blind in dim light when **scotopic* vision depends on **rods*, and mammals with poor or absent colour vision in bright light include rats, mice, rabbits, dogs, and nocturnal owl monkeys; cats have colour vision but use it only when there is no other way of distinguishing between objects. US *color-blindness*. See also ACHROMATOPSIA, ANOMALOUS DICHROMACY, ANOMALOUS TRICHROMACY, COLOUR ANOMALY, COLOUR DEFICIENCY, CONE PIGMENT, DALTONISM, DEUTERANOMALY, DEUTERANOPIA, DYSCHRMATOPSIA, HOLMGREN TEST, HORNER'S

*****ebook converter DEMO Watermarks*****

LAW, ISHIIHARA TEST, PARACHROMATOPSIA, PROTANOMALY, PROTANOPIA, PSEUDO-ISOCHROMATIC, RAYLEIGH EQUATION, STILLING TEST, TRITANOMALY, TRITANOPIA. Compare CHROMATIC VISION, CHROMATOPSIA, COLOUR DYSNOMIA. **colour-blind** *adj.* US *color-blind* .

colour circle *n.* A diagram showing the relationship between the **hue* and **saturation* (1) dimensions of colours, differences in hue being represented by different positions around the circumference of the circle in their natural **spectrum* order, with similar hues close together and **complementary colours* opposite one another, and saturation represented by the distance from the centre, white light being situated at the centre and saturation increasing radially towards the circumference, a special segment of which is occupied by the **non-spectral colour* purple linking spectral blue with spectral red and completing the circle. **Achromatic* (1) colour is not represented, and therefore neither is the **lightness* dimension of colour. US *color circle*. See also METAMER. Compare COLOUR SOLID, COLOUR TRIANGLE.

colour constancy *n.* The tendency for an object or a surface to retain approximately the same apparent colour as the amount and wavelength of light reflected from it changes under varying conditions of illumination, as when the intensity of daylight decreases and its wavelength increases at sunset. The computations required to achieve this result occur in Area V4 of the **visual cortex*, situated on the **fusiform gyrus*. US *color constancy*. See also LAND EFFECT, PERCEPTUAL CONSTANCY, RETINEX THEORY.

colour contrast *n.* The change in perceived colour resulting from its juxtaposition with a different colour, as occurs when **complementary colours* such as blue and yellow are juxtaposed, making the blue look bluer and the yellow yellower, or when red and cyan (blue–green) are juxtaposed, making the red look redder and the cyan more intensely cyan, **simultaneous contrast* occurring when a colour is viewed alongside another and tends to shift towards the complementary colour of the other colour, and **successive contrast* occurring when one colour and then another is viewed, the second tending to shift towards the complementary colour of the first. US *color contrast*. See also APPURTENANCE, CONTRAST (2), VISUAL INDUCTION. Compare COLOUR ASSIMILATION.

colour deficiency *n.* Any defect in the capacity to perceive colours. US *color deficiency*. See [COLOUR-BLINDNESS](#).

colour dysnomia *n.* A defective ability to name colours in spite of an intact ability to match and distinguish them, usually interpreted as a form of nominal aphasia (see [APHASIA](#)). US *color dysnomia*. Compare [AGNOSIA](#), [COLOUR-BLINDNESS](#). [From Greek *dys-* bad or abnormal + *onoma* a name + *-ia* indicating a condition or quality]

coloured noise *n.* Any [*noise](#) (2) apart from [*white noise](#). US *colored noise*.

colour equation *n.* A formula showing the proportions of three [*additive primary](#) colours required by a viewer to match a specified stimulus colour, especially a formula based on the [*CIE colour system](#). US *color equation*. See also [GRASSMANN'S LAWS \(PERCEPTION\)](#), [PRIMARY COLOUR \(1\)](#), [RAYLEIGH EQUATION](#), [TRISTIMULUS VALUES](#).

colour flight See [FLIGHT OF COLOURS](#).

colour hearing *n.* Any form of [*chromaesthesia](#) in which the stimuli that elicit sensations of colour are auditory. US *color hearing*. Also called *coloured audition* or *coloured hearing*.

colour induction *n.* The generation of illusory sensations of colour without direct stimulation of the corresponding [*cones](#) in the retina, by any of a number of different devices. US *color induction*. See also [AFTERIMAGE](#), [BENHAM'S TOP](#), [BIDWELL'S GHOST](#), [CHROMAESTHESIA](#), [COLOUR ASSIMILATION](#), [COLOUR CONTRAST](#), [FLIGHT OF COLOURS](#), [LAND EFFECT](#), [PATTERN-INDUCED FLICKER COLOUR](#), [PURKINJE IMAGE](#).

colour mixing *n.* Producing a colour by combining light of two or more different wavelengths. US *color mixing*. See [ADDITIVE COLOUR MIXTURE](#), [SUBTRACTIVE COLOUR MIXTURE](#). See also [MAXWELL DISC](#).

colour solid *n.* A three-dimensional onion-shaped or spindle-shaped

representation of the relationship between the **hue*, **saturation (1)*, and **lightness* dimensions of colours, the vertical dimension representing **achromatic (1)* colour or lightness, with white at the pointed top and black at the pointed bottom, and the horizontal cross-section consisting of a **colour* circle or ellipse of variable diameter representing hue and saturation. US *color solid*. Compare COLOUR TRIANGLE.

colour spindle *n.* A spindle-shaped **colour solid*. US *color spindle*.

colour surface *n.* Any two-dimensional representation of the relationships between **hue* and **saturation (1)*, notably a **colour* circle or a **colour triangle*. US *color surface*. Compare COLOUR SOLID.

colour triangle *n.* A triangular representation of the relationship between the **hue* and **saturation (1)* dimensions of colours, having hues arranged in their natural **spectrum* order around its perimeter, with similar hues close together and **complementary colours* opposite one another, the centre representing white light and saturation increasing towards the perimeter, a part of which is occupied by the **non-spectral colour* purple linking spectral blue with spectral red. **Achromatic (1)* colour is not represented, and therefore neither is the **lightness* dimension of colour. US *color triangle*. Compare COLOUR CIRCLE, COLOUR SOLID.

colour weakness *n.* Any deficiency in colour vision falling short of **achromatopsia*. US *color weakness*. Also called *colour anomaly*. See also COLOUR-BLINDNESS.

colour wheel *n.* Another name for a **Maxwell disc*. US *color wheel*.

colour zone *n.* Any of the three concentric areas of the **retina* in which **hues* are perceived in particular ways, namely the **macula lutea* in which all hues are visible to a person with normal vision; the intermediate zone in which blues, yellows, and **achromatic (1)* colours appear normally but reds and greens are perceived as shades of grey, yellow, or blue; and the peripheral zone in which all hues appear as achromatic colours. US *color zone*.

coma *n.* A state of deep unconsciousness and absence of responses to external and internal stimuli caused by severe head injury, brain tumour, loss of blood supply to the brain, acute infection, stroke, drug overdose, or poisoning. **comatose** *adj.* In a state of coma. [From Greek *koma* heavy sleep]

combat fatigue *n.* An obsolescent and misleading term (because fatigue is not necessarily a symptom) for ***post-traumatic stress disorder**, especially when caused by traumatic experiences during military actions. Also called *shell shock*.

combination tone *n.* A musical tone such as a ***difference tone** or a ***summation tone** that is heard in a ***complex tone** but is not present in the sensations produced by the constituent components of the stimulus when they are presented singly. When there are two components, the lower having a frequency of f_1 and the higher a frequency of f_2 , then the most easily audible combination tone is generally $2f_1 - f_2$, thus if tones with frequencies of 1,800 hertz and 2,000 hertz are presented, then a combination tone with frequency 1,600 hertz is heard, because $(2 \times 1,800) - 2,000 = 1,600$. *See also* CANCELLATION METHOD, MISSING FUNDAMENTAL ILLUSION, OTOGENIC TONE.

combined parent-figure *n.* A concept introduced into ***psychoanalysis** by the British-based Austrian psychoanalyst Melanie Klein (1882–1960) to denote an infantile fantasy in which the parents are united in a permanent sexual act, the mother containing the father's penis or the whole father, or the father containing the mother's breast or the whole mother. Klein developed the concept fully in her book *The Psycho-Analysis of Children* (1932, at pp. 103–4). Also called a *combined parent*. *See also* PHALLIC WOMAN.

comcon *n.* A ***decentralized communication network** in which every group member has an open channel of communication with every other member. *See also* COMMUNICATION NETWORK. [A blend of *com(pletely)* and *con-(nected)*]

commensal *adj.* Of or relating to two distinct species that live in close proximity to each other without being interdependent. [From Latin *com-* together + *mensa* a table, alluding to eating from the same table]

commissure *n.* A band of fibres or tissue linking two homologous organs, structures, or parts, especially the great cerebral commissure called the **corpus callosum* connecting the two cerebral hemispheres, and other minor inter-hemisphere bundles of nerve fibres, such as the **anterior commissure*, **hippocampal commissure*, **massa intermedia*, **middle commissure*, and **posterior cerebral commissure*. [From Latin *commissura* a joining together, from *com-* together + *mittere* to send]

commissurotomy *n.* Surgical severing of a cerebral **commissure* linking the two hemispheres of the brain, usually the **corpus callosum*, performed on humans as a treatment for chronic, generalized **epilepsy*. Also called *commissurectomy* . See *SPLIT-BRAIN PREPARATION*. See also *DISCONNECTION SYNDROME*. [From Latin *commissura* a connection + Greek *tome* a cut]

common chemical sense *n.* A **chemical sense* that is stimulated by substances such as irritant solutions or vapours capable of exciting receptors in mucous membranes of the nose, mouth, eyes, and respiratory tract. It is mediated by the **trigeminal nerve*, and it accounts for the burning sensation caused by **capsaicin*, the active ingredient in chilli pepper. Also called *trigeminal chemoreception* .

common fate *n.* A special case of the **good continuation* grouping law of **Gestalt psychology*, applying to elements that are moving in time in the same direction and at the same speed and tending to cause them to be grouped together perceptually. See also *PRÄGNANZ*. Compare *CLOSURE GROUPING LAW*, *COMMON REGION*, *CONNECTEDNESS GROUPING LAW*, *PROXIMITY GROUPING LAW*, *SIMILARITY GROUPING LAW*.

common knowledge *n.* Any **proposition (1)* that every member of a specified group knows to be true, knows that every other member knows to be true, knows that every other member knows that every other member knows to be true, and so on. It is not the same as all members of the group merely knowing the proposition to be true, as shown in the **muddy children problem*. The concept was introduced in 1969 by the US philosopher David K(elllogg) Lewis (1941–2001) in his book *Convention: A Philosophical Study* (pp. 52–68).

*****ebook converter DEMO Watermarks*****

common language effect size statistic *n.* The probability that a score selected randomly from one distribution will be greater than a score selected randomly from another. First suggested in an article in the journal *Psychological Bulletin* in 1992 by the US psychologist Kenneth Oakley McGraw (born 1944) and the Malaysian-born US statistician Seok Pin Wong (born 1939), it has a more intuitive interpretation than most other **effect size* measures. The example they gave was based on data from the US National Center for Health Statistics, showing the mean height of men to be 69.7 inches (standard deviation 2.8 inches) and of women 64.3 inches (standard deviation 2.6 inches). If both height distributions are assumed to be normal, then the probability that a randomly selected man will be taller than a randomly selected woman turns out to be .92 or 92 per cent. The statistic is calculated by dividing the difference between the two **means* by the square root of the sum of their **variances* and then determining the probability associated with the resulting **z score*. In the height example, $z = (69.7 - 64.3) / \sqrt{(2.8^2 + 2.6^2)} = 1.41$, and from a published *z* table, the probability of $z < 1.41 = .92$. **CL** or **CLES** *abbrev.*

common ratio effect *n.* A famous violation of **expected utility theory* that seems intuitively appealing to many human decision makers, a typical example being as follows. An urn contains 100 chips numbered 1 to 100. First, you are given a choice between the following pair of options:

Option A: A chip is drawn at random from the urn. If it is numbered 1–20, you receive nothing; if it is numbered 21–100, you receive £16.

Option B: You receive £10 with certainty.

Now you face a choice between a second pair of options:

Option C: A chip is drawn at random from the urn. If it is numbered 1–80, you receive nothing; if it is numbered 81–100, you receive £16.

Option D: A chip is drawn at random from the urn. If it is numbered 1–75, you receive nothing; if it is numbered 76–100, you receive £10.

Many people prefer *B* to *A*, because it guarantees a substantial payoff without the risk associated with *A*, and many of the same people also prefer *C* to *D*, because it offers the prospect of a higher payoff than *D* with only slightly greater risk. But it is easy to show that this pattern of preferences

violates expected utility theory. Writing $u(16)$ for the utility of £16 and $u(10)$ for the utility of £10, the preference of B over A implies that $.80 \times u(16) < u(10)$, which means that $u(16) < 1.25 \times u(10)$. But the preference of C over D implies that $.20 \times u(16) > .25 \times u(10)$, which simplifies to $u(16) > 1.25 \times u(10)$, a contradiction. In general, if $x > y > z$ are sums of money, and p and q are non-zero probabilities, then the common ratio effect occurs if a decision maker prefers the prospect $py + (1 - p)y$ to $px + (1 - p)z$, and also prefers $p(1 - q)x + (1 - p)(1 - q)z + qz$ to $p(1 - q)y + (1 - p)(1 - q)y + qz$. Compare [ALLAIS PARADOX](#), [ELLSBERG PARADOX](#), [MODIFIED ELLSBERG PARADOX](#), [ST PETERSBURG PARADOX](#). **CRE** abbrev.

common region *n.* A [*grouping law](#) formulated in 1990 by the US psychologist Stephen E. Palmer (born 1948) to explain the organization of parts into wholes by the visual system. According to the law, elements that are located within the same perceived region tend to be grouped perceptually, so that the array

[O O] [O O] [O O] [O O]

tends to be perceived as being composed of four pairs rather than eight separate elements. Also called the *enclosure grouping law*. See also [PRÄGNANZ](#). Compare [CLOSURE GROUPING LAW](#), [COMMON FATE](#), [CONNECTEDNESS GROUPING LAW](#), [GOOD CONTINUATION](#), [PROXIMITY GROUPING LAW](#), [SIMILARITY GROUPING LAW](#).

commons dilemma *n.* A type of [*resource dilemma](#) interpreted as a problem of overgrazing on a common pasture, illustrated by the following simple example. Three farmers each own a single cow weighing 1,000 kg and have access to a common that can sustain a maximum of three cows without deterioration. They all want to increase their wealth by adding a further cow to the common, but for each additional cow on the common the weight of every cow decreases by 200 kg. If one farmer adds a cow, then that farmer's personal wealth increases from 1,000 kg (one 1,000 kg cow) to 1,600 kg (two 800 kg cows); if two farmers add a cow each, then the wealth of each increases from 1,000 kg to 1,200 kg (two 600 kg cows); and if all three add a cow each, then the wealth of each *decreases* from 1,000 kg to 800 kg (two 400 kg cows), and each farmer is poorer than if each had acted cooperatively by not adding a further cow to the common. It is always in a farmer's individual self-interest to acquire an additional cow, whether or not one or more of the others does so, but if they all pursue individual self-interest in

*****ebook converter DEMO Watermarks*****

this way, then each ends up poorer than if they all cooperate, which means that the problem is a ***social dilemma**. [So called because of a reference in 1833 in an essay on population growth by the English economist William Forster Lloyd (1795–1852) to the ‘tragedy of the commons’—the overgrazing of the commons in 14th-century England, which led to the enclosures and the eventual disappearance of many of the commons]

communality *n.* In ***factor analysis**, the proportion of the total ***variance** in the scores of one variable accounted for by the factors that the variable has in common with other variables.

communication channel *n.* **1.** The medium or route through which a message is communicated to its recipients, the most common channels being face-to-face communication, telephone, films, internet, television, radio, and the printed media, including newspapers, books, and magazines. **2.** Another name for ***sensory modality**.

communication disorders *n.* In ***DSM-5**, an umbrella term for a group of ***neurodevelopmental disorders** characterized by impairment in language, speech, and communication. *See also* CHILDHOOD-ONSET FLUENCY DISORDER, LANGUAGE DISORDER, SOCIAL (PRAGMATIC) COMMUNICATION DISORDER, SPEECH SOUND DISORDER.

communication network *n.* A group of individuals and the ***communication channels** between some or all of the pairs, indicating the routes along which information can flow or messages can be transmitted, the structure of the network often being determined by the organizational structure of the group. *See also* CENTRALIZED COMMUNICATION NETWORK, DECENTRALIZED COMMUNICATION NETWORK.

communication skills training *n.* Another name for ***social skills training**, especially when it focuses primarily on verbal skills and ***non-verbal communication**. **CST** *abbrev.*

community psychiatry *n.* A branch of ***psychiatry** devoted to the prevention and treatment of mental disorders and the provision of mental health care to people in local communities.

*****ebook converter DEMO Watermarks*****

community psychology *n.* A branch of **applied psychology* involving work at a community level, often including **counselling* and **health psychology*.

companionate love *n.* A type of love characterized by intimacy and commitment but lacking erotic passion. See *LOVE*.

comparable forms *n.* In psychometrics, **alternative forms* of a test that are similar in content but have not been shown to have similar psychometric properties.

comparative judgement *n.* Any judgement of something in relation to something else; more specifically, a sensory judgement elicited by the **method of comparative judgement*. See also *LAW OF COMPARATIVE JUDGEMENT*.

comparative psychology *n.* The study of behaviour in different species, seeking to throw light on the underlying mechanisms and evolution of behaviour. The term is often applied loosely to any form of **animal psychology*.

comparative reference group See *REFERENCE GROUP*.

comparison level *n.* In the **interdependence theory* of the US social psychologists Harold H(arding) Kelley (1921–2003) and John W(alter) Thibaut (1917–86), the quantity of reward or positive outcomes expected by a person on the basis of previous interactions and relationships, outcomes above the comparison level being gratifying and those below it frustrating or disappointing. *Comparison level for alternatives* is the reward that an individual could realize in the best currently available alternative relationship. **CL** *abbrev.*

comparison stimulus *n.* Another name for a **variable stimulus*. **Co** *abbrev.*

compensation *n.* The act or process of making amends, or something done or given to make up for a loss. In **psychoanalysis*, a **defence*

mechanism in which one attempts to redress a perceived deficiency that cannot be eliminated, such as a physical defect, by excelling in some other way. The Austrian psychiatrist Alfred Adler (1870–1937) attached great importance to it in his ***individual psychology**, especially in his concept of the ***inferiority complex**.

compensation neurosis *n.* A collection of symptoms presented by a person who has the prospect of receiving financial compensation for an industrial injury, failed surgical operation, car accident, or the like, susceptible to being interpreted as an attempt to profit from the incident. *Compare* **FACTITIOUS DISORDER**, **MALINGERING**.

compensatory eye movement *n.* A normally involuntary ***smooth eye movement** that occurs in response to a movement of the head to keep the ***gaze** fixated on the same point in the visual field.

competence *n.* **1.** The capacity, skill, or ability to do something correctly or efficiently, or the scope of a person's or a group's ability or knowledge. **2.** In linguistics, a term introduced by the US linguist and philosopher (Avram) Noam Chomsky (born 1928) to denote a person's unconscious knowledge of the grammatical rules of a language, especially those of ***generative grammar** and ***transformational grammar**. Also called *linguistic competence*. *Compare* **PERFORMANCE (2)**. **3.** The legal authority of a court or other body to deal with a particular matter.

[From Latin *competens* competent, from *competere* to be fit and proper, from *com* together + *petere* to aim at or seek]

competency test *n.* An ***achievement test** used to determine whether a person has attained a predetermined level of skill or knowledge in some specified ***content domain**.

competitive antagonist *n.* An ***antagonist (3)** drug that interacts with a class of ***neuroreceptors**, without itself eliciting any response, by producing a change in the neuroreceptors that prevents the ***agonist (3)** from acting on them. Also called a *receptor blocker*. *Compare* **NON-COMPETITIVE ANTAGONIST**.

competitive exclusion principle *n.* The proposition that two distinct but similar species cannot occupy the same *ecological niche indefinitely. Also called *Gause's principle*.

competitive reaction time paradigm *n.* Another name for the *Taylor aggression paradigm.

complemental series *n.* In *psychoanalysis, an arrangement or distribution of a group of cases, from one extreme where hereditary causes predominate, to the other extreme where environmental causes predominate, enabling any specific case to be assigned to a position on a scale according to the relative contributions of nature and nurture. Sigmund Freud (1856–1939) expounded this concept most clearly in 1916–17 in his *Introductory Lectures on Psycho-Analysis* (*Standard Edition*, XV–XVI, especially at pp. 346–7, 362).

complementarity hypothesis *See* NEED COMPLEMENTARITY HYPOTHESIS.

complementary afterimage *n.* An *afterimage in which colours appear approximately as the *complementary colours of the original stimulus. *See also* NEGATIVE AFTERIMAGE (1, 2), POSITIVE AFTERIMAGE.

complementary base pairing *n.* Bonding between the bases adenine and thymine in DNA, between adenine and uracil in RNA, and between cytosine and guanine in both DNA and RNA. Also called *base pairing*. *See also* PURINE, PYRIMIDINE.

complementary colours *n.* Any pair of colours that produce white or grey when mixed in the correct proportions. There is an infinite number of such complementary pairs, but the following typical examples can be read off the *CIE colour system diagram: red (650 nanometres) and blue–green or cyan (495 nm); yellow (580 nm) and blue (480 nm); green (535 nm) and deep bluish purple or magenta (a 2 : 5 mixture of blue and red). *US complementary colors*. *See also* COLOUR ASSIMILATION, COLOUR CIRCLE, COLOUR CONTRAST, PURKINJE IMAGE.

complementary DNA *n.* A form of **DNA* synthesized artificially from a **messenger RNA* template for producing clones by **genetic engineering*. *cDNA* *abbrev.*

complementation *n.* In genetics, the combination of a pair of **homologous chromosomes*, with a **recessive mutant gene* in one and a normal dominant **allele* at the same locus in the other, resulting in a normal **phenotype*, the deficiency being corrected by the normal allele of the other chromosome. *See also* *CIS–TRANS COMPLEMENTATION TEST*, *SEX-LINKED*.

complementation test *n.* Another name for the **cis–trans* complementation test.

complete linkage clustering *n.* In statistics, a technique of **cluster analysis* in which the distance between two clusters is calculated as the distance between their two furthest members, also called the *furthest neighbour method*.

complete Oedipus complex *See* *OEDIPUS COMPLEX*.

completion test *n.* A type of **intelligence* test item in which an incomplete series of items is shown and the respondent tries to select or supply the missing item. The most common form of completion test is a **number-completion test*. Also called a *continuation problem*.

complex *n.* **1.** An organized structure made up of interconnected units. **2.** In **psychoanalysis*, an organized collection of ideas, emotions, impulses, and memories that share a common emotional tone and that have been excluded either partly or entirely from consciousness but continue to influence a person's thoughts, emotions, and behaviour. This concept was introduced in 1895 by the Austrian physician Josef Breuer (1842–1925) in *Studies on Hysteria* (*Standard Edition*, II, at p. 231) and later adapted by Sigmund Freud (1856–1939) and Carl Gustav Jung (1875–1961). The word *complex* is derived from **complexion* (2) in the transitional sense already established by the time of Shakespeare's *Hamlet*: 'So oft it chances in particular men, / That for some vicious mole of nature in them, / As in their birth, wherein they are

not guilty / (Since nature cannot choose his origin), / By the o'ergrowth of some complexion, / Oft breaking down the pales and forts of reason...' (I.iv.23–8). See [CASTRATION COMPLEX](#), [COMPLEX INDICATOR](#), [DIANA COMPLEX](#), [ELECTRA COMPLEX](#), [FATHER COMPLEX](#), [INFERIORITY COMPLEX](#), [INVERTED OEDIPUS COMPLEX](#), [JOCASTA COMPLEX](#), [MOTHER COMPLEX](#), [OEDIPUS COMPLEX](#), [ORESTES COMPLEX](#), [PARTICULAR COMPLEX](#), [PHAEDRA COMPLEX](#), [WORD-ASSOCIATION TEST](#). **3.** In informal usage, an [*obsession](#) or a [*phobia](#). Compare [COMPLEXION](#) (2).

[From Latin *com-* together + *plexus* plaited or twined, from *plectere* to braid]

complex cell *n.* Any of a number of different types of neurons in the [*primary visual cortex](#) (Area V1) in the occipital lobe of the brain, being the most common cell types in that region, responding maximally to stimuli in the form of lines, edges, and/or bars oriented at particular angles and moving at right-angles to their longitudinal axes or stationary anywhere in their [*receptive fields](#), their behaviour being impossible to explain by a straightforward subdivision of the receptive field into excitatory and inhibitory regions. The first complex cell was discovered in a cat's cerebral cortex in 1958 by the Canadian-born US neurophysiologist David H(unter) Hubel (1926–2013) and his Swedish-born collaborator Torsten N(ils) Wiesel (born 1924). See also [BAR DETECTOR](#), [EDGE DETECTOR](#), [END-STOPPED RECEPTIVE FIELD](#), [FEATURE DETECTOR](#), [HYPERCOMPLEX CELL](#), [ORIENTATION-SPECIFIC CELL](#). Compare [SIMPLE CELL](#).

complex indicator *n.* In [*analytical psychology](#), an aspect of a person's response to a [*word-association test](#) that is suggestive of a [*complex](#) (2). Carl Gustav Jung (1875–1961), who popularized the test, listed the main complex indicators in an article entitled 'The Association Method' in the *American Journal of Psychology* in 1910: an unusual reaction to a word, such as laughing or blushing, an abnormally long reaction time, a repetition of the stimulus word, an absurd or far-fetched association, and a failure to respond to a stimulus word.

complexion *n.* **1.** The colour or appearance of the skin, originally believed to be indicative of a person's temperament. See [COMPLEXION](#) (2). **2.** In medieval physiology, the combination of qualities or [*humours](#) (3) believed to determine a person's temperament or personality, as in the Prologue to

Chaucer's *Canterbury Tales*: 'Of his complexion he was sangwyn' (line 333).
See also [COMPLEX \(2\)](#).

[From Latin *complexio*, *complexionis* a combination, from *com-* together + *plectere* to plait]

complex reaction time *n.* Another name for [*choice reaction time](#).

complex receptive field *n.* The [*receptive field](#) of a [*complex cell](#).

complex tone *n.* A sound wave composed of a number of [*pure tones](#) of different [*frequencies \(1\)](#). See also [FOURIER ANALYSIS](#), [HARMONIC](#), [OVERTONE](#), [PARTIAL TONE](#), [TONE \(1\)](#).

compliance *n.* A form of [*social influence](#) in which a person yields to explicit requests from another person or other people. Also called *social compliance*. See [DOOR-IN-THE-FACE TECHNIQUE](#), [FOOT-IN-THE-DOOR TECHNIQUE](#), [LOWBALL TECHNIQUE](#). See also [FORCED COMPLIANCE](#), [LAW OF SOCIAL IMPACT](#). Compare [CONFORMITY](#), [OBEDIENCE](#).

compliance, somatic See [SOMATIC COMPLIANCE](#).

componential theory *n.* A theory of [*concepts](#), [*concept formation](#), and [*semantics](#) according to which the meaning of a concept or a word can be understood by analysing it into its set of [*defining properties](#). The standard example is the concept *even number*, which is completely specified by the defining property *evenly divisible by two*; the theory amounts to an assumption that all concepts can be reduced to their defining properties or essences in this way. It is a form of [*essentialism](#) that can be traced to the writings of the Greek philosophers Plato (?427–?347 BC), in *Laws* (859d–e), and especially Aristotle (384–322 BC), in *Metaphysics* (Bekker edition, pp. 1030–1). It is still hugely influential and is often encountered in the form of a belief that every concept has a defining [*attribute](#) or essence that determines its identity, or that one ought always to define one's terms in any argument or discussion, but it was severely attacked by the Austrian-born British philosopher Karl Raimund Popper (1902–94) in *The Open Society and its Enemies* (1945) and has serious weaknesses in psychology—see [PROTOTYPE](#)

*****ebook converter DEMO Watermarks*****

THEORY. Also called a *definitional theory* or a *feature list theory* .

component instinct *n.* In **psychoanalysis*, any of the basic elements of the **sexual instinct* as defined by its **instinctual source* (oral, anal, and so on) and to a lesser extent by its **instinctual aim* and **instinctual object*. Sigmund Freud (1856–1939) introduced the concept in 1905 in his book *Three Essays on the Theory of Sexuality* (*Standard Edition*, VII, pp. 130–243). In one of his encyclopedia articles published in 1923, he explained: ‘The sexual instinct, the dynamic manifestation of which in mental life we shall call “*libido*”, is made up of component instincts into which it may once more break up and which are only gradually united into well-defined organizations.... The first (pregenital) stage of organization to be discerned is the *oral one*’ (*Standard Edition*, XVIII, pp. 235–59, at p. 244). Also called an *instinctual component* , a *partial instinct* , or a *part instinct* .

composite light *n.* In the terminology introduced by the English physicist and mathematician Sir Isaac Newton (1642–1727) in a paper to the Royal Society in 1675, and elaborated in his book *Opticks* in 1704, any light that can be broken down into constituent colours. *Compare* **PURE LIGHT**.

compound eye *n.* The type of eye found in insects and some crustaceans, composed of a cluster of separate simple eyes, called **ommatidia*, closely packed together but separated by darkly pigmented cells, arranged on a convex membrane and covered by a transparent **cornea*.

compound reaction time *n.* Another name for **choice reaction time*.

compound reinforcement schedule *n.* In **operant* conditioning, any **reinforcement schedule* that incorporates two or more simple schedules. Also called a *compound schedule* or a *higher-order reinforcement schedule* . See **CHAINED REINFORCEMENT SCHEDULE**, **TANDEM REINFORCEMENT SCHEDULE**. *Compare* **SIMPLE REINFORCEMENT SCHEDULE**.

compromise formation *n.* In **psychoanalysis*, a form assumed by a repressed wish, idea, or memory to gain admission to consciousness as a **symptom*, usually **neurotic (1)*, a **dream (1)*, a **parapraxis*, or some other manifestation of unconscious activity, the original idea being distorted
*****ebook converter DEMO Watermarks*****

beyond recognition so that the unconscious element that needs to be repressed and consciousness that needs to be protected from it are both partially satisfied by the compromise. The idea was introduced by Sigmund Freud (1856–1939) in 1896 in his article ‘Further Remarks on the Neuro-Psychoses of Defence’ (*Standard Edition*, III, pp. 162–85, at p. 170) and developed further in his book *Introductory Lectures on Psycho-Analysis* (1916–17): ‘The two forces which have fallen out meet once again in the symptom and are reconciled. It is for that reason, too, that the symptom is so resistant: it is supported from both sides’ (*Standard Edition*, XV–XVI, at pp. 358–9). *See also* [CHOICE OF NEUROSIS](#), [RETURN OF THE REPRESSED](#), [SUBSTITUTE FORMATION](#), [SYMPTOM FORMATION](#).

compulsion *n.* A repetitive pattern of behaviour (such as hand-washing, tidying, or checking) or mental activity (such as praying, counting, reciting words or phrases silently) that a person feels compelled to perform, following strict rules or rituals, with the aim of relieving anxiety or avoiding some dreaded outcome, the behaviour or mental activity being either clearly excessive or not realistically capable of achieving its desired objective, and being recognized as such by the person concerned. *See also* [FUNCTIONAL AUTONOMY](#), [OBSESSIVE–COMPULSIVE DISORDER](#), [OBSESSIVE–COMPULSIVE PERSONALITY DISORDER](#), [REPETITION COMPULSION](#), [RHINOTILLEXOMANIA](#). *Compare* [OBSESSION](#). **compulsive** *adj.* [From Latin *compulsare* to compel habitually, from *compellere* to compel + *-ion* indicating an action, process, or state]

compulsion to repeat *n.* Another name for a [*repetition compulsion](#).

compulsive personality *See* [OBSESSIVE–COMPULSIVE PERSONALITY DISORDER](#).

compulsive sexual behaviour *n.* A [*compulsion](#) characterized by a repetitive pattern of sexual behaviour that is recognized by the person concerned as either clearly excessive or not realistically capable of yielding sexual satisfaction. It typically involves brief sexual encounters with numerous partners and is found in both [*heterosexual](#) and [*homosexual](#) men and women. US *compulsive sexual behavior*. **CSB** *abbrev.*

computational theory *n.* A formal analysis of perception, especially

*****ebook converter DEMO Watermarks*****

one based on the theory of vision pioneered in the late 1970s by the English psychologist David Courtenay Marr (1945–80), which seeks to explain how the pattern of light falling on the retinas of the eyes is transformed into an internal **representation* (2) of the shapes, colours, and movements of what is observed, the three stages in the process being the **primal sketch*, the **2½-D sketch*, and the **3-D model description*. See also EYE–HEAD MOVEMENT SYSTEM, GENERALIZED CONE, IMAGE–RETINAL SYSTEM, ZERO-CROSSING.

computed (axial) tomography See CT SCAN.

computer vision *n.* A branch of **artificial intelligence* concerned with designing or programming computers to process visual stimuli in order to perform such functions as recognizing objects or faces, analysing X-ray images or breast scans, or searching for comets in images from optical telescopes. See also OPTICAL CHARACTER RECOGNITION, PATTERN RECOGNITION, PERCEPTRON, TEMPLATE MATCHING.

conation *n.* The psychological processes involved in purposeful action.
conative *adj.* [From Latin *conatus* attempt, undertaking, or effort]

concept *n.* A mental representation, idea, or thought corresponding to a specific entity or class of entities, or the defining or prototypical **features* (1) of the entity or class, which may be either concrete or abstract. The traditional psychological definition is a category that divides some domain into positive and negative instances. According to some authorities, to qualify as a concept the mental process must be conscious: young children do not have concepts of *noun* or *verb* although their linguistic behaviour shows that they understand these concepts and can discriminate between them. According to evidence, people can form concepts without awareness: in 1920 the US psychologist Clark L(eonard) Hull (1884–1952) reported one of the earliest experiments on concept formation in which participants or subjects sorted Chinese characters into two categories with the help of simple right/wrong feedback, the concept being based on the presence or absence of a certain radical element, but even after learning to sort the elements more or less correctly, some people were unable to describe or draw the defining **attribute*. See also BASIC-LEVEL CATEGORY, COMPONENTIAL THEORY, CONJUNCTIVE CONCEPT, CONSTRUCT, DISJUNCTIVE CONCEPT, EXEMPLAR, INTENSION, INTUITION,

*****ebook converter DEMO Watermarks*****

PROTOTYPE THEORY. **conceptual** *adj.* Of, relating to, or based on a concept or concepts. [From Latin *conceptum* something received or conceived, from *concipere* to take in or conceive, from *con-* with + *capere*, *ceptum* to take]

concept formation *n.* The process by which a **concept* is acquired or learnt, usually from exposure to examples of items that belong to the concept category and items that do not belong to it. In general, it involves learning to distinguish and recognize the relevant **attributes* according to which items are classified and the rules governing the combination of relevant attributes, which may be disjunctive, as in the concept of a coin, which may be circular, polygonal, or annular. Also called *concept identification* or *concept learning*. See also **COMPONENTIAL THEORY**, **FEATURE COMPARISON MODEL**, **INTUITION**, **MISMATCH**, **OVEREXTENSION**, **PROTOTYPE THEORY**, **SEMANTICS**, **2-4-6 PROBLEM**, **UNDEREXTENSION**, **VYGOTSKY BLOCKS**.

concept identification *n.* Another name for **concept formation*.

concept learning *n.* Another name for **concept formation*.

conceptual dependency theory *n.* In the field of **knowledge representation*, a theory of how meaning is represented. According to the theory, propositions are reduced to a small number of **semantic* primitives, such as agents, actions, and objects, and are interpreted according to knowledge stored as **scripts* (3). The theory was introduced in the 1970s by the US linguist and cognitive scientist Roger C. Schank (born 1946).

conceptually driven processing *n.* Any **cognitive* or **perceptual* process that is controlled by higher-level processing or **top-down processing*. See also **CONSTRUCTIVISM**.

conceptual map *n.* Another name for a **cognitive map*.

conceptual tempo *n.* Another name for **reflection–impulsivity*.

concomitant variable *n.* Another name for a **covariate*.

concordance *n.* 1. In genetics, the proportion of **monozygotic twins*, or relatives of other known degrees of genetic relatedness, who share the same characteristic or **phenotype*. See also *MAP DISTANCE*, *TWIN STUDY*. Compare *DISCORDANCE* (1). 2. In statistics, the degree of agreement between **ranks*. See *GAMMA STATISTIC*, *KENDALL COEFFICIENT OF CONCORDANCE*, *KENDALL'S TAU*, *SOMERS' D*. Compare *DISCORDANCE* (2). **concordant** *adj.*

Concorde fallacy *n.* Continuing to invest in a project merely to justify past investment in it, rather than assessing the current rationality of investing, irrespective of what has gone before. Thus gamblers often throw good money after bad in an attempt to escape from escalating debts, marriage partners often become trapped in escalating spirals of hostility and counter-hostility from which they feel increasingly incapable of extricating themselves on account of past emotional investments, and the length of time a female great golden digger wasp *Sphex ichneumoneus* is prepared to fight over a disputed burrow depends not on how much food there is in the burrow but on how much she herself has put there, the wasp that has carried the largest amount of prey into the burrow being generally least willing to give up fighting. The phenomenon was first identified and named in an article in the journal *Nature* in 1976 by the British ethologist Richard Dawkins (born 1941) and his undergraduate student Tamsin R. Carlisle (born 1954). Also called the *sunk cost fallacy*, especially in decision theory and economics. See also *DOLLAR AUCTION GAME*. [Named after the Anglo-French supersonic airliner, the Concorde, whose cost rose steeply during its development phase in the 1970s so that it soon became uneconomical, but British and French governments continued to support it to justify past investment]

concrete operations *n.* According to the theory of cognitive development of the Swiss psychologist Jean Piaget (1896–1980), the stage of cognitive development between the ages of approximately 7 and 12 years during which a child becomes proficient at manipulating internal representations of physical objects and acquires mastery of the various forms of **conservation*. See also *MENTAL OPERATION*. Compare *FORMAL OPERATIONS*, *PRE-OPERATIONAL STAGE*, *SENSORIMOTOR STAGE*.

concurrent validity *n.* In psychometrics, a form of **criterion validity* based on predictor and criterion scores obtained at approximately the same
*****ebook converter DEMO Watermarks*****

time, as when a test of depression is validated against clinical diagnoses made at about the same time. Compare [PREDICTIVE VALIDITY](#).

concussion *n.* Jarring of the brain caused by a blow to the head, a fall, or an explosion, causing a temporary loss of consciousness or disturbance of normal brain function. **concuss** *vb.* [From Latin *concussus* violently shaken, from *concutere* to shake violently, from *quater* to shake + *-ion* indicating an action, process, or state]

condensation *n.* Compressing or making more compact. In [*psychoanalysis](#), the representation of several chains of mental associations by a single idea. This phenomenon is manifested in [*dreams \(1\)](#), [*neurotic \(1\)](#) or other [*symptoms](#), jokes, and other manifestations of unconscious activity, and it is characteristic of the [*primary process](#). Sigmund Freud (1856–1939) first referred to it in 1900 in his book *The Interpretation of Dreams* (*Standard Edition*, IV–V, at pp. 293–5). By 1916–17, when his *Introductory Lectures on Psychoanalysis* was published, Freud had come to the view that condensation is probably not caused directly by [*censorship](#) but that it serves the interests of censorship none the less (*Standard Edition*, XV, at p. 191). In an article in the journal *La Psychoanalyse* in 1957, the French psychoanalyst Jacques Lacan (1901–81) related condensation to [*metaphor](#) and the defence mechanism of [*displacement](#) to [*metonymy](#). See also [DREAMWORK](#), [OVERDETERMINATION](#).

conditional probability *n.* Another name for [*posterior probability](#): the probability assigned to an event in accordance with [*Bayes' theorem](#) in the light of empirical evidence as to its observed relative frequency. See also [CONDITIONAL REASONING](#). Compare [PRIOR PROBABILITY \(2\)](#).

conditional reasoning *n.* A form of logical reasoning based on *conditional statements* or *conditional propositions* having the form *If p, then q*, in which *p* is the [*antecedent](#) and *q* is the [*consequent](#). An example is *If this substance is glass, then a diamond will scratch it*. The conditional statement is logically equivalent to *Not-(p and not-q)*, and it is true, by definition, if and only if *p* and *q* are both true or *p* is false (whether *q* is true or false). A *subjunctive conditional* is a conditional statement or [*proposition \(1\)](#) in which the antecedent and consequent are both hypothetical or

*****ebook converter DEMO Watermarks*****

contingent: *If the polar ice cap were to melt, then many people would drown.* A *counterfactual conditional* is a subjunctive conditional in which the antecedent is not merely hypothetical but false: *If she had pulled the trigger, then I would have been killed*; and in logic it is necessarily true because its antecedent is false. See also [AFFIRMING THE ANTECEDENT](#), [AFFIRMING THE CONSEQUENT](#), [BICONDITIONAL](#), [DENYING THE ANTECEDENT](#), [DENYING THE CONSEQUENT](#), [SIMULATION HEURISTIC](#).

conditional response *n.* An uncommon but more accurate name for a **conditioned response*. Also called a *conditional reflex*.

conditional stimulus *n.* An uncommon but more accurate name for a **conditioned stimulus*.

conditioned avoidance learning *n.* A form of **operant conditioning* in which the organism must make a particular response to evade punishment. See [AVOIDANCE CONDITIONING](#).

conditioned emotional response *n.* A phenomenon of **conditioning* (1) that occurs when a baseline behaviour such as lever pressing for food reward is established at a stable rate of responding, then a long-lasting **conditioned stimulus* (such as a 90-second tone) is presented and terminates with the presentation of an aversive **unconditioned stimulus* (such as a brief electric shock). After several such pairings of conditioned and unconditioned stimulus, the organism suppresses responding during the conditioned stimulus presentation, even though the food reward is still available in response to lever pressing and is completely independent of the tone–shock pairing, the usual interpretation being that the conditioned stimulus (tone) elicits a **conditioned response* (fear) that is incompatible with the suppressed behaviour (feeding). Also called *conditioned suppression*. **CER** *abbrev.*

conditioned food aversion *n.* Another name for **food aversion learning*.

conditioned reflex *n.* Another name for a **conditioned response*, presupposing that such a response arises from modification of a **reflex arc*.

*****ebook converter DEMO Watermarks*****

Also called a *conditional reflex* .

conditioned response *n.* In **classical conditioning*, a learned response that follows a **conditioned stimulus* as a consequence of a process of classical conditioning. *Conditioned* is a slight mistranslation of *conditional*, the term originally used by the Russian physiologist Ivan Petrovich Pavlov (1849–1936), referring to a response occurring only conditionally (after a process of conditioning). Also called a *conditioned reflex* or a *conditional reflex* , presupposing that it arises from modification of a **reflex arc*. Compare UNCONDITIONED RESPONSE. **CR** abbrev.

conditioned stimulus *n.* In **classical conditioning*, a **stimulus* (1) such as the ticking of a metronome that is initially neutral but that comes to elicit a particular **response* such as salivation only as a consequence of being paired with an **unconditioned stimulus* such as food during a process of classical conditioning. It is a slight mistranslation of *conditional stimulus*, the term originally used by the Russian physiologist Ivan Petrovich Pavlov (1849–1936), meaning a stimulus that elicits a particular response only conditionally (after a process of conditioning). Compare UNCONDITIONED STIMULUS. **CS** abbrev.

conditioned suppression *n.* Another name for a **conditioned emotional response*. More generally, a reduction in the frequency of a **conditioned response* resulting from the presence of a stimulus previously associated with pain.

conditioned taste aversion *n.* Another name for **food aversion learning*.

conditioning *n.* 1. The process of **learning* (1) through which the behaviour of organisms becomes dependent on environmental **stimuli* (1). Its two major forms are **classical conditioning* (Pavlovian conditioning) and **operant conditioning* (instrumental conditioning). See also ASSOCIATIVE LEARNING, AUTOSHAPING, BEHAVIOURISM, EVALUATIVE CONDITIONING, OVERSHADOWING, SHAPING (1). 2. In linguistics, the influence of linguistic context on a linguistic unit or form. The **allophone* of a **phoneme* may be determined by phonological context (for an example, see ASPIRATION); or the

*****ebook converter DEMO Watermarks*****

*allomorph of a *morpheme may be determined by grammatical context, as when the morpheme *a* becomes *an* before a *vowel. 3. Another name for *Bayesian inference.

[Sense 1 is a back formation from *conditioned* (originally *conditional*) *response*]

Condorcet's paradox *n.* A *paradox of *intransitive preferences arising from the aggregation of individual *transitive preferences under majority rule. Its simplest manifestation is in a group of three voters choosing among three alternatives *x*, *y*, and *z*, the first voter preferring the three alternatives in the order *xyz*, the second *yzx*, and the third *zxy*. In a majority vote, *x* is preferred to *y* by a majority of two to one (the first and third voters preferring the alternatives in that order), and similarly *y* is preferred to *z* by a majority, and *z* is preferred to *x* by a majority. Also called a *cyclic majority* or the *paradox of voting*. See also [ARROW'S IMPOSSIBILITY THEOREM](#). [Named after the French philosopher and mathematician Marie Jean Antoine Nicolas de Caritat Condorcet (1743–94) who discovered it in 1785]

conduct disorder *n.* In *DSM-5, a *disruptive, *impulse-control, and conduct disorder of childhood or adolescence characterized by repetitive and persistent violations of the rights of others and of social norms and rules, including bullying, aggressive or threatening behaviour towards people or animals, deliberate destruction of property, deceitfulness, or theft, with the behaviour causing significant impairment in social, academic, or occupational functioning. Compare [ANTISOCIAL PERSONALITY DISORDER](#). **CD** abbrev.

conduction aphasia See [APHASIA](#).

conductive deafness *n.* Any form of *deafness resulting from disease, damage, or obstruction in the *outer ear canal or the *middle ear. Common causes are accumulation of wax in the outer ear (*ceruminous deafness), *otitis media, and otosclerosis, a disorder of the *oval window in which the *stapes becomes fused with the vestibule of the *bony labyrinth. Also called *conduction deafness* or *transmission deafness*. Compare [CENTRAL AUDITORY PROCESSING DISORDER](#), [SENSORINEURAL DEAFNESS](#).

cone *n.* One of the two classes of [*photoreceptors](#) at the back of the [*retina](#), mediating [*photopic](#) vision, responsive to bright light, colour-sensitive and found especially abundantly in the [*fovea](#), with an outer segment at its back end containing photosensitive membranes stacked like an orderly pile of discs decreasing in diameter towards the tip, studded with light-absorbing molecules of [*visual pigment](#), and a [*synapse](#) (1) at the other end transmitting nerve impulses to [*bipolar cells](#) and [*horizontal cells](#) in the retina. Cones are divided into three types containing different visual pigments having broad and overlapping sensitivity curves with peak absorption at about 430, 530, and 560 nanometres, loosely called blue, green, and red cones, respectively. Because of the overlap, signals from one type of cone are not sufficient to give rise to a specific sensation of colour, light of any wavelength invariably causing two or more types to respond in different degrees, and the relative strengths of the signals from all three types providing the necessary information for sensations of colour, as when weak signals from red and green cones accompanied by strong signals from blue cones evoke the sensation of blue, or when equal signals from red and green cones accompanied by weak signals from blue cones evoke the sensation of yellow. The human retina contains approximately 6 million cones, far outnumbered by the 120 million rods. Also called a *retinal cone* . *See also* [DOMINATOR](#), [GANGLION CELL](#), [MODULATOR](#), [PIGMENT](#), [TRICHROMATIC THEORY](#). *Compare* [ROD](#). [So called because it is cone-shaped, with a tapering outer segment]

cone of confusion *n.* A cone-shaped set of points, radiating outwards from a location midway between an organism's ears, from which a sound source produces identical [*phase delays](#) and [*transient disparities](#), making the use of such binaural cues useless for [*sound localization](#). Any cross-section of the cone represents a set of points that are equidistant from the left ear and equidistant from the right ear.

cone pigment *n.* Any of three distinct [*visual pigments](#) in the normal (non-colour-blind) human retina that are responsible for colour vision and that have peak sensitivities at approximately 430 nanometres, 530 nm, and 560 nm, usually called blue, green, and red pigments, respectively, although light of these wavelengths actually looks violet, blue-green, and yellowish-green. *See also* [IODOPSIN](#). *Compare* [RHODOPSIN](#).

*****ebook converter DEMO Watermarks*****

confabulation *n.* A memory disorder related to ***amnesia** but involving the generation of fabricated accounts of events, experiences, or facts, either deliberately or without conscious intent, to compensate for memory loss. Some authorities think of it as ‘honest lying’. It is a common sign of ***Korsakoff’s psychosis**. [From Latin *con-* with + *fabula* a story + *-(a)tion* indicating a process or condition]

confederate *n.* A person taking part in a conspiracy. In research methodology, an accomplice of the experimenter in research involving deception, pretending to be an experimental participant or subject, along with the real participants, but actually playing out an assigned role. Also called a *stooge*. Compare **NAIVE PARTICIPANT**.

confidence interval *n.* In statistics, a range of values bounded by *confidence limits* within which there is a specified probability that the true value of a population ***parameter** is expected, with a specified level of confidence, to lie. By convention, the 95 and 99 per cent confidence intervals are most often used. For example, in a population of 8,000, a sample of 950 respondents is required to achieve a 95 per cent confidence interval of ± 3 per cent. This means that if a survey found that 25 per cent of a random sample were in favour of capital punishment, then if 100 different random samples of that size were drawn from the population, 95 per cent of them would give results between 22 and 28 per cent. In large populations, over about 5,000, the necessary sample size for a given confidence interval is surprisingly insensitive to the population size: for a population of 40,000, a sample of 1,050 is required to achieve the same 95 per cent confidence interval of ± 3 per cent, and the required sample size increases only very slowly for larger samples than that, hence opinion polls in the UK (population 64 m), the US (population 317 m), and Ireland (population 4.5 m) all use sample sizes slightly over 1,000 to achieve 95 per cent confidence intervals of ± 3 per cent, which is the conventional confidence interval for public opinion polls. See also **PROBABLE ERROR**.

confidence limits *n.* The bounds of a ***confidence interval**.

configural scoring rule *n.* In psychometrics, any rule for assigning weights to predictor variables so that the interpretation of one predictor score
*****ebook converter DEMO Watermarks*****

depends on the level of one or more others, as for example in a **lexicographic semiorder*. See also [SCORING FORMULA](#).

configural superiority effect *n.* The tendency for some complex visual stimuli, such as faces or printed words, to be more easily recognizable than any of their constituent parts presented in isolation. Also called the *object superiority effect*. See also [WORD SUPERIORITY EFFECT](#).

configuration law *n.* Another name for the principle of **Prägnanz* in Gestalt psychology.

confirmation bias *n.* The tendency to test one's beliefs or conjectures by seeking evidence that might confirm or verify them and to ignore evidence that might disconfirm or refute them. This bias, which helps to maintain **prejudices* and **stereotypes*, is clearly manifested in problem-solvers' behaviour in the **Wason selection task* and the **2-4-6 problem*. See also [FALSIFIABILITY](#), [HEMPEL'S PARADOX](#), [LOGICAL POSITIVISM](#). Compare [MATCHING BIAS](#).

confirmation paradox *n.* Another name for **Hempel's paradox*.

confirmatory factor analysis *n.* The use of **factor analysis* to test **hypotheses* about the factors underlying a set of correlations. Compare [EXPLORATORY FACTOR ANALYSIS](#). **CFA** *abbrev.*

conflict, psychological See [PSYCHICAL CONFLICT](#).

conformity *n.* A form of **social influence* in which a person yields to group pressure in the absence of any explicit order or request from another person to comply, as in the **Asch experiment*. See also [ANTICONFORMITY](#), [LAW OF SOCIAL IMPACT](#). Compare [COMPLIANCE](#), [OBEDIENCE](#).

confounding *n.* In research design, the problem that arises when two or more **causal variables*, often an **independent variable* and an **extraneous variable*, are not properly controlled, so that their separate effects on the **dependent variable* cannot be disentangled. [From Latin *confundere* to mingle or pour together, from *fundere* to pour]

confusion matrix *n.* A **matrix* representing the relative frequencies with which each of a number of stimuli is mistaken for each of the others by a person in a task requiring recognition or identification of stimuli. Analysis of these data allows a researcher to extract **factors* (2) indicating the underlying dimensions of similarity in the perception of the respondent. For example, in colour-identification tasks, relatively frequent confusion of reds with greens would tend to suggest **daltonism*.

congener *n.* 1. A member of the same **genus* as another organism. 2. A drug that belongs to the same category, class, or group as its parent compound. 3. Any additional substance apart from alcohol that is present in an alcoholic beverage and that is partly responsible for its effects.

[From Latin *con* with + *genus* birth]

congenital central hypoventilation syndrome See CENTRAL HYPOVENTILATION SYNDROME. **CCHS** *abbrev.*

congenital facial diplegia *n.* Another name for **Möbius syndrome*.

congenital oculofacial paralysis *n.* Another name for **Möbius syndrome*.

congruent validity *n.* The **validity* of a test determined by its **correlation* with existing tests designed to measure the same **construct*.

congruity theory *n.* A **cognitive* consistency theory of **attitude change*, based on **balance theory* but formulated as a quantitative model, according to which if a source *S* and attitude object *O* are linked by an *associative assertion* (such as *S is an O*, *S likes O*, *S shakes hands with O*, or *S goes with O*) or a *dissociative assertion* (such as *S is not an O*, *S dislikes O*, *S avoids O*, or *S criticizes O*), then the attitudes to both *S* and *O* of the person receiving this message will shift towards a point of equilibrium, the less polarized of the two elements moving proportionately more than the more polarized one. Attitudes towards *S* and *O* are measured on a seven-point **semantic* differential scale from -3 to +3, and the change equation for the source is $\text{Change}(S) = [|O| / (|O| + |S|)]P$, where $|O|$ and $|S|$ are the

*****ebook converter DEMO Watermarks*****

absolute values (ignoring any negative signs) of the two initial attitudes and P is the pressure towards change—the total amount of change required to produce congruity. Similarly, the change equation for the attitude object is $\text{Change}(O) = [|S| / (|S| + |O|)]P$. For example, if a person has a positive attitude towards the composer Tchaikovsky (+2) and a very negative attitude towards homosexuality (−3), and if the person discovers that Tchaikovsky was gay, then the distance between the two and hence the value of P is 5, and $\text{Change}(S) = [3/(3 + 2)]5 = 3$, which means that the attitude towards Tchaikovsky moves three units in the direction of the attitude towards homosexuality; and by a similar calculation, the attitude towards homosexuality moves two units in the direction of the attitude towards Tchaikovsky; so that the person's attitudes to Tchaikovsky and homosexuality both end up at −1. For a dissociative assertion, the two move away from each other. In the light of empirical findings two correction factors were added to the theory: an *assertion constant* to account for the fact that the attitude towards the attitude object tends to change more than the attitude towards the source, and a *correction for incredulity* that reduces the amount of change in both S and O in proportion to their distance apart (for an associative assertion) or their closeness (for a dissociative assertion). The theory was formulated in 1955 by the US psychologist Charles E(gerton) Osgood (1916–91) and the Canadian-born US psychologist Percy (Hyman) Tannenbaum (1927–2009).

conjoint measurement theory *n.* A mathematical method for constructing measurement *scales (1) for objects with multiple *attributes in such a way that attributes are traded off against one another and the scale value of each object is a function of the scale values of its component attributes. The method determines whether apparent *interaction effects arise from actual interactions between the underlying attributes or as *artefacts (2) of the particular *measurement model adopted. *Axiomatic conjoint measurement* investigates qualitative aspects of the data to determine how best to scale the data to provide the optimal composition rule. In *numerical conjoint measurement*, also called *conjoint analysis*, a particular composition rule is assumed and then the data are scaled, if possible, to yield an *additive model solution. The theory was introduced in 1964 by the US mathematical psychologist Robert Duncan Luce (1925–2012) and the US statistician John Wilder Tukey (1915–2000). See also AXIOMATIC MEASUREMENT THEORY,

*****ebook converter DEMO Watermarks*****

UNFOLDING TECHNIQUE. [From Latin *coniungere* to link together, from *com* together + *iungere* to join]

conjoint therapy *n.* Any form of **psychotherapy* or **counselling* in which two or more clients or patients are treated simultaneously. *See also* **GROUP THERAPY.**

conjugate movement *n.* A coordinated movement, as of the two eyes turning together in the same direction or the pupils of both eyes constricting at the same time (a *conjugate eye movement*). Also called a *consensual movement*. *See also* **DEITERS' NUCLEUS**, **PUPILLARY LIGHT REFLEX**. *Compare* **DISJUNCTIVE EYE MOVEMENT.** [From Latin *coniugare* to join together, from *con-* together + *iugare* to marry or join, from *iugum* a yoke]

conjunction *n.* **1.** The act or process of joining together, or the state of being joined. **2.** In logic, two **propositions* (1) connected by an operator denoting *and* to form a single compound proposition, usually written $p \wedge q$, where p and q represent the component propositions or conjuncts, the compound proposition being true only if both of its conjuncts are true. *See also* **CONJUNCTION FALLACY**. *Compare* **DISJUNCTION** (2).

[From Latin *con-* with + *iunctio* joining + *-ion* indicating an action, process, or state]

conjunction fallacy *n.* A widespread error of judgement according to which a combination of two or more **attributes* is judged to be more probable or likely than either attribute on its own. It was identified and named in 1982 by the Israeli-American psychologists Amos Tversky (1937–96) and Daniel Kahneman (born 1934) who presented undergraduate students with personality sketches of a hypothetical person called Linda (young, single, deeply concerned about social issues, and involved in anti-nuclear activity) and asked them whether it was more probable that (a) Linda is a bank teller, or (b) Linda is a bank teller who is active in the feminist movement; 86 per cent of the students judged (b) to be more probable than (a). This is a fallacy, because it is an elementary principle of probability theory that the probability of the **conjunction* (2) *A* and *B* can never exceed the probability of *A* or the probability of *B*. The fallacy arises from the use of

the **representativeness heuristic*, because Linda seems more typical of a feminist bank teller than of a bank teller. *See also* [KOLMOGOROV'S AXIOMS](#).

conjunction search *n.* A search for a target stimulus representing a **conjunctive concept* among a number of distractor stimuli. *Compare* [DISJUNCTION SEARCH](#), [FEATURE SEARCH](#).

conjunctive concept *n.* A concept defined by the simultaneous possession or **conjunction (2)* of two or more **attributes*, for example, a red square. *Compare* [DISJUNCTIVE CONCEPT](#).

conjunctive eye movement *n.* Another name for a **conjugate movement*. [From Latin *coniunctivus* joined, from *coniungere* to conjoin, from *iungere* to join]

connectedness grouping law *n.* A perceptual **grouping law* formulated in 1990 by the US psychologists Irvin Rock (1922–95) and Stephen E. Palmer (born 1948) to explain the organization of parts into wholes by the visual system. According to the law, the perceptual system has a tendency to perceive any uniform, connected line or area as a single unit, so that the array

O–O O–O O–O O–O

tends to be perceived as being composed of four rather than eight or twelve elements. *See also* [PRÄGNANZ](#). *Compare* [CLOSURE GROUPING LAW](#), [COMMON FATE](#), [COMMON REGION](#), [GOOD CONTINUATION](#), [PROXIMITY GROUPING LAW](#), [SIMILARITY GROUPING LAW](#).

connectionism *n.* 1. An approach to **artificial intelligence* involving the design of intelligent systems composed of **neural networks* in which items of knowledge are represented not by single locations or units but by patterns of activation over collections of units, these patterns being adaptive inasmuch as they are capable of learning from experience. It was first introduced in 1948 in an article on 'Intelligent Machinery' by the English mathematician Alan Mathison Turing (1912–54) but became popular only after the publication in 1981 of a connectionist model of human memory developed by the US

cognitive scientist James L(oyd) McClelland (born 1948). Turing's article was partly anticipated by an article in 1943 by the US neurophysiologist Warren S(turgis) McCulloch (1898–1968) and the self-taught US logician Walter Pitts (1923–69), but that early version crucially lacked the ability to learn. Also called *parallel distributed processing* . See also [BACK-PROPAGATION ALGORITHM](#), [CASCADE PROCESSING](#), [DELTA RULE](#), [DISTRIBUTED NETWORK MODEL](#), [GRADIENT DESCENT](#), [HEBBIAN RULE](#), [HILL CLIMBING](#), [KNOWLEDGE REPRESENTATION](#), [TEACHER UNIT](#). Compare [DISTRIBUTED COGNITION](#). **2.** A term used by the US psychologist Edward Lee Thorndike (1874–1949) to refer to his interpretation of trial-and-error learning as the formation of associations between situations (not ideas) and responses. See also [LAW OF EFFECT](#). Compare [ASSOCIATIONISM](#). **connectionist** *n.* **1.** One who practises or advocates connectionism (1, 2). *adj.* **2.** Of or relating to connectionism (1, 2).

connectionist model *n.* Any model of [*information](#) processing based on the conceptual framework of [*connectionism](#) (1). Also called a *connectionist network* .

connotation *n.* **1.** An association or idea suggested or implied by a word or expression; for example, the word *mother* has connotations of home, family, maternal love, and so on. This meaning should be carefully distinguished from sense 2. See also [SEMANTIC DIFFERENTIAL](#). Compare [DENOTATION](#) (1). **2.** In philosophy, the set of [*attributes](#) or properties that determine the thing or things to which a word or expression refers; hence the connotation of the word *mother* is the following set of attributes or properties: {female, human or animal, parent}. See also [INTENSION](#). Compare [DENOTATION](#) (2). **connotative** *adj.* **connote** *vb.*

[From Latin *connotare* to connote, from *con-* with + *notare* to mark, from *nota* a mark or sign + *-ation* indicating a process or condition]

consanguinity, coefficient of See [COEFFICIENT OF CONSANGUINITY](#).

consanguinity study *n.* Another name for a [*kinship study](#).

conscience *n.* A moral sense of what is right and wrong, generally accompanied by corresponding regulation of thought and behaviour. More

*****ebook converter DEMO Watermarks*****

specifically, a feeling of remorse or regret following an unethical ***action** (*I have a guilty conscience about not repaying the loan*). See also **KNOBE EFFECT**, **SUPEREGO**, **TROLLEY PROBLEM**. [From Latin *conscientia* knowledge, from *conscire* to know well, from *con-* wholly + *scire* to know + *entia* indicating a state, condition, or quality]

conscientiousness *n.* One of the ***Big Five** personality factors, characterized by ***traits** such as organization, thoroughness, reliability, and practicality, and the relative absence of carelessness, negligence, and unreliability. Also called *dependability*. See also **ALPHA PERSONALITY FACTOR**, **GENERAL FACTOR OF PERSONALITY**, **HEALTH PSYCHOLOGY**. **conscientious** *adj.* [From Latin *con* with + *scire* to know]

conscious *adj.* **1.** Of or relating to the function of the mind through which one is aware of mental experiences such as perceptions, thoughts, emotions, and wishes. In ***psychoanalysis**, functioning as a noun (*the conscious*), denoting the conscious mind. See also **CONSCIOUSNESS**. Compare **UNCONSCIOUS (1)**. **2.** Awake, alert, and aware of what is happening in the immediate vicinity; not in a state of sleep, trance, or coma. **3.** Aware of and giving due weight to something, as in *Are you conscious of the need for action?* or *I am not at all clothes-conscious*.

[From Latin *conscius* sharing knowledge, from *con* with + *scire* to know]

consciousness *n.* The state of being ***conscious (1, 2)**; the normal mental condition of the waking state of humans, characterized by the experience of perceptions, thoughts, feelings, awareness of the external world, and often in humans (but not necessarily in other animals) self-awareness. See also **ACCESS CONSCIOUSNESS**, **ALTERED STATE OF CONSCIOUSNESS**, **ASTONISHING HYPOTHESIS**, **ATTENTION**, **AUTONOETIC**, **BLINDSIGHT**, **CHINESE ROOM**, **COGNITIVE PENETRABILITY**, **CONTROLLED PROCESSING**, **FUNCTIONALISM**, **GÖDEL'S THEOREM**, **IMAGERY**, **LIBET'S DELAY**, **MARGINAL CONSCIOUSNESS**, **MENTAL MODEL**, **MINDFULNESS**, **NEODISSOCIATION THEORY**, **PERCEPTION—CONSCIOUSNESS SYSTEM**, **PHENOMENAL CONSCIOUSNESS**, **PHENOMENOLOGY**, **READINESS POTENTIAL**, **STREAM OF CONSCIOUSNESS**, **STRONG AI**, **THING-PRESENTATION**, **TOPOGRAPHY**, **TRANSLIMINALITY**, **TURING TEST**, **WEAK AI**. Compare **ABSENCE**, **AUTOMATIC PROCESSING**, **AUTOMATISM**, **HYPNOSIS**, **PRECONSCIOUS**, **SLEEP**, **SUBLIMINAL PERCEPTION**, **UNCONSCIOUS (1, 2)**.

conscious *adj.* **Cs** *abbrev.*

consensual pupillary reflex *n.* Another name for the ***pupillary light reflex**. Also called the *consensual light reflex*. [From Latin *consensus* agreement, from *consentire* to agree or feel together, from *com* with + *sentire* to feel]

consensual validity *n.* The ***validity** of a test determined by its general acceptance in the community of test administrators or by the number of users who judge it to be valid. *See also* **FACE VALIDITY**, **INTRINSIC VALIDITY**.

consensus sequence *n.* A sequence of ***DNA** such as the ***telomere** sequence TTAGGG that is found in widely divergent organisms and has a similar function in each. Also called a *canonical sequence*.

consequent *See* **CONDITIONAL REASONING**.

conservation *n.* A term introduced by the Swiss psychologist Jean Piaget (1896–1980) to denote the understanding that material quantity is unaffected by certain transformations that change its appearance. *Conservation of number* is exemplified by understanding the invariance of the number of objects when their spatial arrangement is changed, *conservation of substance* the invariance of the quantity of a liquid when it is poured into a differently shaped container, and *conservation of mass* and *conservation of volume* the invariance of the mass and the volume of a lump of plasticine, play dough, or similar material when it is moulded into a different shape. The various types of conservation generally appear at different stages of a child's development, first number and substance, then mass, then volume; conservation of number and substance typically appearing by age 7 or 8 and the others soon after. The lack of mastery of conservation of number in a younger child at the ***pre-operational stage** of development can be demonstrated by setting up a row of egg-cups, each containing an egg, asking the child to confirm that the number of egg-cups is the same as the number of eggs, then removing the eggs and moving them close together to make a row that is much shorter than the row of egg-cups, and asking the child whether there are more eggs than egg-cups, more egg-cups than eggs, or the same number of egg-cups and eggs. A child who has not yet mastered the conservation of number usually believes that

*****ebook converter DEMO Watermarks*****

there are more egg-cups, because the row is longer. Variations of this experiment were first described by Piaget in 1941 in his book *La Genèse du Nombre chez l'Enfant* (*The Child's Conception of Number*, English translation published in 1952). See also [CENTRATION](#), [CONCRETE OPERATIONS](#), [DÉCALAGE](#).

conservation of energy law *n.* The first law of [*thermodynamics](#), stating that when a system changes from one state to another, energy is converted to a different form but the total energy remains unchanged or is conserved, making a perpetual-motion machine impossible. It was discovered by the German physician and physicist Julius Mayer (1814–78), who submitted it to the leading physics journal *Annalen der Physik*, but it was rejected, and Mayer was forced to publish it in an obscure chemistry journal where it had little impact; then it was independently rediscovered by the Scottish physicist and mathematician William Thomson (later Lord Kelvin, 1824–1907), who presented it to the Royal Society in 1851 and was credited with its discovery. See also [PRINCIPLE OF CONSTANCY](#).

consistency theory See [COGNITIVE CONSISTENCY THEORY](#).

consolidation *n.* The process whereby new information is fixed in [*long-term memory](#), where it is integrated with existing stored information. The process continues for some time after exposure to the new information. See also [CALPAIN](#), [HEBB SYNAPSE](#), [HIPPOCAMPUS](#), [LONG-TERM POTENTIATION](#), [PHASE SEQUENCE](#).

consonant *n.* Any speech sound that involves a significant obstruction of the airstream in the vocal tract and that functions at the beginning or end of a syllable, either singly or in a cluster, or a letter of the alphabet representing such a speech sound. [*Plosive](#) consonants involve complete stoppage of the airstream and are maximally consonantal; [*nasal](#) (2) consonants complete blockage of the airstream through the mouth but not the nose; [*fricatives](#) considerable obstruction but not stoppage; [*lateral](#) consonants obstruction in the centre of the mouth only; and [*approximants](#) relatively little obstruction of the airflow. Compare [SEMIVOWEL](#), [VOWEL](#). **consonantal** *adj.* [From Latin *consonare* to sound at the same time]

consonant trigram *n.* A string of three consonants, such as *CBT*, sometimes used in experiments on memory instead of **CVC trigrams*. Also called a *CCC trigram*.

consonant-vowel-consonant trigram *n.* A string of three letters, beginning and ending with a consonant, with a vowel in the middle, such as *KUG*. See also *CVC*, *NONSENSE SYLLABLE*.

conspecific *n.* 1. An organism of the same species as another. *adj.* 2. Belonging to the same species.

[From Latin *con* with + *specificus* of or relating to a species, from *species* appearance, from *specere* to look + *-ikos* of, relating to, or resembling]

constancy See *PERCEPTUAL CONSTANCY*.

constancy, principle of See *PRINCIPLE OF CONSTANCY*.

constant error *n.* In **psychophysics*, any systematic error of judgement or perception involving either overestimation or underestimation of a variable magnitude. It is used as a measure of the magnitude of certain perceptual illusions. Compare *VARIABLE ERROR*. **CE** abbrev.

constant stimuli method See *METHOD OF CONSTANT STIMULI*.

constituent *n.* A component part of a larger whole; in linguistics, a word, phrase, or clause forming part of a larger linguistic structure. For example, a sentence can be analysed into its constituent subject and predicate, and each of these units can be analysed further into their constituent parts. The results of such an analysis into constituents at different levels may be depicted by a **phrase marker*. [From Latin *constituens* setting up, from *constituere* to establish, from *con* together + *statuere* to place]

constitutional psychology *n.* A theory, especially that of the US psychologist William H(erbert) Sheldon (1899–1977), postulating that **personality* is dependent on physique or **somatotype*. See *ECTOMORPH*,

ENDOMORPH, MESOMORPH. *Compare* KRETSCHMER CONSTITUTIONAL TYPE.

construct *n.* A **model* based on observation guided by a theoretical framework. In **psychometrics*, a psychological attribute, such as **intelligence* or **extraversion*, on which people differ from one another; more generally any complex **concept* synthesized from simpler concepts. Also called a *latent variable*. See also HYPOTHETICAL CONSTRUCT, PSYCHOANALYTIC CONSTRUCTION, THEORY (2). [From Latin *constructus* piled up or built, from *construere* to pile up or build, from *con-* together + *struere* to arrange or erect]

constructional apraxia See APRAXIA.

construction in analysis *n.* Another name for **psychoanalytic construction*.

constructive memory *n.* The production of memories under the influence of prior experience and expectations in such a way that existing **schemas* or new information affect how the information is stored in memory. See also CONSTRUCTIVISM, PIAGET KIDNAPPING MEMORY, REALITY MONITORING, REPRESENTATIONAL MOMENTUM. *Compare* RECONSTRUCTIVE MEMORY.

constructivism *n.* A doctrine according to which perceptions, memories, and other complex mental structures are actively assembled or built by the mind, rather than being passively acquired. The idea was introduced in 1932 by the English psychologist Sir Frederic Charles Bartlett (1886–1969) to explain phenomena that he observed in his study of memory. An influential example of constructivism in perception is the concept of the **perceptual cycle* introduced by the German-born US psychologist Ulric (Richard Gustav) Neisser (1928–2012), and it has been used by the English psychologist Richard L(angton) Gregory (1923–2010) and others to explain a number of visual illusions. Radical constructivism, deriving from writings in the 1950s of the Swiss psychologist Jean Piaget (1896–1980), is based on the assumption that children construct mental structures by observing the effects of their own actions on the environment. Social constructivism, first popularized by the Austrian-born US sociologist Peter Ludwig Berger (born 1929) and the Yugoslav-born US sociologist Thomas Luckmann (born 1927)

*****ebook converter DEMO Watermarks*****

in their influential book *The Social Construction of Reality* (1966), focuses on the way people come to share interpretations of their social environment. See also [CONSTRUCTIVE MEMORY](#), [RECONSTRUCTIVE MEMORY](#), [SCHEMA](#), [SOCIAL CONSTRUCTIONIST PSYCHOLOGY](#), [TOP-DOWN PROCESSING](#).

construct validity *n.* In psychometrics, the extent to which a test measures a specified [*construct](#) or [*hypothetical construct](#), determined by interpreting the psychological meaning of test scores and testing implications of this interpretation. For example, according to the construct of [*extraversion](#) proposed by the German-born British psychologist Hans J(ürgen) Eysenck (1916–97), extraverts form [*conditioned responses](#) more slowly than introverts; therefore, if a scale designed to measure extraversion is administered to a group of respondents, and high scorers are shown in a conditioning procedure to condition more slowly than low scorers, then these data constitute evidence for the construct validity of the scale relative to Eysenck's concept of extraversion. More specific interpretations of construct validity have been suggested in terms of [*convergent validity](#) and [*discriminant validity](#) in relation to the [*multitrait–multimethod matrix](#), and in terms of the [*nomological network](#).

consumer psychology *n.* A branch of psychology devoted to the study of the delivery of goods and services and the effects of advertising, marketing, packaging, and display on the behaviour of purchasers.

consummate love *n.* A type of love characterized by erotic passion, commitment, and intimacy. See [LOVE](#). [From Latin *consummare*, *consummatum* to perfect, from *con* with + *summus* the highest, from *summa* a sum]

contact hypothesis *n.* The proposition by the US psychologist Gordon W(illard) Allport (1897–1967) that sheer social contact between social groups is sufficient to reduce intergroup [*prejudice](#). Empirical evidence suggests that this is so only in certain circumstances.

contact receptor *n.* A [*sensory receptor](#) such as a [*touch receptor](#) or a [*taste receptor](#) that is stimulated by an object or substance touching it. Compare [DISTANCE RECEPTOR](#).

*****ebook converter DEMO Watermarks*****

contagion, behavioural/social See BEHAVIOURAL CONTAGION, SOCIAL CONTAGION.

content-addressable memory *n.* In computer technology, a memory store that can be accessed by specifying the information that it contains, so that an instruction to find a particular item of information can be automatically converted into an instruction to go to the physical location where that information is stored. Human memory is evidently content addressable, and so are the memory systems of **connectionism* (1) and **parallel distributed processing*. Also called a *content-addressable store*.

content analysis *n.* A collection of techniques often used in **qualitative research* for the systematic and objective description and classification of the manifest or latent subject matter of written or spoken verbal communications, usually by counting the incidence or coincidence of utterances falling into several (usually predetermined) categories.

content domain *n.* In psychometrics, a clearly defined body of knowledge, skills, abilities, aptitudes, or tasks that may be measured with an appropriately constructed test. See also CONTENT VALIDITY, DOMAIN-REFERENCED TEST, DOMAIN SAMPLING.

contentive *n.* Another name for a **content word*.

content psychology *n.* The psychological study of the components of consciousness as practised in **structuralism* (2), rather than of individual acts. Compare ACT PSYCHOLOGY.

content validity *n.* In psychometrics, the extent to which the items of a test are appropriate to the **content domain* of the test. For example, a test used for employment selection has high content validity if the test items cover the abilities, skills, or competencies required to perform the job and do not cover other irrelevant attributes. See also DOMAIN-REFERENCED TEST, DOMAIN SAMPLING.

content word *n.* Any word with an independent meaning that can be

stated, such as *flower*, *write*, and the great majority of words in any natural language. Also called a *contentive* or a *lexical word*. Compare [FUNCTION WORD](#).

context-dependent grammar *n.* A type of [*generative grammar](#) in which a rule can be conditional on the linguistic context—the linguistic units adjacent or nearby those to which the rule applies directly. For example, *Rewrite X as X + Y in the context of Z* is a typical *context-dependent rule* in such a grammar. Also called a *context-sensitive grammar*. Compare [CONTEXT-FREE GRAMMAR](#).

context-dependent memory *n.* A form of [*state-dependent memory](#) associated with the context in which information is learned and recalled.

context effect *n.* Any influence of surrounding objects, events, or information on an organism's response to a [*stimulus \(1\)](#), especially on perception and cognition. See also [ADAPTATION-LEVEL THEORY](#), [ASSOCIATIVE ILLUSION](#), [CHEQUER-SHADOW ILLUSION](#), [DIALECTICAL MONTAGE](#), [FIELD EFFECT](#), [GELB EFFECT](#), [INDUCED MOTION](#), [KARDOS EFFECT](#), [WORD SUPERIORITY EFFECT](#). Compare [FRAMING EFFECT](#).

context-free grammar *n.* A type of [*generative grammar](#) in which the rules apply regardless of the linguistic context—the linguistic units adjacent or nearby those to which the rule applies directly. For example, *Rewrite X as X + Y* is a possible *context-free rule* in such a grammar, and it would apply irrespective of linguistic context. Compare [CONTEXT-DEPENDENT GRAMMAR](#).

context-sensitive grammar *n.* Another name for a [*context-dependent grammar](#).

contiguity law *n.* In the doctrine of [*associationism](#), the most basic law, introduced by the Scottish philosopher James Mill (1773–1836), according to which mental elements or ideas become associated when they are close to one another in time or space. Thus redness is associated with warmth because the two are often contiguous in everyday experience, as when one encounters a hearth full of glowing coals. See also [GROUPING LAW](#). Compare [FREQUENCY LAW](#), [SIMILARITY LAW](#). [From Latin *contigere* to touch on all sides, from *con-* *****ebook converter DEMO Watermarks*****]

wholly + *tangere* to touch]

contiguity theory *n.* The learning theory of the US psychologist Edwin R. Guthrie (1886–1959), according to which an organism invariably gives the same response to a **stimulus (1)* pattern that it gave when it last encountered the pattern (including internal stimuli), the function of **reinforcement* being to create a new stimulus pattern to which the organism responds similarly in the future.

contingency coefficient *n.* In statistics, a measure of association between two categorical variables, applicable to a **contingency table* of any size. It is based on the **chi-square distribution* and ranges from 0 (no association) to 1 (perfect association) and is calculated by dividing the chi-square value for the table by the chi-square value plus the number of observations and then extracting the square root. *Compare* **CRAMÉR'S C** , **PHI COEFFICIENT**.

contingency management *n.* A technique of **behaviour therapy* based on **operant conditioning* in which therapists and family members ignore behaviour that is symptomatic of the disorder being treated and actively reward behaviours that are incompatible with the disorder. In the first decade of the 21st century, contingency management began to be applied more widely in the US, especially in drug treatment programmes and company health initiatives. As a consequence, more homeless people with HIV started remembering to take their medication when they were paid small incentives for doing so, and recidivism rates of drug offenders reduced markedly.

contingency table *n.* A rectangular array of numbers formed by the intersection of two classification variables, showing frequencies of observations in each of its cells. For example, if the two variables are male/female and left-handed/right-handed, then the frequencies of cases in each of the four categories could be displayed in a 2×2 contingency table, that is, a contingency table with two rows and two columns.

contingency theory of leadership effectiveness *n.* A model of leadership style and leadership effectiveness proposed by the US-based
*****ebook converter DEMO Watermarks*****

Austrian psychologist Fred E(dward) Fiedler (born 1922) in his book *Theory of Leadership Effectiveness* (1967), according to which a directive, authoritarian leadership style is most effective when circumstances are either very unfavourable or very favourable for the leader, and non-directive leadership is most effective in intermediate circumstances. The three key factors determining the favourableness of the circumstances for the leader are leader-member relations (how much the leader is liked and respected by the group members), position power (how much authority the leader has over the group members), and task structure (how structured the group task is).

contingent aftereffect *n.* A type of **aftereffect* that results from selective adaptation to specific stimulus features, the resultant effect being contingent on the presence in the visual field of one of these features, the classic example being the **McCollough effect* in which illusory colours are contingent on the presence of particular grating patterns. *See also* [TILT AFTEREFFECT](#).

contingent negative variation *n.* A type of **event-related potential*, believed to indicate attention, consisting of a large negative change in potential voltage across the cerebral cortex, especially in the frontal lobe, that develops slowly in a person who is actively expecting the occurrence of some significant stimulus requiring a response. It is observable as an **evoked potential* occurring typically during the 1–2 seconds after a warning signal is given. *See also* [p300](#). *Compare* [READINESS POTENTIAL](#). **CNV** abbrev.

continuant *n.* Any speech sound such as /l/, /f/, /r/, or /s/ whose **articulation* involves incomplete blockage of the airstream through the vocal tract. *Compare* [PLOSIVE](#).

continuation problem *n.* Another name for a **completion test*.

continuity (Gestalt) *See* [GOOD CONTINUATION](#).

continuity theory *n.* A theory of learning espoused by the US psychologist Clark L. Hull (1884–1952), among others, according to which an organism learns a small amount about all **stimuli* (1) that it encounters, and learning is therefore gradual and continuous. *Compare* [DISCONTINUITY](#)

*****ebook converter DEMO Watermarks*****

THEORY.

continuous reinforcement *n.* In **operant conditioning*, a **reinforcement schedule* in which the organism is rewarded after every response. *Compare* PARTIAL REINFORCEMENT.

continuous variable *n.* In statistics, any **variable* that has a **continuum* of possible values, so that integration rather than simple addition is required to determine cumulative probabilities of its **probability distribution*. *See also* METATHETIC STIMULUS DIMENSION, PROTHETIC STIMULUS DIMENSION. *Compare* DISCRETE VARIABLE.

continuum *n.* A continuous sequence or dimension in which adjacent points are not noticeably different but the extremes are clearly distinct. [From Latin *continuus* uninterrupted, from *continere* to hang together, from *com* together + *tenere* to hold]

contour *n.* A visual line, edge, or border outlining a part of the visual field, usually determined by abrupt **lightness*, **colour*, or **texture gradients* but sometimes induced as a subjective or **illusory contour* without any corresponding retinal image gradient. *See also* EHRENSTEIN'S BRIGHTNESS ILLUSION, ILLUSORY CONTOUR, KANIZSA TRIANGLE, ZERO-CROSSING.

contrafreeloading *n.* Working for **reinforcement* (1) even though the identical reinforcement is freely available, as when a rat repeatedly presses a lever for food (earned food) that is available to be taken with less effort from a dish (free food). This phenomenon has been shown to occur in a wide variety of vertebrate species, including fish, birds, gerbils, mice, rats, monkeys, chimpanzees, and human children and adults, a rare and possibly unique exception being the domestic cat *Felis domesticus*, and it apparently contradicts conventional theories of learning and motivation because, if reinforcement or reward is equated with food eaten, then organisms seem not to be maximizing the reinforcement/effort or reward/cost ratio. The phenomenon was first reported by the US psychologist Glen D. Jensen (1932–2007) in an article in the *Journal of Experimental Psychology* in 1963. [From Latin *contra* against + US English *freeloading* obtaining goods or services at someone else's expense]

*****ebook converter DEMO Watermarks*****

contralateral *adj.* On, pertaining to, or affecting the opposite side of the body. *Compare* **IPSILATERAL**. [From Latin *contra* against + *lateralis* of or relating to a side, from *lateris* a side]

contrast *n.* **1.** A distinction between things being compared, or an emphasis on the distinction between things that are juxtaposed. **2.** In perception, an enhancement of the perceived differences between stimuli resulting from juxtaposing them. In ***simultaneous contrast** the stimuli are presented together; in ***successive contrast** they are presented sequentially. *See* **COLOUR CONTRAST**, **LIGHTNESS CONTRAST**, **WARMTH CONTRAST**. *See also* **CONTRAST RATIO**. **3.** In statistics, a comparison of two or more ***means** calculated by forming a weighted linear combination of means. For example, the contrast $\frac{1}{2}(\text{Mean } 1) + \frac{1}{2}(\text{Mean } 2) - (\text{Mean } 3)$ could be used to test the ***null hypothesis** that the average of Mean 1 and Mean 2 is equal to Mean 3 in the population. In most cases it is necessary for statistical reasons for the contrast to be orthogonal (3), with the coefficients summing to zero, as are the coefficients of $\frac{1}{2}$, $\frac{1}{2}$, and -1 in this example. **4.** The degree to which areas of an optical image, such as those in television or photographic pictures, differ in ***luminance**, often indexed by $(L_{\max} - L_{\min}) / (L_{\max} + L_{\min})$, where $L_{\max}$ is a measure of the luminance of the brightest area and $L_{\min}$ the luminance of the darkest area. *See also* **CONTRAST RATIO**, **CONTRAST THRESHOLD**. **5.** Exaggerating or increasing the discrepancy between one's own attitude and that of a source of a persuasive communication or message. *See also* **ASSIMILATION-CONTRAST THEORY**. *Compare* **ASSIMILATION (4)**.

[From Latin *contra* opposite to + *stare* to stand]

contrast ratio *n.* An index of the difference between the ***luminance** of an image (L_i) and the luminance of its background (L_b) usually expressed as a percentage of the background luminance: $100 \times (L_i - L_b) / L_b$. *Compare* **CONTRAST (4)**.

contrast sensitivity function *n.* A graph depicting the relationship between the ***spatial frequencies** of simple visual images such as ***gratings** with variable distances between their bars and a viewer's ability to perceive the fluctuations in luminance across the images, the horizontal axis showing

different spatial frequencies and the vertical axis sensitivity, the reciprocal of the [*absolute threshold](#). Also called a *modulation transfer function* (MTF). CSF abbrev.

contrast threshold *n.* An [*absolute threshold](#) for [*contrast](#) (4), being the minimum contrast required for an observer to detect a target image reliably.

contrient interdependence *n.* A condition of social situations in which the actions that benefit some individuals harm others. It tends to promote competition. [From Latin *con-* together + *terere* to rub or grind + *-ent* present participle ending + English *interdependence*]

control analysis *n.* A [*psychoanalysis](#) carried out by a student training to become an analyst, under the supervision of a qualified analyst. Also called a *supervised analysis* . Compare [TRAINING ANALYSIS](#).

control, delusion of See [DELUSION OF CONTROL](#).

control group *n.* In experimental design, a comparison group of research participants or subjects who, when the [*independent variable](#) is manipulated, are not exposed to the treatment that subjects in the [*experimental group](#) are exposed to, but who in other respects are treated identically to the experimental group, to provide a baseline against which to evaluate the effects of the treatment. The first deliberate use of a control group was described in the ‘Statistical Inquiries into the Efficacy of Prayer’ by the English explorer, amateur scientist, and psychologist Sir Francis Galton (1822–1911), published in *Fortnightly Review* in 1872. Galton explained the idea as follows: ‘We simply look for the final result—whether those who pray attain their objectives more frequently than those who do not pray, but who live in all other respects under similar conditions’ (p. 126). His results suggested that prayer is ineffective. Compare [EXPERIMENTAL GROUP](#).

controlled association *n.* Another name for [*directed association](#).

controlled experiment *n.* Another name for a true [*experiment](#).

controlled processing *n.* Any form of [*information processing](#) requiring conscious [*attention](#) or control, as in the performance of a novel or difficult task. Compared to [*automatic processing](#), controlled processing is generally much slower, requires more effort, is more easily impaired by fatigue or alcohol, and does not normally involve parallel processing of information from more than one sensory channel, but it can be developed faster and with less practice than automatic processing, often in a few trials, and it leaves the learner with greater control of the behaviour. *See also* [DUAL-PROCESS MODEL](#), [MINDFULNESS](#), [PRINCIPLE OF LEAST EFFORT](#).

control variable *n.* **1.** In experimental design, any variable apart from the [*independent variable](#) that is controlled by the experimenter by being randomized, held constant, statistically controlled, or suppressed in some other way (also called a *controlled variable*). **2.** Any variable whose values are used to separate cases into subgroups in a cross-tabulation.

convenience sample *n.* A [*non-probability sample](#) of research participants or subjects selected not for their representativeness but for their accessibility or handiness, as when university researchers use their own students. *See also* [ACCIDENTAL SAMPLE](#), [OPPORTUNITY SAMPLE](#), [QUOTA SAMPLE](#), [SELF-SELECTED SAMPLE](#), [SNOWBALL SAMPLE](#). *Compare* [CLUSTER SAMPLE](#), [PROBABILITY SAMPLE](#), [RANDOM DIGIT DIALLING](#), [SIMPLE RANDOM SAMPLE](#), [STRATIFIED RANDOM SAMPLE](#).

conventional fighting *n.* The relatively harmless forms of combat used by many species to settle conflicts over scarce resources, as when bighorn rams leap at each other head-on, although they could inflict more damage by charging each other in the flank; many species of fish seize each other's leathery jaws, rather than biting where more injury would be inflicted; male fiddler crabs never injure each other, although their enlarged claws are powerful enough to crush their opponents; rattlesnakes wrestle but never bite; male deer lock antlers but seldom use them to pierce each other's bodies; and some antelopes actually kneel down to fight. Also called *ritualized fighting*. *See also* [DISPLAY \(1, 2\)](#), [DOMINANCE HIERARCHY](#), [HAWK-DOVE GAME](#), [HAWK-DOVE-RETALIATOR GAME](#), [RESOURCE-HOLDING POTENTIAL](#), [SUBMISSIVE BEHAVIOUR](#). *Compare* [ESCALATED FIGHTING](#).

conventional morality *n.* The second *Kohlberg stage of moral development, in which right and wrong are defined in terms of convention and ‘what people would say’. It is divided into two levels: at Level 3 the child’s moral behaviour is guided by the goal of gaining approval and avoiding disapproval of others (*I should not tell lies because then people will respect me*), and at Level 2 by rigid codes of ‘law and order’ (*I should not tell lies because it is forbidden*). Compare POSTCONVENTIONAL MORALITY, PRECONVENTIONAL MORALITY.

convergence *n.* Any process of coming together, specifically *ocular convergence. Compare DIVERGENCE. [From Latin *convergere* to bend together, from *con-* together + *vergere* to incline]

convergence–divergence *n.* A *cognitive style defined by two radically different modes of *thinking. At one extreme is *convergent thinking*, characterized by a tendency to home in on a unique solution to a problem, usually involving the synthesis of information, typified by analytical, deductive thinking in which formal rules are followed, as in arithmetic. It is logical, consciously controlled, reality-oriented, and largely dependent on previously learnt knowledge and skills, and it is measured by conventional IQ tests. At the opposite extreme is *divergent thinking*, characterized by the fluent production of a variety of novel ideas relevant to the problem in hand. Divergent thinkers prefer, and perform better at, open-ended problems that do not have unique solutions. Tests of divergent thinking, which tap more creative types of thinking, include items such as the following: ‘How many uses can you think of for a brick?’ In a study of schoolboys, the English psychologist Liam Hudson (1933–2005) found that most of the boys could think of only three or four answers in about three minutes, but most of those whom he identified as divergent thinkers gave ten or more answers. Some psychologists equate divergent thinking with creativity. The concept was introduced in 1946 by the US psychologist J(oy) P(aul) Guilford (1897–1987), and convergent production and divergent production are two of the six different types of mental operations in *Guilford’s cube.

convergence insufficiency *n.* Diminished or impaired *ocular convergence.

*****ebook converter DEMO Watermarks*****

convergent validity *n.* A form of **validity* that, together with **discriminant validity*, provides evidence of **construct validity*. It is based on the assumption that different measures of the same **hypothetical construct* ought to correlate highly with one another if the measures are valid. The concept was introduced in an article by the US psychologists Donald T(homas) Campbell (1916–96) and Donald W(inslow) Fiske (1916–2003) in the journal *Psychological Bulletin* in 1959. See also [MULTITRAIT–MULTIMETHOD MATRIX](#).

conversational maxims *n.* Four assumptions about the quality, quantity, relevance, and manner of utterances in ordinary conversations suggested in 1975 by the English philosopher H(erbert) P(aul) Grice (1913–88) and generally assumed to underpin the **cooperative principle*. Also called *Gricean maxims*.

conversation analysis *n.* A collection of techniques used in **ethnomethodology* and other forms of **qualitative research* for analysing naturally occurring verbal dialogues. It studies the structure and coherence of conversations using empirical and inductive techniques in contrast to the theoretical and deductive approach characteristic of **discourse analysis*. **CA** *abbrev.*

conversion *n.* A qualitative alteration in form, character, or function. In **psychoanalysis*, a **defence mechanism* in which an unconscious conflict that would otherwise arouse **anxiety* is expressed symbolically, the repressed wish or idea being transformed into a physical **symptom*, such as a pain, paralysis, or loss of sensory function. Sigmund Freud (1856–1939) introduced the concept in 1894 in an article on ‘The Neuro-Psychoses of Defence’ (*Standard Edition*, III, pp. 45–61, at p. 49) and developed it further in 1908/9 in an article entitled ‘Some General Remarks on Hysterical Attacks’ (*Standard Edition*, IX, pp. 229–33). See also [CONVERSION DISORDER](#), [CONVERSION HYSTERIA](#).

conversion disorder *n.* A disorder in **DSM-5* characterized by one or more symptoms related to voluntary body movements or **sensory* functions, with clinical findings showing that these symptoms are not caused by a **neurological* or other medical condition, the symptoms causing significant
*****ebook converter DEMO Watermarks*****

distress or impairment in social, occupational, or everyday life. The term relates to ***conversion symptoms**. In some taxonomies of mental disorders, such as ***ICD-10**, but not DSM-IV or DSM-5, this condition is classified as a ***dissociative disorder**. Also called *functional neurological symptom disorder*. See also **CONVERSION**, **CONVERSION HYSTERIA**, **CONVERSION SYMPTOM**, **LA BELLE INDIFFÉRENCE**. Compare **BODY DYSMORPHIC DISORDER**, **FACTITIOUS DISORDER**, **MALINGERING**, **PANIC DISORDER**, **SOMATIC SYMPTOM DISORDER**.

conversion hypothesis *n.* A conjecture that some errors in judging the validity of ***syllogisms** arise because people mentally translate a premise into one that appears equivalent but actually has a different logical meaning, for example *If p, then q* may be translated mentally to *If and only if p, then q*, which could lead to the incorrect inference, *If not-p, then not-q*. Compare **ATMOSPHERE HYPOTHESIS**.

conversion hysteria *n.* An obsolescent term for ***conversion disorder**. In ***psychoanalysis**, Sigmund Freud (1856–1939) introduced the term in his celebrated analysis of ***Little Hans** in an article in 1909 entitled ‘Analysis of a Phobia in a Five-Year-Old Boy’ (*Standard Edition*, X, pp. 5–149, at p. 116) to denote a form of hysteria characterized by physical symptoms (paralyses, anaesthesias, blindness, deafness, and the like) and to distinguish it from forms of hysteria characterized by anxiety and phobias without physical symptoms. See also **CONVERSION**, **CONVERSION DISORDER**, **CONVERSION SYMPTOM**, **TRANSFERENCE NEUROSIS (1)**.

conversion symptom *n.* A loss or change of sensory or voluntary motor functioning, such as blindness, deafness, numbness, or paralysis, not fully explained by any neurological or ***general medical condition** or drug, and not intentionally produced, but judged to be of psychological origin. Also called a *conversion reaction*. See also **CONVERSION**, **CONVERSION DISORDER**, **CONVERSION HYSTERIA**, **GLOVE ANAESTHESIA**.

convolution *n.* Any of the convex folds or ridges on the surface of the brain, also called a *gyrus*; more generally, anything coiled or twisted together or, by analogy, any confused or intricate issue or condition. **convolute** *vb.* **convoluted** *adj.* [From Latin *convolutus* rolled up, from *con* with + *volvere*, *volutus* to turn + *-ion* indicating an action, process, or state]

*****ebook converter DEMO Watermarks*****

convulsant *adj. n.* (Of or pertaining to) a drug such as **picrotoxin*, **strychnine*, or **tetanus toxin* that produces **convulsions* by blocking the **inhibitory* action of neurotransmitters such as **GABA* or **acetylcholine* in the nervous system. *Compare* ANTICONVULSANT.

convulsion *n.* An episode, which may be recurrent and episodic, of violent involuntary contractions of a group of muscles of the body, as in a **convulsive disorder*, or acute, as in a convulsion following a head injury and concussion. *See* CLONIC CONVULSION, SEIZURE, TONIC–CLONIC, TONIC CONVULSION. *See also* ANTICONVULSANT, AUDIOGENIC SEIZURE, DRAVET SYNDROME, PSEUDOSEIZURE. [From Latin *convulsio* *cramp*, from *convolvere* *to roll together*, from *con-* *together* + *volvere* *to roll* + *-ion* indicating an action, process, or state]

convulsive disorders *n.* Disorders such as **epilepsy* that are characterized by recurrent **convulsions*.

convulsive therapy *See* ELECTROCONVULSIVE THERAPY.

cooing *n.* The earliest identifiable stage in the development of infant vocalization, usually beginning at about three months and characterized by indeterminate **vowel*-like sounds, including **phonemes* not found in the language that the infant will eventually acquire. Cooing is eventually supplanted by **babbling*.

Cook's D *n.* In **regression analysis*, a measure of the influence of a particular case on the overall results. A large value of Cook's *D* indicates that exclusion of the case would cause the regression coefficients to change substantially. [Named after the US statistician R. Dennis Cook (born 1944), who published the statistic in the journal *Technometrics* in 1977]

Coolidge effect *n.* An increase in sexual responsiveness and reduction in the sexual **refractory period* (1) resulting from the arrival of a new mating partner. [Named after US President Calvin Coolidge (1872–1933) and the following apocryphal story, which is seldom recounted in print. During a visit to an egg farm with her husband in the 1920s, Mrs Coolidge, the First Lady,

was impressed by the frequency with which the roosters were mating with the hens, and she pointedly asked an aide to draw this to the attention of her husband. President Coolidge enquired whether each rooster always mated with the same hen, and the reply came that, to maintain the high frequency of mating, each rooster had to be paired with a new hen every few days. The President asked the aide to draw this to the attention of his wife.]

Coombs unfolding technique *n.* Another name for the [*unfolding technique](#).

cooperative principle *n.* A precept derived from the writings of the English philosopher H(erbert) P(aul) Grice (1913–88) according to which speakers normally try to cooperate when communicating, and in particular they usually attempt to be truthful, informative, relevant, and clear—following Grice’s conversational maxims of quality, quantity, relevance, and manner, respectively. Speakers may flout any of these maxims, for example by lying or being sarcastic, but conversation normally proceeds on the assumption that the maxims are being followed. Thus if Person *A* says *I’m thirsty*, and Person *B* replies *I can recommend the Queen’s Head*, then, in the UK at least, if the cooperative principle is being followed, *A* will normally assume that *B* is referring to a pub rather than, for example, to the upper part of the sovereign’s body or to a coin or a banknote carrying her effigy. Some linguists believe that the maxim of relevance is the fundamental explanatory principle of human communication. *See also* [DISTRIBUTED COGNITION](#), [PRAGMATICS](#), [THEORY OF MIND](#).

Coopersmith Self-Esteem Inventories *n.* An instrument comprising three forms designed to measure self-esteem: two forms for schoolchildren and an adult form, all items having dichotomous response categories (*Like me* or *Unlike me*). Each scale yields scores for self-esteem in relation to social self and peers, home and parents, school and academic, total self, and a [*lie scale](#) score. The scales were constructed by the US psychologist Stanley Coopersmith (1926–79), and the original version was published in Coopersmith’s book *Antecedents of Self-Esteem* (1967). **CSEI** *abbrev.*

coprolagnia *n.* An alternative name for [*coprophilia](#). [From Greek *kopros*

*****ebook converter DEMO Watermarks*****

excrement + *lagneia* lust + *-ia* indicating a condition or quality]

coprolalia *n.* Repetitive or obsessive obscene utterances, such as sometimes occurs in **Tourette's disorder*. [From Greek *kopros* excrement + *lalia* speech + *-ia* indicating a condition or quality]

coprophagia *n.* Eating of excrement or faeces. *See also* *PICA*. [From Greek *kopros* excrement + *phagein* to consume + *-ia* indicating a condition or quality]

coprophilia *n.* A **paraphilia* characterized by recurrent sexually arousing fantasies, sexual urges, or behaviour involving excrement or faeces; more generally, an exaggerated interest in or preoccupation with faeces and their excretion. [From Greek *kopros* excrement + *philos* loving, from *philein* to love + *-ia* indicating a condition or quality]

copropraxia *n.* Compulsive or repetitive obscene **gestures (1)*, such as sometimes occur in **Tourette's disorder*. [From Greek *kopros* excrement + *praxis* a deed or action, from *prassein* to do + *-ia* indicating a condition or quality]

copulation *n.* Sexual intercourse or coitus. **copulate** *vb.* [From Latin *copula* a bond or connection, from *co-* together + *apere* to fasten + *-ation* indicating a process or condition]

core self-evaluation *n.* A fundamental personality trait reflecting high **self-esteem*, high **self-efficacy*, high **locus of control*, and low **neuroticism*. The concept was introduced by the US management researcher Timothy A(lan) Judge (born 1962) and two colleagues in the *Journal of Applied Psychology* (1998).

corium *n.* Another name for the **dermis*. [From Latin *corium* skin, rind, or leather]

cornea *n.* The convex, transparent, five-layered fibrous membrane that forms the outer covering of the eyeball and that is responsible for about two-

thirds of the ***refraction** of light required for focusing visual images on the retina, the remaining one-third being supplied by the ***crystalline lens** of the eye. See also **EYE**. **corneal** *adj.* [From Latin *corneus* horny, from *cornu* a horn]

corneal reflex *n.* A ***reflex** closing of the eyelids when the cornea is touched or a puff of air is blown on to it, mediated by the fifth cranial ***trigeminal nerve** (sensory) and the seventh cranial ***facial nerve** (motor), often diminished or absent in people who wear contact lenses.

Cornsweet illusion *n.* Another name for the ***Fraud–O’Brien effect**. [Named after the US cognitive scientist Tom Norman Cornsweet (born 1929) who studied it]

cornu ammonis *n.* Another name for ***Ammon’s horn**. [From Latin *cornu* a horn + *Ammonis* of Ammon]

coronal plane *n.* A vertical plane dividing the brain or any other organ or organism into front and back parts (see **illustration**). Also called a *frontal plane*. Compare **SAGITTAL PLANE**, **TRANSVERSE PLANE**. [From Latin *corona* a crown, alluding to the position in which a tiara is normally worn]

Coronal plane. The figure shows the coronal, sagittal, and transverse or horizontal planes.

coronal section *n.* A cutting through a ***coronal plane**. Also called a *frontal section*. Compare **HORIZONTAL SECTION**, **SAGITTAL SECTION**, **TRANSVERSE SECTION**.

coronal suture *n.* The serrated line down each side of the skull towards the temple where the frontal and parietal bones join together.

coronary-prone See **TYPE A**, **TYPE D**.

corpora cavernosa *n. pl.* Masses of tissue situated along the ***penis** and ***clitoris** that, together with the ***corpus spongiosum**, form the erectile tissue capable of responding to sexual excitement. See also **CYCLIC GMP**, **NITRIC OXIDE**, **VIAGRA**. **corpus cavernosum** *sing.* [From Latin *corpus* body + *cavernosus* hollow]

corpora quadrigemina *n.* A generic name for the ***inferior colliculi** and ***superior colliculi**. [From Latin *corpora* bodies, from *corpus* a body + *quadrigemina* fourfold]

corpus callosum *n.* The largest bundle of nerve fibres in the nervous system, consisting of a broad curved band of more than 200 million white fibres (axons) connecting matching areas of the left and right cerebral hemispheres. The main central part is called the trunk of the corpus callosum, and the other parts are its ***splenium**, ***genu**, and ***rostrum** (1). See also **AGENESIS OF THE CORPUS CALLOSUM**, **ALIEN HAND SIGN**, **DISCONNECTION SYNDROME**, **LEFT-SIDED APRAXIA**, **SPLIT-BRAIN PREPARATION**, **TAPETUM** (2). Compare **ANTERIOR COMMISSURE**, **HIPPOCAMPAL COMMISSURE**, **MASSA INTERMEDIA**, **MIDDLE COMMISSURE**, **POSTERIOR CEREBRAL COMMISSURE**. [From Latin *corpus* a body + *callosus* callous]

corpus luteum *n.* A mass of yellow glandular tissue that forms in a ***Graafian follicle** when an ***ovum** is released and that secretes ***progesterone** in preparation for the implantation of the ovum in the uterus. See also **RELAXIN**. **corpora lutea** *pl.* [From Latin *corpus* body + *luteus* yellow]

corpus spongiosum *n.* The spongy blood-carrying tissue of the ***penis**

or ***clitoris** that, together with the ***corpora cavernosa**, forms the erectile tissue capable of responding to sexual excitement. *See also* **CYCLIC GMP**, **NITRIC OXIDE**. [From Latin *corpus* body + *spongiosum* spongy]

corpus striatum *n.* A term used confusingly for the ***caudate nucleus** and ***lenticular nucleus** taken together, because of their striped appearance in stained sections, leading to frequent confusion with the ***striate cortex** (to which it is unrelated) and the ***striatum**. It includes the striatum, also called the *neostriatum*, and the palaeostriatum, usually called the *globus pallidus*. [From Latin *striatus* streaked, from *stria* a furrow or a flute of a column]

correction for attenuation *See* **ATTENUATION**.

correct rejection *n.* In ***signal detection theory**, an instance of failing to detect a signal when the signal is in fact absent. Also called a *correct reject*. *Compare* **FALSE ALARM (2)**, **HIT**, **MISS**.

correlation *n.* In statistics, the degree of (usually) linear relationship between two variables such that high scores on one tend to go with high scores on the other and low scores on one with low scores on the other (positive correlation), or such that high scores on one tend to go with low scores on the other (negative correlation). The most commonly used index of correlation, the ***product-moment correlation coefficient**, symbolized by *r*, ranges from 1.00 for perfect positive correlation, through zero for uncorrelated variables, to -1.00 for perfect negative correlation. The concept of the correlation coefficient was first suggested by the English explorer, amateur scientist, and psychologist Sir Francis Galton (1822–1911) at a meeting of the Royal Institution in London in 1877. *See also* **AUTOCORRELATION**, **KENDALL'S TAU**, **PARTIAL CORRELATION**, **SPEARMAN RANK CORRELATION COEFFICIENT**. **correlate** *vb.* **correlational** *adj.* [From Latin *com* together + *relatio* a relation + *-ion* indicating an action, process, or state]

correlational study *n.* A non-experimental type of research design, without manipulation of an ***independent variable** or control of ***extraneous variables**, in which patterns of ***correlations** between two or more variables are analysed. *See* **ANALYSIS OF COVARIANCE STRUCTURES**, **MULTIPLE REGRESSION**, **PATH DIAGRAM**.

*****ebook converter DEMO Watermarks*****

correlation centre *n.* Any of a large number of regions in the brain where information from disparate sense organs is integrated. US *correlation center*.

correlation coefficient *n.* A numerical index of **correlation*, usually the **product–moment correlation coefficient*, but sometimes another index, such as **Kendall’s tau* or **Spearman rank correlation coefficient*.

correlation ratio *n.* In statistics, a correlation coefficient that provides an index of the degree of non-linear relationship between two variables. The correlation ratio is symbolized by η and is also called *eta*, the seventh letter of the Greek alphabet. *Compare* *PRODUCT–MOMENT CORRELATION COEFFICIENT*.

correlogram *n.* A plot of the **autocorrelation* of a **time series* at lags 1, 2, and so on. The shape or form of the correlogram reveals information about trends and cycles in the time series. [From *correlation* + Greek *gramme* a line]

correspondence analysis *n.* A technique of data analysis applicable to categorical scores in two-way **contingency tables*, usually involving the depiction of the interrelationships between categories of row and column variables in two-dimensional maps. It is sometimes considered a form of **factor analysis* and sometimes as **principal-components analysis* of qualitative data.

correspondence problem *n.* In visual depth perception based on **binocular disparity*, the matching up in the retinal images of points that are projections of **corresponding retinal points* in the object or image being perceived, a computational problem that is carried out unconsciously by the visual system. *See also* *CORRESPONDING RETINAL POINTS*.

correspondent inference *n.* Another name for the **fundamental attribution error*. The term was introduced in 1965 by the US psychologists Edward Ellsworth Jones (1926–93) and Keith Eugene Davis (born 1936). Also called *correspondence bias*, although this is avoided in careful usage.

corresponding retinal points *n.* For a given degree of **ocular convergence*, any pair of points, one on each retina, on to which a point in the visual field is projected. If the left retina and its image were to be superimposed on the right retina and its image, with the two foveas overlapping, then the corresponding retinal points and all other points on the **horopter* would coincide. *See also* CORRESPONDENCE PROBLEM.

corridor illusion *n.* A visual illusion that causes images of equal size in a perspective picture of a corridor to appear larger the further away they seem to be (see *illustration*). *See also* EMMERT'S LAW, PERSPECTIVE, PONZO ILLUSION, SIZE CONSTANCY.

Corridor illusion. The three human figures are the same size.

Corsi blocks *n.* A popular test of **short-term memory* and **spatial ability*

*****ebook converter DEMO Watermarks*****

based on a set of nine wooden blocks, arranged quasi-randomly on a board with numbered faces visible to the experimenter but not to the person being tested (see [illustration](#)). The examiner taps the blocks in an arbitrary sequence, and the examinee attempts to reproduce the sequence. In clinical use, difficulty is varied by altering the sequence length. Also called the *Corsi tapping test* or *Corsi block-tapping test*. [Named after the Canadian PhD student (later farmer) Philip (Michael) Corsi who introduced it in his PhD research; first published by the English neuropsychologist Brenda Milner (born 1918) in an article in the journal *Clinical Neurosurgery* in 1972]

Corsi blocks. The person being tested sits on the opposite side of the board and cannot see the numbers on the blocks.

cortex *n.* The outer layer of any organ or part, such as the [*cerebrum](#), the [*cerebellum](#), or [*adrenal gland](#). Often used as a shorthand for the [*cerebral cortex](#). **cortical** *adj.* [From Latin *cortex* bark or outer layer]

cortical blindness *n.* Any form of [*blindness](#), such as [*achromatopsia](#), caused by damage to the [*visual cortex](#).

cortical deafness *n.* Any form of [*deafness](#) caused by damage to the [*auditory cortex](#), another name for [*central auditory processing disorder](#).

cortical spreading depression *n.* Another name for [*spreading](#)

*****ebook converter DEMO Watermarks*****

depression.

corticobulbar pathway *n.* A bundle of nerve fibres belonging to the *trigeminal nerve, *facial nerve, and *hypoglossal nerve, leading from the primary *motor cortex to nuclei in the medulla oblongata. A lesion in this pathway can lead to *pseudobulbar palsy. [From *cortex* + Greek *bolbos* an onion, alluding to the onion-shaped medulla oblongata]

corticopontine *adj.* Pertaining to a tract of nerve fibres connecting the *cerebral cortex and the *pons.

corticospinal tract *n.* The bundle of nerve fibres that originate mainly from the *motor cortex and descend through the *internal capsule, *brainstem, and *spinal cord, most of the fibres crossing the midline of the body at the *pyramidal decussation. It mediates voluntary movements of all kinds, and damage to it causes *paresis or *paralysis. Also called the *pyramidal tract* . **CST** *abbrev.*

corticosteroid *n.* Any *steroid hormone that is synthesized in and secreted by the *adrenal cortex, including the *glucocorticoids and *mineralocorticoids, or any of a group of synthetic drugs with a similar pharmacological action used to treat inflammatory or allergic conditions. See ALDOSTERONE, CORTICOSTERONE, CORTISOL, CORTISONE, PREDNISOLONE, PREDNISONE.

corticosterone *n.* A *corticosteroid hormone belonging to the *glucocorticoid group, secreted by the *adrenal cortex in response to serious injury or stress, shifting the body from carbohydrate to fat metabolism, regulating blood pressure, having anti-inflammatory effects, and sometimes suppressing immune responses.

corticotrophin *n.* Another name for * adrenocorticotrophic hormone (ACTH). Also spelt *corticotropin* .

corticotrophin-releasing hormone *n.* A *releasing hormone that is secreted by the hypothalamus and that controls the secretion of * adrenocorticotrophic hormone (ACTH) from the anterior pituitary. Also spelt

corticotropin releasing hormone . Also called *corticotrop (h)in-releasing factor (CRF)* . **CRH** abbrev.

Corti's membrane *n.* Another name for the ***tectorial membrane**.

cortisol *n.* A ***corticosteroid** hormone belonging to the ***glucocorticoid** group secreted into the bloodstream by the adrenal cortex in response to ***adrenocorticotrophic hormone (ACTH)** secreted by the anterior pituitary, especially in response to stress or injury, switching the body from carbohydrate to fat metabolism, regulating blood pressure, and having powerful anti-inflammatory effects. The amount of cortisol (and also adrenalin or epinephrine and noradrenalin or norepinephrine) in the blood or urine is sometimes used as a measure of stress. Also called *hydrocortisone* . [From *cortis(one)* + Latin *ol(eum)* oil]

cortisone *n.* A ***corticosteroid** hormone secreted by the adrenal cortex that suppresses inflammation and promotes carbohydrate formation. *See also DHEA*. [From *corti(co)s(ter)one*]

Corti's organ *See* **ORGAN OF CORTI**.

cost–benefit analysis *n.* A method of assigning a numerical value to the cost-effectiveness of a proposed operation, procedure, or undertaking. It is based on techniques of forecasting that are used to judge the value of each option in relation to its cost, to choose the option or options with the greatest net benefit, and sometimes to determine the optimal scale of the chosen operation(s), for example in terms of the amount to be invested. The basic decision criterion is maximization of the *difference* between total present benefits and total present costs (maximization of benefits minus costs), not the ***benefit–cost ratio** (benefits divided by costs), contrary to common belief and practice in some agencies, including the US Army Corps of Engineers. Also called *benefit–cost analysis* or *C–B analysis* . **CBA** abbrev.

Cotard's syndrome *n.* A pessimistic and distrustful ***delusional** condition characterized by a tendency to deny everything, even to the point of believing that one's body has disintegrated and that one's family no longer exists. Also called *délire de négation* or *insanity of negation* . *See also* *****ebook converter DEMO Watermarks*****

NIHILISM, NIHILISTIC DELUSION. [Named after the French neurologist Jules Cotard (1840–87), who first described it in 1880]

co-therapist *n.* A therapist who works in conjunction with another, especially in leading a **group therapy* session. Also called a *co-facilitator*.

counselling *n.* The practice or profession of applying psychological theories and communication skills to clients' personal problems, concerns, or aspirations. Some forms of counselling also include advice-giving, but the dominant ethos is one of providing facilitation without directive guidance. Counselling psychologists work with individuals, couples, and families in a variety of settings, including counselling agencies, general practitioners' surgeries, educational establishments, business organizations, and private practice. US *counseling*. See ASSERTIVENESS TRAINING, CLIENT-CENTRED THERAPY, CO-COUNSELLING, DISASTER COUNSELLING, EDUCATIONAL PSYCHOLOGY, GENETIC COUNSELLING, GESTALT THERAPY, MARRIAGE COUNSELLING, OFFENDER COUNSELLING, OUTPLACEMENT COUNSELLING, PASTORAL COUNSELLING. See also COUNSELLING PSYCHOLOGY, DISTRESS RELIEF QUOTIENT. Compare PSYCHOTHERAPY. [From Latin *consilium* advice, from *consulere* to consult]

counselling psychology *n.* A branch of **applied psychology* concerned with the application of psychological principles and research to **counselling*. US *counseling psychology*.

counteracting selection *n.* Pressures of **natural selection* that favour certain genes at one level (individual, family, or population) but disfavour them at another. Compare REINFORCING SELECTION.

counterbalancing *n.* 1. In experimental design, a method of controlling for the effects of an **extraneous variable* by ensuring that its effects are equal in all **treatment conditions*. For example, **order* effects can be counterbalanced by administering the various procedures in different sequences. 2. In questionnaire design, a method of controlling for **acquiescence response set* by wording a test so that an affirmative answer is scored in the direction of the **attribute* being measured in half of the questions and in the opposite direction in the rest. See also BALANCED SCALE.

countercathexis *n.* In **psychoanalysis*, the process by which ideas that have undergone **repression* and are constantly striving to break through into consciousness are prevented from doing so by an equal force operating in the opposite direction. It was first postulated in 1900 by Sigmund Freud (1856–1939) in his book *The Interpretation of Dreams* (*Standard Edition*, IV–V, at pp. 604–5), and it was subsequently used to explain the operation of **defence mechanisms*. Also called *anticathexis*. See also *REACTION FORMATION*. Compare *CATHEXIS*.

counterexample set *n.* In **logic*, the premises of an argument, followed by the conclusion with ‘It is not true that’ in place of ‘Therefore’. For example, this is an argument: *Pensioners who live in rented accommodation are eligible for the maximum tax rebate. I am a pensioner. I live in rented accommodation. Therefore I am eligible for the maximum tax rebate.* The counterexample set of this argument is: *Pensioners who live in rented accommodation are eligible for the maximum tax rebate. I am a pensioner. I live in rented accommodation. It is not true that I am eligible for the maximum tax rebate.* An argument is valid precisely if its counterexample set is inconsistent, as this counterexample set obviously is.

counterfactual conditional *n.* A conditional statement or proposition (of the form *If p, then q*) in which *p* is assumed to be false and *q* hypothetical. Such a statement or proposition is invariably and necessarily true: for example *If 2 + 2 = 5, then I’m a monkey’s uncle* is true. See *CONDITIONAL REASONING*.

counterfactual reasoning *n.* Reasoning based on **counterfactual conditionals*.

counter-rotating circles illusion *n.* Another name for the **Pinna–Brelstaff illusion*.

counter-transference *n.* In **psychoanalysis*, the analyst’s emotional reactions to the patient and to the patient’s **transference*, influenced by the analyst’s unconscious needs and conflicts. It should be carefully distinguished from the analyst’s conscious reactions to the patient. It was first

mentioned by Sigmund Freud (1856–1939) in 1910 in an article on ‘The Future Prospects of Psycho-Analytic Therapy’ (*Standard Edition*, XI, pp. 141–51). Since the 1970s there has been an increasing tendency in psychoanalysis to exploit the counter-transference in a controlled manner as part of the technique of psychoanalysis, support for this approach being drawn from Freud’s comment in 1913 in an article on ‘The Disposition to Obsessional Neurosis’ that ‘everyone possesses in his own unconscious an instrument with which he can interpret the utterances of the unconscious in other people’ (*Standard Edition*, XII, pp. 317–26, at p. 320).

couples therapy *n.* Any form of [*psychotherapy](#) aimed at treating problems of couples, whether married or not. *Compare* [MARITAL THERAPY](#).

courtship *n.* **1.** A pattern of behaviour, often involving a form of [*display](#) (1), shown by members of one or both sexes as a prelude to copulation, ensuring that mating occurs between members of the same species, between opposite sexes, and with females that are receptive. **2.** The art or process of wooing someone with the intention of marriage.

[From Latin *cortis* a courtyard, related to *hortus* a garden]

couvade *n.* A custom in many tribal societies according to which the father of an unborn child behaves as if he were also bearing the child, takes to bed, experiences a [*sympathetic pregnancy](#), and is treated as if he were pregnant. It is sometimes considered an example of [*Munchausen’s syndrome](#). [From French *couver* to hatch, from Latin *cubare* to lie down]

covariance *n.* In descriptive statistics, an index of the degree of association between two variables, defined as the expected (average) value of the product of the deviations of the two variables from their means, calculated in samples by transforming the scores in both groups to deviations from their respective group means, multiplying pairs of scores from each group together, and calculating the [*mean](#) of these products. The covariance of variables *X* and *Y* is written *Cov* (*X*, *Y*). *See also* [PRODUCT–MOMENT CORRELATION COEFFICIENT](#). *Compare* [VARIANCE](#).

covariance structures, analysis of *See* [ANALYSIS OF COVARIANCE](#)

*****ebook converter DEMO Watermarks*****

STRUCTURES.

covariate *n.* In * [analysis of variance \(ANOVA\)](#), a variable that is measured in addition to a dependent variable and that represents a source of variance in the dependent variable not controlled for in the experiment. For example, in an experiment on reading comprehension, the covariate might be the research participants' or subjects' ages. In * [analysis of covariance \(ANCOVA\)](#) such a covariate can be controlled for statistically. Also called a *concomitant variable* . [From *covariance*]

covariation principle *n.* In *[attribution theory](#), the tendency to ascribe behaviour to a cause that is present only when the behaviour occurs, or that is observed to vary over time with the behaviour. A typical example is the tendency to attribute competitive behaviour to external causes in people who are observed to behave competitively in interactions with competitive partners but to attribute the competitiveness to internal dispositional causes in people who appear to behave competitively independently of their partners' actions. *See also* [CAUSAL SCHEMA](#), [KELLEY'S CUBE](#). [From Latin *com* together + *variare* to vary + *-ation* indicating a process or condition]

cover memory *n.* Another name for a *[screen memory](#).

crack *n.* A street name for an *[alkaloid](#) extracted from *[cocaine](#) hydrochloride salt, mixed with sodium bicarbonate, and dried into so-called rocks. It differs from other forms of cocaine inasmuch as it is easily vaporized by heat and can be inhaled to produce an extremely rapid effect. Also called *free base* . *See also* [COCAINE-RELATED DISORDERS](#), [FREEBASING](#). [So called because it makes a crackling sound when it is heated]

Craik–O'Brien effect *n.* A powerful visual illusion produced by separating two identical grey areas with a blurred contour flanked by a narrow light strip merging into a narrow dark strip, resembling the appearance of *[Mach bands](#), causing the whole grey area adjacent to the light strip to appear much lighter than the grey area adjacent to the dark strip, the illusion being eliminated if the contour and flanking strips are covered with a narrow object such as a pencil or (if the contour is curved) a piece of string or cord (see [illustration](#)). Also called the *Cornsweet illusion* or the *Craik–*

*****ebook converter DEMO Watermarks*****

O'Brien–Cornsweet illusion . [Named after the Scottish philosopher and psychologist Kenneth J(ames) W(illiams) Craik (1914–45) who was the first to describe it in his doctoral thesis in 1940, and who died following a car accident before publishing it, and the US physicist Vivian O'Brien (1924–2010) who rediscovered and published it in 1958]

Craik–O'Brien effect. The left and right halves are identical, as can be confirmed by covering the join with a matchstick or similar object. In this simplified version of the effect, each half consists of a gradation from a lighter shade on the left to a darker shade on the right.

Cramér's C *n.* In statistics, a measure of association between two categorical variables, applicable to a **contingency table* of any dimensions, based on the **chi-square distribution*. The value of C is calculated by taking the square root of $\chi^2/N(k - 1)$, where N is the total number of scores and k is either the number of rows or the number of columns, whichever is smaller. Unlike the **contingency coefficient*, the value of C is relatively independent of the number of rows and columns. Also called *Cramér's V*. See also *PHI COEFFICIENT*. [Named after the Swedish mathematician and statistician Harald Cramér (1893–1985) who introduced it]

cranial accessory nerve *n.* Another name for either of the pair of **accessory nerves* that are distributed by the **vagus nerve* to the muscles of the larynx and pharynx.

cranial index *n.* A numerical indication of the narrowness of a **cranium* or head, given by its maximum length divided by its maximum breadth multiplied by 100. Compare *CEPHALIC INDEX*.

cranial nerve *n.* Any of the 12 pairs of nerves attached directly to the brain and projecting through natural openings in the skull, supplying the sense organs and the muscles of the head, neck, shoulders, heart, viscera, and vocal tract. They are referred to by either their names or their numbers, which are: ***olfactory nerve** (I), ***optic nerve** (II), ***oculomotor nerve** (III), ***trochlear nerve** (IV), ***trigeminal nerve** (V), ***abducens nerve** (VI), ***facial nerve** (VII), ***vestibulocochlear nerve** (VIII), ***glossopharyngeal nerve** (IX), ***vagus nerve** (X), ***accessory nerve** (XI), and ***hypoglossal nerve** (XII). Compare **SPINAL NERVE**.

cranium *n.* The skull. **cranial** *adj.* [From Latin *cranium* a skull, from Greek *kranion* a skull]

crank *n.* A common street name for ***methamphetamine**. [Supposedly so called because it was frequently smuggled in the crankcases of vehicles]

creak See **VOCAL FRY**.

creatine *n.* A product of protein metabolism produced by the liver and kidneys and found in ***striped muscle**, where it helps to replenish energy and reduce muscle fatigue. It is sometimes taken by athletes and sports competitors as a ***performance enhancer**, and is liable to cause liver and kidney damage if taken in excess, but it is difficult to legislate against because it is a naturally occurring amino acid and is also found in dietary meat. See **CREATINE PHOSPHATE**. [From Greek *kreas*, *kreatos* flesh + *-ine* indicating an organic compound]

creatine phosphate *n.* The ***phosphate** of ***creatine** through which phosphate is stored in muscles to enable adequate quantities of ***ATP** to be produced. Also called *phosphocreatine*.

creationism *n.* The doctrine that all things, including organisms, owe their existence to God's creation and not to ***evolution**. **creationist** *n.* One who believes in or promotes creationism.

creativity *n.* The production of ideas and objects that are both novel or

original and worthwhile or appropriate, that is, useful, attractive, meaningful, or correct. According to some researchers, in order to qualify as creative, a process of production must in addition be **heuristic* or open-ended rather than **algorithmic* (having a definite path to a unique solution). *See also* CONVERGENCE—DIVERGENCE, MULTIPLE INTELLIGENCES, TRANSLIMINALITY, TRIARCHIC THEORY OF INTELLIGENCE. **creative** *adj.*

CREB *abbrev.* Cyclic AMP response element binding protein, a compound present in **neurons*. When activated by **cyclic AMP* it initiates the consolidation of **long-term memories* by switching on genes whose protein production strengthens specific **synapses*. A drug that enhances CREB production or function might enhance memory and function as a **smart drug*. *See also* MEM 1414.

credibility *n.* The quality of meriting belief or confidence. In social psychology, the persuasiveness of a person or message source, generally associated with prestige. Research has shown that it consists of two major components, namely perceived trustworthiness and perceived competence or expertness, and a **multiplicative model* is required to represent the way they combine: if either approaches zero, then so does credibility, irrespective of the value of the other. The first serious discussion of it was by the Greek philosopher Aristotle (384–322 BC) in his *Rhetoric*, the key passage being: ‘Persuasion is achieved by the speaker’s personal character when the speech is also spoken as to make us think him credible. We believe good men more fully and more readily than others; this is true generally whatever the question is, and absolutely true where exact certainty is impossible and opinions are divided’ (Book I, Chapter 2, Bekker edition, p. 1356a). *See also* PRESTIGE SUGGESTION, SLEEPER EFFECT.

creole *n.* A form of language, originally a **pidgin*, that has become the mother tongue of a speech community through a process of linguistic development whereby an increasing proportion of a community use the pidgin as their primary mode of communication and children begin to adopt it as their mother tongue. Striking similarities, such as similar rules for conjugating verbs, have been noted in the structure of all creole languages and cannot be explained by a common ancestor language or exposure to other languages, which suggests that what is common to creole languages is widely

*****ebook converter DEMO Watermarks*****

scattered communities may be the basis of language acquisition everywhere, or that children learn languages by first constructing an abstract form of a creole. See also [BLACK ENGLISH VERNACULAR](#), [CREOLIZATION](#), [DECREOLIZATION](#), [HYPERCREOLIZATION](#). [From Portuguese *crioulo*, which originally meant a person of European descent born and brought up in a colonial territory]

creolization *n.* The process whereby a [*pidgin](#) language becomes a [*creole](#) language. See also [BLACK ENGLISH VERNACULAR](#), [DECREOLIZATION](#), [HYPERCREOLIZATION](#).

Crespi effect *n.* Another name for [*behaviour contrast](#) in its positive form, when increased reward leads to increased response rate. [Named after the US psychologist Leo P(aul) Crespi (1916–2008) who first reported it in an article in the *American Journal of Psychology* in 1942]

cretinism *n.* A congenital deficiency of [*thyroxine](#), the thyroid hormone, resulting in arrested physical development and [*intellectual disability](#) if untreated. **cretin** *n.* A person with congenital thyroid deficiency; colloquially (and offensively) a stupid person. [French *crétin* from Latin *Christianus* Christian, here meaning human, referring to the fact that such afflicted people are not animals]

Creutzfeldt–Jakob disease *n.* A progressive and degenerative human [*prion disease](#) that attacks the central nervous system, causing [*dementia](#), with loss of virtually all cognitive functions, [*ataxia](#), and death within 1–2 years. One form of it, called *new-variant Creutzfeldt–Jakob disease* (*nvCJD* or *vCJD*) may be caused by eating beef products from cattle infected with [*BSE](#). **CJD** *abbrev.* [Named after the German neurologists Hans G. Creutzfeldt (1885–1964) and Alfons M. Jakob (1882–1927) who first described its signs and symptoms; Creutzfeldt described one case, now considered atypical, in 1920, and Jakob described four more in 1921]

crib, air See [AIR CRIB](#).

cri du chat *n.* A rare congenital condition caused by a partial deletion of chromosome 5, resulting in [*intellectual disability](#). [French *cri du chat* cat's cry, referring to the cat-like cries emitted by a child with the condition as a
*****ebook converter DEMO Watermarks*****]

result of underdevelopment of the larynx]

criminal profiling *n.* In **investigative psychology*, the analysis of the behaviour and circumstances associated with serious crimes in an effort to identify the probable characteristics of the perpetrator. It is used especially in cases of serial murder or rape. It can be traced back at least as far as the 1880s, when it was used in an unsuccessful attempt to catch the London serial murderer 'Jack the Ripper', and it came to prominence in the US when the FBI set up its Behavioral Science Unit in 1974. *See also* *ORGANIZED CRIME (1)*. **criminal profile** *n.* A description of the psychological and demographic characteristics of a person who is most likely to have committed a crime or (more usually) a series of crimes. [From Italian *profilo* a profile or outline representation of something, from *profilare* to sketch, from Latin *pro* for or in place of + *filum* a thread]

criminological psychology *n.* A field of **applied psychology* devoted to psychological problems associated with criminal behaviour, criminal investigation, and the treatment of criminals. The term is sometimes used synonymously with **forensic psychology*, but this is avoided in careful usage. *See also* *CRIMINAL PROFILING*, *INVESTIGATIVE PSYCHOLOGY*.

crisis intervention *n.* A form of **brief psychotherapy* applied to problems arising from medical or other emergencies, often in hospitals.

crista *n.* A ridge or crest-like biological structure, especially (a) one of the folds in the inner membrane of a **mitochondrion*, or (b) the **crista acoustica*. **cristae** *pl.* [From Latin *crista* a ridge or crest]

crista acoustica *n.* A crest-shaped structure on the inner surface of the bulge or ampulla of each **semicircular canal*, containing **hair cells* that project into the gelatinous membrane of the canals, functioning as sensory receptors for the labyrinthine sense and responding only to accelerations of the head, which cause them to bend. Also called simply a *crista*. **cristae acousticae** *pl.* [From Latin *crista* a ridge or crest + Greek *akoustikos* of or relating to sound, from *akouein* to hear + *-ikos* of, relating to, or resembling]

criterion-referenced test *n.* A test that measures an **attribute* of a
*****ebook converter DEMO Watermarks*****

respondent against a predefined absolute standard (the criterion) without reference to the scores of other respondents. *See also* [CRITERION VALIDITY](#). *Compare* [DOMAIN-REFERENCED TEST](#), [NORM-REFERENCED TEST](#).

criterion validity *n.* In psychometrics, any measure of [*validity](#) based on determining the strength of the relationship between scores on the test and an independent criterion that is accepted as a standard against which the test may be judged. For example, in validating a test to measure depression, the criterion might be diagnosis of depression by clinical psychologists or psychiatrists, or in validating a test to measure scholastic aptitude, the criterion might be scores on tests of school performance. *See also* [CONCURRENT VALIDITY](#), [CRITERION-REFERENCED TEST](#), [PREDICTIVE VALIDITY](#).

criterion variable *n.* Another name for a [*dependent variable](#) in [*canonical correlation](#), [*discriminant function analysis](#), and [*multiple regression](#).

critical band *n.* For any specified [*tone \(1\)](#), the range of frequencies of sounds that are capable of [*masking](#) the tone, sounds outside this range having little or no masking effect. The *critical bandwidth* increases from a minimum of about 100 hertz for a tone of 500 hertz to over 1,000 hertz for tones above 5,000 hertz. *See also* [AUDITORY MASKING](#).

critical flicker frequency *n.* The threshold rate at which light from an intermittent or fluctuating source begins to be seen as continuous or fused, the usual criterion being the viewer's report of seeing it as continuous 50 per cent of the time. It depends on the [*luminance](#) of the image, its [*angular size](#), and the level of adaptation of the eyes, but its minimum value is about 16 hertz or cycles per second, and it is often taken as approximately 30 hertz. Television presents 25 still images per second (British standard) or 30 per second (US standard), but each image is given twice to raise the flicker rate to 50 or 60 per second, comfortably above the critical flicker frequency. Also called *critical fusion frequency (cff)* or *flicker fusion frequency (fff)*. *See also* [BRIGHTNESS ENHANCEMENT](#), [EPISCOTISTER](#), [FERRY–PORTER LAW](#), [FLICKER](#). *See also* [BIP](#). *Compare* [AUDITORY FLUTTER FUSION](#). **cff** abbrev.

critical period *n.* A biologically determined stage of development at
*****ebook converter DEMO Watermarks*****

which a person or animal is optimally ready to acquire some pattern of behaviour. *See also* [IMPRINTING](#).

critical theory *n.* A philosophical analysis of culture in general and literature in particular, associated especially with the [*Frankfurt school](#), that rejects the possibility of a value-free social science and attempts to address the historical and ideological factors that influence culture and human behaviour. Its proponents conceive it as a practical and [*normative \(1\)](#) theory, rather than as a *positive* or *descriptive* theory, and one that seeks to expose the contradictions in people's belief systems and social practices with a view to changing them. When focusing on psychological issues, also called *critical psychology*. *Compare* [LIBERATION PSYCHOLOGY](#).

Crocker–Henderson system *n.* A system for classifying [*odours](#) based on four primary odours: fragrant, acid, burnt, and caprylic (goat-like or putrid), with each component being given a score from 0 to 8; thus acetic acid, for example, is characterized as 3803—moderately fragrant, very acid, not at all burnt, and moderately caprylic. Also called the *odour square* or *smell square*. *Compare* [HENNING'S PRISM](#), [ZWAARDEMAKER SMELL SYSTEM](#). [Named after the US chemists Ernest Charlton Crocker (1888–1964) and Lloyd F. Henderson, who put it forward in 1927]

Cronbach's alpha *n.* In psychometrics, a reliability coefficient indicating the degree of [*internal consistency](#) of items within a test. Mathematically, it is the equivalent of the average of all possible [*split-half reliability](#) coefficients of the test. If certain assumptions are met, it ranges from 0 (zero internal consistency) to 1 (perfect internal consistency); a negative alpha coefficient indicates that items of the scale are negatively correlated and that an inappropriate reliability model is being used. Also called *alpha reliability coefficient* and *coefficient alpha*. *See also* [KUDER–RICHARDSON COEFFICIENT](#). [Named after the US psychologist Lee J(oseph) Cronbach (1916–2001), who introduced it in *Psychometrika* in 1951, and *alpha* (α) the first letter of the Greek alphabet, which symbolizes it]

cross-adaptation *n.* A temporary loss of sensitivity to a stimulus, especially an odour or a taste, following exposure to a different stimulus, as when exposure to sodium chloride (table salt) reduces sensitivity to other

*****ebook converter DEMO Watermarks*****

salts, or exposure to sucrose (table sugar) reduces sensitivity to fructose and other sweet substances. *See also* [ADAPTATION \(2\)](#).

cross-cultural survey *n.* Any investigation using [*survey research](#) methods to compare different cultural or subcultural groups.

cross-dependence *n.* Transferral of [*dependence \(2\)](#) on a drug to a different drug, enabling addiction to a dangerous drug such as [*heroin](#) to be treated by replacing it with a supposedly less dangerous substitute such as [*methadone](#). *Compare* [CROSS-TOLERANCE](#).

cross-dressing *n.* Another name for [*transvestism](#).

crossing over *n.* The interchange or swapping of [*homologous](#) sections of paired [*chromosomes](#) during [*meiosis \(1\)](#), producing variability in the hereditary characteristics of the offspring. Also called *crossover* or *breakage and reunion*. *See also* [DNA RECOMBINATION](#), [LINKAGE](#).

cross-modal matching *n.* A scaling method used in [*psychophysics](#) in which an observer matches the apparent intensities of stimuli across two [*sensory modalities](#), as when an observer adjusts the brightness of a light to indicate the loudness of a variable stimulus sound. An unusual but memorable example is the remark made in November 2009 by the English supermodel Kate Moss (born 1974): ‘Nothing tastes as good as skinny feels.’ Some authorities consider [*magnitude estimation](#) and [*magnitude production](#) to be forms of cross-modal matching in which one modality is the observer’s perception of the number system. Also called *cross-modality matching*.

cross-modal transfer *n.* The use of information gained through one [*sensory modality](#) to interpret information gained from another, as when a person born blind acquires the power of vision late in life, usually through a surgical operation, and immediately recognizes familiar objects by sight alone. In 1690 the English empiricist philosopher John Locke (1632–1704) expressed the opinion in his *Essay Concerning Human Understanding* (Book 2, Chapter 9, section 8) that such a person would not at first recognize any objects by sight alone, but in 1963 the case of SB reported by the English psychologists Richard L(angton) Gregory (1923–2010) and his research
*****ebook converter DEMO Watermarks*****

assistant Jean G. Wallace clearly refuted Locke's view and showed that cross-modal transfer had occurred, SB being able, immediately after his eye operation in middle age, to read upper-case letters and numerals that he had learnt only through touch. Also called *cross-modality transfer* . See also [MOLYNEUX'S QUESTION](#).

cross-sectional study *n.* A research design commonly used in developmental psychology and other branches of the discipline in which samples of research participants or subjects of different ages or from different groups are studied simultaneously and their behaviour compared. In contrast to a [*longitudinal study](#), this design does not control for [*cohort](#) effects.

cross-tabulation *n.* In statistics, a table with a cell for each combination of values of two or more variables in which the entries represent the number of cases having each specific combination of values.

cross-tolerance *n.* [*Tolerance \(3\)](#) to a drug resulting indirectly from tolerance to a different but chemically related drug. Compare [CROSS-DEPENDENCE](#).

cross-validation *n.* **1.** In psychometrics, evaluating the [*validity](#) of a test by administering it to an independent sample drawn from the same population as the sample on which it was originally validated, in order to determine the stability of the scores. **2.** In [*regression analysis](#) and [*multiple regression](#), measurement of [*predictor variables](#), and comparison of predicted and observed values of the [*dependent variable](#), in a fresh sample drawn from the same population as the sample from which the regression equation was derived, in order to determine the stability of the predictions.

crowd psychology *n.* The study of collective behaviour in crowds and mobs, including phenomena such as [*deindividuation](#), [*diffusion of responsibility](#), [*personal space](#).

cryptaesthesia *n.* In [*parapsychology](#), a putative hidden sense underlying extra-sensory perception. US *cryptesthesia*. [From Greek *kryptos* hidden + *aisthesis* feeling + *-ia* indicating a condition or quality]

cryptomnesia *n.* An apparently creative or original idea that is in fact derived from a latent or subconscious memory. [From Greek *kryptos* hidden + *mneme* memory, from *mnasthai* to remember + *-ia* indicating a condition or quality]

cryptophasia *n.* Another name for **autonomous speech*.

crystalline lens *n.* The biconvex, transparent, elastic structure immediately behind the iris of the vertebrate **eye* that helps to focus light rays on to the retina, although most (about two-thirds) of the refraction of light entering the eye occurs at the **cornea*. The degree of convexity of the crystalline lens can be altered by radial **ciliary muscles* up to about age 45, after which the lens becomes hard and its focus cannot be altered. *See also* ABERRATION (3), ACCOMMODATION (1), AMETROPIA, APHAKIA, ASTIGMATISM, CATARACT, CYCLOPLEGIA, LENS, REFRACTION. *Compare* COMPOUND EYE, OMMATIDIUM. [So called because of its internal crystalline structure]

crystallized intelligence *n.* A fundamental **factor* (2) of human intelligence, derived from **factor analysis*, corresponding roughly to **verbal intelligence*, consisting of the knowledge and expertise accumulated over a lifetime of experience, and measured by vocabulary and comprehension subtests of IQ tests. The concept was introduced in an article by the English-born US psychologist Raymond B(ernard) Cattell (1905–98) in the journal *Psychological Bulletin* in 1941 and became widely known after the publication of his book *Abilities: Their Structure, Growth and Action* (1971). Also called *crystallized ability*. *Compare* FLUID INTELLIGENCE. **g(C)** *abbrev.*

crystal meth *n.* A common street name for **methamphetamine*. Sometimes abbreviated to *crystal* or *meth*. [So called because it is often supplied in the form of salt crystals]

CS gas *abbrev.* A gas that irritates the mucous membranes of the eyes, nose, throat, and lungs, causing pain, temporary blindness, and breathing difficulty, used as an **incapacitant* primarily for crowd control. Formula: $C_6H_4ClCH:C(CN)_2$. *Compare* BZ GAS, CN GAS, MACE, PEPPER SPRAY, TEAR GAS. [From the surname initials of the US chemists Ben B. Corson (1896–

1987) and Roger W. Staughton (1906–57) who first developed it in 1928, not (as widely believed) an abbreviation of Civilian Security gas]

CSI effect *n.* An unrealistically high expectation sometimes held by juries in criminal trials of the amount and quality of forensic evidence required for conviction, arising from fictional (especially television) portrayals of crime scene investigations and leading to acquittal of defendants who might otherwise have been convicted chiefly on circumstantial evidence. The term was introduced by the US crime reporter Robin Franzen (born 1964) in an article headlined ‘ “CSI” Effect on Potential Jurors has Some Prosecutors Worried’ published in the *San Diego Union-Tribune* on December 16, 2002. [Named after the US crime drama series *CSI: Crime Scene Investigation*, first broadcast in October 2000]

CT scan *abbrev.* Computed (or computerized) tomography scan, a non-invasive method of ***brain** imaging or of visualizing other organs of the body, in which a computer builds up a three-dimensional picture from a series of plane cross-sectional X-ray images made at evenly spaced intervals along an axis. Formerly called a **CAT** (*computed axial tomography*) scan.

cue *n.* **1.** An ***attribute** of an object or event to which an organism responds, typical examples being the size or shape of a visual ***stimulus** (1) to which a response may be conditioned. **2.** A dimension or aspect of a proximal ***stimulus** (3) on the basis of which an organism makes inferences about a distal ***stimulus** (2), typical examples being the monocular and binocular depth cues on the basis of which ***depth perception** occurs. **3.** In research into memory, a stimulus that aids the recall of information not recalled spontaneously. *See also* **ACOUSTIC CUE** (2), **CUED RECALL**, **PRIMING** (1), **PROBE**. **4.** A signal to an actor or performer to begin performing, or more generally a hint about how to behave in a certain situation. *vb.* **5.** To supply someone with a cue (3, 4).

[Perhaps from French *queue* a tail, from Latin *cauda* a tail; in the 17th century written Q, standing for Latin *quando* when (the actor should begin)]

cued recall *n.* Retrieval of information from memory with the help of ***cues** (3), typical examples of such cues being the first letter of a word or

*****ebook converter DEMO Watermarks*****

name to be remembered, or the category to which the item of information belongs (such as, *a kind of food*). It is often contrasted with **free recall*. See also PRIMING (3), RECALL.

cultural anthropology *n.* The branch of anthropology devoted to the study of cultural as opposed to physical or biological aspects of humans, especially (though not exclusively) in non-literate societies. Compare PHYSICAL ANTHROPOLOGY, SOCIAL ANTHROPOLOGY.

cultural truism *n.* A proposition that most members of a cultural group accept without question and have never heard questioned, such as (in Western industrial cultures) *It is a good idea to brush your teeth three times a day if possible*. See INOCULATION THEORY.

culture *n.* The sum total of the ideas, beliefs, customs, values, knowledge, and material artefacts that are handed down from one generation to the next in a society. [From Latin *cultus* cultivation, from *colere* to till]

culture-bound syndromes *n.* Patterns of aberrant behaviour that do not fit easily into standard classifications of mental disorders and are entirely or mainly restricted to particular cultural groups, usually (ethnocentrically) excluding disorders such as **anorexia nervosa* that are restricted to Western industrial cultures. Also called *culture-specific disorders* or *syndromes*. See AMOK, ATAQUE DE NERVIOS, BILIS, BOUFFÉE DÉLIRANTE, BRAIN FAG, BRUJERÍA, CAFARD, COLERA, DHAT, ESPANTO, FALLING OUT, GHOST SICKNESS, HIKIKOMORI, HWA-BYUNG, IICH'AA, KHYÂL CAP, KORO, KUFUNGISISA, LATAH, LOCURA, MALADI MOUN, MAL DE OJO, MAL DE PELEA, MAL PUESTO, NERVIOS, PA-LENG, PERDIDA DEL ALMA, PIBLOKTOQ, QI-GONG PSYCHOTIC REACTION, ROOTWORK, SAKA, SANGUE DORMIDO, SHENJING SHUAIRUO, SHEN-K'UEI, SHIN-BYUNG, SHINKEI-SHITSU, SPELL, SUSTO, TAIJIN KYOFUSHO, TRIPA IDA, UFUFUNYANE, UQAMAIRINEQ, WINDIGO, ZAR.

culture-fair *adj.* Of or relating to a psychometric test that is fair and appropriate for respondents of all cultures or subcultures. **Non-verbal tests* of **intelligence*, such as **Raven's Progressive Matrices*, the **Cattell Culture-Fair Test*, the **Peabody Picture Vocabulary Test*, or the **Porteus Maze Test*, are generally considered more culture-fair than verbal and information-based tests and subtests, but culture-fairness is a matter of degree, and no **IQ test*

*****ebook converter DEMO Watermarks*****

could be entirely ***culture-free** unless it were based on purely biological measures such as properties of ***event-related potentials**. *See also* **CHOICE REACTION TIME**, **INSPECTION TIME**, **NERVE CONDUCTION VELOCITY**, **N140**, **PROCESSING SPEED**, **P200**, **STRING LENGTH**. **culture-fairness** *n*.

culture-free *adj*. Of or relating to a psychometric test yielding scores that are completely independent of all cultural influences. *See* **CULTURE-FAIR**.

culture shock *n*. Disorientation, often accompanied by feelings of isolation and rejection, resulting from a radical change in culture, through migration to a different country, or when a person's culture is confronted by another, alien culture. In severe cases, it may lead to ***adjustment disorders**.

culture-specific disorders *See* **CULTURE-BOUND SYNDROMES**.

cumulative record *n*. A ***learning curve** drawn by a pen that moves across a roll of paper at a steady rate, increasing its vertical height by a fixed amount for every response of an organism, such as a lever press by a rat in a ***Skinner box** or a peck by a pigeon of an illuminated plastic key (see **illustration**). To prevent the curve rising off the top of the paper, the pen resets instantly to the bottom of the paper whenever it approaches the top. The slope of the curve within a specified region indicates the rate of responding at that time. It was invented by the US psychologist B(urrhus) F(rederic) Skinner (1904–90) while he was a postgraduate student at Harvard University in the late 1920s. *See also* **LEARNING CURVE**, **OPERANT CONDITIONING**, **REINFORCEMENT (1)**. **cumulative recorder** *n*. A device for producing a cumulative record. [So called because it represents a cumulative distribution of responses]

Cumulative record. A segment of a typical cumulative record, showing a declining rate of responding. The small check marks sloping down to the right indicate reinforcements.

cuneate nucleus *n.* Either of two areas of the **medulla oblongata* where the left or right **fasciculus cuneatus* terminates, functioning as a relay station for somatosensory information. Also called the *nucleus cuneatus* . [From Latin *cuneatus* wedge-shaped, from *cuneus* a wedge]

cunnilingus *n.* Sexual activity in which a woman's genitalia are stimulated by her partner's tongue and lips. Also called *cunnilinctus* or *cunnilinctio* . Compare *FELLATIO*. [From Latin *cunnus* a vulva + *lingere* to lick, from *lingua* a tongue]

cupula *n.* A dome-shaped gelatinous membrane within the **semicircular canals* of the inner ears into which the **hair cells* of the **crista* project. **cupulae** *pl.* [From Latin *cupula* a small cask, from *cupa* a tub]

curare *n.* A black resin that is present in the bark of certain trees indigenous to tropical South America and is used as an arrow poison by South American Indians and as a muscle relaxant in modern medicine. It blocks the action of **acetylcholine* in the somatic nervous system, paralysing

skeletal muscles. **curarize** *vb.* To paralyse the skeletal muscles with curare, as in experiments in which visceral or autonomic responses are being studied and indirect effects via voluntary responses need to be ruled out. *See also* [NICOTINIC RECEPTOR](#). *Compare* [ATROPINE](#), [STRYCHNINE](#). [From Portuguese *curare*, from Carib *kurari* curare]

curvature illusion *n.* A visual illusion in which a semicircle appears more curved than a shorter circular arc with the same radius of curvature (see [illustration](#)). The illusion appears to have been discovered by the English physicist Samuel Tolansky (1907–73), who discussed it in his book *Optical Illusions* (1964), together with a variation that he called the ‘lens illusion’ involving pairs of curves resembling lenses, commenting that ‘I have noticed that there exists a most curious illusory difficulty when we attempt by eye to assess the radius of curvature’ (p. 51) and that ‘it is strange that these [two] illusions have escaped notice before’ (p. 54). Also called *Tolansky’s curvature illusion*. [From Latin *curvatura* bending, from *curvare* to bend, + *-ure* indicating an action or process, from Latin *-ura*]

Curvature illusion. The two arcs have the same radius of curvature and are parallel.

cutaneous rabbit illusion *n.* Another name for [*sensory saltation](#). [From Latin *cutaneus* of or relating to the skin, from *cutis* skin]

cutaneous sense *n.* Any of a number of sensory systems having receptors located in the [*skin](#), including the four basic senses of heat, cold, pain, and pressure first identified in 1904 by the Austrian physiologist Max von Frey (1852–1932), pressure now being known to include sensations of texture and vibration. Also called a *dermal sense* or *skin sense*. *See also* [DELTA FIBRE](#), [DORSAL COLUMN](#), [FASCICULUS CUNEATUS](#), [FASCICULUS GRACILIS](#),

MERKEL CELL, PALLAESTHESIA, SOMATOSENSORY CORTEX, SOMATOSENSORY HOMUNCULUS, SPINOTHALAMIC TRACT, TACTILE ACUITY, TEMPERATURE SENSE, TOUCH RECEPTOR. *Compare* DYNAMIC TOUCH, HAPTIC TOUCH. [From Latin *cutaneus* of or relating to the skin, from *cutis* skin]

cut score *n.* In psychometrics, in a scale used for selection, a predetermined score at or above which respondents are deemed to have passed or are accepted and below which they are deemed to have failed or are rejected.

CVC *abbrev.* Consonant–vowel–consonant, the type of **nonsense syllable* most often used in research into memory, typical examples being *WUD* and *KEB*, the initials C and V standing for phonetic consonants and vowels—speech sounds rather than letters—so that strictly speaking *DAX* is not CVC but CVCC, because the *X* represents two **phonemes* /ks/. The various types of syllable that can exist within a language are denoted analogously; thus in English it is possible to have clusters of up to three consonants at the beginning of a syllable (as in *splash*, which is CCCVC) and up to four at the end of a syllable (as in *sixths*, which is CVCCCC). *See also* CVC TRIGRAM.

CVC trigram *abbrev.* A three-letter word or non-word composed of a consonant, vowel, and consonant in that order, for example *DOG* or *KEB*. *See also* CVC, NONSENSE SYLLABLE. [From Greek *treis* three + *gramma* a letter]

CV digram *abbrev.* A two-letter word or non-word composed of a consonant followed by a vowel, for example *PA* or *BU*. [From Greek *dis* twice + *gramma* a letter]

cyanocabalamine *See* VITAMIN B₁₂.

cybernetics *n.* The comparative study of automatic **feedback* and control processes in mechanical, electronic, and biological systems, especially processes in which negative feedback keeps the system in a particular state or on course towards a particular goal. The term was coined in 1947 by the US mathematician Norbert Wiener (1894–1964) and the Mexican neurophysiologist Arturo Rosenblueth (1900–70). *See also* CLOSED-

LOOP CONTROL, HOMEOSTASIS, OPEN-LOOP CONTROL, TOTE. **cybernetic** *adj.* [From Greek *kybernetes* a steersman + *-ikos* of, relating to, or resembling, chosen in recognition of the fact that the first significant publication on feedback mechanisms was an article in 1868 on mechanical governors by the Scottish physicist James Clerk Maxwell (1831–79)]

cybersex *n.* Communication in **cyberspace*, usually via e-mail messages or internet chat rooms, for the primary purpose of achieving sexual arousal and **orgasm*. *See also* TELEDILDONICS. [From English *cyberspace*, from Greek *kybernetes* a steersman, + English *sex*]

cyberspace *n.* A notional electronic environment created by computer networks, such as the internet, in which people communicate and interact. [From *cyber(netics)* + *space*]

cyclic AMP *n.* Cyclic adenosine monophosphate, a compound widely distributed in biological cells that regulates reactions dependent on **hormones* and **neurotransmitters* and functions as a universal **second messenger*. **cAMP** *abbrev.* *See also* AMP, CREB in the main body of the dictionary.

cyclic GMP *n.* Cyclic guanosine monophosphate, a compound that is analogous to **cyclic AMP* and that keeps **sodium channels* open in the outer membranes of rods and cones in the retina when its ring structure is intact, but is inactivated by **transducin* if stimulated by light, closing the sodium channels and triggering **action potentials*. It also relaxes the smooth muscles in the walls of arteries in the penis, causing the arteries to dilate and tending to constrict veins, its secretion increasing in response to sexual excitement and affecting the **corpora cavernosa* and the **corpus spongiosum* of the penis or clitoris, facilitating the inflow and reducing the outflow of blood into the erectile tissue. *See also* PHOSPHODIESTERASE TYPE 5, VIAGRA. **cGMP** *abbrev.*

cyclic guanosine monophosphate *See* CYCLIC GMP.

cyclic majority *n.* An **intransitive preference* order arising from majority voting in a group of individuals with transitive individual preferences. *See* CONDORCET'S PARADOX.

*****ebook converter DEMO Watermarks*****

cyclic model of perception *n.* Another name for the **perceptual cycle*.

cyclic preferences *n.* Another name for **intransitive preferences*, especially when cyclicity exists among more than three alternatives, as in the following example. A die is rolled, and the outcomes I, II, ..., VI, denoting the number of dots on the face that comes up, are equiprobable. Before the die is rolled, you are given a choice between two gambles as follows, with payoffs in pounds, dollars, or any other currency:

Die shows:	I	II	III	IV	V	VI
Gamble A payoffs:	1	2	3	4	5	6
Gamble B payoffs:	2	3	4	5	6	1

This means that if you choose Gamble A, then if I comes up you win 1 unit, if II comes up you win 2 units, and so on, whereas if you choose Gamble B, then if I comes up you win 2 units, if II comes up you win 3 units, and so on. If you are like most people, you probably prefer Gamble B to Gamble A, because it offers a higher payoff in five cases out of six, despite the fact that the payoff from Gamble A is much greater in the sixth case. Next, you choose between the following pair of gambles:

Die shows:	I	II	III	IV	V	VI
Gamble B payoffs:	2	3	4	5	6	1
Gamble C payoffs:	3	4	5	6	1	2

You probably prefer C to B for the same reason as before. Continuing in the same way, you eventually choose between the following gambles:

Die shows:	I	II	III	IV	V	VI
Gamble F payoffs:	6	1	2	3	4	5
Gamble G payoffs:	1	2	3	4	5	6

You probably prefer G to F for the usual reason. Taking all your preferences into account, your preference order, from most preferred on the left to least preferred on the right, is GFEDCBA. But G is identical to A, which means that your preferences are cyclic: GFEDCBG.... See also [DECISION THEORY](#), [MONEY PUMP](#). Compare [TRANSITIVE PREFERENCES](#).

Cyclopean eye *n.* A hypothetical brain structure where the images from both eyes are brought together, believed by the French philosopher René

*****ebook converter DEMO Watermarks*****

Descartes (1596–1650) to be the pineal gland, by virtue of its location in the centre of the head, but eventually, in 1959, located by the Canadian-born US neurophysiologist David H(unter) Hubel (1926–2013) and his Swedish-born collaborator Torsten N(ils) Wiesel (born 1924) in the **binocular cells* of the **visual cortex*, approximately half the neurons in the **primary visual cortex* being binocular. *See also* *DISPARITY-SELECTIVE CELL*. [Named by the German physiologist, physicist, and mathematician Hermann Ludwig Ferdinand von Helmholtz (1821–94) after the Cyclops in Greek mythology with an eye in the middle of its forehead]

Cyclopean perception *n.* A term introduced by the Hungarian-born US radar engineer and psychologist Bela Julesz (1928–2003) to refer to **stereopsis*, especially of **random-dot stereograms* or **anaglyphs*.

Cyclopean stimulus *n.* Any stimulus, such as a **random-dot stereogram*, that requires binocular vision in order to be perceived.

cyclophoria *n.* A form of **heterophoria* in which the vertical axis of one eye rotates to the left or right because of a weakness of one of the **oblique muscles* of the eye. *Compare* *ESOTROPIA*, *EXOPHORIA*, *HETEROPHORIA*, *HYPERPHORIA*, *HYPOPHORIA*. [From Greek *kyklos* a circle, ring, or wheel + *-phoros* carrying, from *pherein* to bear]

cycloplegia *n.* Paralysis of the **ciliary muscles* that alter the shape of the **crystalline lens* of the eye, resulting in loss of ability to focus, often induced by **anticholinergic* drugs. **cycloplegic** *adj.*

cyclothymia *n.* A chronic instability of mood characterized by recurrent periods of **depression* and elation, below the threshold of severity of **cyclothymic disorder*.

cyclothymic disorder *n.* In **DSM-5*, a **mental disorder* within the category of **bipolar disorders* characterized by chronic instability of moods, with recurrent **hypomanic episodes* and **depressive episodes* falling short of **major depressive episodes*. Its sub-clinical form is called *cyclothymia*. [From Greek *kyklos* a circle + *thymos* spirit]

cypoterone *n.* A synthetic steroid whose acetate is used as an *antagonist (3) to *androgens. [Probably from cy(cle) + pro(ges)terone]

cyranoïd *n.* A person interacting with another using responses supplied by a third party through a hidden earphone, the cyranoïd thus acting as a medium or go-between, merely repeating words provided by someone else. In a typical use of this technique, a person with severe *social skills deficits may conduct what appears to be a sophisticated interaction and may learn by so doing to become more skilled. The concept was introduced by the US psychologist Stanley Milgram (1933–84) in a research grant proposal in 1979 and a paper delivered at the annual convention of the American Psychological Association in Toronto, Canada, in August 1984. **cyranoïc** *adj.* [Named after the balcony scene (Act 3, Scene 6) in the play *Cyrano de Bergerac* (1897) by the French poet and dramatist Edmond Rostand (1868–1918) in which Christian, a handsome but inarticulate nobleman, stands in front of Roxane’s balcony and declares his love for her, using words whispered to him by Cyrano, who is hiding below the balcony]

cytoarchitectonic map *n.* A chart, especially of the brain, based on variations in the cellular structure of tissues, the most widely used being the map of *Brodmann areas. [From Greek *kytos* a vessel + *architekton* a master builder, from *archi-* chief + *tekton* a builder]

cytology *n.* The study of the structure and function of biological cells. [From Greek *kytos* a vessel + *logos* word, discourse, or reason]

cytoplasm *n.* The *protoplasm surrounding the *nucleus (1) of a *cell. Also called the *perikaryon* or (now rarely) *plasma* . See also ECTOPLASM (1), MATERNAL INHERITANCE, MITOCHONDRIAL DNA. [From Greek *kytos* a vessel + *plasma* a form]

cytosine *n.* One of the constituent *bases (1) of the nucleic acids *DNA and *RNA, having an affinity for *guanine. **C** *abbrev.* [From Greek *kytos* a vessel + *-ine* indicating an organic compound]

cytoskeleton *n.* The network of fibrous proteins that provides the

framework for the shape of a [*neuron](#) or other cell, containing [*microtubules](#) that act as transport routes for molecules within the cell and a poorly understood control mechanism analogous to the nervous system of an organism, in some circumstances enabling the cell to make purposeful movements. *See also* [MITOSIS](#), [PARAMECIUM](#).

cytotoxic *adj.* Poisonous to living cells. *See also* [NEUROTOXIN](#). **cytotoxin** *n.* Any cytotoxic substance. [From Greek *kytos* a vessel + *toxikon* arrow-poison, from *toxon* a bow + *-ikos* of, relating to, or resembling]

dactylology *n.* A type of **sign language* in which each letter of the alphabet has its own special sign. Also called *finger spelling* . [From Greek *daktylos* a finger + *logos* word or discourse]

Dale's law *n.* The principle according to which a **neuron* can release only one **neurotransmitter* substance from its synaptic endings. This law has been repealed in the light of research findings. [Named after the English physiologist Sir Henry Hallet Dale (1875–1968) who propounded it]

daltonism *n.* The most common type of **colour-blindness*, occurring in about 7 or 8 per cent of males and 0.4 per cent of females, usually a form of **deuteranomaly* or **deuteranopia* resulting in a defective ability to distinguish reds from greens, caused by a **recessive *X-linked* gene and expressed predominantly in males, because they have only one X chromosome and therefore **complementation* cannot occur. Also called *red–green colour-blindness* . See also *HORNER'S LAW*. [Named after the English chemist and physicist John Dalton (1766–1844) who was red–green colour-blind and gave the first account of his condition in 1794, describing blood as appearing similar in colour to objects usually described as bottle-green]

dance of the bees See *ROUND DANCE*, *WAGGLE DANCE*.

dance therapy *n.* A form of **psychotherapy* in which clients or patients are encouraged to express their feelings and inner conflicts through dance.

dancing mania *n.* Another name for **tarantism*.

dantrolene *n.* Dantrolene sodium, a skeletal muscle relaxant drug that acts by limiting the release of calcium ions in muscle fibres and that is used in the treatment of muscle spasticity resulting from spinal cord injury. [Trademark]

dark adaptation *n.* A form of **adaptation* (2) in which the visual system is adjusted for efficient response in dim illumination, the **pupil* dilating and the **absolute threshold* for vision gradually decreasing with time spent in the dark, the threshold for red, orange, and yellow objects or images attaining its minimum after about 5 minutes, and the threshold for green, blue, and violet also decreasing to a plateau after about 5 minutes but then declining again from about 10 minutes and approaching its minimum after about 25 minutes, this dual or **duplexity function* being due to the different adaptation rates of the **photopic* and **scotopic* systems. See also *FIELD ADAPTATION*, *PHOTOCHROMATIC INTERVAL*, *PURKINJE SHIFT*. Compare *LIGHT ADAPTATION*. **dark-adapted** *adj.* Of or relating to the eye or the visual system after it has undergone dark adaptation.

dark focus *n.* A stable resting **accommodation* (1) of the eye's **crystalline lens*, usually corresponding to a focal distance of about one metre, that the eye assumes when confronted with a stimulus lacking any features on which to focus, such as a completely enveloping blank screen resembling the inside of a giant ping-pong ball, or a blank screen viewed through a lens that makes it appear too close to focus on, or an **isoluminant* stimulus, or complete darkness. It produces a temporary condition of **anomalous myopia*.

dark light *n.* The dim cloud of light that is experienced in complete darkness owing to the spontaneous activity of neurons in the visual system. Also called *intrinsic light* or *idioretinal light*, either of which is less of an **oxymoron*.

Darvon *n.* A proprietary name for the narcotic analgesic drug **propoxyphene* hydrochloride. [Trademark]

Darwinian evolution *n.* The theory according to which species evolve

by **natural selection*. See also *NEO-DARWINISM*. Compare *LAMARCKISM*, *LYSENKOISM*, *NEO-LAMARCKISM*, *NON-DARWINIAN EVOLUTION*. [Named after the English naturalist Charles (Robert) Darwin (1809–82) who expounded the theory in 1859 in his book *The Origin of Species by Means of Natural Selection or the Preservation of Favoured Races in the Struggle for Life*]

Darwinian fitness *n.* The lifetime reproductive success of an organism or **genotype*, indexed by the average number of offspring that it produces, relative to other organisms or genotypes, and hence the relative number of copies of its **genes* that it passes on to future generations. See also *FITNESS*. Compare *INCLUSIVE FITNESS*.

Darwinian reflex *n.* Another name for the **grasp reflex*.

Darwinism *n.* Another name for **Darwinian evolution*. **Darwinist** *n.* One who promotes or believes in **Darwinian evolution*.

Dasein *n.* In the philosophy of the German philosopher Georg Wilhelm Friedrich Hegel (1770–1831), existence. In **existentialism*, it is usually translated as being-in-the-world. [From German *dasein* to be there, from *da* there + *sein* to be]

Daseinsanalyse *n.* Another name for **existential analysis*, focusing on **Dasein*. See also *EXISTENTIAL THERAPY*.

data *n. pl.* Facts or information collected for reference or analysis. In statistics and measurement theory, results of any empirical investigation, usually but not necessarily in the form of numerical scores, that may be interpreted to provide information about the outcome of the investigation. According to the US psychologist Clyde Hamilton Coombs (1912–88), data are what are derived from observations or **raw scores* by the application of a **measurement model* that may or may not be explicitly described. Often treated as singular (*We have not finished analysing this data*), but this is avoided in careful usage. **datum** *sing.* [From Latin *data* things given, from *dare* to give]

data-driven processing *n.* Another name for **bottom-up processing*.

dataholic *n.* An informal term for a person addicted to information, especially a person who spends an excessive amount of time gathering information from the internet and suffers from **withdrawal* symptoms when deprived of access to information. See *INTERNET ADDICTION SYNDROME*, *INTERNET GAMING DISORDER*. [Formed on the model of *alcoholic*, from *data* + (*alco*)*holic*]

data mining *n.* A collective name for analytic techniques designed to discover hidden patterns or relationships in large **data* sets and to overcome the difficulties involved in drawing meaningful inferences from vast quantities of information. The term is occasionally, but misleadingly, used as a synonym for **data snooping*. Compare *EXPLORATORY DATA ANALYSIS*. [Named by analogy with digging for tiny amounts of metal in large volumes of earth]

data set *n.* A collection of **data* relevant to a single research problem.

data snooping *n.* In statistics, laboratory jargon for the haphazard and unplanned inspection of the results of an investigation in the hope of finding significant effects when the results that had been expected or hoped for have not emerged. Not to be confused with **data mining* and **exploratory data analysis*.

date rape *n.* Rape committed by someone with whom the victim has gone on a date, or by someone whom the victim is dating.

date rape drug *n.* A drug that is used to facilitate **date rape*, especially **Rohypnol*.

day blindness *n.* A non-technical name for **hemeralopia*.

daydream *n.* A pleasant dreamlike **fantasy* (2), such as the **Madame Butterfly fantasy*, that distracts one's attention from the present.

daylight vision *n.* A non-technical name for **photopia*.

*****ebook converter DEMO Watermarks*****

deadly nightshade *n.* The plant *Atropa belladonna*, from which the poisonous **alkaloids* **atropine* and **hyoscyamine* are extracted. Also called *belladonna* .

deaf mute *n.* An obsolescent term for a person who is unable to hear or to speak.

deafness *n.* Complete or partial loss of hearing, congenital or acquired, affecting about 10 per cent of adults and more than 50 per cent of people over 65 years old in the UK, the US, and other advanced industrial countries; divided into **conductive deafness*, **sensorineural deafness*, and **central auditory processing disorder*. Also called *hearing impairment* or *hearing loss* , especially when there is some residual hearing. *See also* *AMBLYACUSIA*, *ANACUSIA*, *ASONIA*, *CERUMINOUS DEAFNESS*, *COCHLEAR IMPLANT*, *CONVERSION SYMPTOM*, *CORTICAL DEAFNESS*, *DECIBEL*, *HYPACUSIA*, *OTITIS*, *OTOSCLEROSIS*, *OTOTOXIC*, *PARACUSIA*, *POSTENCEPHALITIC SYNDROME*, *PRESBYACUSIS*, *STENGER TEST*, *TADOMA METHOD*, *TELETACTOR*, *VESTIBULITIS*, *WORD DEAFNESS*. *Compare* *DIPLACUSIS*, *DYSACUSIA*, *HYPERACUSIS*. **deaf** *adj.*

death instinct *n.* Another name for **Thanatos*.

debriefing *n.* Providing research participants or subjects with a retrospective explanation of the purpose of the investigation, including any deception that may have been involved. The ethical codes of the American Psychological Association, the British Psychological Society, and other professional bodies encourage debriefing wherever possible, although there are research studies in which it is not feasible, in some **naturalistic observation* studies, for example, in which the research participants are not even aware of having participated. *See also* *DEHOAXING*.

décalage *n.* A term introduced by the Swiss psychologist Jean Piaget (1896–1980) for the non-simultaneous attainment of different but closely related operational abilities. *Horizontal décalage* is the non-simultaneous attainment of different aspects of a cognitive operation during the same developmental stage, as when conservation of volume is preceded by conservation of mass, which in turn is preceded by conservation of number

and substance, all of these attainments occurring during the stage of concrete operations; *vertical décalage* refers to changes that occur as a child progresses from one developmental stage to another; and *oblique décalage* refers to refinements of abilities at one developmental stage that prepare the way for attainments at a later stage. [From French *décalage* a gap or lag, from *décaler* to bring forward]

decathexis *n.* In **psychoanalysis*, the withdrawal of **cathexis* from an idea or **instinctual object*, as occurs in **narcissistic neurosis*, when cathexis is withdrawn from external instinctual objects and turned on the **ego*. Also called *withdrawal of cathexis* . See also ISOLATION OF AFFECT.

decay theory *n.* The proposition that forgetting is caused by passive degeneration or deterioration of **memory traces*. Compare PROACTIVE INTERFERENCE, RETROACTIVE INTERFERENCE.

decentralized communication network *n.* A **communication network* in which all group members have access to the same number of communication channels, as in a **comcon*. Compare CENTRALIZED COMMUNICATION NETWORK.

decentration *n.* The process of cognitive development by which a child progresses from **centration* to a more objective way of perceiving the world. Also called *decentring* .

decerebrate rigidity *n.* A postural syndrome of continuous muscular spasm, exaggerated **tonus*, and **clasp-knife rigidity* resulting from a lesion in the **brainstem* or **cerebellum*. [From Latin *de* away + *cerebrum* a brain]

decibel *n.* A unit equal to one-tenth of a **bel* for expressing the intensity of a sound or any other power level relative to a reference level. When it is used to specify absolute rather than relative sound intensity, the reference level is conventionally fixed at 10^{-16} W/cm² (watts per square centimetre), slightly below the average human **absolute threshold* for a sound of 1,000 hertz (about two octaves above Middle C), and the intensity so defined is referred to as *decibel sound pressure level (dB SPL)* or simply *sound pressure level*

([SPL](#)). A sound of 60 dB SPL, the approximate level of ordinary conversational speech, is 60dB higher than the reference level and has an intensity of 10^{-10} W/cm², and a doubling or halving of absolute sound pressure level always corresponds to a change of 3 dB SPL. If two people speak at once, the sound level rises from 60 to 63 dB SPL, if four people speak at once it rises to approximately 66 dB SPL, and so on. In units of dB SPL, a sound that is loud enough to reach the pain threshold is about 130, a loud rock group reaches about 120, a person shouting at close range 100, a busy street 80, a loud conversation 70, a normal conversation 60, a quiet conversation 50, a soft whisper 30, and for a sound at 1,000 hertz the average human absolute threshold is 6.5 dB SPL. Exposure to sound above 85 dB SPL entails a risk of damage to the outer hair cells and permanent hearing loss. *See also* [EQUAL-LOUDNESS CONTOUR](#), [PHON](#), [SENSATION LEVEL](#). **dB** *abbrev.* [From Latin *deci(mus)* tenth + English *bel*, named after the Scottish-born US scientist Alexander Graham Bell (1847–1922), inventor of the telephone]

decile *n.* Any of the ten equal groups into which a distribution of scores can be divided, or the value of a variable such that a specified proportion of scores arranged in order of magnitude, divided into tenths, falls below that value, the sixth decile, for example, being the value of the variable such that 60 per cent of the other scores fall below that value. The fifth decile is the **median*. *See also* [PARTILE](#). *Compare* [PERCENTILE](#), [QUARTILE](#). [From Latin *decem* ten]

decision analysis *n.* Applied **decision theory*.

decision frame *See* [FRAMING EFFECT](#).

decision making *n.* The act or process of choosing a preferred option or course of action from a set of alternatives. It precedes and underpins almost all deliberate or voluntary behaviour. Three major classes of theories have guided research into decision making: normative, descriptive (or positive), and prescriptive theories. *See* [DUAL-PROCESS MODEL](#), [NORMATIVE \(1\)](#). *See also* [ALLAIS PARADOX](#), [BEHAVIOURAL DECISION THEORY](#), [BOUNDED RATIONALITY](#), [BURIDAN'S ASS](#), [CERTAINTY EFFECT](#), [COMMON RATIO EFFECT](#), [COST-BENEFIT ANALYSIS](#), [CYCLIC PREFERENCES](#), [DECISION THEORY](#), [DOMINANT ALTERNATIVE/STRATEGY](#), [ELIMINATION BY ASPECTS](#), [ELLSBERG PARADOX](#), [EXPECTED UTILITY](#), [EXPECTED UTILITY](#)

*****ebook converter DEMO Watermarks*****

THEORY, EXPECTED VALUE, FRAMING EFFECT, GAME THEORY, HEURISTIC, LESS-IS-MORE EFFECT, LEXICOGRAPHIC CHOICE, MAXIMIN, MINIMAL SOCIAL SITUATION, MODIFIED ELLSBERG PARADOX, MONTY HALL PROBLEM, MULTI-ATTRIBUTE DECISION MAKING, NEWCOMB'S PROBLEM, PORTFOLIO THEORY, PREFERENCE REVERSAL (1, 2), PROSPECT THEORY, PSYCHOLOGICAL DECISION THEORY, RATIONAL CHOICE THEORY, READINESS POTENTIAL, REVEALED PREFERENCE, RISK AVERSION, RISK SEEKING, RISKY SHIFT, SATISFICING, SOCIAL DILEMMA, ST PETERSBURG PARADOX, SUBJECTIVE EXPECTED UTILITY THEORY, SURE-THING PRINCIPLE, UTILITY THEORY.

decision rule *n.* A formal or mechanical principle or formula for choosing a course of action in response to any given input data. A typical example is a formula for deciding whether a student passes or fails a course on the basis of a set of marks; another is a **significance test* for deciding whether or not to reject a **null hypothesis*.

decision theory *n.* A **normative* (1) approach to **decision making* based on **expected utility theory*, some versions also incorporating **Bayesian inference*. It starts from the assumption that, for any pair of alternatives, the decision maker can express a preference, and that the preferences satisfy the following axioms, which accord with our intuitions about preferences. (1) *Completeness*: for every pair of alternatives *x* and *y*, either *x* is preferred to *y*, *y* is preferred to *x*, or the decision maker is indifferent between *x* and *y*; (2) *Reflexivity*: every alternative *x* is at least as preferable as itself; (3) *Transitivity*: if *x* is at least as preferable as *y*, and *y* is at least as preferable as *z*, then *x* is at least as preferable as *z*. The theory then requires a decision maker always to choose a maximally preferable alternative (which may not be unique). Many writers use the term synonymously with **rational choice theory*. Applied decision theory, taking into account the decision makers' **utility functions*, is called *decision analysis*. *See also* EXPECTED UTILITY THEORY, INTRANSITIVE PREFERENCES, MONEY PUMP. *Compare* BEHAVIOURAL DECISION THEORY, PSYCHOLOGICAL DECISION THEORY. **DT** abbrev.

declarative knowledge *n.* Awareness and understanding of factual information about the world—*knowing that* in contrast to *knowing how*. Its necessary and sufficient conditions are that the information must be true, that the person must believe it to be true, and that the person must be in a position

*****ebook converter DEMO Watermarks*****

to know it. Typical items of declarative knowledge might include: that Princess Diana died in 1997; that Goethe was 83 when he finished writing *Faust*; that there is a village in Hertfordshire, England, called Ugley. *See also* ACT*, DECLARATIVE MEMORY, KNOWLEDGE. *Compare* ACQUAINTANCESHIP KNOWLEDGE, NON-DECLARATIVE KNOWLEDGE, PROCEDURAL KNOWLEDGE.

declarative memory *n.* A storage system for *declarative knowledge, involving structures in the *temporal lobes, especially the *hippocampus. Information contained in it is acquired by a form of learning that requires conscious awareness and that occurs quickly, often in a single trial, generally involving the formation of associations among multiple stimuli. Also called *explicit memory*. *See also* ACT*, EPISODIC MEMORY, MIRROR DRAWING, SEMANTIC MEMORY. *Compare* PROCEDURAL MEMORY.

de Clérambault's syndrome *n.* Another name for *erotomania. [Named after the French psychiatrist Gaëtan de Clérambault (1872–1934), who published an influential article entitled 'Les Psychoses Passionelles' that discussed the disorder in 1921]

deconstruction *n.* A method of critical analysis, associated prominently with the writings of the Algerian-born French philosopher and literary critic Jacques Derrida (1930–2004), in which the meaning of a word or other form of expression is considered to be volatile and unstable and not anchored in the relationship between words and the things that they are supposed to designate, but permanently deferred and always subject to and produced by its difference from other meanings. Deconstruction arose primarily as an attack on *structuralism (1), aiming to show inherent contradictions in the rules governing the structure of texts, especially binary oppositions. It suggests that there is no firm or fixed presence that can guarantee or underwrite the meaning of a term. *Compare* PSYCHOANALYTIC CONSTRUCTION.

deconstruct *vb.* To perform deconstruction on a text or other verbal product, especially by questioning the basis of the opposition between speech and writing. This usage, though common in popular discourse, is regarded as spurious by some deconstructionists who believe that there is no verb associated with *deconstruction*.

decreolization *n.* A process whereby speakers of a *creole language,

*****ebook converter DEMO Watermarks*****

coexisting in a community with a standard language that is associated with higher status, prestige, and wealth, come under social pressure to alter their speech in the direction of the standard. *See also* [CREOLIZATION](#). *Compare* [HYPERCREOLIZATION](#).

decussation *n.* A [*chiasm](#), crossing over, or intersection in the form of the letter X, as in the nerve fibres in the [*optic chiasm](#) or the [*pyramidal decussation](#), both of which are partly rather than fully decussated in the human brain. The partial decussation of the visual pathways was discovered in 1704 by the English mathematician and physicist Isaac Newton (1642–1727). In most fishes and birds the visual pathways are completely crossed, but as animals evolved with eyes more towards the front of the head than the side, the percentage of uncrossed fibres increased. In mammals, the percentage of uncrossed fibres is related to the amount of overlap between the visual fields of the two eyes, overlapping visual fields providing an accurate depth perception through [*stereopsis](#). In human beings there is almost complete overlap of visual fields and almost half the fibres are uncrossed. Most other sensory and motor information is fully crossed, except in the [*cerebellum](#). *See also* [DIVIDED VISUAL FIELD](#), [VENTROMEDIAL TRACT](#). **decussate** *vb.* [From Latin *decussis* the numeral 10, written X, from *decem assi* a coin worth ten asses, from *decem* ten + *as*, *assis* a Roman copper coin + *-ation* indicating a process or condition]

deduction *n.* The form of reasoning characteristic of logic and mathematics in which a conclusion is inferred from a set of premises that logically imply it. The term also denotes a conclusion drawn by this process. *See also* [DEDUCTIVE REASONING](#), [INFERENCE](#), [LOGIC](#). *Compare* [INDUCTION \(1, 2\)](#). **deduce** *vb.* **deductive** *adj.* [From Latin *deducere* to lead away or deduce, from *de-* from + *ducere* to lead + *-ion* indicating an action, process, or state]

deductive reasoning *n.* A form of logical reasoning based on [*deduction](#) in which a conclusion is derived from premises using rules of inference, a valid deduction being one in which it is impossible to assert the premises and deny the conclusion without contradiction. One form, though by no means the only form, of deductive reasoning is the [*syllogism](#). *See also* [CONDITIONAL REASONING](#), [MODAL LOGIC](#).

deep dyslexia *n.* A form of [*dyslexia](#) characterized by inability to read non-words (such as *kebbby*), semantic errors, and impairment in reading abstract rather than concrete words; reading by relying on an established vocabulary of words that are recognized by sight. A person with deep dyslexia may misread *drink* as *beer* or *country* as *nation* and may also make visual errors such as reading *single* as *signal*. *See also* [COGNITIVE NEUROPSYCHOLOGY](#). *Compare* [SURFACE DYSLEXIA](#).

deep structure *n.* A representation of a sentence at a fundamental level, with the grammatical relations between its parts explicitly shown, before any of the transformational rules have been applied to produce the [*surface structure](#). In a famous example suggested by the US linguist and philosopher (Avram) Noam Chomsky (born 1928), the sentences *John is eager to please* and *John is easy to please* have similar surface structures but completely different deep structures, because the first involves John pleasing someone and the second John being pleased by someone. *See also* [CASE GRAMMAR](#), [GENERATIVE GRAMMAR](#), [TRANSFORMATIONAL GRAMMAR](#).

deep tendon reflex *n.* The simplest type of reflex, involving only two neurons, characterized by a quick contraction of a muscle (with a normal latency of 15–25 milliseconds), triggered by a signal from a [*muscle spindle](#) in response to a sudden stretch induced by a sharp tap on the muscle tendon. Absence of the reflex indicates damage to the muscle, nerves, or spinal cord, and a hyperactive reflex suggests [*hyperthyroidism](#) or a lesion in the [*pyramidal tract](#). The most important deep tendon reflexes are the [*Achilles tendon reflex](#), [*biceps reflex](#), [*patellar reflex](#), and [*triceps reflex](#). Also called a *myostatic reflex*, or *tendon reflex*. *See also* [MONOSYNAPTIC REFLEX](#), [REFLEX](#), [STRETCH REFLEX](#). **DTR** *abbrev.*

Deese–Roediger–McDermott paradigm *See* [EXPERIMENTALLY INDUCED FALSE MEMORY](#).

default mode network *n.* An interconnected system of cortical areas that are active in a person who is in a state of wakeful rest, daydreaming, reminiscing, or contemplating future events, but not focused on a specific task involving the processing of external sensory (especially visual) input. It includes the [*parahippocampal gyrus](#), the medial [*prefrontal cortex](#), the
*****ebook converter DEMO Watermarks*****

posterior ***cingulate gyrus**, the ***angular gyrus**, and the medial, lateral, and inferior ***parietal lobe**, and it is characterized by low-frequency ***EEG** waves at about 0.1 Hz (one oscillation every 10 seconds). The term was introduced by the US neurologist Marcus E. Raichle (born 1937) and several collaborators in an article in the *Proceedings of the National Academy of Sciences* in 2001. Also called the default network or the task-negative network. Compare **TASK-POSITIVE NETWORK**. **DMN** abbrev.

default reasoning *n.* A form of ***non-monotonic reasoning** in which a ***premise** is assumed to be true by default but can be rejected if a further premise is added. For example, in the argument *Birds fly; Tweety is a bird; Therefore Tweety can fly*, the default premise *Birds fly* may be defeasible in the light of a further premise, such as *Tweety is a penguin*. See also **FRAME PROBLEM**. Also called *default logic*, but this is avoided in careful usage, because default reasoning violates the ***extension theorem** and is therefore not strictly logical. See also **COGNITIVE ECONOMY**.

defence, ego See **EGO DEFENCE MECHANISM**.

defence hysteria *n.* In ***psychoanalysis**, one of three types of ***hysteria** distinguished by Sigmund Freud (1856–1939) in 1894 in his article ‘The Neuro-Psychoses of Defence’ (*Standard Edition*, III, pp. 45–61), and by the Austrian physician Josef Breuer (1842–1925) and Freud in 1895 in their book *Studies on Hysteria* (*Standard Edition*, II), characterized by prolific use of ***defence mechanisms**. After 1895 Freud came to believe that defence plays a part in all hysteria, and he abandoned the tripartite distinction, but others continued to use it. US *defense hysteria*. Compare **HYPNOID HYSTERIA**, **RETENTION HYSTERIA**.

defence mechanism *n.* A term used originally in ***psychoanalysis** and later more widely in psychology and psychiatry to refer to a process whereby the ***ego** protects itself against demands of the ***id**. More generally, it is a pattern of feeling, thought, or behaviour arising in response to a perception of psychic danger, enabling a person to avoid conscious awareness of conflicts or anxiety-arousing ideas or wishes. In his book *The Ego and the Id* (1923), Sigmund Freud (1856–1939) made it clear that it is an unconscious function of the ego: ‘We have come upon something in the ego itself which is also

*****ebook converter DEMO Watermarks*****

unconscious, which behaves exactly like the repressed—that is, which produces powerful effects without itself being conscious and which requires special work before it can be made conscious’ (*Standard Edition*, XIX, pp. 12–66, at p. 17). The most influential survey and discussion of defence mechanisms was provided by Freud’s daughter, the Austrian-born British psychoanalyst Anna Freud (1895–1982), in her book *The Ego and the Mechanisms of Defence* (1936/7). US *defense mechanism*. Also called an *ego defence mechanism*. See [ACTING OUT \(2\)](#), [COMPENSATION](#), [CONVERSION](#), [DENIAL](#), [DISPLACEMENT](#), [DISSOCIATION](#), [EXTERNALIZATION](#), [FORECLOSURE](#), [IDEALIZATION](#), [IDENTIFICATION \(2\)](#), [IDENTIFICATION WITH THE AGGRESSOR](#), [INCORPORATION](#), [INTELLECTUALIZATION](#), [INTROJECTION](#), [ISOLATION OF AFFECT](#), [NEGATION \(2\)](#), [PROJECTION \(1\)](#), [RATIONALIZATION](#), [REACTION FORMATION](#), [REGRESSION \(2\)](#), [REPRESSION](#), [REVERSAL \(1\)](#), [SPLITTING OF THE OBJECT](#), [SUBLIMATION](#), [SUBSTITUTION](#), [SUPPRESSION](#), [SYMBOLIZATION](#), [UNDOING](#). See also [CATHEXIS](#), [COUNTERCATHEXIS](#), [DEFENCE HYSTERIA](#), [WORD-ASSOCIATION TEST](#).

defence, perceptual See [PERCEPTUAL DEFENCE](#).

defensive identification *n.* Another name for [*identification](#) with the aggressor.

defensive technique *n.* In [*psychoanalysis](#), a concept introduced by the Scottish psychoanalyst W. Ronald D. Fairbairn (1889–1964) to denote any of four different processes that occur during normal development, in the transition to quasi-independence, as a result of [*splitting of the object](#) (the mother or breast) into a [*good object](#) that satisfies and a bad object that frustrates. The particular technique adopted depends on where (internally or externally) the good object and the bad object are located, and this also explains the form that a mental disorder is likely to take if development does not proceed normally. See [HYSTERICAL TECHNIQUE](#), [OBSESSIONAL TECHNIQUE](#), [PARANOID TECHNIQUE](#), [PHOBIC TECHNIQUE](#).

deferred action *n.* In [*psychoanalysis](#), a term used frequently by Sigmund Freud (1856–1939), though never defined by him, apparently to denote the revision of memories to fit in with new experiences or the attainment of later stages of development. Freud used the German word *Nachträglichkeit*, meaning the state or condition of being after the event or

*****ebook converter DEMO Watermarks*****

having hindsight, and the usual translation as *deferred action* may be slightly misleading. The French psychoanalyst Jacques Lacan (1901–81) was the first to draw attention to the importance of the concept in Freud's writings. See also [FALSE MEMORY](#), [RECONSTRUCTIVE MEMORY](#).

deferred gratification *n.* A reward or [*reinforcement](#) that is postponed or delayed, such as the profit that accrues from a long-term investment. See also [MARSHMALLOW TEST](#), [SOMATIC MARKER HYPOTHESIS](#). [From Latin *deferre* to carry off, from *de-* from + *ferre* to carry]

deficit *n.* A shortfall; more specifically, any deficiency in functioning owing to a disorder or [*impairment](#). [From Latin *deficit* it lacks, from *deficere* to lack]

defining properties *n.* In [*componential theory](#), a set of [*attributes](#) or [*features](#) (1) that specify the meaning of a particular concept, each a necessary or essential attribute of any instance of the concept, the entire set constituting a sufficient definition of the concept. This classical interpretation of concepts was undermined by the Austrian-born British philosopher Ludwig (Josef Johann) Wittgenstein (1889–1951), who showed in his *Philosophical Investigations* (1953, paragraph 66) that concepts such as *game* or *chair* lack defining properties. See [FEATURE THEORY](#), [PROTOTYPE THEORY](#). Compare [CHARACTERISTIC FEATURES](#).

definitional theory *n.* Another name for the [*componential theory](#) of concept formation.

defusion of instincts *n.* In [*psychoanalysis](#), the separation of [*Eros](#) and [*Thanatos](#), so that they pursue independent [*instinctual aims](#). Sigmund Freud (1856–1939), in his book *The Ego and the Id* (1923), cited the [*ambivalence](#) of obsessional neurosis ([*obsessive–compulsive disorder](#)) as one of the clearest examples of this phenomenon (*Standard Edition*, XIX, pp. 12–66, at p. 42). Compare [FUSION OF INSTINCTS](#).

degraded stimulus *n.* A stimulus whose detectability or discriminability has been reduced by decreasing its signal-to-noise ratio. Also called an *impoverished stimulus*. See also [ABRAHAM LINCOLN EFFECT](#), [BLOCK](#)
*****ebook converter DEMO Watermarks*****

PORTRAIT.

degrees of freedom *n.* In statistics, a quantity associated with many **significance tests* and with estimates of variability such as the sample **variance*, defined as the number of observations minus the number of restrictions on the freedom of the observations to vary. For example, in estimating the variance in a sample of n scores with a known mean, there are $n-1$ degrees of freedom, because having calculated $n-1$ deviations from the mean, the last deviation is not free to vary but can assume only one value. Similarly, in a 2×2 **contingency table* with fixed row and column totals (marginals), there is only 1 degree of freedom, because if a value is assigned to any of the four cells, then the other three are determined by the constraints and have no freedom to vary. *df abbrev.*

dehoaxing *n.* A form of **debriefing* following research involving deception, in which research participants or subjects are told the true nature of the research, both for ethical reasons and to eliminate any undesirable effects of the deception.

dehydroepiandrosterone *See* DHEA.

deimatic *adj.* Frightening or threatening, of or relating to a posture adopted by an animal to intimidate another. [From Greek *deimatos* frightening, from *deimos* fright]

deindividuation *n.* A psychological state characterized by loss of the sense of individuality and a submerging of personal identity and accountability in a group. In some circumstances it can lead to a relaxation of inhibitions and the release of antisocial behaviour, and it has been used to explain certain forms of mob behaviour. *See also* *BYSTANDER EFFECT*, *DIFFUSION OF RESPONSIBILITY*. *Compare* *INDIVIDUATION*.

deism *n.* Belief in a god who created the universe but does not govern worldly events, does not answer prayers, and has no direct involvement in human affairs. **deist** *n.* One who espouses deism. *Compare* *AGNOSTICISM*, *ATHEISM*, *PANTHEISM*, *THEISM*. **deistic** or **deistical** *adj.* [From Latin *deus* a god + Greek *-ismos* indicating a state or condition]

*****ebook converter DEMO Watermarks*****

Deiters' cell *n.* A modified cell with an elongated ending and a terminal plate, such cells alternating with and supporting the outer ***hair cells** of the ***organ of Corti**. [Named after the German anatomist Otto F. K. Deiters (1834–63)]

Deiters' nucleus *n.* A cluster of nerve cell bodies in the ***medulla oblongata**, with neural connections to the ***flocculonodular lobe** of the cerebellum, receiving afferent impulses from the ***semicircular canals** via the ***vestibular nerve**, and sending efferent motor impulses to the spinal cord and cerebral cortex. It controls equilibrium, muscular tonus, and conjugate eye movements. Often misspelt *Deiter's nucleus*. [Named after the German anatomist Otto F. K. Deiters (1834–63) who discovered it]

deixis *n.* Features of language that refer to personal, locational, or temporal characteristics of the situation in which an utterance occurs and whose meaning is therefore relative to the situation, such as *this/that*, *here/there*, *now/then*, *I/you*. The term is also sometimes applied to words that refer backwards or forwards in discourse, namely ***anaphora** and ***cataphora**.
deictic *adj. n.* (Of or relating to) a verbal expression exhibiting deixis. [From Greek *deiknynai* to show]

déjà vu *n.* A form of ***paramnesia** (1) distinguished by a delusion of having already seen or experienced before something that is in reality being encountered for the first time. Less common variants include *déjà entendu* (already heard), *déjà éprouvé* (already experienced or tested), *déjà fait* (already done), *déjà pensé* (already thought), *déjà raconté* (already told or recounted), *déjà voulu* (already desired). The term first appeared in a letter to the editor of the journal *Revue Philosophique* in 1876 and became popular after the English neurologist J(ohn) Hughlings Jackson (1835–1911) used it in an article in the journal *Brain* in 1888. It is most common in people between 20 and 25 years old, 75 to 80 per cent of whom experience it, and it tends to occur less frequently as people get older. *See also* **PARAPRAXIS**, **PROMNESIA**. *Compare* **JAMAIS VU**. [From French *déjà* already + *vu* seen]

de la Tourette's syndrome *See* **TOURETTE'S DISORDER**.

delay conditioning *n.* A type of **conditioning* (1) in which the **conditioned stimulus* is presented repeatedly for longer and longer periods of time until there is eventually a very long delay between the onset of the conditioned stimulus and the occurrence of the **unconditioned stimulus*. The Russian physiologist Ivan Petrovich Pavlov (1849–1936) found that animals were not only able to bridge this gap in time but were ultimately able to delay the occurrence of the **conditioned response* until it just preceded the arrival of the unconditioned stimulus. *Compare* [TRACE CONDITIONING](#).

delayed auditory feedback *n.* A procedure in which a person speaks into a microphone attached to a voice recorder, and the speech is played back to the speaker through headphones after a brief delay. With a delay of about 200 milliseconds (one-fifth of a second), the effect on most speakers is a severe disruption of speech, with stuttering, slurring, and often complete inability to produce intelligible words. **DAF** *abbrev.*

delayed conditioning *n.* A form of **classical conditioning* in which the **conditioned stimulus* precedes the **unconditioned stimulus* by a significant time period and the organism learns to withhold its **conditioned response*. *See* [DELAY CONDITIONING](#).

delayed ejaculation *n.* In **DSM-5*, a **sexual dysfunction* in men characterized by marked delay in ejaculating or marked infrequency or absence of ejaculation following the excitement phase of the male **sexual response cycle*, causing clinically significant distress for at least six months. Occasional delayed ejaculation is common: according to *DSM-5*, 25% of men report not always ejaculating during sex. Also called *orgasmic impotence*, *ejaculatory impotence*, or *impotence* . *See also* [DE-REFLECTION](#), [IMPOTENCE](#) (2). *Compare* [ERECTILE DISORDER](#).

delayed gratification *n.* Renouncing immediate reward or satisfaction in order to obtain a larger reward in the future, as when a person invests money instead of spending it immediately.

delayed matching to sample *See* [MATCHING TO SAMPLE](#).

delayed-response task *n.* A test of **working memory* in which the human or non-human organism responds on the basis of stored internal representations rather than information currently present in the environment. Typically, the organism receives a brief visual or auditory stimulus that is then withdrawn, and after a delay of several seconds attempts to identify the location where the stimulus appeared, and is rewarded if correct.

delayed sleep-phase syndrome *n.* One of the **circadian rhythm sleep-wake disorders*, characterized by falling asleep very late, sleep-onset **insomnia*, and difficulty waking up in time to meet work, school, or social demands. **DSPS** *abbrev.*

delay-line timing circuit *n.* A series of neuronal connections or circuits that are capable of sustaining activity for an extended period of time.

Delboeuf illusion *n.* A visual illusion in which a circle surrounded by a concentric circle of slightly greater diameter appears larger than another circle of the same size surrounded by a concentric circle of much greater diameter (see *illustration*). [Named after the Belgian physicist and psychologist Joseph Rémy Léopold Delboeuf (1831–96) who published it in 1893]

Delboeuf illusion. The two inner circles are the same size.

deletion *n.* An erasure or blotting out. In genetics, the loss or absence of part of a **chromosome*. **deletion mutation** *n.* A type of **mutation* in which one or more **bases* (1) are lost from a segment of **DNA*.

*****ebook converter DEMO Watermarks*****

Delilah syndrome *n.* Promiscuity in a woman motivated by a desire to render men weak and helpless. [Named after the Philistine mistress of Samson (in Judges 16:4–22), who deprived him of his strength by cutting off his hair]

deliriant *adj. n.* (Of or relating to) a substance such as an **inhalant* that produces a state of **delirium* or a degree of general **anaesthesia*. *See also* INHALANT-RELATED DISORDERS, NITRITE INHALANT, SOLVENT ABUSE.

delirium *n.* A **neurocognitive disorder* in **DSM-5* involving **clouding of consciousness* and impairment of cognition, including such symptoms as memory loss, disorientation, language disturbance, perceptual change, and often sleep disturbances (insomnia or nightmares), the disorder developing quickly (usually in a matter of hours or days) and not being explicable by **dementia*, but accompanied by evidence that it is caused by a **general medical condition*, **substance intoxication* or **withdrawal*, medication, or exposure to a **toxin*. *See also* COGNITIVE DISORDERS, SUBSTANCE INTOXICATION DELIRIUM, SUBSTANCE WITHDRAWAL DELIRIUM. [From Latin *delirium* insanity, from *delirus* insane, from *delirare* to turn aside, from *de* from + *lira* a furrow]

delirium tremens *n.* An acute and sometimes fatal **rebound effect* occurring as a reaction to alcohol withdrawal following prolonged alcohol abuse, characterized by **anorexia* and **insomnia* followed by **psychomotor agitation*, **anxiety*, **hallucinations*, **delusions*, coarse **intention tremor* of the hands, feet, legs, and tongue, fever, **tachycardia*, and profuse sweating. *Compare* ALCOHOL HALLUCINOSIS. **DTs** *abbrev.* [From Latin *tremens* trembling, from *tremere* to shake]

Delphi method *n.* A method of research, analysis, decision making, and often forecasting, developed in the early 1950s by the RAND Corporation in the US, involving the repeated collection and distribution of the judgements and opinions of individual experts through the exchange of written documents or electronic mail. Proponents claim that it avoids domination of the decision process by forceful personalities and the disrupting effects of interpersonal dynamics in face-to-face groups. Also called the *Delphi*

*****ebook converter DEMO Watermarks*****

technique . [Named after the oracle of Delphi in ancient Greece]

delta fibre *n.* A small-diameter, thinly myelinated type of **afferent* nerve fibre with low conduction velocity, such as any of the afferent fibres from certain pain, temperature, and touch receptors. US *delta fiber*. Also written δ fibre . Compare ALPHA FIBRE, IA FIBRE, IB FIBRE, II FIBRE, C FIBRE, GAMMA FIBRE. [From *delta* (δ) the fourth letter of the Greek alphabet]

delta movement *n.* A form of **apparent movement*, first described in 1915 by the German Gestalt psychologist Adolf Korte, that occurs when two stimuli quite close together are presented in an alternating pattern, the second being much brighter than the first. Under certain conditions relating to sizes of the stimuli and interstimulus interval, the visual illusion is created of the second stimulus moving in a reverse direction from its position towards the first stimulus. Also called *delta motion* . Compare ALPHA MOVEMENT, BETA MOVEMENT, GAMMA MOVEMENT.

delta-9-tetrahydrocannabinol *n.* The chemical name for the primary psychotropic substance in **cannabis*. **THC** or **delta-9-THC** *abbrev.*

delta rule *n.* In the **back-propagation algorithm*, adjustment of the weights of connections between units as a function of the discrepancies between actual output and target output as determined by a **teacher unit*. Also called the *Widrow–Hoff rule* . See also CONNECTIONISM (1), HEBBIAN RULE.

delta sleep-inducing peptide *n.* A **peptide* consisting of nine amino acids, extracted from the venous blood of rabbits after putting them to sleep through electrical stimulation of the thalamus. When injected into other rabbits, it induces **slow-wave sleep*, and when injected into human subjects it has a similar effect. [So called because it induces deep sleep with associated **delta waves*]

delta wave *n.* A very low-frequency (1–3 hertz), high amplitude (approximately 150 microvolts) **EEG* wave characteristic of deep, dreamless, **slow-wave sleep*. Also called a *delta rhythm* . See also DELTA SLEEP-INDUCING PEPTIDE.

*****ebook converter DEMO Watermarks*****

delusion *n.* A false belief maintained in the face of overwhelming contradictory evidence, apart from beliefs that are articles of religious faith or are widely accepted in the person's culture. See [DELUSIONAL JEALOUSY](#), [DELUSIONAL MISIDENTIFICATION](#), [DELUSION OF CONTROL](#), [DELUSION OF DEPERSONALIZATION](#), [DELUSION OF REFERENCE](#), [EROTOMANIA \(1\)](#), [GRANDIOSE DELUSION](#), [LYCANTHROPY \(2\)](#), [NIHILISTIC DELUSION](#), [PERSECUTORY DELUSION](#), [SOMATIC DELUSION](#), [SYSTEMATIZED DELUSION](#), [THOUGHT BROADCASTING DELUSION](#), [THOUGHT INSERTION DELUSION](#). See also [DELUSIONAL DISORDER](#). Compare [HALLUCINATION](#), [ILLUSION](#). **delusional** *adj.* [From Latin *deludere* to mock or play false, from *de* away from + *ludere* to play + *-ion* indicating an action, process, or state]

delusional disorder *n.* A [*mental disorder](#) characterized by one or more [*delusions](#), such as being stalked, poisoned, loved from afar, deceived by a sexual partner, or having a physical abnormality. In [*DSM-5](#), this disorder can be diagnosed only if the symptoms persist for at least a month and criteria for [*schizophrenia](#) have never been met. See [EROTOMANIC DELUSIONAL DISORDER](#), [GRANDIOSE DELUSIONAL DISORDER](#), [JEALOUS DELUSIONAL DISORDER](#), [PERSECUTORY DELUSIONAL DISORDER](#), [SOMATIC DELUSIONAL DISORDER](#). See also [SCHREBER CASE](#). Compare [PARANOID PERSONALITY DISORDER](#), [PARANOID SCHIZOPHRENIA](#).

delusional jealousy *n.* A [*delusion](#) that one's sexual partner is being unfaithful.

delusional misidentification *n.* Any [*delusion](#) involving the identity of another person or people, the best known examples occurring in [*Capgras syndrome](#), [*Frégoli syndrome](#), and [*intermetamorphosis](#).

delusion, nihilistic See [NIHILISTIC DELUSION](#).

delusion of control *n.* A [*delusion](#) that one's actions or thoughts are being controlled by an external agent.

delusion of depersonalization *n.* A [*delusion](#), the main content of which is a belief of [*depersonalization](#).

delusion of grandeur *n.* Another name for a **grandiose delusion*.

delusion of influence *n.* Another name for a **delusion of control*.

delusion of persecution *See* PERSECUTORY DELUSION.

delusion of reference *n.* A **delusion* that certain people, events, or things in one's environment have a special (usually baleful) significance, such as a belief that people are talking about one or plotting behind one's back. *Compare* IDEAS OF REFERENCE, PARANOIA.

demand characteristics *n.* Features of an experimental situation that encourage certain types of behaviour from the research participants or subjects and can contaminate the results, especially when this behaviour arises from research participants' expectations or preconceptions or from their interpretations of the experimenter's expectations. *See also* EXPERIMENTER EFFECT, EXPERIMENTER EXPECTANCY EFFECT, REACTIVITY.

deme *n.* A group of closely related organisms living in the same locality. A deme of organisms related genetically is called a *genodeme*, and a deme of organisms related through mating is called a *gamodeme*. [From Greek *demos* a district in local government]

dementia *n.* A **neurocognitive disorder* in **DSM-5* involving impairment or loss of memory, especially evident in the learning of new information, and of thinking, language, judgement, and other cognitive faculties, without **clouding of consciousness*; any of a family of **mental disorders* characterized by memory impairment, especially for newly acquired information, and one or more cognitive disturbances (notably **aphasia*, **apraxia*, or **agnosia*) causing significant difficulties in social or occupational functioning. It is characteristic of old age, occurring in about 10 per cent of people in their early 80s and rising to 20 per cent of those in their late 80s. The most important types are dementia of the Alzheimer type (*see* ALZHEIMER'S DISEASE), **vascular dementia* or **multi-infarct dementia*, dementia resulting from **HIV* infection, head trauma, **Parkinson's disease*, **Huntington's disease*, **Pick's disease*, **Creutzfeldt-Jakob disease*, and

substance-induced persisting dementia resulting from **alcohol*, **inhalants*, **sedatives*, **hypnotics*, or **anxiolytics*. See also CHILDHOOD DISINTEGRATIVE DISORDER, COGNITIVE DISORDERS, PRESENILE DEMENTIA, PROGRESSIVE SUPRANUCLEAR PALSY, SENILE DEMENTIA. Compare AMENTIA. [From Latin *dementare* to drive mad, from *de* from + *mens* mind + *-ia* indicating a condition or quality]

dementia infantilis *n.* Another name for **childhood disintegrative disorder*, introduced in 1908 by the Austrian neuropsychiatrist Theodor O. Heller (1869–1938). [From *dementia* + Latin *infans* speechless, from *in-* without + *fans* speaking, from *fari* to speak + *-alis* of or relating to]

dementia praecox *n.* An obsolete name for **schizophrenia*. [From Latin *dementia* insanity + *praecox* premature]

Demerol *n.* A proprietary name for **pethidine* (meperidine). [Trademark]

demography *n.* The study of human populations, especially as regards size, structure, density, and distribution. **demographic** *adj.* [From Greek *demos* the people + *graphein* to write]

dendrite *n.* A collection of branched, threadlike extensions of a **neuron* specialized to receive impulses via **synapses* (1) from other neurons or from **sensory* receptors and to conduct them towards the cell body or soma. Also called a *dendron*. See also MICROTUBULE. Compare AXON. **dendritic** *adj.* [From Greek *dendron* a tree]

dendrodendritic *adj.* Of or relating to a relatively uncommon type of **synapse* (1) between the **dendrite* of one neuron and the dendrite of another. It does not generate nerve impulses but alters the receptivity of the target neuron. Compare AXOAXONIC, AXODENDRITIC, AXOSOMATIC. **D-D** *abbrev.*

dendrogram *n.* In statistics, a branching diagram showing the clusters formed at each step of a hierarchical **cluster analysis*. [From Greek *dendrites* of or relating to a tree, from *dendron* a tree + *gramme* a line]

dendron *n.* Another name for a **dendrite*.

denial *n.* In *psychoanalysis, a *defence mechanism involving a disavowal or failure consciously to acknowledge thoughts, feelings, desires, or aspects of reality that would be painful or unacceptable, as when a person with a terminal illness refuses to acknowledge the imminence of death. Sigmund Freud (1856–1939) introduced it into psychoanalysis in 1923 in an article on ‘The Infantile Genital Organization’ (*Standard Edition*, XIX, pp. 141–5), where he discusses it in relation to children denying that girls do not have penises although they can see that to be the case, and he developed the concept further in 1938/40 in his book *An Outline of Psycho-Analysis* (*Standard Edition*, XXIII, pp. 144–207, at pp. 203–4). Also called *disavowal*.

denotation *n.* **1.** The explicit dictionary meaning of a word or expression, with reference to the entity or thing that the word designates. This meaning should be carefully distinguished from sense 2. *See also* SEMANTIC FEATURE, SEMANTIC-FEATURE HYPOTHESIS. *Compare* CONNOTATION (1). **2.** In philosophy, the particular entities to which a word or expression can correctly be applied; hence the denotation of the word *mother* is the set of all particular mothers in the world, including the mother of anyone who reads these words, the Queen Mother (mother of Queen Elizabeth II, Queen of Great Britain and Northern Ireland), Mary mother of Christ, and so on. Some words and expressions have no denotation in this sense, a familiar example being *unicorn*, although it does have a *connotation (2), namely *horse-like one-horned animal*. *See also* INTENSION. *Compare* CONNOTATION (2). **denotative** *adj.* **denote** *vb.* [From Latin *denotare* to mark, from *de* from + *notare* to mark, from *nota* a mark or sign + *-ation* indicating a process or condition]

density, tonal *See* TONAL DENSITY.

dental *adj.* Of, relating to, or denoting a speech sound articulated with the tongue tip against upper teeth, as in the initial *phonemes in *thin* and *this*. *See also* ARTICULATION, PLACE OF ARTICULATION. [From Latin *dens*, *dentis* a tooth + *-alis* of or relating to]

dentate gyrus *n.* A small crescent-shaped structure in the hippocampal formation (*see* HIPPOCAMPUS), separated from the narrow tip of *Ammon’s horn. Often confused with the *dentate nucleus. [From Latin *dens*, *dentis* a tooth + *-atus* having the shape of]

*****ebook converter DEMO Watermarks*****

tooth + Greek *gyros* a circle or ring]

dentate nucleus *n.* A large wrinkled horseshoe-shaped strip of nerve cell bodies deep within each hemisphere of the **cerebellum*, involved in the control of rapid skilled movements. Often confused with the **dentate gyrus*. [From Latin *dens*, *dentis* a tooth + *nucleus* a kernel, from *nux*, *nucis* a nut, alluding to its toothed appearance]

denying the antecedent *n.* In **conditional reasoning*, arguing invalidly from a hypothetical proposition of the form *If p then q* that, because *p* is false, therefore *q* is false. For example, given the proposition *If the burglars entered by the front door, then they forced the lock*, it is invalid to deduce from the fact that the burglars did not enter by the front door that they did not force the lock. Compare [AFFIRMING THE ANTECEDENT](#), [AFFIRMING THE CONSEQUENT](#), [DENYING THE CONSEQUENT](#).

denying the consequent *n.* In **conditional reasoning*, arguing validly from a hypothetical proposition of the form *If p then q* that, because *q* is false, therefore *p* is false. For example, given the proposition *If the burglars entered by the front door, then they forced the lock*, it is valid to deduce from the fact that the burglars did not force the lock that they did not enter by the front door. Also called *modus tollens*. Compare [AFFIRMING THE ANTECEDENT](#), [AFFIRMING THE CONSEQUENT](#), [DENYING THE ANTECEDENT](#).

deontic *adj.* Of or relating to obligation and permissibility. See also [DEONTIC LOGIC](#), [DEONTIC REASONING](#), [DEONTOLOGY](#). [From Greek *deon* duty, from *deen* to be necessary, to behave + *-ikos* of, relating to, or resembling]

deontic logic *n.* A branch of **modal logic* devoted to the study of propositions expressing obligation and permission, first suggested by the Finnish logician Georg Henrik von Wright (1916–2003) in an article in the journal *Mind* in 1951 and chapter 5 of his book *Essay in Modal Logic* (1951). It is concerned with seeking to discover and understand what actions a person should or may perform, in contrast to conventional logic, which seeks to discover and understand what propositions a person should or may believe to be true. Several formal systems have been developed in which obligation and permission stand in a relation of duality to each other, as when permission to

*****ebook converter DEMO Watermarks*****

perform an action *p* is defined as not being obliged not to perform *p*. *See also* [DEONTIC](#), [DEONTIC REASONING](#), [DEONTOLOGY](#).

deontic reasoning *n.* Reasoning about obligation and duty, most often in relation to ethical or moral actions, but also in some forms of non-ethical problem solving, to be distinguished from conventional reasoning inasmuch as it is not governed by criteria of conventional [*logic](#). For example, the statement *If a girl is under the age of 16, then she should not wear lipstick* is not true or false in the usual sense but enunciates a deontic conditional rule of conduct. *See also* [DEONTIC](#), [DEONTIC LOGIC](#), [DEONTOLOGY](#).

deontology *n.* The study of obligation and permission. The term was coined by the English philosopher Jeremy Bentham (1748–1832) as the title of a book published posthumously in 1834. *See also* [DEONTIC LOGIC](#), [DEONTIC REASONING](#). **deontological** or **deontic** *adj.* [From Greek *deon* duty, from *deen* to be necessary, to behove + *logos* word, discourse, or reason]

deoxyribonucleic acid *See* [DNA](#).

deoxyribose *n.* Any of a group of sugars similar to [*ribose](#) but having one of its alcoholic hydroxyl groups replaced by hydrogen, especially the sugar that forms part of the backbone of [*DNA](#) and emerges as a product of the hydrolysis of DNA. [From *deoxy-* indicating less oxygen + *ribose*]

dependability *n.* Another name for [*conscientiousness](#).

dependence *n.* **1.** Reliance on another person for financial, emotional, or some other form of support. **2.** A psychological and sometimes physical state of reliance on a substance, especially on a narcotic drug such as cocaine or heroin, but also on everyday drugs such as nicotine, caffeine, or alcohol, characterized by a compulsion to take the drug in order to experience its effects and generally also [*withdrawal](#) and [*tolerance](#) (**3**). *See also* [ADDICTION](#), [CROSS-DEPENDENCE](#), [NUCLEUS ACCUMBENS](#), [SUBSTANCE DEPENDENCE](#). **3.** In probability theory and statistics, a relation between variables that are correlated with one another.

dependent personality disorder *n.* A *personality disorder in *DSM-5 characterized by a pervasive and excessive need to be taken care of, leading to submissive, clinging behaviour and *separation anxiety, beginning by early adulthood and indicated by such signs and symptoms as difficulty making everyday decisions without advice and reassurance from others; a need for others to assume responsibility for major areas of life; difficulty expressing disagreement with others for fear of disapproval or loss of support; difficulty initiating projects or doing things alone; tendency to go to excessive lengths to gain nurturance or support; fear of being unable to cope when alone; urgent seeking of a new relationship as a source of care and support as soon as one ends; and unrealistic preoccupation with fears of being left to cope alone.

dependent variable *n.* In research methods and statistics, a variable that is potentially liable to be influenced by one or more *independent variables. The purpose of an *experiment is typically to determine whether one or more independent variables influence one or more dependent variables in a predicted manner. In *multiple regression, a set of independent or *predictor variables are combined in a *linear model to provide a best prediction of a dependent variable, which is sometimes called a *criterion variable. See also INTERVENING VARIABLE. **DV** abbrev.

depersonalization *n.* A feeling of emotional detachment or estrangement from the perception of self, as if one were acting in a play or observing one's physical and mental activities from without. If it causes clinically significant distress or impairment in social, occupational, or other important areas of functioning, then it may be diagnosed as *depersonalization/derealization disorder. See also ALIENATION (3), DELUSION OF DEPERSONALIZATION, OUT-OF-BODY EXPERIENCE, SELF-ESTRANGEMENT. Compare DEREALIZATION.

depersonalization/derealization disorder *n.* A *dissociative disorder in *DSM-5 characterized by persistent and recurrent feelings of *depersonalization or *derealization causing clinically significant distress or impairment in social, occupational, or other important areas of functioning. Also called *depersonalization neurosis*.

depersonalization disorder *n.* A *dissociative disorder in *DSM-IV included in *depersonalization/derealization disorder in DSM-5.

depolarization *n.* A reduction in the voltage across a neuron's *cell membrane from its normal *resting potential of -70 millivolts or mV (negative on the inside). The reduction tends to excite the neuron and increase its propensity to transmit a nerve impulse, the momentary collapse and reversal of the resting potential constituting an *action potential. *See also* EXCITATORY POSTSYNAPTIC POTENTIAL. *Compare* HYPERPOLARIZATION.

deprenyl *n.* A drug that controls the symptoms and slows the progression of *Parkinson's disease by inhibiting the action of a *monoamine oxidase enzyme that destroys *dopaminergic cells in the *substantia nigra. It has more general anti-oxidant effects, in low doses it increases the life expectancy of experimental animals by more than twenty per cent, and it is sometimes considered to be a *smart drug. *See also* ANTIPARKINSONIAN.

depressant drug *n.* Any drug that reduces or tends to reduce the function of a system or organ of the body, especially a drug that reduces or slows down the activity of the *central nervous system and that in high dosages can lead to slurred speech, behaviour resembling drunkenness, coma, and death. Among the most frequently used depressants are *alcohol, the *barbiturates, the *benzodiazepines, *chloral hydrate, *glutethimide, *haloperidol, *methaqualone, *paraldehyde, *phencyclidine, and *scopolamine. A common street name for depressant drugs in general is *downers*. Also called a *psychomotor depressant*. *See also* SEDATIVE-HYPNOTIC, SEDATIVE-, HYPNOTIC-, OR ANXIOLYTIC-RELATED DISORDERS, SUBSTANCE ABUSE, SUBSTANCE-RELATED AND ADDICTIVE DISORDERS. *Compare* STIMULANT DRUG. [From Latin *depressum* pressed down, from *de* down + *premere*, *pressum* to press]

depressed mood *n.* A *mood (1) state characterized by *depression.

depression *n.* A *mood (1) state of sadness, gloom, and pessimistic ideation, with loss of interest or pleasure in normally enjoyable activities, accompanied in severe cases by *anorexia and consequent weight loss, *insomnia (especially middle or terminal insomnia) or *hypersomnia,

***asthenia**, feelings of worthlessness or guilt, diminished ability to think or concentrate, or recurrent thoughts of death or suicide. It appears as a symptom of many mental disorders. See [DEPRESSIVE DISORDERS](#). See also [AGITATED DEPRESSION](#), [ANACLITIC DEPRESSION](#), [ANTIDEPRESSANT](#), [BECK DEPRESSION INVENTORY](#), [BORNA DISEASE VIRUS](#), [COGNITIVE THERAPY](#), [DEPRESSIVE EPISODE](#), [DEPRESSIVE MOOD](#), [DEPRESSIVE REALISM](#), [DYSTHYMIA \(1\)](#), [DYSTHYMIC DISORDER](#), [ENDOGENOUS DEPRESSION](#), [EXOGENOUS DEPRESSION](#), [HAMILTON DEPRESSION RATING SCALE](#), [INOSITOL](#), [INVOLUTIONAL DEPRESSION](#), [INVOLUTIONAL PSYCHOSIS](#), [IRRITABLE MALE SYNDROME](#), [LEARNED HELPLESSNESS](#), [MAJOR DEPRESSIVE DISORDER](#), [MASKED DEPRESSION](#), [MELANCHOLIA](#), [MHPG](#), [NEUROTIC DEPRESSION](#), [NERVOUS BREAKDOWN](#), [NORADRENALIN](#), [POSTPARTUM BLUES](#), [POSTPARTUM DEPRESSION](#), [PREMENSTRUAL SYNDROME](#), [PSEUDODEMENTIA](#), [PSYCHOMOTOR RETARDATION](#), [PSYCHOTIC DEPRESSION](#), [REACTIVE DEPRESSION](#), [RESERPINE](#), [RETARDED DEPRESSION](#), [SCHIZOAFFECTIVE DISORDER](#), [SEASONAL AFFECTIVE DISORDER \(SAD\)](#), [SEROTONIN](#), [UNIPOLAR DEPRESSION](#). Compare [PSEUDODEPRESSION](#). **depress** *vb.* **depressive** *adj.* [From Old French *depresser* to depress, from Latin *depressum* pressed down, from *de-* down + *premere* to press + *-ion* indicating an action, process, or state]

depression, anaclitic See [ANACLITIC DEPRESSION](#).

depression scale *n.* Any scale to measure ***depression**, including the Depression scale of the ***MMPI** and the ***Beck Depression Inventory**.

depressive disorders *n.* A class of ***mental disorders** in ***DSM-5**. See [DISRUPTIVE MOOD DYSREGULATION DISORDER](#), [MAJOR DEPRESSIVE DISORDER](#), [PERSISTENT DEPRESSIVE DISORDER](#), [PREMENSTRUAL DYSPHORIC DISORDER](#).

depressive episode *n.* A period of ***depression**. See also [MAJOR DEPRESSIVE EPISODE](#).

depressive neurosis *n.* Another name for ***dysthymic disorder**.

depressive position *n.* In ***Kleinian** analysis, a modality of ***object relations** occurring after the ***paranoid–schizoid position**, from about the fourth month until the end of the first year of life, and sometimes reappearing during childhood and adulthood, especially during states of mourning and depression. During the depressive position, the infant for the first time
*****ebook converter DEMO Watermarks*****

recognizes the mother as a ***whole object**, the splitting into ***good object** and bad object is reduced, with both libido and aggressive drives tending to focus on the same ***instinctual object**, resulting in ***ambivalence**, and anxiety is aroused by fear of losing the mother. The concept was introduced in 1934 by the British-based Austrian psychoanalyst Melanie Klein (1882–1960), who explained her preference for the word *position* to *stage* or *phase* in a co-authored book in 1952: ‘these groupings of anxieties and defences, although arising first during the earliest stages, are not restricted to them but occur and recur during the first years of childhood and under certain circumstances in later life’ (*Developments in Psycho-Analysis*, p. 236). See also **REPARATION**, **SPLITTING OF THE OBJECT**.

depressive realism *n.* A reduction or absence of ***unrealistic optimism** and the ***overconfidence effect** in a person with ***depression**, depressed people being characteristically (across situations and domains) more accurate in their processing of information related to themselves and non-depressed people being characteristically positively biased. The concept was introduced in 1979 in an article by the US psychologists Lauren B(ersh) Alloy (born 1953) and Lyn Y(vonne) Abramson (born 1950) in the *Journal of Experimental Psychology: General*. See also **ILLUSION OF CONTROL**.

deprivation, maternal See **MATERNAL DEPRIVATION**.

depth cue *n.* Any ***cue (2)**, indication, or hint of distance that contributes towards visual ***depth perception**. See **BINOCULAR CUE**, **MONOCULAR CUE**.

depth from motion *n.* Another name for *** structure from motion (SFM)**.

depth interview *n.* A type of ***interview** used in ***qualitative research**, and especially in ***motivational research** and ***dynamic psychology** generally, typically lasting at least an hour and attempting to uncover unconscious motives and wishes, sometimes supplemented with ***projective tests**. See also **DEPTH PSYCHOLOGY**.

depth of field *n.* The range of distance from a point behind to a point in front of an object being focused by the eye’s lens, or by any lens, within
*****ebook converter DEMO Watermarks*****

which the image is in focus, the range being relatively great when the **pupil* or aperture is constricted, which is usually the case in bright light, and relatively small when the pupil or aperture is dilated in dim light. Also called *depth of focus* .

depth of processing *n.* The cognitive level at which a stimulus is analysed. For example, the word *clock*, presented as a visual stimulus, may be perceived as a collection of black marks on white paper, or as a string of five letters, or as a word with a corresponding pronunciation, or it may evoke a mental representation of a complicated mechanism capable of keeping time, each of these responses representing a greater depth of processing than its predecessor. See *LEVELS OF PROCESSING*.

depth perception *n.* The visual perception of three-dimensional space through **monocular* cues and **binocular* cues that are present in the two-dimensional images projected on to the retinas of the eyes. It is served by the **magnocellular system*, which is colour-blind (see *ISOLUMINANT*). The monocular depth cues are **accommodation* (1), **aerial perspective*, **chiaroscuro*, **elevation in the visual field*, **interposition*, **linear perspective*, **monocular parallax*, **relative size*, **sfumato*, and **texture gradient*. The binocular depth cues are **ocular convergence* and **stereopsis*. See also *KINETIC DEPTH EFFECT*, *PICTORIAL DEPTH*, *REDUCTION SCREEN*.

depth psychology *n.* A term introduced by the Swiss psychiatrist Eugen Bleuler (1857–1939) to denote psychological approaches that take account of **unconscious* (2) forces, especially **psychoanalysis* in its various forms and varieties. See also *DEPTH INTERVIEW*, *DYNAMIC PSYCHOLOGY*, *METAPSYCHOLOGY*.

derailment See *COGNITIVE DERAILMENT*.

derealization *n.* An experience or perception of the external world as unreal, strange, or alien, as if it were a stage on which people were acting. See also *ALIENATION* (3). Compare *DEPERSONALIZATION*.

de-reflection *n.* A technique of **logotherapy* designed to counter **hyper-reflection* by turning the clients' attention away from themselves and their own activity. It is used chiefly for the treatment of **erectile disorder*, **male*
*****ebook converter DEMO Watermarks*****

orgasmic disorder, and impotence. *See also* CENTIPEDE EFFECT, HUMPHREY'S LAW.

dereism *n.* Thinking that deviates from reality or logic. **dereistic** *adj.* [From Latin *de* from + *res* a thing + Greek *-ismos* indicating a state or condition]

derived score *n.* In psychometrics, a score obtained by applying a mathematical **transformation* to a **raw score*. Common forms of derived scores are **IQ scores*, **stanine scores*, **sten scores*, **T scores*, and **z scores*.

dermal sense *n.* Another name for a **cutaneous sense*. [From Greek *derma* skin]

dermis *n.* The inner layer of the **skin*, below the **epidermis*, containing connective tissue, blood vessels, fat, and most of the skin's **free nerve endings*. Also called the *corium*, *derm* , or *derma* . [From Greek *derma* skin]

dermo-optical perception *n.* A **paranormal* ability claimed by some people to see with the skin, often demonstrated by reading print or perceiving pictorial images or colours with the tips of the fingers shielded from vision.

descending reticular formation *n.* The part of the **corticospinal tract* that descends through the **reticular formation* in the brainstem and controls spinal reflexes and motor behaviour. *Compare* ASCENDING RETICULAR ACTIVATING SYSTEM.

descriptive research *n.* Research that has no other purpose than to describe phenomena and is not intended to explain, predict, or control them. *Compare* ACTION RESEARCH, APPLIED RESEARCH, BASIC RESEARCH, EVALUATION RESEARCH, EXPLORATORY RESEARCH.

descriptive statistics *n.* Summaries of numerical data that make them more easily interpretable, including especially the **mean*, **variance*, **standard deviation*, **range*, **standard error of the mean*, **kurtosis*, and **skewness* of a set of scores. The **correlations* between variables are also

considered to be descriptive statistics by most statisticians. *Compare* [INFERENTIAL STATISTICS](#).

descriptive theory *See* [NORMATIVE \(1\)](#).

desensitization *See* [SYSTEMATIC DESENSITIZATION](#).

designer drug *n.* A drug synthesized specifically to mimic the [*psychotropic](#) effect of an existing (usually illegal) substance, with a slightly modified molecular structure to avoid classification as an illicit drug, typical examples being [*ecstasy \(2\)](#), [*MDA](#), and [*MPPP](#).

desipramine *n.* A [*tricyclic antidepressant](#) used in the treatment of [*mood disorders](#), especially [*bipolar disorders](#). [From *des(methyl) (im)ipramine* demethylated imipramine, from Latin *de* from or away from + *methyl* the alkyl radical CH₃ derived from methane by removal of one hydrogen atom, from Greek *methy* wine + *hyle* wood]

destructive instinct *n.* In [*psychoanalysis](#), a term denoting [*Thanatos](#) or the death instinct in so far as it is directed outwards.

destrudo *n.* In [*psychoanalysis](#), a term coined by the Italian psychoanalyst Edoardo Weiss (1889–1971) to denote the form of energy associated with [*Thanatos](#), intended as a counterpart to [*libido](#). *See also* [MORTIDO](#). [A blend of *destru(ctive)* + *(libi)do*]

desynchronized EEG *n.* An [*EEG](#) pattern lacking regular periodicity in its waveform as a result of blocking of [*alpha wave](#) activity through arousal or focused attention in the waking state, or blocking of [*delta wave](#) activity through dreaming during sleep.

desynchronized sleep *n.* Another name for [*REM sleep](#). **D sleep** *abbrev.* [So called because it is characterized by desynchronized EEG patterns]

desynchronized sleep rhythm *n.* Another name for [*circadian](#)

rhythm sleep–wake disorders.

detection task *n.* Any task in which an observer tries to perceive a signal or a stimulus. *See also* RECEIVER OPERATING CHARACTERISTIC, SIGNAL DETECTION THEORY. *Compare* IDENTIFICATION TASK.

determinant *n.* A number associated with any square **matrix* showing whether the matrix is *singular*, that is, whether two or more rows or columns of the matrix are linearly dependent in the sense of being linear combinations of each other. If the determinant is equal to zero, then the matrix is singular, and many statistical techniques require matrices that are assumed to be non-singular. [From Latin *determinare* to set boundaries, from *terminus* a boundary]

determination, coefficient of *See* COEFFICIENT OF DETERMINATION.

determiner *n.* A word such as a definite or indefinite article (*the, a*), a **quantifier* (2) (*all, some, every, many, any*), or a demonstrative or possessive adjective or pronoun (*this, that, my, our, your, his, her, their*) that limits or determines the meaning of a noun or noun phrase, as in the sentence *I received your letter*, in which *your* determines the meaning of *letter*.

determinism, psychic *See* PSYCHICAL DETERMINISM.

deterministic *adj.* Of, relating to, or consisting of a non-random process or variable whose past completely determines its future forever, so that it can be equally well predicted from its remote past as from its recent past. *Compare* STOCHASTIC.

detour problem *n.* Any problem in which a goal can be reached only by moving away from it at some stage, often because an obstacle blocks the direct route to the goal. Also called an *Umweg problem*.

detoxification *n.* The process of freeing a drug user or an alcoholic from dependence on or addiction to a substance. **detoxification centre** *n.* A unit or facility that specializes in detoxification. US *detoxification center*. **detoxify**

vb. To carry out a process of detoxification, or more generally to remove the poison from someone or something. [From Latin *de* indicating a deprivation + *toxicum* a poison + *-ation* indicating a process or condition]

detrended normal plot *n.* In statistics, a graph of the differences between observed and expected values, the expected values being based on the assumption of a **normal distribution*. If the observed scores are normally distributed, then the points should cluster in a horizontal band close to zero without any discernible pattern. *See also* *NORMAL PROBABILITY PLOT*.

detumescence *n.* Subsidence of a swelling or enlargement, especially of the penis during the resolution phase of the **sexual response cycle*. *Compare* *TUMESCENCE*. [From Latin *detumescere* to cease swelling, from *de* away from + *tumescere* to begin to swell, from *tumere* to swell]

deuteranomaly *n.* A form of partial **colour-blindness* in which the proportion of green light required to be mixed with red to match yellow is abnormally high according to the normal **Rayleigh equation*, owing to a deficiency in the **visual pigment* that absorbs light in the middle part of the visible spectrum. *Compare* *DEUTERANOPIA*, *PROTANOMALY*, *TRITANOMALY*. [From Greek *deuteron* second, alluding to the second of the three **primary colours* (1) red, green, and blue + *anomalos* uneven or inconsistent, from *an-* without + *homalos* even, from *homos* the same]

deuteranopia *n.* The most common form of **anomalous dichromacy* in which the **visual pigment* that absorbs medium-wavelength (green) light is non-functional, resulting in poor hue discrimination in the red and green regions of the spectrum and a tendency to confuse reds with greens and greens with blues. *Compare* *DEUTERANOMALY*, *PROTANOPIA*, *TRITANOPIA*. [From Greek *deuteros* second, alluding to the second of the three **primary colours* (1) red, green, and blue + *anopia* blindness, from *an-* without + *ops* an eye + *-ia* indicating a condition or quality]

developmental age *n.* In psychometrics, a score on a test of ability or intelligence expressed in terms of the average age in years at which the score is attained by children according to the standardization data. *See also* *DEVELOPMENTAL QUOTIENT*.

*****ebook converter DEMO Watermarks*****

developmental coordination disorder *n.* A ***neurodevelopmental disorder** in ***DSM-5**, formerly classified as a ***motor skills disorder**, characterized by substantially below-average motor coordination (in activities such as crawling, sitting, walking, catching a ball, using scissors or cutlery, writing, or riding a bicycle) for the given age, intelligence, and education of the child, and clumsiness manifested by dropping or bumping into objects, the ***deficit** interfering significantly with scholastic or academic achievement or everyday life and not being due to a sensory deficit, ***cerebral palsy**, ***muscular dystrophy**, or any other neurological or degenerative disorder. See also **DYSPRAXIA**. **DCD** abbrev.

developmental crises *n.* A concept introduced in 1959 by the German-born ***ego psychologist** Erik H. Erikson (1902–94), and popularized in his book *Childhood and Society* (1963), denoting eight stages in life, each presenting a fundamental opposition that needs to be resolved. They are *early infancy*: basic trust versus basic mistrust; *later infancy* (during toilet training): autonomy versus shame and doubt; *early childhood* (while learning to walk): initiative versus guilt; *middle childhood* (during the ***latency period** of the early school years): industry versus inferiority; *puberty and adolescence*: identity versus role confusion; *young adulthood*: intimacy versus isolation; *mature adulthood*: generativity versus stagnation; *late adulthood*: ego integrity versus despair. Erikson regarded particular ego ‘virtues’ as emerging through the resolution of each phase, namely hope, will, purpose, competence, fidelity, love, care, and wisdom respectively. See also **EGO IDENTITY**, **IDENTITY CRISIS**.

developmental disorder See **NEURODEVELOPMENTAL DISORDERS**.

developmental dyslexia *n.* One of the two major categories of ***dyslexia**, forms of the disorder that develop during childhood from unknown causes, also called *reading disorder*. See also **SPECIFIC LEARNING DISORDER**. Compare **ACQUIRED DYSLEXIA**.

developmental psychology *n.* The branch of psychology concerned with psychological phenomena of all kinds in infants, children, adolescents, adults, and old people, and all the psychological changes that occur across the lifespan. It includes research into the development of perception, cognition,
*****ebook converter DEMO Watermarks*****

language, skills, moral attitudes, and social relationships.

developmental quotient *n.* In psychometrics, ***developmental age** divided by ***chronological age**, sometimes multiplied by 100. *See* **IQ**. **DQ** *abbrev.*

deviance *n.* **1.** Departing or diverging from an accepted norm of behaviour. *See also* **LABELLING THEORY**. **2.** In statistics, a measure of the goodness of fit of a ***model** to a set of data. [From Latin *deviare* to turn aside, from *de* from + *via* a way]

deviant *n.* A person whose behaviour departs from socially acceptable standards, especially in relation to sexual behaviour. *See* **DEVIANCE (1)**, **PARAPHILIA**. **deviant** *adj.*

deviate *vb.* To depart from an established tradition or standard. *n.* Another name for a ***deviant**. [From Latin *deviare* to turn aside, from *de* from + *via* a way]

deviation IQ *n.* The modern, statistical conception of ***IQ**, introduced in 1939 by the Romanian-born US psychologist David Wechsler (1896–1981), according to which IQ is a normally distributed variable with a mean of 100 and a ***standard deviation** of 15 (usually). By definition, an IQ of 100 is average, approximately 68 per cent of IQ scores fall between 85 and 115, approximately 95 per cent fall between 70 and 130, approximately 99.74 fall between 55 and 145, and so on. *See also* **NORMAL DISTRIBUTION**. *Compare* **RATIO IQ**. [So called because it is based on standard deviations]

deviation score *n.* In statistics, a score representing the difference between the ***raw score** and the ***arithmetic mean** of the raw scores in the group to which it belongs. For example, in the group of raw scores 1, 4, 10, the mean is 5, so the corresponding deviation scores are (1 – 5), (4 – 5), and (10 – 5), that is, –4, –1, and 5. The term is also used to refer to a score expressed in units of ***standard deviations**, also called a ***z score**.

devotee *n.* **1.** A person who is ardently enthusiastic about something. **2.** A

colloquial name for a person with **acrotomophilia*.

dexamethasone *n.* A potent synthetic **glucocorticoid* hormone, used as an anti-inflammatory and anti-allergic drug, that inhibits the secretion of **adrenocorticotrophic hormone* (ACTH) by the pituitary gland, and consequently also the secretion of **cortisol* (hydrocortisone) by the adrenal glands. *See also* DEXAMETHASONE SUPPRESSION TEST. [From *d(ecah)exameth(yl)(corti)sone*, from Greek *deka* ten + *hex* six + *methyl* the alkyl radical CH₃ derived from methane by removal of one hydrogen atom, from Greek *methy* wine + *hyle* wood + English *cortisone*]

dexamethasone suppression test *n.* A diagnostic procedure involving the injection of **dexamethasone*, followed by a measure of the extent to which **cortisol* secretion into the bloodstream has been suppressed. Patients with Cushing's syndrome (overactivity of the adrenal glands) fail to suppress cortisol secretion, and so do some patients with severe **depression*, **melancholia*, **anorexia nervosa*, and **bulimia nervosa*. **DST** *abbrev.*

dextroamphetamine *n.* Dextroamphetamine hydrochloride or sulphate (US *sulfate*), a dextrorotatory (right-handed) form of **amphetamine*, used as a central nervous system **stimulant*. [From Latin *dexter* right + English *amphetamine*]

DF extremes analysis *n.* In behaviour genetics, a method for estimating the **heritability* of a disorder such as dyslexia that is defined qualitatively, people being diagnosed as either having the disorder or not having it, but that depends on an underlying **trait* that varies quantitatively along a **continuum*. The method involves testing a random selection of people who have twins, isolating those that have the disorder, then testing the **monozygotic* and **dizygotic twins* of those individuals, the assumption being that if the disorder is influenced by genes that also affect variability within the normal range, then the mean scores of the monozygotic and dizygotic twins of the disordered individuals should both be closer to the mean of the disordered group than to the mean of the random group of twins, and the mean of the monozygotic twins should be closer to the mean of the disordered group than should the mean of the dizygotic twins. [Named after the behavioural geneticists John C. DeFries (born 1934) and David W. Fulker

*****ebook converter DEMO Watermarks*****

(1937–98) who developed it in the 1990s at the University of Colorado]

dhat *n.* A ***culture-bound syndrome** found in India, where there is another similar syndrome called *jiryan*, and Sri Lanka, where a syndrome resembling dhat is called *sukra prameha*, characterized by severe ***anxiety**, together with ***hypochondria** focused on concerns about weakness and exhaustion, attributed to excessive discharge of semen by both men and women (also believed to secrete semen), and whitish discolouration of urine interpreted as semen loss. Also written *dhatu*. Compare **SHEN-K'UEI**. [From Hindi *dhatu* a plant with strongly narcotic properties]

DHEA *abbrev.* Dehydroepiandrosterone, a ***steroid** hormone that is produced by the ***adrenal cortex** and is often called the mother (or grandmother) of hormones because it functions as a precursor of many other hormones, including ***cortisone**, ***oestrogen**, ***progesterone**, and ***testosterone**. It plays a part in weight control, and its decline with age is believed to account for some of the diseases of old age. Formula: C₁₉H₂₈O₂.

diabetes *n.* Any of several diseases characterized by the excretion of abnormally large quantities of urine. **diabetes insipidus** *n.* A form of diabetes caused by a disorder of the pituitary gland and malfunction of the kidneys. **diabetes mellitus** *n.* A form of diabetes caused by a loss of ***insulin** secretion from the ***islets of Langerhans**, leading to a failure of carbohydrate metabolism and excess sugar in the urine. See also **BLINDNESS**, **HYPOGLYCAEMIA**. **diabetic** *adj.* Of, relating to, or for diabetes or people with diabetes. [From Greek *diabetes* a siphon, from *dia* through + *bainein* to go + Latin *insipidus* insipid, or *mellitus* honied, from *mel* honey]

diagnosis *n.* The process of identifying a disorder by examining its ***signs** (1) and ***symptoms**; an identification of a disorder reached by such a process. See also **DIFFERENTIAL DIAGNOSIS**. [From Greek *dia* between + *gnosis* knowing]

Diagnostic and Statistical Manual of Mental Disorders See **DSM** in the main body of the dictionary.

diagnostic checking *n.* In statistics and mathematical modelling, the

process of carrying out visual and statistical checks to see how well the estimated model fits the data and whether the necessary assumptions of the model have been satisfied.

dialect *n.* A variety of a language, identifiable by its vocabulary and grammar, spoken by people in a particular geographical area or by members of a particular social class or group, to be distinguished from an **accent* (1), which is distinguished by pronunciation only. Compare *ACROLECT*, *BASILECT*, *IDIOLECT*, *LECT*, *MESOLECT*. See also *EYE DIALECT*. **dialectology** *n.* The study of dialects, especially regional dialects. [From Greek *dialektos* speech or dialect]

dialectical behaviour therapy *n.* A form of **cognitive* behaviour therapy specially designed for the treatment of **borderline personality disorder* and sometimes used to treat other **personality disorders*, its paramount aim being to reduce **parasuicidal* and other life-threatening behaviour. During weekly individual and **group therapy* sessions, and between sessions via telephone contact, the therapist reinforces adaptive behaviour, teaching the patient how to manage emotional traumas and practise **mindfulness*. The therapy was introduced in an article by the US psychologist Marsha M. Linehan (born 1943) and several colleagues in the *Archives of General Psychiatry* in 1991. US *dialectical behavior therapy*. Compare acceptance and commitment therapy. **DBT** *abbrev.* [From Greek *dialektikos* pertaining to argument, from *dia* between + *legein* to speak + *-ikos* of, relating to, or resembling]

dialectical montage *n.* A term introduced by the Russian film-maker and editing theorist Lev Kuleshov (1899–1970) for a type of **context effect* that enables an actor in a film or motion picture in certain circumstances to convey emotion without expressing it. In 1922 Kuleshov carried out an experiment in which the famous Russian actor Ivan Mozhukhin (1889–1939) posed with a neutral **facial expression* for several seconds, and a close-up shot of his face was intercut with shots of a bowl of soup, a woman in a coffin, and a child playing with a toy. Viewers of the resulting montage thought they could see faint expressions of satisfaction, sadness, and happiness on Mozhukhin's face as he appeared to respond to each of the cutaway vignettes in turn. [From Greek *dialektikos* pertaining to argument,

*****ebook converter DEMO Watermarks*****

from *dia* between + *legein* to speak + *-ikos* of, relating to, or resembling + French *montage* an assemblage or superimposition of images, from *monter* to mount]

dialinguistics *n.* The study of the full range of dialects and languages in a speech community. [A blend of *dialect* + *linguistics*]

dialysis *n.* The diffusion of small particles in a solution across a **semipermeable membrane* from the side where the solution is more concentrated to the side where it is less concentrated. *Compare* *OSMOSIS*. [From Greek *dialysis* a dissolution, from *dia* through or across + *lysis* a loosening]

Diana complex *n.* In the **individual psychology* of the Austrian psychiatrist Alfred Adler (1870–1937) and his followers, the repressed wish of a woman to be a man. *See also* *COMPLEX (2)*, *GENDER DYSPHORIA*, *GENDER IDENTITY DISORDER*, *MASCULINE PROTEST*. [Named after Diana, the Roman goddess of hunting, considered a typically masculine activity]

diary study *n.* A research methodology in which the research participants or subjects record their own behaviour or experiences for subsequent analysis and interpretation by the investigator.

diaschisis *n.* A temporary disruption of brain activity caused by a localized injury, resulting in a generalized breaking up of a pattern of functioning, not caused directly by the lesion itself but arising from indirect or secondary effects in other areas of the central nervous system. [From Greek *dia* through + *schizein* to split]

diathesis *n.* A hereditary predisposition to a disorder. [From Greek *diathesis* arrangement, from *dia* asunder + *tithenai* to place]

diathesis-stress hypothesis *n.* The conjecture that many disorders are caused by the interaction of predisposing **diathesis* and precipitating environmental **stress (1)* factors.

diatonic *adj.* Pertaining to any musical scale that contains seven notes or tones, separated by five intervals of a **tone* (2) and two intervals of a **semitone*, the most familiar examples being the major and minor scales of Western music. *Compare* *CHROMATIC* (2). [From Latin *diatonicus* diatonic, from Greek *diatonikos* diatonic, from *dia* between + *tonos* a tone + *-ikos* of, relating to, or resembling]

diazepam *n.* A member of the **benzodiazepine* group of drugs, used as a sedative and muscle relaxant. Often referred to as *Valium* (trademark). *See also* *SEDATIVE-, HYPNOTIC-, OR ANXIOLYTIC-RELATED DISORDERS*. **DZP** *abbrev.* [From *di-* two, from Greek *dis* twice + *az-* denoting nitrogen, from Greek *a-* not + *zaein* to live + *ep(oxide)* a compound containing oxygen joined to other atoms, from Greek *epi* on or above + *oxide* a compound of oxygen and another element, from French *oxy(gène)* + *(ac)ide*]

dibenzodiazepine *n.* Any drug having a dibenzodiazepine nucleus in its chemical structure, including **carbamazepine*, various **tricyclic antidepressant* drugs, and a class of **atypical antipsychotic* drugs such as **clozapine* that block both **serotonin* and **dopamine* receptors and cause fewer **neuroleptic-induced* side-effects than are associated with conventional neuroleptic drugs. *See also* *DOPAMINE ANTAGONIST*. [From Greek *dis* twice + English *benzodiazepine*]

dichhaptic technique *n.* Simultaneous presentation of a different tactile stimulus (such as letter shapes or novel shapes without names) to each of the two hands, shielded from vision, in order to study **laterality* of functions, based on the fact that the touch receptors in each hand are projected predominantly to the opposite or contralateral **somatosensory cortex*, the results generally confirming a left hemisphere dominance for linguistic or sequential functions and a right hemisphere dominance for spatial functions. Also spelt *dichaptic*. *Compare* *DICHOPTIC*, *DICHOTIC*. [From Greek *dicha* in two, from *dis* twice + *haptein* to touch]

dichoptic *adj.* Of or relating to the presentation of different stimuli to each eye. *Compare* *BINOCULAR*, *MONOPTIC* (2). [From Greek *dicha* in two, from *dis* twice + *optikos* of or relating to vision, from *optos* visible, from *ops* an eye]

dichoptic masking *n.* A form of [*visual masking](#) in which a test stimulus is presented to one eye and a masking stimulus to the other. When masking is found, it can be inferred that it must occur at a higher level of the visual system than the eyes. *See also* [CENTRAL MASKING](#).

dichotic *adj.* Of or relating to the simultaneous presentation of a different auditory message to each ear via earphones, a task used to study [*attention](#) and [*laterality](#) of functions, based on the fact that the nerve fibres that carry auditory signals from each ear are almost entirely crossed to the [*auditory cortex](#) of the opposite [*cerebral hemisphere](#). Often confused with [*binaural](#). *See also* [SHADOWING](#). *Compare* [DICHAPTIC TECHNIQUE](#), [DIOTIC](#). [From Greek *dicha* in two, from *dis* twice + *ous*, *otos* an ear]

dichromacy *See* [ANOMALOUS DICHROMACY](#). Also called *dichromasy*, *dichromatism*, *dichromatopsia*, *dichromopsia*.

dictyosome *n.* Another name for a Golgi body. *See* [GOLGI APPARATUS](#). [From Greek *diktyon* a net + *soma* a body, alluding to the common appearance of a Golgi body when stained]

diencephalic amnesia *n.* A form of amnesia resulting from loss of neurons in the [*diencephalon](#), especially the midline [*thalamus](#) and the [*mammillary bodies](#) of the [*hypothalamus](#). This pattern of pathology is often associated with [*Korsakoff's psychosis](#) or syndrome as a consequence of alcohol abuse and thiamine deficiency.

diencephalon *n.* The bottom part of the forebrain or prosencephalon, linking the cerebral hemispheres with the midbrain, including the [*basal ganglia](#), [*thalamus](#), [*hypothalamus](#), and [*epithalamus](#). *See also* [GLOBAL AMNESIA](#). *Compare* [TELENCEPHALON](#). [From Greek *dia* between + *en* in + *kephale* head, alluding to its position between the cerebral hemispheres and the brainstem]

diethylstilboestrol *n.* Another name for [*stilboestrol](#). US *diethylstilbestrol*. [From Greek *dis* twice + English *eth(er)*, from Greek *aithein* to burn + English *stilboestrol*]

difference limen *n.* Another name for a **difference threshold* or just noticeable difference. **DL** *abbrev.* [From Latin *limen* a threshold]

difference threshold *n.* In **psychophysics*, the smallest detectable change in a stimulus or difference between two stimuli that can be reliably detected, often defined as the difference for which the percentage of correct discriminations is 75 per cent, though other percentages are sometimes used. Also called the *difference limen (DL)*, *discrimination threshold*, or just *noticeable difference (jnd)*. *See also* *ACUITY*, *ABX PARADIGM*, *BUNSEN–ROSCOE LAW*, *DIFFERENTIAL ACUITY*, *DISCRIMINATION FUNCTION*, *FULLERTON–CATTELL LAW*, *PIPER’S LAW*, *RICCO’S LAW*, *WEBER FRACTION*, *WEBER’S LAW*. *Compare* *ABSOLUTE THRESHOLD*.

difference tone *n.* A **combination tone* whose frequency is equal to the difference between the frequencies of the two tones generating it. *Compare* *SUMMATION TONE*.

differential acuity *n.* The maximum keenness or sharpness of a sense organ in detecting differences or discriminating between stimuli, usually expressed in terms of the **difference threshold*. *See also* *ACUITY*. *Compare* *ABSOLUTE ACUITY*.

Differential Aptitude Tests *n.* An integrated battery of psychometric tests designed for educational and vocational guidance of schoolchildren. The tests measure the following eight aptitudes: verbal reasoning, numerical ability, abstract reasoning, clerical speed and accuracy, mechanical reasoning, spatial relations, spelling, and language usage. **DAT** *abbrev.*

differential diagnosis *n.* The process of distinguishing between two or more disorders with similar or overlapping signs and symptoms. *See also* *DIAGNOSIS*.

differential inversion effect *n.* The relatively greater decrease in recognizability resulting from inverting images of human faces compared to images of other objects. The effect is not peculiar to faces, as was initially believed when it was discovered in 1969 by the US psychologist Robert Kuo-

Zuir Yin (born 1931), but is found with other classes of stimuli that are recognizably different only to viewers who have expert knowledge of them, as when experts on sporting dogs view inverted profiles of dogs. *See also* [MARGARET THATCHER ILLUSION](#). *Compare* [CARICATURE ADVANTAGE](#).

differential reinforcement *n.* In **operant conditioning*, **reinforcement* (1) that is contingent on more than a single response, as when a rat is reinforced for pressing a lever when one type of signal is given but not another. It is useful for determining what kinds of discriminations the organism is capable of making. *See also* [DIFFERENTIAL REINFORCEMENT OF HIGH RESPONSE RATES](#), [DIFFERENTIAL REINFORCEMENT OF LOW RESPONSE RATES](#), [DIFFERENTIAL REINFORCEMENT OF OTHER BEHAVIOUR](#), [DIFFERENTIAL REINFORCEMENT OF PACED RESPONSES](#).

differential reinforcement of high response rates *n.* In **operant conditioning*, a **reinforcement schedule* in which an organism is rewarded only when it responds within a specified interval after its previous response. *See also* [DIFFERENTIAL REINFORCEMENT](#). *Compare* [DIFFERENTIAL REINFORCEMENT OF LOW RESPONSE RATES](#). **DRH** *abbrev.*

differential reinforcement of low response rates *n.* In **operant conditioning*, a **reinforcement schedule* in which an organism is rewarded only for a response made after a specified interval has elapsed since its previous response. *See also* [DIFFERENTIAL REINFORCEMENT](#). *Compare* [DIFFERENTIAL REINFORCEMENT OF HIGH RESPONSE RATES](#). **DRL** *abbrev.*

differential reinforcement of other responses *n.* In **operant conditioning*, a **reinforcement schedule* in which an organism is rewarded for abstaining from making a specified response for a predetermined period of time, any other response being reinforced. *See also* [DIFFERENTIAL REINFORCEMENT](#). **DRO** *abbrev.*

differential reinforcement of paced responses *n.* In **operant conditioning*, a **reinforcement schedule* in which an organism is rewarded for responding at a particular rate, both slower and faster rates of responding leading to withdrawal of reinforcement. *See also* [DIFFERENTIAL REINFORCEMENT](#). **DRP** *abbrev.*

*****ebook converter DEMO Watermarks*****

difficulty effect *n.* Another name for the **hard–easy effect*.

diffraction grating *n.* A plate of glass or a mirror that has equidistant parallel grooves engraved on its surface and that diffracts light, often more strongly than a **prism*. See also *SPECTRUM*. [From Latin *diffRACTIO* a breaking into pieces, from *diffRINGERE* to shatter, from *dis-* apart + *frangere* to break]

diffuse fibres *n.* Touch receptors with large **receptive fields* that have ill-defined borders.

diffusion of responsibility *n.* A reduced sense of personal responsibility and individual accountability experienced in certain circumstances by members of a group, often leading to behaviour untypical of any of the group members when alone. See *BYSTANDER EFFECT*, *DEINDIVIDUATION*, *SOCIAL LOAFING*.

digestive tract *n.* Another name for the **alimentary canal*.

digital *adj.* Of, relating to, consisting of, or containing digits or numerals; representing measurements in the form of discrete numbers rather than continuously varying quantities such as points on a dial. The term is descriptive of the form in which electronic data are stored and handled by computers. See also *BIT*. Compare *ANALOGUE (2)*. [From Latin *digitus* a toe or finger + *-alis* of or related to]

digitalis *n.* Any plant of the genus *Digitalis*, including the foxglove, or a drug prepared from its dried leaves and seeds, functioning as a sympathetic nervous system **stimulant*, used in the treatment of various forms of heart failure. See also *XANTHOPSIA*. **digitalin** or **digitoxin** *n.* The poisonous bitter-tasting white substance extracted from foxglove leaves in the preparation of digitalis. [From Latin *digitalis* of or relating to a finger or toe, from *digitus* a finger or toe, referring to the purple foxglove flowers, which children like to attach to their fingers like thimbles]

digital signature *n.* A technical device for producing an electronic fingerprint, usually a *hash function*, created and verified by public-key

cryptography, applied to electronic data for authentication of documents, especially those transmitted via the internet, and for legal identification of signers with documents.

digit ratio *n.* The ratio of the length of the index finger to the length of the fourth finger (ring finger), measuring from the basal crease near the palm to the tip of the finger. Counting the thumb as digit 1, the ratio compares digits 2 and 4 and is sometimes called the 2D:4D ratio. In men, the index finger is usually shorter than the fourth finger, the ratio averaging about 0.96, whereas in women, the ratio is close to 1.00. The English evolutionary biologist John T. Manning (born 1942) discovered this sexual ***dimorphism** and first described it in an article co-authored with others in the journal *Human Reproduction* in 1998. A low digit ratio tends to be associated with high concentrations of ***testosterone** in the blood. The sex difference is believed to arise from the effects of testosterone on the developing ***embryo** during the 8th to the 13th week after conception, promoting growth of the fourth finger. In his book *Digit Ratio: A Pointer to Fertility, Behavior and Health* (2000), Manning summarized further evidence suggesting that, in men, a low digit ratio tends to be associated with ***fertility**, assertiveness or aggressiveness, proclivity for ***homosexuality** or ***bisexuality**, and musical and sporting aptitude, and a high digit ratio with increased risk of heart disease; in women, a low digit ratio tends to be associated with assertiveness or aggressiveness and a proclivity for homosexuality or bisexuality, and a high digit ratio with fertility and an increased risk of breast cancer. See also **INDUCTION (5)**. **2D:4D** *abbrev.*

digit span *n.* A type of ***intelligence test** item or subtest in which the respondent tries to repeat back a string of numbers that are read out. Sometimes the numbers have to be repeated in reverse order.

digit-symbol test *n.* A type of ***intelligence test** item or subtest in which the respondent learns a code in which each digit is represented by a symbol—for example, 1 might be represented by a star, 2 by a square, 3 by a triangle, and so on—and then tries to substitute the correct symbols for a series of digits as quickly and accurately as possible. Also called a *symbol-digit test* or a *coding test*.

digram *n.* A combination of two letters, which may be a word (*do*) or a non-word (*kd*). See also [CV DIGRAM](#). Compare [DIGRAPH](#). [From Greek *dis* twice + *gramma* a letter or character]

digraph *n.* A two-letter combination representing a single speech sound, such as *sh* in *sheet* or *ph* in *digraph*. Compare [DIGRAM](#), [DIPHTHONG](#).

dihybrid *n.* A cross between parents differing in two pairs of genes or two independently heritable characters. Also called a *dihybrid cross*. Compare [HYBRID \(1\)](#). [From Greek *dis* twice + English *hybrid*]

dilator pupillae *n.* The muscle that contracts the [*iris](#) and thereby dilates the pupil of the eye. Compare [SPHINCTER PUPILLAE](#). [From Latin *dilatare* to spread out + *pupilla* a pupil, diminutive of *pupa* a girl or a doll, alluding to the tiny reflection in the eye]

dimension-abstracted oddity *n.* A type of [*oddity problem](#) in which the set of stimuli contains an odd one out, distinguishable from the others on an oddity-defining dimension, and the other alternatives are indistinguishable from one another on the oddity-defining dimension but distinguishable from one another on other dimensions, often called *ambiguous dimensions*. Such a problem differs from a conventional oddity problem, in which, apart from the odd one out, the stimuli are indistinguishable from one another on any dimension. A typical example might involve a set of objects differing perceptibly in size, colour, and shape, including an odd one out that is a different size from the other stimuli, which in turn are indistinguishable in size but differ from one another in colour and shape.

dimethyltryptamine *n.* The chemical name of [*DMT](#). [From Greek *dis* twice + *methyl* the alkyl radical CH₃ derived from methane by removal of one hydrogen atom, from Greek *methy* wine + *hyle* wood + English *tryptamine*]

dimorphic *adj.* Of or relating to a species with two distinct [*phenotypic](#) forms, such as physically distinct male and female forms. Also written

dimorphous . **dimorphism** *n.* See also [SEXUAL DIMORPHISM](#). [From Greek *dis* twice + *morphe* a form or shape + *-ikos* of, relating to, or resembling]

ding-dong theory *n.* A dismissive name for the [*onomatopoeic theory](#) of the origins of language. Also called the *bow-wow theory* . [From the sound of bells ringing]

Dionysian *adj.* Spontaneous and uncontrolled; in the philosophy of the German philosopher Friedrich Wilhelm Nietzsche (1844–1900), of or relating to creative qualities of spontaneity, irrationality, and rejection of discipline. Compare [APOLLONIAN](#). [Named after Dionysus, the Greek god of wine and bestower of ecstasy]

diopetre *n.* A unit of measurement for the refractive power of a lens, being the reciprocal of the lens's [*focal length](#) in metres. US *dioptr*. [From Greek *dioptron* a spyglass from *dia* through + *opsesthai* to see]

dioptric aberration *n.* Another name for [*aberration \(3\)](#).

diotic *adj.* Of or relating to an auditory signal that is identical in both ears. Compare [DICHOTIC](#). [From Greek *dis* twice + *ous*, *otos* an ear]

diphthong *n.* Any complex [*vowel](#) sound comprising a [*glide](#) from one vowel sound to another within a single syllable, with movement of the tongue between the two sounds. In [*Received Pronunciation](#) there are three diphthongs in which the final sound is similar to the vowel in *tip* (as in the words *day*, *tie*, *boy*); two in which the final vowel sound is similar to the vowel in *put* (as in *go* and *how*); and three in which the final vowel sound is similar to the vowel in *the* (as in *veer*, *care*, and *poor*). Compare [DIGRAPH](#), [MONOPHTHONG](#), [TRIPHTHONG](#). [From Greek *di-* two + *phthongos* sound]

diplacusis *n.* A hearing impairment arising from a difference between the two ears, resulting in hearing a single tone as two tones of different pitch. Also spelt *diplacousis* . Also called *diplacusia* or *diplacousia* . [From Greek *diploos* double + *akusis* hearing, from *akouein* to hear + *-sis* indicating a condition or state]

diploaesthesia *n.* An illusory experience of touching two objects when actually touching only one, occurring occasionally as a neurological sign. US *diplesthesia*. See also **ARISTOTLE'S ILLUSION**. [From Greek *diploos* double + *aisthesis* feeling + *-ia* indicating a condition or quality]

diplegia *n.* Bilateral paralysis of corresponding parts on both sides of the body. Compare **HEMIPLEGIA**, **MONOPLEGIA**, **OPHTHALMOPLEGIA**, **PARAPLEGIA**, **QUADRIPLÉGIA**, **TRIPLEGIA**. **diplegic** *adj.* [From Greek *dis* twice + *plege* a blow + *-ia* indicating a condition or quality]

diploid *adj.* Of or relating to a cell that has a full complement of paired ***chromosomes**, such as a body or somatic cell of humans and most sexually reproducing animals, rather than half the normal number, as in sex cells or gametes; also of or relating to an organism whose body cells contain paired chromosomes. Compare **HAPLODIPLOID**, **HAPLOID**. **diploidy** *n.* The state or condition of being diploid. [From Greek *diploos* double + *-oeides* denoting resemblance of form, from *eidos* shape]

diplopia *n.* Double vision resulting from incorrect fixation or defective functioning of the ***extra-ocular muscles** or the nerves that control the muscles, sometimes resulting from fatigue, stress, or intoxication by alcohol or other depressant drugs. Diplopia when looking down, as when descending stairs, is a cardinal symptom of malfunction of the ***trochlear nerve**. See also **BINOCULAR DISPARITY**. [From Greek *diploos* double + *ops* an eye + *-ia* indicating a condition or quality]

dipsomania *n.* Intermittent pathological craving for alcohol. Compare **ALCOHOL DEPENDENCE**. [From Greek *dipsa* thirst + *mania* madness + *-ia* indicating a condition or quality]

Dircks's ghost *n.* A fairer name for what is usually called ***Pepper's ghost**. [Named after the retired English civil engineer and patent agent Henry Dircks (1806–73) who invented it in 1862]

direct analysis *n.* A technique of ***psychoanalysis** in which the analyst presents ***interpretations (2)** to the patient bluntly, attempting to communicate

directly with the patient's **unconscious* (2). For example, the analyst might interpret a male patient's **Oedipus complex* by telling him: 'You want to fuck your mother and cut your father's balls off'. It was introduced in 1946 by the US psychoanalyst John N(athaniel) Rosen (1902–83), who claimed that it was especially effective in treating **schizophrenia*, in which the unconscious overwhelms the patient's defences, but in the early 1980s it became enveloped in controversy and Rosen stopped practising it. The technique is discussed in detail in Rosen's book *Direct Analysis: Selected Papers* (1953).

directed association *n.* In **analytical psychology*, spontaneously produced chains of related ideas proceeding from the recollection of a dream. In contrast to **free association*, the associated ideas are required constantly to relate to the original dream memory. Also called *controlled association*.

directed thinking *n.* In **analytical psychology*, conscious use of language and concepts, closely tied to reality, characteristic of intellectual communication, scientific exposition, and common sense. It is closely related to the **secondary process* of **psychoanalysis*. Carl Gustav Jung (1875–1961) discussed it at length, contrasting it with **fantasy thinking* (*Collected Works*, 5, paragraphs 4–46).

directional selection *n.* A form of **natural selection* operating against one extreme of the range of variation of a characteristic and shifting the entire population towards the opposite extreme by either increasing or reducing the frequency of an **allele*.

directional test *n.* In **inferential statistics*, a test of the significance of a departure from the **null hypothesis* in one direction only, so that a departure in the opposite direction, no matter how large, is attributed to chance. In a *non-directional test*, a departure from the null hypothesis in either direction results in its rejection. Also called a 1-tailed test. See also [1-TAILED PROBABILITY](#).

direction-sensitive neuron *n.* A **ganglion cell* in the **retina* that is specialized to respond to movement in just one direction in the visual field and that underlies the **image-retinal system*. It is believed to receive

*****ebook converter DEMO Watermarks*****

excitatory signals from one or more [*photoreceptor](#) cells and inhibitory signals from one or more others, the excitatory cells being positioned on the retina in front of the inhibitory cells, relative to the direction of movement that the direction-sensitive neuron is tuned to detect, so that when an image crosses the retina in that direction excitatory signals reach the direction-sensitive ganglion cell before inhibitory signals, and consequently the inhibitory signals fail to suppress the responses of the ganglion cells and the ganglion cells therefore fire, eliciting a perception of movement. Also called a *direction-selective cell* or a *motion detector* .

directory plus one sampling *n.* A variation of [* random digit dialing](#) (RDD) in which a [*probability sample](#) of telephone subscribers is drawn by selecting telephone numbers randomly from directories and adding one to the final digit of each number before dialling it, the purpose being to ensure that ex-directory subscribers are adequately represented in the sample.

direct perception *n.* A theory of (mainly visual) perception, developed by the US psychologist James Jerome Gibson (1904–79) over a period of more than three decades, according to which the flux of light (called the *ambient optic array*) reaching the visual [*receptors](#) (1) of a perceiving organism is richly structured; movements of the organism or of surrounding objects cause some aspects of the array to change while others remain constant, hence the array is composed of *variants* and *invariants*, and the invariants are sufficient to provide perception of aspects of the environment such as spatial arrangements and surfaces directly, that is, without recourse to inference or memory. *See also* [AFFORDANCE](#), [AIR THEORY](#), [GIBSONIAN](#), [GLOBAL PSYCHOPHYSICS](#), [MOTION PERSPECTIVE](#).

direct scaling *n.* In [*psychophysics](#), any method of scaling such as [*magnitude estimation](#) or [*cross-modal matching](#) in which an observer specifically estimates the magnitude of the variable stimulus. *Compare* [INDIRECT SCALING](#).

dirhinic *adj.* Of or relating to any olfactory stimulus that affects both nostrils alike. [From Greek *dis* twice + *rhis*, *rhinos* the nose + *-ikos* of, relating to, or resembling]

disabling agent See INCAPACITANT.

disassortative mating *n.* Preference for mating partners with dissimilar *phenotypes, observed in some species but much less common than *assortative mating. See also POPULATION GENETICS.

disaster counselling *n.* A form of *counselling offered to the victims of major disasters, including accidents such as aircraft crashes, criminal acts such as terrorist bombs, and natural catastrophes such as earthquakes. The survivors of such disasters often experience *post-traumatic stress disorder and other psychological problems. US *disaster counseling*.

disavowal *n.* In *psychoanalysis, another name for *denial.

disconnection syndrome *n.* A term coined in 1965 by the US neurologist Norman Geschwind (1926–84) for a condition in which information transfer between parts of the brain is interrupted or blocked. The term is most often applied to disconnection between the left and right *cerebral hemispheres via the *corpus callosum, although the hemispheres are also connected through the *anterior commissure (interconnecting the olfactory system) and the *hippocampal commissure (limbic system). The most common causes of disconnection syndrome are *commissurotomy and *agenesis of the corpus callosum. In the absence of any other abnormalities, a person with disconnection syndrome appears normal to family and friends, but application of specific tests reveals signs and symptoms of disconnection including left-hand *tactile aphasia, objects placed in the left hand, and therefore represented in the right hemisphere, being impossible to name, because language is normally processed only in the left hemisphere. For the same reason, *left-sided apraxia is manifested in an inability to respond with the left hand to verbal commands, and there is usually very poor understanding of verbal signals presented to the left ear. Striking manifestations of disconnection syndrome are the *alien hand sign and *anarchic hand. See also APHASIA, ARCUATE FASCICULUS, SPLIT-BRAIN PREPARATION.

discontinuity theory *n.* A theory of learning propounded by the US

physiological psychologist Karl Spencer Lashley (1890–1958) according to which an organism does not learn gradually about **stimuli* (1) that it encounters but forms hypotheses, such as *always turn left*, and learns about a stimulus only in relation to its current hypotheses, so that a process of learning can include sudden jumps, as one hypothesis is replaced by another. Compare CONTINUITY THEORY.

discordance *n.* 1. In genetics, the proportion of **monozygotic twins* (or relatives of other known degrees of genetic relatedness) who display different forms of a particular characteristic or different **phenotypes*. See also MAP DISTANCE, TWIN STUDY. Compare CONCORDANCE (1). 2. In statistics, the degree of disagreement between **ranks*. See GAMMA STATISTIC, KENDALL COEFFICIENT OF CONCORDANCE, KENDALL'S TAU, SOMERS' D. Compare CONCORDANCE (2). **concordant** *adj.*

discourse *n.* A continuous stream of spoken (and sometimes written) language longer than a sentence. [From Latin *discursus* argument, from *discurrere* to run to and fro, from *dis-* apart + *currere* to run]

discourse analysis *n.* A method of **qualitative research* and a field of study devoted to understanding all forms of spoken interaction and written texts. It views language critically as an activity that constructs reality rather than merely describing or referring to it, and its theoretical approach is influenced by **deconstruction*, **semiology*, and **speech act* theory and tends to be critical of traditional theories and research methodologies in psychology. Research focuses on well-formed rules governing the sequence of permissible linguistic units and on such aspects of language as *discourse markers*—verbal expressions such as *anyway*, *oh well*, or *I mean* that demarcate units of speech. See also CONVERSATION ANALYSIS, PSYCHOANALYTIC CONSTRUCTION. **DA** *abbrev.*

discrepancy effects *n.* The effects on **attitude change* resulting from the distance of persuasive communications or messages from the recipients' initial attitude positions. See ASSIMILATION (4), ASSIMILATION–CONTRAST THEORY, BOOMERANG EFFECT, CONTRAST (5).

discrete processing *n.* The implementation of later stages of
*****ebook converter DEMO Watermarks*****

***information** processing only after the completion of earlier stages, so that information is not passed on to the next stage until processing at the current stage is complete. *See also* SERIAL PROCESSING. *Compare* CASCADE PROCESSING, PARALLEL PROCESSING.

discrete variable *n.* In statistics, any ***variable** whose adjacent values are not infinitesimally close, so that cumulative values of its ***probability distribution** require simple addition rather than integration. *See also* METATHETIC STIMULUS DIMENSION, PROTHETIC STIMULUS DIMENSION. *Compare* CONTINUOUS VARIABLE.

discriminability *n.* The extent to which stimuli can be distinguished from one another or discriminated. In ***signal detection theory**, it is more specifically an index of the extent to which a signal can be detected or distinguished from noise, and it is also called *d prime* or *d'*. **discriminable** *adj.* [From Latin *discriminare* to divide, from *discrimen* a division, from *discernere* to divide, from *dis* apart + *cernere* to separate + *-abilitas* capacity, from *habilis* able]

discriminability effect *n.* Another name for the ***hard–easy effect**.

discriminanda *n.* Any set of stimuli among which an organism has to discriminate before making a response.

discriminant function analysis *n.* In statistics, a procedure for optimal classification of individuals into groups or classes on the basis of a number of discriminating variables on which each of the individuals has been measured. For example, a researcher might use the discriminating variables age, sex, level of education, and income in order to discriminate optimally between people who support capital punishment and those who oppose it. This is achieved by weighting the variables and combining them into discriminant functions that separate the two groups maximally. This procedure is mathematically equivalent to ***canonical correlation** with the discriminating variables considered as predictor variables and the group membership variable considered as a dummy criterion variable taking on arbitrary values (0 and 1 in the case of two groups). Alternatively, it may be thought of as ***multiple regression** with a categorical dependent variable.

*****ebook converter DEMO Watermarks*****

Also called *discriminant analysis* . **DFA** abbrev.

discriminant validity *n.* A form of **validity* that, together with **convergent validity*, provides evidence of **construct validity*. It is based on the assumption that measures of unrelated **hypothetical constructs* ought not to correlate highly with one another if the measures are valid: they ought to discriminate between dissimilar constructs. The concept was introduced in an article by the US psychologists Donald T(homas) Campbell (1916–96) and Donald W(inslow) Fiske (1916–2003) in the journal *Psychological Bulletin* in 1959. *See also* [MULTITRAIT–MULTIMETHOD MATRIX](#).

discriminating power *n.* In psychometrics, the degree to which a test yields different scores when applied to different criterion groups; specifically, the degree to which an item in an **attitude scale*, or the scale as a whole, yields different scores when it is applied to people holding different attitudes towards the attitude object in question. *See also* [ITEM DISCRIMINATION INDEX](#).

discrimination *n.* **1.** The act or process of distinguishing between stimuli or of recognizing or understanding the differences between things. *See also* [DISCRIMINABILITY](#), [DISCRIMINATION LEARNING](#). **2.** The unfair or prejudiced treatment of a person or group, as in *racial discrimination* or *sexual discrimination*. **discriminate** *vb.*

discrimination function *n.* The **difference threshold* expressed as a function of the physical intensity of the stimuli, as when the difference threshold for loudness is plotted against **sound pressure level* to yield a loudness discrimination function, showing the lowest thresholds for intermediate sound pressure levels.

discrimination learning *n.* Any form of **learning* (1) in which the organism has to discriminate between two or more **stimuli* (1) in order to respond correctly, studies of such learning often being used to establish the capacity of the organism to make certain discriminations. *See also* [PEAK SHIFT](#), [PROBABILITY LEARNING](#).

discrimination reaction time *n.* **Reaction time* to differences in an objectively measurable perceptual dimension such as brightness, length, or
*****ebook converter DEMO Watermarks*****

weight. A common procedure for measuring it involves an observer comparing pairs of visual displays, presented simultaneously, and responding by pressing one of two buttons according to which display appears brighter, longer, heavier, or greater in magnitude on whatever dimension is being examined, the time elapsing between stimulus presentation and key-pressing response being the discrimination reaction time. The three main dependent variables in research using this technique are reaction time, degree of confidence, and relative frequency of each available response. *Compare* CHOICE REACTION TIME, SIMPLE REACTION TIME. **DRT** *abbrev.*

discrimination threshold *n.* Another name for the *difference threshold.

discriminative response *n.* A *response made by an organism to one of two or more different stimuli that it has to distinguish from the other(s) in order to obtain a reward.

dishabituation *n.* The restoration of the prior strength of an *unconditioned response that has been weakened by *habituation (2), such restoration usually being induced by a strong stimulus of a different type. *See also* DISINHIBITION. **dishabituate** *vb.*

disinhibited social engagement disorder *n.* In *DSM-5, a *trauma- and stressor-related disorder of infancy or childhood, characterized by a pattern of behaviour in which a child displays indiscriminate sociability to unfamiliar adults, acting in an overly familiar and trusting manner, together with evidence that the child has experienced pathogenic care, assumed to be responsible for the disturbed social relating, such as neglect or persistent lack of adult care, repeated changes of carers with limited opportunity to form stable attachments, or rearing in institutions with insufficient numbers of carers or other circumstances of severely limited opportunities for forming attachments to carers. *See also* ATTACHMENT THEORY, TRAUMA- AND STRESSOR-RELATED DISORDERS. *Compare* ATTENTION-DEFICIT/HYPERACTIVITY DISORDER, REACTIVE ATTACHMENT DISORDER.

disinhibition *n.* The reappearance of a *conditioned response that has been inhibited, usually by *extinction (2), following the presentation of a
*****ebook converter DEMO Watermarks*****

novel or strong stimulus. Also called *inhibition of inhibition* . Compare [INHIBITION \(3\)](#).

disintegrative disorder *n.* An alternative name for [*childhood disintegrative disorder](#).

disjunction *n.* **1.** The act or process of disconnecting, or the state of being disconnected, especially the separation during [*meiosis](#) or [*mitosis](#) of the members of each pair of [*homologous chromosomes](#). **2.** In logic, two [*propositions \(1\)](#) connected by an operator denoting *or* to form a single compound proposition, usually written $p \vee q$, where p and q represent the component propositions or disjuncts, the compound proposition being true if one or both of its disjuncts are true. Also called an *inclusive disjunction* to distinguish it from the less common *exclusive disjunction*, which is true if either of its disjuncts is true but not if both are true. See also [DISJUNCTIVE CONCEPT](#). Compare [CONJUNCTION \(2\)](#). [From Latin *dis-* indicating reversal + *iunctio* joining + *-ion* indicating an action, process, or state]

disjunction search *n.* A search for a target stimulus representing a [*disjunctive concept](#) among a number of distractor stimuli. Compare [CONJUNCTION SEARCH](#), [FEATURE SEARCH](#).

disjunctive concept *n.* A concept defined by a [*disjunction \(2\)](#) specifying the possession of either one [*attribute](#) or another, for example, a figure that is either red or is a square. Compare [CONJUNCTIVE CONCEPT](#).

disjunctive eye movement *n.* Any turning of the eyes in different directions. Compare [CONJUGATE MOVEMENT](#). [From Latin *dis-* apart + *iungere* to join]

dis legomenon *n.* A twice-occurring word. See [HAPAX LEGOMENON](#). **dis legomena** *pl.* [From Greek *dis* twice + *legomenon* something spoken, from *legein* to say]

disorder of excessive somnolence *n.* Another name for [*hypersomnolence disorder](#). **DOES** *abbrev.*

disorder of initiating and maintaining sleep *n.* Any of the *dyssomnias. **DIMS** *abbrev.*

disorder of written expression *See* SPECIFIC LEARNING DISORDER.

disorganized crime *See* ORGANIZED CRIME (1).

disorganized schizophrenia *n.* One of the major types of *schizophrenia, the essential features of which are *disorganized thought and behaviour and *affective flattening or inappropriate *affect.

disorganized speech *n.* A term used in *DSM-IV for what was later called *disorganized thinking.

disorganized thinking *n.* In certain mental disorders, notably forms of *disorganized schizophrenia, a form of *thought disorder manifested by *cognitive derailment, *loosening of associations, *incoherence, or replies that are unrelated or only obliquely related to the questions posed (*see* GANSER SYNDROME).

disorientation *n.* 1. Generally, a loss of one's bearings. 2. In relation to a mental disorder, confusion about who or where one is or such matters as the day of the week, time of day, or season of the year.

disparate retinal points *n.* Any pair of points, one on each retina, that are not *corresponding retinal points. [From Latin *disparatus* unequal, from *dis-* indicating reversal + *parare* to make ready, influenced by *dispar* unequal, from *par* equal]

disparity, binocular *See* BINOCULAR DISPARITY.

disparity, retinal *n.* Another name for *binocular disparity.

disparity-selective cell *n.* A *binocular cell in the *visual cortex that receives inputs from both eyes and responds only when the *binocular disparity is within certain predetermined limits, thus providing a basis for

*****ebook converter DEMO Watermarks*****

***stereopsis.** Also called a *disparity-selective neuron* , a *disparity-tuned cell* , or a *disparity-tuned neuron* . See also [STEREOBLINDNESS](#).

dispersion *n.* In descriptive statistics, the degree of scatter or variability in a group of scores, usually measured by the ***variance** or ***standard deviation**. See also [INTERQUARTILE RANGE](#), [PROBABLE ERROR](#), [RANGE](#), [SEMI-INTER QUARTILE RANGE](#).

displaced aggression *n.* In ***psychoanalysis**, aggression that has undergone ***displacement** and has been redirected from its original target, usually a source of frustration, on to a substitute target.

displacement *n.* Moving something from its current position. In ***psychoanalysis**, a ***defence mechanism** involving redirection of emotional feelings from their original object to a substitute object related to the original one by a chain of associations. Although not essential to the concept as originally conceived by Sigmund Freud (1856–1939), and expounded further in 1900 in his book *The Interpretation of Dreams* (*Standard Edition*, IV–V, at pp. 180–1, 306–8) and in other writings, the substitute object may be less threatening than the original one, and the displacement may therefore have the effect of avoiding or reducing anxiety. Displacement is a characteristic mechanism of the ***primary process**. In an article in the journal *La Psychoanalyse* in 1957, the French psychoanalyst Jacques Lacan (1901–81) related displacement to ***metonymy** and the defence mechanism of ***condensation** to ***metaphor**. See also [DISPLACED AGGRESSION](#), [DREAMWORK](#), [QUOTA OF AFFECT](#), [TRANSFERENCE](#).

displacement activity *n.* In ethology, the substitution of an irrelevant pattern of behaviour for behaviour that is appropriate to a particular situation, especially as a reaction to a conflict of motives. Male stickleback fish stand on their heads and dig into the sand as if building a nest when the impulses of attack and retreat are evenly balanced; fighting roosters often peck at the ground between bouts as though feeding; and humans often scratch their heads or perform self-grooming ***gestures** (1) when in a state of conflict, embarrassment, or stress. Also called *displacement behaviour* . See also [ADAPTOR](#).

display *n.* 1. An exhibition or show; especially an ostentatious pattern of behaviour by an animal as part of a **courtship (1)* ritual or when defending territory, establishing a position in a **dominance hierarchy* or **pecking order*, or engaging in some other form of social behaviour. *See also CONVENTIONAL FIGHTING.* *vb.* 2. To engage in a display. [From Latin *displicare* to unfold, from *dis-* indicating reversal + *plicare* to fold]

display rule *n.* A cultural **norm (1)* or convention governing the circumstances in which **facial expressions* and other **affect displays* are allowed, suppressed, or exaggerated. For example, in European and North American cultures, it is considered bad etiquette to smile broadly if a person slips on a banana peel and falls face-down, whereas one is expected to smile when greeting an acquaintance even if not genuinely happy. Japanese culture prescribes suppression of affect displays in many situations in which they are allowed or encouraged elsewhere, this no doubt being the origin of the notion of the inscrutable East.

dispositionist bias *n.* Another name for the **fundamental attribution error*, considered more apt by some social psychologists.

disruptive behaviour disorders *n.* A generic name for **attention-deficit/hyperactivity disorder*, **conduct disorder*, and **oppositional defiant disorder*. US *disruptive behavior disorders*.

disruptive, impulse-control, and conduct disorders *n.* An umbrella term introduced in **DSM-5* to bring together disorders involving self-control of emotion and behaviour. *See ANTISOCIAL PERSONALITY DISORDER, CONDUCT DISORDER, INTERMITTENT EXPLOSIVE DISORDER, KLEPTOMANIA, OPPOSITIONAL DEFIANT DISORDER, PYROMANIA.*

disruptive mood dysregulation disorder *n.* A **depressive disorder* introduced in **DSM-5* to address concerns about excessive diagnosis of **bipolar disorder* in children. It can be diagnosed in children between 6 and 18 years of age who have exhibited, for at least 12 months, chronic, severe, persistent irritability and recurrent temper **tantrums*, verbal rages, or physical aggression directed to people or property at least three

times per week on average, and whose mood between outbursts is irritable or angry. *Compare* BIPOLAR DISORDER, INTERMITTENT EXPLOSIVE DISORDER, OPPOSITIONAL DEFIANT DISORDER.

disruptive selection *n.* A form of *natural selection operating against the middle range of variation of a characteristic and tending to split the population into two extreme types. *See also* APOSTATIC SELECTION. *Compare* STABILIZING SELECTION.

dissocial personality disorder *n.* Another name (used in *ICD-10) for *antisocial personality disorder. The diagnostic criteria are similar, with the addition of incapacity to maintain enduring relationships, though with no difficulty in establishing them, and incapacity to experience guilt or to profit from adverse experience, particularly punishment.

dissociation *n.* Partial or total disconnection between memories of the past, awareness of identity and of immediate sensations, and control of bodily movements, often resulting from traumatic experiences, intolerable problems, or disturbed relationships. *See also* DISSOCIATIVE DISORDERS, DISSOCIATION THEORY, NEODISSOCIATION THEORY. [From Latin *dissociare* to separate, from *dis-* apart + *sociare* to associate + *-ation* indicating a process or condition]

dissociation theory *n.* A theory proposed in 1899 by the French psychologist and neurologist Pierre Janet (1859–1947) to explain *automatism and in 1907 to explain *hysteria. According to the theory, these disorders are the result of *dissociation. *See also* NEODISSOCIATION THEORY.

dissociative amnesia *n.* In *DSM-5, a *dissociative disorder characterized by loss of memory, usually for important recent events associated with serious problems, *stress (1), or unexpected *bereavement. It is not diagnosed if it is attributable to ordinary forgetfulness, fatigue, drugs, or a *general medical condition. *See also* AMNESIA, DISSOCIATION.

dissociative convulsions *n.* A *dissociative disorder characterized by sudden spasmodic *convulsions resembling those of *epilepsy but not associated with loss of consciousness.

dissociative disorders *n.* A category of *mental disorders with *dissociation as a prominent feature. In *DSM-5 it includes *depersonalization/derealization disorder, *dissociative amnesia, and *dissociative identity disorder. *See also* DISSOCIATIVE AMNESIA, DISSOCIATIVE CONVULSIONS, DISSOCIATIVE FUGUE, DISSOCIATIVE MOVEMENT DISORDERS, DISSOCIATIVE STUPOR, DISSOCIATIVE TRANCE DISORDER, GANSER SYNDROME. In some taxonomies of mental disorders, including *ICD-10, but not in DSM-5, *conversion disorder is also classified as a dissociative disorder. **DD** *abbrev.*

dissociative fugue *n.* A feature of *dissociative amnesia characterized by sudden unexpected travel away from home, *amnesia for some or all of the past, confusion about personal identity or (occasionally) the assumption of a new identity. It is not diagnosed if it is caused by drugs or a *general medical condition. *Compare* FUGUE. [From Latin *fuga* a flight]

dissociative identity disorder *n.* A *dissociative disorder in *DSM-5 characterized by the presence of two or more (sometimes many) separate personalities, each with its own memories and patterns of behaviour, at least two of which take turns in recurrently taking control of behaviour, the disorder also being characterized by *amnesia for personal information that is too great to be attributable to ordinary forgetfulness. It is sometimes interpreted as a form or variant of *post-traumatic stress disorder, and some researchers and practitioners believe that it is usually a consequence of childhood abuse or other traumatic experiences, but the disorder is the subject of considerable controversy and is not universally recognized. Also called *multiple personality disorder* (*MPD*) or *split personality*. Often confused with (but in fact unrelated to) *schizophrenia. **DID** *abbrev.*

dissociative movement disorders *n.* Forms of *dissociative disorders in which there is a partial or complete loss of ability to perform bodily movements that are normally under voluntary control, without any apparent *organic disorder, including dissociative forms of *akinesia, *aphonia, *apraxia, *ataxia, *convulsions, *dysarthria, *dyskinesia, and *dysstasia. Also called *dissociative motor disorders* or *motor dissociative disorders*.

dissociative stupor *n.* Profound diminution or absence of voluntary
*****ebook converter DEMO Watermarks*****

movement and responsiveness to external stimuli apparently resulting from **stress* (1). *See also* DISSOCIATION.

dissociative trance disorder *n.* A condition characterized by behaviour and experience associated with a **trance* or a **possession trance*. Also called *trance and possession disorder*. *See also* DISSOCIATION, DISSOCIATIVE DISORDER.

dissonance theory *n.* Another name for **cognitive dissonance* theory.

distal *adj.* Farther or farthest from the centre, point of attachment, or origin. *Compare* PROXIMAL. [From *distant* + *-al* from Latin *-alis* of or relating to, by analogy with *central*]

distal criterion *n.* Another name for an **ecological criterion*.

distal stimulus *n.* An object, event, or agent in the external environment producing a pattern of physical energy called the **proximal stimulus* that in turn excites a **sensory receptor*.

distance receptor *n.* A **sensory receptor* for stimuli such as light and sound that are produced by distant stimuli. *Compare* CONTACT RECEPTOR.

distance sense *n.* Another name for a **far sense*.

distinctive feature *n.* Any **feature* (1) or **attribute* of speech or writing that is relevant or significant inasmuch as it enables a contrast to be made between phonological, syntactic, or semantic units of a language, especially the phonological attributes that distinguish **minimal pairs* and that therefore underlie the definition of a **phoneme*. *See also* ACOUSTIC CUE (1).

distorted-room illusion *n.* Another name for the **Ames room*.

distractibility *n.* Diminished ability to maintain attention, usually manifested as excessive shifting of attention from one topic to another or a tendency to be captivated by unimportant details or stimuli.

distractor *n.* A stimulus that diverts attention from a **target item* that a research participant is searching for or trying to concentrate on, frequently used in studies of perception and memory. A *token distractor* resembles the target item closely, differing from it in detail only, whereas a *type distractor* differs substantially from the target item. Also called a *foil*.

distressed personality type See *TYPE D*.

distress relief quotient *n.* The ratio of verbal expressions of distress to verbal expressions of relief in a sequence of discourse, sometimes used as an index to track the process of improvement in **psychotherapy* or **counselling*.

distributed cognition *n.* **Information* processing that is shared among several separate agents. The classic example, due to the US cognitive scientist Edwin Hutchins (born 1948), is that of a group of crew members cooperating to navigate a large ship: one crew member plots the ship's position on a chart, another takes compass bearings on landmarks, another keeps time and communicates with the bearing-takers, another maintains a deck log in which changes in heading and speed are recorded, another monitors water depth, and another operates the steering mechanism. It should be distinguished from **parallel distributed processing* or **connectionism* (1), in which separate sub-processes are distributed within a single agent. The **cooperative principle* is often cited as an example of distributed cognition, making purposeful communication possible as a cooperative endeavour.

distributed network model *n.* A representation of anything by a pattern of activation over a number of connected units, characteristic of **connectionism* (1). Also called *distributed representation*.

distributed practice *n.* Learning that is divided up into sessions, leaving gaps either between trials or between blocks of trials, generally leading to superior recall after a delay relative to **massed practice*.

distributed representation *n.* Another name for a **distributed network model*.

distribution-free test *n.* In inferential statistics, any significance test that makes no assumptions about the precise distribution or form of the sampled **population*. Although the term *distribution-free* is often used interchangeably with *non-parametric*, strictly speaking it is possible for a test to be distribution-free without being non-parametric; for example the **sign* test makes no assumptions about the distribution of the sampled population but tests the hypothesis that a certain parameter of the binomial distribution (the proportion of successes) is 1/2, so it is not really non-parametric. See also NON-PARAMETRIC STATISTICS, PROBABILITY DISTRIBUTION.

distribution, probability See PROBABILITY DISTRIBUTION.

disulfiram *n.* A drug that induces nausea when taken with **alcohol* and is used in the treatment of **alcoholism*. See ANTABUSE.

diurnal *adj.* Occurring during the day or daily. Compare NOCTURNAL. [From Latin *diurnalis* of or relating to a day, from *dies* a day]

diurnal rhythm *n.* Another name for a **circadian rhythm*. See also BIOLOGICAL CLOCK, CHRONOBIOLOGY, ZEITGEBER.

divergence *n.* The act, process, or condition of separation or of going in different directions, especially **ocular divergence*, the turning outwards of the eyes in order to fixate an object or image further away than the previous fixation point. See also HOROPTER, VERGENCE. Compare CONVERGENCE. [From Latin *divergere* to move apart, from *di-* apart + *vergere* to incline]

divergent thinking *n.* Imaginative thinking, characterized by the generation of multiple possible solutions to a problem, often associated with **creativity*. The concept was introduced in 1946 by the US psychologist J(oy) P(aul) Guilford (1897–1987) and is one of the six different types of mental operations in **Guilford's cube*. See CONVERGENCE–DIVERGENCE.

divided visual field *n.* A generic name for a variety of experimental techniques in which a viewer **fixates* (1) on a point while visual stimuli are flashed briefly in the left or right **visual field*, and measures of response

accuracy and [*reaction time](#) are taken, in order to study lateralization of brain functions. It is based on the fact that the partial [*decussation](#) of nerve fibres at the [*optic chiasm](#) results in each half of the visual field being projected to the opposite-hemisphere [*primary visual cortex](#) (Area V1). *See also* [HOMONYMOUS HEMIANOPIA](#), [LATERALITY](#).

divisive hierarchical clustering *n.* In statistics, any technique of [*cluster analysis](#) that begins with all individuals or cases grouped into a single cluster and then splits individuals into separate clusters until there are as many clusters as individuals.

dizygotic *adj.* Developed from two [*zygotes](#). *Compare* [MONOZYGOTIC](#). **DZ** *abbrev.* [From Greek *dis* double + *zygotos* yoked, from *zygon* a yoke + *-itikos* resembling or marked by]

dizygotic twins *n.* Twins that are [*dizygotic](#), arising from the fertilization of two separate ova or eggs by two separate spermatozoa at about the same time, leading to the development of individuals usually (if they have the same father) sharing about half their genes in common like ordinary siblings. Their relative frequency is affected by many environmental factors and is greatly increased by the use of fertility drugs. Also called *fraternal twins* or *non-identical twins* . *See also* [TWIN STUDY](#). *Compare* [MONOZYGOTIC TWINS](#). **DZ twins** *abbrev.*

DMT *abbrev.* The usual name for dimethyltryptamine, a [*hallucinogenic](#) and [*psychedelic](#) drug belonging to the group of [*indole alkaloids](#), found in many South American snuffs. *See also* [PHANTASTICANT](#).

DNA *abbrev.* Deoxyribonucleic acid (also written *desoxyribonucleic acid*), a self-replicating molecule that is the major functional constituent of [*chromosomes](#) and is also found inside [*mitochondria](#) in the cytoplasm of cells, containing the [*genes](#) transmitted from parents to offspring in most organisms, and consisting of two strands of complementary chemical [*base](#) (1) pairs (adenine paired with thymine and cytosine with guanine) incorporating the genetic information, the strands being linked to a backbone composed of the sugar [*deoxyribose](#) alternating with a [*phosphate](#) and coiled into a double helix (spiral) (see [illustration](#)). Human DNA contains

*****ebook converter DEMO Watermarks*****

approximately 21,000 to 23,000 genes, each gene consisting of a sequence of base pairs encoding a corresponding sequence of ***amino acids** that constitute a specific ***protein**. See also **CISTRON**, **CODON**, **COMPLEMENTARY BASE PAIRING**, **DOUBLE HELIX**, **GENETIC CODE**, **INTRON**, **MITOCHONDRIAL DNA**, **NUCLEOTIDE**, **PLASMID**, **POLYMERASE CHAIN REACTION**, **PURINE**, **PYRIMIDINE**, **RECOMBINANT DNA**, **RESTRICTION MAPPING**, **TELOMERE**, **TRANSPOSON**.

The four bases of DNA, showing the hydrogen bonding between base pairs

DNA. Molecular structure.

DNA cloning *n.* Producing ***clones** (2) of ***genes**. Also called *gene*
 *****ebook converter DEMO Watermarks*****

cloning .

DNA fingerprinting *n.* Another name for **genetic fingerprinting*.

DNA hybridization *n.* A technique for determining the similarity of two strands of DNA, or of DNA and RNA, by bringing single strands of each molecule together and examining the degree of double helix formation, which is indicative of corresponding base sequences. It is also used to isolate specific DNA or RNA molecules from a mixture by causing complementary strands to reassociate. The technique is based on the fact that if DNA (or a mixture of DNA and RNA) is heated to the point at which it dissociates into single strands and is then cooled, double helices reform at regions of base-sequence complementarity. *See also* [ANNEALING \(2\)](#), [HYBRIDIZATION](#).

DNA ligase *n.* An **enzyme* that is capable of uniting two strands of **DNA* and is used in **recombinant DNA* techniques and in **genetic engineering*. [From Latin *ligare* to bind + Greek *-ase* denoting an enzyme, from *diastasis* separation]

DNA polymerase *n.* Any of several **enzymes* that catalyse the synthesis of additional units of **DNA* by a process of **transcription (2)*, using single-stranded DNA as a template. *See also* [DNA REPLICATION](#), [POLYMERASE CHAIN REACTION](#). *Compare* [RNA POLYMERASE](#). [From *DNA* + *polymer* + Greek *-ase* denoting an enzyme, from *diastasis* separation]

DNA profiling *n.* Another name for **genetic fingerprinting*.

DNA recombination *n.* Any process of **DNA* exchange in a sexually reproducing organism that produces chromosomes containing new combinations of **genes* not found in the cells of either of its parents, especially the rearrangement of genes resulting from **independent assortment* and **crossing over*. Also called *genetic recombination* or simply *recombination* . Often confused with **recombinant DNA*.

DNA replication *n.* The process, catalysed by **DNA polymerase*, whereby the two complementary strands of a **DNA* double helix molecule

separate, each strand then functioning as a template for the synthesis of a new complementary strand, resulting in the formation of two double-stranded DNA molecules identical to the original.

DNA sequence *n.* The order in which ***base (1)** pairs appear in a ***DNA** molecule, determining within the protein-coding sections of DNA the order of the ***amino acids** to be synthesized. Also called a *base sequence* or a *nucleotide sequence*. **DNA sequencing** *n.* Determining the DNA sequence in a sample of nucleic acid.

DNA splicing *n.* In ***genetic engineering**, artificial rearrangement of sections of ***DNA** using ***restriction enzymes** and ***DNA ligase**.

dodo bird conjecture *n.* The proposition that all methods of ***psychotherapy** are equally effective. The term derives from an article in the *American Journal of Orthopsychiatry* in 1936 in which the US psychologist Saul Rosenzweig (1907–2004) put forward the conjecture and quoted from *Alice's Adventures in Wonderland* by Lewis Carroll, the pen name of Charles Lutwidge Dodgson (1832–98). The quotation was from Chapter 3, after the dodo had arranged a 'caucus-race' but no one knew who had won: 'At last the Dodo said, "Everybody has won, and all must have prizes" '.

doing gender *n.* The study of the interpersonal aspects of ***gender (1)**, focusing on the ways in which cognitive categories based on ***sex (1)** act as social cues that influence people's behaviour and elicit gender-specific patterns of interaction, thereby creating, maintaining, and reinforcing social inequalities.

Dollar Auction game *n.* A strategic ***game (1)** devised by the US economist Martin Shubik (born 1926) and published in the *Journal of Conflict Resolution* in 1971, designed to model strategic escalation and entrapment. A dollar bill (or other currency note) is auctioned to the highest bidder in a group. The highest bidder gets the dollar bill, and the second-highest bidder receives nothing, but *both* bidders must pay the auctioneer amounts corresponding to their last bids. Suppose the bidding stops at 40c and the previous (second-highest) bid was 35c, then the 40c bidder gets the dollar, and the auctioneer collects 40c from that bidder and 35c from the

*****ebook converter DEMO Watermarks*****

second-highest bidder (who receives nothing in return). The first moment of truth occurs after two bids have been made—say 10c and 20c. If no other bids are made, then the first bidder will simply lose 10c, but putting in a further bid for 30c opens up the possibility of winning 70c provided that the auction ends there. The most disturbing moment of truth occurs if the bidding reaches the one-dollar mark, and the second-highest bidder must decide whether to bid more than a dollar for the one-dollar payoff in the hope of minimizing what is by then an inevitable loss: for example, a bid of 105c will result in a loss of only 5 cents if the bidding stops there, but the other bidder may bid even higher for the same reason. Once the bidding passes the one-dollar threshold, the bidders are motivated to minimize losses rather than to maximize gains. When played with real bidders, the game is usually highly profitable for the auctioneer, and controlled experiments have shown that bidding almost invariably exceeds the value of the prize and sometimes goes as high as 20 dollars, causing much distress to the participants. *See also* [CONCORDE FALLACY](#).

Dollo's law *n.* The proposition that a structure or function lost in the course of evolution is never regained in its original form, and that in this sense evolution is irreversible. [Named after the Belgian palaeontologist Louis Antoine Marie Joseph Dollo (1857–1931) who propounded it in 1893]

dolls *n.* A street name for [*barbiturate](#) drugs in general.

Dolophine *n.* A proprietary name for the narcotic drug [*methadone](#). [Trademark]

dolorimeter *n.* A device for measuring [*pain](#) on a scale from mildly unpleasant to unbearable by means of heat applied to the skin. *See also* [ALGESIMETER](#), [COLD PRESSOR PAIN](#), [ISCHAEMIC PAIN](#). **dolorimetry** *n.* The measurement of pain sensations using a dolorimeter. **dolorimetric** *adj.* Of or relating to dolorimetry. [From Latin *dolor* pain, from *dolere* to grieve + *metron* a measure]

dolorology *n.* The study of the origins, nature, and management of pain. [From Latin *dolor* pain, from *dolere* to grieve + *logos* word, discourse, or reason]

*****ebook converter DEMO Watermarks*****

domain-referenced test *n.* A test that measures an **attribute* by estimating the proportion of a specified **content domain* of knowledge, skills, or abilities the respondent has acquired. *See also* CONTENT VALIDITY, DOMAIN SAMPLING. *Compare* CRITERION-REFERENCED TEST, NORM-REFERENCED TEST.

domain sampling *n.* In psychometrics, the process of choosing test items that are appropriate to the **content domain* of the test. *See also* CONTENT VALIDITY, DOMAIN-REFERENCED TEST.

domains of processing theory *n.* The proposition that the more **elaboration* is involved in information processing at a given level of processing, the better it will be remembered. *See also* ELABORATION, LEVELS OF PROCESSING.

dominance *See* DOMINANCE (GENETIC), DOMINANT ALTERNATIVE/STRATEGY.

dominance, eye *See* EYE DOMINANCE.

dominance (genetic) *n.* The property of being a **dominant gene*. If a **hybrid* (1) between two strains is on average exactly intermediate between the two on some measured **trait*, then there is zero dominance and complete **additivity*; if the average hybrid is somewhat more similar to one of the strains, then there is partial dominance by the corresponding **allele*; and if the average hybrid is exactly like one of the strains, then there is complete dominance by the corresponding allele. Also called *genetic dominance*. *See also* HETEROZYGOUS, OVERDOMINANCE, PENETRANCE. *Compare* EPISTASIS. **dominant** *adj.*

dominance hierarchy *n.* A more or less stable rank order of animals competing for resources such as food, territory, or mates, in which each individual is more likely than not to lose a fight or competition against any individual above it in the rank order and to win against any individual below it. Such hierarchies, usually established and maintained by aggressive **displays* (1) or **conventional fighting* rather than **escalated fighting*, have been found in both captive and wild populations of many species, though

they are not always perfectly linear (they tend to include non-linearities in which *A* dominates *B*, *B* dominates *C*, *C* dominates *A*), and the middle position of a hierarchy tends to be less stable and less linear than the top and bottom. See also [HOOK ORDER](#), [PECKING ORDER](#).

dominant alternative/strategy *n.* In decision theory and game theory, an alternative or [*strategy](#) (2) that, in every contingency that might arise, yields a [*payoff](#) at least as good as the payoff from any other available alternative or strategy and a strictly better payoff in at least one. A dominant strategy is *strongly dominant* if it yields a strictly better payoff than any other alternative or strategy in every possible contingency, otherwise it is *weakly dominant*. An alternative or strategy that is not dominated by any other is an *admissible alternative/strategy*, and in a decision problem in which a dominant strategy exists, another alternative or strategy that is not dominant is a *dominated alternative/strategy* or an *inadmissible alternative/strategy*. It is generally agreed that a [*rational](#) decision maker or player will never deliberately choose a dominated alternative or strategy, but this principle appears counter-intuitive to some people in puzzles such as [*Newcomb's problem](#) and the [*Prisoner's Dilemma game](#). Also called a *dominating alternative/strategy*. See also [PROSPECT THEORY](#), [SURE-THING PRINCIPLE](#).

dominant gene *n.* A [*gene](#) displaying [*dominance](#) (genetic) in the sense that if it is inherited from one parent it tends to produce the same [*phenotype](#) in the organism whether the corresponding [*allele](#) inherited from the other parent is the same or different. For example, the gene for brown eyes is dominant and the allele for blue eyes is recessive, so an individual who is heterozygous at this locus will have brown eyes, and only an individual with two blue-eyed alleles will be phenotypically blue-eyed. Also (less commonly but more accurately) called a *dominant allele*. See also [SEX-INFLUENCED TRAIT](#). Compare [RECESSIVE GENE](#).

dominator *n.* Anyone or anything that dominates; in visual perception a hypothetical [*ganglion cell](#) receiving inputs from a group of retinal [*cones](#) that respond to brightness, its responses being regulated by [*modulator](#) cells.

Donders' law *n.* The proposition that for any head position and any direction of [*gaze](#) the eye always assumes the same position, resulting in the

*****ebook converter DEMO Watermarks*****

fixation point being focused on the ***fovea**. [Named after the Dutch ophthalmologist Franciscus Cornelius Donders (1818–89) who formulated it in 1846]

Donders' method *n.* Another name for the ***subtraction method**. [Named after the Dutch ophthalmologist Franciscus Cornelius Donders (1818–89) who introduced it in 1868]

Don Juanism *n.* A non-technical name for ***satyriasis**. [Named after the legendary Spanish nobleman Don Juan, noted for his insatiable sexual appetite]

door-in-the-face technique *n.* A technique for eliciting ***compliance** by making a very large initial request, which the recipient is sure to turn down, followed by a smaller request. It was introduced in 1975 by the US social psychologist Robert B(eno) Cialdini (born 1945) and several colleagues who performed a field experiment in which students were approached on campus and requested to volunteer to spend two hours a week, for two or more years, as unpaid counsellors at a local juvenile detention centre. No one agreed to this, but when they were then asked whether they would be willing on just one occasion to escort a group of juveniles from the detention centre on a two-hour trip to the zoo, 50 per cent agreed, compared with 17 per cent in the control group who received only the second, smaller request. Also called the *rejection-then-retreat technique*. See also **FOOT-IN-THE-DOOR TECHNIQUE**, **LOWBALL TECHNIQUE**.

dopa *n.* An ***amino acid** found in certain fruits and vegetables, especially broad beans, derived by oxidation from ***tyrosine**, and abundantly present in the adrenal glands. It is a precursor of ***dopamine**, ***adrenalin** (epinephrine), and ***noradrenalin** (norepinephrine). The laevorotatory (left-handed) isomer ***L-dopa** is used to treat ***Parkinson's disease**. [A contraction of its chemical name *d(ihydr)o(xy)p(henyl)a(lanine)*]

dopamine *n.* A ***biogenic amine** and ***catecholamine** that is one of the ***neurotransmitter** substances significantly involved in central nervous system functioning, and that also functions as a ***hormone**. Its three main pathways within the brain are from the ***midbrain** to the ***basal ganglia** (see also *****ebook converter DEMO Watermarks*****)

PARKINSON'S DISEASE), from the midbrain to the **frontal lobes*, and from the midbrain to the **limbic system*, the mesolimbic dopamine pathway being strongly implicated in experiences of pleasure or reward and also responses to salient stimuli in general. Formula: C₈H₁₁NO₂. Also called *3-hydroxytyramine*. See also DOPAMINERGIC, L-DOPA, MESOLIMBIC SYSTEM, MESOTELENCEPHALIC PATHWAY, NUCLEUS ACCUMBENS, 6-HYDROXYDOPAMINE, VENTRAL TEGMENTAL AREA. **DA** abbrev. [From *dopa* + *amine*]

dopamine antagonist *n.* Any drug such as **olanzapine* or one of the **phenothiazines*, **butyrophenones*, or **dibenzodiazepines* that inhibits the action of **dopamine* by blocking the dopamine receptors. See also ANTAGONIST (3), NEUROLEPTIC (1). Compare DOPAMINOMIMETIC.

dopaminergic *adj.* Releasing **dopamine*; also activated by or responding to dopamine, this extended usage being widespread but consistently rejected by the English physiologist Sir Henry Hallet Dale (1875–1968), who coined the suffix *-ergic*, and by many other authorities. The term applies especially to nerve fibres, such as those of the **mesotelencephalic pathway* and the **mesolimbic system*, that use dopamine as their main or only **neurotransmitter*. Compare ADRENERGIC, CHOLINERGIC, GABAERGIC, NORADRENERGIC, SEROTONERGIC. [From *dopamine* + Greek *ergon* work + *-ikos* of, relating to, or resembling]

dopaminomimetic *adj. n.* (Of or relating to) a drug such as **apomorphine* or **bromocriptine* that reproduces some or all of the effects of **dopamine* by acting on dopamine receptors as an **agonist* (3). Compare DOPAMINE ANTAGONIST. [From *dopamine* + Greek *mimesis* imitation, from *mimeisthai* to imitate]

dope *n.* A term used for a variety of substances; more specifically, a street name for **cannabis*, **heroin*, or occasionally other drugs. [From Dutch *doop* a sauce, from *doopen* to dip]

Doppelgänger *n.* A **reduplicative paramnesia* in which a person believes that he or she has a double or replica. Compare CAPGRAS SYNDROME. [German: literally double-goer]

Doppler effect *n.* An increase in the **frequency* (1) of a sound wave, or of an electromagnetic wave such as light, emitted by a source moving towards the observer, or a decrease in frequency from a source moving away from the observer, a familiar example being the rise and fall in the pitch of an ambulance siren as it approaches and then recedes, the effect being the result of a compression or stretching out of waves due to the motion of the source relative to the observer. Also called the *Doppler shift*. See also [BIOSONAR](#). [Named after the Austrian physicist Christian Johann Doppler (1803–53) who formulated it in 1842]

Dora *n.* In **psychoanalysis*, the pseudonym of an 18-year-old woman treated by Sigmund Freud (1856–1939) in 1900 for **hysteria* and discussed in his famous case study in 1901/5 entitled ‘Fragment of an Analysis of a Case of Hysteria’ (*Standard Edition*, VII, pp. 7–122). See also [URETHRAL EROTISM](#).

Doriden *n.* A proprietary name for the depressant drug **glutethimide*. [Trademark]

dorsal *adj.* Of, relating to, or situated towards the spine, except in the human forebrain, where *dorsal* is synonymous with *superior* or *top*, as if humans walked on all fours and the cerebrum were not bent forwards 80 degrees relative to the brainstem to keep it horizontally oriented when standing upright. Compare [VENTRAL](#). [From Latin *dorsum* the back]

dorsal attention network *n.* Another name for the **task-positive network*. **DAN** *abbrev.*

dorsal column *n.* A column of nerve fibres, including the **fasciculus cuneatus* and **fasciculus gracilis*, lying dorsally in the posterior **funiculus* of each lateral half of the spinal cord, conveying sensations of touch and proprioception. It is one of two major routes by which afferent spinal nerve fibres carrying sensations of **somaesthesia* are transmitted to the thalamus. Compare [SPINOTHALAMIC TRACT](#).

dorsal root *n.* The short pathways into which a spinal nerve divides near

its point of attachment to the back of the spinal cord, containing afferent or sensory fibres transmitting nerve impulses to the spinal cord. *See also* [BELL–MAGENDIE LAW](#), [DORSAL ROOT GANGLION](#). *Compare* [VENTRAL ROOT](#).

dorsal root ganglion *n.* Any of a number of swellings containing sensory neuron cell bodies located outside the spinal cord close to the dorsal roots of the spinal nerves. **dorsal root ganglia** *pl.* [From Greek *ganglion* a cystic tumour]

dorsolateral prefrontal cortex *n.* An area (top, side) of the [*prefrontal cortex](#) strongly implicated in [*working memory](#). *See also* [TASK-POSITIVE NETWORK](#). **DLPFC** *abbrev.* [From Latin *dorsum* the back + *lateralis* of or relating to a side, from *lateris* a side + *prae* in front + *frons* the forehead + *alis* of or relating to + *cortex* bark or outer layer]

dorsomedial thalamus *n.* A nucleus in the [*thalamus](#) that transmits afferent nerve impulses to the [*prefrontal cortex](#). It usually degenerates in cases of [*Korsakoff's psychosis](#) associated with dense [*amnesia](#).

dose–response curve *n.* The functional relationship between the dosage of a drug and the size or strength of a physiological or behavioural response to it. It is almost invariably monotonically increasing, with larger dosages of the drug producing larger responses, at least within a certain range, but very low and/or very high dosages may not follow this pattern. For example, a low dosage of adrenalin (epinephrine) or acetylcholine produces a slight drop in blood pressure, whereas a high dosage produces a large increase in blood pressure, and a low dosage of caffeine may enhance typing skill whereas a larger dosage impairs it. Also called the *dose–response relation(ship)*. *See also* [HORMESIS](#), [INITIAL VALUES LAW](#).

Dostoevsky syndrome *n.* Another name for [*interictal syndrome](#). [Named after the Russian novelist Fyodor (Mikhailovich) Dostoevsky (1821–81) who is believed to have manifested the syndrome]

double-aspect theory *n.* A response to the [*mind–body problem](#) according to which mental and physical phenomena and processes are not two different kinds of things but rather different aspects of the same thing, *****ebook converter DEMO Watermarks*****

just as a cloud and a mist are the same thing seen from different vantage points, or the morning star and the evening star are the same thing (the planet Venus). See also [IDENTITY THEORY](#), [MATERIALISM](#), [MONISM](#).

double bind *n.* An inescapable dilemma involving conflicting demands that allow no right or satisfactory response. An influential theory of the aetiology of [*schizophrenia](#) was put forward by the English-born US anthropologist Gregory Bateson (1904–80) and several co-authors in an article in the journal *Behavioral Science* in 1956, according to which schizophrenia is caused by parenting styles that create double binds for children, as when a mother complains to her son for not giving her a kiss but recoils physically whenever the child does kiss her. This theory was enthusiastically adopted by the Scottish psychiatrist Ronald D(avid) Laing (1927–89) and others during the 1970s and 1980s, but empirical evidence has not been forthcoming in support of the theory, despite its attractiveness. See also [AVOIDANCE—AVOIDANCE CONFLICT](#), [SCHIZOPHRENOGENIC](#).

double-blind study *n.* A research design planned in such a way that, in order to control for [*experimenter effects](#) and the influence of [*demand characteristics](#), neither the experimenter nor the research participants or subjects know, until after the data have been collected, which experimental treatment has been applied to which individuals. This type of design is used, for example, in drug trials, often with the use of a [*placebo \(1\)](#), to avoid contamination of the results from biases and preconceptions on the part of the experimenter or the subjects. See also [RANDOMIZED CONTROLLED TRIAL](#), [RANDOMIZED DOUBLE-BLIND EXPERIMENT](#). Compare [OPEN STUDY](#), [SINGLE-BLIND STUDY](#).

double helix *n.* The molecular structure of [*DNA](#): two spirals or helixes coiled round a single axis with [*complementary base pairing](#) between the strands. It is also displayed by double-stranded [*RNA](#). It was discovered in 1953 by the US biologist James D(ewey) Watson (born 1928) and the English molecular biologist Francis H(arry) C(ompton) Crick (1916–2004), working with X-ray diffraction images produced by the biophysicist Rosalind E. Franklin (1920–58), although the Nobel prize awarded for this work in 1962 went to Watson, Crick, and Franklin's research supervisor at King's College London, the New Zealand-born biophysicist Maurice H(ugh)

*****ebook converter DEMO Watermarks*****

F(rederick) Wilkins (1916–2004). [From Greek *helix* a spiral]

double-opponent receptive field *n.* A type of **centre-surround receptive field* characteristic of neurons belonging to **blobs* in the **primary visual cortex* in which stimulation of the centre with light of a particular range of wavelengths elicits neural responses and stimulation with the complementary-colour wavelength inhibits responses, whereas stimulation of the immediately surrounding area elicits the reverse responses, the commonest type, involving red (*r*) and green (*g*), being a r^+g^- centre surrounded by a r^-g^+ ring.

double recessive *n.* Carrying two copies of a **recessive gene* and therefore manifesting the recessive **phenotype*.

double vision *n.* A non-technical name for **diplopia*.

Dover's powder *n.* A preparation containing **opium* that was formerly used as an **analgesic* (1), to induce sweating, and to control muscular spasms. [Named after the English physician Thomas Dover (1660–1742) who popularized its medicinal use]

doves *n.* A branded version of the stimulant designer drug **ecstasy* (2). [Identified by a symbol of a dove]

downers *n.* A common street name for central nervous system **depressant drugs* in general. *Compare* *UPPERS*.

Down's syndrome *n.* A disorder linked to a **chromosomal* abnormality resulting in a broadened and flattened face and nose, short, stubby fingers, skin folds at the edges of the eyes, **intellectual disability*, and the premature development of **Alzheimer's disease*, usually in middle age. Formerly called *mongolism*. *See also* *TRISOMY*. *Compare* *WILLIAMS SYNDROME*. **DS** *abbrev.* [Named after the English psychiatrist John Langdon Haydon Down (1828–96) who first described it]

d prime *n.* In **signal detection theory*, an index of the detectability or

discriminability of a signal, given by the difference between the means (or separation between the peaks) of the signal-plus-noise and the noise-only probability distributions, divided by the **standard deviation* of the noise-only distribution. *See also* *NOISE (2)*, *RECEIVER OPERATING CHARACTERISTIC*, *TWO-ALTERNATIVE FORCED-CHOICE TASK*. Symbol: *d'*.

Dracula hormone *n.* Another name for **melatonin*. [Named after the exclusively nocturnal vampire in Bram Stoker's novel *Dracula* (1897)]

drama therapy *n.* A form of **psychotherapy*, including **psychodrama*, in which clients or patients are encouraged to express their feelings and inner conflicts through acting them out in front of others. Sometimes written *dramatherapy*. *See also* *SOCIODRAMA*.

drapetomania *n.* A form of **mania (2)* supposedly affecting slaves in the 19th century, manifested by an uncontrollable impulse to wander or run away from their white masters, preventable by regular whipping. The disorder was first identified in a medical report that is often cited as a fanciful case of **psychologism*. *Compare* *DYSAESTHESIA AETHIOPIS*. [Coined by the US physician Samuel Adolphus Cartwright (1793–1863) in the *New Orleans Medical and Surgical Journal* in 1851, from Greek *drapeteusis* an escape + *mania* madness]

Dravet syndrome *n.* A severe form of childhood **epilepsy*, twice as common in boys than girls, that appears during the first year of life and is characterized by frequent **convulsions* or seizures, accompanied initially by fever and resistant to conventional **anticonvulsant* medication. It is a rare disorder, with an incidence of about 1 in 30,000, and is believed to be caused by a non-inherited genetic defect affecting **sodium channel* and **GABA* receptor functioning. Children with Dravet syndrome typically manifest poor language development, **ataxia*, **hyperactivity*, and difficulty relating to others. Also called *severe myoclonic epilepsy of infancy (SMEI)*. **DS** *abbrev.* [Named after the French neuropsychiatrist Charlotte Dravet (born 1936) who first described it in an article in the journal *La Vie Médicale* in 1978]

Draw-a-Man test *n.* A test of a child's intellectual ability based on a method of scoring the child's drawing of a human figure. It was introduced in
*****ebook converter DEMO Watermarks*****

1926 by the US psychologist Florence Laura Goodenough (1886–1959). Also called the *Goodenough Draw-a-Man test* or the *Goodenough test* . **DAM** abbrev.

Draw-a-Person test *n.* A **projective test* developed by the US psychologist Karen Alper Machover (1902–96) and discussed in her book *Personality Projection in the Drawing of the Human Figure* (1949). The respondent is handed a blank sheet of paper and a pencil and is asked simply to draw a person, then, on a separate sheet, to draw a person of opposite sex to the first, then finally to indicate the age, educational level, occupation, fears, and ambitions of each person drawn. The drawings are interpreted in terms of feature placement (size, body details, positioning, clothing, and so on), the assumptions being that people tend to project acceptable impulses on to the same-sex figure and unacceptable impulses on to the opposite-sex figure, and that various features have special significance: large eyelashes indicate hysteria; prominent eyes or ears indicate suspiciousness; large figures suggest **acting out*; small figures, lack of facial features, or dejected facial expressions indicate depression; lack of body periphery details indicate suicidal tendencies; dark shading indicates aggressive impulses; lack of physical details suggests psychosis or brain damage; and so on. Also called the *Machover Draw-a-Person Test* . **DAP** abbrev.

dream *n.* 1. The mental experiences, usually in the form of a sequence of ideas, images, and imagined events, often accompanied by emotions, occurring during **REM sleep*. See also *DREAM ANALYSIS*, *DREAMWORK*, *INTERPRETATION (2)*, *LUCID DREAM*, *NIGHTMARE*, *SLEEP TERRORS*. *vb.* 2. To experience a dream or dreams; hence, figuratively, to imagine or fantasize. [From Old English *dream* a song]

dream analysis *n.* A technique of **psychoanalysis* in which **interpretation (2)*, aided by **free association*, is applied to the **manifest content* of **dreams (1)* in an effort to reveal their **latent content* which, according to psychoanalytic theory, invariably consists of unconscious **wish fulfilments* that are potentially disturbing to the dreamer and would interrupt sleep if they were not disguised through symbolism. Sigmund Freud (1856–1939) propounded this theory in his book *The Interpretation of Dreams* (1900, *Standard Edition*, IV–V). However, in his later book *Beyond the*

*****ebook converter DEMO Watermarks*****

Pleasure Principle (1920), he raised doubts about the assumption that dreams are wish fulfilments and suggested that they may serve a more primitive function (*Standard Edition*, XVIII, pp. 31–3). See also [DREAMWORK](#), [OVERDETERMINATION](#), [WOLF MAN](#).

dream interpretation See [DREAM ANALYSIS](#).

dreamwork *n.* In [*psychoanalysis](#), a collective name for all the processes that transform the [*latent content](#) of a [*dream \(1\)](#) into its [*manifest content](#), concealing its meaning from the dreamer and thus allowing undisturbed sleep to occur. Sigmund Freud (1856–1939) identified the processes in his book *The Interpretation of Dreams* (1900, *Standard Edition*, IV–V) as [*condensation](#), [*displacement](#), [*secondary revision](#), and [*representability](#). See [DREAM ANALYSIS](#). See also [OVERDETERMINATION](#).

dressing apraxia See [APRAXIA](#).

drink-driving *n.* The crime of driving with excess alcohol in the blood. In the UK and many other jurisdictions, the drink-drive limit is 80mg/dl (.08g/dl), often rather misleadingly referred to as .08 per cent blood alcohol concentration. It equates to roughly four units of alcohol (half pints of beer, glasses of wine, or measures of spirits) taken by an average 150 lb (68 kg) person in quick succession, and this is also the figure recommended by the American College of Emergency Physicians ([ACEP](#)) as *per se* evidence of driving while impaired. In some countries, including several members of the European Union, the drink-drive limit is 50mg/dl, and in Sweden it is 20mg/dl. See also [ALCOHOL](#), [BLOOD ALCOHOL CONCENTRATION](#).

drive *n.* Any internal source of [*motivation](#) that impels an organism to pursue a goal or to satisfy a need, such as sex, hunger, or self-preservation. A *primary drive* is an innate physiological urge or need, such as hunger, thirst, or the need for sex; a *secondary drive* is an acquired non-physiological urge, such as the [*need](#) for achievement or the [*need for affiliation](#). More generally, a person's energy and determination to achieve something (*We're looking for a salesman with a lot of drive*). In [*psychoanalysis](#), another name for [*instinct \(3\)](#). See also [NEED \(2\)](#).

drive strength *n.* In **Hullian learning theory*, the strength of a primary **drive* operative during the formation of a habit. *D abbrev.*

drive theory of social facilitation *n.* A theory formulated in 1965 by the US-based Polish psychologist Robert B(oleslaw) Zajonc (1923–2008) to explain what had until then appeared to be contradictory findings on **audience effects* and **coaction effects*. According to the theory, when an individual performs a task, the effect of an audience or coactors is to increase the individual's **arousal* level, which in turn increases the emission of dominant responses in the individual's response repertoire. If the task is simple or well learned, then the dominant responses are likely to be mostly correct, and the audience or coaction effect results in an improvement or enhancement of performance; but if the task is difficult or inadequately learned, then wrong responses are likely to predominate and the effect is an impairment of performance. *See also* EVALUATION APPREHENSION, SOCIAL FACILITATION.

droperidol *n.* A **neuroleptic* (1) and **sedative* drug belonging to the group of **butyrophenones*, often prescribed in combination with a narcotic drug such as **fentanyl*. *Compare* HALOPERIDOL.

drosophila *n.* Any fruit fly of the genus *Drosophila*, especially *D. melanogaster*, widely used in research in genetics because it breeds quickly and prolifically, is easy to maintain, displays scores of hereditary characteristics that can be observed without difficulty, and has relatively simple genetic material comprising only four pairs of chromosomes per cell. [From Greek *drosos* dew or moisture + *phileein* to love]

drostanalone *n.* Drostanolone propionate, a fast-acting, orally administered **anabolic androgenic steroid* used by athletes to build muscle strength without increasing weight, and occasionally used in the treatment of breast cancer. Formula: C₂₃H₃₆O₃.

drowning *See* INSTINCTIVE DROWNING RESPONSE.

Dr Strangelove syndrome *n.* Another name for the **anarchic hand*.

*****ebook converter DEMO Watermarks*****

[Named after the eponymous Doctor Strangelove in Stanley Kubrick's 1964 film, *Dr Strangelove or: How I Learned to Stop Worrying and Love the Bomb*, who struggles continually to prevent his right hand from giving Nazi salutes]

drug *n.* Any chemical substance that can affect the structure or function of a living body, often used as a medicine, or in making a medicine, or taken for its pleasurable or satisfying effects. *See also* [DOSE—RESPONSE CURVE](#), [DRUG ACTION](#), [DRUG EFFECT](#), [HORMESIS](#), [PSYCHOTROPIC](#), [SUBSTANCE ABUSE](#), [SUBSTANCE-RELATED AND ADDICTIVE DISORDERS](#). [From French *drogue* a drug, perhaps from Middle Dutch *droge* a dry barrel]

drug abuse *n.* Another name for [*substance abuse](#). Preferred usage *drug misuse*. *See also* [ADDICTION](#), [DEPENDENCE \(2\)](#), [SUBSTANCE DEPENDENCE](#), [SUBSTANCE-INDUCED DISORDERS](#), [SUBSTANCE-RELATED AND ADDICTIVE DISORDERS](#), [SUBSTANCE USE DISORDERS](#).

drug action *n.* The interaction of a [*drug](#) with components of living tissues, such as [*neuroreceptors](#), and the biochemical consequences of this interaction, distinguished in careful usage from the [*drug](#) effect—the physiological and psychological consequences of the drug's action. *See also* [PSYCHOPHARMACOLOGY](#). *Compare* [PHARMACODYNAMICS](#).

drug addiction *See* [ADDICTION](#).

drug-dependent memory *n.* A form of [*state-dependent memory](#) associated with states induced by [*psychotropic](#) drugs during learning and recall.

drug effect *n.* The physiological and psychological effects of a [*drug](#), distinguished in careful usage from the biochemical [*drug action](#). *See also* [PSYCHOTROPIC](#). **drug tolerance** *See* [TOLERANCE \(3\)](#).

DSM *abbrev.* The *Diagnostic and Statistical Manual of Mental Disorders* of the American Psychiatric Association, widely regarded as the most authoritative reference work on the definition and classification of [*mental](#)

disorders. The first edition appeared in 1952, the second in 1968, the third (DSM-III) in 1980, a revision of the third in 1987, the fourth (DSM-IV) in 1994, and the 5th (DSM-5) in 2013. *Compare* [ICD](#).

dual-code theory *n.* 1. A theory of [*imagery](#) according to which imaginative cognition involves the activity of two functionally independent subsystems: a non-verbal imagery system specialized to handle objects and events, and a verbal imagery system specialized to perceive and generate language. *See also* [DUAL-PROCESS MODEL](#). 2. A theory according to which physical objects and events are stored in memory in the form of both visual images and verbal representations, whereas abstract information is represented only verbally. **DCT** *abbrev.*

dualism *n.* The state of being twofold or double, especially a philosophical doctrine regarding the [*mind–body problem](#) according to which reality comprises two realms of existence, usually identified as mind and matter, or two types of entities, mental and physical. *See also* [CARTESIAN DUALISM](#), [CATEGORY MISTAKE](#), [EPIPHENOMENALISM](#), [INTERACTIONISM \(1\)](#), [PSYCHOPHYSICAL PARALLELISM](#). *Compare* [DOUBLE-ASPECT THEORY](#), [IDENTITY THEORY](#), [MONISM](#). [From Latin *dualis* twofold, from *duo* two]

dual personality *n.* Multiple personality disorder involving two separate personalities. *See* [DISSOCIATIVE IDENTITY DISORDER](#).

dual-process model *n.* Any of a number of theories of social information processing that emerged in the 1980s and 1990s to explain social [*attitudes \(1\)](#), [*stereotypes](#), [*person perception](#), [*memory](#), and [*decision making](#), although the roots of the idea can be traced at least as far back as the *Principles of Psychology* (1890, p. 451) of the US psychologist William James (1842–1910). According to these theories, two qualitatively different mechanisms of information processing operate in forming judgements, solving problems, or making decisions, the first being a quick and easy processing mode based on effort-conserving [*heuristics](#), and the second being a slow and more difficult rule-based processing mode based on effort-consuming systematic reasoning. The first type of process is often unconscious and tends to involve [*automatic processing](#), whereas the second is invariably conscious and usually involves [*controlled processing](#), and in

*****ebook converter DEMO Watermarks*****

some domains of application the first is affective and the second cognitive. The most influential dual-process theory is the [*elaboration likelihood model](#). Also called *dual-process theory*. See also [BELIEF-BIAS EFFECT](#), [COGNITIVE ECONOMY](#), [COGNITIVE MISER](#), [HODOLOGICAL SPACE](#), [PRINCIPLE OF LEAST EFFORT](#), [SYSTEM 1 THINKING](#).

dual-task performance *n.* An experimental paradigm in which participants or subjects perform two tasks simultaneously under different instructions, such as counting backwards from 100 while responding with key-presses to signals presented through headphones. It is widely used in research into [*attention](#).

Duchenne muscular dystrophy *n.* The commonest form of [*muscular dystrophy](#), characterized by progressive wasting of leg and pelvis muscles, usually in boys under 10 years old, caused by an [*X-linked *recessive gene](#). Also called *Duchenne dystrophy*. **DMD** abbrev. [Named after the French neurologist Guillaume Benjamin Amand Duchenne (1806–75) who was the first to describe it in 1858]

Duchenne smile *n.* A [*facial expression](#) involving contractions of the muscles at the outer ends of the mouth (*zygomatic major* muscles), raising the corners of the mouth, and the muscles encircling the eyes (*orbicularis oculi* muscles), raising the cheeks, narrowing the eye apertures, and producing crows' feet wrinkles at the outer corners of the eyes. In contrast, a non-Duchenne smile involves only the *zygomatic major* muscles. A Duchenne smile is considered to be indicative of spontaneous and genuine happy emotion, rather than a mere [*affect display](#), because the *orbicularis oculi* muscles are more difficult to control voluntarily. [Named after the French neurologist Guillaume Benjamin Amand Duchenne (1806–75) who discussed it in his book *The Mechanism of Human Facial Expression* (1862)]

duck-rabbit *n.* An early [*ambiguous figure](#), first published by the Polish-born US psychologist Joseph Jastrow (1863–1944) in his book *Fact and Fable in Psychology* (1900), and later discussed by the Austrian-born British philosopher Ludwig (Josef Johann) Wittgenstein (1889–1951) in his *Philosophical Investigations* (1953, II.xi, pp. 194–206). The figure can be seen as a duck or a rabbit (see [illustration](#)), and Wittgenstein argued that

*****ebook converter DEMO Watermarks*****

recognition of what the figure represents comes only at the moment of change from one to the other and is not characteristic of the perception in general: 'It would have made as little sense for me to say "Now I am seeing it as ..." as to say at the sight of a knife and fork "Now I am seeing this as a knife and fork". This expression would not be understood.' (p. 195)

Duck-rabbit. A much-discussed reversible figure that appears as a duck facing left or a rabbit facing right.

ductless gland *n.* Another name for an **endocrine gland*.

duetting *n.* A series of bird calls each followed by a rapid antiphonal response from a mating partner, functioning as a recognition and bonding signal. It is often mistaken for the song of a single bird, as by William Shakespeare (1564–1616) in *Love's Labour Lost* (V.ii.903) when he attributed *tu-whit, tu-who* to a single staring owl.

dulosis *n.* A practice in some species of ants of forcing members of a different species to work for the colony as slaves. [From Greek *doulos* enslavement, from *doulos* a slave + *-osis* indicating a process or state]

Duncan's multiple range test *n.* In statistics, a method of **multiple comparisons* in which the group means are ranked from smallest to largest, and then the number of steps that two means are apart in this ranking is used to compute a range statistic for each comparison. Compare *BONFERRONI CORRECTION*, *LEAST-SIGNIFICANT DIFFERENCE TEST*, *NEWMAN-KEULS TEST*, *SCHEFFÉ TEST*, *TUKEY-HSD TEST*. [Named after the Australian-born US statistician

David Beattie Duncan (1916–2006) who developed it in 1955]

duodenum *n.* The first section of the small intestine, into which the pancreas and gall bladder secrete digestive enzymes. [Shortened from Latin *intestinum duodenum digitorum* intestine of twelve fingers' length]

duplexity function *n.* The dual curve of **dark adaptation* resulting from the different adaptation rates of **photopic* and **scotopic* vision. Also called the *duplicity function* .

duplexity theory *n.* The conceptualization of the **retina* as containing two different types of photoreceptors, now identified as **rods* and **cones*, mediating **scotopic* and **photopic* vision respectively. Also called *duplicity theory* .

duplicity function *n.* Another name for the **duplexity function*.

duplicity theory *n.* Another name for the **duplexity theory*.

dura mater *n.* The outermost and toughest of the three **meninges* covering the brain and spinal cord, attached tightly to the arachnoid membrane. Often shortened to *dura*. Also called the *pachymeninx* . Compare *ARACHNOID MEMBRANE*, *PIA MATER*. [From Latin *dura mater* hard mother, a literal translation of its Arabic name *umm al-jafiyah* in accordance with the Arabic usage of *mother* to indicate a relation between things]

duration estimation paradox *n.* A tendency for people to make more accurate prospective time estimations, that is, signalling when they believe that a specified period has elapsed, than retrospective time estimations, that is, estimating at the end of a period how long they believe it to have lasted.

Dutch book *n.* A **money pump* in which a person holds intransitive or **cyclic preferences*, for example, preferring *x* to *y*, *y* to *z*, and *z* to *x*. Such a person is therefore willing to pay to have any of them exchanged for one that is preferred to it, and is then willing to pay to have that one exchanged for

another, and so on indefinitely. The property that differentiates a Dutch book from any other money pump is that the price for each exchange is lowered until the person is willing to pay for it, although the term is often used as a synonym for a money pump. [Probably named after a Dutch auction in which the price of a lot is reduced by steps until a buyer comes forward]

dyad *n.* A two-person group; more generally, an entity consisting of two elements or parts. **dyadic** *adj.* Of or relating to a dyad or dyads. [From Latin *dyas* a dyad, from Greek *duo* two]

dynamic *adj.* Of, relating to, or consisting of forces that produce movement or change. In **psychoanalysis*, of or relating to **dynamic psychology*. [From Greek *dynamikos* powerful, from *dynamis* power, from *dynasthai* to be able]

dynamic aphasia *n.* A name given by the Russian neuropsychologist Alexandr Romanovich Luria (1902–77) to a variant of non-fluent aphasia (see *APHASIA*) characterized by almost total failure to initiate speech, and responses to questions that are sparse and laconic and given only after long pauses, but no impairment in ability to name objects, to read, and to repeat sentences.

dynamic assessment *n.* An approach to assessment following the same basic principles as **dynamic testing*, including not only tests but also other forms of assessment, such as projects, essays, and performances.

dynamic labyrinth *n.* The **semicircular canals* and their **cristae*, operating the **vestibulo-ocular reflex* to keep **gaze* fixated on target when the head is moved.

dynamic memory span *n.* The number of items that a person can remember when presented with a continuous sequence of items, such as words, numbers, or letters, the sequence being halted without warning and the person asked to recall as many items as possible, working back from the most recent items. The usual span is only approximately three items, compared to a **memory span* of approximately seven items when the sequence is confined to that length. See also *SHORT-TERM MEMORY*.

*****ebook converter DEMO Watermarks*****

dynamic psychology *n.* A term loosely applied to all forms of [*psychoanalysis](#), alluding to the [*dynamic](#) interplay of psychological process and phenomena arising from [*instincts](#) (3) that facilitate, inhibit, and combine with one another, or produce [*compromise formations](#). In 1909/10, Sigmund Freud (1856–1939) distinguished his theory of the split between [*consciousness](#) and the [*unconscious](#) (2) from static theories that had gone before: ‘We explain it dynamically, from the conflict of opposing mental forces, and recognize it as the outcome of an active struggling on the part of the two psychical groupings against each other’ (‘Five Lectures on Psycho-Analysis’, *Standard Edition*, XI, pp. 9–55, at pp. 25–6). *See also* [DEPTH INTERVIEW](#), [DEPTH PSYCHOLOGY](#), [METAPSYCHOLOGY](#), [MOTIVATIONAL RESEARCH](#).

dynamic testing *n.* An approach to [*psychometrics](#) that attempts to measure not only the products or processes of learning but also the potential to learn. It focuses on the difference between latent capacity and developed abilities, or the extent to which developed abilities reflect latent capacity, and it seeks to quantify the psychological processes involved in learning and change, rather than the products of such processes, by presenting sequences of progressively more challenging tasks and providing continuous feedback on performance in an atmosphere of teaching and helping that guides the testee towards the right answer. Credit for introducing the concept is usually assigned to the Russian psychologist Lev Semyonovich Vygotsky (1896–1934) who discussed it in *Thought and Language* (1934). Also called *dynamic assessment*. *See also* [LEARNING POTENTIAL ASSESSMENT DEVICE](#), [LERNTEST](#), [ZONE OF PROXIMAL DEVELOPMENT](#). *Compare* [STATIC ASSESSMENT ENVIRONMENT](#).

dynamic touch *n.* The ability to discern certain physical properties of an object by moving it around, an example being the ability of people to judge the length of a rod quite accurately by grasping one end of it and swinging it around, even in the dark or with the hand and the rod screened from vision. *See also* [TOUCH](#). *Compare* [CUTANEOUS SENSE](#), [HAPTIC TOUCH](#).

dynamic visual acuity *n.* The keenness or sharpness of perception of a moving target, related to skills such as driving. *See also* [ACUITY](#), [VISUAL ACUITY](#).

dynamometer *n.* Any of a number of different devices for measuring muscular strength or effort. **dynamometry** *n.* The measurement of power or force. [From Greek *dynamis* power + *metron* measure]

dynorphin *n.* One of a number of *endogenous opioid peptides that are found in the central nervous system and that have a strong affinity for *opiate receptors. Compare BETA-ENDORPHIN, ENDORPHIN, ENKEPHALIN. [From Greek *dyn(amis)* power + English (*end*)orphin]

dysacusia *n.* A condition characterized by pain or discomfort from sounds or noises, usually resulting from damage to the *cochlea. Also spelt *dysacousia* . Also called *dysacusis*, *dysacusmia* , or *dysacousis* . **dysacusic** *adj.* [From Greek *dys-* bad or abnormal + *akousis* hearing, from *akouein* to hear + *-ia* indicating a condition or quality]

dysaesthesia *n.* A loss of feeling, usually experienced as numbness or *paraesthesia, often resulting from spinal injury and experienced below the level of the lesion. US *dysesthesia*. [From Greek *dys-* bad or abnormal + *aisthesis* sensation + *-ia* indicating a condition or quality]

dysaesthesia aethiopsis *n.* A mental disorder supposedly peculiar to black slaves and endemic among them in North America in the mid nineteenth century, manifested by laziness and insensibility to pain when whipped. The article in which it was first reported is often cited as a fanciful example of *psychologism. US *dysesthesia aethiopsis*. Compare DRAPETOMANIA. [Coined by the US physician Samuel Adolphus Cartwright (1793–1863) in the *New Orleans Medical and Surgical Journal* in 1851, from *Aethiop* an archaic word for a black person]

dysarthria *n.* Imperfect articulation of speech caused by paralysis, weakness, or involuntary movements of the muscles involved in speech production. [From Greek *dys-* bad or abnormal + *arthron* articulation + *-ia* indicating a condition or quality]

dysbasia *n.* Partial *abasia; impairment in the ability to walk. [From Greek *dys-* bad or abnormal + *basis* a step, from *bainein* to step or go + *-ia* indicating a condition or quality]

indicating a condition or quality]

dysbulia *n.* Mild **aboulia*. Also spelt *dysboulia* .

dyscalculia *n.* Impairment in ability to do arithmetic. See also [SPECIFIC DISORDER OF ARITHMETIC SKILLS](#), [SPECIFIC LEARNING DISORDER](#). Compare [ACALCULIA](#). [From Greek *dys-* bad or abnormal + Latin *calcularē* to count, from *calculus* a stone, diminutive of *calx* limestone + *-ia* indicating a condition or quality]

dyschiria *n.* Difficulty in distinguishing left from right. [From Greek *dys-* bad or abnormal + *cheir* a hand + *-ia* indicating a condition or quality]

dyschromatopsia *n.* Any acquired loss of colour vision. See [COLOUR-BLINDNESS](#). See also [ACHROMATOPSIA](#), [PARACHROMATOPSIA](#). [From Greek *dys-* bad or abnormal + *chroma* colour + *ops* an eye + *-ia* indicating a condition or quality]

dysdiadochokinesia *n.* Impaired ability to perform rapidly alternating movements, such as rapid rhythmic tapping of the fingers. Also called *dysdiadochokinesis* . Compare [ADIADOCHOKINESIA](#). [From Greek *dys-* bad or abnormal + *diadochos* working in turn + *kinesis* movement + *-ia* indicating a condition or quality]

dysesthesia See [DYSAESTHESIA](#).

dysexecutive syndrome *n.* An impairment in ability to plan and organize purposive behaviour, caused by lesions in the **frontal lobes* of the brain.

dysfunction *n.* Abnormality or disturbance of function. **dysfunctional** *adj.* [From Greek *dys-* bad or abnormal + Latin *functio* to perform + *-ion* indicating an action, process, or state]

dysgenic *adj.* Liable to lead to a degeneration or diminution in the quality or fitness of a group of interbreeding organisms. Compare [EUGENIC](#). [From

Greek *dys-* bad or abnormal + *genein* to produce + *-ikos* of, relating to, or resembling]

dysgeusia *n.* Impaired or abnormal sense of taste. See [AGEUSIA](#), [CACOGEUSIA](#), [HYPERGEUSIA](#), [HYPOGEUSIA](#), [PARAGEUSIA](#), [TASTE BLINDNESS](#). [From Greek *dys-* bad or abnormal + *geusis* taste + *-ia* indicating a condition or quality]

dysgraphia *n.* Inability to write correctly, resulting from a neurological or other disorder. See also [AGRAPHIA](#). [From Greek *dys-* bad or abnormal + *graphein* to write + *-ia* indicating a condition or quality]

dyskinesia *n.* Involuntary repetitive bodily movements. See also [TARDIVE DYSKINESIA](#). **dyskinetic** *adj.* [From Greek *dys-* bad or abnormal + *kinesis* movement + *-ia* indicating a condition or quality]

dyskinesia, tardive See [TARDIVE DYSKINESIA](#).

dyslalia *n.* Defective speech, characteristic of people with [*aphasia](#). [From Greek *dys-* bad or abnormal + *lalia* speech]

dyslexia *n.* Impairment in ability to read, not resulting from low [*intelligence](#). It was first described in 1877 by the German physician Adolf Kussmaul (1822–1902), who coined the term *word blindness* to refer to it. The first detailed case report was published by the Irish-born general practitioner William Pringle Morgan (1861–1934) in the *British Medical Journal* in 1896, where he called it *congenital word blindness*. See also [ACQUIRED DYSLEXIA](#), [ALEXIA](#), [ATTENTIONAL DYSLEXIA](#), [CATALEXIA](#), [CENTRAL DYSLEXIAS](#), [COGNITIVE NEUROPSYCHOLOGY](#), [DEEP DYSLEXIA](#), [DEVELOPMENTAL DYSLEXIA](#), [NEGLECT DYSLEXIA](#), [PHONOLOGICAL DYSLEXIA](#), [READING DISORDER](#), [SPECIFIC LEARNING DISORDER](#), [SPELLING DYSLEXIA](#), [STREPHOSYMBOLIA](#), [SURFACE DYSLEXIA](#), [VISUAL WORD-FORM DYSLEXIA](#). Also called *alexia*, *hypolexia*, and *word blindness*. Compare [HYPERLEXIA](#). **dyslexic** *adj.* [First used in its German form *Dyslexie* in 1883 by the German ophthalmologist Rudolf Berlin (1833–97) in the journal *Medicinisches Correspondenz-Blatt des Württembergischen Ärztlichen Vereins*, from Greek *dys-* bad or abnormal + *lexis* a word + *-ia* indicating a condition or quality]

*****ebook converter DEMO Watermarks*****

dysmelodia *n.* Impaired ability to recognize or reproduce tunes. Also called *dysmusia* . Compare [AMUSIA](#), [ASONIA](#). [From Greek *dys-* bad or abnormal + *meloidia* a tune]

dysmenorrhoea *n.* Painful or difficult menstruation. US *dysmenorrhea*. [From Greek *dys-* bad or abnormal + *men* a month + *rhoia* a flow]

dysmetria *n.* Impaired ability to judge distances associated with body movements, typically underestimating or overestimating the amount of muscular effort required to make a voluntary movement, usually caused by a lesion in the [*cerebellum](#). [From Greek *dys-* bad or abnormal + *metron* a measure + *-ia* indicating a condition or quality]

dysmnesia *n.* A memory disorder characterized by an inability to learn simple new skills in spite of an ability to perform complex skills learnt before the onset of the disorder. Also called *dysmnesic syndrome* . [From Greek *dys-* bad or abnormal + *mnasthai* to remember + *-ia* indicating a condition or quality]

dysmorphophobia *n.* 1. A pathological fear of a personal physical defect or deformity. 2. Another name for [*body dysmorphic disorder](#). [From Greek *dys-* bad or abnormal + *morphe* form + *phobos* fear + *-ia* indicating a condition or quality]

dysmusia *n.* Impaired ability to recognize or reproduce tunes. Also called *dysmelodia* . Compare [AMUSIA](#), [ASONIA](#). [From Greek *dys-* bad or abnormal + *mousika* (*teckne*) musical art, from *mousa* a muse]

dysorexia *n.* Any abnormality or disorder of appetite. [From Greek *dys-* bad or abnormal + *orexis* appetite + *-ia* indicating a condition or quality]

dysosmia *n.* Impaired or abnormal sense of smell. See [ANOSMIA](#), [CACOSMIA](#), [HYPEROSMIA](#), [HYPOSMIA](#), [PAROSMIA](#), [SPECIFIC ANOSMIA](#). [From Greek *dys-* bad or abnormal + *osme* a smell + *-ia* indicating a condition or quality]

dyspareunia *n.* A [*sexual dysfunction](#) in both women and men,

characterized by recurrent or persistent genital pain associated with sexual intercourse, causing significant distress or problems of interpersonal interaction. It is not diagnosed as such if it is attributable to a drug or a **general medical condition*. Compare *VAGINISMUS*. [From Greek *dys-* bad or abnormal + *para* beside + *eune* a bed + *-ia* indicating a condition or quality]

dysphagia *n.* Difficulty in swallowing. Compare *ANOREXIA*, *APHAGIA*. [From Greek *dys-* bad or abnormal + *phagein* to consume + *-ia* indicating a condition or quality]

dysphasia *n.* Another name for **aphasia*. [From Greek *dys-* bad or abnormal + *pheme* speech + *-ia* indicating a condition or quality]

dysphemia *n.* Impaired ability to speak; Broca's aphasia (see *APHASIA*). [From Greek *dys-* bad or abnormal + *pheme* speech + *-ia* indicating a condition or quality]

dysphemism *n.* A usage of language in which an unpleasant or derogatory word or expression is substituted for a neutral one, as in *jackals and hyenas of the press for journalists*, or *self-abuse for masturbation*. Compare *EUPHEMISM*. [From Greek *dys-* ill, bad, or abnormal + *pheme* speech, from *phanai* to speak]

dysphonia *n.* Inability to speak normally, resulting from impairment of voice quality, such as hoarseness or strain of the vocal cords. Compare *APHASIA*. [From Greek *dys-* bad or abnormal + *phone* voice or sound + *-ia* indicating a condition or quality]

dysphoria *n.* A feeling of uneasiness, discomfort, anxiety, or anguish. [From Greek *dys-* bad or abnormal + *pherein* to bear + *-ia* indicating a condition or quality]

dysphoric mood *n.* Any disagreeable or unpleasant **mood* (1), such as sadness or anxiety.

dysplastic body type *n.* A misshapen and ugly **somatotype* believed

by the German psychiatrist Ernst Kretschmer (1888–1964) and his followers to be prone to **schizophrenia*. See also [KRETSCHMER CONSTITUTIONAL TYPE](#). Compare [ASTHENIC BODY TYPE](#), [ATHLETIC BODY TYPE](#), [PYKNIC BODY TYPE](#). [From Greek *dys-* bad or abnormal + *plastikos* mouldable, from *plassein* to form + *-itikos* resembling or marked by]

dyspnoea *n.* Difficult or abnormal breathing. US *dyspnea*. [From Greek *dys-* bad or abnormal + *pnoe* breathing]

dyspraxia *n.* An impairment in ability to perform deliberate movements, not caused by any defect in sensory or motor functions. See also [DEVELOPMENTAL COORDINATION DISORDER](#). Compare [APRAXIA](#). [From Greek *dys-* bad or abnormal, *praxis* a deed or action, from *prassein* to do + *-ia* indicating a condition or quality]

dysprosody *n.* A pathological deficit in the ability to generate appropriate **prosody* in speech. Also called *expressive dysprosody*. Compare [APROSODIA](#). **dysprosodic** *adj.* [From Greek *dys-* bad or abnormal, *prosoidia* a song set to music, from *pros* towards, *oide* a song]

dyssocial personality See [DISSOCIAL PERSONALITY DISORDER](#).

dyssomnias *n.* Disorders of **sleep* with **insomnia* or **hypersomnia* as the major symptom, causing clinically significant distress or impairment in social, occupational, or other important areas of functioning. See [BREATHING-RELATED SLEEP DISORDERS](#), [CIRCADIAN RHYTHM SLEEP–WAKE DISORDERS](#), [DELAYED SLEEP-PHASE SYNDROME](#), [HYPERSONMIA](#), [INSOMNIA](#), [NARCOLEPSY](#), [PRIMARY HYPERSONMIA](#), [SLEEP APNOEA](#), [SLEEP–WAKE DISORDERS](#). Also called *disorders of initiating and maintaining sleep* ([DIMS](#)). See also [ACTIGRAPHY](#), [CATAPLEXY \(1\)](#). Compare [PARASOMNIAS](#), [PSEUDOINSOMNIA](#). [From Greek *dys-* bad or abnormal + Latin *somnus* sleep + *-ia* indicating a condition or quality]

dysstasia *n.* Impairment in ability to stand upright. [From Greek *dys-* bad or abnormal + *stasis* a standing + *-ia* indicating a condition or quality]

dyssymbiosis *n.* A pathological mother-child relationship in which the

child manipulates the mother with neurotic or psychotic mechanisms. [From Greek *dys-* bad or abnormal + *syn-* together + *bios* life + *-osis* indicating a process or state]

dyssynergia *n.* Impaired muscular coordination resulting from a **neurological* disorder. [From Greek *dys-* bad or abnormal + *synergia* cooperation, from *syn-* together + *ergein* to work + *-ia* indicating a condition or quality]

dystaxia *n.* Partial **ataxia*. [From Greek *dys-* bad or abnormal + *taxis* order + *-ia* indicating a condition or quality]

dysthymia *n.* 1. A mild but chronic depressive **mood* (1) state, not severe enough to lead to a diagnosis of **depression* or **dysthymic disorder*. In **DSM-5* it is included under **persistent depressive disorder*. 2. A term used by the German-born British psychologist Hans J(ürgen) Eysenck (1916–97) for people scoring high on measures of neuroticism and introversion and manifesting traits of **anxiety*, **depression*, and **compulsions*. [From Greek *dys-* bad or abnormal + *thymos* spirit + *-ia* indicating a condition or quality]

dysthymic disorder *n.* A form of **depression* (included in the **DSM-5* classification) with similar signs and symptoms to **major depressive disorder* or **persistent depressive disorder* but considered less severe and more chronic, with the **major depressive episodes* being less discrete and the depression less severe and more persistent than in major depressive disorder. Also called *depressive neurosis*, *minor depressive disorder*, or *neurotic depression*. See also ANTIDEPRESSANT, BORNA DISEASE VIRUS, COGNITIVE THERAPY, DYSTHYMIA, INOSITOL. [From Greek *dys-* bad or abnormal + *thymos* spirit + *-ikos* of, relating to, or resembling]

dystonia *n.* A neurological condition associated with **neuroleptic* (1) medication or damage to the **basal ganglia*, characterized by disordered muscle **tonus* and usually spasm of the muscles of the trunk, shoulders, and neck, causing unnatural body postures. See also YIPS. **dystonic** *adj.* [From Greek *dys-* bad or abnormal + *tonos* tension, from *teinein* to stretch + *-ia* indicating a condition or quality]

dystopia *n.* An imaginary world or place where everything is as bad as possible. [Coined by the English philosopher John Stuart Mill (1806–73) from Greek *dys-* bad or abnormal + English *utopia*]

dystrophy *n.* **1.** Any abnormality caused by deficient nutrition; a term often applied to muscle wasting. **2.** A shortened name for ***muscular dystrophy**. [From Greek *dys-* bad or abnormal + *trophe* nourishment]

dysuria *n.* Painful or difficult urination. [From Greek *dys-* bad or abnormal + *ouron* urine + *-ia* indicating a condition or quality]

ear *n.* The organ of hearing and equilibrium, which in vertebrates is usually divided into the sound-collecting ***outer ear** separated by a ***tympanic membrane** from the sound-transmitting ***middle ear**, separated in turn by a ***round window** and an ***oval window** from the ***inner ear** in which are situated the ***vestibular system** and its ***semicircular canals** containing sensory receptors that govern sensations of balance, orientation, and acceleration, and the ***cochlea** with its auditory ***organ of Corti** (see [illustration](#)).

Ear. Main structures of the mammalian ear.

eardrum *n.* A non-technical name for the ***tympanic membrane**.

early oral phase *n.* The first of the two phases of the **oral stage*, according to a subdivision suggested in 1924 by the German psychoanalyst Karl Abraham (1877–1925) in his book *Versuch einer Entwicklungsgeschichte der Libido* (A Study of the Developmental History of the Libido). It is characterized by sucking, in contrast to the second **oral sadistic phase*, which is characterized by biting. Also called the *oral-incorporative phase*.

ear-minded *adj.* Having a marked preference or ability to think in sounds or to carry out mental operations by auditory images. **ear-mindedness** *n.*

eating disorders *n.* A class of **mental disorders* characterized by disturbances or problems associated with feeding or eating. See *ANOREXIA NERVOSA*, *AVOIDANT/RESTRICTIVE FOOD INTAKE DISORDER*, *BINGE-EATING DISORDER*, *BULIMIA NERVOSA*, *PICA*, *RUMINATION DISORDER*. See also *ACTIGRAPHY*.

Ebbinghaus curve *n.* A graph depicting the rate of forgetting of information. The amount of learned material—originally the number of **nonsense syllables*—remembered is plotted on the vertical axis against time on the horizontal axis. [Named after the German psychologist Hermann von Ebbinghaus (1850–1909) who introduced it in his book *Über das Gedächtnis* (On Memory) in 1885]

Ebbinghaus illusion *n.* A visual illusion in which a circle appears larger when surrounded by smaller circles than when surrounded by larger circles (see *illustration*). Also called the *Titchener circles* or *Titchener illusion*. [Named after the German psychologist Hermann von Ebbinghaus (1850–1909) who published a version of it in 1902, although the English psychologist Edward Bradford Titchener (1867–1927) had already discovered and published it in 1898]

Ebbinghaus illusion. The circles at the centre of each cluster are identical.

Ebonics *n.* Another name for **Black English Vernacular*. [A **blend* of *ebony*, from Latin *ebenus* ebony, from Greek *ebenos* ebony, + *phonics* the science of spoken sounds, from Greek *phonikos* of or relating to speech, from *phone* a voice or sound + *-ikos* of, relating to, or resembling]

eccentric *adj.* **1.** Positioned off centre.**2.** Of or relating to a retinal image cast by a visual stimulus off the centre of the **fovea*.**3.** Odd or unconventional. **eccentricity** *n.* [From Greek *ek* out of + *kentron* centre]

eccentric chessboard figure *n.* Another name for the **Münsterberg illusion*. [From German *verschrobene Schachbrettfigur*, Münsterberg's own name for it]

eccentric projection *n.* The **eccentric* (1) localization of a sensation

*****ebook converter DEMO Watermarks*****

at the position in space of the stimulus object rather than at the point where the sense organ is stimulated, so that the greenness of a leaf is perceived as being on the tree rather than on the retina. Visual sensations are projected eccentrically in most cases, but touch sensations are projected only with **haptic* touch when objects are held in the hand, smells have indefinite spatial location, and eccentric projection is not possible for tastes. Also called *extradition*.

echoic store *n.* One of the **sensory registers*, supposedly allowing an auditory image to persist for up to two seconds after its stimulus has ceased, making speech intelligible and enabling **sound localization* with the use of **binaural* time differences between the arrival of the sound at the two ears, although there is controversy regarding its existence. Also called *echoic memory*. See also *PRECATEGORICAL ACOUSTIC STORE*, *SENSORY MEMORY*. Compare *ICONIC STORE*. [From Greek *echo* a sound + *-ikos* of, relating to, or resembling]

echolalia *n.* A pathological parrot-like repetition of overheard words or speech fragments, often with a mocking intonation, symptomatic of some mental disorders, including **catatonic schizophrenia*, **latah*, **pibloktoq*, and some **tic disorders*. Compare *ECHOPRAXIA*, *PALILALIA*. [From Greek *echo* a sound + *lalia* speech]

echolocation *n.* A method of determining the position of objects by emitting sound or **ultrasound* and analysing the returning echoes. Also written *echo location*. See *BIOSONAR*, *FACIAL VISION*. **echolocate** *vb.*

echopraxia *n.* Automatic or uncontrollable imitation of other people's movements, **gestures* (1), or postures, symptomatic of some mental disorders, including **catatonic schizophrenia*, **latah*, and **pibloktoq*. Compare *ECHOLALIA*. [From Greek *echo* a sound + *praxis* a deed or action + *-ia* indicating a condition or quality]

eclipse scotoma See *SCOTOMA*.

ecmnesia *n.* Loss of memory for events of a particular period. [From Greek *ek* from + *mneme* memory + *-ia* indicating a condition or quality]

ecological criterion *n.* In the writings of the Hungarian-born US psychologist Egon Brunswik (1903–55) and his followers, an aspect of an **ecology* (2) that an organism cannot perceive directly but judges from a sensory **cue* (2) to the best of its ability, the correlation between the sensory cue and the ecological criterion being the **ecological validity* (2) of the cue. Also called a *distal criterion*. See also [BRUNSWIKIAN](#), [LENS MODEL](#), [PROBABILISTIC FUNCTIONALISM](#).

ecological fallacy *n.* The inference of individual characteristics from aggregate data. The difficulty that most people have in understanding the following story illustrates the fallacy. *A man was attacked by a mugger while he was walking home from a football match with his young son Peter. Peter left his father lying unconscious in the street and ran into a nearby police station to report the mugging. When Peter arrived at the police station, one of the officers on duty greeted him warmly, because Peter was that police officer's son.* This story sounds impossible or illogical to most people when they read it or hear it for the first time, because they tend to commit the ecological fallacy in interpreting it. In fact, there is nothing illogical about the story. See also [BRUNSWIKIAN](#), [ECOLOGY](#) (2), [LENS MODEL](#), [NOMOTHETIC](#), [PROBABILISTIC FUNCTIONALISM](#).

ecological niche *n.* The position or role of an organism in its environment, defined by such factors as its food, predators, and temperature tolerances.

ecological validity *n.* 1. The confidence with which the conclusions of an empirical investigation can be generalized to naturally occurring situations in which the phenomenon under investigation occurs. See also [VALIDITY](#), [VALIDITY GENERALIZATION](#). Compare [EXTERNAL VALIDITY](#), [INTERNAL VALIDITY](#). 2. In the writings of the Hungarian-born US psychologist Egon Brunswik (1903–55) and his followers, the correlation between a sensory **cue* (2) that an organism uses to judge an **ecological criterion* and the actual though imperceptible ecological criterion itself. See also [BRUNSWIKIAN](#), [ECOLOGY](#) (2), [LENS MODEL](#), [PROBABILISTIC FUNCTIONALISM](#).

ecology *n.* 1. The study of the relationship of living organisms to their natural environments. See also [ECOSYSTEM](#). 2. In the writings of the Hungarian-
*****ebook converter DEMO Watermarks*****

born US psychologist Egon Brunswik (1903–55) and his followers, the environmental context to which an organism must adapt functionally. See also [ECOLOGICAL CRITERION](#), [ECOLOGICAL FALLACY](#), [ECOLOGICAL VALIDITY \(2\)](#), [LENS MODEL](#). **ecological** *adj.* [From German *Ökologie*, from Greek *oikos* a house + *logos* word, discourse, or reason]

economic *adj.* Of or relating to the management of resources or the production, distribution, and consumption of goods and services. In **psychoanalysis*, of or relating to the circulation and distribution of **cathexis* or **instinctual energy* within the mental apparatus. See also [HYDRAULIC THEORY](#), [METAPSYCHOLOGY](#), [PRINCIPLE OF CONSTANCY](#), [QUOTA OF AFFECT](#). [From Greek *oikonomia* household management, from *oikos* a house + *nemein* to manage]

ecosystem *n.* A relatively self-contained biological community and its physical environment considered as a functioning unit. See also [ECOLOGY \(1\)](#). Compare [HABITAT](#). [From Greek *oikos* a house + English *system*]

e-counselling See [E-THERAPY](#).

écouteur *n.* A person who derives sexual gratification from eavesdropping on sexual encounters between others or listening to other people speaking about sex. Compare [VOYEUR](#). [From French *écouter* to listen]

ecphoric *adj.* Pertaining to a mental state, such as an emotion or a memory, evoked or revived by means of a stimulus. The term was introduced by the German biologist Richard Semon (1859–1918) in his treatise *De Mneme* (1912). See also [REDINTEGRATION](#). **ecphorically** *adv.* **ecphore** *vb.* [From German *ekphorieren* to revive, from Greek *ekphorein* carrying or bringing forth, producing, or disclosing, from *ek* out of + *-phoros* carrying, from *pherein* to bear + *-ikos* of or relating to]

ecstasy *n.* **1.** A state of exalted pleasure or euphoria. **2.** The common name for the central nervous system **stimulant* and **designer drug* 3,4-methylenedioxy-methamphetamine (MDMA), a **phenylalkylamine* originally synthesized by the pharmaceutical company Merck in 1912 and patented two years later as an appetite suppressant, then rediscovered as a street drug in the
*****ebook converter DEMO Watermarks*****

late 1970s. It is an ***amphetamine** analogue, sharing many of the characteristics of ***speed** (amphetamine sulphate) but also increasing ***serotonin** and ***dopamine** activity in the brain and inducing feelings of euphoria, empathy, and benevolence. It often causes hyperthermia (overheating) and extreme thirst, especially when accompanied by prolonged and energetic dancing. It sometimes has ***hallucinogenic** effects, though a typical 75–100 mg dosage is not normally hallucinogenic, and prolonged use often results in damage to ***serotonergic** nerve fibres. It is sometimes called the *hug drug* or *XTC* and has many branded versions and street names, including *Adam*, *apples*, *doves*, *E*, and *Einsteins*, and other constantly changing names depending on colour and appearance, such as *custards*, *diamonds*, *rhubarb*, and *strawberries*. See also **AMPHETAMINE-RELATED DISORDERS**, **EMPATHOGEN**, **ENTACTOGEN**, **SUBSTANCE-RELATED AND ADDICTIVE DISORDERS**. Compare **YABA**. [From Greek *ekstasis* trance, from *ex* out + *histanai* to cause to stand]

ectoderm *n.* The outer germ layer of a human or animal embryo, or the epidermis and nervous tissue that develops from it. Compare endoderm, mesoderm. **ectodermal** or **ectodermic** *adj.* [From Greek *ektos* outside + *derma* skin]

ectomorph *n.* A light and delicate physique or body build, believed by the US psychologist William H(erbert) Sheldon (1899–1977) and followers of his ***constitutional psychology** to be associated with such personality characteristics as alertness, intellectualism, and inhibition. Compare **ENDOMORPH**, **MESOMORPH**. **ectomorphic** *adj.* **ectomorphy** *n.* The state or condition of being an ectomorph. [From Greek *ektos* outside + *morphe* a form or shape]

ectopic *adj.* Abnormally displaced. [From Greek *ek* outside + *topos* a place + *-ikos* of, relating to, or resembling]

ectopic pregnancy *n.* The abnormal development of a fertilized ovum outside the uterus, usually within a Fallopian tube. Compare **ENTOPIC**.

ectoplasm *n.* 1. The outer layer of ***cytoplasm** that differs in many cells from the inner cytoplasm in being a clear gel. 2. In parapsychology, a

*****ebook converter DEMO Watermarks*****

substance supposedly exuded by a spirit medium during a trance. [From Greek *ek* outside + *topos* a place + *plasma* a form]

ectotherm *n.* Any animal that does not generate its own body heat but derives it externally, specifically a fish, amphibian, or reptile. *Compare* **ENDOTHERM**. **ectothermic** *adj.* Cold-blooded. [From Greek *ektos* outside + *therme* heat]

edge detector *n.* A cell in the **primary visual cortex* (Area V1) that responds maximally to a straight edge that is darker on one side than the other and has a particular position and orientation on the retina, the response being strongest when the stimulus is moving. *See also* **COMPLEX CELL**, **END-STOPPED RECEPTIVE FIELD**, **FEATURE DETECTOR**, **HYPERCOMPLEX CELL**, **SIMPLE CELL**. *Compare* **BAR DETECTOR**.

edge effect *n.* Another name for the **serial position effect*.

educable mentally retarded *adj.* An obsolescent term for an educational category equivalent to mild **intellectual disability*. **EMR** *abbrev.*

educationally subnormal *adj.* Of or pertaining to someone with a **learning disability*. **ESN** *abbrev.*

educational psychology *n.* A field of **applied psychology* related to the education and emotional and social well-being of children and young people. In the US, educational psychologists are trained in education rather than psychology, and they work mainly as counsellors in universities and colleges. In the UK they are trained in child development, the psychology of learning and teaching, and the psychological aspects of assessing and educating children with special needs; many are employed by Local Authority departments but some directly by schools, voluntary bodies, or parents. Similar work is called *school psychology* in the US. **EP** *abbrev.*

educational psychotherapy *n.* A psychotherapeutic approach in which children are encouraged to explore and resolve emotional difficulties that are holding back learning.

Edwards Personal Preference Schedule *n.* A personality inventory comprising 225 pairs of statements relating to likes and preferences (A: *I like to do things by myself.* B: *I like to help others do things*), the respondent being required to choose the preferred alternative in each case. The scale is **ipsative*, and it yields scores on 15 needs based on the theory of personality introduced by the US psychologist Henry Alexander Murray (1893–1988) in his book *Explorations in Personality* (1938), namely needs for achievement, deference, order, exhibition, autonomy, affiliation, intraception, succourance, dominance, abasement, nurturance, change, endurance, homosexuality, and aggression. **EPPS** *abbrev.* [Named after the US psychologist and statistician Alan L. Edwards (1914–94) who introduced it in 1953]

EEG *abbrev.* Electroencephalogram, a graphical representation of the gross electrical activity of the brain, recorded via electrodes attached to the scalp by an instrument called an *electroencephalograph*, first demonstrated in 1924 and examples published in 1929 by the German psychiatrist Hans Berger (1873–1941). EEGs manifest approximately periodic oscillating waves (see *illustration*) because of a form of **feedback* in which groups of excitatory neurons stimulate inhibitory neurons, which in turn stimulate excitatory neurons, creating negative-feedback circuits that cycle indefinitely. *See also* ALPHA BLOCKING, ALPHA WAVE, BETA WAVE, BRAIN IMAGING, DEFAULT MODE NETWORK, DELTA WAVE, DESYNCHRONIZED EEG, GAMMA WAVE, MU WAVE, SENSORIMOTOR RHYTHM, THETA WAVE. *Compare* ELECTROCORTICOGRAM, ENCEPHALOGRAM. [From Greek *elektron* amber (in which electricity was first observed) + *en* in + *kephale* the head + *gramme* a line]

EEG. Typical brain-wave patterns in various states of consciousness.

EEG spindle *n.* Another name for a **sleep spindle*.

effective dosage *n.* The minimum dosage of a drug that is required to produce a specified effect in an organism. **ED** *abbrev.*

effective dosage 50 *n.* Another name for the **median effective dosage*. See also *THERAPEUTIC INDEX*, *THERAPEUTIC RATIO*. Compare *LETHAL DOSAGE*, *TOXIC DOSAGE*. **ED-50** or **ED₅₀** *abbrev.*

effector *n.* A cell or organ that is specialized to perform a specific function in response to a signal from the nervous system, the most important examples being a **muscle*, **gland*, **cilium*, or **electric organ*.

effect size *n.* In statistics, the magnitude of an experimental outcome, represented by a numerical index, the most prominent of which is **Cohen's d* for the difference between two means. For the differences between *k* means of equal-sized samples compared by one-way **analysis of variance*, the usual effect size index *f* is the standard deviation of the *k* means divided by the pooled within-population standard deviation, and it is considered small if *f* = 0.10, medium if *f* = 0.25, and large if *f* = 0.40. For **correlations*, the value of

*****ebook converter DEMO Watermarks*****

the product–moment correlation coefficient r is its own index of effect size, and it is considered to be small if $r = 0.10$, medium if $r = 0.30$, and large if $r = 0.50$. For the ***chi-square test**, the effect size index w is calculated by dividing the chi-square value by the number of scores and taking the square root, and it is considered small if $w = 0.10$, medium if $w = 0.30$, and large if $w = 0.50$. An effect size index represents the magnitude of an effect, independent of sample size. Effect size measures are often reported alongside the results of ***significance tests** and are widely used in ***meta-analysis**. See also **COMMON LANGUAGE EFFECT SIZE STATISTIC**. **ES** abbrev.

efferent *adj.* Away from the central nervous system; of or relating to a ***motor neuron** or a ***motor nerve** that transmits impulses away from the central nervous system to a muscle, gland, or other ***effector**. Compare **AFFERENT**. [From Latin *eferre* to carry off, from *e* from + *ferre* to carry]

ego *n.* In ***psychoanalysis**, one of the three components of the human mental apparatus in the second formulation of the theory by Sigmund Freud (1856–1939), after he replaced the ***topography** of unconscious-preconscious-conscious with the structural model of id-ego-superego in 1920. It is a largely ***conscious (1)** part of the mind, governed mainly (though not exclusively) by the ***reality principle**, mediating between external reality, the ***id**, and the ***superego**. In his book *The Ego and the Id* (1923) Freud described its role as follows: ‘it owes service to three masters and is consequently menaced by three dangers: from the external world, from the libido of the id and from the severity of the super-ego’ (*Standard Edition*, XIX, pp. 12–66, at p. 56). The ego is not simply the conscious mind, as is often stated in popularized accounts of Freud's theory: in a neurosis, the ego generates ***defence mechanisms**, and this ego function is largely unconscious. Freud introduced the concept of the ego in his earliest writings, using the German word *Ich*, a noun that he coined from the ordinary everyday pronoun *ich* (I), and the translator James Strachey (1887–1967) rendered it as *ego*, adding a veneer of obscurity and technicality that the original German lacks. In colloquial usage, the word is used to denote a person's sense of self-esteem (*Getting the job boosted her ego*) or self-importance (*The managing director has a big ego*). See also **EGO-DYSTONIC**, **EGO IDEAL**, **EGO INSTINCT**, **EGO INTEREST**, **EGO INVOLVEMENT**, **EGO LIBIDO**, **EGO PSYCHOLOGY**, **EGO STRENGTH**, **EGO-SYNTONIC**, **MIRROR PHASE**, **PLEASURE-EGO**, **REALITY-EGO**, **REGRESSION IN THE SERVICE OF THE**

EGO, SPLITTING OF THE EGO. [From Latin *ego* I]

ego-alien *adj.* A synonym for ***ego-dystonic**.

egocentre *n.* A point in the body where sensations from a particular ***sensory modality** are perceived or felt to converge. US *egocenter*. See AUDITORY EGOCENTRE, TACTILE EGOCENTRE, VISUAL EGOCENTRE. [From Latin *ego* I + *centrum* the centre]

egocentric *adj.* Self-centred. See also EGOCENTRISM. Compare EGOMANIA. [From Latin *ego* I + *centrum* the centre + *-icus* of, relating to, or resembling]

egocentric localization *n.* Awareness of the spatial positions of objects in the immediate environment relative to one's body.

egocentrism *n.* Self-centredness, a term given a technical meaning in 1926 by the Swiss psychologist Jean Piaget (1896–1980) to denote a cognitive state in which a child in the ***pre-operational stage** of development comprehends the world only from its own point of view and is unaware that other people's points of view differ from its own. It implies a failure to differentiate subjective from objective aspects of experience, and it therefore imposes an unconscious personal bias on cognition. The classic demonstration of it is Piaget's three mountains task, in which a child sits in front of a table-top model of three mountains and is asked how the scene would look to a doll viewing it from a different angle; most children in the pre-operational stage (children about 5 years old, for example) consistently describe the doll's viewpoint as being the same as their own. See also AUTOMORPHIC PERCEPTION, FALSE-CONSENSUS EFFECT. **egocentric** *adj.* [From Latin *ego* I + *centrum* the middle + Greek *-ismos* indicating a state or condition]

ego defence mechanism *n.* Another name for a ***defence mechanism**. US *ego defense mechanism*.

ego-dystonic *adj.* Experienced as self-repugnant, alien, discordant, or inconsistent with the total personality, as ***obsessions** are generally experienced to be, and as ***homosexuality** may sometimes be. The term was

introduced by Sigmund Freud (1856–1939) in 1914 in an article ‘On Narcissism: An Introduction’ (*Standard Edition*, XIV, pp. 73–102, at p. 99), and he discussed it again in 1923 in an encyclopedia article (*Standard Edition*, XVIII, pp. 235–59, at p. 246). See also [EGO-DYSTONIC SEXUAL ORIENTATION](#). Compare [EGO-SYNTONIC](#). **ego dystonia** *n.* [From Latin *ego* I + Greek *dys-* bad or abnormal + *tonos* tone + *-ikos* of, relating to, or resembling]

ego-dystonic sexual orientation *n.* A controversial term for a sexual preference that is experienced as [*ego-dystonic](#). Hence *ego-dystonic bisexuality*, *ego-dystonic homosexuality*. In 1973 the American Psychiatric Association removed the mental disorder of [*homosexuality](#) from the *Diagnostic and Statistical Manual of Mental Disorders*, resulting in a furious reaction from dissident psychiatrists, who accused the leadership of the Association of capitulation to gay liberationists, and after an acrimonious debate and a referendum of the entire membership of the Association, the third edition (DSM-III) included homosexuality only under *ego-dystonic homosexuality*. Also called *sexual orientation disturbance* ([SOD](#)).

ego ideal *n.* In [*psychoanalysis](#), an internal notion of personal perfection serving as a model to which one strives to conform, derived from the fusion of [*narcissism](#) and early [*identification \(2\)](#) with parents. Sigmund Freud (1856–1939) introduced the concept in 1914 in an article ‘On Narcissism: An Introduction’, where its origins in narcissism were clearly stated: ‘What man projects before him as his ideal is the substitute for the lost narcissism of his childhood in which he was his own ideal’ (*Standard Edition*, XIV, pp. 73–102, at p. 94), and he used it in a central role to explain social phenomena in his book *Group Psychology and the Analysis of the Ego* (1921, *Standard Edition*, XVIII, pp. 69–143). In his later book *New Introductory Lectures on Psycho-Analysis* (1932/3), he described it as one of the three functions of the [*superego](#), the other two being self-observation and conscience (1933, *Standard Edition*, XXII, pp. 5–182, at p. 66).

ego identity *n.* In [*ego psychology](#), a term introduced by the German-born psychoanalyst Erik H. Erikson (1902–94) in 1946 to denote a psychological state that an individual achieves at the end of adolescence if earlier [*developmental crises](#) have been successfully negotiated. It involves a

*****ebook converter DEMO Watermarks*****

sense of personal identity (who one is) and of how one is perceived by others. An adolescent who fails to achieve ego identity is likely to experience despair, to lack a sense of comradeship with peer groups, and to have difficulty handling intimacy and forming loving relationships.

ego instinct *n.* In *psychoanalysis, a *self-preservation instinct that supplies energy to the *ego in a defensive conflict, distinguished by Sigmund Freud (1856–1939) in his early (1910–15) classification from an *object instinct, which is concerned with sexual or destructive relations to an external object. Freud introduced the concept in 1910 in an article on ‘The Psycho-Analytic View of Psychogenic Disturbance of Vision’ (*Standard Edition*, XI, pp. 211–18), the key passage being: ‘A quite specially important part is played by the undeniable opposition between the instincts which subserve sexuality, the attainment of sexual pleasure, and those other instincts which have as their aim the self-preservation of the individual—the ego-instincts’ (pp. 214–15). In his later classification from 1920 onwards, he recognized as ego instincts not merely sexual instincts subserved by *Eros (the life instincts), but also destructive instincts subserved by *Thanatos (the death instinct). *See also* EGO INTEREST.

ego integrity versus despair *n.* One of the crises in the developmental theory of the German-born *ego psychologist Erik H. Erikson (1902–94). *See* DEVELOPMENTAL CRISES.

ego interest *n.* In *psychoanalysis, *cathexis of the ego by *ego instincts, in contrast to *narcissism, which is cathexis of the ego by *sexual instincts. Sigmund Freud (1856–1939) drew this distinction in 1915/17 in ‘A Metapsychological Supplement to the Theory of Dreams’ (*Standard Edition*, XIV, pp. 217–36, at p. 223).

ego involvement *n.* The involvement of one's *self-esteem in an activity or task. **ego-involving** *adj.*

egoistic suicide *See* SUICIDE.

ego libido *n.* In *psychoanalysis, *libido involved in the *cathexis of oneself, in contradistinction to *object libido, which is libido involved in the
*****ebook converter DEMO Watermarks*****

cathexis of an external **instinctual object*. Sigmund Freud (1856–1939) discussed this distinction in 1914 in his article ‘On Narcissism: An Introduction’ (*Standard Edition*, XIV, pp. 73–102, at pp. 77–81), where he theorized that an energy balance exists, ego libido decreasing as object libido increases, and vice versa. Also called *narcissistic libido*. See also [NARCISSISM](#).

egomania *n.* Pathological love for or preoccupation with oneself. Another name for **narcissistic personality disorder*. Compare [EGOCENTRIC](#). **egomaniac** *n.* A person with egomania. **egomaniacal** *adj.* [From Latin *ego* I + *mania* madness]

ego psychology *n.* A school of **psychoanalysis* based on the analysis of the **ego*, founded in 1939 by the Austrian-born US psychoanalyst Heinz Hartmann (1894–1970), including the US-based German psychologist Ernst Kris (1901–57), the Hungarian-born US psychologist David Rapaport (1911–60), and the German-born (of Danish parentage) psychoanalyst Erik H. Erikson (1902–94). The essential theme is that the ego is capable of functioning autonomously and is not confined to internal conflicts with the **id* and **superego*. Hartmann argued that gratification is gained from the sheer exercise of one's functions, as when a child is delighted by learning to walk or to draw, and Rapaport identified novelty-seeking as a self-rewarding activity. Ego psychologists reject the classical psychoanalytic theory of motivation in terms of tension reduction only. See also [DEVELOPMENTAL CRISES](#), [EGO IDENTITY](#), [IDENTITY CRISIS](#), [PSYCHOSOCIAL MORATORIUM](#), [REGRESSION IN THE SERVICE OF THE EGO](#).

ego regression See [REGRESSION \(2\)](#).

ego-splitting See [SPLITTING OF THE EGO](#).

ego strength *n.* In **psychoanalysis*, the degree to which the **ego* is capable of handling the demands of the **id* and the **superego* without disruption, a person with high ego strength being self-confident, strong-willed, and robust in response to frustration.

ego-syntonic *adj.* Experienced as consistent or harmonious with the total **personality*. The term was introduced by Sigmund Freud (1856–1939) in
*****ebook converter DEMO Watermarks*****

1914 in an article 'On Narcissism: An Introduction' (*Standard Edition*, XIV, pp. 73–102, at p. 99), and discussed again in 1923 in an encyclopedia article (*Standard Edition*, XVIII, pp. 235–59, at p. 246). Compare [EGO-DYSTONIC](#). **ego syntony** *n.* [From Latin *ego* I + Greek *syn-* together + *tonos* tone + *-ikos* of, relating to, or resembling]

Ehrenstein's brightness illusion *n.* A visual illusion in which a lattice of black lines with the regions around their intersections erased appears to have white discs with [*illusory contours](#) at the intersections, seemingly occluding the lines and appearing lighter than the background (see [illustration](#)). If the colours are reversed, then illusory dark discs appear at the erased intersections. Also (ambiguously) called the *Ehrenstein illusion*. Compare [EHRENSTEIN'S SQUARE ILLUSION](#), [HERMANN GRID](#). [Named after the German Gestalt psychologist Walter Ehrenstein (1899–1961) who discovered it in 1939/40 and published it in 1941]

Ehrenstein's brightness illusion. The white patches at the intersections of the lines are illusory.

Ehrenstein's square illusion *n.* A visual illusion in which a square superimposed on a fanlike pattern of diverging lines appears distorted (see [illustration](#)) into a trapezium (US trapezoid). It is closely related to the [*Ponzo illusion](#) and the [*Orbison illusion](#). Also (ambiguously) called the *Ehrenstein illusion*. Compare [EHRENSTEIN'S BRIGHTNESS ILLUSION](#). [Named after the German Gestalt psychologist Walter Ehrenstein (1899–1961) who first reported it in his doctoral dissertation in 1921 and published it in 1925]

Ehrenstein's square illusion. The rectangle is a perfect square.

eidetic image *n.* A mental image or memory that is extraordinarily clear and vivid, as though actually being perceived, a significant minority of children and a much smaller proportion of adults being capable of such imagery, according to some authorities. More specifically, it is a clear and vivid visual image representing a previously perceived stimulus, persisting for more than a few seconds and often for several or many minutes, appearing to be located in front of the eyes. It is distinguished from an ***afterimage**, which does not have these properties. [From Greek *eidetikos* belonging to a (visual) image, from *eidos* form + *-ikos* of, relating to, or resembling]

eidetiker *n.* A person who perceives **eidetic images*.

Eigengrau *n.* A nondescript grey fog that is perceived by a viewer experiencing **stabilized retinal images*. [From German *eigen* own or one's own + *grau* grey]

eigenvalue *n.* In statistics, a quantity often used in **multivariate statistics* to indicate the relative contribution of a **factor (2)* or **independent variable* to the **variance* in a **dependent variable*. [From German *eigen* own + English *value*]

Eigenwelt *n.* In **phenomenology* and **existentialism*, the personal world as it is experienced, including one's awareness of mind and body and the sense of who one is. *See also* *EXISTENTIAL ANALYSIS*, *EXISTENTIAL THERAPY*. *Compare* *MITWELT*, *UMWELT*. [From German *eigen* own or one's own + *Welt* world]

eight-month anxiety *n.* Another name for **stranger anxiety*.

Einfühlung *n.* Another name for **empathy*. [German]

Einsteins *n.* A street name for the stimulant designer drug **ecstasy (2)*.

Einstellung *n.* A temporary attitude, expectation, or state of readiness, especially in relation to a stimulus that is about to be experienced. Nowadays more often called a *set*. *See also* *AUFGABE*, *FUNCTIONAL FIXEDNESS*, *SET (2)*, *WATER-JAR PROBLEM*. [From German *Einstellung* adjustment or setting, from *ein* in + *Stellung* placement, from *stellen* to place]

ejaculation *n.* 1. The emission of semen by a male during **orgasm*. 2. A sudden utterance or exclamation. **ejaculate** *vb.* **ejaculatory** *adj.* [From Latin *ejaculatio* ejaculation, from *e* from + *iaculatus* thrown, from *iacere* to throw + *-ation* indicating a process or condition]

ejaculatio praecox *n.* Another name for **premature (early) ejaculation*. *See also* *MALE ORGASMIC DISORDER*. *Compare* *DELAYED EJACULATION*. [From

Latin *ejaculatio* ejaculation + *praecox* premature]

ejaculatio retardata *n.* Delayed ejaculation. See [EJACULATORY INCOMPETENCE](#). [From Latin *ejaculatio* ejaculation + *retardata* retarded or delayed]

ejaculatory incompetence *n.* Inability or delay in reaching orgasm and ejaculating. See [DELAYED EJACULATION](#), [IMPOTENCE \(2\)](#), [MALE ORGASMIC DISORDER](#).

elaborated code *n.* A concept introduced by the British sociologist Basil Bernstein (1924–2000) in an article in the *British Journal of Sociology* in 1958 to denote a comparatively complex and formal use of language, not restricted to immediate situations (context free), with a wide semantic and syntactic range, characteristic of middle-class speakers. Compare [RESTRICTED CODE](#).

elaboration *n.* The depth or level at which information is processed, or the extent to which a person processes information or arguments in relation to existing knowledge or beliefs. See also [ELABORATIVE REHEARSAL](#). **elaborate** *vb.*

elaboration likelihood model *n.* A model of [*persuasion](#) and [*attitude](#) change according to which recipients of a persuasive message who are highly motivated and able to process the content of the message with care tend to elaborate or think about issue-relevant arguments, and if they find the arguments in the message compelling, then they may show lasting [*attitude change](#), whereas recipients whose motivation and processing ability are low are likely to be influenced by peripheral factors such as the attractiveness of the source, and any attitude change achieved by this peripheral route will tend to be short-lived and poorly predictive of behaviour. The model was formulated in 1981 and revised in 1986 by the US psychologists Richard E(dward) Petty (born 1951) and John T(errance) Cacioppo (born 1951). See also [DUAL-PROCESS MODEL](#), [ELABORATION](#), [ELABORATIVE REHEARSAL](#). **ELM** *abbrev.*

elaboration, secondary *n.* Another name for [*secondary revision](#).

elaborative rehearsal *n.* Deep processing of material that needs to be remembered, involving formation of associations, organization (grouping of material into categories), use of mnemonic strategies, or other forms of cognitive processing. *See also* [ELABORATION](#), [ELABORATION LIKELIHOOD MODEL](#), [REHEARSE \(2\)](#), [VERBAL OVERSHADOWING](#). *Compare* [MAINTENANCE REHEARSAL](#).

elation effect *n.* Another name for [*behaviour contrast](#) in its positive form, when increased reward leads to increased response rate.

Elavil *n.* A proprietary name for the tricyclic antidepressant drug [*amitriptyline](#). [Trademark]

Elberfeld horses *n.* Trained horses in Germany in the early years of the 20th century that appeared to possess remarkable human-like intellectual abilities, including especially [*Clever Hans](#). [Named after the German city of Elberfeld, later merged into Wuppertal, where they were trained]

elder abuse *n.* Any form of physical, mental, sexual, or economic exploitation or cruelty by a carer towards an old person, causing significant harm to its victim. *See also* [SEXUAL ABUSE](#), [SPOUSE ABUSE](#).

elective mutism *n.* An alternative name for [*selective mutism](#).

Electra complex *n.* In [*analytical psychology](#), the female [*Oedipus complex](#). Carl Gustav Jung (1875–1961) introduced the term in an article in 1913 in the *Jahrbuch für psychoanalytische und psychopathologische Forschungen*, although Sigmund Freud (1856–1939) stated in 1920 that he did not consider the term useful (*Standard Edition*, XVIII, p. 155*n*), and in an article on ‘Female Sexuality’ in 1931, he went further in denying the existence of such a complex: ‘It is only in the male child that we find the fateful combination of love for one parent and simultaneous hatred for the other as a rival’ (*Standard Edition*, XXI, pp. 225–43, at p. 229). *See also* [COMPLEX \(2\)](#). [Named after Electra in Greek mythology who arranged for the murder of her mother Clytemnestra, who in turn had murdered Electra's father Agamemnon]

electrical brain stimulation *n.* Stimulation of specific areas of the brain with weak electrical currents in order to determine their functions. See also [ELECTRICAL SELF-STIMULATION OF THE BRAIN](#). **EBS** abbrev.

electrical self-stimulation of the brain *n.* Performance by an experimental animal of a response, such as pressing a lever, to deliver a weak electrical current to an area of the brain into which an electrode is permanently implanted. See [PLEASURE CENTRE](#). **ESSB** abbrev.

electrical synapse *n.* Another name for a [*gap junction](#).

electric organ *n.* A specialized area of modified muscle tissue in certain fishes such as the electric eel (*Electrophorus electricus*), the electric catfish (*Malapterurus electricus*), or the electric ray (*Tetranarce occidentalis*), such tissue being capable of discharging an electric shock to any animal that touches it. See also [ELECTRORECEPTOR](#).

electric receptor *n.* Another name for an [*electroreceptor](#).

electroconvulsive therapy *n.* A treatment for some forms of [*depression](#) and other mental disorders by administering an anaesthetic and a muscle relaxant drug and then passing an electric current through the brain to induce either [*convulsions](#) or [*coma](#). It was first used on a human patient in 1938 by the Italian neurologist Ugo Cerletti (1877–1963), who got the idea from watching pigs being anaesthetized by electroshock before being butchered. Its mode of action is controversial and poorly understood. Also called *electric shock therapy* ([EST](#)), *electroconvulsive shock* (*ECS*), *shock therapy*. **ECT** abbrev.

electrocorticogram *n.* A form of [*EEG](#) in which the electrodes are placed in direct contact with brain tissue. [From Greek *elektron* amber (in which electricity was first observed) + Latin *cortex* bark or outer layer + Greek *gramme* a line]

electrodermal response *n.* Another name for [*galvanic skin response](#) ([GSR](#)). **EDR** abbrev.

electroencephalogram See EEG.

electrokymograph *n.* An instrument for recording the flow of air from the mouth and nose during speech. [From *electro-* electric, from Greek *elektron* amber (in which electricity was first observed) + Greek *kyma* a wave + *graphein* to write]

electrolaryngograph *n.* An instrument for recording the vibration of the **vocal folds* during speech. [From *electro-* electric, from Greek *elektron* amber (in which electricity was first observed) + Greek *larynx* the larynx + *graphein* to write]

electrolyte *n.* A liquid or gel solution that contains free **ions* and can therefore conduct electricity, or a chemical compound such as an acid, base, or salt that releases free ions when it is dissolved. The main electrolytes required for human physiology are solutions of the salts of **calcium* for relaxation of skeletal muscles and contraction of cardiac muscle, **potassium* for contraction of skeletal muscles and relaxation of cardiac muscle, and **sodium* for maintaining fluid balance. **electrolysis** *n.* The process of passing an electrical current through an electrolyte. [From Greek *elektron* amber (in which electricity was first observed) + *lysis* loosening]

electromagnetic sense *n.* Another name for the **magnetic sense*.

electromyogram *n.* A recording of the electrical activity of a muscle with an instrument called an **electromyograph*. **EMG** *abbrev.* [From Greek *elektron* amber (in which electricity was first observed) + *mys, myos* a muscle + *gramme* a line]

electromyograph *n.* An instrument for measuring the electrical activity of muscles and producing an **electromyogram*. [From *electro-* electric, from Greek *elektron* amber (in which electricity was first observed) + Greek *mys, myos* a muscle + *graphein* to write]

electro-oculogram *n.* A recording of eye movements, even behind the closed lids of a person who is asleep, obtained from an instrument called an

electro-oculograph that measures electrical potentials in the ***extra-ocular muscles**. **EOG** *abbrev.* [From Greek *elektron* amber (in which electricity was first observed) + Latin *oculus* the eye + Greek *gramme* a line]

electropalatograph *n.* An instrument for recording the contacts between the tongue and palate during speech. [From *electro-* electric, from Greek *elektron* amber (in which electricity was first observed) + English *palate* + Greek *graphein* to write]

electrophoresis *n.* The migration of suspended particles, such as segments of ***DNA**, usually through a gel or colloid under the influence of an applied electrical field, the lightest particles tending to move furthest. Also called *gel electrophoresis*. *See also* **GENETIC FINGERPRINTING**, **RESTRICTION MAPPING**. [From Greek *elektron* amber (in which electricity was first observed) + *phorein* to bear]

electroreceptor *n.* A ***sensory receptor** possessed by some species of fish that is specialized for detecting electrical discharges. *See also* **ELECTRIC ORGAN**. *Compare* **MAGNETIC SENSE**. [From Greek *elektron* amber (in which electricity was first observed) + English *receptor*]

electroretinogram *n.* The summated electrical activity of large numbers of neurons in the ***retina**, recorded from the front of the eyes, analogous to the ***cochlear microphonic** or the ***EEG**. **ERG** *abbrev.* [From Greek *elektron* amber (in which electricity was first observed) + English *retina*, probably from Latin *rete* a net + Greek *gramme* a line]

electroshock therapy (EST) *n.* Another name for ***electroconvulsive therapy**.

element movement *n.* A form of apparent movement that occurs in the ***Ternus phenomenon** when a short interstimulus interval is used, one element appearing to hop back and forth across the others.

elevated mood *n.* A heightened mood characterized by feelings of euphoria, elation, and well-being. A person in such a mood may describe the

feeling as *high* or *ecstatic*.

elevation in the visual field *n.* The relative height of an object relative to the rest of the visual field, suggestive of distance because the horizon is generally higher than the foreground, hence one of the monocular cues of visual **depth perception*. Also called *height in the visual field*.

elimination by aspects *n.* A theory of **multi-attribute decision making*, introduced in 1972 by the Israeli-American psychologist Amos Tversky (1937–96), according to which a choice is reached through an iterated series of eliminations. At each iteration, the decision maker selects an **attribute* (aspect), the probability of selection being proportional to the attribute's perceived importance, and eliminates all alternatives lacking that attribute, then selects the next most important attribute and proceeds in the same way, and so on until all but one of the alternatives have been eliminated. It is a **stochastic* version of **lexicographic choice*, and although it is not guaranteed to produce an optimal choice it appears from experimental tests to be characteristic of human multi-attribute decision making. *See also* *BOUNDED RATIONALITY*. **EBA** *abbrev.*

elimination disorders *n.* An umbrella term introduced in **DSM-5* to cover **enuresis*, **encopresis* and related disorders.

elision *n.* The omission of a speech sound that would normally be present, especially in **allegro speech*, as when the second /t/ sound in the phrase *next time* is omitted, or when *terrific* is pronounced as a two-syllable rather than a three-syllable word. *Compare* *HAPLOLOGY*. [From Latin *elidere* to knock + *-ion* indicating an action, process, or state]

Ellen West *n.* The pseudonym of a young woman with **anorexia nervosa* who became the subject of the most famous case study of **existential analysis*, a long and disturbing account by the Swiss psychiatrist Ludwig Binswanger (1881–1966), published in the *Schweizer Archiv für Neurologie und Psychiatrie* in three instalments in 1944. Quotations from the patient's own diary and letters, in which she recorded her most intimate thoughts and feelings during her psychological decline, were used by Binswanger to draw the reader into her distressing mental state, which ended in tragic death.

*****ebook converter DEMO Watermarks*****

Ellsberg paradox *n.* A [*paradox](#) of choice that usually elicits responses inconsistent with [*expected utility theory](#). Two urns are filled with red and green balls. Urn A contains 50 red balls and 50 green balls randomly mixed; Urn B contains 100 red and green balls randomly mixed in an unknown ratio. You choose an urn and a colour, and you then draw a ball at random from your chosen urn. If the ball is your chosen colour, you win a prize. Most people strongly prefer to draw a ball of either colour from Urn A, although this violates the axioms of expected utility theory. According to expected utility theory, if a decision maker prefers to draw a red ball from Urn A than to draw a red ball from Urn B, then the (subjective) probability of drawing a red ball from Urn B must be less than 1/2; but that means that the (subjective) probability of drawing a green ball from Urn B must be greater than 1/2, and the decision maker should therefore prefer it to drawing a red ball from Urn A, which carries a 1/2 probability of winning. According to Ellsberg, human decision makers tend to maximize expected utility (or subjective expected utility) in judgements involving [*risk](#) (2), such as exists in Urn A, to use [*maximin](#) strategies (to maximize minimum utility) in judgements involving [*uncertainty](#) (2), as in Urn B, and to use compromise strategies when the degree of confidence in their probability estimates is intermediate between risk (high confidence) and uncertainty (low confidence), confidence being derived from the amount, type, reliability, and unanimity of information. This implies that expected utility theory, subjective expected utility theory, and the concept of [*revealed preferences](#) apply to situations of risk but not to situations involving uncertainty. Also called the *Ellsberg–Fellner paradox*, in recognition of an article by the US economist William Fellner (1905–83), drawing attention to the same phenomenon, published in 1961 in the same volume of the *Quarterly Journal of Economics* in which Ellsberg's article appeared. The phenomenon underlying the paradox is called [*ambiguity aversion](#). See also [MODIFIED ELLSBERG PARADOX](#). Compare [ALLAIS PARADOX](#), [COMMON RATIO EFFECT](#), [ST PETERSBURG PARADOX](#). [Named after the US political analyst Daniel Ellsberg (born 1931) who published it in 1961]

Elopram *n.* A proprietary name for the antidepressant drug [*citalopram](#). [Trademark]

elusion *n.* The act or process of eluding or evading. In [*psychoanalysis](#), a term first used by the Scottish psychiatrist Ronald D(avid) Laing (1927–89)

*****ebook converter DEMO Watermarks*****

in his book *The Self and Others* (1961) to denote a mechanism whereby people avoid confrontation with themselves and others by self-impersonation, that is, by deliberately playing out the roles that are assigned to them. Laing cited *Madame Bovary* (1857) by the French novelist Gustave Flaubert (1821–80) as an example of this mechanism.

emasculation *n.* Another name for ***castration**. [From Latin *emasculare* to castrate, from *e* from + *masculus* manly or virile, from *mas* male or masculine + *-ation* indicating a process or condition]

embedded-figures test *n.* A test designed by the German Gestalt psychologist Kurt Gottschaldt (1902–91), and first published in the journal *Psychologische Forschung* in 1926, in which the respondent tries to locate simple geometrical shapes that are hidden in more complex diagrams. It is most often used to measure ***field dependence–independence**, people who are field independent performing the task significantly better than those who are field dependent. Also called the *Gottschaldt figures test*. **EFT** abbrev.

emblem *n.* A visible object, symbol, or representation of something else, especially (in social psychology) a ***gesture (1)** that functions as a substitute for a verbal expression. Many non-verbal emblems, including waving the hand for *goodbye*, putting a forefinger to the lips for *silence*, or crossing two fingers for *good luck*, have wide cross-cultural consistency, whereas others are regionally specific: making a ring with the thumb and forefinger indicates *OK* in the US and northern Europe, whereas in southern Europe it conveys *nothing* or *zero*, and in Japan *money*; and the chin-flick emblem (tapping the back of the fingers against the underside of the chin) means *get lost* in France and northern Italy but is largely unknown in the UK and the US. *See also* **KINESICS**, **SUBMISSIVE BEHAVIOUR**. **emblematic** or **emblematical** *adj.* [From Latin *emblema* a raised decoration or mosaic, from Greek *emblema* something inserted, from *en* in + *ballein* to throw]

embrace reflex *n.* Another name for the ***Moro reflex**. [So called because of its resemblance to a gesture of embrace]

embryo *n.* An ***organism** in the earliest phase of its development after the first cleaving of the ***zygote**; in humans, up to about the end of the second

*****ebook converter DEMO Watermarks*****

month after conception, before the main internal organs have begun to take shape, thereby being distinguished from a **foetus*, or more loosely up to birth. *See also* *BLASTOCYST*, *MORULA*. **embryonic** *adj.* [From Greek *embryon* an embryo, from *bryein* to swell]

embryology *n.* The study of the formation and development of **embryos*.

emergence *n.* In **polygenic inheritance*, the property of being determined by several genes that combine configurally, rather than merely additively, characteristic of a trait with high **heritability* that tends to be shared by identical (monozygotic) twins but nevertheless does not run in families. The game of Scrabble provides a useful analogy: a child's mother and father may each be holding letters that form the word PICTURE, but if the child gets seven letters selected at random from both parents, they are unlikely to enable the child to spell PICTURE; and conversely, if neither parent holds all the letters for PICTURE, the child could nevertheless get those letters from the parents. A typical example of emergence is found in the trait of **subjective well-being*: the correlation between identical twins reared together or apart is approximately .50, but parent-child correlations and correlations between pairs of non-identical twins or siblings are all approximately zero. The term was coined by the US psychologist David T(horeson) Lykken (1928–2006) in a presidential address to the Society for Psychophysiological Research in 1981 and published in the journal *Psychophysiology* in the same year. **emergent** *adj.* Of or relating to emergence. [From *emergent* appearing suddenly, from Latin *emergere* to rise up, from *e* out of + *mergere* to plunge + Greek *genesis* birth or origin, from *genein* to produce]

emic *adj.* In linguistics, of or relating to speech characteristics that are considered in terms of their function within a particular language. For example, an emic approach to **intonation* focuses on those features of pitch pattern that signal differences in meaning, whereas an **etic* approach analyses pitch movements regardless of meaning. In sociology and social psychology, of or relating to an account of a social phenomenon made from the perspective or viewpoint of a participant in the social situation, in contrast to an **etic* account given by an outside observer such as a researcher. [Coined in 1967 by the US linguist Kenneth Lee Pike (1912–2000), from ***

*****ebook converter DEMO Watermarks*****

(phon)emic]

emitted behaviour *n.* In the theory of ***operant conditioning**, responses made spontaneously by an organism as a result of internal factors rather than external ***reinforcement**. *See also OPERANT.* US *emitted behavior*.

Emmert's law *n.* The apparent increase in the size of a visual ***afterimage** when viewed against a relatively nearby surface and then against a more distant surface. Formally, the law asserts that $h/H = d/D$, where h is the linear size (height, width, or diameter) of the object, H is the apparent linear size of its image, d is the object's distance from the observer, and D is the distance between the observer and the surface on which the afterimage is perceived. The relation is one of proportionality, a doubling of distance producing a doubling in apparent size, because it follows from the law that $H = hD/d$, and the explanation lies in the fact that the visual angle remains constant but the apparent distance increases, which would normally indicate an increase in size (*see VISUAL ANGLE*). The law can be demonstrated by staring at a brightly lit image with a steady gaze for a minute and then shifting one's gaze first to a blank sheet of paper and then to a distant wall: the afterimage will appear to grow much larger. *See also CORRIDOR ILLUSION.* [Named after the Swiss ophthalmologist and psychologist Emil Emmert (1844–1911) who formulated it in 1881, although it had been discovered more than two centuries earlier by the Italian physicist Benedetto Castelli (1578–1643)]

emmetropia *n.* The condition of perfect vision in which light rays from distant objects, which are approximately parallel, are focused on the retina without ***accommodation** (1). *Compare HYPEROPIA, MYOPIA.* **emmetrope** *n.* A person with emmetropia. **emmetropic** *adj.* [From Greek *emmetros* in due measure, from *en* in + *metron* a measure + *ops* an eye + *-ia* indicating a condition or quality]

emotion *n.* Any short-term evaluative, affective, intentional, psychological state, including happiness, sadness, disgust, and other inner feelings. *See also AFFECT, CANNON–BARD THEORY, COGNITIVE-APPRAISAL THEORY, IAPS, JAMES–LANGE THEORY, MIRROR NEURON, PERSONAL CONSTRUCT THEORY, PRIMARY EMOTIONS.* *Compare MOOD.* **emotional** *adj.* [From Latin *e-* away + *movere*, *motum* to move + *-ion* indicating an action, process, or state]

*****ebook converter DEMO Watermarks*****

emotional intelligence *n.* Ability to monitor one's own and other people's emotions, to discriminate between different emotions and label them appropriately, and to use emotional information to guide thinking and behaviour. The term appeared sporadically in the psychological literature during the 1970s and 1980s, but the concept was first formally defined in 1990 by the US psychologists Peter Salovey (born 1958) and John D. Mayer (born 1953), who later specified four groups of competencies that it encompasses: (a) the ability to perceive, appraise, and express emotions accurately; (b) the ability to access and evoke emotions when they facilitate cognition; (c) the ability to comprehend emotional messages and to make use of emotional information; and (d) the ability to regulate one's own emotions to promote growth and well-being. The following passage from *The Nicomachean Ethics* by the Greek philosopher Aristotle (384–322 BC) is often quoted as an illustration of emotional intelligence: 'Those who are not angry at the things they should be angry at are thought to be fools, and so are those who are not angry in the right way at the right time, or with the right persons; for such a man is thought not to feel things nor to be pained by them, and, since he does not get angry, he is thought unlikely to defend himself' (Book 4, Chapter 5, Bekker edition, p. 1126a). Popularized interpretations of emotional intelligence include various other factors such as interpersonal skills and adaptability. Also called *social intelligence*, especially when focusing on competencies belonging to (a) and (c). *See also* [EMOTIONAL QUOTIENT](#), [INTELLIGENCE](#), [MULTIPLE INTELLIGENCES](#), [PONS](#). **EI** *abbrev.*

emotional quotient *n.* An index of [*emotional intelligence](#) analogous to the [*IQ](#) index of conventional intelligence. A number of scales to measure the emotional quotient were developed following the publication in 1995 of a best-selling book *Emotional Intelligence* by the US psychologist and journalist Daniel Goleman (born 1946). Early measures of this variable were based on self-report measures of individuals' perceptions or appraisals of their own competencies and experiences in areas of functioning associated with emotional intelligence; development of more valid measures focusing on the key competencies began in the late 1990s. **EQ** *abbrev.*

empathogen *n.* Any drug such as [*ecstasy \(2\)](#) or [*GHB](#) that induces a feeling of [*empathy](#) and benevolence towards others. *See also* [ENTACTOGEN](#), [SOCIABILIZER](#). [From *empathy* + Greek *genein* to produce]

*****ebook converter DEMO Watermarks*****

empathy *n.* The capacity to understand and enter into another person's feelings and emotions or to experience something from the other person's point of view. The word was introduced into English in 1909 by the English psychologist Edward Bradford Titchener (1867–1927) as a translation of the German *Einfühlung*. See also [EMPATHOGEN](#), [MIRROR NEURON](#). [From Greek *empathēia* affection or passion, from *en-* in + *pathos* suffering]

empirical *adj.* Derived from observation or experiment rather than speculation or theory. See also [A POSTERIORI](#), [A PRIORI](#), [EMPIRICISM](#). [From Greek *en* in + *peira* a trial + *-ikos* of or relating to]

empirical induction *n.* Another name for [*induction \(1\)](#).

empiricism *n.* The doctrine associated especially with the English philosopher John Locke (1632–1704), the Irish philosopher Bishop George Berkeley (1685–1753), and the Scottish philosopher David Hume (1711–76), collectively known as British empiricists, that all elements of knowledge—or, in a less extreme version, all factual knowledge as distinct from logically deduced inferences—is derived from experience, adherents to this view often taking the experimental method as a prototype of knowledge acquisition in general. See also [A PRIORI](#), [A POSTERIORI](#), [HUME'S FORK](#), [INFERENCE](#), [LOGICAL EMPIRICISM](#), [LOGICAL POSITIVISM](#), [MOLYNEUX'S QUESTION](#), [POSITIVISM \(1\)](#), [TABULA RASA](#), [TRANSACTIONALISM](#). Compare [INNATE IDEA](#), [NATIVISM](#), [RATIONALISM \(1, 2\)](#).
empiricist *adj. n.*

empty-chair technique *n.* In [*Gestalt therapy](#), a technique in which the client switches between two chairs, acting out both sides of a conversation or argument with a spouse, relative, or other significant person. Also called *chairwork*.

enantiodromia *n.* The principle attributed to the Greek philosopher Heraclitus (?535–?475 BC) according to which everything eventually changes into its opposite. In [*analytical psychology](#), Carl Gustav Jung (1875–1961) described it as ‘the principle which governs all cycles of natural life, from the smallest to the greatest’ (*Collected Works*, 7, paragraph 112). [From Greek *enantios* opposite + *dromos* course + *-ia* indicating a condition or quality]

enantiomorph *n.* A structure that is a mirror image of another, being exactly the same shape as the other except for the reversal of left and right. Some pairs of molecules have this relational property. *See also* [HANDEDNESS \(2\)](#), [MENTAL ROTATION](#), [MIRROR REVERSAL PROBLEM](#). **enantiomorph***ic* *adj.* [From Greek *enantios* opposite + *morphe* a form or shape]

encéphale isolé *n.* A surgical preparation in which the central nervous system is severed between the bottom of the medulla oblongata and the top of the spinal cord. In cats operated on in this way, a normal sleep–wake cycle has been observed in their **EEGs*. *Compare* [CERVEAU ISOLÉ](#). [From French *encéphale* the brain + *isolé* isolated]

encephalic *adj.* Of or relating to the brain. [From Greek *enkephalos* brain, from *en* in + *kephale* the head + *-ikos* of, relating to, or resembling]

encephalitis *n.* Inflammation of the brain, causing signs and symptoms such as headache, neck pain, fever, nausea, vomiting, and sometimes neurological disturbances such as **convulsions*, **paralysis*, **asthenia*, or **coma*, sometimes leading to death. *Compare* [ENCEPHALOMYELITIS](#), [ENCEPHALOPATHY](#). [From Greek *enkephalos* brain, from *en* in + *kephale* head + *-itis* inflammation]

encephalitis lethargica *n.* A form of **encephalitis*, characterized by extreme **lethargy* and sleepiness, that emerged at the end of the First World War, developed into a worldwide epidemic in the 1920s, claiming the lives of more than a million people, and ended abruptly in 1928 without its cause ever having been determined, and that may have reappeared sporadically in subsequent decades. Also (colloquially) called *sleepy sickness*.

encephalization *n.* The increasing anatomical sophistication of the developing brain, beginning with the spinal cord and brainstem, followed by midbrain and forebrain regions, with the cerebral cortex, and particularly the frontal lobes, the last to show fully developed anatomical complexity. [From Greek *en* in + *kephale* the head + *-izein* to cause to become + *-ation* indicating a process or condition]

encephalization quotient *n.* An index of the comparative **intelligence* of animal species formulated by the Polish-born US psychologist Harry Jacob Jerison (born 1925): brain volume of the animal in question divided by brain volume of a standard comparison animal belonging to the same class, correcting for body size. If a cat is arbitrarily assigned a standard mammalian encephalization quotient of 1.0, then a rat scores 0.4, a chimpanzee 2.5, a dolphin 6.0, and a human 6.3. *Compare* [A/S RATIO](#), [PROGRESSION INDEX](#). **EQ** *abbrev.* [From Greek *en* in + *kephale* the head + Latin *quotiens* how many]

encephalogram *n.* An X-ray image of the brain, often taken after first replacing the **cerebrospinal fluid* with air or dye to show the **ventricles* clearly. Also called an *encephalograph*. *See also* [PNEUMOENCEPHALOGRAM](#). *Compare* [EEG](#). **encephalography** *n.* The production and interpretation of encephalograms. [From Greek *en* in + *kephale* the head + *gramme* a line]

encephalomalacia *n.* Softening of the brain caused by a vascular disorder associated with inadequate cerebral blood flow. [From Greek *en* in + *kephale* the head + *malakia* softness, from *malakos* soft + *-ia* indicating a condition or quality]

encephalomyelitis *n.* Inflammation of the brain and spinal cord, causing fever, headache, stiff neck, back pain, vomiting, and possibly **convulsions*, **coma*, and death. A person who recovers from this condition may be left with a **convulsive disorder* or impairment in intellectual ability. *Compare* [ENCEPHALITIS](#), [ENCEPHALOPATHY](#), [MYALGIC ENCEPHALOMYELITIS](#). [From Greek *enkephalos* brain, from *en* in + *kephale* head + *myelos* marrow + *-itis* inflammation]

encephalon *n.* A technical name for the brain. [From Greek *enkephalos* the brain, from *en* in + *kephale* the head]

encephalopathy *n.* Any pathological abnormality in the structure or function of the brain, especially a chronic and degenerative condition such as **BSE*, **Creutzfeldt–Jakob disease (CJD)*, **Gerstmann–Sträussler–Scheinker syndrome (GSS)*, **fatal familial insomnia (FFI)*, or **Wernicke's*

encephalopathy. Compare ENCEPHALITIS, ENCEPHALOMYELITIS. [From Greek *enkephalos* brain, from *en* in + *kephale* head + *pathos* suffering]

enclitic *n.* A monosyllabic *clitic that follows the word on which it depends. Compare PROCLITIC. [From Greek *enklitikos* something leaning, from *enklainein* to cause to lean + *-itikos* resembling or marked by]

enclosure grouping law *n.* Another name for the *common region grouping law of Gestalt psychology.

encoding *n.* Converting information into a different form or representation, especially (in psychology) the process whereby physical sensory information is transformed into a representation suitable for *storage in *memory and subsequent *retrieval. See also LEVELS OF PROCESSING. **encode** *vb.*

encoding specificity *n.* The effect on *recall from memory of the relation between *encoding operations at the time of learning and the *cues (3) available at the time of recall, the effectiveness of the encoding operation being dependent on the nature of the cues at recall, and the effectiveness of particular cues at recall being dependent on the nature of the earlier encoding operations. For example, research has shown that if a person reads the sentence *The man tuned the piano*, together with many other sentences, and later tries to recall the objects mentioned in all the sentences, then the cue *nice sound* facilitates the recall of *piano*, whereas the cue *something heavy* does not; but if the original sentence is *The man lifted the piano*, then *something heavy* is an effective cue but *nice sound* is not. References to this phenomenon can be traced to a book by the US psychologist Harry L. Hollingworth (1880–1956) published in 1928, where it was called the *principle of reinstatement of stimulating conditions*. Also called *encoding-retrieval interaction* or *transfer-appropriate processing*. See also STATE-DEPENDENT MEMORY.

encopresis *n.* In *DSM-5 an *elimination disorder of children at least 4 years old (or of equivalent *mental age), characterized by repeated defecation in inappropriate places, such as in clothing or on the floor, whether unintentionally or (less commonly) intentionally, the behaviour not being

*****ebook converter DEMO Watermarks*****

attributable to laxatives or other substances or to a ***general medical condition**. [From Greek *en* in + *kopros* excrement + *-esis* on the model of *enuresis*]

encounter group *n.* A form of ***experiential therapy** or ***group therapy** that aims to increase self-awareness and to encourage greater understanding of others through open and uninhibited expression of feelings along with verbal and physical confrontation and contact. *Compare* **T-GROUP**. [From Old French *encontrer* to meet face to face, from Latin *en* in + *contra* against]

endbrain *n.* Another name for the ***telencephalon**.

end bulb *n.* Another name for an ***axon's bouton**.

end effect *n.* Another name for the ***serial position effect**.

endemic *adj.* In ***epidemiology**, of or relating to a disorder commonly found in a particular place or population. *Compare* **EPIDEMIC (2)**, **PANDEMIC (2)**. [From Greek *endemos* native, from *en* in + *demos* the people + *-ikos* of, relating to, or resembling]

Endep *n.* A proprietary name for the tricyclic antidepressant drug ***amitriptyline**. [Trademark]

end foot *n.* Another name for a ***bouton**, or more generally a structure at the end of either an ***axon** or a ***dendrite**.

endocannabinoid *n.* A substance manufactured within the body, closely related to the active ***psychotropic** ingredient of ***cannabis**, functioning as an important regulator to control pain, to govern the flow of blood, and to influence the operation of the ***immune system** in ways that are not well understood. The existence of endocannabinoids, suspected for decades, was established in the late 1990s. [From Greek *endon* within + English *cannabis* + *-oid* indicating likeness or resemblance, from Greek *eidos* shape or form]

endocrine disorder *n.* Any disorder of the ***endocrine glands** or their

functions, including disorders of the [*HPA axis](#), which often have psychological effects.

endocrine gland *n.* Any of the ductless glands, including the [*adrenal glands](#), [*islets of Langerhans](#), [*ovaries](#), [*parathyroid glands](#), [*pineal gland](#), [*pituitary gland](#), [*testes](#), [*thymus gland](#), and [*thyroid glands](#), that secrete [*hormones](#) directly into the bloodstream, where they come into contact with specific receptors on target cells, allowing the endocrine system to function as an extensive signalling system within the body, alongside but independently of the nervous system. Secretions from the [*hypothalamus](#) control those of the pituitary gland, the master endocrine gland, and secretions from the pituitary in turn control those of the other endocrine glands. Also called a *ductless gland*. Compare [EXOCRINE GLAND](#). See also [NEUROENDOCRINE](#). [From Greek *endon* within + *krinein* to separate]

endocrine system *n.* The complete set of [*endocrine glands](#) and associated structures in an organism considered as a functional unit.

endocrinology *n.* The study of the [*endocrine glands](#) and their secretions.

endoderm *n.* The innermost germ layer of a human or animal [*embryo](#), from which the lining of the digestive and respiratory tracts are formed. Compare [ECTODERM](#), [MESODERM](#). [From Greek *endon* within + *derma* skin]

endogamy *n.* The cultural practice or custom of marriage between people within the same clan, tribe, or other group of related individuals; more generally, the fusion of [*gametes](#) from closely related parents. Compare [EXOGAMY](#). [From Greek *endon* within + *gameein* to marry]

endogenous depression *n.* A form of [*depression](#) that is not a reaction to an upsetting event or experience. Compare [REACTIVE DEPRESSION](#). [From Greek *endon* within + *genes* born]

endogenous opioid *n.* Any [*opiate](#) that is produced naturally in the brain and that binds to opiate receptors and blocks pain sensations. See [BETA-](#)

ENDORPHIN, DYNORPHIN, ENDORPHIN, ENKEPHALIN. [From Greek *endon* within + *genes* born]

endolymph *n.* A fluid contained within the **scala media* and the **semicircular canals* of the inner ears, functioning as an inertial mass resisting angular acceleration of the head, so that when the head is rotated, the **hair cells* that extend from the crista into the gelatinous membrane or cupula bend in the opposite direction, triggering nerve impulses. *See also* OTOLITH. *Compare* PERILYMPH. [From Greek *endon* within + Latin *lymph* water, influenced by Greek *nymphē* a nymph, alluding to the fact that it is a fluid within the membranous labyrinth, unlike perilymph]

endomorph *n.* A heavy and rounded physique or body build, believed by the US psychologist William H(erbert) Sheldon (1899–1977) and followers of his **constitutional psychology* to be associated with such personality characteristics as placidity, lack of anxiety, and pursuit of pleasure. *Compare* ECTOMORPH, MESOMORPH. **endomorph** *adj.* **endomorph** *n.* The state or condition of being an endomorph. [From Greek *endon* within + *morphe* a form or shape]

endoplasmic reticulum *n.* An extensive convoluted **membrane* inside cells, occurring in clumps called Nissl bodies, in which certain proteins are synthesized by **ribosomes* and are transported through or secreted from the cell. Areas of endoplasmic reticulum that are studded with protein-synthesizing ribosomes are called *rough endoplasmic reticulum* (*RER*), and areas that are not are called *smooth endoplasmic reticulum* (*SER*). *See also* ASPIRIN, MICROSOME, PROSTAGLANDIN. **ER** *abbrev.* [From Greek *endon* within + *plasma* a form + Latin *reticulum* a little net, diminutive of *rete* a net]

endopsychic *adj.* Of, relating to, or consisting of the contents of the mind. [From Greek *endon* within + *psyche* the mind + *-ikos* of, relating to, or resembling]

end organ *n.* The structure at the end of a peripheral neuron or nerve, such as a **bouton* at the end of a **motor nerve* or a **sensory receptor* at the end of a **sensory nerve*.

endorphin *n.* Any member of the group of **endogenous opioid* peptides that occur naturally in the brain and that bind to **opiate* receptors and block **pain* sensations, the other major families of brain opiates being **dynorphin* and **enkephalin*. The most important type of endorphin is **beta-endorphin* (β -endorphin). [From Greek *endon* within + *Morpheus* the god of sleep and dreams]

endothelium *n.* A single layer of cells that is derived from the embryonic **mesoderm* and that lines the internal cavities of the blood vessels and other fluid-filled internal cavities and glands of the body. *Compare* EPITHELIUM.
endothelia *pl.* **endothelial** *adj.* [From Greek *endon* within + *thele* a nipple]

endotherm *n.* Any animal that generates its own body heat, specifically a bird or a mammal. *Compare* ECTOTHERM. **endothermic** *adj.* Warm-blooded. [From Greek *endon* within + *therme* heat]

endowment effect *n.* The tendency to demand much more to give up an object than one is willing to pay to acquire it. The phenomenon was identified and named in 1980 by the US economist Richard H. Thaler (born 1945) and subsequently investigated experimentally by Thaler and others. In a typical experiment, participants were given either a lottery ticket or \$2.00. Some time later, each participant was offered the opportunity to trade the lottery ticket for money, or vice versa, but very few chose to switch, most preferring what they were endowed with. The phenomenon is closely related to **loss aversion*, and it shows that preferences must be understood in relation to status quo reference points, as in **prospect theory*. Also called *status quo bias*. *See also* COGNITIVE DISSONANCE.

end plate *n.* A shortened name for a **motor end plate*.

end-plate potential *n.* The **depolarization* of a **postsynaptic* cell membrane of a muscle fibre when it is stimulated at the **motor end plate* by a **motor neuron*, causing the muscle fibre to contract. *Compare* MINIATURE END-PLATE POTENTIAL. **EPP** *abbrev.*

end-stopped receptive field *n.* An area of the retina that when

stimulated by a bar or an edge oriented at a particular angle causes a neuron in the ***primary visual cortex** (Area V1) to discharge a nerve impulse, but that elicits a weaker response or no response from the neuron if the length of the stimulus exceeds a certain limit. A cortical neuron that responds in this way is called an *end-stopped neuron* or *end-stopped cell*. See also **HYPERCOMPLEX CELL**, **RECEPTIVE FIELD**.

engineering psychology *n.* Another name for ***ergonomics**.

engram *n.* A physical representation of a memory in the brain; a memory trace. Also called a *memory trace* or a *neurogram*. [From German *Engramm* an engram, from Greek *en* in + *gramme* a line]

enkephalin *n.* Either of two major ***endogenous opioid** peptides, met-enkephalin and leu-enkephalin, occurring naturally in the brain in small quantities and functioning as both ***hormones** and ***neurotransmitters**, binding to opiate receptors and blocking ***pain** sensations, the other major families of brain opiates being ***dynorphin** and ***endorphin**. [From Greek *en* in + *kephale* head + *-in(e)* indicating an organic compound]

entactogen *n.* An alternative name for an ***empathogen**, introduced by the US medicinal chemist and neuropharmacologist David E(arl) Nichols (born 1944) in an article in the *Journal of Psychoactive Drugs* in 1986 to avoid the implication of ***pathogenesis** and to capture the sense of something that produces ‘a touching within’. A typical entactogen is MDMA or ***ecstasy**. [From Greek *en-* in + Latin *tactus* a touching, from *tangere* to touch + Greek *genes* born]

entelechy *n.* According to the ancient Greek philosopher Plato (?427–347 BC), actuality as opposed to potential; according to the German rationalist philosopher and mathematician Gottfried Wilhelm von Leibniz (1646–1716), either the soul or a fundamental constituent element of reality called a ***monad**; according to the vitalist philosophers, a life force directing an organism towards a final end. [From Greek *en* in + *telos* an end + *echein* to have]

entopic *adj.* Situated normally. Compare **ECTOPIC**. [From Greek *endon* in +
*****ebook converter DEMO Watermarks*****]

topos a place + *-ikos* of, relating to, or resembling]

entorhinal cortex *n.* A thin strip of cortex in the **limbic system*, at the front of the parahippocampal gyrus, adjacent to and closely connected with the hippocampus, involved in integrating information from disparate sensory systems and in certain memory functions. *See also* *PAPEZ CIRCUIT*, *PERFORANT PATHWAY*. [From Greek *entos* within + *rhis*, *rhinos* the nose, alluding to the **rhinencephalon*]

entrainment *n.* The adjustment of a **biological clock* to synchronize with an external **Zeitgeber* such as the **diurnal* cycle of light and dark. **entrain** *vb.* [From French *entraînement* dragging along, from *entraîner* to drag along, from *en-* in + *trainer* to drag]

entropy *n.* A measure of the degree of disorder of a closed system, originally applied to a contained gas, expressed by $S = \sum p_i \log_2 p_i$ where p_i is the probability of a particular state of the system, the value of S in a closed system never decreasing over time according to the second law of **thermodynamics*. In work on **information theory*, the US mathematicians Norbert Wiener (1894–1964) and Claude E(lwood) Shannon (1916–2001) interpreted information as negative entropy, but this was deprecated by the British telecommunications engineer Colin Cherry (1914–79) and others. *See also* *NERNST HEAT THEOREM*. [Coined in 1865 by the German physicist and mathematician Rudolf Julius Clausius (1822–88) from Greek *en* in or into + *tropos* a turn, from *trepein* to turn, alluding to transformation of energy]

enuresis *n.* In **DSM-5*, an **elimination disorder* of children at least 5 years old (or of equivalent **mental age*), characterized by repeated urination into clothes or bedding, whether unintentional or (less commonly) intentional, occurring frequently or causing clinically significant distress or impairment of social, academic, or occupational functioning, the behaviour not being attributable to diuretics or other substances or to a **general medical condition*. *See also* *NOCTURIA*. [From Greek *en* in + *ouresis* urination]

environment *n.* The external surroundings within which an organism lives; or any external factors that affect the organism's development or

behaviour, as distinct from intrinsic **genetic* factors. **environmental** *adj.*
[From Old French *environner* to surround, from *environ* around]

environmentability *n.* The proportion of the **variance* in a **phenotypic trait* explained by, attributable to, or shared with environmental variance in a specified population at a particular time, and symbolized by e^2 . If environmental variance is V_E and total phenotypic variance is V_P , then $e^2 = V_E/V_P$. Also called *environmentality*. Compare *HERITABILITY*. [Formed from *environment* by analogy with *heritability*]

environmentality *n.* 1. Awareness of environmental issues and sense of responsibility to the natural world. 2. Another word for **environmentability*.

environmental psychology *n.* The study of psychological aspects and effects of the physical surroundings, including especially the built environment, in which people live and work.

envy, penis See *PENIS ENVY*.

enzyme *n.* Any of a large group of **protein* substances that are produced in living cells and that function as catalysts in biochemical reactions. An enzyme usually has an affinity for a particular chemical structure (the substrate), and the enzyme-substrate complex proceeds through the chemical reaction faster than the substrate alone. Chemical names ending in *-ase* are generally enzymes. See *ACETYLCHOLINESTERASE*, *ADENYLATE CYCLASE*, *ATPASE*, *CATECHOL-O-METHYL-TRANSFERASE*, *DNA LIGASE*, *DNA POLYMERASE*, *ESTERASE*, *LUCIFERASE*, *MONOAMINE OXIDASE*, *PEPSIN*, *PHOSPHODIESTERASE TYPE5*, *POLYMERASE CHAIN REACTION*, *RESTRICTION ENZYME*, *REVERSE TRANSCRIPTASE*, *RNA POLYMERASE*, *TYROSINE HYDROXYLASE*, *TRYPTOPHAN HYDROXYLASE*. [From Greek *en* in + *zyme* leaven]

enzyme induction *n.* The synthesis, usually by the liver, of an **enzyme* specifically adapted to metabolize a food or drug newly introduced to the body. It is one of the mechanisms of drug **tolerance* (3).

eonism *n.* The wearing of female clothing by a male. See *TRANSVESTISM*.

*****ebook converter DEMO Watermarks*****

[Named after Charles Eon de Beaumont (1728–1810), a celebrated French transvestite in the court of Catherine the Great]

epencephalon *n.* The part of the brain comprising the ***cerebellum** and ***pons**. Compare **METENCEPHALON**. [From Greek *epi* on + *enkephalos* the brain, from *en* in + *kephale* the head]

ependyma *n.* An epithelial ***membrane** that lines the ***ventricles** of the brain and the central canal of the spinal cord. **ependymal** *adj.* Of or relating to the ependyma. See also **EPENDYMAL CELL**. [From Greek *ependyma* an outer garment, from *epi* on + *endyma* a dress or garment, from *endyein* to put on]

ependymal cell *n.* Any of the ***neuroglial** cells of the ***ependyma** in the ventricles of the brain, with ***cilia** on their surfaces helping to propel cerebrospinal fluid through the ventricular system. Specialized ependymal cells form the ***choroid plexus**.

ephebophilia *n.* Sexual attraction to adolescents, sometimes classified as a ***paraphilia**. **ephebophiliac** *n.* One who practises ephebophilia. **ephebophilic** *adj.* [From Latin *ephebus* an adolescent, from Greek *ephebos* a young citizen from eighteen to twenty years of age, from *epi* above + *hebe* young manhood]

ephedrine *n.* A central nervous system ***stimulant drug** and ***sympathomimetic**, extracted mainly from the Chinese mahuang plant or manufactured synthetically, that acts indirectly by increasing the release of ***noradrenalin** (norepinephrine) from presynaptic neurons in the central nervous system and is used mainly for treating hay fever and asthma. It manifests ***tachyphylaxis**, a standard dosage producing a rapid and short-lived increase in blood pressure, but the same dosage repeated at 10-minute intervals resulting in smaller and smaller effects until, after several dosages, there is virtually no change in blood pressure. Also spelt *ephedrin*. Its street names include *Cloud nine* and *herbal ecstasy*. Formula: $\text{C}_6\text{H}_5\text{CHOHCH}(\text{CH}_3)\text{—NHCH}_3$. [From Latin *Ephedra sinica* the biological name of the mahuang plant from which it was originally extracted + *-ine* indicating a chemical compound]

epicene *adj.* **1.** Having characteristics of both **sexes* (1) or neither sex. Compare *ANDROGYNOUS*, *HERMAPHRODITE* (2). **2.** Of or relating to a noun that may refer to either **sex* (1) without changing its form, such as *flight attendant* as opposed to *air stewardess* or *firefighter* as opposed to *fireman*. See also *POLITICAL CORRECTNESS*. [From Greek *epikoinos* common (to both), from *epi* on + *koinos* common (to both)]

epicritic *adj.* Of or relating to certain **sensory nerve* fibres in the skin that are capable of fine discrimination between small degrees of variation. [From Greek *epikritikos* decisive, from *epi* on + *krinein* to separate or judge + *-itikos* resembling or marked by]

epidemic *n.* **1.** In **epidemiology*, an outbreak of a disorder afflicting large numbers of people in a particular place or population before moving to a different area. *adj.* **2.** Of, relating to, or taking the form of an epidemic (1). Compare *ENDEMIC*, *PANDEMIC* (2). [From Greek *epidemos* general, from *epi* among + *demos* the people + *-ikos* of, relating to, or resembling]

epidemiology *n.* The study of the **incidence*, **prevalence*, distribution, and control of disorders. [From Greek *epi* among + *demos* the people + *logos* word, discourse, or reason]

epidermis *n.* The thin outer **epithelial layer* of the **skin*, with a total surface area of approximately 1.67 square metres (18 square feet) in a human adult, containing some of the **touch receptors* and **pain* receptors. Compare *DERMIS*. **epidermal** or **epidermic** *adj.* [From Greek *epi* on + *derma* the skin]

epidural *adj.* On or outside the **dura mater*. [From Greek *epi* on + Latin **dura mater*]

epidural anaesthetic *n.* An injection of an anaesthetic into the space outside the dura mater at the bottom of the spinal cord, especially during childbirth.

epigenesis *n.* **1.** The theory, now universally accepted, that the development of an **embryo* consists of the gradual differentiation of the

fertilized ***ovum** and the piecemeal production and organization of structures, organs, and parts, in opposition to the theory of ***preformationism**, according to which an embryo is fully differentiated in the ovum or a spermatozoon and merely increases in size during development. **2.** More generally, changes in an organism that are due to environmental factors or to gene-environment interaction rather than to purely genetic factors. **3.** The appearance of specific characteristics at certain stages of development. [From Greek *epi* on + *genesis* birth]

epigenetics *n.* Changes in ***genes** other than changes in their ***DNA sequences**, including additions of methyl groups to the DNA backbone and changes caused by the activity of ***regulator genes** binding to ***gene operators**. Epigenetic changes caused by environmental factors are preserved when cells divide, and can sometimes be inherited by offspring. The best known example of epigenetics is the differentiation of a single fertilized cell after conception to form cells of different types, including ***neurons**, blood cells, skin cells, and muscle cells. *See also* **EPIGENOTYPE**, **GENETIC IMPRINTING**. **epigenetic** *adj.* **epigenome** *n.* The full epigenetic environment of a cell. **epigenomics** *n.* The study of epigenetic effects on cells. [Coined by the English geneticist Conrad Hal Waddington (1905–75) in an article entitled ‘The Epigenotype’ in the magazine *Endeavour* in 1941, from Greek *epi* on + *genesis* birth + *-itikos* resembling or marked by]

epigenotype *n.* The set of ***epigenetic** processes used by an organism to generate a ***phenotype** from a ***genotype**.

epilepsy *n.* A ***neurological** disorder, generally of unknown ***aetiology** though sometimes associated with brain damage, especially to the ***hippocampus** or ***temporal lobes**, characterized by recurrent ***convulsions**, sensory disturbances, ***absences**, or all of these, sometimes preceded by ***auras** (2), often associated with abnormal ***EEG** patterns during and also between attacks. *See also* **AMYGDALOHIPPOCAMPECTOMY**, **CLONIC CONVULSION**, **COMMISSUROTOMY**, **DRAVET SYNDROME**, **HEMISPHERECTOMY**, **IDIOPATHIC EPILEPSY**, **JACKSONIAN EPILEPSY**, **MAJOR EPILEPSY**, **MINOR EPILEPSY**, **PHOSPHENE**, **PHOTOSENSITIVE EPILEPSY**, **SCOTOMA**, **STATUS EPILEPTICUS**, **TEMPORAL LOBE EPILEPSY**, **TONIC-CLONIC**, **TONIC CONVULSION**. [From Greek *epi* on + *lepsis* a seizure, from *lambanein* to seize]

epinephrine *n.* Another name for ***adrenalin**, especially in US usage. **E** abbrev. [From Greek *epi* on + *nephros* a kidney + *-ine* indicating an organic compound]

epinosic gain *n.* Another name for ***secondary gain**. Also called *epinosic advantage*. [From Greek *epi* on + *nosos* a disorder]

epiphenomenalism *n.* An approach to the ***mind–body problem** that is a form of ***dualism** and one-way ***interactionism (1)**, assuming as it does that mental experiences are real but are merely trivial by-products or epiphenomena of one particular class of physical brain processes, real but incidental, like the smoke rising above a factory, so that physical processes can cause mental experiences but not vice versa. Compare **PSYCHOPHYSICAL PARALLELISM**. [From Greek *epi* on + *phainein* to show + *-ismos* indicating a state or condition]

epiphenomenon *n.* A by-product or any fortuitous or extraneous side-effect of a ***phenomenon**. [From Greek *epi* after + *phainomenon* a thing shown, from *phainein* to show]

epiphysis *n.* Short for epiphysis cerebri, literally a growth on the brain, the rarely used technical name of the ***pineal gland**. [From Greek *epi* on + *physis* growth, from *phyein* to produce, alluding to its appearance as a pimple on the base of the brain]

episcotister *n.* A device consisting of a rapidly rotating disc with opaque and transparent sectors of adjustable relative sizes, used for reducing the intensity of light by a known proportion and to determine ***critical flicker frequency** thresholds. [From Greek *episkotizein* to shadow or darken, from *epi* on + *skotizein* to darken, from *skotos* dark]

episodic amnesia *n.* Inability to recall certain (usually emotionally laden) experiences, with the rest of the memory functions intact. Also called *catathymic amnesia* or *lacunar amnesia*. Compare **EPISODIC MEMORY**.

episodic buffer *n.* A third ***buffer store** added to the ***working memory**

model by the English psychologist Alan (David) Baddeley (born 1934) in articles in the journals *Trends in Cognitive Sciences* (2000), *American Psychologist* (2001), and *Behavioral and Brain Sciences* (2001). It was intended to solve the problem of integrating items of information from the various subsystems of working memory and from long-term memory to enable their active maintenance and manipulation. It is assumed to be a limited-capacity buffer store capable of holding integrated scenes or episodes coded in multiple modalities, including especially visual and auditory codes. See also [EPISODIC MEMORY](#).

episodic memory *n.* A type of [*long-term memory](#) for personal experiences and events, such as being stung by a bee many years ago, getting married a few months ago, reading a particular book yesterday, or having an egg for breakfast a few minutes ago. Such knowledge is characteristically stored as information about specific experiences and events occurring at particular times and places, and it affords a sense of personal continuity and familiarity with the past. It accounts for only a small proportion of human memory, most of our memories having no basis in personal experience. The concept was introduced in 1972 by the Estonian-born Canadian psychologist Endel Tulving (born 1927), who distinguished it from [*semantic memory](#) and from [*procedural memory](#). Also called *autobiographical memory*. See also [AUTONOETIC](#), [EPISODIC BUFFER](#), [HYPERTHYMESIA](#), [MENTAL TIME TRAVEL](#). Compare [EPISODIC AMNESIA](#). [So called because it relates to episodes in one's life]

episodic paroxysmal anxiety *n.* Another name for [*panic disorder](#).

epistasis *n.* In genetics, the suppression or masking of a gene by another gene that is not its [*allele](#). See also [PENETRANCE](#). Compare [DOMINANCE \(GENETIC\)](#), [DOMINANT GENE](#). **epistatic** *adj.* [From Greek *epistasis* a stoppage, from *epi* on + *stasis* a standing]

epistemic *adj.* **1.** Of or relating to knowledge or [*epistemology](#). **2.** Of or relating to the use of a modal verb, such as *can*, *may*, *shall*, or *will* in a context in which the truth or falsity of a [*proposition \(1\)](#) is at issue, as in *Can she drive a car?* [From Greek *episteme* knowledge + *-ikos* of, relating to, or resembling]

epistemic reasoning *n.* *Reasoning about knowledge, especially reasoning that involves *modal logic. The *muddy children problem is a classic illustration of epistemic reasoning, and the *unexpected hanging is its most famous paradox.

epistemology *n.* The theory of *knowledge, especially the enquiry into what is to count as knowledge, the validity of knowledge, what distinguishes mere belief from knowledge, what kinds of things are knowable, and whether anything can be known for certain. *See also* GENETIC EPISTEMOLOGY, SOCIOLOGY OF KNOWLEDGE. [From Greek *episteme* knowledge + *logos* word, discourse, or reason]

epithalamus *n.* The part of the diencephalon immediately above the thalamus, comprising the *habenula, *pineal gland, and *posterior cerebral commissure. [From Greek *epi* on + English *thalamus*]

epithelium *n.* A sheet of tissue of tightly bound cells only a few cells thick that is derived from the embryonic *ectoderm and *endoderm and that covers the outer surface of the body, the *mucous membranes, and the lining of the gut, the retinas, and the glands. *See also* EPIDERMIS, NASAL EPITHELIUM. *Compare* ENDOTHELIUM. **epithelia** *pl.* **epithelial** *adj.* [From Greek *epi* on + *thele* a nipple]

epoche *n.* In *phenomenology, suspension of preconceptions, interpretations, and explanations as a precondition for the experience and description of uninterpreted sense experiences and ideas. Also called *bracketing*. [From Greek *epoche* stoppage or cessation, from *epechein* to hold back or pause, from *epi* on + *echein* to hold or have]

equal and unequal cases *See* METHOD OF EQUAL AND UNEQUAL CASES.

equal-appearing intervals *See* METHOD OF EQUAL-APPEARING INTERVALS, THURSTONE SCALE.

equality grouping law *n.* Another name for the *similarity grouping law of Gestalt psychology.

equal-loudness contour *n.* A plot determined by *loudness matching of tones, varying in frequency across the audible range, with the intensity levels in *decibel sound pressure level (dB SPL) that cause them to sound equally as loud to a listener as a standard comparison tone. For a standard comparison tone with a frequency of 1,000 hertz presented at an intensity of 60dB SPL, a tone with a frequency of 100 hertz may sound equally loud and therefore attain a loudness level of 60 *phons at about 80dB SPL, and so on. It was introduced in 1933 by the US acoustical scientist Harvey Fletcher (1884–1981) and the US engineer Wilden A. Munson (1902–82) and is also called a *Fletcher–Munson contour* or an *isophonic contour*.

equated forms *n.* Another name for *parallel forms.

equilibration *n.* In the theories of the Swiss psychologist Jean Piaget (1896–1980) and his followers, a process of *adaptation (3) to the environment that occurs mainly through *assimilation (2) and *accommodation (2) and that tends to maintain a state of cognitive equilibrium or balance when an individual acquires new information.

equilibrium hypothesis *n.* The proposition that participants in a social interaction who feel that the degree of intimacy conveyed by certain channels of *non-verbal communication is inappropriate to the level of intimacy of the relationship, will tend to compensate by reducing the intimacy conveyed through other channels. For example, when crowded situations such as underground trains force people to stand closer together than is ordinarily appropriate with strangers, they tend to reduce the level of intimacy by engaging in less *eye contact. The hypothesis was formulated by the English psychologist Michael Argyle (1925–2002) and his undergraduate student Janet Dean (now Janet Dean Fodor, born 1942) and first published in the journal *Sociometry* in 1965, together with experimental evidence that increased proximity tends to result in decreased eye contact.

equilibrium point (in game theory) *n.* Another name for a *Nash equilibrium. Often called simply an *equilibrium*.

equilibrium potential *n.* Another name for the *resting potential.

equiluminant *adj.* Another word for ***isoluminant**.

equipotentiality *n.* The principle formulated by the US physiological psychologist Karl Spencer Lashley (1890–1958) that different regions of the ***cerebral cortex** are equally involved in performing specific functions and have the capacity to take over functions from other regions that are damaged. This principle is now known to be true only within limits, there being a great deal of ***localization** of function in the brain. *See also* **MASS ACTION**.

equity theory *n.* A theory of social justice according to which people perceive a situation as fair when their own ratio of outcomes to inputs is the same as those of others with whom they compare themselves. Outcomes are the perceived receipts from a social interaction or exchange, including material benefits, social status, and intrinsic rewards, and inputs are the perceived contributions, including material contributions, seniority, education, skills, and effort. In terms of the theory, inequity is felt as uncomfortable even when it is in an individual's favour, and it tends to generate behaviour aimed at restoring equity, such as altering inputs or outcomes or cognitively distorting them, leaving the field, attempting to distort the other person's perceptions of inputs or outcomes, or changing the person used as a point of comparison. It was formulated by the US sociologist George Caspar Homans (1910–89) in his books *The Human Group* (1950) and *Social Behavior: Its Elementary Forms* (1961) and introduced into psychology in 1965 by the Belgian-born US psychologist J(ohn) Stacey Adams (born 1925). *See also* **COGNITIVE DISSONANCE**, **RELATIVE DEPRIVATION**.

equivalent-form reliability *n.* A measure of the ***reliability** of a test based on the correlation between ***equivalent forms** of a test. Also called *parallel-form reliability*.

equivalent forms *n.* In psychometrics, ***alternative forms** of a test that are similar in all important properties.

equivocal sign *n.* Another name for a ***soft sign**.

erectile disorder *n.* A *sexual dysfunction in *DSM-5 characterized by persistent or recurrent inability to attain or maintain an adequate erection of the penis until completion of sexual activity, causing significant distress or problems of interpersonal interaction, believed to affect between 13 per cent and 21 per cent of men aged 40–80 years on at least some occasions. It is not diagnosed if it is attributable to a drug or a *general medical condition. Also called *erectile dysfunction (ED)*, *erectile impotence*, or *impotence*. See also CYCLIC GMP, DE-REFLECTION, IMPOTENCE (2), VIAGRA. Compare MALE ORGASMIC DISORDER. **ED** abbrev.

erectile dysfunction See ERECTILE DISORDER, IMPOTENCE (2). **ED** abbrev.

erectile impotence See IMPOTENCE (2).

ergonomics *n.* A branch of *industrial/organizational psychology or *occupational psychology concerned with fitting jobs to people rather than people to jobs. Ergonomists design jobs, equipment, and work places to maximize performance and well-being and to minimize accidents, fatigue, boredom, and energy expenditure. Also (especially in the US) called *biotechnology*, *human factors psychology*, or *engineering psychology*. See also KNOBS-AND-DIALS PSYCHOLOGY, PERSONNEL PSYCHOLOGY. **ergonomic** *adj.* **ergonomist** *n.* One who practises ergonomics. [From Greek *ergon* work + *nomos* management, from *nemein* to manage]

ergot *n.* A fungus that grows on wheat or rye, or an *alkaloid drug derived from it that induces contractions of the womb in women and is a powerful vasoconstrictor, useful in the treatment of *migraine headaches and haemorrhage. [From French *ergot* a cock's spur, which the fungal projections on the ears of wheat or rye resemble in shape]

ergotism *n.* Poisoning resulting from eating grain affected by *ergot or from an overdose of ergot alkaloid drugs (often in medicines prescribed for migraine headaches), characterized by cerebrospinal symptoms, spasms, cramps, and dry gangrene caused by vasoconstriction. See also BROMOCRIPTINE.

Erhard Seminars Training See EST.

Eriksen flanker task See FLANKER COMPATIBILITY EFFECT.

Eriksonian *adj.* Of or relating to the theories of the German-born psychoanalyst of Danish extraction Erik H. Erikson (1902–94), or to the work of the US physician Milton H. Erikson (1901–80), who developed a form of therapy based on hypnosis. See DEVELOPMENTAL CRISES, EGO IDENTITY, EGO PSYCHOLOGY, IDENTITY CRISIS.

Erklärung See VERSTEHEN.

erogenous zone *n.* Any area of the body that is capable of causing or increasing sexual arousal when stimulated. See also EROTOGENIC ZONE. [From Greek *eros* love or desire + *genes* born]

Eros *n.* In *psychoanalysis, the life instincts, usually including both the *sexual instinct and the *ego instinct (the *self-preservation instinct), the aim of which are to create and maintain the integrity of things. Sigmund Freud (1856–1939) was not entirely consistent in his usage of the term: in his book *Beyond the Pleasure Principle* (1920), he used it as a synonym for *libido: ‘the libido of our sexual instincts would coincide with the Eros of the poets and philosophers’ (*Standard Edition*, XVIII, p. 50), but in other publications he included self-preservation within its scope. In his last discussion of this issue in his book *An Outline of Psycho-Analysis* (1938/40) he defined libido as the energy associated with Eros: ‘the total available energy of Eros, which henceforward we shall speak of as “libido”’ (*Standard Edition*, XXIII, p. 149), and he also identified the underlying principle of Eros to be *binding: ‘to establish ever greater unities and to preserve them’, whereas the principle underlying *Thanatos is ‘to undo connections and so to destroy things’ (p. 148). See also HORME, OBJECT INSTINCT. [Named after Eros in Greek mythology, the god of love and daughter of Aphrodite, from Greek *eros* love or sexual desire]

erotic *adj.* Of or relating to sexual desire. [From Greek *eros* love + *-ikos* of, relating to, or resembling]

erotic love *n.* A primary type of ***love** that is passionate and ***erotic**, being rooted in sexual attraction. *Compare* AGAPIC LOVE, LUDIC LOVE, MANIC LOVE, PRAGMATIC LOVE, STORGIC LOVE.

erotism *See* ALLO-EROTISM, ANAL EROTISM, AUTO-EROTISM, ORGAN EROTISM, PHALLIC EROTISM, URETHRAL EROTISM.

erotogenic zone *n.* In ***psychoanalysis**, another name for an ***erogenous zone**, specifically the oral, anal, and genital areas of the body. Sigmund Freud (1856–1939) first outlined his ideas about erotogenic zones in 1896 and 1897 in letters to his friend, the German physician Wilhelm Fliess (1858–1928), and then published his theory in 1905 in his book *Three Essays on the Theory of Sexuality* (*Standard Edition*, VII, pp. 130–243, at pp. 183–4). By 1938, when he published *An Outline of Psycho-Analysis*, he had decided that ‘in fact the whole body is an erotogenic zone’ (*Standard Edition*, XXIII, pp. 144–207, at p. 151). Also called a *primary zone*. *See also* ANAL EROTISM, INSTINCTUAL SOURCE, LIBIDINAL STAGE, ORAL EROTISM, PHALLIC EROTISM, URETHRAL EROTISM. *Compare* HYSTEROGENIC ZONE. [From Greek *eros* love or sexual desire + *genes* born + *-ikos* of, relating to, or resembling]

erotomania *n.* 1. A ***delusion** of being loved by another person, often a famous person or someone of higher status. People with the disorder usually have little or no direct contact with those they imagine to be in love with them but frequently believe that their secret lovers initiated the relationships and communicate their love by gestures, choice of clothing, or other subtle signals. Also called *de Clérambault's syndrome*. *See also* EROTOMANIC DELUSIONAL DISORDER, STALKING. 2. Abnormally strong sexual desire. [From Greek *erotikos* of or relating to love, from *eros* love + *-ikos* of, relating to, or resembling + *mania* madness]

erotomantic delusional disorder *n.* A type of ***delusional disorder** in which the central delusion is ***erotomania** (1); also called *Clérambault's syndrome*, *psychose passionelle*, or *pure erotomania*.

error bar *n.* On a graph of points representing ***means**, a line through a point indicating the margin of error (see *illustration*). Error bars on a ***line**

graph or *[histogram](#) may indicate *[confidence intervals](#), *[standard deviations](#), or *[standard errors](#) of the means, standard errors frequently being preferred because they provide a visual guide to *[statistical significance](#): if two SE error bars overlap, then the difference between the two means is non-significant (at $p < .05$), whereas if they do not overlap, then the difference is usually significant. Compare [BOX-AND-WHISKER PLOT](#).

Error bar. The vertical lines through the four means represent standard errors of the means, suggesting that adults improved significantly but children did not.

error variable *n.* In statistics, any variable defined by the difference between observed scores and values predicted by a *[model](#).

error variance *n.* In statistics, the portion of the *[variance](#) in a set of scores that is due to *[extraneous variables](#) and measurement error.

erythrocyte *n.* A red button-shaped blood corpuscle containing

***haemoglobin** and transporting oxygen to and carbon dioxide from body tissues. Also called a *red blood cell* or *red blood corpuscle*. See also **ERYTHROPOIETIN**, **STEM CELL**. Compare **LEUCOCYTE**. [From Greek *erythros* red + *kytos* a vessel]

erythropoietin *n.* A protein that is secreted by the kidney in response to low levels of oxygen in the blood and that increases the rate of formation of ***erythrocytes** in the ***blood**. Sometimes injected by competitive cyclists and other athletes as a virtually undetectable ***performance** enhancer that allows more oxygen to be transported to the muscles, thereby raising the level of ***aerobic** energy production. **EPO** *abbrev.* [From Greek *erythro(s)* red + *poiet(ikos)* capable of making, from *poiein* to make + *-itikos* resembling or marked by + *-in(e)* indicating an organic compound]

erythropsia *n.* A visual defect in which everything appears reddish, often caused by overexposure to bright light. Also spelt *erythropia*. [From Greek *erythr(os)* red + *ops* an eye + *-ia* indicating a condition or quality]

escalated fighting *n.* Physical aggression or conflict involving actual or potential bodily injury to the participants, comparatively rare among animals and humans. See also **HAWK–DOVE GAME**, **HAWK–DOVE–RETALIATOR GAME**, **RESOURCE-HOLDING POTENTIAL**. Compare **CONVENTIONAL FIGHTING**.

E scale *abbrev.* A scale to measure ***ethnocentrism**, especially the scale first published by the German philosopher, sociologist, and psychologist Theodor W(iesengrund) Adorno (1903–69) and several colleagues in the book *The Authoritarian Personality* (1950). See also **AUTHORITARIANISM**.

escape conditioning *n.* A form of ***operant** conditioning in which an organism learns to avoid an aversive stimulus. Typically, a rat is placed in a long, narrow alleyway with an electrified grid floor and can escape painful stimulation by running to the end of the alley and stepping into a non-electrified goal box, learning being evidenced by progressively faster running speeds. Also called *escape learning*. Compare **AVOIDANCE CONDITIONING**.

escape learning *n.* Another name for ***escape conditioning**.

Escher figure *n.* Another name for an **impossible figure*. [Named after the Dutch graphic artist Maurits C(ornelis) Escher (1898–1972) who included many impossible figures in his etchings]

eserine *n.* Another name for **physostigmine*. [From *éséré* West African name for the **Calabar bean* + *-ine* indicating an organic compound]

esophagus See OESOPHAGUS.

esotropia *n.* A form of **strabismus* in which one or both eyes turn inwards towards the nose, referred to non-technically as *cross-eye squint*.
esotropic *adj.* [From Greek *eso* inner + *tropos* a turn + *ops* an eye + *-ia* indicating a condition or quality]

espanto *n.* Another name for **susto*. [Spanish *espanto* fright or terror, from *espantar* to scare or frighten]

ESP cards *n.* Another name for **Zener cards*.

essential amino acid See AMINO ACID.

essentialism *n.* The doctrine propounded by the Greek philosophers Plato (?427–?347 BC) and Aristotle (384–322 BC), and developed in the modern era by the German philosopher Edmund (Gustav Albert) Husserl (1859–1938) and others, that any concept or thing is defined by certain attributes (essences) that it necessarily possesses. According to some versions, these necessary attributes are logically prior to particular instances of concepts or things, and classifications can be made only according to the underlying essences. The **componential theory* is a typical example of essentialism. *Methodological essentialism* asserts that scientific research must penetrate to the essence of things in order to explain them. The terms *essentialism* and *methodological essentialism* were introduced and the concepts criticized by the Austrian-born British philosopher Karl R(aimund) Popper (1902–94) in a journal article in *Economica* published in 1944, reprinted in Section 10 of his book *The Poverty of Historicism* (1957). See also PSYCHOLOGICAL ESSENTIALISM. Compare NOMINALISM, PROTOTYPE THEORY.

essentialist *adj.* [From Latin *essentia* essence, from *esse* to be + Greek *-ismos* indicating a state or condition]

est *abbrev.* Erhard Seminars Training, a technique of **group therapy*, designed to raise self-awareness and foster psychological growth, in which people spend sessions lasting many hours deprived of food, drink, and toilet facilities during which they are hectored, abused, and demeaned by stewards. In 1984 the name was changed to Landmark Forum, but it continued to be called est by many people. [Named after the US businessman Werner Erhard (born 1935), who developed the technique in 1971 after dropping his original name Jack Rosenberg and styling himself after the German theoretical physicist Werner Heisenberg and the German economics minister Ludwig Erhard]

ester *n.* A compound formed by a reaction between an alcohol and an acid with the elimination of water, usually resulting in the formation of a volatile aromatic oil or fat that is **psychotropic* when inhaled. *See also* *INHALANT-RELATED DISORDERS*. [Named in 1822 by the German chemist and physician Leopold Gmelin (1788–1853), from German *Es(sig)* vinegar + *(Ä)t(h)er* ether]

esterase *n.* Any **enzyme* that **hydrolyses* an **ester* into an alcohol and an acid. [From *ester* + *-ase* denoting an enzyme, from *diastasis* separation]

esthesiometer *See* *AESTHESIOMETER*.

estimation *n.* The branch of statistics devoted to estimating **parameters* on the basis of data from samples and analysing the properties of estimators such as unbiasedness and efficiency.

estradiol *See* *OESTRADIOL*.

estrogen *See* *OESTROGEN*.

estrone *See* *OESTRONE*.

estrous cycle See OESTROUS CYCLE.

estrus See OESTRUS.

eta coefficient See CORRELATION RATIO. [From the name of η , the seventh letter of the Greek alphabet]

ethanol *n.* Another name for ***ethyl alcohol**. See ALCOHOL.

e-therapy *n.* ***Psychotherapy** conducted over the internet, by e-mail, or by phone. Also called *online counselling* (US *online counseling*) or *online therapy*. [From *e(lectronic)* + Greek *therapeuein* to heal or take care of, from *theraps* an attendant]

ethereal odour *n.* One of the six primary odours in ***Henning's prism**, one of the nine in the ***Zwaardemaker smell system**, and one of the seven in the ***stereochemical theory**, resembling the odour of ether or cleaning fluid. US *ethereal odor*. [From Greek *aither* ether]

ethnic *adj.* Of, relating to, or characteristic of a human community or group with shared historical roots and a common language, religion, and culture. Ethnic groups are often, though not always, distinguished also by shared territory and/or common ***race (2)**. **ethnicity** *n.* Shared historical, linguistic, religious, and cultural identity of a social community, group, nation, or race. [From Greek *ethnos* a nation + *-ikos* of, relating to, or resembling]

ethnic marker *n.* Any of the signs by which ***ethnic** boundaries are defined or maintained, including language, religious and cultural symbols, or territory.

ethnocentrism *n.* A tendency or disposition to judge other ***ethnic** groups, cultures, nations, or societies by the standards and customs of one's own, often accompanied by a dislike or misunderstanding of other such groups and a belief in the intrinsic superiority of one's own. See also AUTHORITARIANISM. Compare ABLEISM, AGEISM, FATTISM, HETEROSEXISM, RACISM,

[SEXISM](#), [SPECIESISM](#). **ethnocentrist** *n.* 1. One who practises or advocates ethnocentrism. *adj.* 2. Of or relating to ethnocentrism. [From Greek *ethnos* a nation + *kentron* a sharp point]

ethnography *n.* 1. The branch of anthropology devoted to the scientific study of individual human societies. 2. A scientific study of an individual human society. **ethnographer** *n.* One who practises ethnography. **ethnographic** or **ethnographical** *adj.* [From Greek *ethnos* a nation + *graphein* to write]

ethnology *n.* The branch of anthropology concerned with the comparative study of cultures; formerly, the historical and comparative study of [*races](#) (2). **ethnological** *adj.* **ethnologist** *n.* One who practises ethnology. [From Greek *ethnos* a nation + *logos* word, discourse, or reason]

ethnomethodology *n.* A term coined in 1967 by the US sociologist Harold Garfinkel (1917–2011) to denote an approach to the study of human communication emphasizing common-sense language and interpretations of the world and making considerable use of [*participant observation](#). See also [CONVERSATION ANALYSIS](#). **ethnomethodological** *adj.* [From Greek *ethnos* a nation or race + English *methodology* denoting people's method]

ethology *n.* The study of behaviour in natural habitats, especially but not exclusively animal behaviour. Compare [ANIMAL PSYCHOLOGY](#), [COMPARATIVE PSYCHOLOGY](#). See also [EVOLUTIONARY PSYCHOLOGY](#). **ethological** *adj.* **ethologist** *n.* One who practises ethology. [From Greek *ethos* character + *logos* word, discourse, or reason]

ethyl alcohol *n.* The main psychotropic constituent of intoxicating liquors. Also called *ethanol*. Formula C₂H₅OH. See [ALCOHOL](#). [From *eth(er)*, from Greek *aithein* to burn + (h)yl(e) wood or matter + English *alcohol*]

etic *adj.* In linguistics, of or relating to speech characteristics that are considered without regard to their function within the language. In sociology and social psychology, of or relating to an account of a social phenomenon made from the perspective or viewpoint of an outside observer, such as a

researcher, rather than that of a participant in the social situation. *Compare* [EMIC](#). [Coined in 1967 by the US linguist Kenneth Lee Pike (1912–2000), from **(phon)etic*]

etiology *See* [AETIOLOGY](#).

etymological fallacy *n.* The belief that an earlier or the earliest meaning of a word is necessarily the right one. That it is fallacious is illustrated by the fact that *orchard* once meant a treeless garden, *treacle* a wild beast, and *villain* a farm labourer.

etymology *n.* The study of the origins and development of words and their meanings. [From Greek *etymos* true + *logos* a word]

eudaimonic well-being *n.* An ancient concept imported into modern psychology in an article in the *Journal of Personality and Social Psychology* in 1989 by the US psychologist Carol D. Ryff (born 1950) and incorporated into [*positive psychology](#) after 2000. According to Ryff, it is a type of well-being with the following six dimensions: self-acceptance, positive relations with others, autonomy, environmental mastery, purpose in life, and personal growth. Its chief significance is that it goes beyond short-term [*hedonic well-being](#); it reflects how one feels about life when thinking about it, rather than how one feels about life when living it. Also spelt *eudemonic* or *eudaemonic well-being*. [From Greek *eudaimonia* defined by Aristotle in his *Nicomachean Ethics* (1095a, 15–22) as ‘doing and living well’, from *eu-* well + *daimon* inner or guardian spirit pleasure + *-ikos* of, relating to, or resembling]

eugenic *adj.* Tending to lead to an increase in the quality or fitness of a group of interbreeding organisms. *Compare* [DYSGENIC](#). **eugenicist** *n.* One who practises or advocates [*eugenics](#). [From Greek *eu* well or good + *genein* to produce + *-ikos* of, relating to, or resembling]

eugenics *n.* The science or pseudoscience concerned with the genetic improvement of the human species, or of selected [*races](#) (2), especially by selective breeding.

eukaryote *n.* An organism composed of cells with well-defined ***nuclei** (1) containing genetic material. All organisms except bacteria, cyanobacteria (blue-green algae), and viruses are eukaryotes. Also spelt *eucaryote*. Compare **PROKARYOTE**. [From Greek *eu* well or good + *karyon* a kernel]

eukaryotic cell *n.* A biological cell with a ***nucleus** (1) containing genetic information. Also spelt *eucaryotic cell*.

Euler diagram *n.* A pictorial representation of ***propositions** (1) or ***sets** (1) by means of overlapping circles (see **illustration**). A ***Venn diagram** is a refined and improved version of it. Also called *Euler's circles*. [Named after the Swiss mathematician Leonhard Euler (1707–83) who introduced them and used them extensively]

Euler diagram. The four basic relations between two sets, A and B. The first diagram at the top shows 'some A are not B'. The two diagrams below it show 'some A are B' and 'all B are A'. The bottom diagram shows 'no A is B'.

euphemism *n.* A usage of language in which an inoffensive word or expression is substituted for one that is considered unpleasant or derogatory, as in *pass away* for *die* or *sleep with* for *have sexual intercourse with*. Compare **DYSPHEMISM**. [From Greek *eu* good + *pheme* speech, from *phanai* to speak]

euphoria *n.* An **affective* state of exaggerated well-being or elation.
euphoric *adj.* [From Greek *eu* good + *pherein* to bear + *-ia* indicating a condition or quality]

euphoriant *n.* (Of or relating to) anything, especially a **psychotropic* drug, that induces or tends to induce euphoria. See ANABOLIC STEROID, ANTIDEPRESSANT, ANXIOLYTIC, APHRODISIAC, BETEL, CANNABIS, CATNIP, EMPATHOGEN, HALLUCINOGEN, KAVA, MEPHEDRONE, Mescaline, NARCOTIC, OPIUM, PHANTASTICANT, PSYCHEDELIC, STIMULANT DRUG. [From Greek *euphoria* good ability to endure, from *eu* good + *pherein* to bear]

eureka moment *n.* A point in time when a scientific discovery is made or an **insight* occurs; more generally, a moment of inspiration, an exciting or significant experience, or an **aha experience*. [From Greek *heureka* I have found it, from *heuriskein* to find]

eusocial *adj.* Of or relating to certain species of **social insects* that cooperate in caring for their young, show reproductive division of labour, with sterile organisms working for others that are reproductive, and contribute simultaneously to the work of the colony with an overlap of at least two generations. The eusocial insects include all ants and termites and some bees and wasps. **eusociality** *n.* [From Greek *eu* well or good + Latin *socius* a companion]

Eustachian tube *n.* A passageway lined with a mucous membrane that joins the **pharynx* and the **middle ear* cavity, allowing equalization of the air pressure in the middle ear when atmospheric pressure changes, as when travelling by aircraft. Also (non-technically) called an *auditory tube*. Compare AUDITORY CANAL. [Named after the Italian physician Bartolomeo Eustachio (1520–74) who was the first to describe it in his *De Auditu Organis* in 1562]

eustress *n.* Any form of **stress* (1) that is beneficial, usually associated with a feeling of fulfilment and achievement rather than anxiety. See also POST-TRAUMATIC GROWTH. [Formed from Greek *eu* well or good + English *stress*, on the model of *distress*]

euthymic mood *n.* A *mood (1) within the temperate range, without the characteristics of *depressed mood, *dysphoric mood, *elevated mood, *irritable mood, or any other strongly affective mood. [From Greek *eu-* well + *thymos* spirit]

evaluation apprehension *n.* Anxiety induced in a person performing some task while being observed by others and feeling anxious about being judged or appraised by them. One of its effects is to increase the person's level of *arousal, which may improve or impair performance, depending on the nature of the task. *See also* AUDIENCE EFFECT, COACTION EFFECT, DRIVE THEORY OF SOCIAL FACILITATION.

evaluation research *n.* A form of *applied research undertaken to test the effectiveness of some programme or intervention, such as a new teaching method in a school system or a new crime prevention policy in a city. *See also* BASIC RESEARCH, DESCRIPTIVE RESEARCH, EXPLORATORY RESEARCH. *Compare* ACTION RESEARCH.

evaluative conditioning *n.* An increase or decrease in liking occurring as a consequence of *associative learning or *classical conditioning, first reported by the Russian-born US psychologist Gregory Razran (1901–73) in an article in the journal *Psychological Bulletin* in 1940. Participants rated a series of political slogans (considered as *conditioned stimuli) on a like–dislike rating scale, and were later asked to rate the slogans a second time. Those who performed the second rating in the context of a free lunch (considered as an *unconditioned stimulus) rated the slogans significantly more positively than others who performed the second rating while being exposed to an unpleasant smell. The term *evaluative conditioning* was introduced in 1975 by the Canadian-born British psychologist Archie B(anks) Levey (1924–2012) and the English psychologist Irene Martin (1926–2009) in an article in the journal *Behaviour Research and Therapy* that also popularized the *picture–picture technique. **EC** abbrev.

Eve *n.* In the Old Testament (Genesis 2:18–25), the first woman, fashioned from Adam's rib. By analogy, the name given by the US biochemist Allan C. Wilson (1935–91) to a woman living in Africa 150,000–200,000 years ago from whom the *mitochondrial DNA of the entire population of the world
*****ebook converter DEMO Watermarks*****

evolved, according to research using the technique of the **evolutionary clock*. [Named after the Old Testament Eve, influenced by the fact that the name echoes the first syllable of *evolution*]

event-related potential *n.* Another name for an **evoked potential*, especially an **EEG* response to a specific sensory, motor, or cognitive **stimulus* (5), associated with the sequential processing of information. When evoked by an external event, it is called an *exogenous event-related potential*, and when evoked by an internal mental process, it is called an *endogenous event-related potential*. Particular event-related potentials are generally named by the letter P or N, depending on whether their voltage deflections are positive or negative, followed by a number indicating the **latency* of the waveform's peak in milliseconds. For example, the first major deflection in response to an auditory click is usually a positive deflection peaking 50 ms after the stimulus, therefore called P50; but sometimes they are labelled P1, P2, P3 or N1, N2, N3, and so on, the numbers indicating their ordinal positions in the waveform (first, second, and so on). See *CONTINGENT NEGATIVE VARIATION*, *N140*, *N400*, *P50*, *P200*, *P300*, *P600*. See also *AVERAGE EVOKED POTENTIAL*, *READINESS POTENTIAL*, *STRING LENGTH*. **ERP** *abbrev.*

evil eye *n.* An English name for **mal de ojo*.

eviration *n.* A delusion of a man that he has been transformed into a woman. [From Latin *e-* away + *vir* a man + *-ation* indicating a process or condition]

evoked potential *n.* A type of **EEG* response, either generated in the primary sensory areas of the brain, initiated by a sensory stimulus, and called a sensory or exogenous potential, or generated elsewhere in the brain, initiated by cognitive activity, and called an event-related or endogenous potential. It is conventionally plotted as an amplitude change over time and symbolized by a letter followed by a number, thus the second positive evoked potential occurring 200 milliseconds after the initiating event is written either P2 (because it is the second positive potential) or P200. Also called an *evoked response*. See also *AVERAGE EVOKED POTENTIAL*, *CONTINGENT NEGATIVE VARIATION*, *EVENT-RELATED POTENTIAL*, *NERVE CONDUCTION VELOCITY*, *N140*, *N400*, *P50*, *P200*, *P300*, *P600*, *READINESS POTENTIAL*, *STRING LENGTH*. **EP** *abbrev.*

*****ebook converter DEMO Watermarks*****

evolution *n.* The gradual changes in populations of organisms over successive generations, producing new species that are quite distinct from their remote ancestors. *See also* [DARWINIAN EVOLUTION](#), [NATURAL SELECTION](#). [From Latin *evolutio* an unrolling, from *evolvere* to unroll, from *e-* from + *volvere*, *volutum* to roll + *-ion* indicating an action, process, or state]

evolutionarily stable strategy *n.* Any hereditary pattern of behaviour that is fixed in the sense that, in a population in which most individuals adopt it, no alternative behaviour pattern has a greater **Darwinian fitness*, and therefore none is favoured over it by **natural selection*. The concept was introduced in 1973 by the English biologist John Maynard Smith (1920–2004) and the US physicist and chemist George R(obert) Price (1922–75). Often mistakenly written *evolutionary stable strategy*. *See also* [HAWK–DOVE GAME](#), [HAWK–DOVE–RETALIATOR GAME](#), [STRATEGY \(2\)](#). **ESS** *abbrev.*

evolutionary bottleneck *n.* A sudden decrease in the size of a population, usually because of an environmental catastrophe, resulting in a loss of genetic variability and therefore adaptability even if the population recovers to its original size. *See also* [AVERAGE HETEROZYGOSITY](#).

evolutionary clock *n.* The accumulation of changes in non-genetic stretches or **introns* of (especially) **mitochondrial DNA* that occur at a fairly constant rate and can be calibrated with real time to enable estimates to be made of how long ago present-day organisms diverged from their common ancestors. *See also* [EVE](#), [MATERNAL INHERITANCE](#), [PARSIMONY PRINCIPLE](#). *Compare* [GLOTTOCHRONOLOGY](#), [LEXICOSTATISTICS](#).

evolutionary psychology *n.* An approach to psychology influenced by **sociobiology* and **ethology*, based on the assumption that human cognition can best be understood in the context of evolution. The human **brain* is viewed as a physical system of neural circuitry incorporating multiple psychological **adaptations (1)* evolved by **natural selection* to generate behaviour and solve problems posed by environmental circumstances in the evolutionary history of the species, especially during the Stone Age, the period from about 2.5 million to 6,000 BC, covering well over 99 per cent of human evolutionary history. The approach reached maturity in
*****ebook converter DEMO Watermarks*****

the late 1980s, through the writings of the US psychologist Leda Cosmides (born 1957) and the US anthropologist John Tooby (born 1952), among others, and was popularized by their influential book, *The Adapted Mind: Evolutionary Psychology and the Generation of Culture* (1992), co-edited with a colleague, although the term *evolutionary psychology* had been introduced by the US biologist Michael T. Ghiselin (born 1939) in the title of an article in the journal *Science* in 1973. *See also* [BEHAVIOURAL ECOLOGY](#).

examination anxiety *n.* Another name for [*test anxiety](#). Also called *exam anxiety*.

excitation *n.* The action of a [*stimulus](#) (1, 5) in evoking a [*response](#) from an organism, or from a cell, tissue, or organ, or the disturbed or altered state resulting from such arousal. *See also* [EXCITATORY](#), [EXCITATORY POSTSYNAPTIC POTENTIAL](#). *Compare* [INHIBITION](#) (2, 3). **excite** *vb.* [From Latin *ex-* out + *ciere* to set in motion + *-ation* indicating a process or condition]

excitatory *adj.* Tending to cause [*excitation](#). In neurophysiology, characteristic of [*neurons](#) that cause other neurons to fire, or neurotransmitters, the action of which tends to cause neurons to fire, or [*synapses](#) (1) at which the transmission of nerve impulses tends to cause postsynaptic neurons to fire. *See also* [EXCITATORY POSTSYNAPTIC POTENTIAL](#). *Compare* [INHIBITORY](#).

excitatory postsynaptic potential *n.* A graded depolarization or decrease in electrical potential across the membrane of a [*postsynaptic](#) neuron, occurring in response to a signal transmitted across a synapse by a [*presynaptic](#) neuron, increasing the propensity of the postsynaptic neuron to initiate a nerve impulse. Also called *postsynaptic excitation*. *See also* [ACTION POTENTIAL](#), [DEPOLARIZATION](#), [POSTSYNAPTIC POTENTIAL](#), [RESTING POTENTIAL](#). *Compare* [INHIBITORY POSTSYNAPTIC POTENTIAL](#). **EPSP** *abbrev.*

excluded middle law *n.* The principle or law according to which for any proposition *p*, the proposition *p* or *not-p* is true by logical necessity. Also called the *principle of the excluded middle*.

exclusive disjunction *See* [DISJUNCTION](#) (2).

*****ebook converter DEMO Watermarks*****

excoriation disorder *n.* A mental disorder introduced in *DSM-5 characterized by recurrent, habitual skin-picking, resulting in skin lesions, most commonly on the face, arms, or hands, despite repeated attempts to eliminate the behaviour, the skin-picking causing significant distress or impairment of social, occupational, or everyday life. *Compare* OBSESSIVE–COMPULSIVE DISORDER, TRICHOTILLOMANIA. [From Latin *excoriare* to strip or flay, from *ex-* out + *corium* a skin or hide]

executive *See* CENTRAL EXECUTIVE.

exemplar *n.* An instance or representative of a *concept; more generally something to be copied or imitated. *Compare* PROTOTYPE (2). [From Latin *exemplarium* a model, from *exemplum* an example]

exhaustion stage *n.* The third and final stage of the *general adaptation syndrome to stress, reached by an organism that has failed to adapt to a stressor, characterized by physical and/or mental disorder or disease. *See also* ALARM REACTION, RESISTANCE STAGE.

exhibitionism *n.* 1. A *paraphilia characterized by recurrent, intense sexual fantasies, urges, or behaviour involving exposure of one's sexual organs to unsuspecting strangers. *See also* EXHIBITIONISTIC DISORDER. 2. Extravagant, theatrical, or boasting behaviour designed to draw attention to oneself. [From Latin *exhibere* to display, from *ex-* out + *habere* to have]

exhibitionistic disorder *n.* A *paraphilic disorder in *DSM-5 characterized by intense, recurrent sexual arousal from exposure of genitals to unsuspecting others, or associated fantasies or urges over a period of at least six months. To meet the diagnostic criteria, the individual must either have acted out this behaviour with a non-consenting person, or the fantasies or urges must have caused clinically significant distress or impairment in social, occupational, or other areas of life. *See also* EXHIBITIONISM.

existential analysis *n.* A form of *psychoanalysis based on *existentialism, introduced in the early 1930s by the Swiss psychiatrist Ludwig Binswanger (1881–1966) and described in his 726-page book

Grundformen und Erkenntnis menschlichen Daseins (1942, Basic Forms and Knowledge of Human Existence), the aim of which is not to cure symptoms but to reconstruct the inner experience of patients, even severely **psychotic* (1) patients, and to get them to confront their existence and exercise their autonomy. The most famous case study in existential analysis, and one of the most disturbing in the annals of psychiatry, is Binswanger's case of **Ellen West*. Also called *Daseinsanalyse*. See also *BAD FAITH*, *EIGENWELT*, *EXISTENTIAL THERAPY*, *MITWELT*, *UMWELT*. **existential analyst** *n.* One who practises existential analysis.

existentialism *n.* A philosophical movement, inspired by **phenomenology*, that developed in the second quarter of the 20th century under the influence of the Danish philosopher and religious thinker Søren Aabye Kierkegaard (1813–55), the German philosopher Martin Heidegger (1889–1976), and the French philosophers and writers Jean-Paul Sartre (1905–80), Simone de Beauvoir (1908–86), and Albert Camus (1913–60). It stresses the existence of the individual person as a free agent who is burdened with personal responsibility and whose existence cannot be investigated objectively, being revealed by reflection on existence in time and space. It tends to disparage scientific methodology and knowledge and to reject objective values. See also *ANGST* (2), *ANTI-PSYCHIATRY*, *BAD FAITH*, *DASEIN*, *DASEINSANALYSE*, *EIGENWELT*, *EXISTENTIAL ANALYSIS*, *EXISTENTIAL THERAPY*, *HERMENEUTICS* (3), *MITWELT*, *UMWELT*. **existential** *adj.* Of or relating to existence or to existentialism. **existentialist** *adj.* Of or relating to existentialism.

existential quantifier See *QUANTIFIER*.

existential therapy *n.* A diverse and fragmented group of techniques of **psychotherapy*, including both **existential analysis* and various other techniques based loosely on the philosophies of **phenomenology* and **existentialism*, in which clients are encouraged to confront their inner emotions and values, stripping away preconceptions and assumptions, and to take responsibility for their lives. See also *ANGST* (2), *ANTI-PSYCHIATRY*, *BAD FAITH*, *INTENTIONALITY* (2).

exocrine gland *n.* A gland that originates in **epithelial tissue* and
*****ebook converter DEMO Watermarks*****

secretes through a duct on to the **skin* or a **mucous membrane* rather than directly into the bloodstream. See *BARTHOLIN'S GLAND*, *GASTRIC GLAND*, *MAMMARY GLAND*, *SALIVARY GLAND*, *SWEAT GLAND*. Compare *ENDOCRINE GLAND*. [From Greek *exo* outside + *krinein* to separate]

exogamy *n.* The cultural practice or custom of marriage between people of different clans, tribes, or other groups of related individuals; more generally, outbreeding, or the fusion of **gametes* from parents that are not closely related. Compare *ENDOGENY*. [From Greek *exo* outside + *gameein* to marry]

exogenous depression *n.* Another name for **reactive depression*. Compare *ENDOGENOUS DEPRESSION*. [From Greek *exo* outside + *genes* born]

exon *n.* Any segment of a gene consisting of **codons* representing instructions for synthesizing a protein. Compare *INTRON*. [From Greek *exo* outside, on the model of *codon*]

exophoria *n.* A form of latent **strabismus* in which the eyes tend to turn outward towards the temples. Compare *CYCLOPHORIA*, *ESOTROPIA*, *HETEROPHORIA*, *HYPERPHORIA*, *HYPOPHORIA*. [From Greek *ex* out + *-phoros* carrying, from *pherein* to bear]

expansive mood *n.* A **mood* (1) characterized by unrestrained emotional expression, often accompanied by an overvaluation of one's importance or significance to others; sometimes merely another name for **elevated mood*.

expectancy-value theory *n.* A theory according to which behaviour is affected by the values of the possible outcomes weighted by the estimated probabilities of those outcomes. The earliest version of it was put forward in 1944 by the German–US psychologist Kurt Lewin (1890–1947) and several colleagues. In relation to **attitudes* (1) it is the theory according to which an attitude reflects the subjective probability (expectancy) that the object of the attitude has certain **attributes*, weighted by the subjective feelings (values) evoked by those attributes. For example, a person may have an expectancy (high subjective probability) that *a united Ireland* (the attitude object) would lead to *peace between Irish Catholics and Protestants* (a positively valued

*****ebook converter DEMO Watermarks*****

attribute). To predict a person's attitude to a united Ireland, the expectancy and value terms for each attribute are multiplied together, and these products are then added: $\text{Attitude} = \sum \text{Expectancy} \times \text{Value}$. This approach to attitudes was formulated in 1975 by the US psychologist Martin Fishbein (1936–2009) and the Polish-born US psychologist Icek Ajzen (born 1942). *See also* [THEORY OF REASONED ACTION](#).

expectation-dependent priming *See* [PRIMING \(1\)](#).

expected utility *n.* The average [*utility \(1\)](#) associated with a decision, calculated by multiplying each of the possible outcomes of the decision by its probability and then summing the resulting products. If the probabilities are subjective, rather than objective measures of relative frequency, then it is called *subjective expected utility*. *Compare* [EXPECTED VALUE](#). **EU** *abbrev.*

expected utility theory *n.* A theory of decision making, formalized in 1947 by the Hungarian-born US mathematician John von Neumann (1903–57) and the German-born US economist Oskar Morgenstern (1902–77), according to which a decision maker chooses actions or strategies that maximize [*expected utility](#), and utilities are determined by [*revealed preferences](#). If the probabilities are subjective, then it is called *subjective expected utility theory*. *See also* [ALLAIS PARADOX](#), [CANCELLATION HEURISTIC](#), [COMMON RATIO EFFECT](#), [ELLSBERG PARADOX](#), [MODIFIED ELLSBERG PARADOX](#), [NEWCOMB'S PROBLEM](#), [PASCAL'S WAGER](#), [PREFERENCE REVERSAL \(1, 2\)](#), [PROSPECT THEORY](#), [RATIONAL CHOICE THEORY](#), [ULTIMATUM GAME](#), [UTILITY THEORY](#). **EU theory** *abbrev.*

expected value *n.* The average value associated with a decision, calculated in the same way as an [*expected utility](#) but using the monetary value of the outcomes rather than their [*utility \(1\)](#) in the calculation. *See also* [PROSPECT THEORY](#), [RISK AVERSION](#), [ST PETERSBURG PARADOX](#). **EV** *abbrev.*

experience sampling *n.* A research technique, very similar to the [*time sampling diary](#), and virtually synonymous with time sampling, introduced by the Italian-born US psychologist Mihaly Csikszentmihalyi (born 1934) and two co-authors in an article in the *Journal of Youth and Adolescence* in 1977, where they originally called it the ‘experiential

*****ebook converter DEMO Watermarks*****

sampling method’.

experiential therapy *n.* Any of a group of techniques of *psychotherapy that focus on emotional release, inner growth, and *self-actualization, including *encounter groups, *Gestalt therapy, *primal therapy, and *transcendental meditation (TM).

experiment *n.* A research method whose defining features are manipulation of an *independent variable or variables and control of *extraneous variables that might influence the *dependent variable. Control of extraneous variables is often, though not necessarily, achieved through *randomization. Experimental methods are uniquely powerful in allowing rigorous examination of *causal effects without the uncertainties of other research methods. *See also* CONTROL GROUP, EXPERIMENTAL GROUP, HYPOTHETICO-DEDUCTIVE METHOD, RANDOMIZED CONTROLLED TRIAL, RANDOMIZED DOUBLE-BLIND EXPERIMENT. *Compare* CASE STUDY, CORRELATIONAL STUDY, OBSERVATIONAL STUDY, QUASI-EXPERIMENT, SURVEY RESEARCH. [From Latin *experimentum* proof or trial]

experimental analysis of behaviour *n.* The application of the theory of *operant conditioning to behaviour, especially in animals, focusing almost exclusively on the effects of *reinforcement on rate of *response. The term can also be applied to the study of behaviour through experiments generally, but in practice it has tended to become confined to the meaning defined above. US *experimental analysis of behavior*.

experimental design *n.* The general plan of an *experiment, including the method of assigning research participants or subjects to *treatment conditions, controlling *extraneous variables, manipulating the *independent variable, and measuring the *dependent variable.

experimental group *n.* In *experimental design, a group of research participants or subjects exposed to an *independent variable in order to examine the *causal effect of that treatment on a *dependent variable. *Compare* CONTROL GROUP.

experimental hypothesis *n.* Another name for an *alternative hypothesis.

*****ebook converter DEMO Watermarks*****

experimentally induced false memory *n.* Any repeatable technique for generating **false memories*, especially a procedure first reported in 1959 by the US psychologist James Earle Deese (1921–99) in an article in the *Journal of Experimental Psychology*. Deese constructed several lists of 12 words, each list consisting of the most common **word-association test* responses to a critical word that was not included in the list, a typical example being the critical word *needle*, from which Deese constructed the list *thread, pin, eye, sewing, sharp, point, pricked, thimble, haystack, pain, hurt, injection*. Experimental participants studied each list, and then tried to recall the words contained in it, and on some of the lists (including the *needle* list) many participants falsely recalled the critical word as having been included in the list, though on other lists they did not—for example, on the *butterfly* list (*moth, cocoon*, and so on), not a single participant falsely recalled the critical word. In an article in the *Journal of Experimental Psychology: Learning, Memory, and Cognition* in 1995, the US psychologists Henry L(ederer) Roediger III (born 1947) and Kathleen B(lyth) McDermott (born 1968) replicated and extended Deese's neglected experiment using published word-association norms. Their results revealed that on immediate **free recall* tests, the missing critical words were falsely recalled by 40 per cent of participants, and in a subsequent experiment with 15-word lists, the rate of false recall rose to 55 per cent. This experimental procedure creates a powerful **cognitive illusion*, causing people to believe that they can remember experiences that did not occur. *See also* EYEWITNESS MISINFORMATION EFFECT.

experimental neurosis *n.* An abnormal pattern of behaviour in an animal usually induced by presenting it with an insoluble learning problem or subjecting it to inescapable electric shocks. *See also* LEARNED HELPLESSNESS.

experimental psychology *n.* The study of psychological processes such as cognition (including perception, memory, thinking, and language), learning, and skills through controlled experiments. The term was originally applied to any psychological research using experimental methods, but it has acquired specialized connotations, and in practice experimental research in social psychology, for example, is not normally published in the major journals of experimental psychology.

experimental variable *n.* Another name for an **independent variable*.

*****ebook converter DEMO Watermarks*****

experimenter bias See EXPERIMENTER EFFECT, EXPERIMENTER EXPECTANCY EFFECT.

experimenter effect *n.* A biasing effect on the results of an experiment caused by expectations or preconceptions on the part of the experimenter. Also called *experimenter bias*. See also DEMAND CHARACTERISTICS, EXPERIMENTER EXPECTANCY EFFECT.

experimenter expectancy effect *n.* A particular type of **experimenter effect* in which the expectations of the experimenter as to the likely outcome of the experiment acts as a **self-fulfilling prophecy*, biasing the results in the direction of the expectation. In a series of classic experiments carried out by the German-born US psychologist Robert Rosenthal (born 1933) in the early 1960s, the effect was induced by telling experimenters what kind of behaviour to expect from laboratory animals. In one experiment published in 1963, 12 psychology students were each given five laboratory rats of the same strain, but six were told that the rats had been bred for maze brightness and the other six that they had been bred for maze dullness. The students were given the assignment of running the rats in a maze-learning experiment, and the rats believed to be bright performed significantly better than those believed to be dull. Later research suggested that in such experiments the effect is due to subtle differences in the way experimenters handle the animals. Also called the *Rosenthal effect*. See also DEMAND CHARACTERISTICS, OEDIPUS EFFECT, PYGMALION EFFECT.

expert system *n.* In **artificial intelligence*, a computer program based on a database of expert knowledge in a specified field, such as medical diagnosis, designed to offer advice or make decisions requiring a high level of expertise.

explicit memory *n.* Memory that is revealed when performance on a task requires conscious recollection of information previously learnt. The term was introduced by the Canadian psychologist Peter Graf (born 1951) and the US psychologist Daniel L. Schacter (born 1952) in an article in the *Journal of Experimental Psychology: Learning, Memory, and Cognition* in 1985. Compare IMPLICIT MEMORY.

exploitative orientation *n.* In **neo-Freudian* theory, a term used by the German-born US psychoanalyst Erich Fromm (1900–80) to denote a character type who tries to take things from others by force and cunning, an extreme example being a person with **kleptomania*. *Compare* *HOARDING ORIENTATION*, *MARKETING ORIENTATION*, *PRODUCTIVE ORIENTATION*, *RECEPTIVE ORIENTATION*.

exploratory data analysis *n.* A general term introduced in 1977 by the US statistician John Wilder Tukey (1915–2000) to refer to techniques of summarizing, organizing, and displaying data in ways that help to show what the data mean. Typical examples are **box-and-whisker plots* and **stem-and-leaf displays*. Not to be confused with **data snooping*. **EDA** *abbrev.*

exploratory factor analysis *n.* The use of **factor analysis* to discover the latent factors lying behind a set of correlated variables. *Compare* *CONFIRMATORY FACTOR ANALYSIS*.

exploratory research *n.* Research that is not explicitly intended to test hypotheses (as in **basic research*) nor to solve practical problems (as in **applied research*) but is used to make initial forays into unfamiliar territory when studying new or poorly understood phenomena. *Compare* *ACTION RESEARCH*, *DESCRIPTIVE RESEARCH*, *EVALUATION RESEARCH*.

explosive disorder *See* *INTERMITTENT EXPLOSIVE DISORDER*.

exposure therapy *n.* Another name for **flooding*.

expression *n.* 1. The transformation of ideas into words. 2. Any non-verbal manifestation of **emotion*. 3. In genetics, the effect of a **gene* on a **phenotype* (also called *gene expression*). **express** *vb.* **expressive** *adj.* [From Latin *expressus* squeezed out, from *ex-* out + *premere*, *pressum* to press + *-ion* indicating an action, process, or state]

expressive aphasia *See* *APHASIA*.

expressive behaviour *n.* Behaviour that communicates emotions or

personality. In human beings this occurs especially through **facial expression*, though it can also occur through other types of **affect displays*, dress styles, handwriting, and so on.

expressive dysprosody *See* *DYSPROSODY*.

expressive language disorder *n.* A **communication disorder* in **DSM-IV*, absorbed into **language disorder* *DSM-5*.

expressivity *n.* In genetics, the strength of a gene's effect on a **phenotype*.

extended family *n.* A family unit comprising not only a mother, father, and their children, but also other relatives, such as grandparents, uncles, and aunts. *Compare* *NUCLEAR FAMILY*.

extended phenotype *n.* All effects that a **gene* has on the external world in comparison with the effects of its **alleles*, including effects associated with such phenomena as **co-evolution*, **inclusive fitness*, evolutionary **arms races*, and **reciprocal altruism*, all of which have a bearing on the number of copies of the gene that are likely to be transmitted to the next generation. It is distinguished from the conventional **phenotype*, which is restricted to the gene's effects on the individual organism in which it resides and which excludes extra-organismic effects associated with such phenomena. *See also* *SELFISH GENE*. [Coined in 1982 by the British ethologist Richard Dawkins (born 1941) in the title of his book *The Extended Phenotype*]

extension/intension *See* *INTENSION*.

extension theorem *n.* In **logic*, a theorem of semantic entailment in propositional calculus according to which if a set of premises *P* entails a conclusion *q*, then the addition of further premises from a larger set *S* that includes *P* cannot affect the truth of the conclusion *q*. The theorem underpins the **monotonicity* of logic. *See also* *DEFAULT REASONING*, *NON-MONOTONIC REASONING*.

external auditory canal *n.* The passageway leading from the *outer ear to the *tympanic membrane. Also called the *external meatus*. Compare INTERNAL AUDITORY CANAL.

external control of reinforcement See LOCUS OF CONTROL.

external ear *n.* Another name for the *outer ear.

external eye muscle *n.* Another name for an *extra-ocular muscle.

externalization *n.* In *psychoanalysis, a *defence mechanism whereby a person unconsciously attributes inner impulses to the external world, as when a child converts unconscious angry or aggressive impulses into a fear of monsters or demons in the dark. A common form of externalization is *projection (1). See also DEFENSIVE TECHNIQUE. **externalize** *vb.*

external meatus *n.* Another name for the *external auditory canal. [From Latin *meatus* a course]

external rectus *n.* Another name for either of the lateral *rectus muscles attached externally to the eyeball.

external validity *n.* The extent to which the conclusions of an empirical investigation remain true when different research methods and research participants or subjects are used. The term is also used to denote *concurrent validity or *predictive validity established by reference to an external criterion, in other words *criterion validity. See also REPLICATION (2), VALIDITY, VALIDITY GENERALIZATION. Compare ECOLOGICAL VALIDITY (1), INTERNAL VALIDITY.

exteroception *n.* Any form of sensation that results from stimuli located outside the body and is detected by *exteroceptors, including vision, hearing, touch or pressure, heat, cold, pain, smell, and taste. Compare INTEROCEPTION, KINAESTHESIS, PROPRIOCEPTION. **exteroceptive** *adj.* [From Latin *exterus* exterior + English *receptor* + *-ion* indicating an action, process, or state]

exteroceptor *n.* Any of several *sensory receptors specialized for

*****ebook converter DEMO Watermarks*****

**exteroception*, whether a **somatic receptor* or a **telereceptor*. Compare INTEROCEPTOR, PROPRIOCEPTOR.

extinction *n.* 1. The wiping out or elimination of something, including a species or life form. 2. The diminution in the strength or frequency of a **conditioned response* as a result of its having been elicited repeatedly without **reinforcement* (1, 2). Compare HABITUATION (2). **extinct** *adj.*

extracellular *adj.* Outside cells. [From Latin *extra* outside + *cella* a room, from *celare* to hide]

extracellular fluid *n.* Fluid that circulates around and between the cells of the body and is separated from the **intracellular* fluid by semipermeable cell membranes. See also OSMOSIS, SODIUM PUMP. Compare INTRACELLULAR FLUID. **ECF** *abbrev.*

extracellular thirst *n.* Another name for **hypovolaemic thirst*.

extradite *vb.* 1. To hand a person over to a foreign government for trial or punishment. 2. To localize a sensation away from the centre of the sensation. See ECCENTRIC PROJECTION. **extradition** *n.* The act or process of extraditing. [From Latin *ex* from + *traditio* a handing over, from *tradere* to give up, from *trans* across + *dare* to give]

extrafusar *adj.* Of or relating to ordinary contractile muscle fibres outside **muscle spindles*. When an extrafusar fibre is stimulated by a **motor neuron*, **actin* filaments slide to overlap with **myosin* filaments, causing the muscle to contract. Compare INTRAFUSAL. [From Latin *extra* outside + *fusus* a spindle]

extramission *n.* Discharge or sending out, especially of ‘visual fire’ from the eyes in the process of seeing, according to a false theory propounded by the Greek philosopher Empedocles (?490–430 BC) and endorsed by later Greek philosophers and scientists, including Plato, Euclid, and Ptolemy. In modern times, the Swiss psychologist Jean Piaget (1896–1980) was the first to report, in his book *La Représentation du Monde chez l'Enfant* (1926, translated as *The Child's Conception of the World*, 1929), that children

continue to believe in emissions of rays or fluids from the eyes during vision, and they tend to assume that people's gazes can collide or mix. More recent studies have revealed that a large proportion of adults (in some US studies more than half) implicitly believe in visual extramission. *Compare* [INTUITIVE PHYSICS](#). [From Latin *extra* outside + *missio* a sending out, from *mittere* to send]

extraneous variable *n.* In statistics and research design, a variable that is of no immediate interest to a researcher but is capable of influencing variables that *are* of interest. In experimental design, such an extraneous variable is capable of influencing the [*dependent variable](#), and it is normally controlled by [*randomization](#); when it cannot be controlled, efforts are often made to measure and allow for it. Also called a *nuisance variable*.

extra-ocular muscle *n.* A generic name for either of the [*oblique muscles](#) or any of the [*rectus muscles](#) that control the rotation of the eyeball within its socket. Also called an *extrinsic eye muscle*. *See also* [ELECTRO-OCULOGRAM](#). [From Latin *extra* outside + *oculus* an eye]

extrapyramidal *adj.* Of or relating to structures outside the pyramidal tract or [*corticospinal tract](#) of the central nervous system, the pathway responsible for coordinating and integrating motor behaviour. [From Latin *extra* outside + English *pyramidal*]

extrapyramidal syndrome *n.* A condition arising from a lesion in the [*extrapyramidal](#) system or as a side-effect of medication with psychotropic drugs, including such signs and symptoms as [*tremor](#), [*parkinsonism](#), [*akathisia](#), [*dystonia](#), [*akinesia](#), [*myotonia](#), drooling, and absence of facial expression.

extra-sensory perception *n.* A generic term for various conjectural [*paranormal](#) phenomena that are defined by the *Journal of Parapsychology* to involve experience of, or response to, a target object, state, event, or influence without sensory contact, hence perception without the use of sense organs, usually divided into [*clairvoyance](#), [*telepathy](#), and [*precognition](#). It is often defined as perception by means *as yet unexplained by science*, but this debilitating interpretation is avoided in careful usage, because it

*****ebook converter DEMO Watermarks*****

encompasses types of perception that are not necessarily extra-sensory or paranormal and therefore implies (for example) that the ***infra-red vision** of rattlesnakes was a form of extra-sensory perception before it was explained in the 1930s, that the use of ***biosonar** by bats was a form of extra-sensory perception before it was explained in 1941, and that the use of the stars as a navigational aid by nocturnally migrant birds such as European warblers was a form of extra-sensory perception before it was explained in the mid 1950s; and there are numerous phenomena in human and animal perception that are still unexplained but do not necessarily involve extra-sensory perception. See also **CRYPTAESTHESIA**, **PSI**, **PSI-MISSING**, **PSYCHOPRAXIA**, **ZENER CARDS**. Compare **PSYCHOKINESIS**. **ESP** abbrev. [From Latin *extra* outside + *sensorius* of the senses, from *sensus* felt, from *sentire* to sense. The US parapsychologist Joseph Banks Rhine (1895–1980) claimed in 1934 to have coined the term, but a book by the Haitian-born German physician Gustav Pagenstecher (1855–1942) entitled *Aussersinnlicher Wahrnehmung*, which means extra-sensory perception in German, had already been published in 1924]

extra-spectral colour *n.* Another name for a ***non-spectral colour**. US *extra-spectral color*. [From Latin *extra* outside + *spectrum* a spectacle, from *spectare* to watch, from *specere* to look at + *-alis* of or relating to]

extrastriate cortex *n.* Areas of the cerebral cortex near and functionally related to the ***primary visual cortex** (Area V1). [So called because they are outside the ***striate cortex**]

extraversion *n.* One of the ***Big Five** personality factors, ranging from extreme extraversion, characterized by ***traits** such as sociability and assertiveness, to extreme ***introversion**, characterized by reserve and passivity. The concept of introversion/extraversion was introduced in 1910 by Carl Gustav Jung (1875–1961). Also called *surgency*. Often spelt *extroversion*, but this is an unnecessary deviation from the Latin root. See also **BETA PERSONALITY FACTOR**, **GENERAL FACTOR OF PERSONALITY**, **LITTLE THIRTY**. **extravert** *n.* A person who manifests extraversion. **extraverted** *adj.* [From Latin *extra* outside + *vertere* to turn]

extrinsic eye muscle *n.* Another name for an ***extra-ocular muscle**. [From Latin *extrinsecus* on the outside, from *exter* outward + *secus*

*****ebook converter DEMO Watermarks*****

alongside]

eye *n.* The organ of vision in animals, each of the human eyeballs being protected by an upper and a lower eyelid and rotating within its bony orbit under the control of four **rectus muscles* and two **oblique muscles*, its structure allowing light to enter through the transparent external **cornea* and to pass through the **aqueous humour*, the dark central adjustable **pupil* in the iris, the **crystalline lens*, and the **vitreous humour*, to be projected on to the **retina* where light-sensitive **photoreceptors* specialized to convert the light into nerve impulses transmit visual information along the **optic nerve* via the **lateral geniculate nuclei* to the **visual cortex* (see *illustration*). Compare COMPOUND EYE, OMMATIDIUM.

Eye. Main structures of the vertebrate eye.

eye contact *n.* The event of two people simultaneously **gazing* at each other in the vicinity of each other's eyes. Also called *mutual gaze*. See also EQUILIBRIUM HYPOTHESIS, GAZE AVERSION, NON-VERBAL COMMUNICATION, REGULATOR.

eye dialect *n.* An alteration to the spelling of words to indicate a regional or social **dialect*, as in the following: *Aw knaow you. Youre the one that took way may girl. Youre the one that set er agen me. Well, I'm gowin to ev er aht* (Bill Walker, 'a rough customer of about 25', in Act II of George Bernard

*****ebook converter DEMO Watermarks*****

Shaw's play *Major Barbara*).

eye dominance *n.* An unconscious preference for the use of one eye rather than the other, analogous to hand preference, though there is no simple relation between the two.

eye-dominance column *n.* Another name for an **ocular-dominance column*.

eye-head movement system *n.* A subsystem of the visual system that enables the movement of objects in the environment to be computed from the **image-retinal system*, discounting movements of the eyes and head, necessary because movements of images across the retinas provide insufficient information for determining movement of objects in the environment, given that eye and head movements cause retinal images to move even when the objects themselves are stationary. *See also* [REAFFERENCE](#).

eye-movement desensitization and reprocessing *n.* A form of **psychotherapy* designed originally for treating **post-traumatic stress disorder* (PTSD) and sometimes applied to other anxiety disorders. When it is applied to PTSD, the client or patient is first asked to visualize or recall the traumatic experience as vividly as possible and to provide a verbal statement, such as *I feel as if I'm about to die*, epitomizing its psychological impact. The client then rates the experienced level of anxiety on a 0–10 scale of Subjective Units of Distress ([SUDs](#)) and provides a competing positive statement epitomizing a desired response to the imagined situation, such as *I can survive*, and a rating of degree of belief in this statement, on a 0–8 scale of Validity of Cognition. Following these preparatory steps, the client focuses visual attention on an object and tracks its movements as the therapist sweeps it rhythmically back and forth in groups of 12 to 24 side-to-side movements in front of the client's face, at a rate of approximately two strokes per second. After each group of strokes, the client is asked to blank out the visual image or memory, to inhale deeply, and to revise the SUD and Validity of Cognition ratings, and this process continues until the SUD rating falls below 2 and the Validity of Cognition rating rises above 6. The technique was developed in 1987 and introduced in 1989 by the US psychologist Francine Shapiro (born 1948), who discovered fortuitously that back-and-forth eye movements

*****ebook converter DEMO Watermarks*****

reduced her own anxiety. **EMDR** *abbrev.*

eye-movement potential *n.* A brief, high-amplitude ***EEG** spike, identical in appearance to a ***PGO spike** and originating in the same brain structures, but occurring in the waking state as an alerting response to unexpected sensory stimuli.

eye-placement principle *n.* A principle of composition in portrait painting that involves the placement of one of the subject's eyes somewhere on the vertical axis running down the centre of the frame. It was discovered by the British-born US psychologist Christopher W(illiam) Tyler (born 1943) and published in the journal *Nature* in 1997. Tyler found that it has governed portrait painting throughout the modern period, 68 per cent of portraits showing one of the sitter's eyes within a narrow strip centred on the vertical axis occupying 10 per cent of the frame width, but that it had not been mentioned in manuals of composition, suggesting that it operates unconsciously.

eye rhyme *n.* Words that have similar endings in their written form but are pronounced differently, such as *love* and *move*.

eye-tracking *n.* Recording eye positions and rotations in order to determine directions of ***gaze** and points of ***fixation** (1), usually in a person who is looking at an image or reading text, a research technique pioneered in the 1950s by the Russian psychologist Alfred Lukyanovich Yarbus (1914–86). An instrument designed for eye-tracking is called an *eye-tracker*. Some use optical devices that do not involve direct contact with the eye, including most commonly video-based systems and, in the case of *dual-Purkinje eye-trackers*, devices that determine eye movements from ***Purkinje–Sanson images** reflected from the front of the ***cornea** and the back of the ***crystalline lens**; others use special contact lenses with embedded mirrors or electrical field sensors to measure eye rotations directly; and some use ***electro-oculogram** recordings from ***extra-ocular muscles** that control eye movements. There are also portable systems available for eye-tracking during activities such as driving. *See also* **SACCADE**.

eye–voice span *n.* In relation to a person who is reading aloud, the

*****ebook converter DEMO Watermarks*****

average number of units (either words or syllables) by which the speech is ahead of the written text, used as a measure of reading proficiency.

eyewitness misinformation effect *n.* A phenomenon whereby misleading post-event information distorts an eyewitness's recall of an event, as when a victim of a sexual assault who is subsequently told that an arrested suspect has a tattoo on his left arm comes to believe that she can recall seeing a tattoo on the perpetrator's arm. The effect may be caused by the post-event information overwriting the original memory, or by the eyewitness becoming confused about the sources of different items of information, without the original memory necessarily being impaired. These processes were first studied systematically by the US psychologists Elizabeth F. Loftus (born 1944) and John Palmer (born 1954), who reported their findings in the *Journal of Verbal Learning and Verbal Behavior* in 1974, and the effect was discussed at length by Loftus in her book *Eyewitness Testimony* (1979). In the original experiment, participants viewed a video recording of two cars colliding, and they were then asked how fast the cars were going when they *hit* or when they *smashed* into each other; when the word *smashed* was used in the question, the participants estimated the speed as 7 miles per hour faster, on average, than when the word *hit* was used, and a week later, 32 per cent of those exposed to the word *smashed* falsely recalled broken glass in the video, compared to only 14 per cent of those exposed to the word *hit*. Also called the *misinformation effect*. See also [EXPERIMENTALLY INDUCED FALSE MEMORY](#), [FALSE MEMORY](#), [FALSE MEMORY SYNDROME](#), [PARAMNESIA \(1\)](#), [PIAGET KIDNAPPING MEMORY](#), [REALITY MONITORING](#), [RECOVERED MEMORY](#).

eyewitness testimony *n.* Evidence of events that occurred, actions that were performed, or words that were spoken, given in court by a person who observed the events or actions at first hand or heard the words being spoken. See also [EYEWITNESS MISINFORMATION EFFECT](#), [FALSE MEMORY](#), [WEAPON FOCUS](#).

Eysenck Personality Inventory *n.* A questionnaire designed to measure two major dimensions of personality, namely [*extraversion](#) and [*neuroticism](#), according to the theory of personality propounded by the German-born British psychologist Hans J(ürgen) Eysenck (1916–97). It was published in 1963 as a commercial test by Hans and Sybil B. G. Eysenck

*****ebook converter DEMO Watermarks*****

(born 1927), as a revision of the [*Maudsley Personality Inventory](#). *See also* [EYSENCK PERSONALITY QUESTIONNAIRE](#). **EPI** *abbrev.*

Eysenck Personality Questionnaire *n.* A revised version of the [*Eysenck Personality Inventory \(EPI\)](#), measuring three major dimensions of personality, namely [*extraversion](#), [*neuroticism](#), and [*psychoticism](#), and including a [*lie scale](#). It was published as a commercial test in 1975. **EPQ** *abbrev.*

F₁ *abbrev.* The first **filial generation*. F₂ represents the second filial generation, and so on.

face–goblet illusion *n.* Another name for the **reversible goblet*.

face recognition *n.* The sum total of the processes involved in the recognition and identification of faces. *See also* FUSIFORM GYRUS, PROSOPAGNOSIA, SUPERIOR TEMPORAL SULCUS.

face validity *n.* The **validity* of a test estimated or judged intuitively, without recourse to any objective evidence. Also called *a priori validity*. *See also* CONSENSUAL VALIDITY, INTRINSIC VALIDITY.

facial expression *n.* A form of **non-verbal communication* in which an **affect* display is communicated via the face, the musculature of which is sufficiently complex to enable a vast range of expressions to be conveyed. *See also* DIALECTICAL MONTAGE, DISPLAY RULE, DUCHENNE SMILE, EXPRESSIVE BEHAVIOUR, FACIAL FEEDBACK HYPOTHESIS, FACIAL NERVE, MÖBIUS SYNDROME, PRIMARY EMOTION.

facial feedback hypothesis *n.* The proposition that adopting a facial expression associated with a particular **emotion* tends to induce that emotion. The hypothesis can be traced back to a remark by the English naturalist Charles (Robert) Darwin (1809–82) in his book, *The Expression of the Emotions in Man and Animals* (1872): ‘Even the simulation of an emotion tends to arouse it in our minds’ (p. 336). Darwin proposed a weak version of the hypothesis, according to which expressing an emotion

*****ebook converter DEMO Watermarks*****

outwardly strengthens the emotional experience and suppressing the outward expression reduces the emotional experience; whereas the US psychologist William James (1842–1910) proposed a strong version, believing that bodily expressions actually *cause* emotions, as postulated in the [*James–Lange theory](#). More recent research has shown that both electrical stimulation of facial muscles to induce expressions artificially and temporary paralysis of facial muscles with Botox injections affect experienced emotions. In an article in the *Journal of Personality and Social Psychology* in 1988, the German social psychologist Fritz Strack (born 1950) and two colleagues showed that even holding a pen sideways between the teeth so that the mouth is forced into a quasi-smiling position tends to induce positive [*affect](#) or emotion. *See also* [COGNITIVE-APPRAISAL THEORY](#).

facial nerve *n.* Either of the seventh pair of [*cranial nerves](#), supplying the muscles involved in [*facial expression](#), the salivary and nasal glands, the taste buds towards the front two-thirds of the tongue, and the stapedius muscle of the inner ear. It is the most frequently paralysed of all peripheral nerves, as in [*Bell's palsy](#). *See also* [CHORDA TYMPANI](#), [CORNEAL REFLEX](#), [GLOSSOPALATINE NERVE](#).

facial vision *n.* An awareness of obstacles without vision, experienced by people who are blindfolded and often highly developed in people who are blind, usually felt as a tactile sensation in the facial area but shown by experiments to be explained by reflected sound waves and mediated entirely by hearing. The French philosopher Denis Diderot (1713–84), in a letter in 1749, first attributed it to the action of nerve endings in the face, but experiments later established that it is due to [*echolocation](#). Also called *obstacle sense*. *See also* [BIOSONAR](#).

facilitated communication *n.* A teaching method and therapeutic technique in which facilitators or partners help people with severe developmental disabilities to communicate by providing sufficient manual guidance to enable them to convey messages through a keyboard, a picture board, or a speech synthesizer. When applied to a person with [*autism spectrum disorder](#), [*cerebral palsy](#), [*Down's syndrome](#), or severe [*intellectual disability](#), it often appears to reveal unexpected literacy and a far higher level of intellectual functioning than the person was believed to

*****ebook converter DEMO Watermarks*****

possess, but [*single-blind studies](#) and [*double-blind studies](#) have revealed that disabled people are unable to respond intelligently to stimuli that are unseen by their facilitators and that the facilitators unwittingly control the responses in a manner reminiscent of [*Clever Hans](#). It was pioneered by the Australian special needs educator Rosemary Crossley (born 1945), who applied it to 12 children with physical and mental handicaps in the early 1970s, and in 1989 it was adopted enthusiastically by a number of speech therapists and special educators in the United States. Also called *facilitated communication training*. **FC** or **FCT** abbrev.

facilitation *n.* The act or process of assisting the progress of something or making it easier; more specifically, the increased ease with which [*neurons](#) transmit impulses as a result of prior excitation. *See also* [CELL ASSEMBLY](#), [LONG-TERM POTENTIATION](#), [PHASE SEQUENCE](#). [From Latin *facilis* easy, from *facere* to do + *-ation* indicating a process or condition]

facilitative priming *See* [PRIMING \(1\)](#).

factitious disorder *n.* A mental disorder in [*DSM-5](#) characterized by a persistent pattern of feigned symptoms and/or self-inflicted injuries to simulate disorder, in the absence of a confirmed physical or mental condition, and without any economic or other external incentive for the behaviour, the motive being to receive medical treatment, to gain admission to hospital, or to assume the sick role, multiple surgical operations often being eagerly sought. Also called *Munchausen syndrome*, *pathomimicry*, or (colloquially) *hospital hopper syndrome*. *See also* [FACTITIOUS DISORDER IMPOSED ON ANOTHER](#), [GANSER SYNDROME](#). *Compare* [BORDERLINE PERSONALITY DISORDER](#), [COMPENSATION NEUROSIS](#), [CONVERSION DISORDER](#), [MALINGERING](#), [PSEUDOLOGIA FANTASTICA](#), [SOMATIC SYMPTOM DISORDER](#). [From Latin *facticius* artificial or made, from *facere* to make]

factitious disorder by proxy *n.* A pattern of behaviour included in the DSM-IV appendix of conditions meriting further study, included in the [*DSM-5](#) classification under a different label. *See* [FACTITIOUS DISORDER IMPOSED ON ANOTHER](#).

factitious disorder imposed on another *n.* A disorder in [*DSM-](#)
*****ebook converter DEMO Watermarks*****

5 characterized by a pattern of behaviour involving intentional feigning of physical or psychological signs or symptoms in another person who is being cared for, without any economic or other external incentive for the behaviour, the motive being to procure medical treatment for the person being cared for and thereby to assume a sick role by proxy. According to the British paediatrician (Samuel) Roy (later Sir Roy) Meadow (born 1933), who was the first to identify the phenomenon and who coined the alternative term *Munchausen by proxy syndrome* (MBPS) in 1977, it is not a psychological disorder but a form of physical or psychological abuse of children or others being cared for. See also [FACTITIOUS DISORDER](#). Compare [BORDERLINE PERSONALITY DISORDER](#), [CONVERSION DISORDER](#), [MALINGERING](#), [SOMATIC SYMPTOM DISORDER](#).

factor *n.* 1. In experimental design, another name for an [*independent variable](#). 2. In [*factor analysis](#), one of the underlying dimensions derived from the larger number of original variables. It is a derived, hypothetical dimension that accounts, in part, for the correlations between a number of variables. The term is also commonly applied to the psychological [*construct](#) associated with the dimension derived from factor analysis, as when the common factor [*g](#) is interpreted as general intelligence. See also [GROUP FACTOR](#). 3. More generally, anything that contributes to an outcome or result. **factorial** *adj.* [From Latin *factor* something that acts, from *facere* to do]

factor analysis *n.* A statistical technique for analysing the correlations between a large number of variables in order to reduce them to a smaller number of underlying dimensions, called *factors*, in a manner analogous to the way in which all spectral colours can be reduced to combinations of just three primary colours, and to determine how much of the [*variance](#) in each of the original variables is explained by each factor. See also [ANALYSIS OF COVARIANCE STRUCTURES](#), [CLUSTER ANALYSIS](#), [COMMUNALITY](#), [CONFIRMATORY FACTOR ANALYSIS](#), [CORRESPONDENCE ANALYSIS](#), [EXPLORATORY FACTOR ANALYSIS](#), [G](#), [PRIMARY MENTAL ABILITIES](#), [PRINCIPAL-COMPONENTS ANALYSIS](#), [Q-METHODOLOGY](#), [R-METHODOLOGY](#), [ROTATION](#), [SIMPLE STRUCTURE](#). **factor-analytic** *adj.*

factorial analysis of variance *n.* Another name for [*multifactorial analysis](#) of variance.

factorial design *n.* Any experimental design in which there are two or more ***independent variables** or factors, and every level of each factor is combined with every level of each other factor. For example, if there are two factors, and if one of the factors has two levels, the other has three levels, and all six combinations are represented, then the design is called a 2×3 factorial design.

factorial validity *n.* The ***validity** of a test determined by its ***correlation** with a ***factor** (2) determined by ***factor analysis**. The idea behind this form of validity was introduced by the English statistician and psychologist Charles Spearman (1863–1945) in an article in the *American Journal of Psychology* in 1904, where he interpreted intelligence as the factor *g* that underlies all test items and subtests with good ***content validity** (that is, items and subtests that appear to require intelligence) and argued that the most valid tests are those with highest loadings on the factor *g*.

faculty psychology *n.* An obsolete school of psychology based on arbitrarily posited powers or capacities (called *faculties*) into which the mind was divided, such as will, reason, and instinct, through whose interaction all mental functions and phenomena were supposed to occur. The most influential figure in the development of this approach was the German philosopher and mathematician Christian Wolff (1679–1754), whose *Psychologia Empirica* (1732) and *Psychologia Rationalis* (1734) popularized a version of faculty psychology that formed the foundation for the later development of ***phrenology**. [From Latin *facultas* a capacity]

failure neurosis *n.* A term introduced in 1939 by the French psychoanalyst René Laforgue (1894–1962) for a class of disorders characterized by behaviour that appears calculated to bring misfortunes on oneself and an inability to accept the things that one most ardently desires. This syndrome is an extension and elaboration of ideas first set forth in 1916 by Sigmund Freud (1856–1939) in an article entitled ‘Some Character-Types Met With in Psycho-Analytic Work’ (*Standard Edition*, XIV, pp. 311–33, at pp. 317–18). Also called *failure syndrome*. Compare **FATE NEUROSIS**.

Fairbairn's revised psychopathology *n.* In ***psychoanalysis**, a term used to denote the theory of mental disorder proposed by the Scottish
*****ebook converter DEMO Watermarks*****

psychoanalyst W. Ronald D. Fairbairn (1889–1964), especially his theory of the ***defensive technique**. He published an early version of it in 1941 in an article entitled ‘A Revised Psychopathology of the Psychoses and Psychoneuroses’, reprinted in his book *Psychoanalytic Studies of the Personality* (1952). See **HYSTERICAL TECHNIQUE**, **OBSessional TECHNIQUE**, **PARANOID TECHNIQUE**, **PHOBIC TECHNIQUE**.

falling out *n.* A ***culture-bound syndrome** found among communities in the southern United States and the Caribbean, characterized by a sudden collapse, occurring either without warning or after a brief spell of dizziness, followed by a sensation of blindness, although the eyes are open, and an inability to speak or move although the person is aware of what is happening in the immediate vicinity. It is sometimes interpreted as a ***conversion disorder** or a ***dissociative disorder**. Also called *blacking out*.

false alarm *n.* 1. A warning signal that turns out to have been unnecessary. 2. In ***signal detection theory**, an incorrect detection of a signal when it is absent. Also called a *false positive*. See also **MEMORY OPERATING CHARACTERISTIC**, **RECEIVER OPERATING CHARACTERISTIC**. Compare **CORRECT REJECTION**, **HIT**, **MISS**.

false anorexia *n.* Another name for ***pseudoanorexia**.

false-consensus effect *n.* A form of ***assimilation** (4) characterized by a tendency to overestimate the extent to which other people share one's beliefs, attitudes, and behaviours. In ***social perception** and ***attribution**, people tend to assume that their own responses are more common than they really are and to consider alternative responses as uncommon, deviant, or inappropriate. The concept was introduced and named by the Canadian psychologist Lee D(avid) Ross (born 1942) and two colleagues in an article in the *Journal of Experimental Social Psychology* in 1977 in which they reported four experiments, including a typical one in which Stanford University students were asked whether they would be willing to walk around the campus for 30 minutes wearing a sandwich board inscribed with the message REPENT; those who agreed to do this estimated, on average, that 63.50 per cent of their fellow students would also agree, and those who refused estimated that 76.67 per cent of their fellow students would also

*****ebook converter DEMO Watermarks*****

refuse. *See also* [ASSIMILATION—CONTRAST THEORY](#), [AUTOMORPHIC PERCEPTION](#), [EGOCENTRISM](#). **FCE** *abbrev.*

false friends *n.* Words in different languages that resemble each other but have different meanings. For example, in French *magasin* means shop or store, not magazine, and *sensible* means sensitive, not sensible; and in German *Mist* means excrement, not mist, and *Gift* means poison, not gift.

false memory *n.* An apparent recollection of something that one did not actually experience, especially sexual abuse during infancy or childhood, often arising from suggestion implanted during counselling or psychotherapy. A classic example, though one unrelated to counselling and psychotherapy, is the [*Piaget kidnapping memory](#). Also called a *pseudomemory* or *pseudomnesia*. *See also* [DEFERRED ACTION](#), [DÉJÀ VU](#), [EXPERIMENTALLY INDUCED FALSE MEMORY](#), [EYEWITNESS MISINFORMATION EFFECT](#), [FALSE MEMORY SYNDROME](#), [INFANTILE AMNESIA](#), [PARAMNESIA \(1\)](#), [RECOVERED MEMORY](#).

false memory syndrome *n.* A condition in which a person's identity and personal relationships are strongly influenced by an objectively false but strongly believed memory of a traumatic experience, such as an objectively false recollection of sexual abuse by a parent or other relative or abduction by alien beings. *See* [FALSE MEMORY](#). *See also* [CONSTRUCTIVE MEMORY](#), [EYEWITNESS MISINFORMATION EFFECT](#), [INFANTILE AMNESIA](#), [PARAMNESIA \(1\)](#), [PIAGET KIDNAPPING MEMORY](#), [RECONSTRUCTIVE MEMORY](#), [RECOVERED MEMORY](#). **FMS** *abbrev.*

false negative *n.* An incorrect classification of an element as not belonging to a class to which it does in fact belong or, especially in [*signal detection theory](#), a failure to detect a signal when it is in fact present. Also called a *miss*. *Compare* [CORRECT REJECTION](#), [FALSE ALARM \(2\)](#), [HIT](#).

false neurotransmitter *n.* Any substance that is not a neuron's normal [*neurotransmitter](#) but that can be taken up by the neuron, stored in its vesicles, and released along with the neuron's normal neurotransmitter when the neuron is stimulated. It may inhibit the function of the neuron if it is less effective than the normal neurotransmitter or enhance the neuron's function if it is more effective.

false positive *n.* An incorrect classification of an element as a member of a class to which it does not in fact belong, as when a decision procedure results in a person being wrongly diagnosed as having a disorder. In **signal detection theory* it is often called a *false alarm*. Compare CORRECT REJECTION, HIT, MISS.

false pregnancy *n.* Another name for **pseudocyesis*.

falsifiability *n.* In the philosophy of science, the property of a **hypothesis* or theory of being capable of refutation by **empirical* evidence, with the implication that a hypothesis lacking this property does not belong to science. The concept was introduced by the Austrian-born British philosopher Karl R(aimund) Popper (1902–94) as a solution to the problem of **induction* (1) and as a criterion of demarcation between science, which deals with falsifiable hypotheses, and metaphysics, which admits unfalsifiable propositions. See also CONFIRMATION BIAS, HYPOTHETICO-DEDUCTIVE METHOD. Compare LOGICAL EMPIRICISM, LOGICAL POSITIVISM.

family *n.* 1. The primary social group, comprising parents, their offspring, and in some societies other relatives sharing the same household (the **extended family*); or more generally any group of individuals related by blood or descended from an identifiable common ancestor. 2. In biology, a **taxonomic* group into which an **order* (3) is divided, containing one or more **genera*. For example, Felidae, the cat family, and Canidae, the dog family, together with the other meat-eating families of bears, raccoons, hyenas, civets, and weasels are all members of the order Carnivora. [From Latin *familia* a household]

family neurosis *n.* A term used mainly in French **psychoanalysis*, not to denote any specific disorder, but to refer to the tendency for individual neuroses of family members to complement and reinforce one another. The concept was introduced in the title of an article published in a French psychoanalytic journal in 1936: ‘La névrose familiale’.

family study *n.* In behaviour genetics, another name for a **kinship study*.

family therapy *n.* A form of **psychotherapy*, based on the assumption that psychological problems are often rooted in and sustained by family relationships, in which two or more members of a family participate simultaneously with the aim of improving communication and modes of interaction between them. *See also* *SYSTEMS THEORY*.

famous names test *n.* A technique for measuring **long-term memory* and providing evidence for **amnesia*. Respondents are presented with the names of people who were famous for limited periods up to several decades previously and are asked to try to identify them and recall what they were famous for. The names that are chosen are usually of people such as Winston Churchill, John F. Kennedy, and Elvis Presley, who were so famous that respondents with intact memories are expected to remember all of them.

fan effect *n.* A tendency for the amount of time required to retrieve a particular fact about a concept to increase with the number of facts that are known about that concept. The effect has been found in retrieval of various categories of knowledge, and also in face recognition, and it may in part be responsible for the slowing of memory retrieval with age. The concept was first reported in 1974 by the Canadian-born US psychologist John R(ober) Anderson (born 1947), who performed an experiment in which participants tried to memorize a list of 26 sentences about people in locations, such as *A hippie is in the park*, *A hippie is in the church*, and *A lawyer is in the cave*. In the list, each person (concept) was associated with either one, two, or three locations (facts); for example, *hippie* was associated with *park*, *church*, and *bank*, and in addition each location was associated with either one, two, or three persons, for example, *cave* was associated with *lawyer* only. Recall was tested by asking the participants to pick out the target sentences from a list in which the sentences that they had learnt were mixed up with **foils* constructed from the same people and locations in novel combinations. The average time required to accept target sentences and reject foils was 1.19 seconds for concepts with one associated fact, 1.28 seconds for concepts with two associated facts, and 1.30 seconds for concepts with three associated facts, and this effect has been replicated many times. *See also* *ACT**. [An acronym, from *facts associated with node*, a concept being represented by a **node (2)* in Anderson's network model. Anderson did not use the word *fan* in his original 1974 article but began using it immediately after]

*****ebook converter DEMO Watermarks*****

fantasize *vb.* To engage in **fantasy* (1) or to produce **fantasies* (1, 2).

fantasticant *See* PHANTASTICANT.

fantasy *n.* 1. Imagination or mental **imagery*. *See also* ALEXITHYMIA, FANTASY THINKING, MALE HYPOACTIVE SEXUAL DESIRE DISORDER. 2. A product of the imagination, especially one detached from reality, or a **daydream* such as the **Madame Butterfly fantasy*. *See also* PRIMAL FANTASY. 3. A whimsical or unrealistic plan or idea. Also spelt *phantasy*. [From Latin *phantasia* a fantasy, from Greek *phantazein* to make visible, from *phainein* to show, from *phaein* to shine]

fantasy thinking *n.* In **analytical psychology*, a form of thinking based on **fantasy* (1) that relies on **imagery*, **emotion*, and **intuition*, without logical or moral constraints. It is closely related to the **primary process* of **psychoanalysis*, and it occurs in dreams and mythology; it is debatable whether it should be called thinking. Carl Gustav Jung (1875–1961) contrasted it with **directed thinking* (*Collected Works*, 5, paragraphs 4–46).

far point *n.* The most distant point from the eye at which an object is focused on the retina without **accommodation* (1) of the crystalline lens, theoretically located at infinity for a normal eye but in practice usually set as 6 metres or 20 feet. *See also* RANGE OF ACCOMMODATION. *Compare* NEAR POINT.

far sense *n.* Any of the senses, such as vision or hearing, that are mediated by **telereceptors* and that enable an organism to perceive objects or events at a distance. Also called a *distance sense*. *Compare* NEAR SENSE.

far-sighted *adj.* 1. Having the ability to see at great distances. 2. Exhibiting foresight and shrewd judgement. 3. A non-technical word for **hyperopic*. **far-sightedness** *n.*

far vision *n.* Distance viewing, usually defined for objects more than 2 feet or about 60 centimetres from the eyes. *See also* ACCOMMODATION (1), ACCOMMODATION REFLEX, CILIARY REFLEX, MYOPIA, SYMPATHETIC NERVOUS SYSTEM. *Compare* NEAR VISION.

fascicle *n.* Another name for a **fasciculus*. [From Latin *fascis* a bundle]

fasciculus *n.* A small bundle or bunch, especially a bundle of nerve fibres such as the **arcuate fasciculus*, **fasciculus cuneatus*, **fasciculus gracilis*, **inferior longitudinal fasciculus*, **superior longitudinal fasciculus*, **subthalamic fasciculus*, or **uncinate fasciculus*. Also called a *fascicle*. [From Latin *fasciculus* a small bundle, diminutive of *fascis* a bundle]

fasciculus cuneatus *n.* A subdivision of the bundle of ascending nerve fibres in the posterior funiculus of the spinal cord, the part towards either side that carries information about touch and position from the arm on the same side of the body and that terminates in the **cuneate nucleus*. See also DORSAL COLUMN. Compare FASCICULUS GRACILIS. [From Latin *cuneatus* wedge-shaped, from *cuneus* a wedge]

fasciculus gracilis *n.* A subdivision of the bundle of ascending nerve fibres in the posterior funiculus of the spinal cord, the part towards the centre that carries information about touch and position of the leg on the same side of the body and that terminates in the **gracile nucleus*. Compare FASCICULUS CUNEATUS. [From Latin *gracilis* slender]

FAST *abbrev.* Face Arm Speech Test, or Face Arm Speech Tongue test, quick and easy assessments for paramedics and members of the public designed to maximize the proportion of **stroke* victims receiving treatment within three hours of the onset of symptoms. Facial weakness is assessed by asking a potential stroke victim to smile and noting any difficulty in smiling without the mouth or eyes dropping; arm weakness by difficulty in raising both arms successfully; speech impairment by difficulty speaking clearly without slurring; and (added later by health practitioners) tongue protrusion difficulty by an inability to stick the tongue out straight from the mouth. Presence of any of these signs is a possible indication of stroke. The test was developed in 1998 by stroke specialists, paramedics, and an emergency room physician in the United Kingdom.

fast glycolytic fibre *n.* A type of **fast-twitch fibre* that is light-coloured and is adapted for **anaerobic* metabolism. US *fast glycolytic fiber*.

Compare **FAST OXIDATIVE GLYCOLYTIC FIBRE**. **FG fibre** *abbrev.* [So called because it is adapted for metabolism by ***glycolysis**]

fast oxidative glycolytic fibre *n.* A type of ***fast-twitch fibre** that is red and is adapted for oxidative metabolism. US *fast oxidative glycolytic fiber*. Compare **FAST GLYCOLYTIC FIBRE**. **FOG fibre** *abbrev.* [So called because it is adapted for oxidative or aerobic metabolism by ***glycolysis**]

fast-twitch fibre *n.* A ***striped muscle** fibre that responds quickly and powerfully but is more prone to fatigue than ***slow-twitch fibre**. US *fast-twitch fiber*. See **FAST GLYCOLYTIC FIBRE**, **FAST OXIDATIVE GLYCOLYTIC FIBRE**.

fatal familial insomnia *n.* A human ***prion** disease characterized by ***insomnia**, disorders of the ***autonomic nervous system**, ***ataxia**, ***dementia**, and death within three years. **FFI** *abbrev.*

fate control *n.* In ***interdependence theory**, as expounded by the US social psychologists Harold H(arding) Kelley (1921–2003) and John W(alter) Thibaut (1917–86) in their books *The Social Psychology of Groups* (1959) and *Interpersonal Relations: A Theory of Interdependence* (1978), an interpersonal situation involving two people, *A* and *B*, in which ‘by simply varying what he does, *A* can produce a variation in *B*’s outcomes. We have described this as *fate control* (**FC**) because *A* has absolute control over *B*’s fate’ (1978, p. 31). Compare **BEHAVIOUR CONTROL**. **FC** *abbrev.*

fate neurosis *n.* In ***psychoanalysis**, a syndrome of repeating patterns of unpleasant life events, the recurrences appearing to be misfortunes but bearing an uncanny similarity to one another. It was discussed by Sigmund Freud (1856–1939) in 1920 in his book *Beyond the Pleasure Principle* (*Standard Edition*, XVIII, 7–64, at pp. 21–2), where he gave examples of people whose good deeds are constantly repaid by ingratitude or bad luck, people who are repeatedly betrayed by friends, and similar cases, and he explained it as a manifestation of a ***repetition compulsion**. The word that Freud coined was *Schicksalszwang* (fate compulsion) rather than *Schicksalneurose* (fate neurosis), but the latter term became conventional in both German and English. Compare **FAILURE NEUROSIS**.

father complex *n.* In **psychoanalysis*, **ambivalence* in a boy's feelings towards his father, being one of the elements of the **Oedipus complex*. See also *COMPLEX (2)*.

fatigue *n.* **1.** Weariness or exhaustion, normally resulting from physical or mental work or lack of sleep. **2.** In physiology, a temporary diminution in the response of an organ or part to a stimulus resulting from overactivity. [From French *fatiguer* to tire, from Latin *fatigare* to tire]

fatigue syndrome See *CHRONIC FATIGUE SYNDROME*.

fattism *n.* Discrimination against people who are overweight, or the tendency to poke fun at them. The word was coined by the US psychologist Rita (Jackaway) Freedman (born 1940) in her book *Bodylove* (1988). Also spelt *fatism*. Compare *ABLEISM*, *AGEISM*, *ETHNOCENTRISM*, *HETEROSEXISM*, *RACISM*, *SEXISM*, *SPECIESISM*. **fattist** or **fatist** *n.* **1.** One who practises or advocates fattism. *adj.* **2.** Of or relating to fattism. [From *fat* + Greek *-ismos* indicating a state or condition, on the model of words such as *racism*]

fatuous love *n.* A type of love characterized by erotic passion and commitment but lacking intimacy. See also *LOVE*. [From Latin *fatuus* foolish]

fear of success *n.* Anxiety about accomplishing goals and achieving ambitions, especially among women because of cultural associations of ambition and success with lack of femininity, as a consequence of which success can lead to social rejection and disapproval. The concept was introduced in 1968 in a doctoral dissertation by the US psychologist Matina S(ouretis) Horner (born 1939) and became well known after an article by her in the *Journal of Social Issues* in 1972. Horner presented men and women with the following brief statement and asked them to write stories based on it: 'After first-term finals (Anne/John) finds (herself/himself) at the top of (her/his) medical class.' The stories written by women responding to the version with the female character called Anne often expressed ambivalence and conflict over Anne's success; they described Anne living a lonely and miserable life, being ugly and horrid, having no love life, and so on. Evidence of fear of success was found in only 10 per cent of stories written by men but

in 65 per cent of stories written by women. Later research reported some decline in fear of success among women as gender inequality declined after the early 1970s, and evidence emerged that both men and women fear success in various circumstances, including occupations that are not traditional for their gender. *See also* [SUCCESS NEUROSIS](#).

feature *n.* 1. Any attribute of a sensory [*stimulus \(1, 2, 3\)](#). A [*local feature](#) is an attribute of part of the stimulus, and a [*global feature](#) is an attribute of the stimulus as a whole. *See also* [ACOUSTIC FEATURE](#), [CHARACTERISTIC FEATURES](#), [CONCEPT](#), [DEFINING PROPERTIES](#), [DISTINCTIVE FEATURE](#), [FEATURE COMPARISON MODEL](#), [FEATURE DETECTION THEORY](#), [FEATURE DETECTOR](#), [FEATURE INTEGRATION THEORY](#), [FEATURE SEARCH](#), [LEVELS OF PROCESSING](#), [PROTOTYPE THEORY](#). 2. More specifically, any of the distinctive parts of the face, such as the eyes, nose, mouth, ears, or chin. [From Old French *faiture* a feature, from Latin *factura* a making, from *facere* to make]

feature abstraction theory *n.* Another name for [*feature detection theory](#).

feature comparison model *n.* Any theory of [*concept formation](#) according to which a decision as to whether a particular item or element belongs to a class proceeds by comparing the [*features \(1\)](#) of the item with those of the class. For example, the theory posits that a person decides whether a particular animal is a cat by checking it for various features associated with cats, such as whiskers, a tail, a propensity to mew, and so on. **FCM** *abbrev.*

feature contrast *n.* In perceptual learning, the isolation of distinctive [*features \(1\)](#) of stimuli by first examining a pair of stimuli that are clearly or obviously differentiated on the feature in question and then responding to a sequence of pairs in which discrimination becomes progressively more difficult.

feature detection theory *n.* Any of a number of theories according to which the perception of objects proceeds by recognizing individual [*features \(1\)](#), such as a pair of wheels, a pair of pedals, a handlebar, a saddle, and an M-shaped metal frame, and assembling them to form a coherent pattern, in

*****ebook converter DEMO Watermarks*****

this example a bicycle, which is then identified as such. Also called *feature abstraction theory*. Compare [FEATURE INTEGRATION THEORY](#), [TOP-DOWN PROCESSING](#).

feature detector *n.* A neuron that responds selectively to a specific **feature* (1) of its input, such as an **edge detector*, a **bar detector*, or a cell specified for facial recognition in the visual association cortex (see [VISUAL CORTEX](#)). Feature detectors in the **retina* were first proposed by the US neuroscientist Jerry (Jerome Ysroael) Lettvin (1920–2011) and three co-authors in an article in the *Proceedings of the Institute of Radio Engineers* in 1959 entitled ‘What the Frog’s Eye Tells the Frog’s Brain’. See also [COMPLEX CELL](#), [GRANDMOTHER CELL](#), [HYPERCOMPLEX CELL](#), [SIMPLE CELL](#).

feature integration theory *n.* A theory first presented in 1977 and 1980 by the US-based English psychologist Anne (Marie) Treisman (born 1935) and colleagues according to which **features* (1) of a stimulus such as colour and shape are analysed separately and only later integrated in the process of perception. Indirect evidence for this comes from experiments showing that, without attention, features are often incorrectly bound, giving rise to illusory conjunctions, and that a red square hidden among blue squares can be detected just as quickly if it is hidden among 20 blue squares as among 10 blue squares, but the time taken to detect a red square hidden among blue squares and red triangles increases with the number of distractor items. See also [BINDING PROBLEM](#), [CONJUNCTION SEARCH](#), [CONJUNCTIVE CONCEPT](#). Compare [FEATURE DETECTION THEORY](#).

feature list theory *n.* Another name for the **componential theory* of concept formation.

feature negative learning *n.* A form of **classical conditioning* in which an animal is given **reinforcement* (2) in the presence of a **conditioned stimulus* that has feature *B* but not a stimulus that has features *A* and *B*. Compare [FEATURE POSITIVE LEARNING](#).

feature positive learning *n.* A form of **classical conditioning* in which an animal is given **reinforcement* (2) in the presence of a **conditioned stimulus* with two features *A* and *B* but not a stimulus that has
*****ebook converter DEMO Watermarks*****

only feature *B. Compare* [FEATURE NEGATIVE LEARNING](#).

feature search *n.* A search for a particular [*feature \(1\)](#) or [*attribute](#), as when a person scans a page in a telephone directory searching for telephone numbers ending with the digit 9. *Compare* [CONJUNCTION SEARCH](#), [DISJUNCTION SEARCH](#).

feature theory *n.* Any theory according to which objects or concepts are recognized by examining their individual features and comparing them to a stored list of [*defining properties](#) for the object or concept concerned. One of the problems with any such theory is that it takes no account of relations between features.

Fechner–Benham colours *n.* Another name for [*pattern-induced flicker colours](#) induced by [*Benham's top](#). US *Fechner–Benham colors*. Also called *Fechner colours* or *subjective colours*. [Named after the German philosopher, physician, psychologist, and mystic Gustav Theodor Fechner (1801–87) who discovered the phenomenon in 1838 using a disc with 18 progressively longer arcs and the English amateur scientist and polymath Charles Edwin Benham (1860–1929) who rediscovered the phenomenon in its more familiar form in 1894]

Fechner's law *n.* In [*psychophysics](#), the proposition that the magnitude of a sensation is proportional to the logarithm of the intensity of the stimulus causing it, usually expressed by the equation $\psi = k \log \phi$, where ψ is the magnitude of the sensation, ϕ is the physical intensity of the stimulus, and k is a constant scaling factor that varies from one kind of sensation to another. It has been largely supplanted by a [*power law](#), which Fechner's law approximates for many sensory modalities. Also called the *Weber–Fechner law*, Fechner himself having called it *Weber's law*. *See also* [PSYCHOPHYSICAL FUNCTION](#). [Named after the German philosopher, physician, psychologist, and mystic Gustav Theodor Fechner (1801–87) to whom it came as a revelation as he lay in bed on 22 October 1850 contemplating the [*mind–body problem](#), although its influence was felt mainly after the publication of his *Elemente der Psychophysik* in 1860]

Fechner's paradox *n.* An increase in the perceived [*lightness](#) of an
*****ebook converter DEMO Watermarks*****

image or scene that is viewed first with both eyes, but with an achromatic light-reducing filter over one eye, and then with the other eye alone and without a filter, despite the fact that less light enters the visual system in the second viewing. It arises as a direct consequence of ***binocular summation**, according to which the perceived lightness of an image or scene viewed binocularly is approximately the average of the brightness of the two stimuli perceived monocularly. It is a surprising phenomenon rather than a true ***paradox**. [Named after the German philosopher, physician, psychologist, and mystic Gustav Theodor Fechner (1801–87) who first pointed it out]

feeble-mindedness *n.* An obsolescent term for ***intellectual disability**.

feedback *n.* The return of part of a system's output to its input, usually as a means of achieving self-correction or modification of performance. In *negative feedback* an increase in output causes a decrease in input, as in a thermostat or other self-regulating mechanism and many ***homeostatic** biological processes including ***EEG** waves. In *positive feedback* an increase in output causes an increase in input, as in the howling of a public address system when a microphone is held too close to its loudspeaker. The term is also used informally for information given to research participants about their own performance or behaviour. *See also* **CLOSED-LOOP CONTROL**, **CYBERNETICS**, **DELAYED AUDITORY FEEDBACK**, **OPEN-LOOP CONTROL**, **TOTE**. *Compare* **FEEDFORWARD**.

feedforward *n.* The effect of a signal pre-empting a subsequent error, such as the efferent output of the extra-ocular muscles during a ***saccade**, suppressing the sensation of movement that would otherwise be created by the motion of images across the retinas during the saccade. *See also* **VISUAL SUPPRESSION**. *Compare* **FEEDBACK**.

feeding and eating disorders *n.* An umbrella term introduced in ***DSM-5** for ***mental disorders** associated with disturbance of eating or eating-related behaviour with significant impairment of physical health or psychosocial functioning. *See* **ANOREXIA NERVOSA**, **AVOIDANT/RESTRICTIVE FOOD INTAKE DISORDER**, **BINGE-EATING DISORDER**, **BULIMIA NERVOSA**, **PICA**, **RUMINATION DISORDER**. *See also* **ACTIGRAPHY**.

feeding centre *n.* One of the two structures of the **appestat*, situated in both halves of the lateral **hypothalamus*, stimulation of which increases eating and destruction inhibits eating. US *feeding center*. See also LATERAL HYPOTHALAMIC FEEDING CENTRE. Compare SATIETY CENTRE.

feeling type *n.* One of the subsidiary personality types in **analytical psychology*. See FUNCTION TYPE.

fellatio *n.* Sexual activity in which a man's genitalia are stimulated by his partner's tongue and lips. Also called *fellation*. Compare CUNNILINGUS. **fellate** *vb.* To perform fellatio. [From Latin *fellare* to suck]

female genital mutilation *n.* Another name for **clitoridectomy*, widely practised in parts of Africa and elsewhere to deter women's sexual infidelity. **FGM** *abbrev.*

female orgasmic disorder *n.* A **sexual dysfunction* in **DSM-5* characterized by a persistent or recurrent delay or absence of **orgasm* following the excitement phase of the female **sexual response cycle* on all or almost all occasions (75–100 per cent), causing significant distress or interpersonal problems, persisting for at least six months, and not being attributable to a drug, another medical condition, or relationship distress, such as partner violence. Compare PERSISTENT SEXUAL AROUSAL SYNDROME.

female sexual interest/arousal disorder *n.* A **sexual dysfunction* in **DSM-5* characterized by reduced or absent interest in sex and erotic thoughts or fantasies, reduced or absent sexual excitement or pleasure during sex, unresponsiveness to sexual cues, and absent genital sensations in all or most sexual encounters (75–100 per cent). It is usually accompanied by a persistent or recurrent inability to attain or maintain adequate lubrication and swelling of the external sexual organs until completion of sexual activity.

fenestra *n.* A window, or a window-like opening in an anatomical structure. **fenestrae** *pl.* [From Latin *fenestra* a window]

fenestra ovalis *n.* The **oval window*. Also called the *fenestra vestibuli*.

fenestra rotunda *n.* The **round window*. Also called the *fenestra cochleae* or *fenestra tympani*.

fentanyl *n.* A **narcotic analgesic* drug that has a pharmacological action similar to that of morphine and is used as an adjunct to general anaesthesia, as a sedative or **neuroleptic (1)* drug, and sometimes as a street drug. Its most common street name is *China white*. See also *DROPERIDOL*. [A corruption of *phenethyl*]

feral *adj.* Wild or untamed, especially after having previously been domesticated. [From Latin *feralis* wild, from *fera* a wild beast]

feral child *n.* A child supposedly raised by wild animals with little or no involvement of other humans. See also *KASPAR HAUSER EXPERIMENT*, *WILD BOY OF AVEYRON*.

Ferberize *vb.* To train an infant to be self-reliant and to sleep on its own by placing it in its crib, leaving the room, and ignoring its crying for at least 20 minutes, then returning, patting it but not picking it up, and leaving quickly. When this influential but controversial child-care practice is followed, the procedure is repeated every night, increasing by five minutes per night the waiting period before responding to the infant's crying with patting. **Ferberization** *n.* The practice of Ferberizing. [Named after the US paediatric sleep researcher Richard Ferber (born 1944) who developed it in 1986]

Ferry–Porter law *n.* The proposition that the **critical flicker frequency* increases in proportion to the logarithm of light intensity. Also called *Porter's law*. [Named after Edwin Sidney Ferry (1868–1956), US physicist, and Thomas Cunningham Porter (1860–1933), assistant science and mathematics master at Eton College, England, who discovered it independently]

fertility *n.* The reproductive activity of an organism or of a population, species, or other taxonomic group, indexed by the number of viable offspring that it produces in a specified time period. [From Latin *fertilis* fruitful, from *ferre* to bear]

fertilization *n.* The union of a male and a female **gamete*, such as an ovum and a spermatozoon in humans, to produce a **zygote*.

festination *n.* A manner of walking with an involuntary acceleration of gait, as if trying to catch up with one's displaced centre of gravity, often shown by people with **Parkinson's disease*. [From Latin *festinare* to hurry + *-ation* indicating a process or condition]

fetal alcohol syndrome *See* FOETAL ALCOHOL SYNDROME.

fetal brain transplantation *See* FOETAL BRAIN TRANSPLANTATION.

fetish *n.* 1. An inanimate object to which a pathological sexual attachment is formed, or by extension a person who is the object of an obsessive **fixation* (3). 2. An object, the possession of which is believed to procure the services of a spirit lodged within it. *See also* FETISHISM. [From Portuguese *feitício* magic, from *feitício* artificial, from Latin *facticius* artificial or made, from *facere* to make]

fetishism *n.* A **paraphilia* characterized by recurrent, intense sexual fantasies, urges, or behaviour involving inanimate objects such as women's undergarments, stockings, or shoes that are treated as **fetishes* (1). *See also* FETISHISTIC DISORDER, SPLITTING OF THE EGO. **fetishistic** *adj.*

fetishistic disorder *n.* A **paraphilic disorder* in **DSM-5* characterized by intense, recurrent sexual arousal from either non-living objects or non-genital body parts, or associated fantasies or urges over a period of at least six months. To meet the diagnostic criteria, the fantasies, urges, or behaviour must have caused clinically significant distress or impairment in social, occupational, or other areas of life, and the fetish objects must not be limited to opposite-sex clothing or sex toys or devices. *See also* FETISHISM.

fetishistic transvestism *n.* A **paraphilia* characterized by recurrent sexually arousing fantasies, sexual urges, or behaviour involving the wearing of clothes of the opposite sex and appearing as a member of the opposite sex. Also called *transvestic fetishism*. *Compare* TRANSSEXUALISM, TRANSVESTISM.

[From Latin *trans* across + *vestire* to dress]

fetus *n.* An alternative (etymologically more correct) spelling of **foetus*.
[From Latin *fetus* offspring]

fibril *n.* A small fibre or threadlike structure such as one of the contractile strands of muscle tissue. [From Latin *fibrilla* a little fibre, diminutive of *fibra* a fibre]

fibrillation *n.* A localized and involuntary twitching of muscle fibres; also, a chaotic twitching of muscle fibres of the heart. [So called because it arises from the discoordinated actions of muscle **fibrils*]

fictional finalism *n.* In the **individual psychology* of the Austrian psychiatrist Alfred Adler (1870–1937) and his followers, a term used to denote the characteristic form of human motivation, being driven by striving after unattainable ultimate goals. Except in cases of neurosis, however, people are normally able to suspend such fantasies and adopt more realistic judgements of the future.

fiction, guiding *See* GUIDING FICTION.

field *n.* A bounded area, especially a region within which a body experiences forces resulting from the presence of other bodies not in contact with it (as in a gravitational or a magnetic field), or more generally any region within which certain specified phenomena occur. *See also* FIELD DEPENDENCE–INDEPENDENCE, FIELD EFFECT, FIELD THEORY, LIFE SPACE, RECEPTIVE FIELD, TOPOLOGICAL PSYCHOLOGY, VISUAL FIELD.

field adaptation *n.* The component of **visual adaptation* during **dark adaptation* or **light adaptation* that occurs relatively quickly through neural processes rather than as a result of pigment bleaching. Also called *neural adaptation*.

field dependence–independence *n.* A **cognitive style* characterized by the propensity to differentiate perceptual and other

experiences from their backgrounds or contexts, a person with a weak propensity of this kind being field dependent and a person with a strong propensity field independent. Men tend on average to be more field independent than women, adults than children, and people who score high on abstract reasoning subtests of IQ tests (as opposed to vocabulary, information, and comprehension subtests) than those who score low on such subtests. It was discovered in 1950 by the US psychologist Herman A. Witkin (1916–79) and is usually measured by the **rod-and-frame test*, the **embedded-figures test*, or the **tilting-room test*. Field independence is also called *psychological differentiation*. **FD–I** abbrev.

field effect *n.* A term used by **Gestalt psychologists* to denote a **context effect* in which the appearance of an image or part of an image is affected by its spatial or temporal setting, as in **associative illusions*. See also *PRÄGNANZ*.

field experiment *n.* Any **experiment* carried out in a natural setting rather than in the artificial environment of a laboratory. Compare *FIELD STUDY*.

field of vision *n.* Another name for the **visual field*.

field study *n.* A research investigation, possibly but not necessarily a **field experiment*, carried out in a natural setting rather than in the artificial environment of a research laboratory.

field theory *n.* Any theory in which phenomena are interpreted as resulting from the dynamic interplay of elements within a **field*, especially (in psychology) the theory introduced in 1935 by the German–US psychologist Kurt Lewin (1890–1947). According to Lewin's field theory, psychological events occur within a type of field called a **life space*, within which the important relations are qualitative aspects of connection and position, such as belongingness, membership, and part-whole relationships. Behaviour is interpreted as a function of the person and the life space, this relation being expressed by the equation $B = f(LS)$, and the life space is interpreted as the person and the environment, so that $B = f(P, E)$, meaning that behaviour is a joint function of the person and the environment, behaviour being represented as *locomotion* from one region of the life space to another, regions that attract or repel having *valence*. See also *HODOLOGICAL*

*****ebook converter DEMO Watermarks*****

SPACE, LEWINIAN, TOPOLOGICAL PSYCHOLOGY.

fight-or-flight response *n.* A term introduced by the US physiologist Walter Bradford Cannon (1871–1945), and popularized in his book *Bodily Changes in Pain, Hunger, Fear and Rage* (1929), for the syndrome of physiological **responses* of an organism confronted with a situation that evokes fear, pain, or anger, such responses being mobilized by the secretion of **adrenalin* (epinephrine) from the adrenal medulla, preparing the organism to fight or to flee. It includes increased blood pressure, accelerated heart rate, deepened respiration, increased sweating, dilation of the pupils, diversion of blood flow from the digestive tract to the skeletal muscles and cessation of digestive processes, release of sugar from reserves in the liver, and closure of the sphincter of the bladder, leading to retention of urine.

figural aftereffect *n.* A change in perception of a visual stimulus resulting from prolonged (usually 30 seconds or more) exposure to a different visual stimulus, as when the contour of the second stimulus falling on the retina near the contour of the original stimulus appears displaced away from the position occupied by the original contour, or more generally any distortion in visual perception resulting from a prior visual stimulus, as occurs in **successive contrast*. *See also* [AFTEREFFECT](#), [CONTINGENT AFTEREFFECT](#), [MOTION AFTEREFFECT](#), [SPIRAL AFTEREFFECT](#), [TILT AFTEREFFECT](#), [VISUAL AFTEREFFECT](#). **FAE** *abbrev.*

figure-ground reversal *n.* A phenomenon underlying many **ambiguous figures*, the alternating perceptions of which depend on shifting interpretations of which parts of the image represent the figure and which represent the (back)ground. The Dutch graphic artist Maurits C(ornelis) Escher (1898–1970) often exploited this phenomenon, together with visual puzzles in the form of **impossible figures* (Escher figures). *See* [REVERSIBLE GOBLET](#).

figure of speech *n.* A linguistic expression or device in which words are used to create special effects or to express ideas different from their usual or literal meaning. Also called an *image*. *See* [APOSTROPHE \(1\)](#), [CHIASMUS](#), [HENDIADYS](#), [METAPHOR](#), [METONYMY](#), [OXYMORON](#), [PERSONIFICATION](#), [SIMILE](#), [SYNECDOCHE](#).

*****ebook converter DEMO Watermarks*****

filament *n.* Any slender, threadlike structure, such as the tail of a **spermatozoon*. [From Latin *filum* a thread, from *filare* to spin]

file drawer problem *n.* A bias in the body of published research in any field resulting from the fact that studies reporting positive results are more likely to be published than those reporting negative or non-significant results. It is especially problematical in research areas such as **parapsychology*, and in any area it makes difficulties for the interpretation of **meta-analyses*. [So called because researchers relegate unpublished findings to file drawers]

filial generation *n.* In genetics, any generation following a parental generation that has been designated arbitrarily as the first in a hereditary line. By convention, F_1 designates the first filial generation, F_2 the second filial generation, and so on. [From Latin *filialis* pertaining to a son or daughter, from *filius* a son]

filial imprinting See *IMPRINTING*.

filial regression *n.* The tendency for a child of a parent who scores extremely high or extremely low on some heritable characteristic, such as IQ or physical stature, to score closer to the population **mean* than the parent. This phenomenon is explained by **regression towards the mean*. Also called *Galton's law of filial regression*. See also *OVERDOMINANCE*. [From Latin *filius* a son + *regressus* a retreat + *-ion* indicating an action, process, or state]

filled-duration illusion *n.* A **cognitive illusion* that causes a specified period of time to be experienced as longer when many events are experienced during it than when it is relatively empty. For example, if two clicks mark the beginning and end of a period of silence (an unfilled interval), it tends to be perceived as shorter than the same objective interval filled with a sequence of clicks (a filled interval). Compare *FILLED-SPACE ILLUSION*.

filled pause *n.* A vocal hesitation into which the speaker inserts a meaningless vocalization such as *um* or *er*.

filled-space illusion *n.* A visual illusion in which a line, area, or

volume appears larger if it is occupied by a number of distinct elements than if it is empty (see [illustration](#)). The first written reference to it is to be found in Book 16, Chapter 7 of *Problems*, a work often spuriously attributed to the Greek philosopher Aristotle (384–322 BC), probably written by one of his followers. The illusion is there presented the wrong way round, and the explanation that is offered to clarify it is therefore beside the point: ‘Why is it that magnitudes always appear less when divided than when taken as a whole? Is it because, though things which are divided always possess number, in size they are smaller than that which is single and undivided?’ The first systematic investigation of the illusion was reported in 1860–1 (not 1854–5 as often stated) by the German physicist Johann Joseph Oppel (1815–94). Also called the *filled and unfilled extent illusion*, the *Oppel illusion*, or the *Oppel–Kundt illusion*. See also [KUNDT'S RULES](#). Compare [FILLED-DURATION ILLUSION](#).

Filled-space illusion. The distance between A and B is the same as that between B and C.

fillet *n.* A narrow strip of meat or other material; also, a non-technical name for the [*lemniscus](#). [Via Old French from Latin *filum* a cord or thread]

filling-in *n.* The action of the visual system or other perceptual system, when responding to a stimulus with gaps or missing information, of guessing the missing information by assuming that it is the same as the information presented and generating perception without gaps. Also called *perceptual completion*. See also [AMODAL COMPLETION](#), [ARTIFICIAL SCOTOMA](#), [BLIND SPOT \(1\)](#), [CRAIK–O'BRIEN EFFECT](#), [FILLING-IN ILLUSION](#), [MODAL COMPLETION](#), [PHONEMIC RESTORATION](#), [TROXLER EFFECT](#).

filling-in illusion *n.* A visual illusion of [*filling-in](#) consisting of a central black dot surrounded by a dark region that fades very gradually into a lighter background. Steady, unmoving fixation on the dot with one eye (keeping the other eye closed or covered) causes the dark region to vanish after a few seconds by a process of [*filling-in](#), but the effect is eliminated if the dark region is surrounded by a clearly defined ring or boundary (see [illustration](#)).

*****ebook converter DEMO Watermarks*****

The illusion arises from an approximation to a **stabilized retinal image*: the eye movements resulting from **physiological nystagmus* during fixation do not produce any noticeable changes in the peripheral areas of the retinal image because of its smoothly graded contour, and the visual system therefore allows the image to fade as if it were fixed, but the addition of a sharply defined ring or boundary makes movements in the peripheral image detectable and causes the visual system to refresh that part of the image.

Filling-in illusion. In the left-hand figure, steady fixation on the black dot with one eye, keeping the other eye covered or closed, causes the dark region surrounding the dot to disappear, whereas in the right-hand figure the ring prevents fading.

film colour *n.* A misty appearance of colour without any fixed distance that is experienced when there are no lines or edges present in the visual field. US *film color*. Also called *volume colour*. See also [GANZFELD](#). Compare [SURFACE COLOUR](#).

filiform papilla *n.* Any of the numerous threadlike **papillae* that are situated on the upper surface of the **tongue* and that conspicuously lack **taste* buds. Compare [CIRCUMVALLATE PAPILLA](#), [FOLIATE PAPILLA](#), [FUNGIFORM PAPILLA](#). **filiform papillae** *pl.* [From Latin *filum* a thread + *forma* a shape]

filter *n.* **1.** A porous substance or device that removes suspended particles while allowing fluid to pass through it. **2.** Any electronic, acoustic, optical, or purely mathematical device that blocks signals of certain frequencies while allowing others to pass. See also [BAND-PASS FILTER](#). *vb.* **3.** To remove or separate suspended particles from a fluid or certain wavelengths from a signal, or more generally to exclude certain types of stimuli from attention. See also [FILTER THEORY](#).

filter theory *n.* A theory of **attention* proposed in 1958 by the English

*****ebook converter DEMO Watermarks*****

psychologist Donald E(ric) Broadbent (1926–93) according to which there exists a ***central processor (2)** with a limited capacity that can select only one sensory input channel at a time and can switch between input channels no more than about twice per second, information in an unattended channel being held in ***short-term memory** for a few seconds. Evidence for the theory was provided by *split-span* experiments in which pairs of digits were presented simultaneously to both ears at a rate of up to two per second, and listeners invariably recalled them ear by ear rather than pair by pair, evidently switching attention from one ear to the other, but later findings necessitated refinements of the theory. *See also* [ATTENUATION THEORY](#), [COCKTAIL PARTY PHENOMENON](#), [BOTTLENECK THEORY](#), [SELECTIVE ATTENTION](#).

fimbria *n.* The fringe of white nerve fibres along the edge of the ***hippocampus**, meeting in the ***fornix**. [From Latin *fimbriae* fibres or a fringe]

finger agnosia *n.* A form of ***autotopagnosia**, usually associated with a lesion in the posterior region of the dominant hemisphere, characterized by a primary inability to recognize, identify, differentiate, name, select, or indicate individual fingers of either hand. If a person with finger agnosia is touched on either one or two fingers, each finger being touched in either one or two places, such a person is unable to state how many fingers are being touched. *See also* [AGNOSIA](#), [GERSTMANN SYNDROME](#).

fingerprint, genetic *See* [GENETIC FINGERPRINTING](#).

finger spelling *n.* Another name for ***dactylology**.

finite-state grammar *n.* A simplified form of ***generative grammar** capable of yielding only a limited number of sentences.

fire-setting, pathological *n.* Another name for ***pyromania**.

FIRO-B *abbrev.* A 54-item ***self-report** questionnaire designed to measure needs for inclusion, control, and affection in the way people behave towards others and the way they desire others to behave towards them. Developed in

1957 by the US consulting psychologist William C. ('Will') Schutz (1925–2002), it is the most popular of several FIRO scales, especially in [*industrial/organizational psychology](#) and [*occupational psychology](#). [Fundamental Interpersonal Relations Orientation–Behavior]

first censorship *See* [CENSORSHIP](#).

first-order approximation to language *See* [APPROXIMATION TO LANGUAGE](#).

fishberry *n.* The climbing plant *Cocculus indicus* that contains [*picrotoxin](#). [So called because its berries are sometimes fed to fish so that they die and float to the surface]

Fisher's exact test *n.* A statistical test that can be applied to data in a 2×2 contingency table and is especially useful when the total sample size or some of the expected values are small so that the [*chi-square test](#) cannot be used. This [*distribution-free test](#) establishes the exact probability, under the [*null hypothesis](#) that the row and column variables are independent, of obtaining a result as extreme or more extreme than the observed result assuming that the marginals (the row and column totals) are fixed. It is the prototypical [*randomization test](#). Also called *Fisher's exact probability test*, *Fisher–Yates test*. [Named after the English statistician and geneticist Ronald Aylmer Fisher (1890–1962) who in 1934 encouraged Frank Yates (1902–94) to develop it]

Fisher's r to z transformation *n.* In statistics, a method of transforming [*product–moment correlation coefficients](#) into [*standard scores](#) or z scores to facilitate interpretation and to enable tests such as those for the significance of the difference between two correlation coefficients to be carried out. [Named after the English statistician and geneticist Ronald Aylmer Fisher (1890–1962)]

Fisher–Yates test *n.* Another name for [*Fisher's exact test](#).

fis phenomenon *n.* A child's refusal to accept an adult's rendering of

what the child has just said. The phenomenon was first reported in 1960 by the US psychologists Jean Berko (born 1931, later called Jean Berko Gleason) and Roger William Brown (1925–97) in an account of a child who called his plastic fish a *fis* but refused to accept this pronunciation from adults and was satisfied only when they called it a *fish*. This is often taken to illustrate that young children can hear more than they can say.

fission *n.* **1.** The process of splitting something into parts. **2.** A form of **asexual reproduction* in which a single-celled organism such as a **bacterium divides* into two or more equal parts, each of which then develops into a new cell. [From Latin *fissio* a cleaving + *-ion* indicating an action, process, or state]

fissure *n.* A narrow cleft or crack; any of the longer and deeper grooves or furrows between the **gyri* or convolutions of the brain. Also called a *sulcus*. [From Latin *fissus* split, from *findere* to split]

fissure of Rolando *n.* Another name for the **central sulcus*. [Named after the Italian physician Luigi Rolando (1773–1831)]

fissure of Sylvius *n.* Another name for the **lateral sulcus*. [Named after the Flemish anatomist Franciscus Sylvius (1614–72), also called Franz de le Boë, who apparently discovered it]

fitness *n.* The condition of being fit and healthy, or of being suitable for a particular function. More specifically, the degree of **adaptation (1)* of an organism to its environment, usually measured in terms of the average contribution of its **genotype* to the next generation, relative to that of other genotypes. Also called *genetic fitness*. See also *DARWINIAN FITNESS*. Compare *INCLUSIVE FITNESS*.

Fitts' law *n.* In **reaction time* experiments in which a subject or participant moves a stylus as quickly as possible from a starting position to a target, a relation observed between movement time (*MT*) on the one hand and target width (*W*) and movement amplitude (*A*) on the other, expressed by the equation $MT = a + b \log_2 (2A/W)$, where *a* and *b* are constants representing

the intercept and slope of the function respectively. Thus movement time decreases with the size of the target and increases with the amplitude of the movement. Often incorrectly spelt *Fitt's law*. Compare [HICK's LAW](#). [Named after the US psychologist Paul Morris Fitts (1912–65) who formulated it in 1954]

five-factor model *n.* Another name for the [*Big Five](#). **FFM** *abbrev.*

5-hydroxyindoleacetic acid *n.* A substance that is produced by the [*metabolism](#) of [*serotonin](#) and whose concentration in [*cerebrospinal fluid](#) has been found to be negatively correlated with suicidal depression. See also [BUFOTENIN](#). **5-HIAA** *abbrev.*

5-hydroxytryptamine *n.* The chemical name for [*serotonin](#). **5-HT** *abbrev.*

5-hydroxytryptophan *n.* A precursor of [*serotonin](#) (5-hydroxytryptamine), synthesized in the brain from dietary [*tryptophan](#), an amino acid that, unlike serotonin itself, is able to cross the [*blood–brain barrier](#). **5-HTP** *abbrev.*

five-number summary *n.* A set of figures providing a useful basic summary of a [*data set](#). It comprises the lowest score, the lower [*quartile](#), the [*median](#), the upper quartile, and the highest score. These data can be displayed in a [*box-and-whisker plot](#).

5 per cent trim *n.* In statistics, the [*arithmetic mean](#) calculated after eliminating the largest five per cent and smallest five per cent of the cases. It is used occasionally when a set of scores contains values that are much smaller or much larger than the rest, because in such cases it may yield a more useful indication of [*central tendency](#) than the untrimmed mean. See also [TRIMMED MEAN](#).

fixate *vb.* **1.** To train one's eyes on an object or point in the visual field so that its image falls on the [*foveas](#) of the eyes. See also [DONDERS' LAW](#), [READING SPAN](#). **2.** To engage or indulge in [*fixation](#) (3); to become

preoccupied or obsessed with something. [From Latin *fixus* fixed]

fixation *n.* **1.** The act or process of **fixating* (1). Also called *visual fixation*. See also *DONDERS' LAW*, *EYE-TRACKING*, *READING SPAN*. **2.** In **psychoanalysis*, the persistence of a mode of **libidinal* satisfaction characteristic of an earlier stage of **psychosexual development*, as when **libido* remains attached to a particular **instinctual object* or an **erotogenic zone* associated with a pre-genital **libidinal stage*, such as the **oral stage*, **anal stage*, or **phallic stage*. The concept rests on the insight that people retain throughout life latent attachments to earlier modes of satisfaction and **object-relationships*, and that these are reactivated by **regression* (2). Sigmund Freud (1856–1939) referred to it in 1905 in his book *Three Essays on the Theory of Sexuality* (*Standard Edition*, VII, pp. 130–243) and repeatedly in his later writings. See also *ANAL CHARACTER*, *GENITAL CHARACTER*, *ORAL CHARACTER*, *PHALLIC CHARACTER*, *URETHRAL CHARACTER*. **3.** The act or process of becoming preoccupied or obsessed with something.

fixed-action pattern *n.* In ethology, a **response* to a **sign stimulus* or **releaser*, taking the form of a stereotyped pattern of innate behaviour, such as the aggressive attack of a male European robin elicited by the red feathers on the breast of a rival. It is relatively uninfluenced by learning and is assumed to be governed by an **innate releasing mechanism*. See also *VACUUM ACTIVITY*. **FAP** abbrev.

fixed idea See *IDÉE FIXE*.

fixed image *n.* Another name for a **stabilized retinal image*.

fixed-interval schedule *n.* In **operant conditioning*, a simple **reinforcement schedule* in which reward follows the first response that the organism makes after a predetermined time interval, and then the first response that it makes after the same interval, and so on, the duration of the interval being specified in seconds as an affix to the abbreviation, hence *FI20* indicates a fixed-interval schedule with a 20-second interval. Also called a *fixed-interval reinforcement schedule*. See also *SIMPLE REINFORCEMENT SCHEDULE*. Compare *FIXED-RATIO SCHEDULE*, *VARIABLE-INTERVAL SCHEDULE*, *VARIABLE-RATIO SCHEDULE*. **FI** abbrev.

*****ebook converter DEMO Watermarks*****

fixedness, functional See FUNCTIONAL FIXEDNESS.

fixed-ratio schedule *n.* In *operant conditioning, a simple *reinforcement schedule in which reward is delivered after the organism has made a fixed number of responses, and is delivered again after the same number of responses, and so on, the number of responses required before each reinforcement being specified as an affix to the abbreviation, hence *FR10* indicates a fixed-ratio schedule with reinforcement after every 10 responses. Also called a *fixed-ratio reinforcement schedule*. See also SIMPLE REINFORCEMENT SCHEDULE. Compare FIXED-INTERVAL SCHEDULE, VARIABLE-INTERVAL SCHEDULE, VARIABLE-RATIO SCHEDULE. **FR** abbrev.

fixed-role therapy *n.* A form of *psychotherapy based on the *personal construct theory of the US psychologist George A(lexander) Kelly (1905–67), first explored by Kelly and his colleagues in 1939 and described in his book *The Psychology of Personal Constructs* (1955, Volume 1, pp. 360–451), in which the client begins with a self-characterization then modifies it in the direction of a desired alternative. See also PERSONAL CONSTRUCTS THERAPY. **FRT** abbrev.

flanker compatibility effect *n.* A shorter *choice reaction time in response to a target stimulus closely flanked by compatible than incompatible stimuli. For example, if target stimuli are presented in the middle of five-letter strings, and participants are instructed to press one key whenever the target is H or K and a different key whenever the target is S or C, then HHKHH has compatible flankers and SSKSS incompatible flankers. Reaction times are significantly shorter with compatible flankers or without flankers than with incompatible flankers, suggesting that incorrect responses compete with correct ones (compare STROOP EFFECT) and that the *levels of processing of stimuli deliberately excluded from *attention are deeper than required by the task. The effect was first reported by the US psychologists Charles W(alter) Eriksen (born 1923) and James E. Hoffman (born 1948) in the journal *Perception and Psychophysics* in 1973, and by Barbara A(nn) Eriksen (born 1931) and Charles W(alter) Eriksen in a second article in the same journal in 1974, after which it was frequently used to study *selective attention. Also called the *Eriksen flanker task* or *flanker effect*. **FCE** abbrev. [From Old French *flanc* the side of the body between ribs and hip, from Latin

*****ebook converter DEMO Watermarks*****

flancum]

flashback *n.* **1.** In a novel, film, or other fictional work, a sudden transition to an earlier episode in the narrative. **2.** A recurrence of a memory, or the experience of reliving an episode from the past. *See also* [POST-TRAUMATIC STRESS DISORDER](#), [REDINTEGRATION](#). **3.** After consumption of a **hallucinogen*, the re-experiencing of some of the perceptual effects of the intoxication, such as geometric illusions, false perceptions of motion in the periphery of the visual field, flashes of light or colour, **afterimages*, **micropsia*, and **macropsia*. Also called *posthallucinogen perception disorder*.

flashbulb memory *n.* An unusually vivid, richly detailed, and long-lasting memory for the circumstances surrounding a dramatic event. The standard example is the assassination of the US president John F. Kennedy in 1963: most people who were adults at the time have flashbulb memories of where they were and what they were doing when they first heard about this event. [So called because it has the subjective quality of something indelibly recorded as by a flash camera, although research has shown that in reality it is often less than perfectly accurate]

flash-lag effect *n.* A **movement illusion* whereby a brief flash occurring at the same position as a moving object or image appears to lag behind the object or image. It also occurs with a moving sound source. It was first reported by the German Gestalt psychologist Wolfgang Metzger (1899–1979) in an article in the journal *Psychologische Forschung* in 1931. **FLE** *abbrev.*

flattening of affect *See* [AFFECTIVE FLATTENING](#).

flavour *n.* The quality of a food or drink perceived in the mouth, determined by a combination of sensory effects including its taste, odour, texture, temperature, colour, irritability, and sound (when chewed). US *flavor*. *See also* [TASTE](#). [From Old French *flaour* flavour, probably influenced by *savour* taste, from Latin *sapor* taste, from *sapere* to taste]

flavour aversion learning/conditioning *See* [FOOD](#) [AVERSION](#)

*****ebook converter DEMO Watermarks*****

LEARNING.

Flesch indices *n.* Indices designed to measure two aspects of the readability of text: the **reading ease score*, which measures how easy the text is to read, and the **human interest score*, which measures how interesting it is to read. [Named after the Austrian-born US researcher Rudolf (Franz) Flesch (1911–86), who devised the indices in 1946 and revised them in 1949]

Fletcher–Munson contour *n.* Another name for an **equal-loudness contour*. Also called a *Fletcher–Munson curve*. [Named after the US acoustical scientist Harvey Fletcher (1884–1981) and the US engineer Wilden A. Munson (1902–82) who introduced it in 1933]

flexibilitas cerea *See* CEREAL FLEXIBILITAS.

flexion reflex *n.* A type of **reflex (1)* consisting of a quick, involuntary bending of a joint to withdraw a limb, hand, finger, or other part in response to a strong painful **stimulus (1)* applied to it. [From Latin *flectere*, *flexum* to bend]

flicker *n.* Intermittent or rapidly fluctuating light, or the visual sensation resulting from a light stimulus fluctuating periodically in brightness below the **critical flicker frequency*. *Compare* AUDITORY FLUTTER.

flicker fusion frequency *n.* Another name for **critical flicker frequency*. **fff** *abbrev.*

flight into health *n.* In **psychoanalysis*, a sudden claim by a patient to be fully recovered and in no further need of help, interpreted as a defensive reaction to **psychotherapy*. The term is based on the original concept of the **flight into illness*.

flight into history *n.* In **counselling* and **psychotherapy*, a tendency to dwell excessively on the past, interpreted as a defensive reaction to pain or embarrassment evoked by the present. The term was coined on the model of **flight into illness*.

*****ebook converter DEMO Watermarks*****

flight into illness *n.* An attempt to escape from unacceptable feelings or conflicts by developing **neurotic (1)*, **psychotic (1)*, or **psychosomatic* symptoms. The term originated in **psychoanalysis*: Sigmund Freud (1856–1939) referred in 1894 to the ‘flight into psychosis’ (*Standard Edition*, III, p. 59), then in 1908 to the ‘flight into neurotic illness’ (*Standard Edition*, IX, p. 192), and then finally in 1909 to the ‘flight into illness’ (*Standard Edition*, IX, p. 231). See also *PRIMARY GAIN*. Compare *FLIGHT INTO HEALTH*, *FLIGHT INTO HISTORY*.

flight of colours *n.* The sequence of **afterimages* of different colours that follow brief exposure to a bright stimulus, especially in dark-adapted eyes. It can be demonstrated by adapting one's eyes in the dark for 25 minutes, then switching on a light, fixating it with a steady gaze for several seconds, turning the light off, and keeping the eyes as steady as possible—the phenomenon tends to vanish when the eyes are moved. US *flight of colors*. Also called *colour flight* or *color flight*.

flight of ideas *n.* A form of **thought disorder* in which a rapid flow of thoughts occur, flitting from one topic to another, usually with transitions based on arbitrary conceptual or verbal links. It is often seen in a **manic episode* and occasionally in certain forms of **schizophrenia*.

floater *n.* A dark speck that appears to float in front of one's eyes and appears to follow their movements, caused by dead cells and fragments of cells suspended in the vitreous humour and crystalline lens of the eye.

floating-finger illusion *n.* A visual illusion that is seen when the forefingers of each hand are held horizontally about 30 centimetres in front of the eyes, with the fingertips touching and the gaze focused on a point in the distance, and the fingertips are then drawn apart about one centimetre. A disembodied finger, with two tips, appears floating in mid-air, and it can be lengthened or shortened by varying the distance between the fingertips (see *illustration*). The illusion was discovered in 1928 and described in the journal *Psychological Review* by the US psychologist Winford Lee Sharp (1890–1975).

Floating-finger illusion

flocculonodular lobe *n.* The evolutionarily oldest part of the ***cerebellum**, present even in fishes, consisting of a pair of small irregular structures (flocculi) joined in the middle by a ***node (1)** or nodulus and separated by a deep fissure from the back of the cerebellum, connected to the vestibular system and concerned chiefly with posture, balance, and ballistic movements. [From Latin *flocculus* a small tuft of wool, diminutive of *floccus* a tuft of wool + *nodulus* a small knot, diminutive of *nodus* a knot, alluding to its appearance as two small tufts of wool with a small knot in the middle]

flooding *n.* A technique of ***behaviour therapy** used to treat ***post-traumatic stress disorder**, ***phobias**, and other ***anxiety** disorders by exposing the anxious person intensively to the anxiety-producing situation until the anxiety subsides. Also called *exposure therapy*, *implosion therapy*.

floor effect *n.* In statistics and measurement theory, an artificial lower limit on the value that a ***variable** can attain, causing the distribution of scores to be skewed. For example, the distribution of scores on an ability test will be skewed by a floor effect if the test is much too difficult for many of the respondents and many of them obtain zero scores. Also called a *basement effect*. Compare **CEILING EFFECT**.

floral odour See **FRAGRANT ODOUR**.

flow chart *n.* A diagram consisting of a series of boxes, each representing a particular process or operation, joined by arrows indicating the output of one process or operation to another. There is usually one particular box from which the sequence begins, and some boxes, often distinguished by a

*****ebook converter DEMO Watermarks*****

distinctive shape, may represent decision or choice points from which two or more arrows emerge, each indicating a different decision or choice. Also called a *block diagram*.

flowery odour *See* FRAGRANT ODOUR.

fluent aphasia *See* APHASIA.

fluid intelligence *n.* A fundamental **factor* (2) of human intelligence, derived from **factor analysis*, corresponding roughly to non-verbal reasoning, requiring rapid understanding of novel relationships, measured by tests such as **Raven's Progressive Matrices*. The concept was introduced in an article by the English-born US psychologist Raymond B(ernard) Cattell (1905–98) in the journal *Psychological Bulletin* in 1941 and became widely known after the publication of his book *Abilities: Their Structure, Growth and Action* (1971). Also called *fluid ability*. Compare CRYSTALLIZED INTELLIGENCE. **g(F)** *abbrev.*

flunitrazepam *n.* The chemical name of the benzodiazepine drug **Rohypnol*, sometimes called the *date rape drug*.

fluoxetine *n.* Fluoxetine hydrochloride, the chemical name of the antidepressant drug **Prozac*. **FXT** *abbrev.*

fluphenazine *n.* Fluphenazine hydrochloride, or fluphenazine decanoate, or fluphenazine enanthate, different forms of a **neuroleptic* (1) drug belonging to the group of **phenothiazines*, frequently used in the treatment of schizophrenia. Also called *Prolixin* (trademark).

flutter, auditory *See* AUDITORY FLUTTER.

fluvoxamine *n.* An antidepressant drug belonging to the group of **selective serotonin reuptake inhibitors* (SSRIs). Also called *Luvox* (trademark).

fly agaric *n.* The slightly poisonous woodland mushroom *Amanita*

muscaria, with a scarlet cap, white warts, and gills, made famous by *Alice's Adventures in Wonderland* by Lewis Carroll, the pen name of Charles Lutwidge Dodgson (1832–98). It contains the drugs **muscimol*, **muscarine*, **ibotenic acid*, and **bufotenin*, sometimes eaten for its **hallucinogenic* effects and used for ritual purposes by shamans of eastern Siberia. Also called *magic mushroom*. See also *LIBERTY CAP*, *TEONANACTYL*. Compare *COHOBA*. [From Greek *agarikon* a mushroom, called *fly agaric* because of its use as a poison on flypaper]

Flynn effect *n.* A secular increase in average IQ scores, typically averaging about three IQ points per decade, that has been occurring since the introduction of IQ tests in many industrialized societies, including the United States, the United Kingdom, Belgium, France, The Netherlands, Norway, Israel, Canada, New Zealand, Australia, and Japan, the effect being most pronounced on measures of **fluid intelligence* such as **Raven's Progressive Matrices*. Because IQ tests are periodically re-standardized to a mean of 100, the increase is not apparent in continuously rising average IQ scores, but people who score 100 on a newly standardized test tend to score more than 100 on older ones. The effect has been attributed to various causes, including improved nutrition and parenting, better schooling, increased test-taking sophistication, and various effects of growing up with television and video games in an increasingly complex environment, but it is generally acknowledged to be poorly understood and largely mysterious. See also *COHORT*. [Named after the US-born New Zealand political scientist James R(obert) Flynn (born 1934) who was the first to draw attention to it in two influential articles in the journal *Psychological Bulletin* in 1984 and 1987]

F max *n.* Another name for **Hartley's F max*.

focal colour *n.* A colour that is a **prototypical* instance of a particular colour name, such as a shade of red that a majority of viewers consider to be the best example of a red colour. US *focal color*.

focal epilepsy *n.* Another name for **Jacksonian epilepsy*.

focal length *n.* The distance between the centre of a lens or curved mirror and its **focal point*. See also *DIOPTRE*.

*****ebook converter DEMO Watermarks*****

focal point *n.* The point at which parallel light rays passing through a lens or reflected from a curved mirror converge, or the point from which they appear to diverge after refraction or reflection by the lens or mirror. Also called the *focus* or the *principal focus*. See also [FOCAL LENGTH](#).

focal system *n.* The aspect of vision that governs object identification and discrimination, using predominantly [*central vision](#) without [*peripheral vision](#). Compare [AMBIENT SYSTEM](#).

focal therapy *n.* A form of [*brief psychotherapy](#) that concentrates solely on a single core problem.

focus See [FOCAL POINT](#).

focus group *n.* A small group of people selected and assembled for research purposes, to participate in an organized discussion, under the guidance of a moderator, of an issue or topic of which they have personal experience. Focus groups were first proposed by the US sociologist Robert K(ing) Merton (1910–2003) and co-authors in *The Focused Interview: A Manual of Problems and Procedures* (1956), and they have had a long history in [*market research](#), where they have been used to sample the range of opinions and attitudes that might be expected in the wider population. They have been used to a lesser extent in psychology, generally in the tradition of [*qualitative research](#), when interaction between group members is felt to add an important element that is lacking in other types of [*interviews](#).

foetal alcohol syndrome *n.* A highly variable pattern of congenital defects, including small stature, intellectual disability, pixie-like facial features, and malformations of the skull and brain, that tend to occur in infants of mothers who drink large quantities of alcohol during pregnancy. Also spelt *fetal alcohol syndrome*. **FAS** abbrev.

foetal brain transplantation *n.* The surgical grafting of brain tissue from an aborted foetus into the brain of an adult to repair damage caused by disease or injury, as in the replacement of dopamine-secreting brain tissue in the [*substantia nigra](#) or [*striatum](#) of patients with [*Parkinson's disease](#). Also

spelt *fetal brain transplantation*.

foetus *n.* An unborn animal at an early stage of development, after its main internal organs have begun to become distinctly formed, especially an unborn human baby from the end of the eighth week of pregnancy (to distinguish it from an **embryo*) until birth. US *fetus*, this spelling being more correct etymologically but unusual in British orthography. See also *BLASTOCYST*, *MORULA*, *ZYGOTE*. **foetal** or **fetal** *adj.* [From Latin *fetus* offspring]

foil *n.* In research methodology, another name for a **distractor*.

foliate papilla *n.* Any of a large number of paired oval **papillae* on the sides of the back part of the **tongue* with **taste buds* at their bases that respond mainly to sour tastes. Compare *CIRCUMVALLATE PAPILLA*, *FILOFORM PAPILLA*, *FUNGIFORM PAPILLA*. **foliate papillae** *pl.* [From Latin *folium* a leaf + *forma* a shape]

folie à deux *n.* Another name for **shared psychotic disorder*. Also *folie à trois* (a delusion shared by three people living together), *folie à quatre* (a delusion shared by four people living together), and so on. [French *folie* insanity + *à* of + *deux* two]

folium *n.* One of the flattened structures of the **cerebellum* that expand sideways to form its superior lobes. [From Latin *folium* a leaf]

folk etymology *n.* **1.** An alteration in the form of a word through the influence of a more familiar word or words that people associate with it, as in *sparrow-grass* for *asparagus*. **2.** A popular misconception about the origin of a word. Thus *belfry*, the part of a tower in which bells are hung, comes from Medieval Latin *berfredus* a tower, not from the English word *bell*; *crap*, excrement or faeces, comes from Middle Dutch *krappe* chaff and is not named after Thomas Crapper (1836–1910), the Victorian English sanitary engineer who contributed to the development of the siphonic flush toilet and whose **aptronym* is inscribed on a manhole cover, popular with brass-rubbers, in the cloisters of Westminster Abbey; *penthouse*, a top-floor flat, comes via Middle English *pentis* from Latin *appendicium* an appendage, not from English *pent* or *house*; and *pickaxe*, a large double-pointed garden tool,

*****ebook converter DEMO Watermarks*****

comes from Old French *picois* a mattock, not from English *pick* or *axe*. See also [BACK FORMATION](#), [METANALYSIS](#).

folk psychology *n.* The assumptions, hypotheses, and beliefs of ordinary people about behaviour and mental experience. See also [BASIC-LEVEL CATEGORY](#), [GROUNDED THEORY](#), [IMPLICIT PERSONALITY THEORY](#).

follicle *n.* Any small sac or cavity, such as the pit in which a hair-root is embedded. [From Latin *folliculus* a small bag, diminutive of *folis* a bellows or money-bag]

follicle-stimulating hormone *n.* A [*gonadotrophic](#) hormone that is secreted by the anterior pituitary and that stimulates the growth of [*Graafian follicles](#) in females and production of [*spermatozoa](#) in males. See also [OESTROUS CYCLE](#). Compare [LUTEINIZING HORMONE](#). **FSH** *abbrev.*

follicular phase *n.* The first phase of the [*oestrous cycle](#) or [*menstrual cycle](#), initiated by the secretion of [*follicle-stimulating hormone](#) and ending with [*ovulation](#). Also called the *proliferative phase*. Compare [LUTEAL PHASE](#), [MENSTRUAL PHASE](#). [Named after the [*Graafian follicles](#)]

following behaviour *n.* In [*ethology](#), the trailing of a young bird or animal behind its parent or another organism or object, especially as a consequence of [*imprinting](#).

Folstein Mini-Mental State Examination See [MINI-MENTAL STATE EXAMINATION](#).

F₁ *abbrev.* The first [*filial generation](#). F₂ represents the second filial generation, and so on.

fontanelle *n.* A soft membranous gap between the immature skull bones of an infant or foetus. Also spelt *fontanel*. See also [BREGMA](#). [From Old French *fontanele* a little fountain, from Latin *fons*, *fontis* a fountain]

food aversion learning *n.* Avoidance of food with a distinctive taste

by an organism that has felt ill after eating food with that taste, the aversion often being learned after a single trial, even if the ill feeling arises many hours after eating the food and is not caused by the food. In the original experiment carried out by the US psychologists Sam Revusky (born 1933) and John Garcia (1917–2012) and published in 1970, rats were fed a sweet-tasting sucrose solution and were then injected with lithium chloride, which made them mildly ill, and they refused to touch the sucrose solution the next day. Also called *conditioned food/taste aversion*, *flavour aversion learning/conditioning*, *food aversion conditioning*, *food avoidance learning/conditioning*, *Garcia effect*, *learned flavour aversion*, *learned taste aversion*, *taste aversion learning/conditioning*, *toxicosis*.

food chain *n.* In **ecology* (1), a hierarchy of organisms in which each is consumed as food by one or more of the ones above it. *See also* [PYRAMID OF NUMBERS](#).

footbridge problem *See* [TROLLEY PROBLEM](#).

foot-candle *n.* An obsolescent unit of **illuminance*, equal to one lumen per square foot. *See also* [FOOT-LAMBERT](#). **fc** *abbrev.*

foot-in-the-door technique *n.* A technique for eliciting **compliance* by preceding a request for a large commitment with a request for a small one, the initial small request serving the function of softening up the target person. It was introduced and named in 1966 by the US social psychologists Jonathan L. Freedman (born 1937) and Scott C(ameron) Fraser (born 1943), who reported a field experiment in which householders were visited in their homes where some were asked whether they would be willing to put a very small sticker in their house or car windows about road safety or keeping California beautiful and others were asked to sign a petition on one of these issues; two weeks later, a different person, supposedly from a different organization, arrived and asked the same householders whether they would be willing to have a hole dug in their front gardens and a large, ugly *Drive Carefully* sign planted there. Among a control group who had not received the earlier small request, only 17 per cent agreed to have the safe driving sign planted in their gardens, but 55 per cent of the participants in the foot-in-the-door condition agreed. *See also* [DOOR-IN-THE-FACE TECHNIQUE](#), [LOWBALL TECHNIQUE](#).

*****ebook converter DEMO Watermarks*****

foot-lambert *n.* An obsolescent unit of **luminance* equal to that of a surface emitting or reflecting one **lumen* per square foot, a completely reflecting surface illuminated by 1 foot-candle having a luminance of 1 foot-lambert. *See also* LAMBERT. **ft-L** *abbrev.*

foramen magnum *n.* The large hole at the base of the skull through which the **spinal cord* passes. [From Latin *foramen* a hole, from *forare* to bore or pierce + *magnum* large]

foramen of Monro *n.* Either of the openings of the two lateral **ventricles* of the brain into the third ventricle. Also called the *interventricular foramen*. [Named after the Scottish anatomist Alexander Monro (1733–1817) who first drew attention to them in 1783]

forced-choice *adj.* Of or relating to a test, experiment, procedure, or questionnaire in which the respondent has to select a response from a set of alternatives such as Yes/No or Strongly Disagree/Disagree/Neutral/Agree/Strongly Agree. *See also* RESPONSE CATEGORY. *Compare* FREE RESPONSE.

forced compliance *n.* Yielding to social pressure to make a statement or behave in a way that conflicts with one's attitudes, as when an experimenter induces a research participant to tell a lie to another research participant. According to the theory of **cognitive dissonance*, such behaviour tends to result in an **attitude change* to reduce the dissonance between the two cognitions *My attitude is X* and *My statement (or behaviour) was anti-X*. The second cognition is behaviourally anchored and cannot easily be changed once the statement has been made or the action performed, but the first cognition can and often does change. The theory predicts, and experimental research confirms, that the attitude change tends to be greatest when the justification for the counterattitudinal behaviour is least—for example, when the person was offered a small rather than a large financial incentive for it.

forebrain *n.* The front part of the brain, divided into the **telencephalon* and **diencephalon*. It includes the **cerebral hemispheres*, **thalamus*, **hypothalamus*, and associated structures. Also called the *prosencephalon*,

especially in a developing embryo. Compare MIDBRAIN, HINDBRAIN.

foreclosure *n.* In *psychoanalysis, a *defence mechanism, first identified in 1956 by the French psychoanalyst Jacques Lacan (1901–81), involving the expulsion of a fundamental signifier, such as the *phallus as a fundamental signifier of the *castration complex, from a person's symbolic universe. It may be a defence mechanism specific to *psychosis (1), and it differs from *repression inasmuch as the foreclosed signifier is not integrated into the person's unconscious and does not re-emerge from within as a *neurotic (1) *symptom but may return in the form of a *psychotic (1) *hallucination. The idea is traceable to an article in 1894 by Sigmund Freud (1856–1939) on 'The Neuro-Psychoses of Defence' (*Standard Edition*, III, pp. 45–61): 'There is, however, a much more energetic and successful kind of defence. Here, the ego rejects the incompatible idea together with its affect and behaves as if the idea had never occurred to the ego at all' (p. 58).

foreign accent syndrome *n.* A rare condition, resulting from *stroke, *traumatic brain injury, or the aftereffects of brain surgery, in which a person begins to speak with an *accent (1) that sounds foreign, sometimes resembling the accent associated with a specific foreign language, but is actually caused by disrupted *articulation and *prosody resulting from left hemisphere brain injury. The condition was first reported by the Czech neurologist Arnold Pick (1851–1924) in an article in the journal *Zeitschrift für die gesamte Neurologie und Psychiatrie* in 1919. Reports of *foreign language syndrome*, in which, following brain injury, people allegedly speak foreign languages that they have never previously spoken, are spurious, although there are cases of people reverting to languages that they used to speak earlier in life. FAS abbrev.

forensic linguistics *n.* The application of linguistic techniques in the investigation of crimes to show, for example, that an incriminating recording of an utterance is unlikely to have been spoken by the defendant in a criminal trial, or that different passages in an alleged confession were probably written by different people. See also HAPAX LEGOMENON, STYLOSTATISTICS.

forensic psychiatry *n.* Applications of *psychiatry to legal questions, such as diminished responsibility and fitness to stand trial. Compare FORENSIC

*****ebook converter DEMO Watermarks*****

PSYCHOLOGY. [From Latin *forensis* public, from *forum* a public place]

forensic psychology *n.* A field of **applied psychology* devoted to psychological aspects of legal processes in court. The term is increasingly often applied to **criminological psychology* as well, although the derivation of the word suggests a more limited meaning. *Compare* **FORENSIC PSYCHIATRY**.

foreplay *n.* Sexual activity, such as kissing and stroking, preceding sexual intercourse.

forgetting *n.* The process by which memories are lost. *See* **AMNESTIC DISORDER**, **DECAY THEORY**, **DISSOCIATIVE AMNESIA**, **DISSOCIATIVE IDENTITY DISORDER**, **EBBINGHAUS CURVE**, **FORGETTING LAW**, **MEMORY**, **METHOD OF SAVINGS**, **PROACTIVE INTERFERENCE**, **REMINISCENCE (2)**, **RETRIEVAL-INDUCED FORGETTING**, **RETROACTIVE INTERFERENCE**. *See also* **ALETHIA**, **COGNITIVE FAILURES QUESTIONNAIRE**, **INTENTIONAL FORGETTING**.

forgetting law *n.* The proposition that the amount of information forgotten increases linearly with the logarithm of the time elapsed since learning.

formal operations *n.* In the theory of cognitive development of the Swiss psychologist Jean Piaget (1896–1980), the developmental stage beginning at about 12 years when children become proficient in manipulating their internal representations of abstract concepts as well as concrete objects. *See also* **MENTAL OPERATION**. *Compare* **CONCRETE OPERATIONS**, **PRE-OPERATIONAL STAGE**, **SENSORIMOTOR STAGE**.

formal universals *n.* One of the classes of **linguistic universals*, consisting of the abstract rules that govern the grammars of languages, such as the transformational rules that all languages appear to have for converting a statement such as *This job is easy* into a question such as *Is this job easy?* In this case the transformational rule is simply to move the verb to the beginning of the sentence. *See also* **TRANSFORMATIONAL GRAMMAR**, **UNIVERSAL GRAMMAR**.

formant *n.* A peak in the spectrum of frequencies of a specific speech sound, analogous to the **fundamental frequency* or one of the **overtones* of a musical tone, which helps to give the speech sound its distinctive sound quality or **timbre*. For example, in a typical female voice, the first two formants F1 and F2 of the **schwa* vowel in the word *bird* or *fern* are about 650 hertz and 1,593 hertz; in a typical male voice F1 is about 513 hertz and F2 about 1,377 hertz.

form constancy *n.* Another name for **shape constancy*. See also *PERCEPTUAL CONSTANCY*.

formication *n.* The sensation of insects crawling over or under one's skin, most commonly experienced as a symptom of **withdrawal* from alcohol or cocaine. Also called *parasitosis*. See also *COCAINE BUG*, *TACTILE HALLUCINATION*. [From Latin *formicare* to crawl around, from *formica* an ant + *-ation* indicating a process or condition]

fornix *n.* Any structure resembling an arch, especially the archlike band of white fibres in the limbic system at the base of the brain, projecting from the **hippocampus* to the **mammillary bodies*, involved in memory and the control of eating. Also called the *vault*. **fornical** *adj.* [From Latin *fornix* a vault]

Förster phenomenon *n.* Another name for the **Aubert–Förster phenomenon*.

fortis *adj.* Of or relating to a **consonant* speech sound articulated with considerable muscular tension of the organs of speech and strong breath pressure, such as the initial phonemes in *pie*, *tea*, *key*, *chew*, *jaw*, *fee*, *thigh*, *see*, and *shoe*. In English, a **vowel* is shortened when it occurs immediately before a fortis consonant, and this is called pre-fortis **clipping*. Compare *LENIS*. [From Latin *fortis* strong]

Fortral *n.* A proprietary name for the narcotic analgesic drug **pentazocine*. [Trademark]

40-hertz oscillations *n.* Another (inaccurate) name for **gamma waves*.

forward association *n.* A learned association between a **stimulus* (1) and either another stimulus or a **response* occurring later in time. *Compare* BACKWARD ASSOCIATION.

forward conditioning *n.* The usual method of **classical conditioning*, in which the **conditioned stimulus* precedes the **unconditioned stimulus*. *Compare* BACKWARD CONDITIONING.

forward masking *n.* A form of **masking* that occurs when the perception of a stimulus called the *test stimulus* is diminished or eliminated by the presentation of a different stimulus called the *masking stimulus* that precedes it. In the case of **visual masking*, when the test stimulus and masking stimulus do not overlap spatially, the phenomenon is called **paracontrast*. *See also* AUDITORY MASKING. *Compare* BACKWARD MASKING, SIMULTANEOUS MASKING.

founded content *n.* Another name for **Gestaltqualität*. [From *found* to cast metal or some other substance by melting and pouring it into a mould]

founder effect *n.* The tendency for an isolated offshoot of a population to develop genetic differences from the parent population owing to the distribution of **alleles* in its founder members not being perfectly representative of the distribution in the parent population. *Compare* GENETIC DRIFT.

four-card problem *n.* Another name for the **Wason selection task*.

Fourier analysis *n.* The decomposition of a **time series* or a periodic phenomenon such as a sound wave or the variation in luminance across a visual image into its component **sinusoidal* components of different frequencies and amplitudes by fitting terms of a **Fourier series* to it. *See also* FOURIER SERIES, FOURIER THEOREM, FOURIER TRANSFORM, OHM'S ACOUSTIC LAW. [Named after the French mathematician Baron Jean Baptiste Joseph Fourier (1768–1830) who published the fundamental mathematical results underlying

it in 1822]

Fourier series *n.* An infinite series of the form $\frac{1}{2} a_0 + a_1 \cos x + b_1 \sin x + a_2 \cos 2x + b_2 \sin 2x + \dots$ that can be used to decompose or to approximate a **time series* or periodic function in **Fourier analysis*.

Fourier theorem *n.* A mathematical proof that any periodic function can be decomposed by **Fourier analysis* into a **Fourier series* that is a sum of sine and cosine terms with suitable constants.

Fourier transform *n.* A function of the form $f(t)$ that can be obtained from another function $f(x)$ by multiplying by e^{itx} and integrating over all values of x . It plays a crucial part in **Fourier analysis*.

fourth ventricle *See* VENTRICLE.

fovea *n.* Any small pit or depression on or in the body, especially the *fovea centralis*, the small pit in the centre of the **macula lutea* of the **retina*, about half a millimetre in diameter, densely packed with **cones* but lacking rods, where the image of an object in the direct line of vision falls and where vision is sharpest. *See also* ARAGO PHENOMENON, DONDERS' LAW, PARAFOVEA. **foveae** *pl.* **foveal** *adj.* [From Latin *fovea* a pit]

fractionation *n.* A technique of scaling used in **psychophysics* in which an observer is presented with a stimulus that is assigned an arbitrary value or number, then the observer is asked to select a stimulus whose magnitude is exactly half, that stimulus being assigned a number half the size of the first one, and so on. *See also* MEL.

fragile X syndrome *n.* The most common inherited cause of **intellectual disability*, involving an easily damaged X chromosome with a tip hanging by a narrow thread; the syndrome is often accompanied by **attention-deficit/hyperactivity disorder*, with additional characteristics such as enlarged head, long face, prominent ears and (in males) enlarged testicles. It is caused by a single gene on the **X chromosome* that is invariably expressed in males but rarely in females—only if they inherit copies on both

their X chromosomes—resulting in a greater preponderance of intellectual disability in males than females.

fragrant odour *n.* One of the six primary odours in **Henning's prism*, one of the four in the **Crocker–Henderson system*, and one of the seven in the **stereochemical theory*, resembling the odour of lavender or rose petals. US *fragrant odor*. Also called *flowery odour* or *floral odour*.

frame *n.* **1.** A rigid structure surrounding or enclosing an object such as a picture or a window. **2.** An underlying assumption or set of assumptions that supports an interpretation or a concept and that functions as an interpretive frame of reference for thinking about the concept. In the branch of **artificial intelligence* devoted to **knowledge* representation, a frame is a knowledge structure of an everyday aspect of the world such as a house, containing fixed structural information (all houses are assumed to have walls, a roof, and various other fixed attributes) and slots capable of accepting one of two or more values representing variable information (a house may be built from brick, concrete, or wood, and it may or may not have a garden, a garage, a swimming pool, and so on). This sense, close to the concept of a **schema*, was formulated in 1975 by the US cognitive scientist Marvin (Lee) Minsky (born 1927). See *FRAME PROBLEM*, *FRAMING EFFECT*. **3.** A single image in a sequence forming a cinema, television, or video film; hence, figuratively, a part of a **script* (3) representing a single event, action, or scene. See also *SCHEMA*.

frame problem *n.* In **artificial intelligence* and especially **knowledge representation*, the problem of specifying formally what is left unchanged when an action is performed. A simple example might involve moving a block from a table on to the floor: this obviously leaves the colour of the block unchanged, and in a formal representation of the action this needs to be made explicit, because some actions do have side-effects, but a difficulty arises from the fact that an infinity of potential changes have to be accounted for. This problem is often solved with the help of some form of **non-monotonic reasoning*, especially **default reasoning*.

frameshift mutation *n.* A **mutation* resulting from the insertion or deletion of a base pair, or a number of base pairs that is not a multiple of

*****ebook converter DEMO Watermarks*****

three, causing subsequent base pairs to be grouped wrongly into triplets at the stage of translation into **amino acids*. See also [FRAMESHIFT SUPPRESSION](#). [So called because the genetic code is in effect read through a moving window or frame displaying three bases at a time]

frameshift suppression *n.* The process whereby the effects of a **frameshift mutation* are overcome, either by the reinsertion of the original gene or by the action of a specialized form of **transfer RNA*, called an extragenic frameshift suppressor, that can recognize four-base sequences.

framing effect *n.* An effect of the description, labelling, or presentation of a problem on responses to it. A classic example was provided in 1981 by the Israeli-American psychologists Amos Tversky (1937–96) and Daniel Kahneman (born 1934), who invited participants to choose between two programmes for combating an unusual disease that was expected to kill 600 people. Participants in one group were told that programme *A* would save 200 lives, whereas programme *B* had a 1/3 probability of saving 600 lives and a 2/3 probability of saving no one, and in this **frame (2)*, focusing on gains, 72 per cent preferred *A* to *B*. Participants in a second group were told that under programme *C* 400 people would die, whereas under programme *D* there was a 1/3 probability that no one would die and a 2/3 probability that 600 would die, and in this frame, focusing on losses, 78 per cent preferred *D* to *C*. The majority of participants were **risk-averse* in their preference of *A* over *B* in the gain frame but **risk-seeking* in their preference of *D* over *C* in the loss frame, although the two frames are merely different ways of describing the same problem. This effect occurs even if both problems are presented to the same group of participants. A framing effect on a decision is called a *decision frame*. See also [CANCELLATION HEURISTIC](#), [PROSPECT THEORY](#), [RISK AVERSION](#), [WASON SELECTION TASK](#). Compare [CONTEXT EFFECT](#).

Frankfurt school *n.* A movement involving political philosophy and psychology founded at the Institute for Social Research at the University of Frankfurt in Germany, closed by the Nazis in 1933, and re-established in 1934 at Columbia University in New York. Its leading figures included Max Horkheimer (1895–1973), Theodor W(iesengrund) Adorno (1903–69), and Herbert Marcuse (1898–1979), who were united by a belief in the possibility and desirability of a Marxist **critical theory* and a rejection of **positivism (1,*

*****ebook converter DEMO Watermarks*****

2).

Fraser illusion *n.* Another name for any of the forms of the ***twisted-cord illusion**, which Fraser himself called the ‘twisted cord with a chequer-work background illusion’. *See also* **FRASER SPIRAL**. [Named after the Scottish physician and psychologist James Fraser (1863–1936) who published it as a new illusion in the *British Journal of Psychology* in 1908]

Fraser spiral *n.* A ***twisted-cord illusion** in which a series of concentric circles composed of cord made by twisting dark and light strands together, or of thin strips of diagonal stripes resembling such a twisted cord, appear as a spiral when presented against a chequered background composed of radiating curved bands (see **illustration**). The term is a misnomer, given that it is not actually a spiral. [Named after the Scottish physician and psychologist James Fraser (1863–1936) who published it together with other twisted-cord illusions in the *British Journal of Psychology* in 1908]

Fraser spiral. What appears to be a spiral is in fact a series of concentric circles, as can be confirmed by tracing all the way round any of them.

fraternal twins *n.* A non-technical name for ***dizygotic twins**. [From

*****ebook converter DEMO Watermarks*****

Latin *frater* a brother]

fraud syndrome *n.* Another name for the [*imposter phenomenon](#). [From Latin *fraus* deception, from *fraudare* to deceive]

free association *n.* A technique of [*psychoanalysis](#) in which the patient is encouraged to relate to the analyst all thoughts, feelings, wishes, sensations, memories, and images that come to mind, however embarrassing or trivial they might seem. It is designed to incapacitate the *second censorship* between the [*preconscious](#) and [*consciousness](#), thereby exposing the unconscious defences operating through the *first censorship* between the [*unconscious](#) (2) and preconscious. Sigmund Freud (1856–1939) revealed in ‘A Note on the Prehistory of the Technique of Analysis’ in 1920 that he was influenced by the German political writer and satirist Ludwig Börne (originally called Löb Baruch, 1786–1837), who recommended a form of generative writing that begins by putting on paper everything that comes to mind, in order to avoid self-censorship and to increase originality (*Standard Edition*, XVIII, pp. 263–5, at p. 265). Some credit for developing the technique should be given to Frau Emmy von N, one of Freud's earliest patients who, as Freud recounted in 1895 in his co-authored book *Studies on Hysteria* (*Standard Edition*, II), asked him ‘not to keep on asking her where this or that came from, but to let her tell me what she had to say’ (p. 63), and when she followed this procedure, her verbal accounts turned out to contain ‘a fairly complete reproduction of the memories and new impressions which have affected her since our last talk, and it often leads on, in a quite unexpected way, to pathogenic reminiscences of which she unburdens herself without being asked to’ (p. 56). At about the same time (in 1904) and independently of Freud, Carl Gustav Jung (1875–1961) introduced his [*word-association test](#), and this also influenced the development of the technique of free association. *See also* [DREAM ANALYSIS](#), [FUNDAMENTAL RULE OF PSYCHOANALYSIS](#). *Compare* [DIRECTED ASSOCIATION](#), [INTROSPECTION](#).

freebasing *n.* Increasing the potency of [*cocaine](#) by extracting its active alkaloid (the free base), heating it, and inhaling the vapours through a cigarette or water pipe ([*bong](#)). *See also* [CRACK](#).

free energy *n.* In [*psychoanalysis](#), psychic energy in the [*primary](#)
*****ebook converter DEMO Watermarks*****

process, which seeks immediate and total discharge through the most direct route available. Sigmund Freud (1856–1939) published his theory of free energy and ***bound energy** in 1895, in his ‘Project for a Scientific Psychology’ (*Standard Edition*, I, pp. 177–397), basing it on the ***principle of constancy**. See also **NIRVANA PRINCIPLE**, **PLEASURE PRINCIPLE**.

free-floating anxiety *n.* Another name for ***generalized anxiety disorder**.

Freemish crate *n.* A popular ***impossible figure** depicting the frame of a box-like object that can be drawn but could not exist in actual space (see **illustration**). [Origin obscure, named in a letter to the *Scientific American* in June 1966 containing the earliest published version of the object]

Freemish crate

free morpheme *n.* A ***morpheme** that can occur on its own as a word, such as *tree*. Compare **BOUND FORM**.

free nerve ending *n.* A ***sensory** receptor consisting of finely myelinated or unmyelinated ends of the axons of nerve fibres, located
*****ebook converter DEMO Watermarks*****

throughout the body but concentrated mainly in the **dermis* or **epidermis* of the skin, in certain **mucous membranes*, in the **corneas* of the eyes, adjacent to the roots of hairs, and around the bodies of **sweat glands*. Some free nerve endings are **pain receptors* (nocireceptors); others function as **temperature receptors* supplying **warm spots* and **cold spots* on the skin.

free operant avoidance conditioning *n.* Another name for **Sidman avoidance conditioning*.

free radical *n.* Any of a number of highly reactive **radical* (2) molecules having an unpaired electron occupying the outer orbital and therefore being prone to snatch electrons from other molecules in processes such as oxidation, which rusts metals, spoils butter, and injures cells in the body, probably including neurons in the basal ganglia in Parkinson's disease. See also *MITOCHONDRIAL DNA*.

free recall *n.* Retrieval of information from memory without the help of **cues* (3), and hence often contrasted with **cued recall*. The term is also used for retrieval of a number of items of information in any order, in contradistinction to **serial recall*. See also *CLUSTERING*, *RECALL*.

free response *n.* In psychometrics, a response to a test item that the respondent supplies without constraints, in contradistinction to a response that the respondent chooses from a set of alternatives. Compare *FORCED-CHOICE*, *MULTIPLE-CHOICE*, *RESPONSE CATEGORY*.

free-rider problem *n.* Another name for a **public goods dilemma*. [From the colloquial term *free-rider*, a person who enjoys benefits obtained for workers by a trade union without joining the union]

Frégoli syndrome *n.* A **delusional misidentification* of strangers as familiar people in disguise; thus a delusion of overidentification, in contrast to **Capgras syndrome*, which involves underidentification. Compare *INTERMETAMORPHOSIS*. [Named after Leopoldo Frégoli (1867–1936), an Italian actor of the *belle époque* who was famous for his ability as a mimic]

frequency *n.* 1. The number of times that an event occurs in a specified time period; more specifically the number of times that a wave repeats itself in one second, generally expressed in **hertz* (Hz) or cycles per second. Frequency (f) is equivalent to the velocity of propagation (v) divided by wavelength (λ): $f = v/\lambda$. The **audibility range* of sound waves extends from about 16 Hz at the low end to about 20,000 Hz at the high end for a person with normal hearing, and the **visible spectrum* of light from about 405,405 billion Hz at the red end to about 769,231 billion Hz at the violet end. See also SPATIAL FREQUENCY. 2. In statistics and measurement theory, the number of items or scores falling into a particular class. *Frequency data* are scores representing counts rather than other kinds of measurements.

frequency-dependent *adj.* Of or relating to a **gene* or **allele* whose **Darwinian fitness* is dependent on the frequency of the gene or allele in the population, as when a phenotypic characteristic is advantageous only if it is unusual in the population or only if it is common.

frequency-dependent selection *n.* A form of **natural selection* in which the **fitness* of a particular **genotype* depends on its frequency in the population. See also APOSTATIC SELECTION, STABILIZING SELECTION.

frequency distribution *n.* In statistics, a table or graph showing classes into which the data have been grouped, together with their corresponding frequencies, that is, the number of scores falling into each class.

frequency law *n.* In the doctrine of **associationism*, a law introduced by the English philosopher John Stuart Mill (1806–73), according to which mental elements that frequently occur together tend to become associated. It was influential in the early development of **behaviourism*. See also GROUPING LAW. Compare CONTIGUITY LAW, SIMILARITY LAW.

frequency polygon *n.* In descriptive statistics, a line graph showing the relationship between the values of scores, usually on the horizontal axis, and their frequencies of occurrence, usually on the vertical axis.

frequency theory *n.* A theory of pitch perception first proposed in 1886 by the British physiologist William Rutherford (1839–99) according to which the ear converts acoustic vibrations into nerve impulses by emitting one impulse for each cycle of the sound wave in the manner of a telephone. This mechanism is believed to operate for low-frequency sounds, but because an auditory neuron can respond up to only about 500 hertz, this theory cannot explain the perception of higher-pitched sounds within the **audibility range*. Also called the *telephone theory*. Compare *PLACE THEORY*, *VOLLEY THEORY*.

frequency threshold curve *n.* Another name for the **tuning curve*. **FTC** *abbrev.*

frequency tuning curve *n.* Another name for the **tuning curve*. **FTC** *abbrev.*

Freudian *adj.* Of or relating to the **psychoanalytic* ideas and practices of the Austrian neurologist Sigmund Freud (1856–1939) or of his daughter, the Austrian-born British psychoanalyst Anna Freud (1895–1982). The term *Freudian analysis* generally refers to the classical approach of Anna Freud and is used in contradistinction to **Adlerian*, **Eriksonian*, **Jungian*, **Kleinian*, **Kohutian*, **Lacanian*, **Winnicottian*, and other schools of analysis.

Freudian slip *n.* A colloquial name for a **parapraxis*.

fricative *n.* A **consonant* speech sound articulated by narrowing the mouth passage to make the airflow turbulent but to allow it to pass through without interruption, as in the initial **phonemes* in the words *fire*, *high*, *see*, *shoe*, *thee*, *thigh*, *vow*, *zoo*, and the second phoneme in *azure*. See also *MANNER OF ARTICULATION*.

Friedman two-way analysis of variance *n.* A distribution-free statistical test of the **null hypothesis* that several related samples are distributed similarly. For each subject or case, the scores are ranked across samples, and the test statistic is based on these ranks. The standard equivalent distribution-dependent test is one-way **analysis of variance* (*ANOVA*). Also

called *Friedman two-way ANOVA*. [Named after the prominent US economist Milton Friedman (1912–2006) who developed it in 1937]

fright *n.* Sudden fear or alarm. Sigmund Freud (1856–1939) distinguished in 1920 between fright (German *Schreck*), anxiety (*Angst*), and fear (*Furcht*): fright ‘is the name we give to the state a person gets into when he has run into danger without being prepared for it’; anxiety ‘describes a particular state of expecting the danger or preparing for it, even though it may be an unknown one’; and fear ‘requires a definite object of which to be afraid’ (*Beyond the Pleasure Principle*, *Standard Edition*, XVIII, pp. 7–64, at pp. 12–13).

frigidity *n.* 1. A lack of warmth, passion, or emotional responsiveness. 2. More specifically in relation to females, sexual unresponsiveness. *See also* [DYSpareunia](#), [Female Orgasmic Disorder](#), [Female Sexual Interest/Arousal Disorder](#), [Vaginismus](#). **frigid** *adj.* [From Latin *frigidus* frozen, from *frigus* cold]

frog-pond effect *n.* Another name for the [*big-fish-little-pond effect](#).

Fromm's typology *n.* In [*neo-Freudian](#) theory, a classification of character types suggested by the German-born US psychoanalyst Erich Fromm (1900–80) in his book *Man for Himself* (1947), comprising: [*exploitative orientation](#), [*hoarding orientation](#), [*marketing orientation](#), [*productive orientation](#), [*receptive orientation](#).

frontal eye field *See* [MOTOR CORTEX](#). **FEF** *abbrev.*

frontal leucotomy *n.* Surgical severing of the neural connections between the [*thalamus](#) and the [*frontal lobes](#) of the brain to relieve severe cases of [*schizophrenia](#) and [*bipolar](#) disorders. Also called *prefrontal leucotomy* or simply *leucotomy*. *Compare* [FRONTAL LOBOTOMY](#). Also spelt *frontal leukotomy*. [From Greek *leukos* white + *tome* a cut, alluding to white matter in the brain]

frontal lobe *n.* The anterior [*lobe](#) of each [*cerebral hemisphere](#), separated on its lateral or outer surface from the parietal lobe by the [*central sulcus](#) and

from the temporal lobe by the **lateral sulcus*, involved in attention, short-term memory, and activities requiring planning and organization. Lesions in this area are associated with **frontal lobe syndrome*. See also *APROSODIA*, *DYSEXECUTIVE SYNDROME*, *FRONTAL LEUCOTOMY*, *FRONTAL LOBE SYNDROME*, *FRONTAL LOBOTOMY*, *LOBE*, *PREFRONTAL CORTEX*, *PSEUDODEPRESSION*, *WISCONSIN CARD SORTING TEST*, *WITZELSUCHT*.

frontal lobe syndrome *n.* A pattern of signs and symptoms associated with damage to the **frontal lobe* of the brain, typically including general impairment of planning functions, and either boastfulness, lack of inhibition, **hypomanic episodes*, impulsiveness, and antisocial behaviour, or **depression*, apathy, negligence about personal appearance, and **perseveration* (2). See also *DYSEXECUTIVE SYNDROME*.

frontal lobotomy *n.* Surgical removal of portions of the **frontal lobes* of the brain, usually in the **prefrontal cortex*, and severing of the neural connections between the **thalamus* and the **frontal lobes*, as a method of treating intractable **depression* or pain. Also called *prefrontal lobotomy* or simply *lobotomy*. Compare *FRONTAL LEUCOTOMY*. [From Greek *lobos* a lobe + *tome* a cut]

frontal plane *n.* Another name for a **coronal plane*.

frontal section *n.* Another name for a **coronal section*.

frontopolar cortex *n.* The area of the **frontal lobe* immediately behind the forehead, specifically **Brodmann Area 10*, involved in strategic planning, problem-solving, reasoning, and **episodic memory* retrieval. See also *BRODMANN AREA* and accompanying illustration. Also called the *anterior prefrontal cortex*. **FPC** *abbrev.* [From Latin *frons* forehead + *polus* end of an axis + *-aris* belonging to or like]

frontotemporal neurocognitive disorder *n.* A **neurocognitive disorder* in **DSM-5* characterized by impairments in either behavioural or language functions associated with **frontal lobe* deterioration and sometimes also, in later stages of the disorder, also **temporal lobe* deterioration, most commonly diagnosed in people in the sixth decade of life. To meet the
*****ebook converter DEMO Watermarks*****

diagnostic criteria for the behavioural variant, evidence is required of prominent decline in **social cognition* and/or executive abilities (planning or organizing ability) plus at least three of the following: disinhibited social behaviour or minor law-breaking, **apathy* or **abulia*, loss of **empathy* or sympathy, **compulsions* and **perseveration* (2), or marked dietary changes, especially binge eating or **pica*. For the language variant, evidence is required of prominent decline in language ability affecting speech production, retrieval of words, object naming, and grammar. In both variants, learning, memory, and perceptual–motor functioning in other areas must be relatively unaffected, and the signs and symptoms must not be better explained by another neurocognitive disorder. [From Latin *frons* the forehead + *temporalis* of the temple, from *tempus*, *temporis* a temple (on the side of the head) + *-alis* of or relating to]

front vowel *n.* A **vowel* (see the diagram accompanying that entry) produced in the front of the mouth with the front part of the tongue raised, such as the vowels in *see*, French *thé*, *red*, *trap*, and German *Mann*. Compare BACK VOWEL, CENTRAL VOWEL.

frotteurism *n.* A **paraphilia* characterized by recurrent, intense sexual fantasies, urges, or behaviour involving touching or rubbing up against non-consenting people, often in crowded public places. Also called *frottage*. See also FROTTEURISTIC DISORDER. **frotteur** *n.* One who practises frotteurism. [From French *frotter* to rub]

frotteuristic disorder *n.* A **paraphilic disorder* in **DSM-5* characterized by intense, recurrent sexual arousal from touching or rubbing against a non-consenting person, or associated fantasies or urges over a period of at least six months. To meet the diagnostic criteria, the individual must either have acted out this behaviour with a non-consenting person, or the fantasies or urges must have caused clinically significant distress or impairment in social, occupational, or other areas of life. See also FROTTEURISM.

frozen noise *n.* A burst of **white noise* that has been recorded and is repeated over and over again. Compare PINK NOISE, COLOURED NOISE.

frustration *n.* The blocking or prevention of a potentially rewarding or satisfying act or sequence of behaviour; or the emotional response to such hindrance. See also **FRUSTRATION–AGGRESSION HYPOTHESIS**. [From Latin *frustrare* to cheat + *-ation* indicating a process or condition]

frustration–aggression hypothesis *n.* A conjecture, originally put forward by the US psychologist John Dollard (1900–80) and four colleagues in their book *Frustration and Aggression* in 1939, the strongest form of which states that the instigation to aggressive behaviour always presupposes frustration and that frustration always leads to aggression.

F scale *n.* A questionnaire to measure ***authoritarianism**, first published by the German philosopher, sociologist, and psychologist Theodor W(iesengrund) Adorno (1903–69) and several colleagues in the book *The Authoritarian Personality* (1950). It is composed of the following nine aspects, typical items being shown in italics, and a Yes answer always indicating a tendency to authoritarianism. Conventionalism (rigid adherence to conventional middle-class values): *Obedience and respect for authority are the most important virtues children should learn*; Authoritarian Submission (a submissive and uncritical attitude towards authority figures): *Young people sometimes get rebellious ideas, but as they grow up they ought to get over them and settle down*; Authoritarian Aggression (a punishing attitude towards violations of conventional values): *Sex crimes, such as rape and attacks on children, deserve more than mere imprisonment; such criminals ought to be publicly whipped, or worse*; Anti-Intraception (a dislike of subjectivity and imagination): *When a person has a problem or worry, it is best for him not to think about it, but to keep busy with more cheerful things*; Superstition and Stereotypy (a belief in supernatural determinants of human fate and a tendency to think in rigid categories): *Some day it will probably be shown that astrology can explain a lot of things*; Power and Toughness (a preoccupation with strong/weak, leader/follower relationships): *People can be divided into two distinct classes: the weak and the strong*; Destructiveness and Cynicism (a distrustful and misanthropic attitude towards people in general): *Human nature being what it is, there will always be war and conflict*; Projectivity (a tendency to project one's own unconscious impulses on to others): *Homosexuals are hardly better than criminals and ought to be severely punished*; Sex (exaggerated concern with people's sexual activities):

*****ebook converter DEMO Watermarks*****

The wild sex life of the old Greeks and Romans was tame compared to some of the goings-on in this country, even in places where people might least expect it. Also called the California F scale. [From (Potentiality for) F(ascism) scale]

F statistic *n.* An important statistic that underlies the *analysis of variance (ANOVA). For a set of scores divided into groups, it is defined as the total *variance or *mean square between groups divided by the total variance or mean square within groups. Also called the *F ratio*.

fugue *n.* A form of *dissociation characterized by apparently purposeful travel outside one's normal range of movement, with *amnesia during the period of travel. If it causes significant distress or impairment in social, occupational, or other areas of functioning, it may be diagnosed as the mental disorder *dissociative fugue. [From Latin *fuga* a flight]

Fullerton–Cattell law *n.* In *psychophysics, the proposition that for any stimulus intensity I , the *difference threshold ΔI is proportional to the square root of I , hence $\Delta I = k\sqrt{I}$, where k is a constant, rather than being proportional to I itself, as in *Weber's law, which is both simpler and generally more accurate. [Named after the US psychologists George Stuart Fullerton (1859–1925) and James McKeen Cattell (1860–1944) who formulated it in 1892]

full primal sketch See PRIMAL SKETCH.

functional *adj.* In relation to a disorder, referring to changes in behaviour or action, without any observable change in physical structure in the person or any organ or body part.

functional analysis of behaviour *n.* The application of the laws of *operant conditioning, or less commonly those of another learning theory, to establish the relationships between *stimuli (1) and *responses. US *functional analysis of behavior*.

functional autonomy *n.* The property of a drive or habit that has

become detached from the goal that originally motivated it and operates independently. A classic example is the drive or habit associated with making money, initially to buy goods and services that improve the quality of one's life, but often becoming an end in itself. Many **compulsions* such as hand-washing manifest functional autonomy.

functional equivalence hypothesis *n.* The proposition that **imagery*, although it does not result from stimulation of sense organs, is essentially the same as perception in the way that it functions.

functional fixedness *n.* An impaired ability to solve a problem requiring the use of a particular object, the impairment being caused by recent use of the object for a different function, or by recent perception of the object performing a different function. The phenomenon was first reported in 1935 by the German-born US psychologist Karl Duncker (1903–40), who experimented with five problems, including what he called the *box problem*: Three small lighted candles are to be attached to a wooden door at eye level. The participants or subjects were presented with many objects, including a matchbox containing matches, a similar-sized cardboard box containing small candles, and a third similar box containing thumbtacks (drawing pins). The solution was to empty the three boxes, to fix them to the door with thumbtacks, and to stand a lighted candle in each box. Only 43 per cent of Duncker's subjects solved the box problem in that form, but 100 per cent of a control group solved it when presented with the same objects but with the three boxes empty, thus avoiding functional fixedness arising from perceiving the boxes as containers of other objects. Across all five problems, Duncker found that functional fixedness of the crucial objects reduced the number of solutions by almost a half. Duncker pointed out that the phenomenon applies not only to physical objects or tools, but also to mental objects or concepts. A translation from the original German into English of Duncker's classic article was published in the journal *Psychological Monographs* in 1945. Also called *functional fixity* or *functional embeddedness*. See also *EINSTELLUNG*, *SET* (2).

functionalism *n.* Any doctrine that emphasizes utility or purpose, especially the school of psychology that was launched in 1896 by the US pragmatist philosopher and psychologist John Dewey (1859–1952) and that

*****ebook converter DEMO Watermarks*****

flourished for many years at the University of Chicago under the influence of Dewey, George Herbert Mead (1863–1931), and James Rowland Angell (1869–1949), at Columbia University under the influence of Edward Thorndike (1874–1949) and Robert S(essions) Woodworth (1869–1962), and at Harvard University under the influence of William James (1842–1910). Instead of analysing the structure of mental experience, as was conventional in **structuralism* (2), functionalism examined both mental experience and behaviour from the standpoint of their functional value in adapting the organism to its environment, in a deliberate attempt to introduce evolutionary ideas into psychology. Conscious experiences were interpreted as phenomena that arise when automatic, reflex behaviour is inadequate to meet the needs of an organism, as when a person who is learning to ride a bicycle eventually ceases to be conscious of every movement when conscious awareness is no longer needed. The early practitioners of functionalism were the first to use non-human animals in psychological experiments. During the 1920s and 1930s, functionalism was gradually swallowed up by **behaviourism*. [From Latin *functio* a performance, from *fungi* to perform + Greek *-ismos* indicating a state or condition]

functionalist *n.* A member or follower of the school of **functionalism*, or one who advocates or practises functionalism.

functional MRI *See* [MRI](#).

functional neurological symptom disorder *See* [CONVERSION DISORDER](#).

function type *n.* In **analytical psychology*, any of the personality types identified by Carl Gustav Jung (1875–1961). According to Jung, people fall into the *rational type* (subdivided into *feeling type* or *thinking type*) or *irrational type* (subdivided into *sensing type* or *intuitive type*). Jung also distinguished between *extraverts* and *introverts*. *See also* [MYERS–BRIGGS TYPE INDICATOR](#).

function word *n.* Any word that fulfils a specific grammatical role but has little or no independent meaning outside of its linguistic context, typical examples being articles such as *the*, pronouns such as *she*, and conjunctions

*****ebook converter DEMO Watermarks*****

such as *and*. See also [TELEGRAPHIC SPEECH](#). Compare [CONTENT WORD](#).

fundamental attribution error *n.* A pervasive tendency to underestimate the importance of external situational pressures and to overestimate the importance of internal motives and dispositions in interpreting the behaviour of others. In a typical experiment, participants filled in questionnaires indicating their attitudes towards the Cuban leader Fidel Castro and towards the legalization of cannabis, then half of them were instructed to write essays in favour of Castro and the rest to write essays in favour of legalizing cannabis. The pro-Castro essays were then shown to the writers of the pro-cannabis essays and vice versa, and the readers estimated the writers' true attitudes towards the issues discussed in their essays. Although the readers knew the constraints under which the essays had been written, they failed to take these external situational factors sufficiently into account and persistently misjudged the writers' attitudes in the direction of the views expressed in the essays. The phenomenon was first identified in 1929 in an article in the journal *Zeitschrift für angewandte Psychologie* by the Polish-born Austrian psychologist Gustav Ichheiser (1897–1969) and was subsequently observed and described in 1944 by the Austrian-born US psychologist Fritz Heider (1896–1988), and in 1965 by the US psychologist Edward Ellsworth Jones (1926–93), who called it *correspondent inference*, but it was not until 1977 that it was named and given prominence by the Canadian psychologist Lee D(avid) Ross (born 1942), to whom it is often (mis)attributed. Ross later came to believe that it could more aptly be called the *dispositionist bias*, and many other social psychologists call it the *overattribution bias*. Cross-cultural research suggests that it is far less pervasive in more collectivist (less individualist) cultures than in the US and northern Europe. See also [ATTRIBUTION](#), [ATTRIBUTIONAL BIAS](#), [ATTRIBUTION THEORY](#), [KELLEY'S CUBE](#).

fundamental colour *n.* Another name for a **primary colour* (1, 2, or 3). US *fundamental color*.

fundamental frequency *n.* The **pure tone* with the lowest frequency forming a component of a **complex tone*, or the analogous sine wave in some other complex oscillatory vibration. Also called a *fundamental*. See also [MISSING FUNDAMENTAL ILLUSION](#). Compare [HARMONIC](#).

*****ebook converter DEMO Watermarks*****

fundamental rule of psychoanalysis *n.* The principle according to which a patient undergoing **psychoanalysis* should engage wholeheartedly in **free association*. Also called the *basic rule of psychoanalysis*. See also INTELLECTUALIZATION, THERAPEUTIC ALLIANCE.

fungiform papilla *n.* Any of a large number of flat-topped, mushroom-shaped, reddish-coloured **papillae* on the upper surface of the **tongue*, most of which are studded with **taste buds* around their bases. See also SUPERTASTER. Compare CIRCUMVALLATE PAPILLA, FILOFORM PAPILLA, FOLIATE PAPILLA. **fungiform papillae** *pl.* [From Latin *fungus* a mushroom + *forma* a shape]

funiculus *n.* Any of the three bundles of nerve fibres into which the H-shaped column of **grey matter* running through the length of the **spinal cord* divides the **white matter*: the lateral funiculus on either side of the H, the posterior funiculus between the dorsal uprights of the H, and the anterior funiculus between the ventral uprights of the H. **funiculi** *pl.* [From Latin *funiculus* a string, diminutive of *funis* a rope]

furthest neighbour method *n.* Another name for **complete linkage clustering*.

fusiform cell *n.* Another name for a **spindle cell*. [From Latin *fuscus* a spindle + *forma* a shape]

fusiform gyrus *n.* A spindle-shaped **gyrus* on the medial (inside) surface of each **temporal lobe*, at the junction with the occipital lobe, occupied by Area V4 of the **visual cortex*, largely responsible for colour perception and also implicated in face recognition. The left fusiform gyrus is involved in word recognition in reading, and lesions in that region are associated with **spelling dyslexia*. It is sometimes taken to include a region that is adjacent and anterior to this and is involved in object perception. [From Latin *fuscus* a spindle + *forma* a shape + Greek *gyros* a circle or ring]

fusion See BINOCULAR FUSION.

fusional language *n.* Another name for an [*inflecting language](#).

fusion of instincts *n.* In [*psychoanalysis](#), the mixing of [*Eros](#) and [*Thanatos](#) so that they operate jointly, in contrast to the [*defusion of instincts](#) in which they operate independently, each pursuing its own [*instinctual aim](#). In a key passage on this phenomenon, Sigmund Freud (1856–1939) wrote in his book *New Introductory Lectures on Psycho-Analysis* (1933, *Standard Edition*, XXII, pp. 5–182): ‘In sadism and masochism we have before us two excellent examples of a mixture of two classes of instinct, of Eros and aggressiveness; and we proceed to the hypothesis that this relation is a model of one—the very instinctual impulse that we can examine consists of similar fusions or alloys of the two classes of instinct. These fusions, of course, would be in the most varied ratios’ (pp. 104–5).

fuzzy logic *n.* A form of logic based on [*fuzzy set](#) theory in which [*propositions \(1\)](#) have continuously graded truth values ranging from 0 to 1, rather than being either false (0) or true (1) as in conventional [*Boolean](#) logic. It is influential mainly in the field of [*knowledge](#) representation and [*neural networks](#).

fuzzy set *n.* A generalized concept of a set in which elements have continuously graded degrees of set membership ranging from 0 to 1, rather than either not belonging (0) or belonging (1) as in conventional [*set theory](#). It was developed in 1965 by the Azerbaijani-born US engineer and systems theorist Lotfi A. Zadeh (born 1921) to reflect the fact that many natural categories, such as baldness, tallness, and beauty, have intrinsically indistinct boundaries. *See also* [FUZZY LOGIC](#), [GUPPY EFFECT](#), [PROTOTYPE THEORY](#).

g *abbrev.* General factor of ability or intelligence, a concept first proposed in an article by the English psychologist Charles Edward Spearman (1863–1945) in the *American Journal of Psychology* in 1904 on the basis of **factor analysis* to explain the correlations between scores on diverse intelligence tests and subtests. Spearman interpreted it as mental energy, but others reinterpreted it as abstract reasoning ability or as neural processing speed, and some, starting in 1916 with the English psychologist Godfrey H(ilton) (later Sir Godfrey) Thomson (1881–1955), viewed it as a mere statistical abstraction devoid of psychological meaning. Also called *general ability*. *See also* FACTORIAL VALIDITY. *Compare* PRIMARY MENTAL ABILITIES.

GABA *abbrev.* Gamma-aminobutyric acid, the commonest inhibitory **neurotransmitter* in the central nervous system. When it is released into a synapse, it tends to prevent the postsynaptic neuron from firing. *See also* DRAVET SYNDROME, PICROTOXIN, PURKINJE CELL. [From *g(amma)* (γ) the third letter of the Greek alphabet + *a(mine)* + Greek *b(outyron)* butter, from *bous* ox + *tyros* cheese + *-ikos* of, relating to, or resembling]

GABAergic *adj.* Releasing **GABA*; also activated by or responding to GABA, this extended usage being widespread but consistently rejected by the English physiologist Sir Henry Hallet Dale (1875–1968), who coined the suffix *-ergic*, and by many other authorities. *Compare* ADRENERGIC, CHOLINERGIC, DOPAMINERGIC, NORADRENERGIC, SEROTONERGIC.

GABA receptor complex *n.* A structure that is present in certain cells of the central nervous system and that comprises three interacting neuroreceptors, the first being a receptor that is stimulated by sedative or

hypnotic drugs such as *barbiturates and is inhibited by *convulsant drugs; the second a receptor that is stimulated by *benzodiazepines; and the third the primary *GABA receptor, stimulation of which inhibits neuronal activity by enlarging chloride channels, this effect being augmented by the presence of either barbiturates or benzodiazepines and blocked by convulsants.

gag reflex *n.* A reflex contraction of muscles in the *pharynx and retraction of the tongue in response to stroking of the *velar or *pharyngeal surfaces. Its absence is a sign of a lesion in the vagus nerve or the glossopharyngeal nerve. Also called the *pharyngeal reflex*. [From *gag* to *retch*]

gain from illness *n.* An umbrella term for *primary gain and *secondary gain.

gain-loss effect *n.* The finding that people tend to be most attracted to others whose liking for them appears to have increased, and least attracted to others whose liking for them appears to have decreased, such increases and decreases in the perceived estimation of others having more impact on their attraction towards those others than constant levels of liking or rewarding behaviour from them. The phenomenon was first remarked on by the Dutch philosopher Baruch Spinoza (1632–77) in his *Ethics*, published posthumously in 1677: ‘Hatred which is completely vanquished by love passes into love; and love is thereupon greater than if hatred had not preceded it. For he who begins to love a thing, which he had wont to hate or regard with pain, from the very fact of loving feels pleasure’ (proposition 44). The phenomenon was first studied empirically by the US psychologists Elliot Aronson (born 1932) and Darwyn E. Linder (born 1939) who reported in the *Journal of Experimental Social Psychology* in 1965 the results of an experiment in which students overheard conversations in which they were being discussed by a fellow student either entirely positively, entirely negatively, beginning with negative comments and becoming more positive (gain), or beginning with positive comments and becoming more negative (loss). The students were later asked how much they liked the fellow student whose conversation they had overheard, and the results showed that their liking was greatest in the gain condition and least in the loss condition.

gain, primary/secondary See PRIMARY GAIN, SECONDARY GAIN.

gain score *n.* In psychometrics, the difference between a person's score on a test and the same person's score on the same test, or an **equivalent form* or **parallel form*, administered earlier.

gait apraxia *n.* A form of **apraxia* characterized by difficulty in walking, and often in making other voluntary movements with the feet or legs such as kicking a ball, sometimes sufficiently severe to require confinement to a wheelchair. [From Old Norse *gata* a path, way, street, or manner of behaviour]

gait ataxia *n.* A form of **ataxia* caused by a lesion in the **anterior* lobe of the **cerebellum*, usually as a consequence of **alcohol dependence*, characterized by staggering movement even when sober and inability to stand still with feet together. See also ROMBERG'S SIGN, TANDEM GAIT. Compare LOCOMOTOR ATAXIA.

Galatea effect *n.* Any positive **Pygmalion effect*, when expectations function as **self-fulfilling prophecies* with positive consequences, as when high expectations by teachers of the potential school performance of particular children has positive effects on their actual performance. The term was introduced in an article in the *Journal of Educational Psychology* in 1982 by the Israeli psychologist Alisha Y. Babad (born 1944), the Argentine-born Israeli psychologist Jacinto Inbar (born 1943), and the German-born US psychologist Robert Rosenthal (born 1933). Compare GOLEM EFFECT. [Named after the Greek myth of Pygmalion and Galatea in which an ivory sculpture of a woman, created by Pygmalion, the king of Cyprus, was brought to life as Galatea after Pygmalion fell in love with it]

gall bladder *n.* A muscular sac attached to the right side of the liver that releases **bile* into the duodenum. [From Greek *chole* bile]

Galton bar *n.* A device consisting of a horizontal rod that can be bisected by an adjustable vertical pointer, used to test the accuracy of visual estimates of length. [Named after the English explorer, amateur scientist, and

psychologist Sir Francis Galton (1822–1911) who invented it]

Galton's law of filial regression *n.* Another name for ***filial regression**. [Named after the English explorer and scientist Sir Francis Galton (1822–1911) who first drew attention to it]

Galton whistle *n.* An instrument for emitting high-pitched tones and ***ultrasound** for determining the upper limits of the ***audibility range** in humans and other animals. The original version, which the English explorer, amateur scientist, and psychologist Sir Francis Galton (1822–1911) first described in 1876, was a whistle attached to a hollow walking-stick, with a rubber bulb for its operation in the handle, which he used to experiment on animals at London Zoo and elsewhere.

galvanic skin response *n.* A fall in the resistance of the ***skin** to the passage of a weak electric current, usually measured in the palm of the hand in units of ohms, indicative of emotion or physiological arousal, also called a *psychogalvanic response* (**PGR**) or an *electrodermal response* (**EDR**). See also **POLYGRAPH**. Compare **SKIN CONDUCTANCE RESPONSE**. **GSR** abbrev. [From *galvanic* of or relating to current electricity, named after the Italian physiologist Luigi Galvani (1737–98) who first showed that muscles contract when electricity is passed through them]

gambler's fallacy *n.* The false belief that the probability of an event in a random sequence is dependent on preceding events, its probability increasing with each successive occasion on which it fails to occur. Thus if black has come up many times in succession at a roulette table, a false belief may develop that red is increasingly likely on each subsequent spin of the wheel, to even out the sequence in the long run; or if a fair coin is tossed repeatedly and tails comes up many times in a row, a gambler may believe that heads is more likely on the following toss; or if a mother gives birth to several girls in succession, she may come to believe that the probability of a boy is greater than 1/2 for her next baby. See also **SAMPLE SIZE FALLACY**.

gambling disorder *n.* A ***substance-related and addictive disorder** in ***DSM-5** (the only one that is not substance-related), characterized by persistent and maladaptive gambling, causing clinically significant
*****ebook converter DEMO Watermarks*****

impairment or distress, indicated by such signs and symptoms as needing increasing amounts of money to achieve the desired level of excitement; becoming restless or irritable while refraining from gambling; attempting repeatedly and unsuccessfully to cut down or to stop gambling; frequent preoccupation with gambling; using gambling as an escape from worry or unhappiness; attempting to recoup gambling losses by further gambling; jeopardizing a significant job, personal relationship, or educational opportunity by gambling; and relying on others to relieve financial crises caused by gambling. *Compare* [INTERNET GAMING DISORDER](#), [MANIC EPISODE](#).

gambling, pathological *See* [GAMBLING DISORDER](#).

game *n.* **1.** An interactive decision modelled in [*game theory](#). Also called a *strategic game* or a *game of strategy*. *See* [CHICKEN GAME](#), [DOLLAR AUCTION GAME](#), [NEWCOMB'S PROBLEM](#), [N- PERSON PRISONER'S DILEMMA](#), [PRISONER'S DILEMMA GAME](#), [PUBLIC GOODS DILEMMA](#), [RESOURCE DILEMMA](#), [SOCIAL DILEMMA](#), [ULTIMATUM GAME](#). **2.** More generally, any sport, recreational contest, amusement, or pastime conducted according to a code or system of rules.

gamete *n.* A sexual reproductive cell, such as an [*ovum](#) or a [*spermatozoon](#), that fuses with another during fertilization. Also called a *germ cell*. [From Greek *gamete* a wife and *gametes* a husband, from *gameein* to marry]

game theory *n.* A branch of mathematics devoted to the logic of interactive decision making, applicable to any social interaction in which there are two or more decision makers, called [*players](#), each having two or more ways of acting, called [*strategies \(2\)](#), such that the outcome depends on the strategy choices of all the players, and the players have well-defined preferences among the possible outcomes so that numerical [*payoffs](#) reflecting these preferences can be assigned to all players for all outcomes. Many social, economic, political, military, and interpersonal conflicts are games in the technical sense, and experimental games based on game theory have been used to study such phenomena as individual and collective rationality, cooperation and competition, trust and suspicion, threats and commitments. Also called the *theory of games* or *games theory*, though the latter phrase is avoided in careful usage. *See* [GAME \(1\)](#). *See also* [ADMISSIBLE](#)

*****ebook converter DEMO Watermarks*****

ALTERNATIVE/STRATEGY, DOMINANT ALTERNATIVE/STRATEGY, EVOLUTIONARILY STABLE STRATEGY, MAXIMIN, MINIMAL SOCIAL SITUATION, MINIMAX, MIXED-MOTIVE GAME, MIXED STRATEGY, NASH EQUILIBRIUM, NORMATIVE (1), PAYOFF, PLAYER (1), PROGRAMMED STRATEGY, SOCIAL DILEMMA, STRATEGY (2), SURE-THING PRINCIPLE, TIT FOR TAT STRATEGY, UTILITY (1), WIN-STAY, LOSE-SHIFT STRATEGY, ZERO-SUM GAME.

gamma-aminobutyric acid *n.* The full name of what is usually called *GABA. [From *gamma* (γ) the third letter of the Greek alphabet + *amine* + Greek *boutyron* butter, from *bous* ox + *tyros* cheese + *-ikos* of, relating to, or resembling]

gamma fibre *n.* A medium-diameter partly myelinated type of *efferent somatic nerve fibre, composed of *gamma motor neurons and having intermediate conduction velocity. A typical example is a fibre supplying a muscle spindle. US *gamma fiber*. Also written γ fibre. Compare ALPHA FIBRE, IA FIBRE, IB FIBRE, II FIBRE, C FIBRE. [From *gamma* (γ) the third letter of the Greek alphabet]

Gamma-hydroxybutyrate See GHB.

gamma motor neuron *n.* A type of spinal *motor neuron that supplies *intrafusal muscles and forms part of a *gamma fibre. Also called a *gamma motoneuron*. Compare ALPHA MOTOR NEURON, RENSCHAW CELL.

gamma movement *n.* A form of *apparent movement that is elicited when a stimulus is presented in an alternating pattern of high and low illumination or *brightness, with an interstimulus interval of about 60 milliseconds, the visual illusion being created of a single object expanding and shrinking in all dimensions. Also called *gamma motion*. See also KORTE'S LAWS. Compare ALPHA MOVEMENT, BETA MOVEMENT, DELTA MOVEMENT.

gamma-OH *n.* A proprietary name for gamma-hydroxybutyrate. See GHB.

gamma statistic *n.* In descriptive statistics, an index of association between two variables measured on *ordinal scales. If two pairs of scores are examined, they must either be concordant, in the sense that the one ranked

higher than the other on the first variable is also ranked higher than the other on the second variable, or discordant. Gamma is defined as the difference between the number of concordant pairs and the number of discordant pairs divided by the total number of concordant and discordant pairs, and it ranges from 0 to 1. Also called *Goodman–Kruskall gamma*, and closely related to **Somers' D* and to **Kendall's tau*. [From *gamma* (γ), the third letter of the Greek alphabet]

gamma wave *n.* A high-frequency (35–75 hertz) **EEG* wave that occurs during thinking. Also called a *40-hertz oscillation*, but this inaccurate term is avoided in careful usage. [From *gamma* (γ) the third letter of the Greek alphabet]

gamodeme *See* *DEME*.

ganglion *n.* A nerve-centre or collection of neuron cell bodies usually (apart from the **basal ganglia* and adjacent structures) located in the **peripheral nervous system*. *See* *DORSAL ROOT GANGLION*, *POSTGANGLIONIC*, *PREGANGLIONIC*, *SYMPATHETIC GANGLIONIC CHAIN*. **ganglia** or **ganglions** *pl.* [From Greek *ganglion* a cystic tumour]

ganglion cell *n.* A type of **neuron* found in the inner layer of the **retina*, nearest the front of the eye, receiving inputs from retinal **bipolar cells*, which in turn receive inputs from **rods* and **cones*. An ON ganglion cell is excited by a spot of light and inhibited by light in a ring surrounding the spot, the inhibition being effected by **horizontal cells*; an OFF ganglion cell behaves in the opposite way. Two types of ganglion cells are intermixed in the inner layer: large ganglion cells, which form the first stage of the **magnocellular system* and that do not distinguish between signals from different types of photoreceptors and simply add the signals from all three types of cones together, and small ganglion cells that form the first stage of the **parvocellular system* and that distinguish between different cone types, from which they add and subtract information, as when a red-minus-green ganglion cell responds only to red light. *See also* *CENTRE-SURROUND RECEPTIVE FIELD*, *DIRECTION-SENSITIVE NEURON*, *DOMINATOR*, *MIDGET CELL*, *PARASOL CELL*, *MODULATOR*, *OFF-CENTRE CELL*, *ON-CENTRE CELL*, *SPIRAL GANGLION CELL*.

ganja *n.* A common street name for **cannabis*. [From Hindi *gaja*, from Sanskrit *grñja*]

Ganser syndrome *n.* A condition sometimes classified as a **dissociative disorder* and sometimes as a **factitious disorder*, characterized by the giving of approximate answers to questions, the answers being suggestive of a knowledge of the right answers. Thus, on being asked how many legs a dog has, a person with Ganser syndrome may reply either three or five, and Sigbert Ganser labelled this *vorbeireden*, literally talking past. Also called *nonsense syndrome*. See also *PRISON PSYCHOSIS*. Compare *CIRCUMSTANTIALITY*, *TANGENTIALITY*. [Named after the German psychiatrist Sigbert Josef Maria Ganser (1853–1931) who first described it in 1897]

Ganzfeld *n.* A uniform and featureless **visual field*, usually created by taping halved ping-pong balls over both eyes and shining a dim red light on to them, perceived as **film colour*. [From German *ganz* whole + *Feld* field]

gap junction *n.* A rare type of synapse in which a signal is transmitted from one neuron to another by electrical induction across a very narrow gap between them without the involvement of any chemical neurotransmitter. Also called an *electrical synapse*.

Garcia effect *n.* Another name for **food aversion learning*. [Named after the US psychologist John Garcia (1917–2012) who did much of the early work on it]

gargoylism *n.* A term sometimes used to describe the grotesque facial features associated with some forms of **intellectual disability*, especially **Hurler's syndrome*.

gastric gland *n.* A tubular **exocrine gland* in the stomach wall that secretes gastric juice containing pepsin, hydrochloric acid, and mucus. [From Greek *gaster* the stomach]

gastrointestinal *adj.* Of or relating to the **stomach* and the **intestinal tract*. **GI** *abbrev.* [From Greek *gaster* the stomach + Latin *intestinum* gut,

from *intestinus* internal]

gastrointestinal tract *n.* Another name for the **alimentary canal*.

gate-control theory *n.* A theory of **pain*, put forward by the Canadian psychologist Ronald Melzack (born 1929) and the US-based English anatomist Patrick D(avid) Wall (1925–2001) in an article in the journal *Science* in 1965, according to which pain signals transmitted by small-diameter nerve fibres may be blocked at the level of the **spinal cord* and prevented from reaching the brain by the firing of larger sensory nerve fibres, which act as a gate without normally transmitting pain signals themselves. Chronic pain occurs when disease, injury, or infection damage the large fibres that normally close the gate so that pain messages are not blocked on their path to the brain. According to this theory, **acupuncture* anaesthesia may work by stimulating large-diameter sensory nerves to close the spinal gates.

gateway drug *n.* A generic name for **alcohol*, **cocaine*, or **cannabis*, referring to their supposed roles as avenues leading people on to harder drugs. *See also* *SOFT DRUG*.

gating *n.* The exclusion from attention of certain stimuli while attending to other stimuli.

Gause's principle *n.* In **ecology* (1), the proposition that two or more similar species cannot share the same **ecological niche* indefinitely. Also called the *competitive exclusion principle*. [Named after the Russian biologist Georgyi Frantsevich Gause (1910–86) who propounded it in 1934]

Gaussian distribution *n.* Another name for the **normal distribution*. [Named after the mathematician Johann Karl Friedrich Gauss (1777–1855), born in the Duchy of Brunswick in what is now Germany, who investigated its basic properties]

gay *adj. n.* 1. Another word for **homosexual*. *adj.* 2. Light-hearted and carefree, pleasure-seeking; brightly coloured or decorated. [From Old French

gai happy, introduced in sense 1 by homosexual men in the 1960s as a non-pejorative word to describe themselves, later accepted as a general term to describe male and female homosexuals, rendering sense 2 obsolescent]

gaze *vb. n.* To look steadily at something or someone, or a prolonged and steady look. In social psychology, it refers to steady looking at other people in the region of their eyes, and it is a form of ***non-verbal communication**. It tends to increase with interpersonal liking, but also when a person is attempting to dominate another, and one of its important functions is to regulate turn-taking in conversations: speakers tend to gaze at the beginning and end of a speaking turn. *Mutual gaze* or *eye contact* occurs when two people simultaneously gaze in the direction of each other's eyes, as tends to occur at points in a conversation when the floor is handed over smoothly to another speaker. See also **BÁLINT'S SYNDROME**, **COMPENSATORY EYE MOVEMENT**, **DONDERS' LAW**, **DYNAMIC LABYRINTH**, **EYE-TRACKING**, **REGULATOR**, **ROTATING HEAD ILLUSION**. [From Swedish dialect *gasa* to stare or gape at]

gaze aversion *n.* Active avoidance of ***eye contact**, such as occurs as a result of embarrassment or a feeling of being socially dominated and is often observed in people with ***autism spectrum disorder**. Also called *gaze avoidance*. See also **EQUILIBRIUM HYPOTHESIS**.

GBH *abbrev.* **1.** Grievous bodily harm, a technical term in English law denoting the crime of causing serious physical injury to another person, contrasted with *actual bodily harm* (**ABH**), the crime of causing minor physical injury to another person. **2.** A common jocular reference to ***GHB**.

gear *n.* A common street name for ***heroin**.

Gedankenexperiment *n.* An imaginary experiment, such as the ***Chinese room** or the ***Turing test**. As an example of how such an experiment can be highly illuminating, imagine walking into a dark room and switching on a 60-watt light, and then another 60-watt light. It is obvious from experience, without actually performing the experiment, that the room will not seem twice as brightly lit after the second light it turned on, which shows that the sensation of brightness does not double when the physical intensity of the light doubles (see **FECHNER'S LAW**, **POWER LAW**). Also called a

*****ebook converter DEMO Watermarks*****

thought experiment or an *armchair experiment*. [From German *Gedanke* a thought + *Experiment* an experiment]

Gelb effect *n.* The appearance of a black surface as white when it is brightly illuminated by a narrowly focused spotlight and viewed in front of a dimly illuminated background. If a white object is held in the beam of the spotlight in front of the black surface, the black surface immediately appears black, but as soon as the white object is removed it reverts to looking white. This phenomenon can be demonstrated using a slide projector or electric torch (flashlight) to produce a narrow beam of light. Together with its counterpart, the ***Kardos effect**, it demonstrates that the lightness dimension of colour is not determined straightforwardly by physical light intensity but is subject to ***context effects**, as are other dimensions of colour. *See also* LIGHTNESS, LUMINANCE. *Compare* CHEQUER–SHADOW ILLUSION, LAND EFFECT. [Named after the Russian-born German psychologist Adhémar Maximillian Maurice Gelb (1887–1936) who published his discovery of it in a book chapter in 1929]

gel electrophoresis *See* ELECTROPHORESIS.

gender *n.* 1. Non-technically, a synonym for ***sex (1)**. More specifically, especially in feminist psychology, the behavioural, social, and cultural attributes associated with sex. *See also* DOING GENDER. 2. The categories into which nouns of a language are divided (such as masculine, feminine, and neuter). [From Old French *gendre* gender, from Latin *genus* a kind]

gender dysphoria *n.* A ***mental disorder**, introduced in ***DSM-5**, characterized by a feeling of incongruence between assigned ***gender (1)** or ***sex (1)** and experienced gender. To meet the diagnostic criteria in children, six of the following must be present: a strong desire to be the other gender; in boys, a strong preference for cross-dressing, or in girls, a strong preference for masculine clothes; a strong preference for cross-gender roles in fantasy play; a strong preference for the toys, games, and activities of the other gender; a strong preference for playmates of the other gender; in boys, a strong rejection of typically masculine toys and games, or in girls, a strong rejection of typically feminine toys and games; a strong dislike of one's sexual anatomy; and a strong desire for the sexual anatomy of the

*****ebook converter DEMO Watermarks*****

experienced gender. A corresponding set of criteria applies to adolescents and adults. *See also* [DIANA COMPLEX](#), [MASCULINE PROTEST](#), [TRANSVESTISM](#). [From English *gender* + Greek *dys-* bad or abnormal + *pherein* to bear + *-ia* indicating a condition or quality]

gender identity *n.* A sense of awareness, usually beginning in infancy, continuing throughout childhood, and reaching maturity in adolescence, of being male or female, or of the experienced [*gender \(1\)](#) associated with one's biological [*sex \(1\)](#). *See also* [GENDER DYSPHORIA](#).

gender identity disorder *n.* A term used in [*DSM-IV](#) for what was later renamed [*gender dysphoria](#). **GID** *abbrev.*

gender role *n.* A set of behaviour patterns, attitudes, and personality characteristics stereotypically perceived as masculine or feminine within a culture. *See also* [GENDER \(1\)](#).

gene *n.* The unit of hereditary transmission encoded in [*DNA](#), occupying a fixed [*locus](#) on a [*chromosome](#) and transmitted from a parent to its offspring, consisting of a sequence of [*base \(1\)](#) pairs corresponding to a specific sequence of [*amino acids](#) making up a [*protein](#), functioning either to build body cells (if it is a [*structural gene](#)) or else to regulate the expression of other genes (if it is a [*regulator gene](#)). The human [*genome](#), present in every [*somatic cell](#), contains approximately 21,000 to 23,000 genes encoded in about 3 billion base pairs. *See also* [CISTRON](#), [CODON](#), [GENE ACTIVATOR](#), [GENE LOCUS](#), [GENE MAPPING](#), [GENE OPERATOR](#), [GENE REPRESSOR](#), [GENE SPLICING](#), [OPERON](#), [SUPERGENE](#). **genetic** *adj.* Of or pertaining to genes. [The word was introduced in 1909 by the Danish plant physiologist and geneticist Wilhelm Johannsen (1857–1927) in a book entitled *Elemente der exakten Erblchkeitslehre* (Elements of Exact Heredity), from German *Gen* a gene, from Greek *genes* born]

gene activator *n.* A protein that increases the expression of a [*structural gene](#) by binding to a [*gene](#) operator in a segment of [*DNA](#). *See also* [ACTIVATOR GENE](#). *Compare* [GENE REPRESSOR](#).

gene amplification *n.* The duplication of a gene to produce multiple
*****ebook converter DEMO Watermarks*****

copies of it within a cell nucleus.

gene cloning *n.* Producing ***clones (2)** of genes. Also called *DNA cloning*.

gene complex *n.* A group of genes that combine to produce a distinct characteristic of a ***phenotype**.

gene expression *n.* The transcription of a gene into an ***RNA** sequence or a ***protein**, or more generally its effects on a ***phenotype**. Also called *expression*.

gene frequency *n.* The relative frequency of a specific ***allele** of a gene in a population relative to the frequency of its other alleles.

gene locus *n.* The site occupied by a particular gene on a ***chromosome**. If the gene has two or more ***alleles**, then they occupy the same gene locus. Also called simply a *locus*. **gene loci** *pl.* [From Latin *locus* a place]

gene mapping *n.* The determination of the positions of genes on chromosomes (***gene loci**) by such means as studying ***linkages** that emerge when genes that are close to one another tend to be inherited together. Also called *genetic mapping*.

gene operator *n.* A binding site in a region of ***DNA** to which a ***gene** regulator can become attached, thereby affecting the expression of a ***structural gene** by increasing or repressing the synthesis of its protein product. Also called an *operator*. See **GENE ACTIVATOR**, **GENE REPRESSOR**. See also **OPERON**.

gene pool *n.* The sum total of all genes present in an interbreeding population. Compare **MEME POOL**.

genera *n. pl.* Plural of ***genus**.

general ability See **G**.

*****ebook converter DEMO Watermarks*****

general adaptation syndrome *n.* The three-stage biological response of an organism to **stress* (1) according to the Austrian-born Canadian physician and endocrinologist Hans Selye (1907–82), comprising an **alarm reaction*, a **resistance stage*, and an **exhaustion stage*. Also called the *adaptation syndrome*. **GAS** abbrev.

general factor of personality *n.* A superordinate **factor* (2) of personality suggested by the Slovenian psychologist Janek Musek (born 1945) in an article in the *Journal of Research in Personality* in 1977. It incorporates the **Big Five* personality factors as lower-order factors, and a person who scores highly on this factor is consequently extraverted, agreeable, conscientious, emotionally stable (rather than neurotic), and open to experience or intelligent. Also called the *Big One*. See also *ALPHA PERSONALITY FACTOR*, *BETA PERSONALITY FACTOR*. **GFP** abbrev.

General Health Questionnaire *n.* A self-rating questionnaire that takes between six and eight minutes to fill in and is designed to provide a rough-and-ready screening device for a wide range of mental disorders excluding **psychoses* (1). It comprises 60 items, each describing a symptom and being accompanied by four response categories indicating personal experience of the symptom (*less than usual, no more than usual, rather more than usual, much more than usual*) from which the respondent chooses one. Shorter versions containing 20, 28, and 30 items have also been constructed. It was developed by the English psychiatrist David (Paul Brandes) Goldberg (born 1934) and published initially in monograph form in 1972; this was followed by a co-authored article in the journal *Psychological Medicine* in 1979 describing a scaled version of the questionnaire. **GHQ** abbrev.

generalizability theory *n.* In psychometrics, the use of **analysis* of variance to estimate the extent to which the scores derived from a test are applicable beyond the specific test items, respondents, and testing conditions from which they were obtained. It is an extension of the theory of **reliability*.

generalization, acoustic See *ACOUSTIC GENERALIZATION*.

generalization gradient *n.* In **stimulus generalization*, a change in

the strength or frequency of a response to a variable stimulus as a function of the degree to which it resembles a particular stimulus to which the response has been learned or conditioned. It is sometimes used to examine perceptual similarity and discrimination in infants and non-human organisms that cannot give verbal judgements.

generalization, semantic See SEMANTIC GENERALIZATION.

generalized anxiety disorder *n.* An *anxiety disorder in *DSM-5 characterized by excessive and largely uncontrollable *anxiety not focused on any specific circumstances but related to everyday events or activities such as problems at work or school, with symptoms of restlessness, tiredness, difficulty concentrating, irritability, muscle tension, or sleep disturbance (insomnia or restless sleep), causing significant impairment in everyday functioning. Also called *anxiety neurosis*, *free-floating anxiety*. See also ACTUAL NEUROSIS, OVERANXIOUS DISORDER. **GAD** abbrev.

generalized cone *n.* In the *computational theory of vision pioneered in the late 1970s by the English psychologist David Courtenay Marr (1945–80), a basic element that is used in the perceptual *representation (2) of a three-dimensional object and that consists of a surface formed by moving a cross-section of constant shape but continuously variable size along an axis. For example, with a circular cross-section and a vertical axis of movement, a generalized cone can generate a three-dimensional outline of a wine glass, the diameter of the circle changing as it moves down the glass, and multiple generalized cones with differently shaped cross-sections and axes of movement can be used to generate images of more complex objects such as people. Compare GEON.

generalized habit strength *n.* In *Hullian learning theory, the *habit strength after taking into account the reduction resulting from a difference between the current *stimulus (1) and the stimulus present during the learning process. ${}_sH_R$ abbrev.

generalized matching to sample See MATCHING TO SAMPLE.

generalized oddity problem *n.* A form of **serial learning (2)* in which, in order to solve an **oddity problem*, an organism has to generalize a principle established in a series of earlier oddity problems with different sets of stimuli, as when the general principle is that the reward is always in the smallest container.

generalized reaction potential *n.* In **Hullian learning theory*, the strength of an organism's propensity to respond to a stimulus after taking into account **generalized habit strength* and several other intervening variables. *See also* NET REACTION POTENTIAL. sE_R abbrev.

general medical condition *n.* Any disorder not considered to be a **mental disorder*, specifically any disorder not included in the section devoted to mental and behavioural disorders in **ICD-10* and used in **DSM-IV* as a term of convenience, without any implication of a fundamental or sharp distinction between mental disorders and general medical conditions.

general paralysis (paresis) of the insane *n.* An obsolete term for **neurological* impairments arising from tertiary syphilis. *See also* PARESIS. GPI abbrev.

General Problem Solver *n.* A computer program designed to simulate human **problem solving*, introduced in 1958 by the US cognitive scientist Allen Newell (1927–92), the US economist John Clark Shaw (born 1933), and the US political scientist and decision theorist Herbert A(lexander) Simon (1916–2001), and developed further in 1972 by Newell and Simon. In this program, a problem is represented as a table of connections showing the distances between all pairs of states (initial, intervening, and final), and problem solving is modelled as a search through the problem space using permissible operators (actions), the task being to find a path of operators from an initial state to a goal state. A typical initial state is the starting position in a game of chess, and the corresponding goal state is checkmating the opponent; a more commonplace initial state is being at home with a child and a car that has a flat battery, and the corresponding goal state in this case might be delivering the child to nursery school. In general, the problem space is too large for exhaustive search to be feasible, and therefore the cognitive

***heuristic** of ***means–end analysis** is implemented. The program is able to solve ***water-jar problems**, the ***Tower of Hanoi** problem, and many logic problems and chess problems. It represents one of the first major landmarks in the history of ***artificial intelligence**. **GPS** *abbrev.*

general systems theory *n.* A theory of organization and wholeness, introduced by the Austrian biologist Ludwig von Bertalanffy (1901–72) in 1940 and expounded at length in his book *General Systems Theory* (1968), after he had moved to the US. It seeks to incorporate ideas of hierarchical organization, multivariable interaction, and goal-directed processes that are absent from physics and, according to general systems theorists, are therefore bypassed, denied, or overlooked in psychology and other areas where they occur. **GST** *abbrev.*

generative grammar *n.* A term introduced by the US linguist and philosopher (Avram) Noam Chomsky (born 1928) in his book *Syntactic Structures* (1957) to refer to a description of a language in terms of a finite set of explicitly specified rules capable of generating the potentially infinite set of all grammatical sentences in the language, and only those sentences. *See also* **CASE GRAMMAR**, **CONTEXT-DEPENDENT GRAMMAR**, **CONTEXT-FREE GRAMMAR**, **KERNEL**, **COMPETENCE (2)**, **PERFORMANCE (2)**, **PHRASE-STRUCTURE GRAMMAR**, **REWRITE RULE**. *Compare* **FINITE-STATE GRAMMAR**, **TRANSFORMATIONAL GRAMMAR**.

generativity versus stagnation *n.* One of the crises in the developmental theory of the German-born ***ego** psychologist Erik H. Erikson (1902–94). *See* **DEVELOPMENTAL CRISES**.

generator potential *n.* A graded change in the voltage difference across the membrane of a ***sensory receptor** that results from an appropriate stimulus and that tends either to excite or to inhibit an ***action potential** in the associated sensory neuron. Also called *receptor potential*.

gene regulator *n.* A ***protein** that can become attached to the binding site of a region of ***DNA**, thereby affecting the expression of a ***structural gene** by increasing or repressing the synthesis of its protein product. *See also* **GENE ACTIVATOR**, **GENE OPERATOR**, **GENE REPRESSOR**, **REGULATOR GENE**.

*****ebook converter DEMO Watermarks*****

gene repressor *n.* A protein that prevents the expression of a ***structural gene** by binding to a ***gene operator** in a segment of ***DNA**. *See also* REPRESSOR GENE. *Compare* GENE ACTIVATOR.

generic knowledge *n.* Knowledge of facts other than personal experiences or episodes from one's life. It is the type of information that is stored in ***semantic** knowledge.

gene splicing *n.* A technique of genetic engineering in which a phenotypic characteristic is produced in an organism by introducing DNA from another organism into its genetic material.

gene therapy *n.* The prevention and treatment of genetic defects by replacing or supplementing affected cells with genetically corrected cells.

genetic activation *n.* The process whereby the expression of a ***structural gene** is enhanced by a ***gene** activator. Also called *gene activation* or simply *activation*. *Compare* GENETIC REPRESSION.

genetically modified *adj.* Of or relating to a plant or animal that has been altered by ***genetic engineering**. **GM** *abbrev.*

genetic code *n.* The system by which genetic information is represented in the arrangement of the ***bases (1)** of the ***DNA** and ***RNA molecules**, thereby determining the proteins to be synthesized by the cell. The four bases are arranged in triplets, each specifying a particular ***amino acid**, and the amino acids combine to form ***proteins** (see *illustration*). ***Mitochondrial DNA** has its own genetic code, slightly different from the universal code of nuclear DNA and subject to variation between species. The idea of a genetic code in the sequence of bases was first suggested in 1954 (the year after the discovery of the ***double helix**) by the Russian-born US physicist George Gamow (1904–68), but the dictionary of ***codons** was worked out in detail between 1961 and 1967 by the US biochemist Marshall Warren Nirenberg (1927–2010), the Indian-born US molecular chemist Har Gobind Khorana (1922–2011), and the US biochemist Robert William Holley (1922–93), for which they shared a Nobel prize in 1968. *See also* CODON FAMILY, EXON,

INTRON.

First base in codon	Second base in codon				Third base in codon
	U	C	A	G	
U	UUU Phe	UCU Ser	UAU Tyr	UGU Cys	U
	UUC Phe	UCC Ser	UAC Tyr	UGC Cys	C
	UUA Leu	UCA Ser	UAA (stop codon)	UGA (stop codon)	A
	UUG Leu	UCG Ser	UAG (stop codon)	UGG Trp	G
C	CUU Leu	CCU Pro	CAU His	CGU Arg	U
	CUC Leu	CCC Pro	CAC His	CGC Arg	C
	CUA Leu	CCA Pro	CAA Gln	CGA Arg	A
	CUG Leu	CCG Pro	CAG Gln	CGG Arg	G
A	AUU Ile	ACU Thr	AAU Asn	AGU Ser	U
	AUC Ile	ACC Thr	AAC Asn	AGC Ser	C
	AUA Ile	ACA Thr	AAA Lys	AGA Arg	A
	AUG Met (start codon)	ACG Thr	AAG Lys	AGG Arg	G
G	GUU Val	GCU Ala	GAU Asp	GGU Gly	U
	GUC Val	GCC Ala	GAC Asp	GGC Gly	C
	GUA Val	GCA Ala	GAA Glu	GGA Gly	A
	GUG Val	GCG Ala	GAG Glu	GGG Gly	G

Genetic code. For RNA, the bases uracil (U), cytosine (C), adenine (A), and guanine (G), and the amino acids for which they code: Phe (phenylalanine), Leu (leucine), and so on. For DNA, substitute T for U throughout.

genetic counselling n. Information given to prospective parents on the basis of *chromosomal investigation and (with pregnant women) *amniocentesis, including the odds that their own child would have genetic abnormalities and the course and management of such conditions, especially when there is a family history of genetic disorders. US *genetic counseling*.

genetic dominance See [DOMINANCE \(GENETIC\)](#).

genetic drift *n.* Change in the relative frequencies of genes in a population resulting not from natural selection but from [*neutral mutation](#). Also called *non-Darwinian evolution* or *random drift*. See also [DARWINIAN EVOLUTION](#), [NATURAL SELECTION](#). Compare [FOUNDER EFFECT](#).

genetic engineering *n.* The artificial manipulation and alteration of [*DNA](#), using techniques such as [*gene cloning](#) and [*gene splicing](#), in the course of research, to modify plants and animals that are being bred, to manufacture proteins such as insulin, or to find treatments for genetic disorders. See also [CLONE \(1, 2\)](#), [COMPLEMENTARY DNA](#), [DNA CLONING](#), [DNA HYBRIDIZATION](#), [DNA LIGASE](#), [DNA SPLICING](#), [GENE SPLICING](#), [GENE THERAPY](#), [GENETICALLY MODIFIED](#), [HETERODUPLEX DNA](#), [HYBRIDIZATION](#), [MONOCLONAL ANTIBODY](#), [PLASMID](#), [RECOMBINANT DNA](#), [RESTRICTION ENZYME](#), [TRANSGENIC](#). Compare [MEMETIC ENGINEERING](#), [POLYMERASE CHAIN REACTION](#).

genetic epistemology *n.* The term used by the Swiss psychologist Jean Piaget (1896–1980) to describe the nature of his own research. He began his research career with the ambition of contributing to [*epistemology](#), believing that many epistemological problems were in fact empirical questions and that a genetic (by which he meant developmental) approach would be most fruitful. His three-volume series specifically devoted to genetic epistemology, *Introduction à l'Épistémologie Génétique* (1950) covers various branches of knowledge, including mathematics, logic, physics, biology, psychology, and sociology, all from an epistemological point of view. See also [PIAGETIAN](#).

genetic equilibrium *n.* A state or condition of a population in which the relative frequencies of genes stay constant from generation to generation. See [HARDY–WEINBERG LAW](#).

genetic fingerprint *n.* A unique pattern of repeated DNA sequences discovered by [*restriction mapping](#) and used in [*genetic fingerprinting](#).

genetic fingerprinting *n.* A technique for establishing an individual's

identity, for determining possible genetic relationships with other individuals, or for linking a suspected criminal to a crime scene where a sample of blood, saliva, semen, or tissue was found, by examining certain highly variable sequences of DNA fragments found by **restriction mapping*, the DNA on which attention is focused being **introns*, **junk DNA*, and especially **repetitive DNA* that are virtually unique to each individual. When only a very small sample of nuclear DNA is available, the **polymerase chain reaction* is used to amplify it, or **mitochondrial DNA* is used instead, because it is generally more plentiful in samples of bone, teeth, hair, and faeces. The technique was developed in the early 1980s by the English geneticist Alec (John) Jeffreys (born 1950) and first used as evidence in a murder trial in 1987. Also called *DNA fingerprinting* or *DNA profiling*.

genetic fitness See *FITNESS*.

genetic genealogy *n.* The application of genetic techniques to determine the degree of relatedness of people, both living and dead. It is based on the analysis of both **junk DNA* and **polymorphic genes*. The first use of the term was by the US science writer Tom Siegfried (born 1950) in an article entitled 'Genetic Genealogy and the Search of Eve' in the *Dallas Morning News* on 20 February 1989. [From Greek *genesis* birth + *-itikos* resembling or marked by + *genes* born + *logos* word, discourse, or study]

genetic imprinting *n.* Differential **expression (3)* of a **gene* depending on whether it is inherited from the mother or father, a phenomenon that occurs in only a small number (about 100) of the genes in the human **genome*. In *paternal imprinting*, an **allele* inherited from the father is not expressed in the offspring; in *maternal imprinting*, an allele inherited from the mother is not expressed in the offspring. Also called *molecular imprinting* or simply *imprinting*. Genetic imprinting occurs in the testes or ovary early in the formation of a sperm or egg. [So called because the gene is imprinted with information about the parent from which it came]

genetic mapping *n.* Another name for **gene mapping*.

genetic polymorphism *n.* The existence in a population of variable **alleles* coding for differences in **phenotypic* characteristics, such as the
*****ebook converter DEMO Watermarks*****

alleles coding for different eye colours or different ABO blood types in humans, a gene locus being defined as polymorphic if the most frequent **homozygote* constitutes less than 90 per cent of the population. It has been estimated that between 20 and 50 per cent of all **structural gene* loci in humans occur in two or more allelic forms. *See also* [BALANCED POLYMORPHISM](#), [NEUTRAL MUTATION](#), [POLYMORPHIC GENE](#), [TRANSIENT POLYMORPHISM](#). [From Greek *polys* many + *morphe* a form or shape]

genetic recombination *See* [DNA RECOMBINATION](#).

genetic repression *n.* The process whereby the expression of a **structural gene* is inactivated by a **gene* repressor. Also called *gene repression* or simply *repression*. *Compare* [GENETIC ACTIVATION](#).

genetics *n.* The branch of biology devoted to the study of heredity and variation, including their physical basis in **DNA*. **geneticist** *n.* One who practises genetics. [From Greek *genesis* birth + *-itikos* resembling or marked by]

genetic sexual attraction *n.* Erotic feelings between close relatives, often between siblings or between parents and children, who are separated early in life and reunited in adolescence or adulthood. The phenomenon was first recognized following the relaxation of adoption laws in the US and the UK in the mid-1970s, providing adopted children with easier access to their adoption records and enabling them to trace their blood relatives. The term was introduced in a newsletter published in 1987 by the US adoption counsellor Barbara Gonyo (born 1937), who felt attracted to her own adult son when she was reunited with him in 1979, having given him up for adoption 26 years earlier. The term became more widely known after the publication of Gonyo's book, *The Forbidden Love (Genetic Sexual Attraction)* in 1991. *See also* [INCEST TABOO](#). **GSA** *abbrev.*

genetic variance *n.* A statistical measure of **genetic variation* used in calculations of **heritability*. Also called *genotypic variance*. *See also* [VARIANCE](#).

genetic variation *n.* Variability in hereditary characteristics within a
*****ebook converter DEMO Watermarks*****

population resulting from the existence of variant forms of genes, called **alleles*, and from genetic recombination resulting from **independent assortment* and **crossing over*. See also GENETIC VARIANCE.

genital character *n.* In **psychoanalysis*, a personality pattern associated with successful negotiation of **libidinal stages* up to the **genital stage*, characterized by the capacity for **genital love*. Also called the *genital personality*.

genital love *n.* In **psychoanalysis*, the sensual and affectionate form of **love* that a person is capable of after successfully negotiating the various **libidinal stages* preceding the **genital stage* and overcoming the **Oedipus complex*. The term does not occur in the writings of Sigmund Freud (1856–1939), but the concept is implicit in his book *Three Essays on the Theory of Sexuality* (1905) and in his article in 1912 ‘On the Universal Tendency to Debasement in the Sphere of Love’ (*Standard Edition*, XI, pp. 179–90). See also GENITAL CHARACTER.

genital stage *n.* In **psychoanalysis*, the final **libidinal stage* of **psychosexual development* coming after the **oral stage*, **anal stage*, **phallic stage*, and **latency period*. The genital stage is characterized by a focus of **libido* on the genital area, and it emerges during puberty, when the **Oedipus complex* reappears and is overcome with greater or lesser success through mature **object-choices*. The concept was developed by Sigmund Freud (1856–1939) in a section added in 1915 to his book *Three Essays on the Theory of Sexuality* (1905), where he suggested that its roots lie in childhood: ‘The only difference lies in the fact that in childhood the combination of the component instincts and their subordination under the primacy of the genitals have been effected only very incompletely or not at all. Thus the establishment of that primacy in the service of reproduction is the last phase through which the organization of sexuality passes’ (*Standard Edition*, VII, pp. 130–243, at p. 199). Also called the *genital phase*. See also GENITAL CHARACTER, GENITAL LOVE, PREGENITAL.

genito-pelvic pain/penetration disorder *n.* A term introduced in **DSM-5* to denote a female **sexual dysfunction* characterized by **dyspareunia* or **vaginismus*.

*****ebook converter DEMO Watermarks*****

genius *n.* A person of exceptional intelligence or ability; also such exceptional intelligence or ability itself (*Michelangelo's artistic genius*). It was first investigated in psychology by the English explorer, amateur scientist, and psychologist Sir Francis Galton (1822–1911), who used eminence as the main criterion of genius in his book *Hereditary Genius* (1869). In later research in psychology, a permissive criterion such as an ***IQ** score of 140 or above has often been used to define it, and in the influential *Genetic Studies of Genius* carried out from 1921 onwards by the US psychometrician Lewis M(adison) Terman (1877–1956) and his colleagues, the ‘geniuses’ were children with IQs above 135. Also called *giftedness*. **geniuses** *pl.* [From Latin *genius* attendant spirit present from one's birth, innate ability or talent, from *gignere*, *genitum* to beget]

genodeme See **DEME**.

genogram *n.* In counselling and psychotherapy, a client's diagrammatic representation of past and present family members and their interrelationships. [From Greek *genos* begetting + *gramme* a line]

genome *n.* The full genetic complement of an organism; the ***haploid** complement of a ***diploid** organism such as the human species. See also **DNA**, **GENE**. Compare **PHENOME**, **PROTEOME**. [A blend of *gen(e)* + (*chromos*)ome]

genotropism *n.* The doctrine first proposed by the Hungarian geneticist Leopold (Lipót) Szondi (1893–1986) in the journal *Acta Psychologica* in 1938, and developed further in 1944 in his book entitled *Schicksalsanalyse* (Analysis of Destiny), that latent ***recessive genes** determine instinctive or spontaneous choices (in love, friendship, occupation, illness, and even manner of death) and underlie attraction between people sharing the same genes. See also **SZONDI TEST**. **genotropic** *adj.* [From *gene* + Greek *tropos* a turn, from *trepein* to turn + *-ismos* indicating a state or condition]

genotype *n.* The genetic constitution of a single organism at a particular ***locus** or set of loci; or more loosely the entire genetic constitution or ***genome** of a single organism. Compare **PHENOTYPE**. **genotypic** *adj.* [The word was introduced in 1909 by the Danish plant physiologist and geneticist

Wilhelm Johannsen (1857–1927) in a book entitled *Elemente der exakten Erblichkeitslehre* (Elements of Exact Heredity), from *gene* + *type*]

genotypic variance *n.* Another name for **genetic variance*. See HERITABILITY.

genu *n.* Any knee-shaped structure, especially the bend at the front of the **corpus callosum*. [From Latin *genu* a knee]

genus *n.* One of the **taxonomic* groups into which a **family* (2) is divided, containing one or more **species*. By convention, a species is denoted by the name of the genus, the initial letter of which is written in upper case, or by its upper-case initial alone, followed by the specific name in lower case. Thus the genus *Felis* of cats includes the species *Felis domesticus* (the domestic cat), *F. leo* (the lion), *F. tigris* (the tiger), *F. pardus* (the leopard), and so on. **genera** *pl.* **generic** *adj.* [From Latin *genus* birth]

geometric illusion *n.* Another name for an **associative illusion*. The term is also used as a synonym for a **visual illusion* of any type, but this over-extended interpretation is avoided in careful usage. Also called a *geometrical illusion*.

geometric mean *n.* In descriptive statistics, the average value of a set of *n* scores calculated by multiplying the scores together and then extracting the *n*th root of the resulting product. The geometric mean of two scores is the square root of their product. Compare ARITHMETIC MEAN, HARMONIC MEAN.

geon *n.* Any of a hypothetical set of three-dimensional geometric elements, such as spheres, cubes, and cylinders, into which a complex figure may be decomposed in the process of perception. Geons are easily distinguishable from all vantage points and are highly resistant to visual distortion. They are central to the recognition-by-component theory of the US psychologist Irving Biederman (born 1939). Compare GENERALIZED CONE. [A blend of *geo*(metrical) and (*ic*)on]

geophagia *n.* A form of **pica* characterized by the eating of earth or dirt.

[From Greek *ge* earth + *phagein* to consume + *-ia* indicating a condition or quality]

geriatrics *n.* The branch of medicine devoted to the prevention, diagnosis, and treatment of disorders affecting old people. *See also* **PSYCHOGERIATRICS**. *Compare* **GERONTOLOGY**. **geriatric** *adj.* [From Greek *geras* old age + *iatros* a doctor + *-ikos* of, relating to, or resembling]

germ cell *n.* Another name for a ***gamete** or sexual reproductive cell. [From Latin *germen* a seed]

germ line *n.* The cells that give rise to germ cells or ***gametes**, being the part of a body that is potentially immortal and can be passed on indefinitely from parents to offspring, in contradistinction to the ***somatic cells**.

germ plasm *n.* The part of a ***gamete** containing the ***chromosomes**. [From Latin *germen* a seed + *plasma* a form]

gerontology *n.* The study of ageing. *Compare* **GERIATRICS**. [From Greek *geron*, *gerontos* an old man + *logos* word, discourse, or reason]

gerontophilia *n.* A ***paraphilia** characterized by recurrent, intense sexual fantasies, urges, or behaviour involving sexual activity with old people. *Compare* **PAEDOPHILIA**. **gerontophile** *n.* A person who manifests gerontophilia. [From Greek *geron*, *gerontos* an old man + *philos* loving, from *philein* to love + *-ia* indicating a condition or quality]

geropsychology *n.* Psychological aspects of ageing. *Compare* **GERONTOLOGY**. [From Greek *geron*, *gerontos* an old man + English *psychology*]

Gerstmann–Sträussler–Scheinker syndrome *n.* A human ***prion** disease usually regarded as a variant of ***Creutzfeldt–Jakob disease** with pathology mainly in the ***cerebellum**, leading to ***cerebellar syndrome**. **GSS** *abbrev.* [Named after the Austrian neurologist Josef Gerstmann (1887–1969) and his colleagues Ernst Sträussler (1872–1959) and the Russian-born

neuropathologist Ilya Mark Scheinker (1902–54) who first described its signs and symptoms in 1936]

Gerstmann syndrome *n.* A neurological disorder characterized by left-right disorientation, **agraphia*, **acalculia*, and **finger agnosia*, generally associated with lesions in the **parietal lobe* of the dominant cerebral hemisphere. [Named after the Austrian neurologist Josef Gerstmann (1887–1969) who first noticed in 1930 the tendency for the four components of the syndrome to occur together]

Gesell Developmental Schedules *n.* A set of norms based on 27 observations of behaviour of infants and young children in standardized situations, providing an assessment of gross motor, fine motor, language, personal-social, and adaptive development. Also called the *Gesell Developmental Scales*. [Named after the US psychologist and paediatrician Arnold (Lucius) Gesell (1880–1961) who, in collaboration with several colleagues, published them in a book entitled *The First Five Years of Life* in 1940]

Gestalt *n.* A perceptual configuration or structure that possesses qualities transcending the sum of its constituent elements or parts and that cannot be described simply in terms of its parts. A classic example underlies **melodic constancy*: the sequence of notes C, D, E, C, C, D, E, C played evenly on any musical instrument is instantly recognizable as the well-known folk tune *Frère Jacques*; and the sequence F, G, A, F, F, G, A, F, which does not contain a single element in common with the first, sounds like exactly the same tune; but the sequence E, D, C, C, E, D, C, C, which contains the same elements as the first sequence in a new configuration, sounds like *Three Blind Mice*, an entirely different Gestalt. *See also* *AUTOCHTHONOUS*, *BUNDLE HYPOTHESIS*, *GESTALT PSYCHOLOGY*, *GESTALTQUALITÄT*, *GROUPING LAW*, *MEMBER*, *MEMBERSHIP CHARACTER*, *PRÄGNANZ*, *PRECISION LAW*, *TRAIT CENTRALITY*. **Gestalten** *pl.* [From German *Gestalt* shape or form, from Old High German *stellen* to shape]

Gestalt psychology *n.* A school of psychology concerned largely with emergent **Gestalt* phenomena in perception. Its forerunners were the German poet Johann Wolfgang von Goethe (1749–1832), the Austrian physicist,
*****ebook converter DEMO Watermarks*****

philosopher, and psychologist Ernst Mach (1838–1916), and especially the German philosopher Christian von Ehrenfels (1859–1932), but the emergence of the school is usually traced to 1912 and the publication of a seminal article on **apparent movement* by the German psychologist Max Wertheimer (1880–1943). The school was transplanted to the US with the rise of Nazism in Germany, as Wertheimer emigrated there together with the other founding German psychologists Kurt Koffka (1886–1941), Wolfgang Köhler (1887–1967), and Kurt Lewin (1890–1947). The cardinal principles of Gestalt psychology are the primary importance in psychology of subjective experience and of its forms and structures, and a rejection of elementalism. *See also* APPURTENANCE, BENDER GESTALT TEST, BUNDLE HYPOTHESIS, FIELD EFFECT, GESTALTQUALITÄT, GOOD GESTALT, GROUPING LAW, HÖFFDING STEP, ISOMORPHISM (3), KORTE'S LAWS, LEVELLING (1), MEMBER, MEMBERSHIP CHARACTER, PERCEPTUAL CONSTANCY, PRÄGNANZ, PRECISION LAW, SYMMETRY LAW, TERNUS PHENOMENON, TRAIT CENTRALITY.

Gestaltqualität *n.* A term coined by the German philosopher Christian von Ehrenfels (1859–1932) and later introduced into **Gestalt psychology* to denote a perceptual **attribute* or quality that emerges from the way in which the elements of an object or image are put together and is not reducible to the sum of those elements, his standard example being **melodic constancy*, according to which a tune is recognizably the same when played in a different key without using any of its original elements (tones). Also called *founded content*. *See* GESTALT. *Gestaltqualitäten* *pl.* [From German *Gestalt* shape or form, from *stellen* to shape + *Qualität* quality]

Gestalt therapy *n.* A form of **counselling* or **psychotherapy*, unconnected with Gestalt psychology, developed in the United States during the 1960s by the German-born psychiatrist Friedrich Salomon (Fritz) Perls (1893–1970), in which clients are encouraged to focus on the immediate present and to express their true feelings openly and honestly. *See also* EMPTY-CHAIR TECHNIQUE, UNFINISHED BUSINESS.

gesture *n.* 1. A bodily movement, usually of the hands or the head, that has a communicative function in **kinesics*. *See also* AMIMIA, APRAXIA, ASEMIA, COPROPRAXIA, ECHOPRAXIA, PARAMIMIA, RETT'S DISORDER. 2. Something that is said or done as a formality or without conviction. *vb.* 3. To make a gesture

*****ebook converter DEMO Watermarks*****

(1). [From Latin *gestura* bearing, from *gestus* carried, from *gerere* to carry or behave]

geusis *n.* The sense of **taste*. [From Greek *geusis* taste, from *geusthai* to taste]

GHB *abbrev.* Gamma-hydroxybutyrate, a colourless, odourless, salty-tasting liquid that acts as an **anaesthetic (1)* drug with sedative–hypnotic and antidepressant effects. It became popular as a street drug in the late 1990s, at moderate doses having a general calming effect, lowering inhibitions, and increasing sociability, and at high doses causing nausea, muscle stiffness, confusion, convulsions, and possible coma and respiratory collapse. Also called *gamma-OH* (trademark). Often humorously called *GBH*, especially in the UK. *See also* *SEDATIVE–HYPNOTIC*; *SEDATIVE-, HYPNOTIC-, OR ANXIOLYTIC-RELATED DISORDERS*, *SOCIABILIZER*.

ghost in the machine *n.* The term first used by the English philosopher Gilbert Ryle (1900–76) on page 17 of his book *The Concept of Mind* (1949) to describe the dogma of mind–body **dualism*, which he interpreted as a **category mistake*.

ghost sickness *n.* A **culture-bound syndrome* found in many American Indian tribes, characterized by **thanatophobia*, **necromania*, **nightmares (1)*, **asthenia*, feelings of danger, **anorexia*, fainting, dizziness, **anxiety*, and **hallucinations*, the **symptoms* often being attributed by the afflicted person to witchcraft.

ghrelin *n.* A **peptide hormone*, produced by **endocrine* cells of the stomach, that acts in the brain to increase food intake and body weight by stimulating hunger and triggering release of **growth hormone* from the **pituitary gland*. Its discovery was reported in an article by the Japanese molecular geneticist Masayasu Kojima (born 1959) and several colleagues in the journal *Nature* in 1999. *Compare* *LEPTIN*. [From *ghre-* the Proto-Indo-European root of the word grow + Latin *-in* indicating an organic or chemical substance]

Gibsonian *adj.* Pertaining to or resembling the interpretation of visual
*****ebook converter DEMO Watermarks*****

perception of the US psychologist James Jerome Gibson (1904–79), according to which information is absorbed from the ambient flow of light, without significant retinal or cognitive processing, by the detection of features of objects that are invariant with motion and rotation. *See also* AFFORDANCE, AIR THEORY, DIRECT PERCEPTION, GLOBAL PSYCHOPHYSICS, MOTION PERSPECTIVE.

giftedness *n.* Exceptional intelligence or talent. *See* GENIUS.

gift of tongues *n.* A non-technical name for *glossolalia.

Gilles de la Tourette's syndrome *n.* Another name for *Tourette's disorder. **GTS** *abbrev.*

ginkgo *n.* The ornamental Chinese tree *Ginkgo biloba*, also called the *maidenhair tree*, the dominant species of tree some 200 million years ago, before the conifers and broadleaved trees we know today had evolved, highly resistant to virus infection, fungi, and effects of pollution and radiation. Also, a herbal substance prepared from it and taken for its alleged *nootropic effect of slowing intellectual decline in old age or as an *aphrodisiac. Also spelt *gingko*. *See also* SMART DRUG. [From Japanese *ginkyo*, from Chinese *yin* silver + *hing* apricot]

ginseng *n.* A plant of the genus *Panax* (*Panax schinseng* in China or *Panax quinquefolius* in North America) whose roots contain ginsenosides, used in Chinese medicine for their tonic, stimulant, or restorative effects. Its pharmacological action is poorly understood, though it is believed to involve enhancement of *nitric oxide (NO) synthesis in the body. Also taken as a *smart drug with a wide range of supposed mental and physical benefits and as an *aphrodisiac. [From Mandarin Chinese *jen* a man, from the resemblance of the roots to human legs + *shen* spirit]

gland *n.* A cell or organ specialized to secrete a substance either through a duct or into the bloodstream. *See* ENDOCRINE GLAND, EXOCRINE GLAND. [From Latin *glans* an acorn]

glaucoma *n.* A relatively common disorder of the eye in which fluid pressure increases within the eyeball because of obstruction of the outflow of ***aqueous humour**, impairing vision and eventually causing ***tunnel vision** if not corrected. *Acute glaucoma*, accompanied by a dilated ***pupil**, intense pain, blurred vision, and red eye, results from the pupil dilating in a manner that causes the ***iris** to fold back against the cornea and to block the exit of aqueous humour, and it results in complete and permanent ***blindness** within 2–5 days if untreated with eye drops that constrict the pupil and unfold the iris; *chronic glaucoma*, which is much more common and often bilateral, develops insidiously, often without symptoms apart from gradual loss of peripheral vision, and is caused by a genetic factor. [From Greek *glaukoma* cataract, from *glaukos* bluish-green or grey + *-oma* indicating an abnormality, alluding to the appearance of an eye affected by ***cataract**, with which glaucoma was confused]

glia *n.* A short name for ***neuroglia**. Often mistakenly assumed to be a plural of *glion* (a spurious ***back formation**), but in fact singular like the word *glue*. See also **MACROGLIA**, **MICROGLIA**, **NEUROGLIA**. **glial** *adj.* [From Greek *glia* glue]

glide *n.* The transitional sound that is made as the vocal organs move from a position for articulating one speech sound to a position for articulating another, as in any ***diphthong**, ***triphthong**, or ***semivowel**.

glioblastoma *n.* A malignant glioma or tumour of ***neuroglia** in the brain or spinal cord. [From *glia* + Greek *blastos* a bud + *-oma* indicating a tumour]

glioma *n.* A tumour affecting the ***neuroglia** (usually ***astrocytes**) in the brain or spinal cord. Symptoms include headache, drowsiness, and vomiting, together with other site-dependent signs, such as motor weakness on one side of the body caused by a cerebral glioma on the opposite side, or clumsiness on one side caused by a ***cerebellar** glioma on the same side. Compare **GLIOBLASTOMA**. [From Greek *glia* glue + *-oma* indicating a tumour]

gliosis *n.* Scar tissue resulting when damaged ***astrocytes** (large ***neuroglial** cells in the brain) form ***plaque**, resulting in a form of ***sclerosis**. [From Greek *glia* glue + *-osis* indicating a process or state]

global amnesia *n.* Severe or total **anterograde amnesia* resulting from damage to the **diencephalon* or medial **temporal lobe*, often accompanied by partial **retrograde amnesia*, with **short-term memory* and **perceptual-motor skills* generally remaining unimpaired. *Compare* TRANSIENT GLOBAL AMNESIA.

global feature *n.* A **feature* (1) of a stimulus as a whole, such as its overall circular shape or its symmetry. *See also* NAVON FIGURE. *Compare* LOCAL FEATURE.

global processing *See* GLOBAL FEATURE, NAVON FIGURE.

global psychophysics *n.* A term used by the US psychologist James Jerome Gibson (1904–79) to characterize his approach to the study of perception, in which an attempt is made to establish psychophysical correspondences between perceptions and behaviour by examining relations between stimulus information and response, in contrast to classical **psychophysics* in which relations between stimulus intensity and response are examined. *See also* DIRECT PERCEPTION.

globus hystericus *n.* The medical name for a lump in the throat.

globus pallidus *n.* One of the **basal ganglia* in the lenticular nucleus of the corpus striatum, either of a pair of pale yellow globular masses involved in posture, muscle tonus, and the control of eating and drinking. Also called the *pallidum* or the *palaeostriatum* (US *paleostriatum*). *See also* ATTENTION-DEFICIT/HYPERACTIVITY DISORDER. [From Latin *globus* a sphere + *pallidus* pale]

glomerulus *n.* Any cluster or coil of blood vessels or nerve fibres, especially the clusters of nerve fibres of the **olfactory bulb* (containing the primary synapses of the olfactory pathway) and the **cerebellum*. [From Latin *glomerulus* a little ball, diminutive of *glomus* a ball]

glossa *n.* The technical name for the tongue. **glossal** *adj.* [From Greek *glossa* a tongue]

glossogenetics *n.* The study of the origins and development of language. [From Greek *glossa* a tongue + *genesis* generation or development]

glossograph *n.* An instrument for recording the movements of the tongue during speech. [From Greek *glossa* a tongue + *graphein* to write]

glossographia *n.* A written variant of ***glossolalia**.

glossolalia *n.* Speech-like utterances with an impoverished range of syllabic and rhythmic patterns and no systematic grammatical structure, often believed by the speaker to be a real but unknown language, but on analysis quite unlike any ***natural language**, commonly produced during Pentecostal Protestant and charismatic Roman Catholic religious services. Also called the *gift of tongues* or *speaking in tongues*. Glossolalia should be carefully distinguished from ***xenoglossia**. **glossolalic** *adj.* [From Greek *glossa* a tongue + *lalein* to babble]

glossopalatine nerve *n.* A branch of the ***facial nerve** supplying the front two-thirds of the tongue and parts of the palate. [From Greek *glossa* a tongue + Latin *palatum* the roof of the mouth]

glossopharyngeal nerve *n.* Either of the ninth pair of ***cranial nerves**, carrying sensations from the pharynx, the back of the tongue, and the middle ear, and supplying the muscles of the pharynx, hence involved in controlling swallowing and, together with the vagus nerve, the ***gag reflex**. [From Greek *glossa* a tongue + *pharynx*, *pharyngos* the throat]

glossosynthesis *n.* Arbitrary invention of new words. [From Greek *glossa* a tongue + *syn* together + *tithenai* to place]

glottal *adj.* Of, relating to, or denoting a speech sound articulated by interrupting the airstream at the ***glottis** by closing the ***vocal folds**, as in the **glottal stop** used in the ***cockney** dialect in place of the usual /t/ sounds in utterances such as *Pat's got a lot of bottle* (*Pa's go' a lo' of bo'le*). See also **PLACE OF ARTICULATION**.

glottal fry See VOCAL FRY.

glottis *n.* The opening between the ***vocal folds**. [From Greek *glotta*, Attic form of Ionic *glossa* a tongue]

glottochronology *n.* The application of techniques of ***lexicostatistics** to study the evolution and establish the relationship between languages and therefore populations and to estimate how long ago they diverged from their common source, believed by many authorities to have been in Africa approximately 150,000 years ago. See also **INDO-EUROPEAN**. Compare **EVOLUTIONARY CLOCK**, **MITOCHONDRIAL DNA**. [From Greek *glotta*, Attic form of Ionic *glossa* a tongue + *chronos* time + *logos* word, discourse, or reason]

glove anaesthesia *n.* Absence of sensation or feeling in the hand, the anaesthetic area ending abruptly at the wrist, invariably a ***conversion symptom**, the distribution of sensory nerve fibres allowing no possible neurological cause of the symptom, because the nerve that supplies the hand also supplies the lower arm. *Shoe anaesthesia* and *stocking anaesthesia* are defined and interpreted analogously. US *glove anesthesia*. See also **ANAESTHESIA**.

glucagon *n.* A hormone secreted by the ***islets of Langerhans** in the pancreas that stimulates the release of glucose into the bloodstream. [From Greek *glykys* sweet + *agein* to lead]

glucocorticoid *n.* Any of a group of ***corticosteroids**, the principal ones being ***cortisol** (hydrocortisone) and ***corticosterone**, that are secreted by the adrenal cortex in response to serious injury or stress and that tend to shift the body from carbohydrate to fat metabolism, to regulate blood pressure, and to have anti-inflammatory effects. See also **DEXAMETHASONE**, **PREDNISOLONE**, **PREDNISONE**, **ZONA FASCICULATA**. Compare **MINERALOCORTICOID**. [From *gluco(se)* + *cortic(al)* + Greek *-oeides* denoting resemblance of form, from *eidos* shape]

glucose *n.* A white crystalline sugar, the most common form being dextrose, that plays an important part in energy supply and metabolism. See **GLYCOLYSIS**, **KREBS CYCLE**. [From Greek *gleukos* sweet wine, from *glykys*

sweet]

glucostatic theory *n.* A ***homeostatic** theory of hunger, according to which the brain monitors the difference between the levels of glucose in the arteries and veins as an index of the rate of glucose removal from the blood. A low rate, which indicates that the blood glucose level is low and is probably being replenished by glucose derived from body fat, stimulates hunger and eating behaviour. *Compare* **LIPOSTATIC THEORY**. [From *glucose* + Greek *statikos* bringing to a standstill, from *histanai* to cause to stand or to weigh in a balance + *-ikos* of, resembling, or characterized by]

glue-sniffing *n.* The deliberate inhalation of the ***psychotropic** fumes given off by certain types of adhesives. *See also* **INHALANT-RELATED DISORDERS, SOLVENT ABUSE**.

glutamate *n.* A salt of glutamic acid, the main excitatory ***neurotransmitter** for all nerve impulses in the ***diencephalon** and ***telencephalon** and for sensory impulses in the ***peripheral nervous system**. *See also* **KAINIC ACID, LITHIUM**. [From *glutamic acid* + *-ate* indicating a salt or ester of an acid]

glutamic acid *n.* A non-essential ***amino acid** that is a precursor of ***glutamate** and is believed to function as a ***neurotransmitter** in the dorsal horns of the spinal cord and in the cerebellum. **Glu** *abbrev.* [From Latin *gluten* glue + *-amine* indicating an amine + *-ikos* of, resembling, or characterized by]

glutamic acid decarboxylase *n.* An ***enzyme** that makes ***GABA**. **GAD** *abbrev.*

glutethimide *n.* One of the ***carbamates**, a central nervous system ***depressant** that is prescribed as a ***sedative–hypnotic** drug in the treatment of anxiety disorders and insomnia. Also called *Doriden* (trademark). *See also* **SEDATIVE-, HYPNOTIC-, OR ANXIOLYTIC-RELATED DISORDERS**. [From its chemical name *glut(aryl)* + *eth(yl)* + *imide*]

glycine *n.* A non-essential [*amino acid](#) that functions as an inhibitory [*neurotransmitter](#) in the spinal cord, binding to the receptor sites on [*alpha motor neurons](#). *See also* [STRYCHNINE](#). **Gly** *abbrev.* [From Greek *glykys* sweet + *-ine* indicating an organic compound]

glycogen *n.* Animal starch, stored in the liver and muscles and converted to [*glucose](#) by [*hydrolysis](#). [From Greek *glykys* sweet + *genein* to produce]

glycol *n.* A chemical used as antifreeze and as a solvent, containing volatile substances that are [*psychotropic](#) when inhaled. *See also* [INHALANT-RELATED DISORDERS](#), [SOLVENT ABUSE](#). [From Greek *glykys* sweet]

glycolysis *n.* The metabolism, by enzymes, of [*glucose](#) with the production of pyruvic acid and the liberation of energy in the form of [*ATP](#). Depending on the cell type and conditions, the pyruvate may then be converted to [*ethanol](#) (an [*anaerobic](#) process), lactic acid (an anaerobic process), or acetyl coenzyme A which enters the [*Krebs cycle](#), initiating a process of [*aerobic](#) respiration. [From *glucose* + Greek *lysis* loosening]

GnRH *abbrev.* Gonadotrophin-releasing hormone. *See* [GONADOTROPHIN](#).

goal-gradient hypothesis *n.* The suggestion that an organism's tendency to approach a goal increases with proximity to the goal. This hypothesis was first proposed by the US psychologist Clark L(eonard) Hull (1884–1952) in an article entitled 'The Goal-Gradient Hypothesis and Maze Learning' in the journal *Psychological Review* in 1932. Experimental evidence subsequently corroborated the hypothesis, among the earliest arising from experiments reported by Hull himself in the *Journal of Comparative Psychology* in 1943 showing that hungry rats in a maze tend to run faster as they approach a goal box containing food than at the beginning of the path, and there is evidence for the phenomenon in human behaviour.

Gödel's theorem *n.* A term that usually refers to Gödel's first incompleteness theorem, the proposition that, in any formal system rich enough to incorporate arithmetic, it is possible to formulate statements that are true but that cannot be proved within the system. Slightly more precisely,

in such a system S , there must be a sentence p such that if S is consistent, then neither p nor its negation ($\text{not-}p$) can be proved within S . This theorem is a genuine [*paradox](#), has far-reaching implications for the foundations of arithmetic and logic, and has (controversially) been used, informally by the Czech-born US philosopher Ernest Nagel (1901–85) and James R(oy) Newman (1907–66) in their book *Gödel's Proof* (1958), more formally by the British philosopher John R(andolph) Lucas (born 1929) in an article in the journal *Philosophy* in 1961, and most formally by the mathematical physicist Roger Penrose (born 1931) in his book *The Emperor's New Mind* (1989) and especially in his later book *Shadows of the Mind* (1994), to argue against the [*strong AI](#) position that conscious thought can be explained in terms of computational principles, and also against the [*weak AI](#) position that conscious thought can be simulated by computational procedures, and in favour of the view that a fundamental difference therefore exists between human and [*artificial intelligence](#). Gödel's second incompleteness theorem is the proposition that the consistency of a formal system rich enough to incorporate arithmetic cannot be proved within the system itself. [Named after the US logician and mathematician Kurt Gödel (1906–78), born in Brno, Austria-Hungary (now in the Czech Republic), who published it in the journal *Monatshefte für Mathematik und Physik* in 1931]

God-image *n.* In [*analytical psychology](#), an image of God that, when it appears spontaneously in a dream or fantasy, symbolizes the self. Carl Gustav Jung (1875–1961) borrowed this term from medieval Christian theology, in which the Latin version *imago Dei* (image of God) was believed to be imprinted on the human soul.

Goldilocks effect *n.* A term applicable to any phenomenon that depends on narrowly constrained conditions for its occurrence, especially life on earth, the evolution of which depends on the earth's orbit remaining within a narrow band of distances from the sun for water to exist in a liquid state. The term was coined by the US sociologists Beth B(owman) Hess (1928–2003) and Joan M. Waring (born 1943) in a chapter in a book entitled *Child Influences on Marital and Family Interaction* (1978), referring to the optimal level of contact with kin that satisfies married people without interfering with their marital relationship. *See also* [ANTHROPIC PRINCIPLE](#). [From the episode in the fairy tale *Goldilocks and the Three Bears* when Goldilocks tastes the porridge

of the small bear and finds it ‘neither too hot nor too cold, but just right; and she liked it so well that she ate it all up’]

Goldstein–Scheerer tests *n.* A set of tests requiring abstract thinking and **concept formation*, used to diagnose **neurological* damage. The tests require the respondent to copy coloured designs, to sort items into categories according to colour, form, and material, and to reproduce designs from memory by arranging sticks. They were developed in the US by the German-born psychiatrist Kurt Goldstein (1878–1965) and the German-born psychologist Martin Scheerer (1900–61) and first published by them in the journal *Psychological Monographs* in 1941. Later editions of the test are also called the *Weigl–Goldstein–Scheerer tests*.

Golem effect *n.* Any negative **Pygmalion effect*, when expectations function as **self-fulfilling prophecies* having negative consequences. The term was introduced in an article in the *Journal of Educational Psychology* in 1982 by the Israeli psychologist Alisha Y. Babad (born 1944), the Argentine-born Israeli psychologist Jacinto Inbar (born 1943), and the German-born US psychologist Robert Rosenthal (born 1933), who reviewed evidence that low expectations of the likely school performance of particular children, when held by dogmatic teachers, can impair the children's actual performance. *Compare GALATEA EFFECT*. [Named after the golem in Hasidic Jewish legend, a mechanical device into which life is infused so that it can serve its creator, turning ultimately into a monster that must be destroyed, from Yiddish *goylem* a golem, from Hebrew *golem* a formless thing]

Golgi apparatus *n.* A complex of easily stained stacks, called Golgi bodies or dictyosomes, of flattened membrane sacs, called Golgi vesicles, in the **cytoplasm* of most cells, involved in transport of **lipids* and **proteins*. Also called a *Golgi complex*. **GA** *abbrev.* [Named after the Italian cytologist Camillo Golgi (1843–1926) who discovered it in 1897, although the term was first used in the scientific literature in 1913]

Golgi cell *n.* A type of **interneuron* found in the cerebellum that acts on **granule cells*. *Compare BASKET CELL, STELLATE CELL*. [Named after the Italian cytologist Camillo Golgi (1843–1926) who discovered it]

Golgi stain *n.* A method of staining neurons with potassium dichromate and silver nitrate, introduced in 1873 by the Italian cytologist Camillo Golgi (1843–1926), affecting only a tiny fraction of the neurons in the stained region but revealing them fully or almost fully, exposing their cell bodies, dendrites, and axons. *Compare* **NISSL STAIN**.

Golgi tendon organ *n.* A ***sensory receptor** that is located in a muscle, near a junction with a tendon, and is sensitive to contractions of the muscle, producing ***action potentials** when compressed by muscle tension. Also called an *organ of Golgi* or a *tendon organ*. *See also* **IB FIBRE**. *Compare* **MUSCLE SPINDLE**. [Named after the Italian cytologist Camillo Golgi (1843–1926) who gave the first complete description of it in 1880]

gonad *n.* Any organ that produces ***gametes**, including a human ***testis** or ***ovary**. The word is often mistakenly believed to apply to male organs only. **gonadal**, **gonadial**, or **gonadic** *adj.* [From Greek *gonos* seed]

gonadotrophin *n.* Any of a number of hormones secreted by the pituitary gland and the placenta that stimulate the activity of the ***gonads**. Also spelt *gonadotropin*. *See also* **CHORIONIC GONADOTROPHIN**, **FOLLICLE-STIMULATING HORMONE**, **LUTEINIZING HORMONE**, **PROLACTIN**. **gonadotrophic** or **gonadotropic** *adj.* [From *gonad* + Greek *trophe* nourishment + *-in(e)* indicating an organic compound]

gonadotrophin-releasing hormone *n.* Another name for ***luteinizing hormone releasing hormone**. Also spelt *gonadotropin-releasing hormone*. **GnRH** *abbrev.*

good breast *n.* In ***psychoanalysis**, a concept introduced by the British-based Austrian psychoanalyst Melanie Klein (1882–1960) to denote one aspect of the mother's breast as a ***part object** in an infant's fantasies after ***splitting of the object** into a good breast and a bad breast as a defence against ***ambivalence** and consequent ***anxiety**. Gratification of hunger tends to produce an ***imago (1)** of a good breast, and withdrawal generates the bad breast through a vicious circle involving ***projection (1)** in which the infant comes to believe that the breast is withdrawn because it is hated. In the theory

of ***defensive techniques** of the Scottish psychoanalyst W. Ronald D. Fairbairn (1889–1964), the location of the good breast and the bad breast define the particular defensive technique adopted by a person with a mental disorder. *See also* **GOOD OBJECT**.

good continuation *n.* One of the four original ***grouping laws** of ***Gestalt psychology**, formulated in 1923 by the German psychologist Max Wertheimer (1880–1943) to explain the organization of parts into wholes by the visual system. According to the law, elements that move in the same direction tend to be grouped perceptually, hence the symbol × is perceived as being composed of two straight lines rather than (for example) two wedges > and <, and the symbol Ø is perceived as a circle crossed by a straight line. A special case of this law for elements moving in time is called ***common fate**. *See also* **COMMON REGION**, **CONNECTEDNESS GROUPING LAW**, **PRÄGNANZ**. *Compare* **CLOSURE GROUPING LAW**, **PROXIMITY GROUPING LAW**, **SIMILARITY GROUPING LAW**.

Goodenough Draw-a-Man test *See* **DRAW-A-MAN TEST**. [Named after the US psychologist Florence Laura Goodenough (1886–1959) who introduced it in 1926]

good-enough mother *n.* A concept introduced in 1953 by the English psychoanalyst Donald Woods Winnicott (1896–1971) to denote a mother who initially behaves towards a totally dependent infant just how the infant wishes, allowing the infant to feel all-powerful and to maintain the fantasy that the mother is a part of itself, and who later allows the child to abandon this fantasy and separate from her in an orderly way. A mother who is too intrusive (too good) interferes with the child's separation and development of selfhood, and a mother who is too distant (not good enough) generates anxiety in the child; in either case the failure to supply good-enough mothering can disrupt the development of the child's self-concept, and as an adult the ability to form meaningful relationships.

good figure *n.* Another name for ***good Gestalt**.

good Gestalt *n.* A law of ***Gestalt psychology** according to which shapes, contours, and patterns tend to be perceived in the most simple, stable, and balanced form compatible with the sensory information. Also called *good*

*****ebook converter DEMO Watermarks*****

figure or *good shape*. See also [LEVELLING \(1\)](#), [PRÄGNANZ](#), [PRECISION LAW](#).

Goodman–Kruskal gamma *n.* Another name for the [*gamma statistic](#). [Named after the US statisticians Leo A. Goodman (born 1928) and William Henry Kruskal (1919–2005) who developed it in a series of articles beginning in 1954, and *gamma* (γ), the third letter of the Greek alphabet]

Goodman–Kruskal lambda *n.* In descriptive statistics, a measure of the degree of similarity between binary or dichotomous variables. It provides an index, on a scale ranging from 0 to 1, of the presence or absence of a characteristic on one variable given its presence or absence on the other variable. Also called the *lambda statistic* L_B . [Named after the US statisticians Leo A. Goodman (born 1928) and William Henry Kruskal (1919–2005) who discussed it in a series of articles beginning in 1954 and *lambda* (λ), the eleventh letter of the Greek alphabet]

Goodman's paradox *n.* A [*paradox](#) of [*induction \(1\)](#). Suppose that someone notes that all emeralds that have ever been observed are green, and argues inductively to conclude that all emeralds are green. Now suppose we define *grue* as the property of being green up to time *t* (say, the beginning of the year 2050) and blue thereafter. All our inductive evidence supports the conclusion that all emeralds are grue just as well as it supports the conclusion that all emeralds are green, therefore we have no grounds for preferring either conclusion. Many people (though not Goodman) interpret this as a refutation of induction. Also called the *grue paradox*. Compare [HEMPEL'S PARADOX](#). [Named after the US philosopher Nelson Goodman (1906–98) who published it in an article in the *Journal of Philosophy* in 1946 and expanded it in 1955 in his book *Fact, Fiction, and Forecast* (pp. 74–5)]

goodness of fit *n.* **1.** In statistics, the closeness of agreement between observed and expected frequencies, usually measured by the [*chi-square test](#) or the [*Kolmogorov–Smirnov test](#). **2.** In fitting a line or a curve to a set of data points, the degree of closeness of the points to the curve, often measured by the [*least-squares method](#) or [*maximum likelihood method](#).

good object *n.* In [*psychoanalysis](#), a concept introduced by the British-

based Austrian psychoanalyst Melanie Klein (1882–1960) to denote a [*part object](#) or [*whole object](#) as it appears in an infant's fantasies. According to Klein, the [*splitting of the object](#) into a good object and a bad object is a defence against ambivalence and the [*anxiety](#) that it generates, the first object to undergo splitting being the mother's breast. A person's handling of the good object and the bad object defines the four [*defensive techniques](#) in the theory of mental disorders of the Scottish psychoanalyst W. Ronald D. Fairbairn (1889–1964). *See also* [GOOD BREAST](#), [IMAGO \(1\)](#).

good shape *n.* Another name for [*good Gestalt](#).

goofers *n.* A street name for [*barbiturate](#) drugs in general.

goose pimples *n.* A colloquial name for [*piloerection](#) when it occurs in skin that is not thickly covered in hair. Also called *goose flesh* or *goose bumps*. *See also* [TICKLE](#). [So called because of resemblance to the skin of a freshly plucked fowl]

Gottschaldt figures test *n.* Another name for the [*embedded-figures test](#). [Named after the German psychologist Kurt Gottschaldt (1902–91) who published it in the journal *Psychologische Forschung* in 1926]

Gough Adjective Check List *n.* Another name for the [*Adjective Check List](#). [Named after the US psychologist Harrison G. Gough (1921–2014) who introduced it in 1952 and discussed its psychometric properties in an article in the journal *Psychological Reports* in 1960]

government and binding *n.* A class of linguistic theories, derived from [*transformational grammar](#), based on the assumption that any syntactic operation can be interpreted as a transformation involving the movement of some linguistic element(s) such as a noun phrase. *See also* [BINDING PROBLEM](#). **GB** *abbrev.*

Graafian follicle *n.* A fluid-filled sac in the [*ovary](#) within which an [*ovum](#) develops. Also called a *Graafian vesicle* or *ovarian follicle*. *See also* [ZONA GRANULOSA](#). [Named after the 17th-century Dutch anatomist Regnier de

Graaf (1641–73) who discovered it in 1672]

graceful degradation *n.* A principle proposed by the English psychologist David Courtenay Marr (1945–80) according to which an efficient information processing system should be able to respond to minor errors without generating completely incorrect output. The human mind appears to have this property, but most computers do not.

gracile nucleus *n.* Either of two areas of the **medulla oblongata* where the **fasciculus gracilis* terminates. Also called the *nucleus gracilis*. [From Latin *gracilis* slender]

gradation method *See* METHOD OF GRADATION.

graded potential *n.* A **depolarization* or **hyperpolarization* of a neuron that varies in amplitude according to the intensity of stimulation and that does not produce a conventional nerve impulse or action potential but is itself conducted passively along the axon as a nerve signal, declining with time and distance. Some cells with very short axons, including **rods*, **cones*, and **bipolar cells*, show only graded potentials and function without conventional nerve impulses, whereas others generate nerve impulses only when their graded potentials reach some threshold as a consequence of **spatial summation* or **temporal summation*. *Compare* ACTION POTENTIAL.

grade-equivalent score *n.* A measure of a person's ability, skill, or knowledge, expressed in terms of the grade level in school at which the average person attains that level of performance. Also called a *grade score*. *Compare* AGE-EQUIVALENT SCORE.

gradient descent *n.* A numerical method for minimizing a function by invariably moving downwards along a steepest path from the current position. The method does not guarantee to reach a global minimum because, like a mountaineer who tries to reach the lowest point by always going down a steepest slope from any given point and who gets trapped in a local basin separated by hills from lower valleys, the process may get trapped in a local minimum far above the global minimum. It is used in **connectionism (1)* and **parallel distributed processing* to minimize the discrepancy between the

*****ebook converter DEMO Watermarks*****

output of a **network model* and the desired state for a given input. Also called *steepest descent*. See also ANNEALING (1), BACK-PROPAGATION ALGORITHM. Compare HILL CLIMBING.

gradient of texture See TEXTURE GRADIENT.

Graduate Records Examination *n.* The most widely used **psychometric* test for selecting entrants into graduate schools in the United States. It comprises subtests designed to measure verbal, mathematical, and analytical aptitudes and an advanced test of knowledge in the particular academic field to be studied. Results are reported as a single standardized score with a **mean* of 500 and a **standard deviation* of 100. Compare MILLER ANALOGIES TEST, SCHOLASTIC ASSESSMENT TEST. **GRE** *abbrev.*

Gräfenberg spot See G SPOT.

gram calorie See CALORIE.

grammar *n.* 1. The branch of **linguistics* concerned with sentence structure, especially **syntax* and **morphology* (2). 2. The system of implicit rules governing a speaker's use of a language, especially **semantics* and **phonology*. See also CASE GRAMMAR, CONTEXT-DEPENDENT GRAMMAR, CONTEXT-FREE GRAMMAR, FINITE-STATE GRAMMAR, GENERATIVE GRAMMAR, PHRASE-STRUCTURE GRAMMAR, PIVOT GRAMMAR, TRANSFORMATIONAL GRAMMAR, UNIVERSAL GRAMMAR. [From Greek *grammatikos* concerning letters]

grandeur, delusion of See GRANDIOSE DELUSION.

grandiose delusion *n.* A **delusion* of inflated importance, power, wealth, knowledge, or identity, or of having a great but unrecognized talent or intelligence, having made a significant discovery, or of being or having a special relationship with a prominent person. See also GRANDIOSE DELUSIONAL DISORDER, MEGALOMANIA. Compare GRANDIOSE IDEAS OR ACTIONS.

grandiose delusional disorder *n.* A type of **delusional disorder* in which the central delusion is a **grandiose delusion*. Compare GRANDIOSE

IDEAS OR ACTIONS.

grandiose ideas or **actions** *n.* A pattern of thought or behaviour, falling short of being classified as a **delusion*, seen in **manic episodes*, **narcissistic personality disorder*, and other mental disorders and states, characterized by feelings of being superbly healthy, exceptionally intelligent, or extraordinarily talented, often associated with overspending, excessive gambling, and similar extravagant behaviour. *See also* *GRANDIOSE SELF*. *Compare* *GRANDIOSE DELUSION*, *GRANDIOSE DELUSIONAL DISORDER*.

grandiose self *n.* In **self-psychology*, a term introduced by the Austrian-born US psychoanalyst Heinz Kohut (1913–81) to denote a protective and inflated self-image that a child develops when its natural **narcissism* is inevitably undermined by the mother's occasional failure to respond adequately. This grandiose self normally moderates as the child grows older and its parents' responses change; but it is liable to remain unaltered if the normal developmental sequence is disrupted, especially if the mother never responds adequately or responds unpredictably or unrealistically, and in such cases the child may develop **narcissistic personality disorder*. Also called the *grandiose-exhibitionist self*. *See also* *GRANDIOSE IDEAS OR ACTIONS*, *SELF-PSYCHOLOGY*.

grand mal *n.* An obsolescent synonym for **tonic-clonic*. [French: literally big illness]

grandmother cell *n.* Based on the discovery of **feature* detectors, a hypothetical cell (improbably exaggerated, but based on reality) in the **visual cortex* that might respond maximally to a highly specific stimulus such as the viewer's own grandmother. The term was introduced by the US neuroscientist Jerry (Jerome Ysroael) Lettvin (1920–2011) in a lecture to students at the Massachusetts Institute of Technology in 1969 in which he suggested that about 18,000 **neurons* could underlie a specific conscious experience.

granule cell *n.* Any of the small **multipolar neurons* that are the principal **interneurons* of the neocortex and are abundantly present in the cerebellum. *See also* *PARALLEL FIBRE*. *Compare* *PYRAMIDAL CELL*. [From Latin

*****ebook converter DEMO Watermarks*****

granulum a small grain]

granulocyte *n.* Any of a group of **leucocytes* with granules in their cytoplasm that play a part in the immune system as **phagocytes* by consuming foreign or malfunctioning cells. *See also* LYMPHOCYTE, MONOCYTE. [From Latin *granulum* a small grain + Greek *kytos* a vessel]

grapheme *n.* The smallest unit in the written form of a language, usually a letter or combination of letters representing a single **phoneme*, such as the *b* in *book*, the *s* in *sip*, the *sh* in *ship*, or the *ph* in *photograph*. [From Greek *graphema* a letter, from *graphein* to write]

graphic rating scale *n.* Any **rating scale* in which a response is indicated by marking a position on a line, such as one anchored by *strongly disagree* at one end and *strongly agree* at the other, or some other **analogue* (2) representation of the dimension being rated. *Compare* NUMERICAL RATING SCALE, VERBAL RATING SCALE.

graphology *n.* The study of handwriting from all angles, including its relationship with character or personality. Speculation about this possibility can be traced to ancient Rome, where in the second century Seutonius Tranquillus remarked on peculiarities in Augustus Caesar's handwriting, and modern interest in graphology was stimulated by the French Abbot Jean Hippolyte Michon (1806–81), who coined the word in the title of his book *Système de Graphologie* (1875). Graphologists study variations of size, layout, slant, connectedness, speed, regularity, letter forms, angularity, and shading of handwriting, but relationships with objective measures of personality have generally produced only weak and unstable correlations. None the less, graphology has been popular as a selection tool in Germany and other continental European countries since the publication of the influential book *Handschrift und Charakter* (1940, *Handwriting and Character*) by the German philosopher and psychologist Ludwig Klages (1872–1956). [From Greek *graphein* to write + *logos* word, discourse, or reason]

graphomania *n.* Overpowering urge to write, often leading to **graphorrhoea*. [From Greek *graphein* to write + *mania* madness]

*****ebook converter DEMO Watermarks*****

graphorrhoea *n.* Excessive, uncontrolled, incoherent writing; a written counterpart of *logorrhoea. US *graphorrhea*. [From Greek *graphein* to write + *rhoia* a flow]

grasp reflex *n.* A type of reflex in which the fingers flex in a clutching motion in response to stroking of the palm of the hand. It is normal in young infants from birth to about four months of age, during which time the grip is strong enough to support the infant's own weight, but in older people it is a neurological sign of a lesion in the premotor cortex (see **MOTOR CORTEX**). Also called the *Darwinian reflex* or the *grasping reflex*.

grass *n.* A common street name for *cannabis, especially in the form of *marijuana.

Grassmann's law (linguistics) *n.* A modification of *Grimm's law, devised to explain exceptions to it, such as the English *daughter*, which was *duhita* in Sanskrit but according to Grimm's law should have been *dhuhita*. Grassmann's law asserts that a sequence of two *aspirates (2) in a word is sufficient to block the sound shift of Grimm's law. [Named after the German–Polish mathematician and physicist Hermann G(ünther) Grassmann (1809–77) who formulated it in 1863]

Grassmann's laws (perception) *n.* Three basic laws of colour mixing. If x , y , and z are distinct stimulus colours, and if the symbol $=$ indicates visual matching, then the laws state that: (a) If $x = y$, then $x + z = y + z$ (if equivalent colours are added to equivalent colours, then the sums are also equivalent); (b) If $x = y$, then $x - z = y - z$ (if equivalent colours are subtracted from equivalent colours, then the differences are also equivalent); (c) If $x = z$ and $y = z$, then $x = y$ (colours that are equivalent to the same colour are equivalent to each other). See also **ADDITIVE PRIMARY**, **PRIMARY COLOUR (1, 2)**, **SUBTRACTIVE PRIMARY**. [Named after the German–Polish mathematician and physicist Hermann G(ünther) Grassmann (1809–77) who formulated them in 1853]

grating *n.* A framework of parallel bars serving as a cover or hatch, hence figuratively an image consisting of alternating dark and light bars used for

studying spatial vision. *See also* [ACUITY GRATING](#), [DIFFRACTION GRATING](#), [McCOLLOUGH EFFECT](#), [PHANTOM GRATING](#), [SINUSOIDAL GRATING](#), [SPATIAL FREQUENCY](#), [TILT AFTEREFFECT](#).

gray matter *See* [GREY MATTER](#).

Great Vowel Shift *n.* A change in the pronunciation of English that took place at the end of the Middle Ages: most long [*vowels](#), such as the vowel in *see* (which before the shift rhymed with the modern French *thé*), were raised, and the already [*close vowels](#) in *shine* (which was pronounced like today's *sheen*) and *mouse* (which was pronounced like today's *moose*) became the [*diphthongs](#) that they now are.

Greenspoon effect *n.* Modification of the content of conversational speech, without the speaker's awareness, through [*reinforcement](#) given by the listener in the form of nods, smiles, or expressions of approval such as 'mmm-hmm'. Such reinforcers have been used to increase the speaker's use of a certain word, or a category of words such as plural nouns, or the frequency with which the speaker expresses personal opinions, and so on. [Named after the US psychologist Joel Greenspoon (1921–2004) who reported the effect in articles in the *American Psychologist* in 1954 and the *American Journal of Psychology* in 1955, although previous studies had already demonstrated the effect]

Grelling's paradox *n.* A [*paradox](#) of non-self-descriptive adjectives. Some adjectives are self-descriptive: the adjective *short* is short, the adjective *English* is English, and the adjective *polysyllabic* is polysyllabic, and each of these adjectives is therefore [*autological](#), because each is self-descriptive. In contrast, some adjectives are [*heterological](#): the adjective *long* is not long, *Russian* is not Russian, and *monosyllabic* is not monosyllabic. Is the adjective *heterological* autological or heterological? If it is autological, then it is self-descriptive, which means that it must be heterological; and if it is heterological, then it must be non-self-descriptive, in which case it is autological. [Named after the German mathematician Kurt Grelling (1886–1942) who published it in 1908]

grey matter *n.* The greyish nerve tissue of the brain and spinal cord,

*****ebook converter DEMO Watermarks*****

containing neuronal cell bodies, unmyelinated axons, and dendrites. US *gray matter*. Also called (technically) the *substantia grisea*. Compare [WHITE MATTER](#).

Gricean maxims *n.* Another name for [*conversational maxims](#).

grid analysis *n.* A collection of techniques for analysing data generated by the [*Repertory Grid Test](#).

grid test See [REPERTORY GRID TEST](#).

grief reaction *n.* Distress and intense sorrow in response to the loss of someone or something to which one is strongly attached, usually through [*bereavement](#). In severe cases it can amount to an [*adjustment disorder](#).

Grimm's law *n.* A proposition about various shifts that occurred in the pronunciation of [*plosive](#) consonants between the Proto-Indo-European language and the various Indo-European languages, including English, that are descended from it, based on a set of nine correspondences observed between Sanskrit, Latin and Greek on the one hand and the Germanic languages such as English on the other, including the change from [p] to [f] as in Latin *pater* becoming English *father* and the change from [t] to [θ] as in Latin *tres* becoming English *three*. The other correspondences are [k] to [x] (the final phoneme in the Scots *loch*), [b] to [p], [d] to [t], [g] to [k], [b^h] (aspirated, that is, accompanied by a brief [h]-sound) to [b], [d^h] to [d], and [g^h] to [g]. See also [GRASSMANN'S LAW \(LINGUISTICS\)](#). [Named after the German philologist Jakob Ludwig Karl Grimm (1785–1863) who formulated it in 1822]

grooming *n.* **1.** A pattern of behaviour whereby an animal cleans and maintains the hair or surface of its body or that of another member of the same species (a conspecific). **2.** In humans, cleaning and tidying one's hair, clothes, and general appearance (also called *self-grooming*), or rubbing down and smartening a horse, dog, or other domesticated animal. [From Middle English *grom* a manservant]

grounded theory *n.* A **theory* built up from **naturalistic observations* of phenomena, generally reflecting the participants' own interpretations, rather than being introduced or imposed by the investigator, sometimes used in **qualitative research*.

group dynamics *n.* The social interactions and influences in small groups and the study of these phenomena.

group factor *n.* In **factor analysis*, a **factor* (2) that accounts for the intercorrelations between a subset of the variables but not all of them.

grouping law *n.* Any of the four laws formulated in 1923 by the Gestalt psychologist Max Wertheimer (1880–1943) to explain the organization of parts into wholes by the visual system, or one of the two additional laws suggested in 1990 by the US psychologists Irvin Rock (1922–95) and Stephen E. Palmer (born 1948). Also called a Gestalt *principle of organization*. See CLOSURE GROUPING LAW, COMMON REGION, CONNECTEDNESS GROUPING LAW, GOOD CONTINUATION, PROXIMITY GROUPING LAW, SIMILARITY GROUPING LAW. See also ASSOCIATIONISM, BENDER GESTALT TEST, COMMON FATE, GESTALT PSYCHOLOGY.

group inhibition of helping See BYSTANDER EFFECT.

group movement *n.* A form of **apparent movement* that occurs in the **Ternus phenomenon* when an intermediate interstimulus interval is used, all three elements appearing to move together in step. Compare ELEMENT MOVEMENT.

group polarization *n.* The tendency for involvement in a group to cause the attitudes and opinions of the group members to become more extreme, in the direction of the predominant attitudes and opinions in the group. The phenomenon is explained by collective involvement and group participation making salient the group **norms* (1), amplifying normative individual attitudes and opinions and causing them to shift even further in the direction of the group norms. The concept was introduced in 1969 by the Romanian-born French social psychologist Serge Moscovici (born 1925) and the Italian-

born Canadian social psychologist Marisa Zavalloni (born 1929), who provided evidence, for example, that the generally favourable attitudes of French students towards de Gaulle became even more positive, on average, and their generally hostile attitudes towards Americans became even more hostile, following group discussion. *See also* [RISKY SHIFT](#), [SOCIAL INFLUENCE](#).

group selection *n.* A form of [*natural selection](#) favouring characteristics that benefit the group or species as a whole, rather than any individual organism, put forward to explain the evolution of [*altruistic](#) behaviour such as the alarm calls of birds responding to the presence of predators, but rejected by most contemporary biologists because of the problem of explaining how it could evolve, except in highly unusual circumstances. *Compare* [KIN SELECTION](#).

group stereotype *See* [STEREOTYPE](#).

group test *n.* A test of [*intelligence](#), [*personality](#), or any other psychological attribute that is presented in [*multiple-choice](#) format and can be administered to groups of respondents simultaneously. The first widely used group tests were the [*Army Alpha and Beta Tests](#). *Compare* [INDIVIDUAL TEST](#).

group therapy *n.* A generic term for various techniques of [*psychotherapy](#) in which clients or patients are treated together in groups, including traditional therapies adapted for application in groups, [*encounter groups](#), [*est](#), [*milieu therapy](#), [*psychodrama](#), [*sociodrama](#), [*T-groups](#), and a myriad of more unconventional marathon, growth, and confrontation therapies. Its first use is believed to have been by the Scottish psychiatrist William (Alexander Francis) Browne (1805–85) at the Crichton Royal Hospital in Dumfries, Scotland, in 1855. Also called *group psychotherapy*, the original term introduced in 1932 by the Romanian-born US psychiatrist Jacob L(ey) Moreno (1892–1974). *See also* [CONJOINT THERAPY](#), [SOCIODRAMA](#), [SYSTEMS THEORY](#).

groupthink *n.* A collective pattern of defensive avoidance, characteristic of group decision making in organizations in which group members develop rationalizations supporting shared illusions of their own infallibility and

*****ebook converter DEMO Watermarks*****

invulnerability within the organization. The US psychologist Irving Lester Janis (1918–90), who introduced the term in his book *Victims of Groupthink* (1972), listed eight characteristic features: an illusion of invulnerability; collective efforts to rationalize in order to discount warnings; an unquestioned belief in the group's inherent morality; stereotyped views of rivals and enemies; direct pressure on any member who dissents from the consensus view; self-censorship of disagreements with the apparent group consensus; a shared illusion of unanimity; and the emergence of self-appointed protectors of the group from adverse information that might undermine the existing complacency.

growth hormone *n.* A ***hormone** secreted by the ***anterior pituitary** that acts directly on somatic cells, promoting the synthesis of proteins essential to growth of muscles and long limb bones, sometimes used as a ***performance enhancer**. Also called *somatotrophin*. **GH** *abbrev.*

growth hormone releasing hormone *n.* A ***releasing hormone** secreted by the hypothalamus that induces the anterior pituitary to secrete ***growth hormone**. Also called *somatotrophin releasing hormone*. Compare **SOMATOSTATIN**. **GHRH** *abbrev.*

GrüBELsucht *n.* A type of ***obsession** in which even simple and obvious things are compulsively questioned. [From German *grüBELn* to ponder + *Sucht* mania]

grue paradox *n.* Another name for ***Goodman's paradox**.

G spot *abbrev.* A region of spongy tissue on the front wall of the vagina, behind the pubic bone, surrounding the urethra approximately two inches from the mouth of the vagina, that when stimulated by firm pressure swells into a ridge, becomes a focus of sexual excitement in some women, and has been claimed to be a source of fluid, similar in composition to a man's prostate fluid, released through the urethra. See also **EROGENOUS ZONE**. [An abbreviation of *Gräfenberg spot*, named after the German gynaecologist Ernst Gräfenberg (1881–1957) who first drew attention to it in 1950]

guanine *n.* One of the constituent ***bases** (1) of the nucleic acids ***DNA**
*****ebook converter DEMO Watermarks*****

and [*RNA](#), having an affinity for cytosine, also found in the liver, pancreas, and other organs of animals, in the germ cells of plants, and in guano. **G** *abbrev.* [From Spanish *guano* the dung of fish-eating sea-birds + Greek *-ine* indicating an organic compound]

guided discovery *n.* A technique used in [*cognitive behaviour modification](#) for helping a client to recall the steps that led to a particular instance of feeling anxious or depressed, with a view to locating potentially changeable elements in the client's thinking patterns.

guiding fiction *n.* In the [*individual psychology](#) of the Austrian psychiatrist Alfred Adler (1870–1937) and his followers, a term used to denote the characteristic form of a person's [*self-image](#). Also called a *guiding idea*. See also [NEUROTIC FICTION](#).

Guilford's cube *n.* A multifactorial model of the *structure of intellect* (*SOI*) developed and refined from 1946 onwards by the US psychologist J(oy) P(aul) Guilford (1897–1987) and usually depicted as an object loosely called a cube. According to the theory, intelligence comprises 120 independent abilities, extended in 1982 to 150 and, in a posthumous article in the journal *Educational and Psychological Measurement* in 1988, to 180. In the extended version of the theory, a given mental task may involve any of six possible kinds of mental *operations* (cognition, memory recording, memory retention, divergent production, convergent production, or evaluation); five different kinds of mental representations or *contents* (visual, auditory, symbolic, semantic, or behavioural); and six different kinds of *products* (units, classes, relations, systems, transformations, or implications). Multiplying these together yields 180 different cognitive factors, each of which can be assessed by a different task, and the theory can be represented by a $6 \times 5 \times 6$ 'cube' composed of 180 smaller units (see [illustration](#) overleaf). Also called the *structure-of-intellect model*. See also [CONVERGENCE–DIVERGENCE](#), [MERRILL-PALMER SCALE](#). Compare [MULTIPLE INTELLIGENCES](#).

Guilford's cube. Guilford's extended cube, showing 180 aspects of intelligence.

Gulf War Syndrome *n.* A disorder contracted by soldiers involved in the Gulf War in 1991, characterized by fatigue, muscle and joint pains, headaches, memory loss, insomnia, skin complaints, depression, and irritability, possibly caused by multiple vaccinations, nerve gas, interaction of vaccinations with anti-nerve-gas medication, or **organophosphate* insecticides. *Compare* CHRONIC FATIGUE SYNDROME. **GWS** *abbrev.* [Named after the 1991 Gulf War between an international force led by the US on the one side and Iraq on the other, following Iraq's invasion of Kuwait in 1990]

guppy effect *n.* An anomaly in **prototype theory*, in which an item is more prototypical of a conjunctive concept than of either (or any) of its constituent concepts. Thus a *guppy* is supposedly more prototypical of the conjunctive concept *pet fish* than of either of the constituent concepts *pet* or *fish*, and if prototype theory is formulated in the theory of **fuzzy sets*, this leads to a contradiction, implying that either the apparently natural formulation in the theory of fuzzy sets, or prototype theory itself, must be fundamentally flawed. The concept of *goldfish* has also been claimed to

manifest the guppy effect, because it is a more prototypical instance of a pet fish than of a pet or a fish, and empirical research has uncovered many other examples, such as *atlas*, more prototypical of *reference books* than of *reference sources* or *books*. The anomaly was first uncovered and the example of the guppy suggested in 1981 by the US psychologists Daniel N. Osherson (born 1949) and Edward E. Smith (1940–2012).

gustation *n.* The act or process of tasting or the sense of **taste*. **gustatory** *adj.* [From Latin *gustare* to taste + *-ation* indicating a process or condition]

gustatory acuity *n.* Keenness or sharpness of the sense of **taste*. See also *ACUITY*.

gustatory hallucination *n.* A **hallucination* of a taste, usually experienced as unpleasant. [From Latin *gustare* to taste]

gustatory receptor *n.* A **sensory receptor* specialized for binding to molecules of sapid chemical substances and responding with nerve impulses that generate experiences of **taste*. The term is used sometimes for a **taste bud* and sometimes for a **taste cell*. Also called a *gustatory cell* or *taste cell*.

Guttman scale *n.* A type of **attitude scale*, the items of which can be arranged in a hierarchical order such that agreement with any particular item implies probable agreement with all those below it in the hierarchy, as would apply to the following (non-attitudinal) items: *I am over 5 feet tall; I am over 5 feet 6 inches tall; I am over 6 feet tall; I am over 6 feet 6 inches tall*. It is constructed by the method of *scalogram analysis* in which a large pool of candidate statements about an attitude object (such as *Euthanasia is morally wrong; Euthanasia should be legalized*, and so on) are administered to a group of respondents who mark just those items with which they agree, and from these responses a set of items is selected that can be arranged into a hierarchy with as few errors (deviations from a perfect linear hierarchy) as possible, a satisfactory Guttman scale having relatively few errors as indexed by a **reproducibility* (Rep) of at least .90, implying that the scale is unidimensional, measuring only one major attitude variable. The process of constructing a Guttman scale is called *scalogram analysis*. A simple example of a Guttman scale is a **social distance scale*. [Named after the US (later

*****ebook converter DEMO Watermarks*****

Israeli) psychologist Louis (Eliahu) Guttman (1916–87) who introduced it in an article in the *American Sociological Review* in 1944]

gyrus *n.* A ridge, especially one of the convolutions on the surface of the brain that are separated by **sulci*. See [ANGULAR GYRUS](#), [CINGULATE GYRUS](#), [DENTATE GYRUS](#), [HESCHL'S GYRUS](#), [INFERIOR TEMPORAL GYRUS](#), [PARAHIPPOCAMPAL GYRUS](#), [POSTCENTRAL GYRUS](#), [PRECENTRAL GYRUS](#), [SUPERIOR TEMPORAL GYRUS](#). **gyri** *pl.* [From Latin *gyrus* a circle or turning, from Greek *gyros* a circle or ring]

H *abbrev.* A common street name for **heroin*.

Haab's pupillary reflex *n.* Another name for the **pupillary light reflex*. [Named after the Swiss ophthalmologist Otto Haab (1850–1931) who drew attention to it]

habenula *n.* A small triangular area of the **epithalamus* on each side of the base of the pineal gland. **habenulae** *pl.* [From Latin *habenula* a little strap or thong, from *habena* a strap or thong]

habenular nucleus *n.* A collection of nerve cells in each half of the **habenula*, connected by nerve fibres, functioning as a correlation centre for olfactory information.

habit *n.* A disposition to behave in a particular way, or an established practice or custom. In learning theory, a learned behavioural **response* associated with a particular situation, especially a response that has been subject to **reinforcement* (1, 2) or a **conditioned response*.

habitat *n.* The natural locality in which an organism lives, or the environment of a community; the place in which a person or group of people are normally to be found. *Compare* BIOTOPE, ECOSYSTEM. [From Latin *habitat* it dwells, from *habitare* to dwell]

habit disorders *n.* Any **impulse-control disorders* involving habitual maladaptive behaviour, apart from the **paraphilias* and **substance-related and addictive disorders*. Examples include **internet addiction syndrome*,

*****ebook converter DEMO Watermarks*****

*internet gaming disorder, *kleptomania, *pathological gambling, *pyromania, and *trichotillomania. In careful usage, this term should not be applied to stereotyped movements or to stereotypic movement disorder.

habit reversal *n.* A form of *learning (1) in which an organism choosing repeatedly between two alternatives *A* and *B* is initially rewarded for choosing alternative *A* rather than *B* until a behavioural preference for *A* is established, and is then rewarded for choosing *B* rather than *A* until the preference is reversed, and so on. Birds and mammals show progressive improvement in switching from *A* to *B* and back again, whereas fish show little or no improvement. Also called *reversal learning*. See also OVERTRAINING REVERSAL EFFECT, SERIAL LEARNING (2). Compare NON-REVERSAL SHIFT.

habit strength *n.* The term used in *Hullian learning theory to denote the strength of a connection between a *stimulus (1) and a *response, determined by the number of *reinforcements (1). See also GENERALIZED HABIT STRENGTH. sH_R abbrev.

habituation *n.* 1. The process of making or becoming used to something. 2. More specifically the temporary diminution in the strength or frequency of an *unconditioned response by repeated exposure to the *stimulus (1) that evokes it. 3. A mild form of *tolerance (3) of the effects of a drug. See also INHIBITION (3). Compare DISHABITUATION, EXTINCTION (2).

haemoglobin *n.* A protein present in *erythrocytes (red blood corpuscles). It consists of haem, a red organic pigment containing iron, and globin, a protein, and it combines reversibly with oxygen and plays a vital role in the transport of oxygen through the bloodstream to the tissues. US *hemoglobin*. **Hb** abbrev. [From Greek *haima* blood + Latin *globus* a sphere]

hair cell *n.* Any of the cylindrical or flask-shaped *sensory receptor cells for hearing in the *organ of Corti of the *cochlea, or any of the similar cells in the *vestibular system that are involved in the sense of balance and orientation and that enable human beings to walk upright, certain animals to detect vibrations in the ground, and fishes to detect displacements of water.

The cell is divided into three sections: a front end consisting of a cone-shaped bundle of 30 to 150 **stereocilia* (which are not true cilia) together with a single true cilium called a **kinocilium*, a middle section containing the cell nucleus, **mitochondria*, and **Golgi apparatuses*, and a back section consisting of nerve endings that feed in to the nervous system, the cell as a whole functioning as an extremely sensitive mechano-electrical **transducer* that converts kinetic energy into electrical nerve impulses. A mammalian hair cell responds along its axis of maximum sensitivity to movements of its tip of 100 picometres (trillionths of a metre, about the same distance as the diameter of some atoms), but is totally insensitive to movement along the perpendicular axis. *See also* *DEITERS' CELL*, *INNER HAIR CELL*, *OUTER HAIR CELL*.

hair-pulling, pathological *n.* Another name for **trichotillomania*.

Halcion *n.* A proprietary name for the benzodiazepine drug **triazolam*. [Trademark, from *halcyon*, peaceful and carefree, from Greek *alkyon* a kingfisher, once believed to make a secure floating nest for its eggs]

Haldol *n.* A proprietary name for the neuroleptic drug **haloperidol*. [Trademark]

half-second delay in consciousness *n.* Another name for **Libet's delay*.

halfway house *n.* A residential centre offering temporary accommodation and rehabilitation to people recently released from prison or recovering from a mental disorder not requiring full hospitalization.

hallucination *n.* A perceptual experience similar to a true perception but not resulting from stimulation of a sense organ, generally occurring under a **hallucinogen* or **hypnosis*, or as a symptom of **schizophrenia* or a **neurological* disorder, but excluding dreams occurring while asleep, **hypnagogic images* experienced while falling asleep, and **hypnopompic images* experienced while awakening. To be distinguished in careful usage from an **illusion*, in which a real object or event is misperceived or misinterpreted. *See also* *ALCOHOL HALLUCINOSIS*, *AUDIBLE THOUGHT*, *AUDITORY HALLUCINATION*, *CHARLES BONNET SYNDROME*, *DELIRIUM TREMENS*, *GUSTATORY*
*****ebook converter DEMO Watermarks*****

HALLUCINATION, HALLUCINOGEN, HALLUCINOSIS, MOOD-CONGRUENT, MOOD-INCONGRUENT, ODOUR HALLUCINATION, ORGANIC HALLUCINOSIS, PSEUDOHALLUCINATION, SCHIZOPHRENIA, SOMATIC HALLUCINATION, TACTILE HALLUCINATION, VISUAL HALLUCINATION. *Compare* DELUSION. [From Latin *alucinari* to wander in the mind + *-ation* indicating a process or condition]

hallucinogen *n.* Any of a number of drugs that induce **hallucinations* or perceptual alterations, the most common examples being **phenylalkylamines* such as **mescaline* and **STP*; **indole alkaloids* such as **bufotenin*, **harmine*, **LSD*, **psilocybin*, and **DMT*; and various other compounds such as **ibotenic acid*, **myristin*, and **ololiuqui*. Also called a *psychodysleptic*, a *psycholytic*, or a *psychotomimetic*. *See also* AMANITA MUSCARIA, CANNABIS, FLY AGARIC, HALLUCINOGEN-RELATED DISORDERS, MAGIC MUSHROOM, MORNING GLORY, MUSCIMOL, PHENCYCLIDINE, TEONANACTYL, TRAVEL AGENT, TRIP. *Compare* PHANTASTICANT, PSYCHEDELIC. **hallucinogenic** *adj.* [From Latin *alucinari* to wander in the mind + Greek *genes* born or produced]

hallucinogen-related disorders *n.* **Substance-related and addictive disorders* in **DSM-5* associated specifically with the consumption of **hallucinogens*. DSM-5 distinguishes between **phencyclidine* and other hallucinogens. *See also* SUBSTANCE-INDUCED DISORDERS, SUBSTANCE-RELATED AND ADDICTIVE DISORDERS, SUBSTANCE USE DISORDERS.

hallucinosi *n.* A mental condition in which **hallucinations* occur frequently. *See also* ALCOHOL HALLUCINOSIS, ORGANIC HALLUCINOSIS.

halo effect *n.* In **person perception*, a generalization from the perception of one prominent or salient characteristic, trait, or personality attribute to an impression of the personality as a whole, leading to inflated correlations between rated characteristics. The effect was first reported by the US psychologist Frederick Lyman Wells (1884–1964) in a study of ratings of the literary merit of authors published in the *Archives of Psychology* in 1907. The US psychologist Edward Lee Thorndike (1874–1949) introduced the term *halo error* in 1920. The term is sometimes restricted to instances in which it leads to an overvaluation of the personality as a whole. *See also* ATMOSPHERE EFFECT, TRAIT CENTRALITY.

haloperidol *n.* A central nervous system *depressant and *neuroleptic (1) agent, belonging to the class of *butyrophenones, that blocks *dopamine neuroreceptors and is used in the treatment of *schizophrenia and other psychotic disorders and in the control of symptoms in *Tourette's disorder. Also called *Haldol* (trademark). Compare DROPERIDOL. [From *hal-* indicating a halogen, from Greek *hals* salt + English (*pi*)*perid(ine)* + *-ol* denoting a compound containing a hydroxyl group, from (*alcoh*)*ol*]

Hamilton Depression Rating Scale *n.* A widely used scale for measuring *depression, consisting of a list of 17 symptoms, designed to be rated by a clinician on three-point and five-point scales after a full interview. The symptoms are: depressed mood (0–4); guilt feelings (0–4); suicide (0–4); *insomnia, initial or early (0–2); insomnia, middle (0–2); insomnia, terminal or late (0–2); disturbed work and activities (0–4); *psychomotor retardation (0–4); *psychomotor agitation (0–4); *anxiety, psychological (0–4); anxiety, somatic (0–4); *gastrointestinal symptoms (0–2); *somatic symptoms (0–2); *sexual dysfunction or menstrual disturbance (0–2); *hypochondriasis (0–4); weight loss (0–2); lack of insight (0–2). The maximum score is 52, and the following interpretation of scores is often used: 10–13 mild depression; 14–17 moderate depression; 18–30 marked depression; over 30 severe depression. Several alternative versions of the scale have been devised. Compare BECK DEPRESSION INVENTORY. **HAM-D** or **HRSD** abbrev. It was developed by the English psychiatrist Max Hamilton (1912–88) and first published in the *Journal of Clinical Psychiatry* in 1960.

hammer *n.* A non-technical name for the *malleus of the *middle ear. See also ANVIL. [So called because of its resemblance to a blacksmith's hammer]

handedness *n.* **1.** A preference for using one hand rather than the other, or a tendency to use one hand more skilfully or comfortably than the other, depending on which *cerebral hemisphere is dominant for motor control, approximately 90 per cent of people showing right handedness or left hemisphere dominance for motor control. Also called *lateral dominance*. See also CEREBRAL DOMINANCE, LATERALITY. **2.** A property of some molecules of having an inherent asymmetry in their three-dimensional structure depending on the direction of rotation or twist, such molecules often having both left-handed and right-handed *enantiomorphs.

*****ebook converter DEMO Watermarks*****

handicapped *adj.* An obsolescent term meaning afflicted by a physical disability or **intellectual disability*.

Hanoi, Tower of *See* TOWER OF HANOI.

Hans, Little *See* LITTLE HANS.

hapax legomenon *n.* A word that occurs only once in a specific text, or in the works of a particular author, or in a language (in which case it is a *nonce word*). Such words have special significance in **stylostatistics* and **forensic linguistics*. **hapax dislegomenon** (preferably simply **dis legomenon**) *n.* A twice-occurring word. **hapax legomena** and **dis legomena** *pl.* [Greek: something said once, from *hapax* once + *legomenon* something spoken, from *legein* to speak]

haphalgnesia *n.* A condition in which stimuli that would ordinarily elicit sensations of touch are experienced as painful. [From Greek *haphē* touch + *algnesia* sense of pain, from *algos* pain + *-ia* indicating a condition or quality]

haplodiploid *adj.* Of or relating to a species, including many ants, bees, and wasps, and some bugs, beetles, mites, ticks, and rotifers, in which males emerge from unfertilized eggs and are **haploid* whereas females emerge from fertilized eggs and are **diploid*. This explains how, in a haplodiploid species, females inherit only half their genes from their fathers, although fathers pass all their genes on to their daughters. **haplodiploidy** *n.* The state or condition of being haplodiploid. [From *haplo(id)* + *diploid*]

haplography *n.* An error in writing a word containing a repeated letter or syllable, only one instead of both of the repeated letters or syllables being written, as in *ocurrence* instead of the correct *occurrence*, or *autopagnosia* instead of the correct *autotopagnosia* (this example occurring even in dictionaries of psychology). Also called *lipography*. *Compare* HAPLOLOGY. [From Greek *haplous* single + *graphein* to write]

haploid *adj.* Of or relating to a cell that has a single set of unpaired **chromosomes*, as in the sex cells or **gametes* of humans and other sexually

reproducing animals, rather than the full complement of paired chromosomes; also of or relating to an organism such as a fungus or a male bee whose body cells are haploid. *Compare* [DIPLOID](#), [HAPLODIPLOID](#). **haploidy** *n.* The state or condition of being haploid. [From Greek *haploeides* single, from *haplos* one + *-oeides* denoting resemblance of form, from *eidos* shape]

haplology *n.* An error in fluent speech, especially in **allegro speech*, in pronouncing a word containing a repeated sound or syllable, only one of the repeated sounds or syllables being articulated, as when *library* is pronounced as if it were written *libry* or *probably* as if it were written *probly*. Also called *syncope*. *Compare* [ELISION](#), [HAPLOGRAPHY](#). [From Greek *haplous* single + *logos* a word]

happiness *n.* One of the **primary emotions*, associated with pleasure or joy. *See also* [EUDAIMONIC WELL-BEING](#), [HEALTH PSYCHOLOGY](#), [HEDONIC TREADMILL](#), [HEDONIC WELL-BEING](#), [POSITIVE PSYCHOLOGY](#), [SMILE](#), [SUBJECTIVE WELL-BEING](#). **happy** *adj.* [From Old Norse *happ* good luck + *-ness*, indicating a state]

haptic *adj.* Of or relating to the sense of **touch*. *See also* [HAPTIC TOUCH](#). [From Greek *haptein* to touch + *-ikos* of, relating to, or resembling]

haptic agnosia *n.* Another name for **tactile agnosia*. [From Greek *haptein* to touch + *agnosia*]

haptic touch *n.* One of the major forms of **touch*, involving active exploration, usually by the hands, or the experience that arises when one's hands envelop an object and explore its surface freely, providing information about its general shape or form and allowing object recognition to occur, even if the object is larger than any area of the skin. *See also* [ASTEREOGNOSIS](#), [ECCENTRIC PROJECTION](#), [STEREOGNOSIS](#). *Compare* [CUTANEOUS SENSE](#), [DYNAMIC TOUCH](#).

harassment *See* [SEXUAL HARASSMENT](#), [STALKING](#).

hard AI *n.* Another name for **strong AI*.

hard drug *n.* An imprecise term for a drug such as heroin or cocaine that is highly addictive, but excluding highly addictive drugs such as alcohol or nicotine. *Compare* [SOFT DRUG](#).

hard–easy effect *n.* A tendency to be overconfident about the correctness of answers to difficult questions and underconfident about answers to easy questions. If respondents have to choose from two possible answers to a series of questions, and if they also give confidence ratings for each answer on a scale from 50 per cent probability of being correct (no better than chance) to 100 per cent, then a comparison of their average confidence ratings with the actual percentages of correct answers usually reveals that they overestimated the percentages of difficult questions answered correctly (the [*overconfidence effect](#)) and underestimated the percentages of easy questions answered correctly. The phenomenon was first reported by the US psychologists Sarah C. Lichtenstein (born 1933) and Baruch Fischhoff (born 1946) in an article in the journal *Organizational Behavior and Human Performance* in 1977. Also called the *discriminability effect* or *difficulty effect*.

hard of hearing *n.* Partially deaf. *See* [DEAFNESS](#).

hard sign *n.* An obvious or unambiguous [*sign \(1\)](#) of a [*neurological](#) disorder, such as an absent or pathological [*reflex](#), an abnormal [*EEG](#), a unilateral [*paralysis](#), or a loss of function of one or more of the [*cranial nerves](#). *Compare* [SOFT SIGN](#).

hard-wired *adj.* Of, relating to, or consisting of a circuit or instruction that is built into the hardware of a computer and is therefore effectively unmodifiable; figuratively, of or relating to an innate and unmodifiable response or pattern of behaviour, such as a [*fixed-action pattern](#).

Hardy–Weinberg equilibrium *n.* The stable state of a population in which the [*Hardy–Weinberg law](#) holds, also called a *balanced polymorphism*.

Hardy–Weinberg law *n.* The law according to which relative [*gene](#)

frequencies in a population remain stable from generation to generation provided that mating occurs randomly and there is no *selection (1), *migration, or *mutation. If the relative frequency of one *allele at a particular gene locus is p and that of another is q , then it is easy to prove that the population will contain p^2 homozygotes with two p genes, q^2 homozygotes with two q genes, and $2pq$ heterozygotes with one p and one q gene. See also BALANCED POLYMORPHISM, POPULATION GENETICS. [Named after the English mathematician G(odfrey) H(arold) Hardy (1877–1947) and the German physician Wilhelm Weinberg (1862–1937) who discovered the law independently of each other in 1908]

Hare Psychopathy Checklist See PSYCHOPATHY CHECKLIST–REVISED.

harmine *n.* An *indole alkaloid, sometimes used as a recreational drug, discovered in 1847, found in the seeds of the plants *Peganum harmala* (Syrian rue), native to southern Europe and Asia Minor, and also in *Zygophyllum fabago* and *Passiflora incarnata* (the passion flower). Native South Americans were the first to prepare from it the *hallucinogenic drink *yagé. It is a brief monoamine oxidase inhibitor that also acts as a *serotonin antagonist and *hallucinogen. Formula: $C_{13}H_{12}N_2O$. [From Latin *harmala* wild rue, from Arabic *harmil* + *-ine* indicating an organic compound]

harmonic *n.* A component of a *complex tone, having a frequency that is an integral multiple of the *fundamental frequency. The *first harmonic* is the fundamental tone; the *second harmonic*, also called the *first overtone*, has twice the frequency of the fundamental and is therefore an *octave higher; the *third harmonic* or *second overtone* has three times the frequency of the fundamental; and so on (see illustration). See also MISSING FUNDAMENTAL ILLUSION. [From Latin *harmonicus* of or relating to harmony]

Harmonic. Fundamental and two overtones.

harmonic mean *n.* In descriptive statistics, the average value of a set of scores calculated by taking the reciprocal of the arithmetic mean of the reciprocals of the scores. The scores 3, 4, 5 have reciprocal $1/3$, $1/4$, $1/5$, and the arithmetic mean of these reciprocals is 0.261, so the harmonic mean of the set of scores is $1/0.261 = 3.831$. Compare [ARITHMETIC MEAN](#), [GEOMETRIC MEAN](#).

harp theory *n.* Another name for the [*place theory](#).

Hartley's F max *n.* In statistics, a test for [*homogeneity of variance](#) in several samples based on the ratio of the largest variance to the smallest variance. Also called *F max*, *Hartley's largest F*. [Named after the US-based German statistician Herman Otto Hartley (1912–80) who published the test in 1950]

hashish *n.* The dried resinous exudate of the flowering tops of the female [*cannabis](#) plant and the undersides of its leaves, smoked with tobacco or added to foods and eaten as a psychotropic drug. [From Arabic *hashish* dried hemp]

Hawk–Dove game *n.* Another name for the [*Chicken game](#), especially

in biological literature, where it was rediscovered and interpreted as follows. The Hawk strategy involves **escalated fighting* until the individual adopting it is forced to withdraw or its opponent gives way; the Dove strategy involves **conventional fighting*—the individual adopting it retreats before getting injured if its opponent escalates. The highest payoff, in terms of **Darwinian fitness*, goes to the Hawk strategy pitted against Dove, the second-highest payoff to Dove against Dove, the third-highest to Dove against Hawk, and the lowest to Hawk against Hawk. The English biologist John Maynard Smith (1920–2004) and the US physicist and chemist George R(ober) Price (1922–75) first analysed this game in 1973 and showed that the **evolutionarily stable strategy* is a mixture of Hawk and Dove.

Hawk–Dove–Retaliator game *n.* An extension of the **Hawk–Dove game*, with the additional strategy available of fighting conventionally and escalating only if the adversary escalates: a Retaliator normally plays Dove but responds to a Hawk opponent by playing Hawk. The game was introduced in 1973 by the English biologist John Maynard Smith (1920–2004) and the US physicist and chemist George R(ober) Price (1922–75), who showed that the **evolutionarily stable strategy* is Retaliator.

Hawthorne effect *n.* Improvement in the performance or productivity of workers or students resulting from the introduction of new working methods or conditions, irrespective of the nature of the changes, the effect often being attributed to the feeling of being under concerned observation. In the mid 1920s, informal tests at the Hawthorne works of the effects of changes in lighting on the productivity of women factory workers inspecting parts, assembling relays, and winding coils suggested that the women worked faster irrespective of the lighting changes that were introduced. The first formal investigation of the effect was the Relay Assembly Test Room experiment, focusing on the effects of rest pauses and changes in hours of work, which ran from 1927 to 1932 under the directorship of the Australian psychologist Elton Mayo (1880–1949), with the collaboration of the US human relations researcher Fritz J(ules) Roethlisberger (1898–1974) and others. The interpretation of all the Hawthorne studies has been a matter of controversy, especially since the mid 1970s. [Named after the Hawthorne works in Chicago where the Western Electric Company manufactured equipment for Bell Telephone Systems and where seven separate studies on

the effects of changes in working conditions were carried out between 1924 and 1932]

heading vector *n.* A fixed direction of travel towards a goal, used as a crude method of navigation. *Compare* [COGNITIVE MAP](#). [From Latin *vector* a carrier or bearer, from *vehere*, *vectum* to convey]

head rotation illusion *See* [ROTATING HEAD ILLUSION](#).

health anxiety disorder *n.* Another name for [*somatic symptom disorder](#).

health psychology *n.* A field of [*applied psychology](#) concerned with psychological aspects of physical health, including health promotion and the prevention and treatment of illness and the identification of psychological causes and correlates of health and illness. *See also* [MEDICAL PSYCHOLOGY](#), [OCCUPATIONAL HEALTH PSYCHOLOGY](#). A critical review of decades of research, published in the *Annual Review of Psychology* in 2014, concluded that happiness does not appear to be a cause of good health, nor are negative emotions such as worry or depression significant causes of ill health, but [*conscientiousness](#) appears to be significantly linked to health and well-being across the lifespan.

hearing *n.* One of the five classical [*senses \(1\)](#), responsive to sound waves within the normal [*audibility range](#) of [*frequencies \(1\)](#) from 16 hertz to about 20,000 hertz, the human organ of hearing being the [*ear](#), within which periodic variations in air pressure are amplified in the [*outer ear](#) and [*middle ear](#) and transmitted to the [*inner ear](#) where [*hair cells](#) in the [*organ of Corti](#) located in the [*cochlea](#) convert the vibrations into nerve impulses that are transmitted by the [*vestibulocochlear nerve](#) to the [*inferior colliculi](#) in the tectum of the midbrain and thence to the [*auditory cortex](#) located on [*Heschl's gyrus](#). Also called *audition*. *See also* [AMBLYACUSIA](#), [ANACUSIA](#), [DEAFNESS](#), [DIPLACUSIS](#), [DYSACUSIA](#), [HYPACUSIA](#), [HYPERACUSIS](#), [OHM'S ACOUSTIC LAW](#), [PARACUSIA](#), [PRESBYACUSIS](#).

hearing impairment *n.* Partial [*deafness](#). **hearing-impaired** *adj.*

hearing loss *n.* *Deafness or partial deafness.

heat grill *n.* A device consisting of closely packed alternating warm (40° C) and cool (20° C) bars used for eliciting the *thermal grill illusion.

Hebbian rule *n.* In *connectionism (1) and *parallel distributed processing, a rule governing the alteration of weights of connections between units in order to adjust a *network model in the direction of a target pattern of activation. For example, the *Hopfield rule* strengthens the connection between two units whenever both are simultaneously active or both are simultaneously inactive, and weakens the connection whenever one is active and the other inactive; the *Stent–Singer rule* strengthens the weight of a connection between two units whenever one is active and the other is capable of sending a signal to it and is also active, and it decreases the weight whenever the unit capable of sending the signal is inactive. [Named after the *Hebb synapse]

Hebb synapse *n.* A special type of excitatory *synapse (1) that tends to be strengthened whenever the *postsynaptic cell fires shortly after the *presynaptic cell, even when the firing of the postsynaptic cell occurs in response to an input from a different cell. Such synapses are believed to underlie *long-term potentiation in the hippocampus. Also called a *Hebbian synapse*. See also CELL ASSEMBLY. [Named after the Canadian psychologist Donald O(lding) Hebb (1904–85) who identified and discussed it in his book *The Organization of Behavior* (1949)]

hebephrenia *n.* An obsolescent term for a form of insanity with onset in childhood. **hebephrenic** *adj.* See also HEBEPHRENIC SCHIZOPHRENIA. [From Greek *hebe* youth, from *Hebe* in Greek mythology, the cup-bearer of Olympus and the personification of youth + *phren* mind, originally midriff, the supposed seat of the soul + *-ia* indicating a condition or quality]

hebephrenic schizophrenia *n.* A form of *schizophrenia in adolescents and young adults in which *affective flattening or inappropriate *affect are prominent, *delusions and *hallucinations relatively insignificant, behaviour irresponsible and erratic, and mannerisms common.

hebetude *n.* Emotional dullness, listlessness, or ***lethargy**. [From Latin *hebetare* to dull or blunt]

hedonic treadmill *n.* An interpretation of ***subjective well-being** based on ***adaptation-level theory**, published by the Canadian psychologist Philip Brickman (1943–82) and the US psychologist Donald T(homas) Campbell (1916–96) in a book chapter in 1971, according to which a person's moods change in response to good and bad experiences but return quickly to neutrality, so that both happiness and sadness tend to be transitory. In a classic article in the *Journal of Personality and Social Psychology* (1978), Brickman and two colleagues provided evidence showing that, a short while after the events that changed their lives, lottery winners are not substantially happier, and accident victims who have become paraplegic are not substantially less happy, than other people. *See also* **PROSPECT THEORY**. [From Greek *hedone* pleasure + *-ikos* of, relating to, or resembling + English *treadmill*]

hedonic well-being *n.* Short-term, ***affective** happiness, as distinct from ***eudaimonic well-being**; how one feels about life when living it, rather than how one feels about life when thinking about it. [From Greek *hedone* pleasure + *-ikos* of, relating to, or resembling]

height in the visual field *n.* Another name for ***elevation in the visual field**.

Heimdallr sensitivity *n.* Any extremely low ***absolute threshold**, especially for hearing; another name for ***hyperacusis**, ***hyperaesthesia**, ***hyperalgesia**, ***thermalgesia**, and other forms of sensory hypersensitivity. Also spelt *Heimdal sensitivity* or *Heimdall sensitivity*. [Named after Heimdallr in Norse mythology, the god of light and the dawn, guardian of the rainbow bridge Bifrost between heaven and Earth, who could hear the wool growing on a sheep's back]

Heisenberg uncertainty principle *n.* Another name for the ***uncertainty principle**. [Named after the German physicist Werner (Karl) Heisenberg (1901–76) who propounded it in 1927]

helicotrema *n.* The tiny opening within the apex of the **cochlea* where the **scala tympani* and **scala vestibuli* communicate. [From Greek *helix* a spiral + *trema* a hole]

Heller's syndrome *n.* An alternative name for **childhood disintegrative disorder*. [Named after the Austrian neuropsychiatrist Theodor O. Heller (1869–1938) who first described it and called it *dementia infantilis* in 1908]

Helmholtz illusion *n.* An **irradiation* illusion consisting of a light square on a dark background and a dark square on a light background, the two squares being equal in size but the light one appearing larger than the dark one (see *illustration*). Also called *Helmholtz's flags*. [Named after the German physiologist, physicist, and mathematician Hermann Ludwig Ferdinand von Helmholtz (1821–94) who first drew attention to it]

Helmholtz illusion. The small black square is the same size as the small white square.

helper T cell See *T LYMPHOCYTE*.

helplessness, learned See *LEARNED HELPLESSNESS*.

hemeralopia *n.* A form of partial **blindness* in which bright light causes blurring of vision, resulting from a malfunction of the **photopic* visual system, often as a side-effect of **anticonvulsant* medication prescribed for people with **epilepsy*. The term is sometimes misapplied to **nyctalopia*, but

this is avoided in careful usage. Also called *day blindness*. Compare **NYCTALOPIA**. [From Greek *hemera* day + *alaos* blind + *ops* an eye + *-ia* indicating a condition or quality]

hemianopia *n.* Blindness in the left or right ***visual field** affecting one or both eyes, *left hemianopia* referring to loss of the left visual field and *right hemianopia* to loss of the right visual field. Also called *hemianopsia*, *hemiambyopia*, or *hemiopia*. See also **HOMONYMOUS HEMIANOPIA**, **NASAL HEMIANOPIA**, **SPATIAL NEGLECT**. [From Greek *hemi-* half + *an-* without + *ops* an eye + *-ia* indicating a condition or quality]

hemiballism *n.* A form of ***ballism** resulting from unilateral subthalamic haemorrhage and affecting one side of the body only, caused by a lesion in the ***subthalamic nucleus** of the brain. [From Greek *hemi-* half + *ballein* to throw]

hemifield *n.* Half a field, usually referring to the left or right ***visual field**. [From Greek *hemi-* half + English *field*]

hemineglect *n.* Another name for ***spatial neglect**.

hemiopia *n.* Another name for ***hemianopia**.

hemiparesis *n.* Partial paralysis or muscular weakness confined to one side of the body. Compare **HEMIPLEGIA**. [From Greek *hemi-* half + Latin *paresis* relaxation, from Greek *para* beside or beyond + *hienai* to release]

hemiplegia *n.* Paralysis of one side of the body, usually as a result of a lesion in the contralateral cerebral hemisphere. Compare **DIPLEGIA**, **MONOPLEGIA**, **OPHTHALMOPLEGIA**, **PARAPLEGIA**, **QUADRIPLEGIA**, **TRIPLEGIA**.

hemiplegic *adj.* [From Greek *hemi-* half + *plege* a blow + *-ia* indicating a condition or quality]

hemisity *n.* Preferred mode of ***cognitive** processing associated with either the left or the right ***cerebral hemisphere** predominance in thinking, feeling, and behaviour, found by ***MRI** imaging to be associated with a thicker

ventral gyrus of the ***anterior cingulate cortex (ACC)** on the dominant side. Left-brained people tend to be significantly more logical, verbal, anxiety-prone, and introverted than right-brained people. The term *hemisphericity* was coined by the US neurophysiologist Joseph E. Bogen (1926–2005) in an article in the *Bulletin of the Los Angeles Neurological Society* in 1969. The US neuroscientist Bruce Eldine Morton (born 1938) introduced the term *hemisity* in an online article in 2000. See also **CEREBRAL DOMINANCE**, **LATERALITY**. [A contraction of *hemis(pheric)ity*, from Greek *hemi-* half + *sphaira* a sphere or globe + Latin *-itas*, indicating a state or condition]

hemisphere *n.* Any half sphere, including either of the two ***cerebral hemispheres**. [From Greek *hemi-* half + *sphaira* a sphere or globe]

hemispherectomy *n.* A radical surgical operation involving removal of the cortical structures of one ***cerebral hemisphere**, usually leaving subcortical structures in place, to restrict the spread of tumours or to relieve very severe epilepsy associated with damage to one hemisphere.

hemispheric encoding/retrieval asymmetry *n.* The hypothesis that the left ***prefrontal cortex** is disproportionately involved in ***encoding** and the right prefrontal cortex in ***retrieval** of ***episodic memories**. On the basis of ***brain imaging** data from functional ***MRI** studies, the Estonian-born Canadian psychologist Endel Tulving (born 1927) and co-authors put this hypothesis forward in an article in the *Proceedings of the National Academy of Sciences of the United States of America* in 1994. **HERA** abbrev. [Referring to left and right ***cerebral hemispheres**]

hemisphericity See **HEMISITY**.

hemizygous *adj.* Having only one ***gene** or ***chromosome**, without its ***homologous** counterpart. Thus, for example, males of the human and other mammalian species are hemizygous for their X and Y chromosomes, and consequently for certain genes carried on those chromosomes. [From Greek *hemi-* half + Greek *zygon* a yoke + *-ous* having or characterized by]

hemoglobin See **HAEMOGLOBIN**.

Hempel's paradox *n.* A [*paradox](#) of [*induction](#) (1). Suppose a researcher wishes to confirm the hypothesis that all ravens are black, using the logic of induction. The more black ravens that are observed, the more probable the hypothesis becomes. But instead of going outside and examining ravens, the researcher may just as well stay indoors and observe a green carpet, a blue skirt, a brown egg, a grey telephone, and so on, because each of these is also a confirming instance of the hypothesis. The reason is that the propositions *All ravens are black* and *All non-black objects are not ravens* are logically equivalent: they are identical in meaning, different merely in wording. Logicians agree that there is no flaw in this reasoning; the difficulty is a purely psychological one arising from misguided intuition. Also called the *confirmation paradox* or the *raven paradox*. See also [CONFIRMATION BIAS](#). Compare [GOODMAN'S PARADOX](#). [Named after the German-born US philosopher Carl (Gustav) Hempel (1905–97) who first expounded it in 1937 in the Swedish journal *Theoria*]

henbane *n.* A poisonous Mediterranean plant *Hyoscyamus niger* from which the drugs [*hyoscyamine](#) and [*scopolamine](#) are obtained. [So called because of its capacity to poison poultry]

hendiadys *n.* A [*figure of speech](#) in which a single idea is expressed by two words, usually nouns, connected by *and*, instead of an adjective and a noun. It is used for rhetorical emphasis, as in the phrase *wind and weather*, which does not denote two separate ideas but one (windy weather). [From Greek *hen* one + *dia* through + *dis* twice, from *dyoin* two]

Henning's prism *n.* A classification of [*odours](#) according to six primary odours: fragrant (like lavender or rose petals), ethereal (like ether or cleaning fluid), resinous (like resin or turpentine), spicy (like cinnamon or nutmeg), putrid (like faeces or rotten eggs), and burnt (like tar oil), the first four being closely related and depicted as the vertices of one face of a prism (see [illustration](#)). Also called the *odour prism* or *smell prism*. Compare [CROCKER–HENDERSON SYSTEM](#), [STEREOCHEMICAL THEORY](#), [ZWAARDEMAKER SMELL SYSTEM](#). [Named after the German psychologist Hans Henning (1885–1946) who presented it in his book *Der Geruch* (Smell) in 1915]

Henning's prism

Henning's tetrahedron *n.* A classification of tastes in terms of a pyramid with a triangular base, its corners representing the fundamental or primary tastes, namely sweet (like sugar or [*aspartame](#)), sour (like vinegar or lemon juice), salty (like sea water or table salt), and bitter (like quinine or orange peel), and points elsewhere representing other tastes, assumed to be blends of the four primaries. Also called the *taste tetrahedron*. *See also* [UMAMI](#). [Named after the German psychologist Hans Henning (1885–1946) who published it in 1927]

hepatic portal vein *n.* A vein that carries newly absorbed food nutrients from the small intestine to the liver. [From Greek *hepar*, *hepatos* the liver + Latin *porta* a gate]

herbal ecstasy *n.* A street name for [*ephedrine](#).

herbivore *n.* An animal that feeds on plants, especially grass. *Compare* [CARNIVORE](#), [OMNIVORE](#). **herbivorous** *adj.* [From Latin *herba* a herb + *vorare* to

devour]

hereditarianism *n.* The belief that ***heredity** is the predominant factor determining behaviour or individual differences.

heredity *n.* The transmission from parents to their offspring of genetic factors that partly determine individual characteristics. **hereditary** *adj.* Of or relating to characteristics that can be transmitted genetically from parents to offspring. *See also* **GENE**, **HERITABILITY**, **MENDEL'S LAWS**. [From Latin *hereditas* inheritance, from *heres* an heir]

Hering grey *n.* Any of a set of 50 neutral-grey papers, carefully graded in steps of equal subjective ***lightness** from black to white, representing the range of ***achromatic (1)** colours. US *Hering gray*. [Devised by the German psychologist and physiologist Ewald Hering (1834–1918)]

Hering illusion *n.* A visual illusion in which a pair of parallel straight lines appear to be bowed outwards when superimposed on a series of straight lines radiating like spokes of a wheel from a central point between the parallel lines (see **illustration**). It is closely related to the ***Wundt illusion**. [First reported in 1861 by the German psychologist and physiologist Ewald Hering (1834–1918)]

Hering illusion. The vertical lines are straight and parallel.

Hering image *n.* The first **afterimage* in the sequence of afterimages that follow brief exposure to a bright light, a **positive afterimage* provided that the original stimulus was lighter than its surroundings, otherwise a **negative afterimage* (1), usually appearing in the same colour as the original stimulus but sometimes colourless, persisting for only about 50 milliseconds. Also called a *Hering afterimage*. Compare *HESS IMAGE*, *PURKINJE IMAGE*. [Named after the German psychologist and physiologist Ewald Hering (1834–1918) who first reported it]

heritability *n.* The proportion of **variance*, symbolized by h^2 , in a **phenotypic* variable that is explained by, attributable to, or shared with **genetic variance* in a specified population at a particular time. Thus if $h^2 = .30$ for a particular **trait*, this means that 30 per cent of the total phenotypic variance in that trait is explained by genetic factors. The broad heritability h^2 of a trait is the ratio of genetic variance V_G to total phenotypic variance V_P , and its definition is: h^2 (broad) = V_G/V_P . Narrow heritability is the ratio of additive **genetic variance* V_A , excluding the effects of **dominance* (genetic), **epistasis*, and **assortative mating*, to total phenotypic variance V_P , its definition being: h^2 (narrow) = V_A/V_P . See also *ADOPTION STUDY*, *DF EXTREMES ANALYSIS*, *EMERGENESIS*, *KINSHIP STUDY*, *POPULATION GENETICS*, *TWIN STUDY*. Compare *ENVIRONMENTABILITY*. The term *heritability*, although found in some textbooks and dictionaries, is a barbarism that is avoided in careful usage. **heritable** *adj.* Capable of being inherited. [From Old French *heriter* to inherit, from Latin *hereditas* inheritance, from *heres* an heir + *-abilitas* capacity, from *habilis* able]

Hermann grid *n.* A visual illusion induced by a pattern of black squares separated by narrow white channels, at the intersections of which illusory grey spots appear (see *illustration*). The illusion is believed to be caused by the fact that both ON and OFF regions of **centre-surround receptive fields* are stimulated by white light at the intersections, whereas when the gaze is fixed on other parts of the white channels, the edges of the black squares fall on the OFF regions and the white channels on the ON regions, producing

stronger responses from both types of retinal neurons. *Compare* [EHRENSTEIN BRIGHTNESS ILLUSION](#). [Named after the German physiologist Ludimar Hermann (1838–1914) who first observed it in a design on a book cover and reported his observation in 1870]

Hermann grid. Illusory grey spots appear at the corners of the black squares.

hermaphrodite *n.* 1. Any plant or animal with the reproductive organs of both sexes; in the case of humans, usually having a female sex chromosome but being partly masculinized by abnormally high levels of [*androgens](#) in the womb. *Compare* [PSEUDOHERMAPHRODITE](#). *adj.* 2. Of, relating to, or resembling a hermaphrodite. *Compare* [EPICENE \(1\)](#). **hermaphroditism** *n.* The congenital condition of being a hermaphrodite. [Named after Hermaphroditos in Greek mythology, so called because he was the son of Hermes and Aphrodite, who

merged with a female nymph to form one person]

hermeneutics *n.* **1.** A term first used by the German philosopher Wilhelm Dilthey (1833–1911) to denote the art, skill, or theory of interpreting human behaviour, speech, and writing in terms of intentions and meanings, using methods of understanding that are inapplicable to the natural sciences. *See also* [VERSTEHEN](#). **2.** The branch of knowledge that deals with interpretation, especially of literary texts and Scripture. **3.** In [*existentialism](#), discussion of the meaning of life. [From Greek *hermeneutikos* of or relating to interpretation, from *hermeneuein* to interpret, from *hermeneus* an interpreter + *-ikos* of, relating to, or resembling]

heroin *n.* A bitter-tasting white or brown crystalline powder diacetylmorphine, derived from [*morphine](#), a powerful [*narcotic](#) analgesic with [*psychotropic](#) effects when consumed as a street drug, either by intravenous injection or, if very pure, by smoking or snorting through the nostrils. It is often used as a street drug, although it is highly addictive, and its street names include *gear*, *H*, *horse*, *junk*, *skag*, and *smack*. *See also* [ADDICTION](#), [DEPENDENCE \(2\)](#), [OPIOID-RELATED DISORDERS](#), [SUBSTANCE DEPENDENCE](#), [SUBSTANCE-INDUCED DISORDERS](#), [SUBSTANCE-RELATED AND ADDICTIVE DISORDERS](#), [SUBSTANCE USE DISORDERS](#). [Coined as a trademark from Greek *heros* a hero, probably alluding to its aggrandizing effects + English (*morph*)-*in(e)*]

herpes *n.* Any of a group of seven viruses, including herpes simplex viruses 1 and 2, and cytomegalovirus, associated mostly with skin diseases but also with other disorders. *See also* [HERPES SIMPLEX ENCEPHALITIS](#). [From Greek *herpein* to creep]

herpes simplex encephalitis *n.* A condition caused by [*herpes simplex virus 1](#) in people with severely compromised immune systems, usually from [*AIDS](#) or intensive chemotherapy for cancer. It is characterized by variable lesions in the temporal lobes, parietal lobes, and orbitofrontal cortex, leading to [*anterograde amnesia](#) and [*retrograde amnesia](#) but without loss of short-term memory, sometimes producing signs and symptoms resembling those of [*Klüver–Bucy syndrome](#). **HSE** *abbrev.*

herstory *n.* Feminist history, or history viewed from a female or feminine

*****ebook converter DEMO Watermarks*****

perspective. The word was coined by militant feminists in the US in 1970, although the standard word *history* is not, in fact, a compound of *his* + *story* but derives from the Greek and Latin *historia*, meaning narrative. *See also* [POLITICAL CORRECTNESS](#), [PSEUDOMORPHEME](#). **herstorian** *n.* A writer of herstory. [Coined in 1970 by the US poet and radical feminist Robin Morgan (born 1941) in her book *Sisterhood is Powerful* as a deliberate [*folk etymology \(1\)](#), from *her* + *story*, intended to resemble *history*]

hertz *n.* The unit of [*frequency \(1\)](#) known non-technically as cycles per second. Alternating current (mains electricity) cycles at 50 hertz in the UK and at 60 hertz in the US, Middle C has a frequency of 256 hertz, and EEG alpha waves have frequencies in the region of 8–10 hertz. **Hz** *abbrev.* [Named after the German physicist Heinrich Rudolph Hertz (1857–94) who discovered radio waves in 1887]

Heschl's gyrus *n.* A small [*gyrus](#) running transversely across the [*superior temporal gyrus](#) (temporal operculum) on the upper surface of each temporal lobe immediately in front of the planum temporale. It is occupied by the primary [*auditory cortex](#) and arranged in isofrequency stripes, each stripe responding to a particular tonal frequency, both ears being represented in each cerebral hemisphere because of incomplete crossing of the auditory nerve fibres. [Named after the Austrian pathologist Richard Ladislas Heschl (1824–81)]

Hess image *n.* A third [*positive afterimage](#) occurring in the sequence of afterimages that result from exposure to a brief light stimulus. Also called a *Hess afterimage*. *See also* [AFTERIMAGE](#). *Compare* [HERING IMAGE](#), [PURKINJE IMAGE](#). [Named after the German ophthalmologist Carl von Hess (1863–1923) who drew attention to it]

heteroduplex DNA *n.* Double-stranded [*DNA](#) produced by [*annealing \(2\)](#) two single DNA strands from different organisms in genetic engineering. *See also* [DNA HYBRIDIZATION](#), [HYBRIDIZATION](#), [RECOMBINANT DNA](#). [From Greek *heteros* other + Latin *duplex* twofold or double]

heterogeneity of variance *n.* Another name for [*heteroscedasticity](#).

heterographs *n.* Words that have the same pronunciation but different spelling, such as *write* and *right*. Compare [HOMOPHONES](#). [From Greek *heteros* other + *graphein* to write]

heterological *adj.* Of or relating to an adjective that is non-self-descriptive, such as the adjective *long* (which is not long), *Russian* (which is not Russian), and *monosyllabic* (which is not monosyllabic). See also [GRELLING'S PARADOX](#). Compare [AUTOLOGICAL](#). [From Greek *heteros* other + *logos* a word + Latin *-icalis* of, relating to, or resembling]

heteronyms *n.* Words that are spelt the same but pronounced differently, such as *sow* (an adult female pig) and *sow* (to scatter seed). See also [POLYSEMY](#). Compare [HOMOGRAPHS](#), [HOMONYMS](#). [From Greek *heteros* other + *onoma* a name]

heterophoria *n.* A form of [*strabismus](#) in which one eye tends to deviate either outwards or inwards. Also called *heterotropia*. Compare [CYCLOPHORIA](#), [ESOTROPIA](#), [EXOPHORIA](#), [HYPERPHORIA](#), [HYPOPHORIA](#). **heterophoric** *adj.* [From Greek *heteros* other + *-phoros* carrying, from *pherein* to bear + *-ia* indicating a condition or quality]

heteroscedasticity *n.* In statistics, the degree to which the [*variances](#) of two or more variables differ. Many distribution-dependent statistical tests, such as [*analysis](#) of variance and the [*t test](#) assume [*homoscedasticity](#). Compare [HOMOSCEDASTICITY](#). **heteroscedastic** *adj.* [From Greek *heteros* other + *skedasis* a scattering or dispersion]

heterosexism *n.* Prejudice or discrimination in favour of [*heterosexuals](#) (1) and against [*homosexuals](#) (1). It first appeared in a paper given to the National Council of Teachers of English in San Francisco in 1979 by the US linguist and English teacher Julia Penelope (1941–2013). Compare [ABLEISM](#), [AGEISM](#), [ETHNOCENTRISM](#), [FATTISM](#), [RACISM](#), [SEXISM](#), [SPECIESISM](#). **heterosexist** *n.* 1. One who practises or advocates heterosexism. *adj.* 2. Of or relating to heterosexism. [From *heterosexuality* + Greek *-ismos* indicating a state or condition, on the model of words such as *racism*]

heterosexual *n.* 1. A person who is sexually attracted to members of the opposite sex. *Compare* BISEXUAL (1), HOMOSEXUAL (1). *adj.* 2. Of or relating to heterosexuals or heterosexuality. *Compare* BISEXUAL (2), HOMOSEXUAL (2). **heterosexuality** *n.* Attraction to or sexual activity between members of opposite sexes. [From Greek *heteros* other + Latin *sexus* sex]

heterosis *n.* The increased size, robustness, or health often found in a *hybrid (1, 2) compared with a pure genetic form, also called *hybrid vigour*. A well-known example is associated with the gene that causes the disease sickle-cell anaemia, which is endemic in parts of Africa: individuals who are *homozygous for this gene develop the disease and tend to die young, whereas *heterozygous individuals do not normally develop the disease and are significantly more resistant to malaria than other members of the population. Heterosis is a factor that can contribute towards *balanced polymorphism. [From Greek *heteros* other + *-osis* indicating a process or state]

heterotropia *n.* Another name for *heterophoria. [From Greek *heteros* other + *tropos* a turn, from *trepein* to turn + *ops* an eye + *-ia* indicating a condition or quality]

heterozygote *n.* An organism that is *heterozygous. *Compare* HOMOZYGOTE.

heterozygous *adj.* Having a different *allele of a specified gene inherited from each parent at the same chromosomal *locus, one normally being a *dominant gene and the other *recessive. *Compare* HOMOZYGOUS. **heterozygosis** or **heterozygosity** *n.* The condition of having inherited a different *allele of a specified gene from each parent; the state or condition of being heterozygous. [From Greek *heteros* other + *zygon* a yoke + *-ous* having or characterized by]

heuristic *n.* A rough-and-ready procedure or rule of thumb for making a decision, forming a judgement, or solving a problem without the application of an *algorithm or an exhaustive comparison of all available options, and hence without any guarantee of obtaining a correct or optimal result. The

concept can be traced to the work of the US political scientist and decision theorist Herbert A(lexander) Simon (1916–2001) who first suggested in 1957 that human decision makers with ***bounded rationality** use such procedures when thorough examination of all available options is infeasible. The German psychologists Karl Duncker (1903–40) and Wolfgang Köhler (1887–1967) had earlier interpreted the term more closely to its Greek roots to denote ‘serving to find out or discover’. The concept was reintroduced into psychology in the early 1970s by the Israeli-American psychologists Amos Tversky (1937–96) and Daniel Kahneman (born 1934), and the most important heuristics initially identified and studied by them were the ***anchoring and adjustment heuristic**, the ***availability heuristic**, and the ***representativeness heuristic**. Also called a *cognitive heuristic*. See also **BASE-RATE FALLACY**, **CANCELLATION HEURISTIC**, **DUAL-PROCESS MODEL**, **MEANS-END ANALYSIS**, **RECOGNITION HEURISTIC**, **REGRESSION FALLACY**, **SAMPLE SIZE FALLACY**, **SATISFICING**, **SIMULATION HEURISTIC**. Compare **ALGORITHM**. **heuristic** *adj.* [From Greek *heuriskein* to find]

HEXACO *abbrev.* Honesty–humility, emotionality, extraversion, agreeableness, conscientiousness, and openness to experience. A popular scale to measure six dimensions of ***personality** found in lexical studies of personality structure that have been performed in various languages, and also to reflect our theoretical interpretations of those factors. The full 100-item scale and a shorter 60-item version are provided in several languages free to download from the internet. The scale was designed in 2000 by the Canadian psychologist Michael C(raig) Ashton (born 1970) and the Korean psychologist Kibeom Lee (born 1966) and was first reported in the *European Journal of Personality* in 2001. See also **LANGUAGE PERSONALITY SPHERE**. Compare **BIG FIVE**.

hibernate *vb.* To pass the winter in a dormant state with greatly reduced metabolism, as do some amphibians, reptiles, and mammals. **hibernation** *n.* [From Latin *hibernare* to spend the winter, from *hibernus* wintry, from *hiems* winter]

Hick’s law *n.* The proposition that ***choice reaction time** increases as the logarithm of the number of alternatives. The law is usually expressed by the formula $RT = a + b \log_2 (n + 1)$, where *a* and *b* are constants representing the

*****ebook converter DEMO Watermarks*****

intercept and slope of the function, respectively, and n is the number of alternatives. It was first documented by the German psychologist Julius Merkel (1834–1900) in the journal *Philosophische Studien* in 1885, therefore the name by which it is usually known is a misnomer and there is a strong case for calling it *Merkel's law*. Compare [FITTS' LAW](#). [Named after the English physician W(illiam) Edmund Hick (1912–74) who reformulated it in 1952]

hidden figure *n.* Another name for an embedded figure. See [EMBEDDED-FIGURES TEST](#).

hidden observer *n.* In a person who is hypnotized, a part of the mind that functions separately, experiencing things of which the hypnotized person appears to be unaware. For example, a person under hypnotic [*analgesia](#) who is subjected to [*cold pressor pain](#) may report no pain sensation and may appear quite undisturbed, but if the hypnotist says, 'When I place my hand on your shoulder, I shall be able to talk to a hidden part of you that knows things that are going on in your body, things that are unknown to the part of you to which I am now talking', then the hidden observer may emerge and the person may report strong pain sensations. The phenomenon was observed in 1899 by the US psychologist William James (1842–1910) and by several subsequent researchers, but it was first studied experimentally in 1973 by the US psychologist Ernest R(opiequit) Hilgard (1904–2001), who had rediscovered it by chance during a laboratory demonstration in which a hypnotically deaf subject was asked, in a quiet voice, to raise his right forefinger if 'some part' of him could hear the hypnotist's voice, whereupon the finger rose and the subject immediately asked to have his hearing restored because he had felt his finger move and wanted to know what had been done to him. See also [NEODISSOCIATION THEORY](#).

higher-order conditioning *n.* A form of [*classical conditioning](#) in which a [*conditioned stimulus](#) CS1 is first paired with an [*unconditioned stimulus](#), in the usual way, until CS1 elicits a [*conditioned response](#), then a new conditioned stimulus CS2 is paired with CS1, without the unconditioned stimulus, until CS2 elicits the original conditioned response. For example, the ticking of a metronome may be paired with food powder until it elicits salivation, then a bell may be paired with the metronome until the bell elicits

*****ebook converter DEMO Watermarks*****

salivation, and so on. This process can be extended further back. The corresponding phenomenon in **operant* conditioning is **secondary reinforcement*.

higher-order reinforcement schedule *n.* In **operant* conditioning, any **reinforcement schedule* that incorporates two or more simple schedules. Also called a *higher-order schedule* or a *compound reinforcement schedule*. See CHAINED REINFORCEMENT SCHEDULE, TANDEM REINFORCEMENT SCHEDULE. Compare SIMPLE REINFORCEMENT SCHEDULE.

high-pass filter See BAND-PASS FILTER.

high rising intonation Also called *high rising terminal speech*. See UPTALK.

high vowel *n.* Another name for a **close vowel*.

hikikomori *n.* A **culture-bound syndrome* found almost exclusively in Japan, most commonly among male teenagers and young adults, especially eldest sons, although about a quarter of cases are female. It is characterized by extreme social withdrawal and near-total severance of contact with the outside world, without any other evidence of psychiatric or neurological disorder, usually triggered by an upsetting experience, such as being bullied, failing an examination, or experiencing a broken love affair. People with the disorder usually lock themselves in their bedrooms and refuse to come out for weeks, months, or years. The disorder was first recognized in the 1970s, and the word *hikikomori* was first applied to it by the Japanese Health and Welfare Ministry in 1991. Compare AGORAPHOBIA, SOCIAL ANXIETY DISORDER. [From Japanese *hikikomori* social withdrawal, from *hikikomoru* to stay indoors or shut oneself indoors]

hill climbing *n.* In **connectionism* (1), a numerical method for maximizing a function by invariably moving upwards along a slope of steepest ascent from the current position. The method does not guarantee to reach a global maximum because, like a mountaineer who tries to reach the highest point by always climbing up a slope of steepest ascent from any given point and who gets trapped on a local mound separated by valleys from
*****ebook converter DEMO Watermarks*****

higher peaks, the process may get trapped at a local maximum nowhere near the global maximum or summit. It is used in connectionism and ***parallel distributed processing** to maximize the correlation between the output of a ***network model** and the desired state for a given input. Also called *steepest ascent*. See also [ANNEALING \(1\)](#), [BACK-PROPAGATION ALGORITHM](#). Compare [GRADIENT DESCENT](#).

hindbrain *n.* The ***cerebellum**, ***pons**, and ***medulla** oblongata, responsible for unconscious control functions such as regulation of muscle tonus, posture, heartbeat, blood pressure, and respiration. Also called the *rhombencephalon*, especially in a developing embryo. Compare [FOREBRAIN](#), [MIDBRAIN](#).

hindsight bias *n.* The tendency for people who know that a particular event has occurred to overestimate in hindsight the probability with which they would have predicted it in foresight. It was first reported in 1975 by the US psychologist Baruch Fischhoff (born 1946), who initially invited people to predict the likelihood of events (such as the US president's visit to China) before they occurred and later to recall their predictions. Their recall of their predictions was biased towards what had actually occurred, and they were therefore insufficiently surprised by the events, given their earlier predictions. In a later experiment, participants read descriptions of historical events, judged the likelihoods of various possible outcomes, and were then told what had actually happened. When they were invited to estimate the likelihoods of the possible outcomes once again in the light of this additional information—with the benefit of hindsight—they tended to assign higher likelihoods to outcomes they were told had occurred, and they justified this to themselves by perceiving information supporting this outcome as more relevant than other information that they had been given. See also [OVERCONFIDENCE EFFECT](#).

hippocampal commissure *n.* A thin triangular band of transverse nerve fibres connecting the two cerebral hemispheres at the level of the hippocampus. See also [COMMISSURE](#).

hippocampal formation *n.* ***Ammon's horn** (the hippocampus proper) and its associated structures, namely the ***subiculum** and the ***dentate gyrus**.

hippocampus *n.* A phylogenetically primitive structure in the ***limbic**
*****ebook converter DEMO Watermarks*****

system of the brain, folded into the inner surface of each temporal lobe between the thalamus and the main part of the cerebral cortex, having a cross-section shaped like a sea horse, involved in emotion, motivation, navigation by ***cognitive maps**, learning, and the ***consolidation** of long-term memory (only ***declarative memory** and not ***procedural memory**). The entire hippocampal formation consists of ***Ammon's horn** (the hippocampus proper) together with the ***subiculum** and the ***dentate gyrus**. *See also* ARCHAEOCORTEX, ENTORHINAL CORTEX, FIMBRIA, HIPPOCAMPAL COMMISSURE, KINDLING, LONG-TERM POTENTIATION, PAPEZ CIRCUIT, PARAHIPPOCAMPAL GYRUS, THETA WAVE, UNCUS. **hippocampi** *pl.* [From Greek *hippokampos* a fabulous sea horse, from *hippos* a horse + *kampos* a sea monster]

hiragana *See* KANA.

Hiskey–Nebraska Test of Learning Aptitude *n.* A non-linguistic ***intelligence** test for deaf children, constructed by the US psychologist Marshall S. Hiskey (1908–98).

histamine *n.* A ***base (1)** that is present in all body tissues and is released by ***mast cells** during allergic reactions and when the skin is injured or burnt, causing blood vessels to dilate and smooth muscles outside blood vessels to contract, resulting in the accumulation of tissue fluid and the weal response; it is also a ***biogenic amine** belonging to the class of imidazoleamines and functioning as a ***neurotransmitter** in certain areas of the brain. *See also* ANTIHISTAMINE, AXON REFLEX. [From Greek *histos* tissue + English *amine*, from *am(monium)* + Greek *-ine* indicating an organic compound]

histocompatibility antigen *n.* Any of a number of genetically determined and highly variable proteins, including the major histocompatibility antigens, that are displayed on the surface of almost every body cell, defining tissue type, and are involved in antigen recognition. [From Greek *histos* tissue + Latin *compatibilis* agreeable]

histogram *n.* In descriptive statistics, a graph in which the values of scores of a quantitative variable are plotted, usually on the horizontal axis, and their ***frequencies** are represented by the heights of the bars on the vertical axis. Also called a *block diagram*. *See also* ERROR BAR. *Compare* BAR

*****ebook converter DEMO Watermarks*****

CHART. [Perhaps from *history* + Greek *gramme* a line]

histrionic personality disorder *n.* A ***personality disorder** in ***DSM-5** characterized by a pervasive pattern of excessive emotionality and attention-seeking behaviour, beginning by early adulthood and indicated by such signs and symptoms as discomfort when not being the centre of attention, inappropriate sexually seductive interactions with others, labile and shallow emotional expression, consistent use of physical appearance to attract attention, impressionistic speech style with insufficient detail, self-dramatization and theatricality, suggestibility, and a tendency to consider relationships to be more intimate than they really are. **HPD** *abbrev.* [From Latin *histrionicus* like an actor, from *histrion* an actor]

hit *n.* An impact or blow; a musical, theatrical, or literary creation that gains great popularity; or a shot that reaches its target. In ***signal detection theory**, a correct detection of a signal when it is present. *See also* **MEMORY OPERATING CHARACTERISTIC**, **RECEIVER OPERATING CHARACTERISTIC**. *Compare* **CORRECT REJECTION**, **FALSE ALARM (2)**, **MISS**.

HIV *abbrev.* Human immunodeficiency virus, a ***retrovirus** that is transmitted through sexual contact, infected blood or blood products, and from mother to child via the placenta, and that breaks down the human body's immune system, sometimes producing symptoms of ***dementia**, and often leading to ***AIDS**. **HIV positive** *adj.* Infected by HIV according to the positive result of a blood test.

HIV dementia *n.* Human immunodeficiency virus dementia resulting from infection with ***HIV**, a rapidly progressive ***dementia** experienced by almost one-third of people with ***AIDS**, characterized by cognitive deficits such as ***amnesia** and motor abnormalities such as ***tremor** and ***ataxia**. Also called *AIDS dementia complex* (**ADC**).

hoarding disorder *n.* A mental disorder introduced in ***DSM-5** characterized by persistent difficulty in discarding or parting with possessions regardless of their intrinsic value, and distress when forced to discard them, causing significant impairment in social, occupational, or everyday functioning. People with this condition generally accumulate objects that

*****ebook converter DEMO Watermarks*****

clutter their living space until it can no longer be used comfortably. According to DSM-5, the **prevalence* in the US and Europe is between 2 per cent and 6 per cent. *Compare* *OBSESSIVE—COMPULSIVE DISORDER*. [From Old English *hord* to collect or store]

hoarding orientation *n.* In **neo-Freudian* theory, a term used by the German-born US psychoanalyst Erich Fromm (1900–80) to denote a character type in which security is obtained by holding on to possessions, spending is felt to be threatening and anxiety-arousing, and miserliness extends to feelings as well as material things. *Compare* *EXPLOITATIVE ORIENTATION*, *MARKETING ORIENTATION*, *PRODUCTIVE ORIENTATION*, *RECEPTIVE ORIENTATION*.

hodological space *n.* In the **topological psychology* of the German–US psychologist Kurt Lewin (1890–1947), a special form of topological geometry in which paths and vectors are defined psychologically, the distance between one hodological region and another being not the shortest path but the path of least effort given the attractive and repulsive valences of the regions making up the space. *See also* *PRINCIPLE OF LEAST EFFORT*. [From Greek *hodos* a way + *logos* word, discourse, or reason + Latin *-al* from *-alis* of or relating to]

Höfdding step *n.* According to a theory in **Gestalt psychology*, a mental step in which one **memory trace* makes contact with another, such a step being required for the association of ideas to occur, as when the perception of bread elicits the associated idea of butter, a memory trace of bread having first to be activated and to make contact with a memory trace of butter before the association can occur. [Named after the Danish philosopher and psychologist Harald Höfdding (1843–1931) who suggested it]

hog *n.* A common street name for the depressant drug **phencyclidine*.

holandric *adj.* Transmitted only from fathers to sons by genes carried on the **Y chromosome* that do not have counterparts on the **X chromosome*. *See also* *SEX-LINKED*, *Y-LINKED*. *Compare* *HOLOGYNIC*. [From Greek *holos* whole + *andros* a man + *-ikos* of, relating to, or resembling]

hold-out sample *n.* In statistics, a **sample* of observations withheld from estimation when multiple regression, discriminant function analysis, or any other type of analysis designed to yield a predictive model is being developed, so that the model's ability to predict future scores can be estimated by its ability to predict the data of the hold-out sample.

hole-in-the-hand illusion *n.* A visual illusion produced by holding a tube to the right eye, placing the edge of the left hand against the far end of the tube, and looking at a distant object or surface with both eyes open, whereupon the left hand appears to have a circular hole through it. A cardboard tube from the middle of a roll of kitchen towel or foil is ideal for this demonstration. The illusion, which results from **binocular rivalry*, was first described in print in 1871 in the *Philosophical Magazine* by the US physician and geologist Joseph LeConte (1823–1901).

Holland codes *n.* A classification of **personality* types associated with careers and vocational choices devised by the US psychologist John L(ewis) Holland (1919–2008) and first published in articles in the *Journal of Applied Psychology* in 1958 and the *Journal of Counseling Psychology* in 1959. According to this theory, there are six basic types: Doers (Realistic), Thinkers (Investigative), Creators (Artistic), Helpers (Social), Persuaders (Enterprising), and Organizers (Conventional). Later versions of the **Strong–Campbell Interest Inventory* are based on this typology. Holland's own test to measure these types, first published in 1970, is called the *Self-Directed Search* (SDS).

hollow-face illusion *n.* A concave mask or mould of a human face that looks like a normal convex face when viewed from a distance of about 150 centimetres or more and seems to turn to follow the viewer's movements. The illusion arises from a **top-down processing* assumption made by the visual system that objects are likely to be globally convex. The illusion is weaker for inverted faces and for other objects such as potatoes, disappearing in both cases at about 350 centimetres distance, when **bottom-up processing* based on **stereopsis* overcomes the top-down global convexity assumption. Illumination from below enhances the illusion by duplicating the shadows that would be cast on a normal convex face lit from above (see *CHIAROSCURO*), but the effect is seen even without special lighting, suggesting that the global

*****ebook converter DEMO Watermarks*****

convexity assumption is stronger than the assumption of lighting from above. A dramatic demonstration can be constructed from a mask obtained from a novelty store, by painting the hollow inside roughly to match the colours on the outside and attaching a length of stiff wire or other material so that the mask can be rotated. The illusion was first reported in 1916 by the US lighting engineer and psychologist Matthew Luckiesh (1883–1967) in his book *Light and Shade and Their Applications*, where he commented that ‘the mould actually appeared to be a relief lighted from below’ (p. 120) and that ‘the [hollow face] was not suspected of being a mould and not a relief because the relief is by far the most common in objects of this character’ (p. 122). Compare [ROTATING HEAD ILLUSION](#).

hollow squares illusion *n.* A visual illusion in which columns of staggered hollow squares appear to be misaligned on the horizontal axis (see [illustration](#)). It is essentially a variant of the [*Münsterberg illusion](#) without alternating colours. Also called the *Taylor-Woodhouse illusion*. [First published in 1980 by the English optometrists Stephen P(hilip) Taylor (born 1951) and J(oy) Margaret Woodhouse (born 1948)]

Hollow squares illusion. The figure is composed of identical perfect squares.

Holmgren test *n.* One of the first scientific tests of colour vision, still in use, involving the selection of coloured woollen skeins to match three standard skeins. Compare [ISHIHARA TEST](#), [STILLING TEST](#). [Named after the Swedish physiologist Alarik Frithiof Holmgren (1831–97) who introduced it in 1879 following a railway disaster at Lagerlunda, Sweden, that was believed to have resulted from the driver’s colour-blindness]

holocrine *adj.* Of or relating to a gland, such as the sebaceous gland,

*****ebook converter DEMO Watermarks*****

whose secretions contain the whole of the secreting cell. Compare [APOCRINE](#), [MEROCRINE](#). [From Greek *holos* whole + *krinein* to separate]

hologynic *adj.* Transmitted only from mothers to daughters by recessive genes carried on the [*X chromosome](#) that do not have counterparts on the [*Y chromosome](#). See also [SEX-LINKED](#), [X-LINKED](#). Compare [HOLANDRIC](#). [From Greek *holos* whole + *gyne* a woman + *-ikos* of, relating to, or resembling]

holophrase *n.* A grammatically unstructured speech segment, usually a single word, characteristic of the earliest stage of language acquisition in children, such as *mama* or *allgone*, according to some authorities analysable as one-word sentences (as in *mama* = *There is mama* or *allgone* = *It is all gone*) and sometimes found in the language of adults in utterances such as *thanks* and *sorry*. Compare [PIVOT GRAMMAR](#), [TELEGRAPHIC SPEECH](#). **holophrastic** *adj.* [From Greek *holos* whole + *phrazein* to express]

Holtzman Inkblot Technique *n.* A [*projective test](#), designed to overcome the psychometric weaknesses of the [*Rorschach test](#), introduced by the US psychologist Wayne H(arold) Holtzman (born 1923) and several colleagues in 1961, comprising two parallel sets of 45 ink blots and an elaborate scoring procedure. **HIT** *abbrev.*

homeopathy *n.* An unconventional or alternative form of drug therapy for physical and mental disorders devised by the German physician Christian Samuel Hahnemann (1755–1843), based on the dictum of the Greek father of medicine Hippocrates (?460–?377 BC) that ‘like cures like’ (*similia similibus curantur*), in which a drug that produces a particular pattern of symptoms in a healthy person is used in an extremely dilute form to treat disorders characterized by similar symptoms. Successive dilutions of the drug produce a solution containing virtually no molecules of the original active substance but are believed to have therapeutic properties none the less. Also spelt *homoeopathy*. See also [HORMESIS](#). Compare [ALLOPATHY](#). **homeopath** or **homoeopath** *n.* One who practises homeopathy. **homeopathic** or **homoeopathic** *adj.* [From Greek *homoio-* similar to, from *homos* the same + *pathos* suffering]

homeostasis *n.* The maintenance of equilibrium in any physiological,
*****ebook converter DEMO Watermarks*****

psychological, or social process by an automatic ***feedback** mechanism compensating for disrupting changes. The word was coined by the US physiologist Walter Bradford Cannon (1871–1945) and became popular after the publication in 1932 of his book *The Wisdom of the Body*, in which the process is described in relation to the automatic maintenance of body temperature and components of blood, including water, salt, sugar, proteins, fat, calcium, oxygen, hydrogen ions—the list could be extended in the light of subsequent discoveries. *See also* **APPESTAT**, **CLOSED-LOOP CONTROL**, **CYBERNETICS**, **FEEDBACK**, **PRINCIPLE OF CONSTANCY**, **THERMOREGULATION**, **SET POINT**. **homeostatic** *adj.* [From Greek *homos* same + *stasis* a standing]

homeothermic *See* **HOMOIOTHERMIC**.

hominid *n.* Any member of the ***family** (2) Hominidae, including modern humans and their extinct ancestors such as ***australopithecines**. **hominid** *adj.* Belonging to the family Hominidae. [From Latin *homo* man + *-ida* indicating offspring]

hominoid *n.* 1. Any member of the superfamily Hominoidea, including both ***hominids** and ***anthropoid** (1) apes. *adj.* 2. Belonging to the superfamily Hominoidea; apelike. [From Latin *homo* man + Greek *-oeides* denoting resemblance of form, from *eidos* shape]

Homo *n.* A ***genus** of ***hominids** that includes the ***species** *Homo sapiens* (modern man) and various extinct forerunners such as *H. erectus* (increasingly called *H. ergaster*), *H. habilis*, *H. neanderthalensis* (Neanderthal man), and *H. heidelbergensis*, the last of these being a probable ancestor of both *H. neanderthalensis* and *H. sapiens*, the human species that evolved in Africa about 150,000 years ago. *See also* **MITOCHONDRIAL DNA**. [From Latin *homo* a man]

homoeopathy *See* **HOMEOPATHY**.

homogeneity of variance *n.* Another name for ***homoscedasticity**.

homogeneous subset *n.* In statistics, after calculating a ***multiple**

comparison, a set of groups that have means which are not significantly different from one another.

homographs *n.* Words that are spelt the same but have different meanings, such as *content* (what is inside) and *content* (satisfied) or *wind* (air) and *wind* (twist). Homographs are one of the two major classes of ***homonyms**. Compare **HETERONYMS**, **HOMOPHONES**. [From Greek *homos* same + *graphein* to write]

homoiothermic *adj.* Warm-blooded, or having a body temperature that remains constant with changes in ambient temperature. Also called *homeothermal*, *homeothermic*, *homothermal*, or *homothermous*. Compare **POIKILOTHERMIC**. See also **THERMOREGULATION**. **homoiothermy** or **homoiothermism** *n.* [From Greek *homos* the same + *therme* heat + *-ikos* of, relating to, or resembling]

homologous *adj.* Having a related, similar, or corresponding position, structure, or origin. [From Greek *homologos* agreeing, from *homos* the same + *legein* to speak]

homologous chromosomes *n.* Any pair of ***chromosomes**, one from the father and one from the mother, that are similar in appearance and pair with each other during ***meiosis (1)**, one member of each pair being carried by every ***gamete**.

homologue *n.* Anything that is ***homologous** to something else. Also spelt *homolog*.

homonymous hemianopia *n.* Blindness in the left or right ***visual field** affecting both eyes, caused by unilateral damage to the visual cortex or the nerve fibres with projections there, often resulting from a massive ***stroke** in one side of the brain. A person with this condition may be unaware of being totally blind in half the visual field, because the blindness is not like a conspicuous black curtain draped over half a television screen, as many people assume, but is simply a portion of the immediate environment that is not visible, as is the area behind the head of a person with normal vision; but a person with left homonymous hemianopia who gazes fixedly at the dot in
*****ebook converter DEMO Watermarks*****

the printed sequence *L.R* will see the *R* but not the *L*, and a person with right homonymous hemianopia will see the *L* but not the *R*. To test for these forms of ***hemifield** blindness, the person is usually asked to close one eye and fixate on a point directly ahead with the other eye while a conspicuous object is waved in the area to the left and right of the fixation point, and then the procedure is repeated with the other eye. Another method is the ***line bisection test**. Also called *homonymous hemianopsia*, *homonymous hemiopia*, *homonymous hemiamblyopia*, or *spatial neglect*. See also **DIVIDED VISUAL FIELD**. Compare **HEMIANOPIA**. [From Greek *homos* same + *onoma* a name + *hemi-* half + *a-* without + *opsis* sight, from *ops* an eye + *-ia* indicating a condition or quality]

homonyms *n.* Words that are spelt the same way but have different meanings, such as *bear* (animal) and *bear* (carry), also called ***homographs**, or that have the same pronunciation but different spelling or meaning, such as *rest* (relaxation) and *wrest* (take by force), also called ***homophones**. See also **POLYSEMY**. Compare **HETERONYMS**, **HOMOGRAPHS**. [From Greek *homos* same + *onoma* a name]

homonym symptom *n.* A pattern of speech, associated with ***thought disorder** in general and ***loosening of associations** in particular, in which the speaker hops from one topic to another via ***homonyms**, as in: *The pain is hard to bear, doctor, a koala bear came to the zoo from China cups and saucers for the goose is sauce for the gander.*

homophones *n.* Words that have the same pronunciation but different spelling or meaning or both, such as *write* and *right*, *threw* and *through*, or *rest* (relaxation) and *rest* (remainder). Homophones are one of the two major classes of ***homonyms**. Compare **HETEROGRAPHS**, **HOMOGRAPHS**, **HOMONYMS**. [From Greek *homos* same + *phone* sound]

homoscedasticity *n.* In statistics, the degree of similarity in the ***variances** of two or more variables. Many distribution-dependent statistical tests, such as ***analysis** of variance and the ***t test**, assume homoscedasticity. Compare **HETEROSCEDASTICITY**. **homoscedastic** *adj.* [From Greek *homos* same + *skedasis* a scattering or dispersion]

homosexual *n.* **1.** A person who is sexually attracted to members of the same sex. *Compare* [BISEXUAL \(1\)](#), [HETEROSEXUAL \(1\)](#). *adj.* **2.** Of or relating to homosexuals or homosexuality. *Compare* [BISEXUAL \(2\)](#), [HETEROSEXUAL \(2\)](#). **homosexuality** *n.* Attraction to or sexual activity with members of one's own sex. *See also* [DIGIT RATIO](#), [EGO-DYSTONIC SEXUAL ORIENTATION](#), [LATENT HOMOSEXUALITY](#), [LESBIAN](#), [NARCISSISM](#). [From Greek *homos* the same + Latin *sexus* sex]

homothermic *See* [HOMOIOTHERMIC](#).

homozygote *n.* An organism that is **homozygous* for a specified factor, thus having **gametes* of only one kind for that factor and consequently breeding true to type. *Compare* [HETEROZYGOTE](#).

homozygous *adj.* Having identical **alleles* of a specified gene at the same chromosomal **locus*, as in an individual who inherits the same gene for blue eye colour from both parents and is therefore blue-eyed, although the gene is **recessive*. *Compare* [HETEROZYGOUS](#). **homozygosis** or **homozygosity** *n.* The condition of having inherited identical **alleles* of a specified gene from both parents; the state or condition of being homozygous. [From Greek *homos* the same + *zygon* a yoke + *-ous* having or characterized by]

homunculus *n.* A tiny man, especially the completed homunculus depicting the surface of the human body, with each part drawn in proportion to its representation in the **somatosensory cortex* (see [illustration](#)), or the **somatosensory homunculus* often used to depict the layout of the **sensory* projection areas of the somatosensory cortex. The term was formerly used to denote the minute but fully formed human form that was believed by the **preformationists* to be present in every spermatozoon or ovum. [From Latin *homunculus* a little man, diminutive of *homo* a man]

Homunculus. The distorted body parts indicate the relative sizes of their sensory projection areas in the somatosensory cortex; adapted from Penfield and Rasmussen's *The Cerebral Cortex of Man* (1950).

honestly significant difference test See [TUKEY-HSD TEST](#).

honey-bee dance See [ROUND DANCE](#), [WAGGLE DANCE](#).

Honi phenomenon *n.* An effect of viewing a very familiar person in the [*Ames room](#), the illusory distortion usually created by the abnormal perspectives of the room being partly or wholly suppressed. [Named after the family nickname of a woman who first experienced and reported the phenomenon when she observed both a stranger and her husband in the Ames room in 1949 and saw a size distortion in the stranger but not in her husband]

hook order *n.* A [*dominance hierarchy](#) in a herd of cattle in which each animal is able to gore only those lower in the hierarchy without retaliation and is liable to be gored only by those above. Compare [PECKING ORDER](#). [From *hook* to catch or gore with the horns]

*****ebook converter DEMO Watermarks*****

Hopfield rule See [HEBBIAN RULE](#).

horizon *n.* The circle at which the Earth and sky appear to meet and on which the [*vanishing point](#) is usually located, also called the *apparent horizon* or the *visible horizon*; a plane forming a tangent to the Earth at the position of an observer, also called a *sensible horizon*; a plane through the centre of the Earth parallel to the apparent horizon, also called the *celestial horizon* or *rational horizon*; figuratively, the limit or scope of a person's perception, knowledge, interest, experience, or expectation. **horizontal** *adj.* [From Greek *horizon* (*kyklos*) limiting (circle), from *horizein* to limit, from *horos* a limit]

horizontal cell *n.* A type of cell in the [*retina](#) that lacks an [*axon](#), lying perpendicular to the sensory pathway and linking [*photoreceptors](#) and [*bipolar cells](#), one of its important functions being to inhibit neurons outside the immediate zone of excitation. Compare [AMACRINE CELL](#).

horizontal décalage See [DÉCALAGE](#).

horizontal icicle plot *n.* In statistics, a graphical representation of successive steps of a [*cluster analysis](#) in which the individuals or cases are represented in the display by the rows, and the steps of the analysis by the columns, with individuals or cases in the same cluster being joined by a vertical line. A horizontal icicle plot is especially useful when there are many individuals or cases so that a [*vertical icicle plot](#) cannot fit across a single page. Compare [VERTICAL ICICLE PLOT](#).

horizontal plane *n.* A plane parallel to the horizon dividing the brain or any other organ or organism into top and bottom parts. (see illustration at [*coronal plane](#)). Also called *transverse plane*. Compare [CORONAL PLANE](#), [SAGITTAL PLANE](#).

horizontal section *n.* A cutting through a [*horizontal plane](#). Compare [CORONAL SECTION](#), [SAGITTAL SECTION](#), [TRANSVERSE SECTION](#).

horizontal-vertical illusion *n.* A visual illusion that causes a vertical

distance to appear greater than an equal horizontal distance, usually illustrated with an inverted T whose horizontal and vertical lines are of equal length (see [illustration](#)), first reported in 1858 by the German psychologist Wilhelm (Max) Wundt (1832–1920). *See also* [TEACUP ILLUSION](#), [TOP HAT ILLUSION](#).

Horizontal–vertical illusion. The horizontal and vertical lines are the same length.

horme *n.* In [*analytical psychology](#), a word introduced by Carl Gustav Jung (1875–1961) to denote vital or purposeful energy. Also spelt *hormé*. [From Greek *horme* animal impulse]

hormesis *n.* A phenomenon in which a [*dose–response curve](#) shows low-dose stimulation and high-dose inhibition, as in a [*drug](#) that has beneficial

*****ebook converter DEMO Watermarks*****

effects at a low dose and toxic or harmful effects at a higher dose, relative to criteria such as health, stress tolerance, growth, or longevity. An example is **alcohol*, beneficial at low dosages in preventing heart disease and stroke, but toxic at higher dosages. The phenomenon has controversially been used to lend credibility to **homeopathy*. The term was introduced by the Master's degree student of forestry Chester M. Southam (1919–2002) and his supervisor John Ehrlich (1907–92) in an article in the journal *Phytopathology* in 1943. **hormetic** *adj.* [From Greek *horme* animal impulse + *-sis* indicating action]

hormonagogue *n.* A substance that stimulates the secretion of a hormone, a typical example being nicotine, which stimulates the secretion of vasopressin. [From *hormone* + Greek *agogos* leading, from *agein* to lead]

hormone *n.* Any of a large number of chemical substances secreted into the bloodstream by an **endocrine gland* and transported to another part of the body where it binds to a specific type of receptor and exerts a particular effect, enabling the endocrine system to function as a communication system between cells alongside and independently of the nervous system. Most hormones are either **peptide hormones* or **steroid hormones*, and among the most important are the **androgens*, **corticosteroid hormones*, **gonadotrophins*, **masculinizing hormones*, **neurohormones*, **neuropeptides*, **releasing hormones*, **sex hormones*, and **trophic hormones*. *See also* ADRENALIN, ADRENOCORTICOTROPHIC HORMONE, ALDOSTERONE, ANABOLIC STEROID, ANDROSTERONE, ANGIOTENSIN II, CALCITONIN, CHOLECYSTOKININ, CORTICOSTERONE, CORTICOTROPHIN-RELEASING HORMONE, CORTISOL, CORTISONE, DEXAMETHASONE, DOPAMINE, ENKEPHALIN, FOLLICLE-STIMULATING HORMONE, GLUCAGON, GONADOTROPHIN-RELEASING HORMONE, GROWTH HORMONE, GROWTH HORMONE RELEASING HORMONE, INSULIN, LEPTIN, LUTEINIZING HORMONE, LUTEINIZING HORMONE RELEASING HORMONE, MELANOCYTE-STIMULATING HORMONE, MELATONIN, MÜLLERIAN INHIBITING SUBSTANCE, NORADRENALIN, OESTRADIOL, OESTROGEN, OESTRONE, OXYTOCIN, PARATHYROID HORMONE, PROGESTERONE, PROLACTIN, RELAXIN, RENIN, TESTOSTERONE, THYROID-STIMULATING HORMONE, THYROTROPHIN-RELEASING HORMONE, THYROXINE, VASOPRESSIN. [Coined in 1904 by the British physiologist Ernest Henry Starling (1866–1927) from Greek *horman* to stir up or urge on]

Horner's law *n.* The proposition that the most common forms of **colour-blindness* are transmitted from males to males through female carriers. *See also* DALTONISM, X-LINKED. [Named after the Swiss ophthalmologist Johann Friedrich Horner (1831–86) who formulated it]

Horner's syndrome *n.* A **neurological* condition caused by damage to or malfunction of the **sympathetic nervous system*, often associated with a spinal cord injury, characterized by **ptosis* of one eyelid, constriction of the corresponding pupil, and inability to sweat on that side of the face. [Named after the Swiss ophthalmologist Johann Friedrich Horner (1831–86) who first described it]

horologagnosia *See* AGNOSIA.

horopter *n.* The curved surface of points in space that, for a given degree of **ocular convergence*, are projected on to **corresponding retinal points*, all points on the horopter being perceived as the same distance away as the point being fixated. Points close to the horopter within **Panum's fusion area* give rise to **binocular disparity* and produce sensations of three-dimensional depth, and points far from the horopter outside Panum's fusion area fail to result in **binocular fusion* and produce double images or **diplopia*. *See also* CORRESPONDENCE PROBLEM, STEREOPSIS. [From Greek *horos* boundary + *optos* seen, from *ops* an eye]

horse *n.* A street name for **heroin*.

hospice *n.* A nursing home for the care of people who are terminally ill. [From Latin *hospes* a guest]

hospital hopper syndrome *n.* A colloquial name for **factitious disorder*.

hospitalism *n.* A term introduced in 1945 by the Austrian psychoanalyst René A(rpad) Spitz (1887–1974) to denote the physical and psychological effects on an infant (up to 18 months old) of prolonged and total separation from its mother, due to hospitalization or some other similar cause.

According to Spitz, the characteristics include retarded physical development and disruption of perceptual–motor skills and language. *See also* [ANACLETIC DEPRESSION](#), [ATTACHMENT THEORY](#), [MATERNAL DEPRIVATION](#), [SEPARATION ANXIETY](#), [SEPARATION ANXIETY DISORDER](#).

hot sauce task *n.* A frequently used laboratory measure of [*aggression](#) in response to provocation, developed by the US psychologist Joel D. Leiberma (born 1967) and three colleagues and published in the journal *Aggressive Behavior* in 1999. The task is disguised as a food-tasting study. After tasting and rating a sample of food, participants are asked to prepare a food sample for a fictitious participant who has previously provoked them. The amount of hot sauce that the participant chooses to add to this person's food is taken as an indicator of aggression in response to provocation. *Compare* [POINT SUBTRACTION](#) [AGGRESSION PARADIGM](#), [TAYLOR AGGRESSION PARADIGM](#). **HST** *abbrev.*

hot spot *n.* In genetics, a region of a chromosome or a gene that has a propensity for [*recombination](#) or [*mutation](#). Also written *hotspot*.

HOUND *abbrev.* Humble, old, unattractive, non-verbal, and dumb, the syndrome of personal qualities that counsellors, therapists, and people in general supposedly find most unappealing in their clients or associates. *Compare* [YAVIS](#).

House–Tree–Person technique *n.* A [*projective test](#) developed by the US psychologist John N. Buck (1906–83) and first published in the journal *Clinical Psychology Monographs* in 1948 in which the respondent is asked to make freehand drawings of a house, a tree, and a person, first in pencil, then in crayon, and is then asked 20 questions about each drawing. Interpretations of the drawings are based on the assumptions that the drawing of the house reveals aspects of the respondent's home life and family relationships, the tree reflects unconscious feelings about the self, and the person shows aspects of the self, interpreted similarly to the [*Draw-a-Person test](#). The test gained a certain notoriety during the 1990s when it was recommended as a device for discovering evidence of sexual abuse in children but was criticized for lack of [*validity](#). **H–T–P** *abbrev.*

HPA axis *abbrev.* The hypothalamic–pituitary–adrenal axis, a self-regulating system, based on negative **feedback*, in which **hormones* are released from the **hypothalamus*, stimulating the release of a different class of hormones from the **pituitary gland*, which in turn stimulate secretions of a third class of hormones from the **adrenal glands* and the **testes*, or **ovaries*, the whole cycle playing an important role in the regulation of hunger, thirst, sleep, mood, sexual activity, learning, and memory.

hue *n.* The dimension of a **colour* that is determined by the wavelength of the light in relation to the wavelengths reflected from objects or surfaces in other parts of the visual field and that gives rise to a qualitative sensation such as red or blue, the other major dimensions of colour being **saturation* (1) and **lightness*. The *Munsell hue scale* contains five principal hues (red, yellow, green, blue, purple) and five intermediate hues (yellow–red, green–yellow, blue–green, purple–blue, red–purple). *See also* CHROMA, CHROMATIC (1), CHROMATICITY, MUNSELL COLOUR SYSTEM, NON-SPECTRAL COLOUR. [From Old English *hīw* beauty, cognate with Old Norse *hý* fine hair]

hug drug *n.* A street name sometimes used for **ecstasy* (2), because of the feelings of empathy and benevolence that it induces.

Hullian learning theory *n.* An elaborate theory of **learning* (1) formulated in 1940 by the US psychologist Clark L. Hull (1884–1952), published in his book *Principles of Behavior* (1943), and presented in a modified form in *A Behavior System* (1952). In the final version, the **independent variables* are stimulus energy (*S*), work involved in response (*W*), number of reinforcements (*N*), and difference between the current stimulus and the stimulus used in training (*d*); the **dependent variables* are **reaction latency* (s_{tR}), **response amplitude* (*A*), and number of unreinforced responses required to produce extinction (*n*); and the theory also has scores of **intervening variables*. The gist of the theory is as follows: learning is represented by **habit strength* (sH_R), the *S* and the *R* nestling on either side of the *H* to symbolize the role of a habit in linking stimuli to responses, and sH_R is a logarithmic function of *n*. **Generalized habit strength* (sH_R) is determined jointly by sH_R and *d*. **Generalized reaction potential* (sE_R) is a multiplicative function of sH_R and three other intervening variables: $sE_R =$

*****ebook converter DEMO Watermarks*****

${}_SH_R \times D \times K \times V$, where D is **drive strength*, K is **incentive motivation* (determined in turn by W) and V is **stimulus intensity dynamism* (determined in turn by S). **Net reaction potential* is defined as follows: ${}_SE_R = {}_SE_R - {}_SI_R$, where ${}_SI_R$ is aggregate inhibitory potential (determined in turn by d and W acting via various intervening variables). Finally, ${}_SE_R$ interacts with **behavioural oscillation* (${}_SO_R$) and **reaction threshold* (${}_SL_R$) to determine the dependent variables ${}_St_R$, A , and n .

human factors psychology *n.* Another name for **ergonomics*.

human immunodeficiency virus See *HIV*.

human interest score *n.* One of the **Flesch indices* of the readability of text, defined by the formula $HI = (3.635 \times \text{average number of personal words per 100 words}) + (0.314 \times \text{average number of personal sentences per 100 sentences})$, where personal words are pronouns referring to people, words of identifiable masculine or feminine gender (such as *Mary*, *sister*, or *iceman*), and the words *people* and *folks*, and personal sentences are spoken sentences in quotation marks, questions, commands, requests, other sentences addressed directly to the reader, and also exclamations and grammatically incomplete sentences whose meaning has to be inferred from their contexts. A human interest score of zero indicates that the text has no human interest, 30 that it is interesting, 50 that it is very interesting, and 80 that it is dramatic. Although the theoretical upper limit is about 395, in practice human interest scores are almost always below 100. See also *READING EASE SCORE*.

humanistic psychology *n.* An approach to psychology that became popular in the 1960s, influenced by **existentialism* and **phenomenology*, stressing individual free will, responsibility, and **self-actualization*. See also *CLIENT-CENTRED THERAPY*, *NEED-HIERARCHY THEORY*, *NEURO-LINGUISTIC PROGRAMMING*, *PEAK EXPERIENCE*.

human performance *n.* The effectiveness with which tasks or purposeful activities are carried out or accomplished by people in the workplace, sports arena, or elsewhere. Factors affecting human performance are investigated especially in **ergonomics*.

*****ebook converter DEMO Watermarks*****

human relations group See T-GROUP.

Hume's fork *n.* The argument first advanced by the Scottish philosopher David Hume (1711–76) in section IV, part I of his *Inquiry Concerning Human Understanding*, that the only legitimate sources of knowledge or belief are **reason* and **empirical* evidence, an often-quoted synopsis of the argument occurring at the end of the book: 'If we take in our hand any volume; of divinity or school metaphysics, for instance; let us ask, *Does it contain any abstract reasoning concerning quantity or number?* No. *Does it contain any experimental reasoning concerning matter of fact and existence?* No. Commit it then to the flames: for it can contain nothing but sophistry and illusion' (section XII, part III, italics in original). In **logical positivism*, a strong form of Hume's fork was used as a criterion for distinguishing sense from nonsense, the assumption being that any assertion that failed the test was literally nonsensical. See also EMPIRICISM, RATIONALISM (1).

Hume's problem *n.* The problem of **induction* (1).

humour *n.* **1.** Anything that is funny, witty, or amusing, or that has the capacity to make people laugh. Most forms of humour can be classified into the following categories: slapstick, misunderstanding/farce, innuendo, pun/wordplay, mimicry/parody/satire, irony/sarcasm, exaggeration, analogy/comic metaphor, inappropriate response, comic repetition, reversal of reality, black humour. **2.** A state or disposition of mind or mood, as in the phrases *bad humour* or *good humour*. **3.** According to a doctrine propounded by pre-Socratic philosophy and widely accepted until the Renaissance, any of the four cardinal bodily fluids, the balance of which was believed to determine a person's **temperament* or **personality*: people were thought to be more or less sanguine (optimistic), melancholic (depressive), choleric (short-tempered), or phlegmatic (unemotional) according to the balance in their bodies of blood (*sanguis*), black bile (*melaina chole*), yellow bile (*chole*), and phlegm (*phlegma*). Also called a *cardinal humour*. US *humor*, *cardinal humor*. See also AQUEOUS HUMOUR, COMPLEXION (2), TEMPERAMENT, VITREOUS HUMOUR. Compare YIN AND YANG. [From Latin *umere* to be moist]

Humphrey's law *n.* The proposition that consciously thinking about one's performance of a task that involves **automatic processing* impairs
*****ebook converter DEMO Watermarks*****

one's performance of it. For example, golfers who think too closely about their golf swings may find that they cannot swing properly, and a man who thinks too closely about how he knots a bow tie may find that he cannot do it. *See also* [CENTIPEDE EFFECT](#), [HYPER-REFLECTION](#). [Named after the English psychologist George Humphrey (1889–1966) who propounded it in 1951]

hunger *n.* 1. Appetite, craving, desire, or need for food; figuratively, a strong desire for anything else. *vb.* 2. To have a hunger for something. *See also* [2-DEOXYGLUCOSE](#), [GLUCOSTATIC THEORY](#), [HPA AXIS](#), [HYPOTHALAMUS](#), [LIMBIC SYSTEM](#), [LIPOSTATIC THEORY](#), [MEDIAL FOREBRAIN BUNDLE](#), [SPECIFIC HUNGER](#). **hungry** *adj.* [From Old English *hungor* a hunger, *hyngnan* to hunger]

Huntington's disease *n.* A rare hereditary disorder (affecting about 1 in 20,000 people) transmitted by a single [*dominant gene](#) on the tip of [*chromosome 4](#), with damage to the [*basal ganglia](#), characterized by widespread degeneration of the brain, [*dementia](#), and [*chorea](#), with onset after the age of 40 and slow progression leading to death usually within 10–15 years. Also called *Huntington's chorea*. **HD** *abbrev.* [Named after the US neurologist George S. Huntington (1850–1916) who described it in 1872, though it had already been described in 1841 by the US physician Charles Oscar Waters (1816–92) in a letter to the US-based English physiologist Robley Dunglison (1798–1869), who reported it in a book entitled *Practice of Medicine* (volume 2) in 1842]

Hunt–Minnesota test *n.* A psychometric test constructed by the US psychologist Howard Francis Hunt (1918–2001), designed to detect organic brain damage, including a vocabulary test (taken from the [*Stanford–Binet intelligence scale](#)), six memory and recall tests, and nine further tests.

Hurler's syndrome *n.* A hereditary metabolic disorder transmitted by a recessive gene resulting in the absence of an enzyme and leading to severe [*intellectual disability](#), swelling of the liver and spleen, low forehead, enlarged head, often clouding of the corneas of the eyes, and usually death during childhood from heart or lung complications. Also called *gargoylism*. [Named after the German paediatrician Gertrud Hurler (1889–1965) who first described it in 1919]

hwa-byung *n.* A **culture-bound syndrome* of Korea and emigrant Korean communities in other countries, attributed locally to suppression of anger, characterized by **panic attacks*, **dyspnoea*, **thanatophobia*, **insomnia*, **anorexia*, **palpitation*, **fatigue* (1), joint or muscle pains, indigestion, and a sense of fullness in the pit of the stomach. [Korean *hwa-byung* anger syndrome]

hyalophagia *n.* Eating glass. *See also* *PICA*. [From Greek *hyalos* glass + *phagein* to consume + *-ia* indicating a condition or quality]

hybrid *n.* 1. In genetics, the offspring of a cross between genetically dissimilar forms, such an organism being necessarily sterile if the cross is between different **species*; also, a molecule of **DNA* composed of portions from different organisms. *See also* *DIHYBRID*. 2. Any organism of mixed ancestry. 3. A word formed by combining parts from different languages, as in *bureaucracy*, from French *bureau* a department or office + Greek *kratos* power; or *amoral*, from Greek *a-* not + Latin *moralis* moral. *adj.* 4. Of or relating to an organism of genetically mixed parentage or a word of linguistically mixed origin. [From Latin *hybrida* the offspring of a mixed union, originally a tame sow and a wild boar]

hybrid image *n.* An image that appears to depict different faces, objects, or scenes from different viewing distances (see *illustration*). Such an image is constructed by combining one image represented in low **spatial frequencies* (fine detail) and a different image in high spatial frequencies (broad-brush features). The famously elusive and enigmatic smile in the Mona Lisa painting by the Italian artist and polymath Leonardo da Vinci (1452–1519) was explained in a letter to the journal *Science* in 2000 by the US neurobiologist Margaret S. Livingstone (born 1950) as a hybrid image. When looked at directly, with the sharp resolution of central vision, the high spatial frequency detail in the area of the Mona Lisa's mouth shows no smile, but when observed in peripheral vision or from a distance, the lower frequency **sfumato* outline reveals a distinct smile. *Compare* *AMBIGUOUS FIGURE*, *BLOCK PORTRAIT*, *NAVON FIGURE*. [From *hybrid* of mixed origin, from Latin *hybrida* the offspring of a mixed union, first applied to images and stimuli by the Belgian psychologist Philippe G. Schyns (born 1963) and the French psychologist Aude Oliva (born 1968) in an article in the journal

*****ebook converter DEMO Watermarks*****

Psychological Science in 1994]

Hybrid image. When this image (from Aude Oliva, MIT) is viewed from close up, it looks like Albert Einstein; from farther away, it looks like Marilyn Monroe.

hybridization *n.* A technique of **genetic engineering* for determining the degree of relatedness of two DNA or RNA samples by **annealing (2)* them to form hybrid molecules of **heteroduplex DNA*, the stability of which indicates the degree of relatedness. *See also* [DNA HYBRIDIZATION](#), [RECOMBINANT DNA](#).

hybridize *vb.* To produce a **hybrid (1, 2)* or to interbreed.

hybrid sterility *n.* Inability of an organism to produce offspring owing to

*****ebook converter DEMO Watermarks*****

the fact that it is a ***hybrid (1, 2)**, as in a cross between two different ***species**. Compare **HYBRID VIGOUR**.

hybrid vigour *n.* The increased size, robustness, and health often found in a ***hybrid (1, 2)** compared with its parents. Also called *heterosis*. Compare **HYBRID STERILITY**.

hydraulic theory *n.* Any theory based on liquid in motion or under pressure, either literally as in certain theories of hearing, or figuratively as in the ***economic** aspects of ***psychoanalysis** that are more correctly called the ***principle of constancy** and the ***quota of affect**. [From Greek *hydraulikos* hydraulic, from *hydor* water + *aulos* a pipe + *-ikos* of, relating to, or resembling]

hydrazine *n.* A colourless liquid ***base (1)** made from sodium hydrochlorite and ammonia and used in the manufacture of certain monoamine oxidase inhibitor drugs such as ***isocarboxazid** and ***phenelzine**. [From Greek *hydor* water + *azo* indicating a compound containing the divalent group —N:N— + *-ine* an organic compound]

hydrocephalus *n.* A disorder sometimes caused by a mutant gene on the ***X chromosome**, associated with obstruction of the flow of ***cerebrospinal fluid** and its accumulation in the ***ventricles** of the brain, causing increased intracranial pressure, leading in infants to an enlargement of the head and a wide range of impairments and disorders. Also written *hydrocephaly*, and referred to non-technically as *water on the brain*. See also **AGENESIS OF THE CORPUS CALLOSUM**. Compare **MACROCEPHALY**. **hydrocephalic** *adj.* [From Greek *hydor* water + *kephale* the head]

hydrocortisone *n.* Another name for ***cortisol**. [From Greek *hydor* water + English *cortisone*]

hydrolysis *n.* Chemical decomposition caused by reaction with water, as when a salt is decomposed into an acid and a base, or an ester to an acid and an alcohol. **hydrolyse** or, especially in the US, **hydrolyze** *vb.* [From Greek *hydor* water + *lysis* loosening]

hydromorphone *n.* Hydromorphone hydrochloride, a **narcotic analgesic* drug, used in the management of moderate and severe pain and sometimes taken as a street drug. [From Greek *hydor* water + English *morphine* + Greek *-one* indicating a chemical compound that is a ketone, from *-one* a feminine name suffix]

hyoscine *n.* Another name for **scopolamine*.

hyoscyamine *n.* A poisonous **alkaloid* occurring in **henbane*, **deadly nightshade*, and related plants, with similar pharmacological properties to **atropine*. [From Greek *hyoskyamos*, from *hys* a pig + *kyanion* cyanide, from *kyamos* a bean, alluding to the fact that the plant is poisonous to pigs + English *amine*]

hypacusia *n.* Partial deafness. Also spelt *hypacusia* or *hypoacusia*. Also called *hypacosis*. **hypacusic** *adj.* [From Greek *hypo* under + *akousis* hearing, from *akouein* to hear + *-ia* indicating a condition or quality]

hypoesthesia *n.* Abnormally diminished touch sensitivity. US *hypesthesia*. Also called *hypoesthesia* or *hypoesthesia*. **hypoesthetic** or **hypesthetic** *adj.* [From Greek *hypo* under + *aisthesis* sensation + *-ia* indicating a condition or quality]

hypalgesia *n.* Abnormally diminished sensitivity to pain. **hypalgesic** *adj.* [From Greek *hypo* under + *algesis* sense of pain, from *algos* pain + *-ia* indicating a condition or quality]

hyperactivity *n.* Abnormal or pathological overactivity; a prominent feature of **attention-deficit/hyperactivity disorder* and **hyperkinetic disorders*.

hyperacusis *n.* Abnormally sensitive hearing resulting in uncomfortable sensitivity to sounds, a common symptom of **Bell's palsy* and **Williams syndrome*. Also spelt *hyperacosis*. Also called *hyperacusia* or *hyperacousia*. See also *HEIMDALLR SENSITIVITY*. **hyperacusic** *adj.* [From Greek *hyper* over + *akousis* hearing, from *akouein* to hear + *-ia* indicating a condition or quality]

hyperaesthesia *n.* Increased sensitivity of any of the sense organs, especially touch. US *hyperesthesia*. Also called *superaesthesia* or *superesthesia*. See also [HEIMDALLR SENSITIVITY](#), [THIGMOHYPERAESTHESIA](#), [TRANSLIMINALITY](#). **hyperaesthetic**, **hyperesthetic**, or **hyperesthetic** *adj.* [From Greek *hyper* over + *aisthesis* sensation, from *aisthanesthai* to feel + *-ia* indicating a condition or quality]

hyperalgesia *n.* Abnormally heightened sensitivity to pain. See also [HEIMDALLR SENSITIVITY](#). **hyperalgesic** *adj.* [From Greek *hyper* over + *algesis* sense of pain, from *algos* pain + *-ia* indicating a condition or quality]

hypercathexis *n.* In **psychoanalysis*, additional **cathexis* invested in any object that is already cathected. Sigmund Freud (1856–1939) used the concept especially for explaining **attention*, his most detailed account of this theory appearing in 1895 in his ‘Project for a Scientific Psychology’ (*Standard Edition*, I, pp. 177–397).

hypercolumn *n.* An aggregation of **ocular-dominance columns* containing cells whose **receptive fields* overlap on the same region of the retina.

hypercomplex cell *n.* A type of cell in the **primary visual cortex* (Area V1) that is similar to a **simple cell* or a **complex cell* except that it has an **end-stopped receptive field*, ceasing to fire if the line, edge, or bar that excites it exceeds a certain length. Hypercomplex cells are sensitive to corners, curvature, or to sudden breaks in straight images. See also [BAR DETECTOR](#), [EDGE DETECTOR](#), [END-STOPPED RECEPTIVE FIELD](#), [FEATURE DETECTOR](#), [ORIENTATION-SPECIFIC CELL](#).

hypercomplex receptive field *n.* The **receptive field* of a **hypercomplex cell*.

hypercorrection *n.* A mistaken attempt to correct an imagined error in the use of language, such as the erroneous use of *I* instead of *me* in *The party will be hosted by Jessica and I*, or the occasional pronunciation by people from the North of England, where *cut* rhymes with *but*, of words such as *put*

as if they also rhymed with **Received Pronunciation* of *but*. Also called *overcorrection*. **hypercorrect** *adj. vb.* [From Greek *hyper* over + English *correction*]

hypercreolization *n.* A reaction by **creole* speakers against the standard language of a community, motivated by a desire to protect and maintain their ethnic identity, involving the deliberate adoption and emphasis of distinctive features of the creole. See also *CREOLIZATION*. Compare *DECREOLIZATION*.

hypergasia *n.* Frenzied **psychomotor agitation*. [From Greek *hyper* over + *ergasia* work or business + *-ia* indicating a condition or quality]

hypergeusia *n.* Abnormally heightened taste sensitivity. Compare *AGEUSIA*, *CACOGEUSIA*, *DYSGEUSIA*, *HYPOGEUSIA*, *PARAGEUSIA*, *TASTE BLINDNESS*. **hypergeusic** *adj.* [From Greek *hyper* over + *geusis* taste + *-ia* indicating a condition or quality]

hyperglycaemia *n.* An abnormally high level of sugar in the blood, often caused by a deficiency of insulin secretion by the islets of Langerhans due to **diabetes* mellitus, leading to a failure of carbohydrate metabolism. US *hyperglycemia*. Compare *HYPOGLYCAEMIA*. [From Greek *hyper* over + *glykys* sweet + *haima* blood + *-ia* indicating a condition or quality]

hypericum *n.* The pharmacologically active ingredient of **St John's wort*. See also *ORPHAN DRUG*. [From Latin *Hypericum* the generic name of St John's wort, from Greek *hypereikon*, from *hyper* over + *ereike* heath]

hyperkinaesthesia *n.* Abnormally heightened sense of body movement or **kinaesthesia*. US *hyperkinesthesia*. Also called *hyperkinaesthesia* or *hyperkinesthesia*. [From Greek *hyper* over + *kineein* to move + *aisthesis* sensation, from *aisthanesthai* to feel]

hyperkinesis *n.* Excessive movement, as in such conditions as **athetosis* or **ballism*, or in **hyperkinetic disorders* and **attention-deficit/hyperactivity disorder* in children. [From Greek *hyper* over + *kinesis* movement]

hyperkinetic disorders *n.* A class of disorders with early onset (in the first five years of life) characterized by persistent inattention and lack of persistence in activities requiring concentration, together with excessive, disorganized, and unregulated physical activity or ***hyperkinesis**, and often impulsivity, recklessness, and accident-proneness. *See also* **ATTENTION-DEFICIT/HYPERACTIVITY DISORDER**.

hyperlexia *n.* A ***reading disorder** characterized by advanced word-recognition skills in a person with pronounced cognitive and language deficits. People with hyperlexia manifest word-recognition skills by their ability to pronounce single words presented to them out of context, but they lack the ability to understand printed words and texts and therefore have poor reading comprehension. The condition was first identified and named by Norman E(sau) Silberberg (1931–2007) and Margaret C. Silberberg (1927–82) in 1967. *See also* **ATTENTIONAL DYSLEXIA**, **DYSLEXIA**. [From Greek *hyper* over + *lexis* a word + *-ia* indicating a condition or quality]

hypermania *n.* An exaggerated or extreme form of ***mania (1)**; often confused with ***hypomania**. *See* **MANIC EPISODE**. [From Greek *hyper* over + *mania* madness]

hypermetamorphosis *n.* A tendency to attend indiscriminately and react to every visual stimulus. It is characteristic of ***Klüver–Bucy syndrome**. [From Greek *hyper* over + *meta* among, with, or beside + *morphe* form + *-osis* indicating a process or state]

hypermetropia *n.* Another name for ***hyperopia**. Also written *hypermetropy*. **hypermetrope** *n.* A long-sighted person. **hypermetropic** *adj.* Long-sighted. [From Greek *hypermetros* beyond the measure, from *hyper* over + *metron* a measure + *ops* an eye + *-ia* indicating a condition or quality]

hypermnnesia *n.* Enhanced power of memory, usually under the influence of ***hypnosis** or ***truth drugs**, though the effects may be illusory. The term is also used to denote a form of ***reminiscence (2)**, for material such as pictures or prose passages, in ***successive reproduction** with short intervals between successive tests. For example, people who view a video recording of a

burglary and are then tested repeatedly over a few hours or days for their recall of critical details have shown steady improvement across the repeated tests. If the interval between tests is increased to a week, then recall tends to decline. Compare [AMNESIA](#). [From Greek *hyper* over + *mnasthai* to remember + *-ia* indicating a condition or quality]

hypermotility *n.* Another name for [*hyperkinesis](#).

hyperopia *n.* Long-sightedness (far-sightedness) or difficulty in accommodating the eyes for [*near vision](#), resulting from light rays that enter the eye being focused behind the retina, most often because of [*presbyopia](#). Also called *hypermetropia* or *hypermetropy*. See also [APHAKIA](#). Compare [EMMETROPIA](#), [MYOPIA](#). **hyperope** *n.* A long-sighted person. **hyperopic** *adj.* Long-sighted or far-sighted. [From Greek *hyper* over + *ops* an eye + *-ia* indicating a condition or quality]

hyperorexia *n.* Excessive appetite; another name for [*bulimia \(1\)](#). The term is usually restricted to cases in which it is not caused by a brain lesion. Compare [HYPERPHAGIA](#). [From Greek *hyper* over + *orexis* appetite + *-ia* indicating a condition or quality]

hyperosmia *n.* Abnormal acuteness of the sense of smell. See also [ANOSMIA](#), [CACOSMIA](#), [DYSOSMIA](#), [PAROSMIA](#), [SPECIFIC ANOSMIA](#). Compare [HYPOSMIA](#). **hyperosmic** *adj.* [From Greek *hyper* over + *osme* a smell + *-ia* indicating a condition or quality]

hyperphagia *n.* Compulsive overeating; another name for [*bulimia \(1\)](#), but usually reserved for cases in which it is caused by a lesion in the medial forebrain bundle, the hypothalamus, or some other part of the brain involved in appetite. Compare [HYPEROREXIA](#). [From Greek *hyper* over + *phagein* to consume + *-ia* indicating a condition or quality]

hyperphoria *n.* A form of [*strabismus](#) in which the eye tends to deviate upwards. Compare [CYCLOPHORIA](#), [ESOTROPIA](#), [EXOPHORIA](#), [HETEROPHORIA](#), [HYPOPHORIA](#). [From Greek *hyper* over + *-phoros* carrying, from *pherein* to bear + *-ia* indicating a condition or quality]

hyperphrasia *n.* Excessive volubility or talkativeness, as often occurs in **manic episodes*. [From Greek *hyper* over + *phrazein* to express + *-ia* indicating a condition or quality]

hyperphrenia *n.* Mental overactivity such as occurs in **flight of ideas* or, more generally, in a **manic episode*. [From Greek *hyper* over + *phren* mind, originally midriff, the supposed seat of the soul + *-ia* indicating a condition or quality]

hyperpnoea *n.* Another name for **hyperventilation*. US *hyperpnea*. [From Greek *hyper* over + *pnein* to breathe]

hyperpolarization *n.* An increase in the **membrane potential* of a neuron relative to its **resting potential*, reducing its propensity to generate a nerve impulse, such as occurs in an **inhibitory postsynaptic potential*. Compare *DEPOLARIZATION*. [From Greek *hyper* over + English *polarization*]

hyperprosexia *n.* Excessive and sometimes debilitating attention to trivial matters, such as the sound of a dripping tap. Compare *APROSEXIA*, *HYPOPROSEXIA*. [From Greek *hyper* over + *prosexis* heedfulness, from *prosechein* to heed + *-ia* indicating a condition or quality]

hyper-reflection *n.* Over-consciousness of one's own behaviour, to the point that it interferes with sexual performance, social interaction, or other activities involving skills. The idea can be traced back to the ancient Sanskrit scriptures of the Vedanta, one of the philosophical schools of Hinduism, according to which the knower cannot be known, and the one that sees cannot be seen, but it was first investigated in clinical psychology by the Austrian psychiatrist Viktor E. Frankl (1905–97). It is countered by the therapeutic technique of **de-reflection*. See also *CENTIPEDE EFFECT*, *HUMPHREY'S LAW*.

hyper-reflexia *n.* Overactive or exaggerated reflexes, usually occurring during a period of recovery from spinal injury. [From Greek *hyper* over + English *reflex* + *-ia* indicating a condition or quality]

hypersomnia *n.* Excessive sleepiness, usually manifested as prolonged

nocturnal sleep followed by difficulty in staying awake during the day. See also [DISORDER OF EXCESSIVE SOMNOLENCE](#), [DYSSOMNIAS](#), [HYPERMOMNOLENCE DISORDER](#), [NARCOLEPSY](#), [PRIMARY HYPERMOMNIA](#). Compare [INSOMNIA](#). [From Greek *hyper* over + *somnus* sleep + *-ia* indicating a condition or quality]

hypersomnolence disorder *n.* A [*sleep–wake disorder](#) in [*DSM-5](#) characterized by [*hypersomnia](#) and excessive sleepiness, even after a main sleep period of at least seven hours, with recurrent lapses into sleep during the day, prolonged sleep not being experienced as refreshing or restorative, and difficulty becoming fully awake when woken abruptly. [From Greek *hyper* over + Latin *somnus* sleep + *-entia* indicating a state or condition]

hyperthymesia *n.* Exceptional [*episodic memory](#). People with this trait spend much of their time thinking about past events in their own lives and have an extraordinary capacity to recall them. The condition was first identified in a case of a 41-year old Jewish woman and reported in an article in the journal *Neurocase* in 2006, where it was originally called *hyperthymestic syndrome*. See also [EIDETIC IMAGE](#). Compare [MNEMONIST](#). [From Greek *hyper* over + *thymesia* remembering, from *thymos* spirit or mind + *-ia* indicating a condition or quality]

hyperthymia *n.* Excessive emotionalism. [From Greek *hyper* over + *thymos* spirit + *-ia* indicating a condition or quality]

hyperthyroidism *n.* Overproduction by the thyroid gland of [*thyroxine](#), leading to increased metabolic rate, insomnia, palpitations, tremor, nervousness, weight loss, sweating, hypersensitivity to heat, and possibly swelling of the eyeballs (exophthalmic goitre). See also [DEEP TENDON REFLEX](#).

hypertonia *n.* Abnormally high muscle tone or tension. See [HYPERTONIC \(1\)](#). Compare [HYPOTONIA](#), [ISOTONIA](#).

hypertonic *adj.* 1. Of or relating to muscles that are abnormally tensed. Compare [HYPOTONIC \(1\)](#), [ISOTONIC \(1\)](#). 2. Of or relating to a solution having a greater concentration than another and hence exerting more [*osmotic pressure](#) than the other. A hypertonic saline solution (more than 0.9 per cent) is more concentrated than the [*intracellular fluid](#), so that cells shrink when

*****ebook converter DEMO Watermarks*****

immersed in it. *See also* [OSMOSIS](#). *Compare* [HYPOTONIC \(2\)](#), [ISOTONIC \(2\)](#). [From Greek *hyper* over + *tonos* tension + *-ikos* of, relating to, or resembling]

hypertrophy *n.* Abnormal enlargement of an organ, structure, or part. *Compare* [ATROPHY](#). [From Greek *hyper* over + *trophe* nourishment]

hypertropia *n.* Another name for [*anoopsia](#). [From Greek *hyper* over + *tropos* a turn + *ops* an eye + *-ia* indicating a condition or quality]

hyperventilation *n.* Abnormally increased depth or rate of breathing, often associated with [*anxiety](#), leading to a reduction in blood carbon dioxide, sometimes causing dizziness and muscle cramps. Also called *hyperpnoea*.

hypesthesia *n.* Another name for [*hypoesthesia](#).

hypnagogic image *n.* A dreamlike image, often vivid and resembling a [*hallucination](#), generally accompanied by [*sleep paralysis](#), experienced by a person in the transition state from wakefulness to sleep. *See also* [ISAKOWER PHENOMENON](#). *Compare* [HYPNOPOMPIC IMAGE](#). [From French *hypnagogique* hypnagogic, from Greek *hypnos* sleep + *agogos* bringing + *-ikos* of, relating to, or resembling]

hypnoanalysis *n.* A form of [*psychoanalysis](#) in which [*hypnosis](#) is used to facilitate the uncovering of repressed memories, especially from infancy and early childhood. *See also* [ABREACTION](#), [ANNA O](#), [CATHARSIS](#), [HYPNOID HYSTERA](#).

hypnodermatology *n.* The practice of treating skin disorders with hypnosis. *See also* [PSYCHODERMATOLOGY](#). **hypnodermatologist** *n.* One who practises hypnodermatology. **hypnodermatological** *adj.* [From Greek *hypnos* sleep + *derma*, *dermatos* skin + *logos* word, discourse, or reason]

hypnogenic *adj.* Tending to cause sleep or [*hypnosis](#). [From Greek *hypnos* sleep + *genein* to produce + *-ikos* of, relating to, or resembling]

hypnoid hysteria *n.* In **psychoanalysis*, one of three types of **hysteria* that were distinguished in 1895 by the Austrian physician Josef Breuer (1842–1925) and Sigmund Freud (1856–1939) in *Studies on Hysteria* (*Standard Edition*, II), supposedly originating in a state similar to a hypnotic state. However, Freud wrote: ‘Strangely enough, I have never in my own experience met with a genuine hypnoid hysteria. Any that I took in hand has turned into a defence hysteria’ (p. 286). After 1895 Freud came to believe that all hysteria is defence hysteria, and he abandoned the tripartite distinction. *See also* [HYPNOID STATE](#). *Compare* [DEFENCE HYSTERIA](#), [RETENTION HYSTERIA](#).

hypnoid state *n.* In **psychoanalysis*, a concept introduced by the Austrian physician Josef Breuer (1842–1925) to denote a state of consciousness resembling **hypnosis*, occurring when an emotion intrudes into a reverie or daydream. Breuer’s theory is set out in Freud’s *Standard Edition*, II, pp. 183–252. The concept was later (1901/5) repudiated by Sigmund Freud (1856–1939) in his ‘Fragment of an Analysis of a Case of Hysteria’ (*Standard Edition*, VII, pp. 7–122, at p. 27*n*). *See also* [HYPNOID HYSTERIA](#).

hypnopompic image *n.* A dreamlike image, often vivid and resembling a **hallucination*, sometimes accompanied by **sleep paralysis*, experienced by a person in transition from sleep to wakefulness. *Compare* [HYPNAGOGIC IMAGE](#). [From Greek *hypnos* sleep + *pompos* a guide + *-ikos* of, relating to, or resembling]

hypnosis *n.* Alterations in sensations, perceptions, thoughts, feelings, or behaviour brought about by suggestion, often (though controversially) interpreted as a trance-like altered state of consciousness characterized by heightened suggestibility, associated with such phenomena as suggested **hallucinations*, hypnotic **analgesia*, **hypnotic amnesia*, and **hypnotic age regression*. Also called *hypnotism* or *mesmerism*. *See also* [ANIMAL MAGNETISM](#), [AUTOGENIC TRAINING](#), [AUTOHYPNOSIS](#), [AUTOMATISM](#), [CATALEPSY](#), [CATHARSIS](#), [CEREA FLEXIBILITAS](#), [HIDDEN OBSERVER](#), [HYPERMNESIA](#), [HYPNOANALYSIS](#), [HYPNOID STATE](#), [HYPNOTHERAPY](#), [HYPNOTIC AMNESIA](#), [HYPNOTIC SUSCEPTIBILITY](#), [KOHNSTAMM EFFECT](#), [NEODISSOCIATION THEORY](#), [TRANCE](#), [TRANCE LOGIC](#). **hypnoid** *adj.* Resembling hypnosis. [From Greek *hypnos* sleep + *-osis* indicating a process or state]

*****ebook converter DEMO Watermarks*****

hypnotherapy *n.* A form of **psychotherapy* based on **hypnosis*, using techniques such as helping the client to perceive or interpret things differently (reframing), training the client to experience particular reactions such as calmness around spiders or disgust around cigarette smoke (anchoring), and using language patterns. *See also* [AUTOGENIC TRAINING](#), [RECOVERED MEMORY](#). *Compare* [HYPNOANALYSIS](#).

hypnotic *adj.* **1.** Of, relating to, or tending to produce **hypnosis* or **sleep*. *n.* **2.** Any drug that is used primarily to induce sleep, especially a **barbiturate* acting via the **GABA receptor complex*. In careful usage, the word is reserved for sleeping pills or draughts and is not applied to **sedatives*, **narcotics*, and **anxiolytics* that may induce sleep incidentally to their main function. *See also* [NARCOTIC](#), [SEDATIVE-](#), [HYPNOTIC-](#), OR [ANXIOLYTIC-RELATED DISORDERS](#). [From Greek *hypnos* sleep + *-itikos* resembling or marked by]

hypnotic age regression *n.* The re-experiencing or re-enacting of experiences or patterns of behaviour from earlier life in response to suggestions given under **hypnosis*, usually involving a guided year-by-year retracing of life. *See also* [NEODISSOCIATION THEORY](#).

hypnotic amnesia *n.* The inability of a person who has been hypnotized to recall, after the hypnotic session, all or part of what took place during the session. It usually occurs as a consequence of a direct suggestion given by the hypnotist during the hypnotic session but can also occur spontaneously. Also called *posthypnotic amnesia*.

hypnotic analgesia *See* [ANALGESIA](#).

hypnotic susceptibility *n.* Responsivity or openness to **hypnosis*, some people being significantly more easily or successfully hypnotized than others. Also called *hypnotizability*.

hypnotism *n.* An obsolescent name for the state of **hypnosis*.

hypnotist *n.* A person who induces **hypnosis* in another.

hypnotizability *n.* Another name for **hypnotic susceptibility*.

hypnotize *vb.* To induce **hypnosis* in a person or an animal.

hypoactive sexual desire disorder *n.* A term used in **DSM-IV* for what was later called **female sexual interest/arousal disorder* and **male hypoactive sexual desire disorder*. [From Greek *hypo* under + Latin *activus* in a state of action, from *actus* a doing + *-ivus* tending]

hypoesthesia *n.* Another name for **hypoesthesia*. US *hypoesthesia*. [From Greek *hypo* under + *aisthesis* sensation, from *aisthanesthai* to feel + *-ia* indicating a condition or quality]

hypochondria *n.* Preoccupation and worry about apparently normal **somatic* sensations or physical manifestations, which are interpreted as symptoms of a serious illness. *See also* ACTUAL NEUROSIS, HYPOCHONDRIASIS, MEDICAL STUDENT SYNDROME, SOMATIC SYMPTOM DISORDER. **hypochondriac** *n.* 1. A sufferer from hypochondria. *adj.* 2. Of or relating to a sufferer from hypochondria. **hypochondriacal** *adj.* [From Greek *hypochondrion* the region of the abdomen under the costal cartilages and short ribs, from *hypo* under + *chondros* a cartilage + *-ia* indicating a condition or quality]

hypochondriasis *n.* A **somatoform disorder* characterized by pathological **hypochondria*, intense preoccupation and worry about apparently normal **somatic* sensations or physical signs, which are interpreted as symptoms of a serious illness, in spite of appropriate medical investigation and reassurance that the fear is groundless. In most severe cases the preoccupation can become a hypochondriacal **delusional disorder* involving a false belief that a disease is present. In **DSM-5*, this term was replaced by **somatic symptom disorder*. Also called *health anxiety disorder*. *See also* MEDICAL STUDENT SYNDROME.

hypochondriasis scale *See* MMPI.

hypoergastia *n.* Depression, especially the depressive phase of a **bipolar disorder*. [From *hypo* under + *ergasia* work or business, from *ergon* work + *-*

ia indicating a condition or quality]

hypoesthesia *See* [HYPAESTHESIA](#).

hypogeusia *n.* Abnormally diminished taste sensitivity. *Compare* [AGEUSIA](#), [CACOGEUSIA](#), [DYSGEUSIA](#), [HYPERGEUSIA](#), [PARAGEUSIA](#), [TASTE BLINDNESS](#).

hypogeusic *adj.* [From Greek *hypo* under + *geusis* taste + *-ia* indicating a condition or quality]

hypoglossal nerve *n.* Either of the twelfth pair of [*cranial nerves](#) arising from the medulla oblongata, controlling the muscles of the tongue, and essential for swallowing. [From Greek *hypo* under + *glossa* a tongue]

hypoglycaemia *n.* Abnormally low blood glucose, usually caused either by an overdose of insulin taken therapeutically in the treatment of [*diabetes mellitus](#) or by an excessive secretion of insulin by the pancreas, generally resulting from a pancreatic tumour, alcoholism, or liver disease. The signs and symptoms include asthenia, palpitations, tachycardia, sweating, tremor, ataxia, slowed thinking, confusion, irritability, and aggressiveness, terminating if untreated in delirium, coma, and occasionally death. US *hypoglycemia*. *See also* [INSULIN SHOCK](#). *Compare* [HYPERGLYCAEMIA](#). [From Greek *hypo* under + *glykys* sweet + *haima* blood + *-ia* indicating a condition or quality]

hypohedonia *n.* Abnormally reduced ability to experience pleasure or enjoyment in ordinarily pleasurable activities, falling short of [*anhedonia](#) or [*depression](#). **hypohedonic** *adj.* [From Greek *hypo* under + *hedone* pleasure + *-ia* indicating a condition or quality]

hypokinaesthesia *n.* Reduced sensitivity to positions or movements of body parts. US *hypokinesesthesia*. [From Greek *hypo* under + *kinesis* movement + *aisthesis* sensation, from *aisthanesthai* to feel + *-ia* indicating a condition or quality]

hypokinesis *n.* Diminished bodily movement. [From Greek *hypo* under + *kinesis* movement]

hypolexia *n.* Another name for ***dyslexia**. [From Greek *hypo* under + *lexis* a word + *-ia* indicating a condition or quality]

hypologia *n.* Another name for ***poverty of speech**. [From Greek *hypo* under + *logos* a word or discourse + *-ia* indicating a condition or quality]

hypomania *n.* Another name for a ***hypomanic episode**.

hypomania scale See **MMPI**.

hypomanic episode *n.* A ***mood episode** with similar symptoms to a ***manic episode** but not sufficiently severe to cause marked impairment in social or occupational functioning or to require hospitalization, though characterized by unrealistic optimism, overactivity, a decreased need for sleep, and often reckless spending of money. Also called *hypomania* or *hypomanic disorder*. [From Greek *hypo* under + *mania* madness]

hypomnesia *n.* Partial ***amnesia**. [From Greek *hypo* under + *mnasthai* to remember + *-ia* indicating a condition or quality]

hypophoria *n.* A form of ***strabismus** in which the eye tends to deviate downwards. Compare **CYCLOPHORIA**, **ESOTROPIA**, **EXOPHORIA**, **HETEROPHORIA**, **HYPERPHORIA**. [From Greek *hypo* under + *-phoros* carrying, from *pherein* to bear + *-ia* indicating a condition or quality]

hypophrasia *n.* Another name for ***poverty of speech** or ***hypologia**. [From Greek *hypo* under + *phrazein* to express + *-ia* indicating a condition or quality]

hypophrenia *n.* Another name for ***intellectual disability**. [From Greek *hypo* under + *phren* mind, originally midriff, the supposed seat of the soul + *-ia* indicating a condition or quality]

hypophysis *n.* Short for hypophysis cerebri, a technical name for the ***pituitary gland**. [From Greek *hypophysis* an attachment underneath, from *hypo* under + *phyein* to grow]

hypopnoea *n.* Abnormally shallow breathing or decreased breathing rate. See OBSTRUCTIVE SLEEP APNOEA HYPOPNOEA. US *hypopnea*. Compare APNOEA. [From Greek *hypo* under + *pnein* to breathe]

hypoproslexia *n.* Reduced ability to attend or concentrate. Compare APROSEXIA, HYPERPROSEXIA. [From Greek *hypo* under + *prosexis* heedfulness, from *prosechein* to heed + *-ia* indicating a condition or quality]

hyposmia *n.* Abnormally diminished sensitivity to all or a limited number of odorants. See also ANOSMIA, CACOSMIA, DYSOSMIA, PAROSMIA, SPECIFIC ANOSMIA. Compare HYPEROSMIA. **hyposmic** *adj.* [From Greek *hypo* under + *osme* a smell + *-ia* indicating a condition or quality]

hyposthenia *n.* Debilitation or lack of strength. [From Greek *hypo* under + *sthenos* strength + *-ia* indicating a condition or quality]

hypothalamic hyperphagia *n.* Another name for *ventromedial hypothalamic syndrome.

hypothalamic–hypophyseal portal system *n.* A system of blood vessels connecting capillaries of the *hypothalamus and the *anterior pituitary (hypophysis) through which hypothalamic hormones travel to the anterior pituitary.

hypothalamic–pituitary–adrenal axis See HPA AXIS.

hypothalamic syndromes *n.* Disorders associated with damage to the *hypothalamus arising from tumours, congenital malformations, or head injury, with signs and symptoms such as gross obesity, disturbances of *autonomic control, *hypersomnia, and *amnesia.

hypothalamus *n.* A fingernail-sized area of the diencephalon at the base of the brain in the limbic system, occupying the side walls and floor of the third ventricle, situated below both sides of the thalamus and above the pituitary gland, consisting of two halves with paired right and left nuclei, crucially involved in the regulation of the *endocrine glands and the

***autonomic nervous system** and implicated in the control of temperature, heart rate, blood pressure, hunger, thirst, sexual arousal, predatory aggression, and fight-or-flight responses. See **ARCUATE NUCLEUS**, **LATERAL HYPOTHALAMIC FEEDING CENTRE**, **MEDIAL FOREBRAIN BUNDLE**, **MEDIAN EMINENCE**, **OSMORECEPTOR (2)**, **PARAVENTRICULAR NUCLEUS**, **PREOPTIC NUCLEUS**, **SATIETY CENTRE**, **SUPRACHIASMATIC NUCLEUS**, **SUPRAOPTIC NUCLEUS**, **VENTROMEDIAL HYPOTHALAMUS**, **ZONA INCERTA**. **hypothalamic** *adj.* [From Greek *hypo* under + English *thalamus*, so called because of its situation]

hypothesis *n.* A tentative explanation for a ***phenomenon**, subject to criticism by rational argument and refutation by ***empirical** evidence. See also **ALTERNATIVE HYPOTHESIS**, **HYPOTHETICO-DEDUCTIVE METHOD**, **NULL HYPOTHESIS**. Compare **MODEL**, **THEORY (2)**. **hypotheses** *pl.* [From Greek *hypo* under + *tithenai* to place]

hypothetical construct *n.* A conjectured entity, process, or event that is not observed directly but is assumed to explain an observable phenomenon. It is not merely a summary of the relationships between observable variables but contains surplus meaning over and above such relationships. Typical examples are the ***echoic store**, ***logogen**, ***primal sketch**, and ***superego**. The distinction between hypothetical constructs and ***intervening variables** was first made explicit by the US psychologists Kenneth MacCorquodale (1919–86) and Paul Everett Meehl (1920–2003) in an influential article in the journal *Psychological Review* in 1948, in which they used the examples from physics of an *electron* (a hypothetical construct that is assumed to be an entity, although it is not observed directly) and the *resistance* of a wire (an intervening variable that merely specifies the amperage of current that will be carried by the wire for any given voltage). See also **CONSTRUCT**, **CONVERGENT VALIDITY**, **DISCRIMINANT VALIDITY**, **NOMOLOGICAL NETWORK**.

hypothetico-deductive method *n.* The standard research method of empirical science in which ***hypotheses** are formulated and tested by deducing predictions from them and then testing the predictions through controlled ***experiments**, hypotheses that are falsified being rejected and replaced by new ones. Also called *scientific method*. See also **CONFIRMATION BIAS**, **FALSIFIABILITY**, **INDUCTION (1)**.

hypothymia *n.* Diminished emotional response or **depression*. [From Greek *hypo* under + *thymos* spirit + *-ia* indicating a condition or quality]

hypothyroidism *n.* An underproduction of **thyroxine* by the **thyroid gland*, leading to decreased metabolic rate, asthenia, weight gain, constipation, and sometimes **intellectual disability*, coma, and death. Compare HYPERTHYROIDISM.

hypotonia *n.* Abnormally low muscle **tonus* or tension. See HYPOTONIC (1). Compare HYPERTONIA, ISOTONIA.

hypotonic *adj.* 1. Of or relating to muscles that are abnormally flaccid. Compare HYPERTONIC (1), ISOTONIC (1). 2. Of or relating to a solution having a lower concentration than another and hence exerting less **osmotic pressure* than the other. A hypotonic saline solution (less than 0.9 per cent) is less concentrated than the **intracellular fluid*, so that cells expand when immersed in it. See also OSMOSIS. Compare HYPERTONIC (2), ISOTONIC (2). [From Greek *hypo* under + *tonos* tension + *-ikos* of, relating to, or resembling]

hypoventilation *n.* Abnormally decreased depth and/or frequency of breathing. [From Greek *hypo* under + Latin *ventilare* to ventilate, from *ventus* wind]

hypovolaemic thirst *n.* A form of thirst triggered by decreased blood volume sensed by **baroreceptors*. US *hypovolemic thirst*. Also called *extracellular thirst* or *volumetric thirst*. Compare INTRACELLULAR THIRST. [From Greek *hypo* under + English *volume* + Greek *haima* blood]

hypoxyphilia *n.* A **paraphilia* characterized by recurrent sexually arousing fantasies, sexual urges, or behaviour involving a dangerous and sometimes fatal form of **sexual masochism* in which self-stimulation is sought by oxygen deprivation through the use of a noose, ligature, plastic bag, or chemical substance such as **amyl nitrite*. [From Greek *hypo* under + *oxy-* denoting oxygen + *philos* loving, from *phileein* to love + *-ia* indicating a condition or quality]

hysteria *n.* A once-popular name for a [*mental disorder](#) characterized by emotional outbursts, fainting, heightened [*suggestibility](#), and [*conversion symptoms](#) such as [*paralysis](#), nowadays generally not viewed as a coherent [*syndrome](#) but rather as aspects of [*conversion disorder](#), [*dissociative disorders](#), and [*histrionic personality disorder](#). It has been traced back to the ancient Greek physician Hippocrates (?460–?377 BC). Also called *hysterical neurosis*. See also [ANXIETY HYSTERIA](#), [CONVERSION HYSTERIA](#), [DEFENCE HYSTERIA](#), [DISSOCIATION THEORY](#), [HYPNOID HYSTERIA](#), [HYSTERICAL TECHNIQUE](#), [HYSTEROGENIC ZONE](#), [RETENTION HYSTERIA](#). **hysteric** *n.* A person with hysteria. **hysterical** *adj.* [From Greek *hysteria* the womb, which was formerly thought to underlie the disorder because it occurred mainly in women]

hysteria scale See [MMPI](#).

hysterical convulsion *n.* An obsolete name for a [*pseudoseizure](#). Also called a *hysterical seizure*. See also [HYSTERICAL EPILEPSY](#).

hysterical epilepsy *n.* An obsolete name for a form of [*hysteria](#) assumed to produce [*hysterical seizures](#) or convulsions. See also [PSEUDOSEIZURES](#).

hysterical paralysis *n.* Any [*paralysis](#) of [*psychogenic](#) rather than organic aetiology. See [PSYCHOGENESIS](#). Compare [ORGANIC DISORDERS](#).

hysterical personality *n.* An obsolescent name for [*histrionic personality disorder](#).

hysterical seizure *n.* An obsolete name for a [*pseudoseizure](#). Also called a *hysterical convulsion*. See also [HYSTERICAL EPILEPSY](#).

hysterical technique *n.* In [*psychoanalysis](#), one of the four [*defensive techniques](#) proposed by the Scottish psychoanalyst W. Ronald D. Fairbairn (1889–1964). It involves [*externalization](#) of the [*good object](#) and [*internalization](#) of the bad object, causing the hysterical person to consider internal impulses as bad. See also [SPLITTING OF THE OBJECT](#). Compare [OBSESSIONAL TECHNIQUE](#), [PARANOID TECHNIQUE](#), [PHOBIC TECHNIQUE](#).

hysterogetic zone *n.* In *[psychoanalysis](#), areas of the body identified in 1890 by the French neurologist Jean Martin Charcot (1825–93) as the focal points for symptoms of conversion hysteria (*[conversion disorder](#)). According to Charcot, the patient describes them as painful but experiences sexual pleasure if they are stimulated (they function as *[erotogenic zones](#)), although this can precipitate a hysterical attack. Sigmund Freud (1856–1939) endorsed this theory in 1895 in *Studies on Hysteria* (*Standard Edition*, II, at p. 137) and in ‘Some General Remarks on Hysterical Attacks’ (1908/9), where he describes such a hysterical attack as ‘an equivalent of coition’ (*Standard Edition*, IX, pp. 227–34, at p. 234).

Ia fibre *n.* A large-diameter, thickly myelinated type of **afferent* nerve fibre with high conduction velocity, such as that innervating a **muscle spindle*. US *Ia fiber*. Compare ALPHA FIBRE, C FIBRE, DELTA FIBRE, GAMMA FIBRE, IB FIBRE, II FIBRE.

IAPS *abbrev.* International Affective Picture System, a database of hundreds of colour photographs depicting wildlife, bodily mutilations, landscapes, children, snakes, insects, accidents, puppies, babies, and many other scenes designed to elicit a range of **emotions* along the dimensions of pleasure, arousal, and dominance. The earliest version of the database was developed in 1988 by the US psychologist Peter J(ohn) Lang (born 1930) and collaborators at the University of Florida, and it is widely used in research on emotional arousal.

iatrogenic *adj.* Of or pertaining to a disorder, **sign* (1), or **symptom* caused by a physician's treatment or management of a patient; doctor-induced. [From Greek *iatros* a physician + *genes* born + *-ikos* of, relating to, or resembling]

Ib fibre *n.* A large-diameter, thickly myelinated type of **afferent* nerve fibre with high conduction velocity, such as that innervating a **Golgi tendon organ*. US *Ib fiber*. Compare ALPHA FIBRE, C FIBRE, DELTA FIBRE, GAMMA FIBRE, IA FIBRE, II FIBRE.

ibotenic acid *n.* The **psychedelic* drug α -amino-3-hydroxy-5-isoxazole-acetic acid, found in the **fly agaric* mushroom **Amanita muscaria*, a potent excitatory amino acid **antagonist* (3) that causes initial drowsiness,

*****ebook converter DEMO Watermarks*****

depression of motor activity, and ataxia, followed by hyperactivity and excitability accompanied by changes in perceptions and emotions and delirium. It is also used as a [*neurotoxin](#) to destroy neuron cell bodies while leaving nerve fibres intact in the area where it is applied. *See also* [HALLUCINOGEN](#).

ICD *abbrev.* The *International Classification of Diseases and Related Health Problems*, issued by the World Health Organization in Geneva, a section of which is devoted to mental and behavioural disorders. Along with [*DSM](#), it is one of the most authoritative reference works on matters of definition and classification of mental disorders. The tenth edition, ICD-10, was published in 1992–93, and ICD-11, harmonized with DSM-5, appeared in beta draft form in 2013, prior to full publication in 2015.

ice *n.* Frozen water. Also, a street name for a very pure form of [*methamphetamine](#). Because of its purity and low vaporization point, like crack cocaine it produces a rapid and powerful effect when smoked. [So called because of the appearance of its crystals when seen under magnification]

icicle plot *See* [HORIZONTAL ICICLE PLOT](#), [VERTICAL ICICLE PLOT](#).

iconic memory *See* [ICONIC STORE](#).

iconic store *n.* One of the [*sensory registers](#), allowing a visual image to persist for about half a second (depending on brightness) after its stimulus has ceased. It enables television, which presents 25 still images per second, each given twice to raise the flicker rate to 50 per second (British standard), to convey the illusion of a single continuous image, which, owing to [*apparent movement](#), can be perceived as a moving image. In 1740, the Hungarian physicist Johann Andreas von Segner (1704–77) was the first to measure the duration of iconic memory traces (about half a second) by attaching a glowing ember to the rim of a wheel and determining the minimum speed of rotation (about 120 revolutions per minute) at which a complete circle was perceived. Interest in iconic memory was revived by a classic experiment devised by the US psychologist George Sperling (born 1934) and reported in the journal *Psychological Monographs* in 1960 in

*****ebook converter DEMO Watermarks*****

which three rows of four random letters were exposed for approximately 50 milliseconds; when viewers attempted to recall as many letters as possible from all three rows, they typically reported no more than four or five items, but when they attempted to recall as many letters as possible from a single specified row, cued after the offset of the display, their recall was virtually perfect, provided that the row number was cued immediately, but recall declined steadily with increasing cue delay up to about 500 milliseconds, suggesting (in line with von Segner's earlier finding) that more information is available immediately after the stimulus offset than can be reported before it fades from memory and that much of it has disappeared after about half a second. Also called *iconic memory*, a term introduced by the German-born US psychologist Ulric (Richard Gustav) Neisser (1928–2012) in his book *Cognitive Psychology* (1967). See also [SENSORY MEMORY](#). Compare [ECHOIC STORE](#). [From Greek *eikon* an image + *-ikos* of, relating to, or resembling]

ICSI *abbrev.* Intracytoplasmic sperm injection, an extension of [*in vitro fertilization](#) (IVF) first introduced in Belgium in 1992, in which sperm are injected directly into the [*ovum](#) with a fine needle. Unlike IVF, ICSI can be used for artificial insemination with sperm that have no motility and are therefore incapable of fertilizing ova on their own. [From Latin *intra* within + Greek *kytos* a vessel + *plasma* a form + *-ikos* of, relating to, or resembling]

ictal *adj.* Of or relating to a sudden acute onset or attack, especially of an epileptic seizure or [*convulsion](#). **ictus** *n.* A sudden acute onset or attack. [From Latin *ictus* struck, from *icere* to strike + *-alis* of or relating to]

id *n.* In [*psychoanalysis](#), one of the three components of the human mental apparatus in the second formulation of Sigmund Freud (1856–1939), after he replaced the [*topography](#) of unconscious-preconscious-conscious with the structural model of id-ego-superego in 1920. It is a reservoir of energy derived from [*instincts](#) (3), governed by the [*pleasure principle](#), and its contents are [*unconscious](#) (1), some being [*innate](#) and others derived from experience but submerged by [*repression](#), and it is in constant conflict with the [*ego](#) and the [*superego](#), both of which originate from it during the course of development. Freud used the German word *das Es* (the it) in 1923 in his book *Das Ich und das Es*, translated as *The Ego and the Id* (Standard Edition, XIX, pp. 12–66, at p. 23), where he revealed that he borrowed the term from

*****ebook converter DEMO Watermarks*****

the German psychiatrist Georg Groddeck (1866–1934) but attributed it ultimately to the German philosopher Friedrich Wilhelm Nietzsche (1844–1900), and Freud's translator James Strachey (1887–1967) chose the word *id*, imbuing it with an aura of obscurity and technicality that the original German word lacks. The id is insulated from the [*preconscious](#) and [*consciousness](#) by [*censorship](#), but it is not synonymous with the unconscious, as stated in many elementary expositions of Freud's theory, because the repressive functions of the [*ego](#) and many of the functions of the superego are also unconscious. The functions of the id are governed by the [*primary process](#). [From Latin *id* it]

idea *n.* **1.** In cognitive psychology, a mental representation or image occurring without simultaneous [*sensation](#) or [*perception](#) of the corresponding object or event, though frequently based on memories of earlier perceptions. **2.** Any conception, thought, or mental content. **3.** In the philosophy of the Greek philosopher Plato (?427–?347 BC), a supposed ideal form or [*archetype](#) (1) of a class of things, individual things being imperfect copies of archetypal ideas and deriving their existence from them. *See also* [IDEATION](#), [INNATE IDEA](#). [From Greek *idea* a model, pattern, or form, from *idein* to see]

idea, guiding *See* [GUIDING FICTION](#).

idealization *n.* In [*psychoanalysis](#), a process whereby the attributes of an [*instinctual object](#), especially another person, are represented mentally in a perfected form. Sigmund Freud (1856–1939) defined it as follows in an article ‘On Narcissism: An Introduction’ (1914): ‘Idealisation is a process which concerns the *object*; by it that object, without any alteration in its nature, is aggrandised and exalted in the subject's mind’ (*Standard Edition*, XIV, pp. 73–102, at p. 94). Many subsequent psychoanalysts, including the British-based Austrian psychoanalyst Melanie Klein (1882–1960) in a chapter in a co-authored book *Developments in Psycho-Analysis* in 1952, have interpreted it as a [*defence mechanism](#). *See also* [IMAGO](#) (1).

ideal observer *n.* In [*signal detection theory](#), a hypothetical observer who has complete knowledge of the detection problem and who responds optimally in the light of this knowledge.

*****ebook converter DEMO Watermarks*****

ideal self *n.* A conception of oneself as one would most like to be, in contradistinction to how one actually is or how one sees oneself.

ideas of reference *n.* A pattern of beliefs that external events and activities have a special significance for the person. *Compare* DELUSION OF REFERENCE.

ideation *n.* The act or process of forming *ideas (1) or mental images of things not at the time being experienced through *sensation; a collective term for all phenomena associated with ideas. The word was introduced in 1829 by the Scottish philosopher James Mill (1773–1836) in his book *Analysis of the Phenomena of the Human Mind* (Vol. 1): ‘We have not a name for that complex notion which embraces, as one whole, all the different phenomena to which the term Idea relates. As we say Sensation, we might also say Ideation; it would be a very useful word; and there is no objection to it, except for the pedantic habit of decrying a new term. Sensation would in that case be the general name for one part of our constitution, Ideation for another’ (p. 42). **ideate** *vb.* To form ideas. **ideational** *adj.* Of or relating to the formation of ideas. **ideationally** *adv.* Through or by means of ideation. [From Latin *idea* a general or ideal form, type, or model, from Greek *idein* to see + *-ation* indicating a process or condition]

ideational apraxia *See* APRAXIA.

idée fixe *n.* A fixed idea or *obsession. **idées fixes** *pl.* [From French *idée* idea + *fixe* fixed]

identical twins *n.* A non-technical name for *monozygotic twins. It is a misleading term, avoided in careful scientific usage, because monozygotic twins, though similar, are never identical, phenotype being influenced not only by genetic but also by environmental factors.

identification *n.* **1.** The act or process of recognizing or distinguishing something or someone. **2.** The deliberate adoption of another person's behaviour or ideas as one's own. In *psychoanalysis, a *defence mechanism whereby one unconsciously incorporates attributes or characteristics of

another person into one's own personality. Sigmund Freud (1856–1939) expounded his theory of identification most fully in his book *Group Psychology and the Analysis of the Ego* (1921, *Standard Edition*, XVIII, pp. 69–143, at pp. 105–9). See also [IDENTIFICATION WITH THE AGGRESSOR](#), [INCORPORATION](#), [INTROJECTION](#), [PRIMARY IDENTIFICATION](#), [PROJECTIVE IDENTIFICATION](#), [SECONDARY IDENTIFICATION](#).

identification task *n.* A task in which the subject or participant tries to recognize a stimulus or discriminate it from other stimuli. Compare [DETECTION TASK](#).

identification with the aggressor *n.* In **psychoanalysis*, a **defence mechanism* first named and described in 1936/7 by the Austrian-born British psychoanalyst Anna Freud (1895–1982) in her book *The Ego and the Mechanisms of Defence* whereby a person facing an external threat, such as disapproval or criticism from an authority figure, identifies with the source of the threat, either by appropriating the aggression or else by adopting other attributes of the threatening figure. Anna Freud and the Austrian psychoanalyst René A(rpad) Spitz (1887–1974) argued that this mechanism plays an important part in the early development of the **superego*, before criticism is turned inward at a later stage of development. The Austrian-born US psychologist Bruno Bettelheim (1903–90) described in an article in the *Journal of Abnormal and Social Psychology* in 1943 and in Chapter 4 of his book *The Informed Heart* (1960) how even in Nazi concentration camps, some inmates came to identify with their SS guards. See also [IDENTIFICATION \(2\)](#).

identity crisis *n.* A state of confusion arising from an inability to reconcile conflicting aspects of one's personality. The concept was popularized by the German-born **ego psychologist* Erik H. Erikson (1902–94) in his book *Identity: Youth and Conflict* (1968). See [DEVELOPMENTAL CRISES](#), [EGO IDENTITY](#). See also [DISSOCIATIVE IDENTITY DISORDER](#), [GENDER DYSPHORIA](#).

identity disorder See [DISSOCIATIVE IDENTITY DISORDER](#), [GENDER DYSPHORIA](#).

identity theory *n.* An approach to the **mind–body problem*, a form of
*****ebook converter DEMO Watermarks*****

***materialism** holding that mental states have no separate existence but are identical to physical brain states. *See also* [DOUBLE-ASPECT THEORY](#), [MONISM](#).

identity versus role confusion *n.* One of the crises in the developmental theory of the German-born ***ego psychologist** Erik H. Erikson (1902–94). *See* [DEVELOPMENTAL CRISES](#).

ideograph *n.* A character or symbol used in a system of writing to represent directly a concept, idea, or object rather than a word or a sound. Characters in the writing systems of China and Japan are often called ideographs, but because the characters actually represent linguistic units rather than concepts they are therefore more properly called ***logographs**. Also called an *ideogram*. *See also* [KANJI](#). *Compare* [LOGOGRAPH](#), [PICTOGRAPH](#).
ideographic *adj.* Of or relating to ideographs, not to be confused with ***idiographic**. [From Greek *idea* idea + *graphein* to write]

ideokinetic apraxia *n.* Another name for ***ideomotor apraxia**. *See* [APRAXIA](#).

ideomotor aphasia *n.* Another name for ***transcortical motor aphasia**. *See* [APHASIA](#).

ideomotor apraxia *See* [APRAXIA](#).

idioglossia *n.* Another name for ***autonomous speech**.

idiographic *adj.* Of or relating to the study of individuals or anything unique, especially approaches to the study of ***personality** that deny the possibility of general laws or ***traits** and stress the uniqueness of individuals. Not to be confused with ***ideographic**. The term was coined in 1904 by the German philosopher Wilhelm Windelband (1848–1915). *Compare* [NOMOTHETIC](#). [From Greek *idios* own or private + *graphein* to write + *-ikos* of, relating to, or resembling]

idiolect *n.* A variety of a language peculiar to an individual speaker. *Compare* [ACROLECT](#), [BASILECT](#), [DIALECT](#), [LECT](#), [MESOLECT](#). [From Greek *idios*

private or separate + *legein* to speak]

idiopathic *adj.* Of unknown or uncertain cause. Hence terms such as *idiopathic epilepsy*, *idiopathic convulsion*, *idiopathic seizure* exclude cases resulting from known head injury or other identifiable causes. [From Greek *idios* separate + *pathos* suffering + *-ikos* of, relating to, or resembling]

idioretinal light *n.* Another name for **dark light* or **intrinsic light*. [From Greek *idios* private or separate + English *retina* + *-al* from Latin *-alis* of or relating to]

idiot *n.* An obsolete term for a person with profound **intellectual disability*; also an abusive term for a fool. **idiocy** *n.* Profound **intellectual disability*. **idiotic** *adj.* [From French *idiot* an idiot, from Latin *idiota* an ignorant person, from Greek *idiotes* a private person, or one who has no professional knowledge]

idiot savant *n.* A person with **intellectual disability* who can perform at a high level in some restricted domain of intellectual functioning, such as memorizing vast bodies of information, musical or artistic performance, or calendar calculating—naming the day of the week for a specified date in the past or future. It is not unusual for an idiot savant to suffer from **autism spectrum disorder*. Also called a *savant*. **idiots savants** *pl.* [From French *idiot* an idiot + *savant* wise or knowledgeable]

IE scale *n.* A scale derived from the **MMPI* (Minnesota Multiphasic Personality Inventory) to measure **introversion*—extraversion.

iff *conj.* In logic and mathematics, if and only if. It indicates that the two sentences that it conjoins are necessary and sufficient conditions for each other. See *BICONDITIONAL*.

iich'aa *n.* A variant name for **amok* among the Navajo indians of North America. [Navajo]

II fibre *n.* A medium-diameter, partly myelinated type of **afferent* nerve

fibre with intermediate conduction velocity, such as those of the sensory receptors located in the skin, extrafusal muscles, and joints. US *II fiber*. Compare ALPHA FIBRE, C FIBRE, DELTA FIBRE, GAMMA FIBRE, IA FIBRE, IB FIBRE.

ikota See LATAH.

ill-defined problem *n.* In the study of *problem solving, any problem in which either the starting position, the allowable operations, or the goal state is not clearly specified, or a unique solution cannot be shown to exist. A typical example is the problem of overpopulation, which satisfies none of these criteria. Also called an *ill-structured problem*. Compare WELL-DEFINED PROBLEM.

Illinois Test of Psycholinguistic Abilities *n.* A test for the assessment of psycholinguistic disabilities in children, consisting of 10 ordinary subtests plus a further two optional subtests for children between the ages of 2 and 10. It was developed by the US special educator and psychologist Samuel A(lexander) Kirk (1904–96) and published in 1961, with a revised version in 1968. **ITPA** *abbrev.*

illness anxiety disorder *n.* A term introduced in *DSM-5 to denote a disorder characterized by clearly excessive preoccupation, for at least six months, with the possibility of having or contracting a serious illness, with at most mild or minimal *somatic symptoms (this distinguishes it from *somatic symptom disorder), intense *anxiety about health, and excessive health-related activities, either repeatedly checking for symptoms or fearfully avoiding doctor's appointments. Compare BODY DYSMORPHIC DISORDER, GENERALIZED ANXIETY DISORDER, OBSESSIVE—COMPULSIVE DISORDER, PANIC DISORDER.

illocutionary act *n.* A form of *speech act that does not convey information like a statement but functions as an action in itself. For example, a request, a threat, a welcome, a warning, or an apology cannot be considered as true or false like a statement, but such utterances none the less bring about new psychological or social realities—saying is equivalent to doing. Compare LOCUTIONARY ACT, PERLOCUTIONARY ACT. [From *in-* into + Latin *locutio* an utterance, from *loqui* to speak]

*****ebook converter DEMO Watermarks*****

illuminance *n.* The amount of light falling on a surface, measured in **lux*. Also called *illumination*.

illumination *n.* 1. Another name for **illuminance*. 2. Another name for **insight* (2).

illusion *n.* According to a narrow definition, a misperception or misconception of a stimulus object, image, event, experience, or problem, or a stimulus that generates such a misperception or misconception; more generally, any misleading, deceptive, or puzzling stimulus or the experience that it generates. **Perceptual illusions* can arise through any **sensory modality*, but the most prominent are the **auditory illusions*, **tactile illusions*, and above all **visual illusions*. Illusions of conception rather than of perception are called **cognitive illusions*. Delusions of identification and memory such as **Capgras syndrome*, **déjà vu*, and the other **paramnesias* (1) are often referred to as illusions, but this is avoided in careful usage. See also POSTURAL AFTEREFFECT, SPACE–TIME ILLUSION. Compare DELUSION, HALLUCINATION. [From Latin *illusio*, *illusionis* deceit, from *illudere* to mock or make sport with, from *ludere* to play]

illusion of circular pitch *n.* Another name for the **auditory staircase illusion*.

illusion of control *n.* The belief that one has control over events that are actually determined by chance. For example, choosing a ‘lucky’ number when buying a lottery ticket does not increase the probability of winning, and throwing dice with great effort does not increase the probability of winning numbers coming up, but people often behave as if such actions influence the events in question. People who are presented with a simulation of coin-tossing on a computer and who try to influence the outcomes—for example, to increase the number of heads—by **psychokinesis* often believe that they have had an effect even when the computer has behaved perfectly randomly. The English psychologist Susan J. Blackmore (born 1951) and a colleague provided evidence in 1985 that this occurs especially in people who believe strongly in **extra-sensory perception* (ESP). The concept of illusion of control was introduced and named in 1975 in an article in the *Journal of Personality and Social Psychology* by the US psychologist Ellen J. Langer

*****ebook converter DEMO Watermarks*****

(born 1947), who was also the first to study it experimentally. Research by Langer and others suggests that it occurs most frequently in situations that resemble tasks involving skill, appear familiar, allow free choice, involve competition with apparently incompetent opponents, include foreknowledge of the desired outcome, and emphasize the importance of success. There is also evidence to suggest that depressive mood reduces the illusion of control. See also [DEPRESSIVE REALISM](#), [JUST WORLD HYPOTHESIS](#).

illusion of doubles See [CAPGRAS SYNDROME](#).

illusory conjunction *n.* Mistakenly merging attributes of two distinct stimuli in perception, for example, perceiving a red circle when a blue circle and a red square were displayed.

illusory contour *n.* A visual [*contour](#) in the absence of a lightness or colour gradient in the stimulus, computed in Area V2 of the [*visual cortex](#), generating form perception without a corresponding retinal image, the best-known example being the contour of a [*Kanizsa triangle](#). Also called an *imaginary contour*, a *Kanizsa contour*, or a *subjective contour*. See also [ANORTHOSCOPIC](#), [COGNITIVE INVENTION](#), [EHRENSTEIN'S BRIGHTNESS ILLUSION](#), [RANDOM-DOT KINEMATOGRAM](#), [RANDOM-DOT STEREOGRAM](#).

illusory correlation *n.* An apparent correlation that does not actually exist in the data being judged. In the classic demonstration of the illusion in 1967, the US psychologists Loren J(ames) Chapman (born 1927) and Jean Chapman (born 1929) presented experienced clinicians and students with information about a number of mental patients—for each patient, diagnostic statements and a drawing of a person made by that patient. The clinicians and students then estimated, from memory, the frequency with which different diagnostic statements (such as *The man who drew this is suspicious of other people*) had been associated with specific characteristics of the drawings (such as peculiar eyes in the drawing). Both groups of judges vastly overestimated the co-occurrences that fitted in with their [*implicit personality theories](#), and this illusion was extremely resistant to change, persisting even when the actual correlations were negative. For example, 91 per cent of the experienced clinicians and 58 per cent of the students reported that peculiar eyes had been associated with suspiciousness, and 80 per cent of the

*****ebook converter DEMO Watermarks*****

clinicians and 76 per cent of the students reported that broad shoulders had been associated with being worried about manliness. The illusion helps to underpin superstitions and prejudices, and it is usually explained by the **availability heuristic*, the assumption being that co-occurrences that seem likely are easier to remember than unlikely ones.

illustrator *n.* Anything that elucidates or amplifies, especially by visual signs, or anyone who produces pictures to clarify or explain a written text. In social psychology, a **gesture* (1) that accompanies speech and that depicts, clarifies, or amplifies what is being said, as when a person locks two hands together to illustrate a phrase referring to a powerful bond between two people, or punches the fist of one hand into the palm of the other to accompany a description of a car crash. *See also* KINESICS.

image *n.* 1. A depiction or likeness of an object. 2. An optically formed representation of an object, such as a **retinal image* projected by the crystalline lens of the eye on to the retina. 3. A mental representation of a stimulus in the absence of the physical stimulus, formed by imagination or memory. Also called a *mental image*. *See also* AFTERIMAGE, EIDETIC IMAGE, HERING IMAGE, HESS IMAGE, HYPNAGOGIC IMAGE, HYPNOPOMPIC IMAGE, IMAGERY, PURKINJE IMAGE, PURKINJE–SANSON IMAGE, REPRESENTATION (1, 2), STABILIZED RETINAL IMAGE. 4. The appearance or character that a person or an organization presents in public (as in *Speaking out in favour of legalizing cannabis wouldn't be good for my image*). 5. Another name for a **figure of speech* in which a word or phrase is applied to something other than its usual or literal meaning. **imaging** *n.* Creating or forming images (1, 2, 3). *See also* BRAIN IMAGING. [From Latin *imago* an image]

imageless thought *n.* **Thinking* without mental **imagery*. The **Würzburg school* believed this form of thinking to be possible but never managed to provide evidence persuasive enough to convince sceptics.

imagen *n.* A representation of a visual image in long-term memory. *Compare* LOGOGEN. [From Latin *imago* a copy or representation + Greek *genes* born]

image–retinal system *n.* A subsystem of the visual system, based on
*****ebook converter DEMO Watermarks*****

***direction-sensitive neurons**, that computes the movement of objects from the movement of images across the retina, but that is unable on its own to distinguish between retinal movements caused by movements in the environment and those caused by movements of the observer's eyes and head. *See also* EYE-HEAD MOVEMENT SYSTEM, REAFFERENCE.

imagery *n.* The act or process of forming mental ***images** (3) without stimulation of sense organs, or the mental images formed by ***memory** and ***imagination**, including not only visual images but also images from the other senses, such as hearing, taste, smell, and touch. The German psychologist Wilhelm (Max) Wundt (1832–1920) believed that images are one of the three basic elements of consciousness, together with sensations and feelings. *See also* DUAL-CODE THEORY (1), EIDETIC IMAGE, FUNCTIONAL EQUIVALENCE HYPOTHESIS, IMAGEN, LOGOGEN, MENTAL MODEL, MENTAL ROTATION.

imaginary companion *n.* A child's fanciful or invented friend, playmate, or associate, often believed in with ***delusional** conviction.

imaginary contour *n.* Another name for an ***illusory contour**.

imagination *n.* 1. The act or process of ***imagery**, especially of generating mental ***images** (3) of stimuli that are not being or have never been experienced in perception; more generally creative ability or resourcefulness. 2. In approaches to literary criticism influenced by the English romantic poet and critic Samuel Taylor Coleridge (1772–1834), a creative joining of active and passive perceptual elements that imposes unity on poetic material.
imaginary *adj.*

imago *n.* 1. In ***psychoanalysis**, an idealized image of another person, such as a parent, or of an ***instinctual object**, acquired in infancy and maintained in the ***unconscious** (2) in later life. The concept was introduced in 1911 by Carl Gustav Jung (1875–1961), who believed that some imagos are derived from ***archetypes** (2) rather than from personal experiences, and it became a key concept of his ***analytical psychology**. In the writings of the British-based Austrian psychoanalyst Melanie Klein (1882–1960), it is a fantastically distorted picture of the real object on which it is based. *See also* ANIMA, ANIMUS (3), IDEALIZATION. 2. A mature adult insect produced by

*****ebook converter DEMO Watermarks*****

metamorphosis. [From Latin *imago* a likeness, from *imitari* to copy]

imbecile *n.* An obsolete term for a person with mild [*intellectual disability](#); also, an abusive term for a person of low intelligence. **imbecility** *n.* Mild intellectual disability. **imbecilic** *adj.* [From Latin *imbecillus* feeble]

imidazoleamine *n.* A [*biogenic amine](#) such as [*histamine](#) derived from the five-member imidazole ring $C_3H_4N_2$. [From *imidazole* a white crystalline base + *amine*]

imipramine *n.* A commonly prescribed [*tricyclic antidepressant](#) drug that acts by blocking the reuptake mechanism of amine neurotransmitters, allowing them to accumulate at [*synapses \(1\)](#) in the central nervous system. Also called *Amitril*, *Elavil*, *Endep*, *Laroxyl*, *Saroten*, *Tofranil*, and *Triptafen* (trademarks). Formula $C_{19}H_{24}N_2$. See also [CLOMIPRAMINE](#). [From *imi(de)* indicating a compound containing the divalent group $—CONHCO—$ + *pr(opyl)* indicating a compound containing the monovalent group C_3H_7 + *amine*]

imitation game *n.* The name used by the English mathematician Alan Mathison Turing (1912–54) to refer to what others have always called the [*Turing test](#).

immediate memory *n.* Another name for [*short-term memory](#).

immune response *n.* The production of [*antibodies](#) within the body as a defensive reaction to the presence of an [*antigen](#), as when [*B lymphocytes](#) produce [*immunoglobulin](#) molecules with combining sites that fit shapes on the surface of the antigen and that bind to the antigen, setting in train a process that can neutralize and destroy it. A *primary immune response* follows first exposure to an antigen, usually takes several days to develop, and is mediated initially by immunoglobulin M (IgM), whereas a *secondary immune response* occurs after a second or subsequent exposure, develops much more rapidly, and is mediated primarily by immunoglobulin G (IgG). Also called an *antigen–antibody response*. See also [GRANULOCYTE](#), [INTERLEUKIN](#), [MONOCYTE](#), [PRION DISEASE](#), [T LYMPHOCYTE](#). [From Latin *immunis*

exempt or immune, from *in-* not + *munis* serving]

immune system *n.* The structures, substances, and processes within the body that are responsible for **immune responses*.

immunoglobulin *n.* Any of a group of Y-shaped protein molecules synthesized in blood plasma by B lymphocytes and functioning as an **antibody* in an **immune response*. Immunoglobulins are made up of two pairs of molecular chains, one light pair and one heavy pair, linked by disulphide bonds and containing variable regions providing differently shaped combining sites for different **antigens*, the number and positions determining the particular class. Among the most important classes are immunoglobulin G (IgG), an antibody produced towards the end of a primary immune response and the main antibody in a secondary response; immunoglobulin A (IgA), secreted locally in the gut and occurring in bodily fluids such as saliva, tears, and milk; and immunoglobulin M (IgM), the first class of immunoglobulin appearing in a primary immune response. *See also* B LYMPHOCYTE, T LYMPHOCYTE. **Ig** *abbrev.* [From Latin *immunis* exempt or immune, from *in-* not + *munis* serving + *globulus* a little globe, diminutive of *globus* a globe + *-in(a)* indicating an organic compound, referring to globulins, proteins soluble in dilute salt solutions but not in pure water]

immunology *n.* The study of the nature, functions, and phenomena of the **immune system* and **immune responses*. [From *immune* + Greek *logos* word, discourse, or reason]

impairment *n.* Any diminution in quality or strength; more specifically, any diminution in the quality or strength of physical or psychological functioning in some specified domain. *Compare* DEFICIT. **impair** *vb.* [From Latin *im-* indicating intensive + *peiorare* to make worse, from *peior* worse]

implicational universals *n.* One of the classes of **linguistic universals*, taking the form *if A, then B*, where *A* and *B* are two properties of languages. A typical example, suggested by the US linguist Joseph H. Greenberg (1915–2001), is the following: If a language has **gender (2)* categories in nouns, then it has gender categories in pronouns.

implicit association test *n.* A test designed to measure ***implicit attitudes** by pairing the object of the attitude with pleasant and unpleasant words. To measure implicit prejudice against black people, for example, a respondent may be presented with images of faces of black and white people interspersed with pleasant words (such as *happy, peace, pleasure*) and unpleasant words (such as *filth, rotten, ugly*). In one phase of the test, the respondent's task is to react as quickly as possible by pressing a particular key whenever a black face or an unpleasant word is presented and a different key whenever a white face or a pleasant word is presented. In a second phase, the pairings are reversed, so that the respondent has to press one key for a black face or pleasant word and a different key for a white face or an unpleasant word. A person with an unfavourable implicit attitude to black people should find the first (congruent) phase easier than the second (incongruent) phase and should therefore respond more quickly in the first, the difference between the average ***latencies** in the two phases providing a measure of the implicit attitude. The test was developed by the US psychologist Anthony G(alt) Greenwald (born 1939) and two postgraduate students and published in the *Journal of Personality and Social Psychology* in 1998. Because it is a ***non-reactive** and ***unobtrusive measure** whose purpose is hidden from respondents, and because responses to it are difficult to fake, it is especially useful in assessing socially stigmatized attitudes. Also called the *implicit attitude test*. See also **MODERN RACISM**. **IAT** abbrev. [From Latin *implicitus* interwoven, from *implicare* to interweave, from *plicare* to fold]

implicit attitude *n.* An ***attitude** activated without conscious awareness by memory of past experiences, as when a woman meets a man and takes an instant dislike to him because he reminds her unconsciously of an uncle whom she disliked when she was a child. It is usually measured by means of the ***implicit association test**. See also **MODERN RACISM**.

implicit learning *n.* Acquisition of information occurring largely without conscious effort or explicit knowledge of what is learned. The second part of the definition is controversial because of the difficulty of proving that participants lack knowledge of what they have learned. The concept was introduced in 1967 by the US psychologist Arthur S. Reber (born 1940) in an article in the *Journal of Verbal Learning and Verbal Behavior* in which he reported evidence that, after viewing a series of letter strings formed

*****ebook converter DEMO Watermarks*****

according to an artificial ***finite-state grammar**, participants who had little conscious insight into the underlying rule structure were nevertheless able to classify new letter strings as to whether or not they conformed to the grammar. *See also* **WUG TEST**. *Compare* **IMPLICIT MEMORY**. [From Latin *implicitus* interwoven, from *implicare* to interweave, from *plicare* to fold + English *learning*]

implicit memory *n.* A type of memory that is revealed when learning facilitates performance on a task that does not require conscious or intentional recollection of what was learnt. In a typical test, learners are shown a list of words or pictures, and then they are given an ostensibly unrelated task of recognizing fragmented forms of words or pictures in brief displays, and evidence for implicit memory is found in their ability to recognize the fragmented forms better if they have previously studied them. Evidence suggests that densely amnesic patients, who perform badly on standard memory tests, often perform normally on tests of implicit memory. The term was introduced by the Canadian psychologist Peter Graf (born 1951) and the US psychologist Daniel Lawrence Schacter (born 1952) in an article in the *Journal of Experimental Psychology: Learning, Memory, and Cognition* in 1985. *Compare* **EXPLICIT MEMORY**.

implicit personality theory *n.* A set of assumptions that a person makes, often unconsciously, about the ***correlations** between personality ***traits**, including such widespread assumptions as that *warmth* is positively correlated with *generosity*, so that a person who is warm is perceived as being likely also to be generous, and that *coldness* is positively correlated with *seriousness*, so that a person who is cold is perceived as being likely also to be serious. Some implicit personality theories also include correlations between psychological and physiognomic traits, such as the belief that intelligence is positively correlated with forehead height or that meanness is negatively correlated with distance between the eyes. The concept was introduced in 1954 by the US psychologist Jerome S(eymour) Bruner (born 1915) and the Italian-born US psychologist Renato Tagiuri (1919–2011), who called it a *lay personality theory*, and in 1955 by the US psychologist Lee J(oseph) Cronbach (1916–2001), who introduced the term *implicit personality theory*. *See also* **ILLUSORY CORRELATION**, **TRAIT CENTRALITY**.

implosion therapy *n.* Another name for [*flooding](#). [From Latin *in* in + *plodere* to clap]

impossible figure *n.* A drawing or other representation of an object that could not exist in actual three-dimensional space, the best known examples being the [*Freemish crate](#), [*impossible trident](#), the [*Penrose triangle](#), and the [*staircase illusion](#). It is a misnomer, because what is impossible is not the figure but what it represents. Impossible figures feature strongly in the work of the Swedish artist Oscar Reutersvärd (1915–2001) and the Dutch artist Maurits C(ornelis) Escher (1898–1970). Also called an *Escher figure* or an *undecidable figure*. See also [VISUAL ILLUSION](#). Compare [AMBIGUOUS FIGURE](#).

impossible triangle *n.* Another name for the [*Penrose triangle](#).

impossible trident *n.* An [*impossible figure](#) representing a three-pronged (or two-pronged) object that emerged from an obscure source in the US in 1964 and appeared on the cover of *Mad* magazine in 1965 (see [illustration](#)). It has been incorporated into several of the paintings, drawings, and etchings of the Swedish artist Oscar Reutersvärd (1915–2002) and some of the works of the Dutch graphic artist Maurits C(ornelis) Escher (1898–1970). Also called a *blivet*. See also [VISUAL ILLUSION](#).

Impossible trident. How many prongs does it have?

imposter phenomenon *n.* A subjective experience of phoniness in people who believe that they are not intelligent, capable, or creative despite evidence of high achievement, and who are highly motivated to achieve but live in perpetual fear of being ‘found out’ or exposed as frauds. The phenomenon was first described in 1978 by the US psychologists Pauline Rose Clance (born 1938) and Suzanne A(ment) Imes (born 1944) in an article entitled ‘The Impostor Phenomenon in High Achieving Women: Dynamics and Therapeutic Intervention’ in the journal *Psychotherapy: Theory and Practice*. Also spelt *impostor phenomenon*. Also called the *imposter* (or *impostor*) *syndrome* or *fraud syndrome*. [From Latin *impositus* imposed, from *imponere*, *impositum* to place upon, from *ponere* to place]

impotence *n.* **1.** Weakness or powerlessness. **2.** More specifically in relation to males, incapacity to perform sexual intercourse owing to an inability to achieve or to maintain an erection, believed to affect between 13 and 21 per cent of men aged 20–80 on at least some occasions. Also called *erectile dysfunction* or *erectile disorder (ED)*, *erectile impotence*, or *male erectile disorder*. Also, less commonly, an inability to have an ***orgasm** or to ejaculate. Also called *ejaculatory impotence*, *male orgasmic disorder*, or *orgasmic impotence*. Both forms of impotence may be classified either as *primary impotence*, if successful intercourse has never been possible, and *secondary impotence*, if at least one successful intercourse has been possible. See also **CYCLIC GMP**, **DE-REFLECTION**, **ERECTILE DISORDER**, **PREMATURE (EARLY) EJACULATION**, **VIAGRA**. **impotent** *adj.* [From Latin *in-* not + *potentia* power]

impoverished stimulus *n.* Another name for a ***degraded stimulus**.

impression formation *n.* The rapid creation of a unified perception or understanding of the character or personality of another person on the basis of a large number of diverse characteristics. One of the main problems in this area has been to determine whether people use ***additive** or non-additive models to combine the information. See also **ATTRIBUTION THEORY**, **IMPLICIT PERSONALITY THEORY**, **IMPRESSION MANAGEMENT**, **PERSON PERCEPTION**, **PRIMACY EFFECT (2)**, **SELF-PRESENTATION**, **TRAIT CENTRALITY**.

impression management *n.* Control and regulation of information in order to influence ***impression formation** or the attitudes or opinions of the people on whom such behaviour is targeted. Through impression management one seeks to shape other people's impressions of a person (such as oneself, a friend, or an enemy) or of an event (such as an achievement or a failure). Impression management that is focused on controlling impressions of oneself is called ***self-presentation**.

imprinting *n.* In ethology, a form of rapid ***learning (1)** that takes place during a ***critical period** of development immediately or shortly after birth and is extremely resistant to ***extinction (2)**, the most familiar example being the behaviour of newly hatched ducklings that become imprinted on, and subsequently follow around, virtually any moving object to which they are exposed during the critical period following hatching. It was first studied in
*****ebook converter DEMO Watermarks*****

detail in 1935 by the Austrian zoologist Konrad (Zacharias) Lorenz (1903–89). Also called *filial imprinting*. See also [GENETIC IMPRINTING](#). Compare [ATTACHMENT THEORY](#).

impulse-control disorders *n.* A class of [*mental disorders](#) in [*DSM-IV](#) characterized by a failure to resist impulses, drives, or temptations to behave in ways that are damaging to oneself or others. In DSM-5, they appear under [*disruptive, impulse-control, and conduct disorders](#). See [ANTISOCIAL PERSONALITY DISORDER](#), [CONDUCT DISORDER](#), [INTERMITTENT EXPLOSIVE DISORDER](#), [KLEPTOMANIA](#), [OPPOSITIONAL DEFIANT DISORDER](#), [PYROMANIA](#). See also [INTERNET ADDICTION SYNDROME](#), [INTERNET GAMING DISORDER](#), [ROAD RAGE](#), [ROID RAGE](#), [SUBSTANCE-RELATED AND ADDICTIVE DISORDERS](#).

impulsivity *n.* Acting on the spur of the moment without thinking, planning, or considering the consequences It is frequently accompanied by an inability to stick to plans and a continual sense of urgency. See [ANTISOCIAL PERSONALITY DISORDER](#), [ATTENTION-DEFICIT/HYPERACTIVITY DISORDER](#), [BORDERLINE PERSONALITY DISORDER](#), [PSYCHOPATHY](#), [REFLECTION–IMPULSIVITY](#). [From Latin *impulsus*, a pushing against, from *impellere* to strike against + *-ivus* indicating a tendency + *itas* indicating a state or condition]

imu See [LATAH](#).

inadequate personality *n.* A term occasionally used for a condition, without evidence of any [*mental disorder](#), characterized by lack of judgement, ambition, and initiative, leading to failure at almost everything attempted.

inadequate stimulus *n.* A term sometimes used for a [*stimulus \(1\)](#) that is incapable of evoking a [*response](#) from an organism, such as light or sound that is too faint for the visual or auditory receptors to detect. It is an [*oxymoron](#) and is avoided in careful usage. Compare [ADEQUATE STIMULUS](#).

inadmissible alternative/strategy *n.* In decision theory and game theory, an alternative or [*strategy \(2\)](#) that is dominated by a [*dominant alternative/strategy](#).

inappropriate affect See AFFECT.

inattention blindness *n.* Failure to register consciously a visual stimulus when attention is focused elsewhere. The term was coined in the title of the book *Inattention Blindness* (1998) by the US psychologists Arien Mack (born 1931) and (posthumously) Irvin Rock (1922–95). In Mack and Rock's standard experimental procedure, a small cross was presented briefly on a computer screen, and participants were asked to judge which of its component lines was longer. After several similar trials, an unexpected image, such as a brightly coloured rectangle or an inverted face, appeared on the screen along with the cross. The participants, who were concentrating on the cross, often failed to notice the unexpected image, even when it appeared in the centre of the **visual field*, although a personally meaningful image, such as the participant's own name or a non-inverted happy face, was usually noticed. This phenomenon may help to explain why motorists and train drivers sometimes go through red traffic signals and why certain other accidents occur. See also VISUAL SEARCH. Compare CHANGE BLINDNESS, MOTION-INDUCED BLINDNESS.

inbred strain *n.* A group of organisms produced by or resulting from **inbreeding*.

inbreeding *n.* Producing offspring from closely related parents over a number of generations. See INBREEDING DEPRESSION.

inbreeding depression *n.* Loss of vigour resulting from **inbreeding*, due to the loss of **heterozygosity* and the expression of deleterious **recessive genes* in **homozygous* state. See also INCEST TABOO.

incapacitant *n.* A substance that temporarily disables people and is used for personal protection, crowd control, or biological warfare. Also called an *incapacitating agent* or a *disabling agent*. See BZ GAS, CN GAS, CS GAS, MACE, PEPPER SPRAY, TEAR GAS.

incentive motivation *n.* In **Hullian learning theory*, an **intervening variable* between the work involved in a response and the **generalized*

reaction potential. *K* abbrev.

incentive-sensitization theory *n.* A theory of drug addiction that avoids the assumption that addicts are motivated to take drugs either to experience pleasure or **euphoria* or to avoid unpleasant **withdrawal* symptoms. The theory proposes that potentially addictive drugs produce long-lasting changes in brain organization in areas normally involved in the process of incentive motivation and reward and elsewhere, especially the **nucleus accumbens*. These changes cause brain reward systems to become hypersensitive to drugs and drug-associated stimuli, causing the drug user to 'want' the drug more and more, with the consequence that 'wanting' becomes dissociated from 'liking', and addicts continue to take drugs even when they derive no pleasure or relief from withdrawal symptoms from doing so. The theory was first proposed by the Canadian psychologist Terry E. Robinson (born 1949) and Kent C(harles) Berridge (born 1957) in an article in the journal *Brain Research Reviews* in 1993.

incest *n.* Prohibited sexual intercourse between close relatives. *See also* INCEST TABOO, GENETIC SEXUAL ATTRACTION. [From Latin *incestus* incest, from *in-* not + *castus* chaste or pure]

incest taboo *n.* The custom or law in all societies prohibiting sex and marriage between members of the **nuclear family*, the universality of the taboo being notoriously difficult to explain. According to the *functional theory*, the taboo creates and maintains networks of social relationships without which societies disintegrate into separate nuclear families and are eliminated, but this theory rests on the controversial assumption that without the incest taboo people would naturally want to mate with close relatives, and it fails to explain why the taboo governs sexual intercourse rather than marriage. According to the *inbreeding depression theory*, inbreeding leads to the genetic deterioration and ultimate extinction of any society that practises it, because harmful **recessive genes* are more likely to come together, and the taboo may thus have evolved by natural selection, but this leaves open the question as to why few non-human animals have incest taboos and why some successful human societies, such as the Sotho people of southern Africa, have a positive obligation to marry cousins. The most persuasive explanation is the *prepubertal interaction theory*, put forward in 1894 by the Finnish social

*****ebook converter DEMO Watermarks*****

philosopher Edvard Alexander Westermarck (1862–1939), based on the psychological observation that intimate contact between children at a critical period before puberty, now believed to be between 2 and 6 years of age, results in a lack of sexual attraction between them in adult life. *See also* [ADELPHOGAMY \(2\)](#), [INBREEDING DEPRESSION](#).

incidence *n.* In [*epidemiology](#), the frequency of occurrence or onset of new cases of a disorder as a proportion of a population in a specific time period, usually expressed as the number of new cases per 100,000 per annum. *Compare* [PREVALENCE](#).

incidental learning *n.* Human [*learning \(1\)](#) that is unintentional and unmotivated or that occurs without any apparent [*reinforcement \(1, 2\)](#). In animal learning, the phenomenon is called [*latent learning](#). Also called *passive learning*.

incident light *n.* Light falling on or striking a surface. [From Latin *incidere* to fall into, from *in* into + *cadere* to fall]

inclusive disjunction *See* [DISJUNCTION \(2\)](#).

inclusive fitness *n.* The degree of [*adaptation \(1\)](#) of an organism to its environment, measured in terms of the average number of genes belonging to its [*genotype](#) that are passed on to the next generation, relative to those of other genotypes, taking into account not only the genes that it passes on directly but also those that it shares with other relatives and are passed on by them. The concept was introduced by the British biologist William D(onald) Hamilton (1936–2000) in two articles in the *Journal of Theoretical Biology* in 1964. *See also* [KIN SELECTION](#). *Compare* [DARWINIAN FITNESS](#), [FITNESS](#).

incoherence *n.* Loose, rambling speech that lacks meaningful connections between words or phrases within sentences or clauses and is incomprehensible to others. Extreme instances are sometimes called *word salad*. *See also* [DISORGANIZED SPEECH](#), [DISORGANIZED THINKING](#). *Compare* [COGNITIVE DERAILMENT](#), [LOOSENING OF ASSOCIATIONS](#). [From Latin *in-* not + *cohaerere* to stick together or be consistent, from *co-* together + *haerere* to stick]

*****ebook converter DEMO Watermarks*****

incomplete-pictures test *n.* A non-verbal test or subtest, often included in an **IQ test*, in which the respondent tries to identify or fill in a part that is missing from a picture of a familiar object, such as a pig without a tail or a revolver without a trigger.

incomplete-sentences test *n.* Another name for a **sentence completion test*.

incongruity of affect *See* AFFECT.

incorporation *n.* In **psychoanalysis*, a **defence mechanism* whereby a person mentally ingests or swallows another person, an **instinctual object*, or a **part object*. Its **instinctual aim* is characteristic of the **oral stage*, and it provides a model for **identification (2)* and **introjection*.

incremental validity *n.* In psychometrics, the degree to which a test improves on decisions that can be made from existing information, such as the **base* rate of the attribute being measured and other measures that are available. The term is also used to denote the **validity* of a test arising from successive refinements or improvements of it in the light of experience or evidence, usually including the removal or replacement of test items that turn out to be problematic or that yield different results from the others.

incubation *n.* One of the **problem-solving stages*, coming after preparation and before **insight (2)*, characterized by creative thinking while the problem is turned over in the mind, often unconsciously. [From Latin *incubare* to lie on, from *in* to or on + *cubare* to lie down, alluding to the incubation of eggs before they hatch]

incus *n.* The middle of the three small bones in the **middle ear*, transmitting sound vibrations from the malleus to the stapes. Referred to non-technically as the *anvil*. *Compare* MALLEUS, STAPES. [From Latin *incus* an anvil, from *incudere* to forge, alluding to its resemblance to a blacksmith's anvil]

independent assortment *n.* The law of independent assortment, the

second of **Mendel's laws*, stating that the separation at **meiosis (1)* of any pair of hereditary units for a **trait* or characteristic is not affected by the separation of any other pair, so that each unit is inherited independently of every other unit. This law had to be modified when **linkage* was discovered. Also called the *law of independent assortment of genes*. See also *DNA RECOMBINATION*, *SEGREGATION OF ALLELES*.

independent samples t test *n.* In inferential statistics, a version of the **t test* used for comparing means from two independent samples. Compare *RELATED SCORES T TEST*.

independent variable *n.* In **experimental design*, a variable that is varied by the experimenter independently of the **extraneous variables* in order to examine its effects on the **dependent variable*. In **multiple regression*, it is a variable that has a potential effect on the **dependent variable*. Also called an *experimental variable*. See also *INTERVENING VARIABLE*. *IV* abbrev.

indeterminacy principle *n.* Another name for the **uncertainty principle*.

index case *n.* Another name for a **proband*.

indicator variable *n.* In statistics, a variable with just two possible values, sometimes represented by the symbols 0 and 1, used (for example) to represent categorical variables in **regression analysis*.

indifference interval *n.* A time interval that, according to **Vierordt's law*, is neither systematically overestimated nor systematically underestimated, usually found by experiment to be in the region of 0.7 second, though varying from one person to another and from one occasion to another.

indifference, principle of *n.* Another name for the principle of **insufficient reason*.

indirect scaling *n.* In **psychophysics*, any scaling method, such as the **method of bisection*, in which an observer's judgement of stimulus magnitude is inferred rather than being simply estimated as in direct scaling or **magnitude estimation*.

indirect speech act *n.* An utterance whose communicative purpose is masked by its grammatical form. For example, the utterance *Would you like to set the table?* is grammatically a question, but it masks the speaker's real communicative purpose, which is not to enquire about the listener's likes or dislikes but to tell the listener to do something. *See also* *SPEECH ACT*.

indissociation *n.* The term used by the Swiss psychologist Jean Piaget (1896–1980) to refer to the failure of young children to differentiate themselves from their environments or objects from one another.

individual differences *n.* All of the ways in which people differ from one another, especially psychological differences. Included are all differences in **personality* and **intelligence*.

individual differences scaling *See* *INDSCAL*.

individual psychology *n.* The school of **psychoanalysis*, also called **Adlerian* psychoanalysis, founded in 1911 by the Austrian psychiatrist Alfred Adler (1870–1937). *See* *COMPENSATION*, *DIANA COMPLEX*, *FICTIONAL FINALISM*, *GUIDING FICTION*, *INFERIORITY COMPLEX*, *LIFE LIE*, *MASCULINE PROTEST*, *NEUROTIC CHARACTER*, *NEUROTIC FICTION*, *WILL TO POWER*.

individual test *n.* A test of **intelligence*, **personality*, or any other psychological attribute, designed to be administered to one respondent at a time. *Compare* *GROUP TEST*.

individuation *n.* The act or process of giving individuality to someone or something. In **analytical psychology* it is the process occurring by degrees over the lifespan whereby an individual achieves wholeness through the integration of **consciousness* and the **collective unconscious*, and it is symbolized by the **mandala*. In a key passage, Carl Gustav Jung (1875–

1961) described it as follows: ‘Individuation means becoming a single, homogeneous being, and, in so far as “individuality” embraces our innermost, last, and incomparable uniqueness, it also implies becoming one's own self. We could therefore translate individuation as “coming to selfhood” or “self-actualization” ’ (*Collected Works*, 7, paragraph 266). Jung borrowed the word from the German philosopher Arthur Schopenhauer (1788–1860), but it has been traced back to 16th-century alchemy. In [*neo-Freudian](#) theory, the German-born US psychoanalyst Erich Fromm (1900–80) used the term slightly differently to denote the gradual attainment by a growing child of awareness of being a particular, individual person. *Compare* [DEINDIVIDUATION](#). [From Latin *individuare* to single out, from *in-* into + *dividuus* divisible, from *dividere* to divide]

Indo-European *adj. n.* (Of, relating to, or belonging to) a family of languages spoken by almost half the world's population, descended from a common tongue called *Proto-Indo-European* that is believed to have existed in the fifth millennium BC and subsequently to have fragmented into Germanic, Italic, Celtic, Baltic, Slavic, Albanian, Greek, Armenian, Iranian, and Indic, and later still into many different languages, including English and all descendants from Greek, Latin, and Sanskrit. By working backwards, linguists have reconstructed much of the structure and vocabulary of Indo-European; thus the word for god is believed to have been *deiw-os* (cognate with Latin *deus* and Greek *theos*), the word for father *p'tēr-* (cognate with Latin and Greek *pater*), and hence the word for the patriarchal god of Indo-European religion *Dyeu p'ter-*, from which *Zeus pater* found its way into Greek, *Dyaus pitar* into Sanskrit, and *Jupiter* into Latin and then English. *See also* [GLOTTOCHRONOLOGY](#), [GRIMM'S LAW](#), [LEXICOSTATISTICS](#).

indole *n.* A crystalline substance C_8H_7N forming the basis of the indigo molecule, occurring naturally in coal tar, some plants such as jasmine, and the urine of civets and other mammals, also an important constituent of [*indoleamine](#). Also spelt *indol*. [From *indigo* a tropical plant formerly cultivated for its dark blue dye, also a source of indole + Latin *oleum* oil]

indole alkaloids *n.* A group of [*alkaloids](#) forming one of the major groups of [*hallucinogens](#) and [*psychedelic](#) drugs, including [*bufotenin](#), [*DMT](#), [*harmine](#), [*LSD](#), and [*psilocybin](#). *See also* [PHANTASTICANT](#).

*****ebook converter DEMO Watermarks*****

indoleamine *n.* Any of a group of **biogenic amines*, including **serotonin* and **tryptamine*, containing an **indole* ring with five members and an amine group (NH₂). [From *indole* + *amine*]

indoleamine hypothesis *n.* The conjecture that abnormalities in the metabolism of **indoleamines* are implicated in the aetiology of **depression*, **mania* (1), and other mental disorders.

INDSCAL *abbrev.* Individual differences scaling, one of the most powerful and popular methods of **multidimensional scaling*, first published in the journal *Psychometrika* in 1970 by the US psychometricians J(ohn) Douglas Carroll (1939–2011) and the Chinese-born computer scientist Jih-Jie Chang (born 1927), used for analysing several proximity matrices simultaneously.

induced colour *n.* A colour arising from **colour induction*. US *induced color*.

induced delusional disorder *n.* Another name for a **shared psychotic disorder* (*folie à deux*). Also called *induced psychotic disorder*.

induced motion *n.* Another name for **vection*; more generally, any illusion of movement of a stationary object caused by movement of its background or surrounding context.

induction *n.* 1. A form of reasoning, also called *empirical induction*, in which a general law or principle is inferred from particular instances that have been observed. Many people believe that this form of reasoning works in practice, and it is widely believed to form the basis of all empirical sciences, but the Scottish philosopher David Hume (1711–76) showed in *A Treatise of Human Nature* in 1739 that induction is logically invalid: from the premise *All swans that have been observed are white* it is not valid to conclude that *Therefore, all swans are white*. There is a missing premise, that *All swans have been observed*, which is not true and could never be true of any universal proposition in science that is supposed to apply throughout time and space. Hume pointed out that the uniformity of nature might justify induction, in the form of the premise *Future observations will resemble past*

observations, but this could be justified only by a question-begging appeal to induction itself, and in any event it is not true in general—for example, there are black swans in Australia. This apparent inconsistency is called the *problem of induction* or *Hume's problem*, and it is solved by the insight that empirical evidence is used to falsify rather than to confirm hypotheses. See also [FALSIFIABILITY](#), [GOODMAN'S PARADOX](#), [HEMPEL'S PARADOX](#), [HYPOTHETICO-DEDUCTIVE METHOD](#). Compare [DEDUCTION](#). **2.** A mathematical technique, also called *mathematical induction*, for proving that a statement or [*proposition \(1\)](#) is true in general, or (equivalently) that each of an infinite sequence of statements is true, by proving that the first statement in the sequence is true, and then that if any one of the statements is true it follows that the next one is also true. **3.** Indirect generation of a sensory experience without direct stimulation of the corresponding sensory receptors, by stimulation of adjacent or related sensory processes. See [COLOUR INDUCTION](#), [INDUCED MOTION](#), [VISUAL INDUCTION](#), [WARMTH CONTRAST](#). **4.** The name given by the Russian physiologist Ivan Petrovich Pavlov (1849–1936) to *positive induction*, in which the response to an excitatory [*conditioned stimulus](#) is increased if it is immediately preceded by an inhibitory one, and to *negative induction*, in which the response to an inhibitory conditioned stimulus is increased if it is immediately preceded by an excitatory one. **5.** The process whereby morphogenic differentiation is stimulated in a developing [*embryo](#) by [*Müllerian inhibiting substance](#), [*testosterone](#), or other hormones or substances. **6.** A formal process of introduction to membership of a group or organization. **7.** A shortened name for [*enzyme induction](#). **induce** *vb.* **inductive** *adj.* [From Latin *inducere* to lead in, from *in* in + *ducere*, *inductum* to lead + *-ion* indicating an action, process, or state]

inductive reasoning *n.* Another name for [*induction \(1, 2\)](#).

inductive statistics *n.* Another name for [*inferential statistics](#).

industrial/organizational psychology *n.* A field of applied psychology in which the results of basic and applied research into the well-being and efficiency of people in work is applied to problems arising in industry and in non-industrial organizations. Work in this field focuses on vocational guidance and selection, problems of work motivation and [*job satisfaction](#), absenteeism in organizations, improvement of communication

within organizations, design and implementation of training courses, teaching of social and human relations skills, improvement of promotion structures, evaluation of job performance, and problems of safety and welfare. Its major branches are **personnel psychology*, **ergonomics* or human factors psychology, and **organizational psychology*. It corresponds roughly to **occupational psychology*, the term often preferred in the UK and the rest of Europe, and it falls under the umbrella of **work psychology*. **I/O psychology** *abbrev.*

industry versus inferiority *n.* One of the crises in the developmental theory of the German-born **ego psychologist* Erik H. Erikson (1902–94). See DEVELOPMENTAL CRISES.

infantile amnesia *n.* The inability of human adults to retrieve genuine memories for events that occurred before about three years of age. Also called *childhood amnesia*. Faced with overwhelming evidence for this phenomenon, even the Austrian neurologist Sigmund Freud (1856–1939) was forced to accept it in his book *Three Essays on the Theory of Sexuality* (1905) (*Standard Edition*, VI, pp. 130–243, at pp. 174–6). See also FALSE MEMORY, FALSE MEMORY SYNDROME, PARAMNESIA (1), PIAGET KIDNAPPING MEMORY, SCREEN MEMORY.

infantile autism *n.* An alternative name for **autism spectrum disorder* when manifested during infancy. Compare CHILDHOOD AUTISM.

infantile sexuality *n.* In **psychoanalysis*, the sexual drive or **libido* in infants. See ANAL STAGE, ORAL STAGE.

infarct *n.* A localized area of dead tissue resulting from the interruption of its blood supply. When it occurs at multiple sites in the brain it can lead to **dementia*. Also called an *infarction*. See also VASCULAR DEMENTIA. [From Latin *infarctus* stuffed into, from *in* in or into + *farcire* to stuff]

infatuation *n.* Foolish or unreasoning passion; a type of love characterized by erotic passion but lacking other components. See LOVE. [From Latin *in* in + *fatuus* foolish]

inference *n.* Reasoning from premises to conclusions; or a conclusion arrived at by this process. When the premises are particular observations and the conclusion a general law or principle, then the mode of inference is called ***induction (1)**; when the premises are axioms, postulates, or assumptions and the conclusion a logical inference or theorem, then the mode of inference is called ***deduction**. **infer** *vb.* To make inferences. This word is sometimes used as a synonym for *imply* (as in *Her replies inferred that she disagreed*), but this is avoided in careful usage. [From Latin *inferre* to bring in, bring about, or deduce, from *in-* into + *ferre* to bear or carry]

inferential statistics *n.* Techniques for inferring conclusions about ***populations** on the basis of data from ***samples**. The major objective is usually to decide whether the results of research are statistically significant. Also called *inductive statistics*. See also **SIGNIFICANCE TEST**, **STATISTICAL INFERENCE**. Compare **DESCRIPTIVE STATISTICS**.

inferior *adj.* Lower in any respect; towards the bottom of a body, organ, or part, or situated below another homologous structure. Compare **SUPERIOR**. [From Latin *inferior* lower, from *inferus* low]

inferior colliculus *n.* Either of two hillock-shaped small bumps on the tectum (the roof of the midbrain), below and behind the superior colliculi, functioning as an intermediate nucleus for processing auditory signals before they are transmitted to the primary ***auditory cortex**. The four colliculi are collectively called the corpora quadrigemina. **inferior colliculi** *pl.* [From Latin *inferior* lower + *colliculus* a small hill, from *collis* a hill]

inferiority complex *n.* In the ***individual psychology** of the Austrian psychiatrist Alfred Adler (1870–1937) and his followers, a ***complex (2)** of emotionally toned ideas arising from repressed fear and resentment associated with real or imagined inferiority, resulting either in ***compensation**, in the form of pugnacity, or withdrawal into oneself. Adler introduced the concept in 1907 in a book translated as *Study of Organ Inferiority and its Psychical Compensation* (1917). In a later book *The Neurotic Constitution* (1926, original work 1912), he described it as follows: ‘The constitutional inferiority and similarly effective childhood situations give rise to a feeling of inferiority which demands a compensation in the
*****ebook converter DEMO Watermarks*****

sense of an enhancement of the self-esteem' (p. 111). In an article in 1935 Adler distinguished between natural feelings of inferiority and the inferiority complex proper.

inferior longitudinal fasciculus *n.* A bundle of nerve fibres in each cerebral hemisphere linking the *temporal lobe to the *occipital lobe. Compare SUPERIOR LONGITUDINAL FASCICULUS. [From Latin *inferior* lower + *longitudo* length, from *longus* long + *fasciculus* a little bundle, diminutive of *fasculus* a bundle]

inferior oblique muscle *n.* The lower of the two *oblique muscles attached externally to the eyeball.

inferior olivary nucleus *n.* Either of two wrinkled olive-shaped clumps of neurons in the upper part of the medulla oblongata, just below the pons, connected to the thalamus, cerebellum, and spinal cord, implicated in motor coordination. Also called an *inferior olivary complex* or an *inferior olive*. Compare SUPERIOR OLIVARY NUCLEUS. **ION** abbrev.

inferior rectus *n.* The lower of the four *rectus muscles attached externally to the eyeball.

inferior temporal cortex *n.* Another name for the *inferior temporal gyrus. **ITC** abbrev.

inferior temporal gyrus *n.* The lowest *gyrus running horizontally on the lateral (outer) surface of the *temporal lobe, implicated in visual pattern recognition. Also called the *inferior temporal cortex* (**ITC**) or *inferotemporal cortex*. **ITG** abbrev.

infinite regress *n.* An argument consisting of or implying an endless sequence of steps. An argument of this kind shows, for example, that *introspection cannot be a valid and complete source of self-knowledge, because it requires that it be possible to perform a mental act (such as remembering one's last birthday) while at the same time observing oneself doing it; but then the act of introspection is part of the mental process, and for

a complete understanding it would be necessary to observe the act of observation, and so on, which in this case is clearly impossible. This is an example of a *vicious* infinite regress: an infinite regress is vicious only if it leads to an absurd conclusion, and in other cases it is often unproblematic.

inflation of consciousness *n.* In **analytical psychology*, the expansion of a person's consciousness beyond its normal limits, arising through **identification* (2) with an **archetype* (2), the **persona* (1) or, in certain mental disorders, a famous person, resulting in an exaggerated sense of importance that is generally compensated for by feelings of inferiority. Carl Gustav Jung (1875–1961) described how it arises when the archetypal content ‘seizes hold of the psyche with a kind of primeval force and compels it to transgress the bounds of humanity. The consequence is a puffed-up attitude, loss of free will, delusion and enthusiasm for good and evil alike’ (*Collected Works*, 12, paragraph 563).

inflecting language *n.* A language such as Latin, German, or Arabic in which grammatical relationships are indicated by altering the internal structure of words, often by changing their endings. English has some features of an inflecting language, as is shown in the two sentences *I ask you* and *I asked you*. Also called a *synthetic language* or a *fusional language*. Compare AGGLUTINATIVE LANGUAGE, ISOLATING LANGUAGE.

influence, delusion of See DELUSION OF CONTROL.

information *n.* 1. **Knowledge* acquired by **learning* (2). 2. In **information theory*, a numerical quantity indicating the degree of uncertainty in a **signal*, such that if the signal occurs with probability p , then the information that it conveys, symbolized by H , is equal to $\log_2 (1/p)$, the units of measurement being binary digits or **bits*. See also BYTE, INFORMATION TECHNOLOGY, INFORMATION THEORY, NYBBLE. [From Latin *informare* to give form or shape to, from *in* into + *formare* to form, from *forma* a form or shape + *-ation* indicating a process or condition]

information processing *n.* Cognitive functioning or **cognition* interpreted with the help of concepts borrowed from computer science. It

includes all of the processes studied within **cognitive psychology*, such as **attention*, **perception*, **learning* (1, 2), **memory*, **thinking*, **problem solving*, **decision making*, and **language* (1). See ACT*, AUTOMATIC PROCESSING, BOTTOM-UP PROCESSING, CASCADE PROCESSING, COGNITIVE MISER, COGNITIVE PSYCHOLOGY, CONTROLLED PROCESSING, DISCRETE PROCESSING, DISTRIBUTED COGNITION, NEURAL NETWORK, PARALLEL DISTRIBUTED PROCESSING, STEREOTYPE, TOP-DOWN PROCESSING.

information technology *n.* The study or use of computers, telecommunication systems, and other devices for storing, retrieving, and transmitting **information* (2). See also INFORMATION THEORY. **IT** abbrev.

information theory *n.* A theory of **information* (2) in which the amount of information, symbolized by H , in a signal is defined as the smallest number of binary digits or **bits* that are required to encode it. If a signal specifies a choice of one of N equiprobable alternatives, then the amount of information that it contains is $H = \log_2 N$; hence, for example, if 16 people are equally likely to have committed a crime, a signal specifying the guilty person conveys $H = \log_2 16 = 4$ bits of information, which may be interpreted as four successive binary divisions of the set of suspects. As a second example, in a signal in which each letter of the English alphabet is equally probable, the information content of a single letter is $H = \log_2 26 = 4.70$ bits. A more general definition, applicable where the alternatives are not equiprobable, is given by the Wiener-Shannon formula $H = -\sum p_i \log_2 p_i$, where p_i is the probability of the i th alternative, and in the light of this formula information is sometimes defined as negative **entropy*. The theory was developed independently in the late 1940s and early 1950s by the English statistician and geneticist Ronald Aylmer Fisher (1890–1962) and the US mathematicians Norbert Wiener (1894–1964) and Claude E(lwood) Shannon (1916–2001), and it was Shannon's work that had the greatest influence in psychology. See also BYTE, INFORMATION TECHNOLOGY, NYBBLE.

informed consent *n.* Voluntary agreement by a patient to undergo a medical treatment or procedure, or by a research participant or subject to take part in an experiment or other research study, given in full knowledge of the nature of the procedure and its potential risks and benefits. It is

acknowledged in the ethical principles for research published by the American Psychological Association and the British Psychological Society that informed consent, while desirable, is sometimes either infeasible (as when the research participants lack the capacity to give it, through youth or mental disorder), or impractical (as when the nature of the investigation relies on deception). *See also* [ULYSSES CONTRACT](#).

infradian rhythm *n.* Any [*biological rhythm](#) with a period of less than a day. *See* [ALPHA WAVE](#), [BASIC REST–ACTIVITY CYCLE](#), [BETA WAVE](#), [DELTA WAVE](#), [GAMMA WAVE](#), [SENSORIMOTOR RHYTHM](#), [THETA WAVE](#). *See also* [BIOLOGICAL CLOCK](#), [CHRONOBIOLOGY](#), [ZEITGEBER](#). *Compare* [CIRCADIAN RHYTHM](#), [CIRCANNUAL RHYTHM](#), [ULTRADIAN RHYTHM](#). [From Latin *infra* under + *dies* a day]

infra-red *adj. n.* (Of or relating to) electromagnetic radiation with wavelengths longer than the longest radiation in the [*visible spectrum](#) but not as long as radio waves, hence within the range 750 nanometres to 1 millimetre, such radiation being perceived as heat. *See also* [INFRA-RED VISION](#). *Compare* [ULTRAVIOLET](#). **IR** *abbrev.* [From Latin *infra* below or under + English *red*]

infra-red vision *n.* A form of perception found in all snakes of the subfamily Crotalinae, the pit vipers, including rattlesnakes and pythons, in which [*infra-red](#) radiation emitted by warm objects such as prey animals is detected by a snake's pit organs, a pair of deep cavities in the sides of its head below its eyes.

infrasound *n.* A pressure wave of the same physical character as sound but with a frequency below the lower limit of the [*audibility range](#)—below about 16 hertz. Such waves are capable of travelling relatively great distances, and if intense enough, they can induce [*dysphoria](#) and can even damage internal organs of the body although they cannot be heard. African and Indian elephant families in the wild communicate with sounds that are partly infrasonic, ranging from 35 hertz down to 12 hertz. *Compare* [ULTRASOUND](#). **infrasonic** *adj.* [From Latin *infra* below or under + English *sound*]

infundibulum *n.* The funnel-shaped stalk connecting the [*pituitary gland](#)

*****ebook converter DEMO Watermarks*****

to the ***hypothalamus** at the base of the brain. [From Latin *infundibulum* a funnel, from *in* into + *fundere* to pour]

ingratiation *n.* A form of ***self-presentation** calculated to increase one's attractiveness in the eyes of another person. It was first investigated experimentally in the early 1960s by the US psychologist Edward Ellsworth Jones (1926–93), who observed three major classes of tactics commonly used by ingratiators who are motivated to win the favour of a target person: other-enhancement, in which the ingratiator flatters and compliments the target person; opinion conformity, in which the ingratiator pretends to share the target person's attitudes on important issues; and biased self-presentation, in which ingratiators of both sexes emphasize their most attractive qualities and play down their weak points. In addition, if circumstances allow, an ingratiator often renders favours to the target person. Research has revealed that such ingratiation tactics are often successful in eliciting liking, and that when they succeed, ingratiators often come to believe, presumably out of vanity, that they did not use any tactics. **ingratiate** *vb.* [From Latin *in* into + *gratia* favour]

inhalant *n.* Any volatile chemical substance that is inhaled, whether for medicinal or therapeutic purposes or as a street drug. *See also* **ALIPHATIC**, **INHALANT-RELATED DISORDERS**, **KETONE**, **NITRITE INHALANT**, **SOLVENT ABUSE**. [From *in-* into + Latin *halare* to breathe]

inhalant-related disorders *n.* ***Substance-related and addictive disorders** in ***DSM-5** induced by inhaling the ***aliphatic** and ***aromatic** hydrocarbons in petrol or gasoline, glue, paint, and some aerosols or, less commonly, the halogenated hydrocarbons in cleaning fluids and other volatile substances in ***esters**, ***ketones**, and ***glycols**. DSM-5 distinguishes between inhalant use disorder and inhalant intoxication. *See also* **SUBSTANCE-INDUCED DISORDERS**, **SUBSTANCE-RELATED AND ADDICTIVE DISORDERS**, **SUBSTANCE USE DISORDERS**. *See* **GLUE-SNIFFING**, **SOLVENT ABUSE**, **SUBSTANCE ABUSE**, **SUBSTANCE DEPENDENCE**, **SUBSTANCE-INDUCED DISORDERS**, **SUBSTANCE USE DISORDERS**.

inhibited orgasm *n.* Another name for ***female orgasmic disorder** and ***male orgasmic disorder**.

inhibited sexual desire *n.* Another name for **female sexual interest/arousal disorder* and **male hypoactive sexual desire disorder*.

inhibition *n.* **1.** The act or process of restraining or preventing something, or the state of being restrained or prevented. **2.** A stopping or checking of a physiological process, as when the action of a neuron, organ, or gland is interrupted by the action of a nerve impulse or a hormone. *See also* *INHIBITORY POSTSYNAPTIC POTENTIAL*. *Compare* *EXCITATION*. **3.** The weakening of a **conditioned response* by **extinction (2)* or an **unconditioned response* by **habituation (2)* or by the occurrence of a distracting stimulus. *See also* *RECIPROCAL INHIBITION*. *Compare* *EXCITATION*. **4.** A psychological state or condition characterized by lack of confidence and restriction of the range of **expressive behaviour*. *See also* *AVOIDANT PERSONALITY DISORDER*, *REACTIVE ATTACHMENT DISORDER*. **5.** In **psychoanalysis*, the unconscious restraint of a drive or impulse. *See also* *AIM-INHIBITION*. **inhibit** *vb.* [From Latin *inhibere*, *inhibitum* to restrain, from *habere* to have + *-ion* indicating an action, process, or state]

inhibition of inhibition *n.* Another name for **disinhibition*.

inhibition, proactive *See* *PROACTIVE INTERFERENCE*.

inhibition, retroactive *See* *RETROACTIVE INTERFERENCE*.

inhibitor *n.* A substance or gene that inhibits a specific process.

inhibitory *adj.* Tending to cause **inhibition (1, 2, 3, 4, 5)*. In neurophysiology, characteristic of **neurons* that restrain other neurons from firing, or **neurotransmitters* such as GABA, the action of which tends to prevent neurons from firing, or **synapses (1)* at which the transmission of nerve impulses tends to prevent postsynaptic neurons from firing. *See also* *INHIBITORY POSTSYNAPTIC POTENTIAL*. *Compare* *EXCITATORY*.

inhibitory postsynaptic potential *n.* A graded hyperpolarization or increase in the electrical potential across the membrane of a **postsynaptic neuron*, occurring in response to a signal transmitted across a **synapse (1)* by

a ***presynaptic** neuron and reducing the propensity of the postsynaptic neuron to initiate a nerve impulse. Also called *postsynaptic inhibition*. See also ACTION POTENTIAL, RESTING POTENTIAL. Compare EXCITATORY POSTSYNAPTIC POTENTIAL. **IPSP** abbrev.

inhibitory priming See PRIMING (1).

initial insomnia See INSOMNIA.

initial letter priming See PRIMING (1).

Initial Teaching Alphabet *n.* An alphabet containing 44 characters, each of which corresponds to a single sound or ***phoneme** of English, designed to simplify and facilitate the teaching of reading, with upper-case (capital) letters being written simply as larger versions of the lower-case letters. It was introduced in 1959 by the English educationalist Sir (Isaac) James Pitman (1901–85), not as a proposal to reform English spelling, but to help children learning to read. **ITA** abbrev.

initial values law *n.* In the study of drug effects, the notion that the effect of a drug on a measurable variable may depend on the level of that variable at the time of administration or, more generally, that the ***dose–response curve** of a drug may depend on the starting level of the effect variable. As an example, a central nervous system stimulant may have a strong positive effect on the arousal of a drowsy person but may have very little effect, or even a depressant effect, on a highly aroused person. In relation to behaviour, the law is also called the *rate-dependency effect*. See also METHYLPHENIDATE (RITALIN).

initiation codon *n.* Another name for a ***start codon**. Also called an *initiator codon*.

initiative versus guilt *n.* One of the crises in the developmental theory of the German-born ***ego psychologist** Erik H. Erikson (1902–94). See DEVELOPMENTAL CRISES.

injury feigning See [FACTITIOUS DISORDER](#), [MALINGERING](#).

inkblot test See [HOLTZMAN INKBLOT TECHNIQUE](#), [RORSCHACH TEST](#).

innate *adj.* Present in an organism from birth, hence inborn or congenital. Also, loosely, genetically determined rather than acquired by learning or attributable to environmental factors, though this meaning is avoided in careful usage, because a congenital characteristic is not necessarily genetic in origin. [From Latin *innatus* inborn, from *in* in or into + *nasci*, *natus* born]

innate idea *n.* An [*idea](#) that is inborn, rather than being learned through experience. The French philosopher René Descartes (1596–1650) believed the idea of God to be innate, and the German philosopher Gottfried Wilhelm Leibniz (1646–1716) believed that mathematical truisms such as $1 + 1 = 2$ are innate, but the British empiricist philosophers John Locke (1632–1704), George Berkeley (1685–1753), and David Hume (1711–76) rejected innate ideas in favour of the [*tabula rasa](#). The notion was revived by the Swiss psychologist Carl Gustav Jung (1875–1961) in his [*collective unconscious](#) and, in modified form, by the US linguist and philosopher (Avram) Noam Chomsky (born 1928) in his concepts of [*universal grammar](#) and the [*language acquisition device](#). See also [COLLECTIVE UNCONSCIOUS](#), [EMPIRICISM](#), [INNATE](#), [NATIVISM](#), [PSAMMETICHUS EXPERIMENT](#), [RATIONALISM](#) (1, 2). Compare [EMPIRICISM](#). [From Latin *innatus* born in, from *in* in or into + *natus* born, from *nasci* to be born + Greek *idea* a model, pattern, or form, from *idein* to see]

innate releasing mechanism *n.* In ethology, a hypothetical [*hard-wired](#) device in the [*central nervous system](#) of an animal that causes a [*sign stimulus](#) or [*releaser](#) to evoke [*fixed-action pattern](#). See also [VACUUM ACTIVITY](#). **IRM** *abbrev.*

inner ear *n.* The internal fluid-filled part of the [*ear](#) containing the [*cochlea](#) and the [*vestibular system](#), including the [*semicircular canals](#), separated from the middle ear by the round window (fenestra rotunda) and the oval window (fenestra ovalis). Also called the *internal ear* or *labyrinth*. See [EAR](#) (accompanying illustration). See also [SCALA](#). Compare [MIDDLE EAR](#), [OUTER EAR](#).

inner hair cell *n.* Any of approximately 3,500 **hair cells*, situated in the **organ of Corti*, specialized as **transducers* of sound waves into nerve impulses and believed to encode information about the frequency of sound. *Compare* *OUTER HAIR CELL*. **IHC** *abbrev.* [So called because they are further from the outside of the cochlea than are the outer hair cells]

inner nuclear layer *n.* A stratum of the **retina* containing the cell bodies of **amacrine cells*, **bipolar cells*, **horizontal cells*, and **interplexiform cells*.

inner plexiform layer *n.* A thin stratum separating the inner and middle layers of the **retina* and containing synaptic connections between **amacrine cells*, **bipolar cells*, and **ganglion cells*. *See also* *INTERPLEXIFORM CELL*. [From Latin *plexus* a network, from *plectere* to weave]

inner speech *n.* The mental use of words or language without physical articulation of speech sounds. *See also* *PHONOLOGICAL LOOP*.

innervate *vb.* **1.** To supply an organ, structure, or body part with nerves or with nerve impulses. **2.** To excite or stimulate a nerve. When used by the Austrian neurologist Sigmund Freud (1856–1939), the word always had this meaning. **innervation** *n.* [From Latin *in* in or into + *nervus* a nerve]

innervation ratio *n.* A number indicating the density of **innervation* (1) of a specified muscle by motor neurons, especially the average number of muscle fibres contacted by each motor neuron (the total number of muscle fibres contacted divided by the number of motor neurons), a low ratio being indicative of a lack of precise control, and a high ratio, greater precision of control.

inoculation theory *n.* A theory of resistance to **persuasion* according to which most ordinary attitudes and beliefs are more or less resistant to change through having been exposed to repeated mild attacks. The theory predicts that *cultural truisms* that most people have never heard being questioned, such as *It is a good idea to brush your teeth three times a day if possible*, should be more vulnerable to persuasion, and this counter-intuitive

prediction has been confirmed by experiments. The theory is based on the biological analogy of an organism that has been raised in a sterile, germ-free environment and that appears robust and healthy but is in reality vulnerable to infection, because it has not had the opportunity to develop defensive antibodies. Cultural truisms have also never been attacked, and defensive arguments have therefore never been developed, but their resistance to persuasion can be markedly increased by a process of inoculation, which involves exposing the recipients to relatively weak arguments against the truisms together with rebuttals that the recipients are either presented with or are required to think up for themselves. When the cultural truisms are later exposed to strong persuasive attacks, they turn out to be much more resistant to persuasion, even when the arguments used in the attacking messages are different from those presented in the inoculation procedure. The theory was formulated in 1964 by the US psychologist William J(ames) McGuire (1925–2007). *See also* [ATTITUDE CHANGE](#). [From Latin *inoculare*, *inoculatum* to implant, from *in* into + *oculus* an eye or a bud]

inositol *n.* A substance closely related to glucose that occurs in most body tissues, at high levels in people with [*mania \(1\)](#) and at low levels in people with [*depression](#). The richest dietary sources are fruits, nuts, beans, and grains. *Compare* [ANTIDEPRESSANT](#). [From Greek *is*, *inos* a sinew + *-ite* indicating a part of the body *-ol* denoting a compound containing a hydroxyl group, from (*alcoh*)*ol*]

insanity *n.* Another name for [*mental disorder](#), especially in legal contexts, where it refers specifically to conditions that impair one's ability to discharge one's legal responsibilities. *See also* [MCNAGHTEN RULES](#), [MENS REA](#). **insane** *adj.*

insanity of negation *n.* Another name for [*Cotard's syndrome](#).

insight *n.* **1.** Clear and deep understanding or perception. **2.** The process by which the meaning or significance of a pattern or the solution of a problem suddenly becomes clear, often accompanied by a [*eureka moment](#) or an [*aha experience](#). A famous and dramatic example is that of the ancient Greek mathematician and physicist Archimedes of Syracuse (?287–212 BC), who was asked by King Hiero II (308–216 BC) to determine whether his gold

*****ebook converter DEMO Watermarks*****

crown was alloyed with silver. Archimedes could not at first think how to perform such a test, but when getting into a bath that was full to its brim, he had an aha experience, realizing suddenly that a body heavier than water must displace its own volume of water when immersed, and that because silver is lighter than gold, a pound weight of gold/silver alloy must displace more water than a pound weight of gold, enabling the crown to be tested against a piece of pure gold of equal weight, whereupon (according to Vitruvius Pollio) he jumped out of the bath crying 'Eureka! Eureka!' (I've found it! I've found it!) and ran home naked to perform the experiment. 3. The capacity to understand oneself, especially the abnormal or pathological nature of aspects of one's behaviour or mental experience that result from a **mental disorder*; often used to distinguish **neurosis*, in which insight is typically present, from **psychosis* (1), in which it is typically absent. In **psychoanalysis*, conscious understanding of unconscious reasons for maladaptive behaviour is believed to be curative in itself. See also *ANTON'S SYNDROME*, *INTERPRETATION* (2), *PROBLEM-SOLVING STAGES*.

insomnia *n.* Inability to fall asleep or to maintain restful sleep, the condition usually being chronic. *Initial insomnia* (also called *sleep-onset insomnia*) is difficulty in falling asleep; *middle insomnia* is waking up in the middle of the night and having difficulty going back to sleep; and *terminal insomnia* is waking up at least two hours before one's normal waking time and being unable to fall asleep again. See also *DELAYED SLEEP-PHASE SYNDROME*, *DYSSOMNIAS*, *FATAL FAMILIAL INSOMNIA*, *INSOMNIA DISORDER*. Compare *HYPERSOMNIA*, *PSEUDOINSOMNIA*. [From Greek *insomnus* sleepless, from *in-* not + *somnus* sleep + *-ia* indicating a condition or quality]

insomnia disorder *n.* A **sleep-wake disorder* characterized by **insomnia*: either difficulty in falling asleep or maintaining sleep or early morning waking with difficulty in going back to sleep. In **DSM-5*, diagnostic criteria for the disorder require that the sleep difficulty causes significant distress or impairment in social, occupational, educational, academic, or other areas of life, occurs on at least three nights per week, has persisted for at least three months, and is not better explained by **narcolepsy* or another sleep-wake disorder, drug abuse, or medication. According to DSM-5, about 33 per cent of adults report some symptoms of insomnia and between 6 and 10 per cent meet the diagnostic criteria of the disorder.

inspection time *n.* An aspect of [*processing speed](#), usually measured with the help of [*visual masking](#). A test stimulus consisting of two vertical lines is exposed very briefly on each trial and is immediately followed by a masking stimulus. The task is to judge which line was shorter, and a person's inspection time is usually taken as the minimum exposure duration (up to the onset of the masking stimulus) required for a predetermined level of accuracy, such as 90 per cent correct responses. Inspection time is consistently though weakly correlated (approximately $r = -.30$) with psychometric measures of [*intelligence](#), especially with performance subtests. **IT** *abbrev.*

instinct *n.* 1. An [*innate](#) propensity to emit a relatively fixed [*response](#) to a stimulus. 2. Any natural and apparently innate drive or motivation, such as those associated with sex, hunger, and self-preservation. 3. In [*psychoanalysis](#), a dynamic force of biological origin, represented mentally by ideas and images having an emotional charge called [*cathexis](#), generating psychological pressure and directing a person towards its aim. Sigmund Freud (1856–1939) originally identified it with [*libido](#) but later (beginning with the publication of his book *Beyond the Pleasure Principle* in 1920) with both [*Eros](#) and [*Thanatos](#). The German word that Freud used was *Trieb*, which his translator James Strachey (1887–1967) rendered in English as *instinct*, but some scholars believe that *drive* would have been a better choice. Also called *instinctual drive* or simply *drive*. See also [INSTINCTUAL AIM](#), [INSTINCTUAL SOURCE](#), [INSTINCTUAL OBJECT](#). **instinctive** or **instinctual** *adj.* [From Latin *instinctus* roused, from *instinguere* to instigate]

instinct, component See [COMPONENT INSTINCT](#).

instinct, death See [DEATH INSTINCT](#), [THANATOS](#).

instinct, life See [EROS](#), [LIFE INSTINCT](#).

instinctive drowning response *n.* A pattern of involuntary behaviour occurring when a person is close to drowning, in the final minute before sinking underwater. It is very different from what most people expect and from the way drowning is depicted in fictional film and television

enactments, especially inasmuch as drowning people cannot shout for help, because oxygen is instinctively reserved for breathing, or wave their arms above the water line, because the arms are instinctively splayed out to maximize buoyancy. The response was first identified by the US psychologist and lifeguard Francesco A. Pia (born 1943), on the basis of video footage of many actual and near-drownings, and published in a training film entitled *On Drowning* in 1970 and an article in the *Journal of Physical Education* in 1974. **IDR** abbrev.

instinctual aim *n.* In **psychoanalysis*, behaviour or activity that an **instinct* (3) exerts pressure on a person to perform, performance of the behaviour resulting in resolution of internal tension. Sigmund Freud (1856–1939) introduced the distinction between the instinctual aim, the **instinctual object*, and the **instinctual source* in his book *Three Essays on the Theory of Sexuality* (1905). See also [AIM-INHIBITION](#).

instinctual component *n.* Another name for a **component instinct*.

instinctual drive *n.* Another name for **instinct* (3).

instinctual energy *n.* Energy associated with an **instinct* (3).

instinctual object *n.* In **psychoanalysis*, anything through which an **instinct* (3) seeks to attain its **instinctual aim*, including a person, a **part object*, or either of these in a person's fantasy. It is not necessarily a physical object but rather an object in the sense of a phrase such as *object of her desire*. Sigmund Freud (1856–1939) introduced the distinction between the **instinctual aim*, the instinctual object, and the **instinctual source* in his book *Three Essays on the Theory of Sexuality* (1905). See also [GOOD OBJECT](#), [OBJECT-CATHEXIS](#), [OBJECT-CHOICE](#), [OBJECT-RELATIONSHIP](#), [PRIMARY OBJECT](#), [SPLITTING OF THE OBJECT](#), [TRANSITIONAL OBJECT](#), [WHOLE OBJECT](#).

instinctual source *n.* In **psychoanalysis*, the particular internal origin of an **instinct* (3), being either the site of its origin, such as an **erotogenic zone*, including a sexual organ, or the physiological process assumed to occur at such a site and to be experienced as excitation. Sigmund Freud (1856–1939) introduced the concept in 1905 in his book *Three Essays on the Theory*
*****ebook converter DEMO Watermarks*****

of *Sexuality* and developed it fully in 1915 in an article on 'Instincts and their Vicissitudes' (*Standard Edition*, XIV, pp. 117–40, at pp. 123, 132). Compare INSTINCTUAL AIM, INSTINCTUAL OBJECT.

instrumental conditioning *n.* Another name for **operant conditioning*.

insufficient reason *n.* The principle introduced by the English mathematician and Presbyterian clergyman Thomas Bayes (1702–61), and championed by the French mathematician Pierre Simon Laplace (1749–1827), according to which we are entitled to consider two events as equally probable if we have no reason to consider one more probable than the other. It enables **uncertainty (2)* to be transformed into **risk (2)* and provides a justification for **prior probabilities (2)* in **Bayesian inference* in the absence of other grounds for estimating them. Its critics have shown that it leads to contradictions, and they deny that anything can be inferred from ignorance. Also called the principle of *indifference*.

insula *n.* The large pyramid-shaped structure in the limbic system of the brain that lies deep between the opercula or lips of the lateral sulcus of each cerebral hemisphere and that is exposed by retracting the temporal lobe. The anterior part functions as the cortical **pain* centre and also contains **mirror neurons* for emotion, and the posterior part is implicated in language functions. Also called the *island of Reil*. See also PAIN ASYMBOLIA. [From Latin *insula* an island]

insulin *n.* A polypeptide **hormone* that is secreted by the **islets of Langerhans* in the pancreas and that lowers the concentration of **glucose* in the blood. A deficiency of insulin leads to **diabetes* mellitus. See also HYPOGLYCAEMIA. [From Latin *insula* an island (referring to the islets of Langerhans) + *-in(a)* indicating an organic compound]

insulin shock *n.* A formerly popular method of treating **schizophrenia* and other disorders by injecting **insulin* into the bloodstream to induce **hypoglycaemia*, resulting in **coma*. Also called *insulin coma*.

integral attribute *n.* An **attribute* that is inherent in a **phenomenon*,
*****ebook converter DEMO Watermarks*****

without which the phenomenon cannot occur or exist. For example, ***amplitude** is an integral attribute of any sound, because without amplitude there can be no sound wave and therefore no sound, but ***frequency (1)** is not an integral attribute of sound, because ***noise (1)** is sound without any definite frequency. In the visual modality, ***lightness** is an integral attribute of colour, but ***saturation (1)** is not. *Compare* SEPARABLE ATTRIBUTE.

integral stimulus dimension *n.* An ***integral attribute** of any measurable aspect of a ***stimulus (1)**. *Compare* SEPARABLE STIMULUS DIMENSION.

integrative agnosia *n.* Intact ability to recognize elements of perceptual forms with impaired ability to integrate the elements into perceptual wholes. *See also* AGNOSIA.

intellect *n.* The faculty of reasoning and understanding, as distinct from feeling and wishing; a term used in general discourse for what in psychology is usually called ***intelligence**. In personality theory and psychometrics, another name for ***openness to experience**. [From Latin *intellectus* understanding, from *intellegere* to understand, from *inter* between + *legere* to choose]

intellectual developmental disorder *n.* Another term for ***intellectual disability**. **IDD** abbrev.

intellectual disability *n.* A term introduced in ***DSM-5** to refer to what was formerly called *mental retardation*, a ***neurodevelopmental disorder** characterized by arrested or incomplete mental development, with onset before the age of 18, including deficits in both intellectual and adaptive functioning. Diagnosis requires three criteria to be met: deficits in reasoning, problem solving, abstract thinking, or other intellectual functioning, confirmed by clinical assessment and ***intelligence testing** (specifically, ***IQ** below 70); failure to meet developmental standards of independence and social responsibility in such areas as interpersonal communication, self-care, home living, social skills, use of public amenities, self-direction, scholastic or academic performance, work, leisure, health, or safety; and onset of intellectual and adaptive deficits during the developmental period (before the

*****ebook converter DEMO Watermarks*****

age of 18). According to DSM-5, overall population ***prevalence** is about 1 per cent. According to the World Health Organization, an IQ between 50 and 70 is approximately indicative of mild mental intellectual disability, 35–50 moderate intellectual disability, 20–35 severe intellectual disability, and below 20 profound intellectual disability. Also called *intellectual developmental disorder*. See CEREBRAL GIGANTISM, CEREBRAL PALSY, CRETINISM, CRI DU CHAT, DOWN'S SYNDROME, FOETAL ALCOHOL SYNDROME, FRAGILE X SYNDROME, HURLER'S SYNDROME, IDIOT SAVANT, KLINEFELTER'S SYNDROME, LESCH–NYHAN SYNDROME, MACROCEPHALY, MICROCEPHALY, MILD MENTAL RETARDATION, MODERATE MENTAL RETARDATION, PHENYLKETONURIA, PROFOUND MENTAL RETARDATION, SEVERE MENTAL RETARDATION, TAY–SACHS DISEASE, WILLIAMS SYNDROME, ZOMBIE (2). See also AGENESIS OF THE CORPUS CALLOSUM, SAVANT. Compare BORDERLINE INTELLIGENCE. **ID** abbrev.

intellectualization *n.* In ***psychoanalysis**, a ***defence mechanism** involving excessive abstract thinking designed to block out disturbing emotions or conflicts, in therapy usually a device for evading the ***fundamental rule of psychoanalysis**. The concept was introduced by the Austrian-born British psychoanalyst Anna Freud (1895–1982) in her book *The Ego and the Mechanisms of Defence* (1937), her father never having used the term in writing.

intelligence *n.* Cognitive ability. In a symposium published in the *Journal of Educational Psychology* in 1921, fourteen of the world's leading authorities suggested definitions of intelligence, which included 'the ability to carry on abstract thinking' (Lewis Madison Terman, 1877–1956); 'the power of good responses from the point of view of truth or fact' (Edward Lee Thorndike, 1874–1949); and 'the capacity to inhibit an instinctive adjustment, the capacity to redefine the inhibited instinctive adjustment in the light of imaginably experienced trial and error, and the volitional capacity to realize the modified instinctive adjustment into overt behaviour to the advantage of the individual as a social animal' (Louis Leon Thurstone, 1887–1955). Since then, one of the most influential definitions was the one put forward in 1944 by the Romanian-born US psychologist David Wechsler (1896–1981): 'the aggregate or global capacity of the individual to act purposefully, to think rationally, and to deal effectively with his environment.' However, just as a triangle is defined simply as a plane figure

with three angles and three sides, ignoring its many other interesting and important but non-defining properties, good lexicographic practice suggests that it may be best to define intelligence simply as cognitive ability. *Factor-analytic studies by the US psychologist Robert J(effrey) Sternberg (born 1949) and others have suggested that the major components of intelligence as it is conceived by experts and lay people are verbal intelligence, problem solving, and practical intelligence; but during the 1990s some authorities began to consider *emotional intelligence as another form of intelligence. The standard index of intelligence is the *IQ score. See also A/S RATIO, CRYSTALLIZED INTELLIGENCE, EMOTIONAL INTELLIGENCE, ENCEPHALIZATION QUOTIENT, FLUID INTELLIGENCE, G, GUILFORD'S CUBE, INSPECTION TIME, INTELLECTUAL DISABILITY, INTELLIGENCE TEST, MULTIPLE INTELLIGENCES, NERVE CONDUCTION VELOCITY, n140, PRIMARY MENTAL ABILITIES, PROCESSING SPEED, PROGRESSION INDEX, p200, SOCIAL INTELLIGENCE, STRING LENGTH, TRIARCHIC THEORY OF INTELLIGENCE. [From Latin *intelligere* to understand, from *inter* between + *legere* to choose]

intelligence quotient See IQ.

intelligence test *n.* A test designed to measure *intelligence, often but not invariably an *IQ test.

intension *n.* The sum of properties by which the referent or referents of a given word or expression are determined, including both defining and non-defining properties; thus, *having interior angles equal to 180 degrees* is part of the intension of the word *triangle*, although it is not part of the definition of that concept, and *suckling its young* and *having a pouch* are both parts of the intension of the word *marsupial*. It is distinguished from the *extension* of a word, expression, or concept, which consists of all those entities to which the word or expression applies or that fall under the concept: the extension of *wife of King Henry VIII* is precisely the set {Catherine of Aragon, Anne Boleyn, Jane Seymour, Anne of Cleves, Catherine Howard, Catherine Parr}. The distinction between intension and extension, which is close to the distinction between *connotation (2) and *denotation (2), was introduced by the French theologians/logicians Antoine Arnauld (1612–94) and Pierre Nicole (1625–95) in the *Port Royal Logic* in 1662, where intension was called *comprehension*. **intensional** *adj.* [From Latin *intensus* stretched or

*****ebook converter DEMO Watermarks*****

given one's attention, from *intendere* to stretch forth or give one's attention to, from *in-* towards + *tendere* to stretch]

intentional forgetting *n.* Deliberately erasing something from memory. In **psychoanalysis*, forgetting something as a consequence of **repression*.

intentionality *n.* 1. According to the German psychologist and philosopher Franz Brentano (1838–1917), the property of mental experiences whereby they refer to objects or entities outside themselves: it is impossible to hear without hearing a sound, to believe without believing a statement or a proposition, to hope without hoping for something, to strive without striving for a goal, to feel joy without feeling joyful about something, and so on (these examples are all Brentano's). The concept was introduced by Brentano in 1874 in his book *Psychologie vom empirischen Standpunkt* (Book II, Chapter I, section 5, pp. 125ff.) to distinguish psychological from physical phenomena, which lack this property of outward-directedness. It is a key concept of **phenomenology*. See also ACT PSYCHOLOGY. 2. The property of an action that is performed deliberately rather than accidentally or without purpose. See also ACTION. **intentional** *adj.* [From Latin *intentus* aim or intent, from *intendere* to stretch forth or give one's attention to, from *in-* towards + *tendere* to stretch]

intention tremor *n.* A form of **tremor* characterized by fine rhythmic movements that tend to increase during voluntary movements, as in some cases of **alcohol dependence*, **cerebellar syndrome*, and **senile dementia*. Also called *movement tremor*. See also DELIRIUM TREMENS. Compare PARKINSONISM, RESTING TREMOR.

interaction effect *n.* In statistics, a pattern of data obtained from multifactorial **analysis of variance* (ANOVA) or **log-linear analysis* in which the effect of an **independent variable* or **factor* (1) varies across levels of another independent variable, or across combinations of levels of other independent variables or factors. When this occurs, variation in the **dependent variable* is not the result of a simple additive combination of the independent variables or factors. For example, suppose a well-practised skill is performed better in front of an audience than alone, whereas an unpractised

*****ebook converter DEMO Watermarks*****

skill is performed better alone than in front of an audience. In this case the independent variables or factors may be the audience condition and the level of practice, and the effect of the audience factor on the dependent variable varies across levels of the practice factor, leading to improved performance at one level of the practice factor (well practised) and worse performance at the other level (unpractised). In this case, performance is not a simple additive effect of audience condition and level practice. Interactions are notoriously difficult to interpret, and an **interaction graph* is usually helpful. A *main effect*, in contrast to an interaction effect, is a significant difference between two or more means; a *two-way interaction* is a significant difference between two or more *differences* between means (as in the above example, in which one difference is positive and the other negative); a *three-way interaction* is a significant difference between two or more differences between two or more differences between means, and so on, but after that it begins to become too complex to grasp or to depict graphically. Compare *MAIN EFFECT*.

interaction graph *n.* A diagram representing an **interaction effect* in multifactorial **analysis of variance* (ANOVA). For the simplest two-way interaction, the vertical axis represents scores on the **dependent variable*, the horizontal axis different levels of one **independent variable*, and each line on the graph a different level of another independent variable. If the lines are parallel, there is no interaction effect; if the lines cross or are non-parallel, then there is an interaction effect that can be tested for **statistical significance*.

interactionism *n.* 1. An approach to the **mind–body problem*, a form of **dualism* according to which events or processes in the mental and physical realms influence or interact with each other. See also *EPIPHENOMENALISM*. 2. An interpretation of the contributions of **personality* according to which human behaviour is dependent partly on internal personality factors, partly on external situational factors, and partly on interactions between the two. Compare *SITUATIONIST CRITIQUE*.

interaction process analysis *n.* A technique for studying interaction in small groups. Observers record the source and target of every expressive act and classify the acts into the following twelve categories: shows solidarity, shows tension release, agrees, gives suggestion, gives

*****ebook converter DEMO Watermarks*****

opinion, gives orientation, asks for orientation, asks for opinion, asks for suggestion, disagrees, shows tension, and shows antagonism. Analysis of protocols has revealed, among other things, two principal types of group leader, namely the task specialist and the social specialist, and leadership in groups is often shared between two people filling these roles. The technique was introduced in 1947 by the US social psychologist Robert Freed Bales (1916–2004) and described in his book *Interaction Process Analysis: A Method for the Study of Small Groups* (1950). Bales initially studied meetings of Alcoholics Anonymous, the effectiveness of which he was anxious to understand. **IPA** abbrev.

interaural intensity difference *n.* Another name for a ***sonic shadow**. Also called a *binaural intensity difference*. **IID** abbrev.

interaural time difference *n.* A generic name for both ***phase delay** or ***transient disparity**. Also called a *binaural time difference*. **ITD** abbrev.

interblob See **BLOB**.

intercorrelations *n.* The ***correlations** of several variables with one another.

interdependence theory *n.* A theory that seeks to analyse the causal determinants of ***dyadic** social behaviour by providing a systematic classification of certain key properties of interpersonal situations or interactions and of the individuals' responses to them. It was first proposed by the US social psychologists Harold H(arding) Kelley (1921–2003) and John W(alter) Thibaut (1917–86) in their book *The Social Psychology of Groups* (1959) and developed in *Interpersonal Relations: A Theory of Interdependence* (1978), and Kelley extended it further in an article in the *Journal of Personality and Social Psychology* in 1984. In the theory, the nature of the interdependence between two individuals depends on the manner in which each can influence what happens to the other during the course of the social interaction, and this is called 'outcome interdependence'. See **BEHAVIOUR CONTROL**, **FATE CONTROL**. **IT** abbrev. [From Latin *inter* between + *dependere* to hang from, from *de* from + *pendere* to hang + *entia* indicating an action, state, condition, or quality]

*****ebook converter DEMO Watermarks*****

interest inventory *n.* Any questionnaire designed to assess interests, including especially any **occupational interest inventory*. *See also* ALLPORT–VERNON–LINDZEY STUDY OF VALUES, KUDER PREFERENCE RECORD, STRONG–CAMPBELL INTEREST INVENTORY.

interference theory *n.* The proposition that forgetting is caused by **proactive interference* and **retroactive interference*. *Compare* DECAY THEORY.

interhemispheric fissure *n.* Another name for the **longitudinal fissure*. [From Latin *inter* between + English *hemisphere*]

interictal syndrome *n.* A condition sometimes observed in people with **temporal lobe epilepsy*, characterized by intense productiveness, often in writing or artistic work, between **convulsions*. Also called *Dostoevsky syndrome*. [From Latin *inter* between + *ictus* struck, from *icere* to strike + *-alis* of or relating to]

interleukin *n.* A group of peptides present in white blood cells or leucocytes, produced mainly by neuroglial cells, that play a part in the **immune system* by mobilizing **lymphocytes*. **interleukin-1** *n.* An interleukin produced by **macrophages* and **monocytes* that regulates immune responses by activating lymphocytes, and by playing a part in other reactions to infection and inflammation, and that increases sleep. **interleukin-2** *n.* An interleukin that is produced by helper **T lymphocytes*, after their activation by an **antigen*, and that in the presence of interleukin-1 stimulates the production of T lymphocytes carrying antigen-specific receptors and plays a part in the production of **B lymphocytes* and **macrophages*. It is used in the treatment of cancer and AIDS. **interleukin-3** *n.* A substance involved in the maturation of **stem cell* populations of **T lymphocytes*. [From Latin *inter* among + Greek *leukos* white, alluding to its presence among the white blood cells]

intermediary neuron *n.* Another name for an **interneuron*

intermetamorphosis *n.* A **delusional misidentification* in which a familiar person appears to change into someone else. *Compare* CAPGRAS

SYNDROME, FRÉGOLI SYNDROME. [From Latin *inter* between or among + Greek *meta* with or beside + *morphe* form + -osis indicating a process or state]

intermittent explosive disorder *n.* A *disruptive, impulse-control, and conduct disorder in *DSM-5 characterized by repeated outbursts of aggression, grossly out of proportion to the precipitating events or provocations, resulting in serious assaults or destruction of property. *See also* ROAD RAGE, ROID RAGE. *Compare* DISRUPTIVE MOOD DYSREGULATION DISORDER, OPPOSITIONAL DEFIANT DISORDER.

intermittent reinforcement *n.* Another name for *partial reinforcement.

internal auditory canal *n.* A passageway located in the *temporal bone and containing the *vestibulocochlear nerve that transmits impulses from the *inner ear to the brain. Also called the *internal meatus*. *Compare* EXTERNAL AUDITORY CANAL.

internal capsule *n.* Either of two neural pathways in the brain between the thalamus and the lenticular nucleus containing nerve fibres running from the thalamus to the left or right cerebral cortex and from the cerebral cortex to the thalamus, brainstem, and spinal cord. It is a common site for a *stroke.

internal consistency *n.* In psychometrics, an aspect of *reliability associated with the degree to which the items of a test measure the same *construct or *attribute. It is indexed by *Cronbach's alpha, the *Kuder–Richardson coefficient, or the *split-half reliability.

internal ear *n.* Another name for the *inner ear.

internal–external control of reinforcement *n.* Another name for *locus of control. **I–E** abbrev.

internal–external scale *n.* A 29-item questionnaire designed to measure *locus of control. The respondent chooses one statement that ‘I believe more strongly’ from each of the 29 pairs, 23 of the items measuring

locus of control and the remaining six being fillers unrelated to locus of control. A typical item from the scale is: *I believe more strongly that: (a) Whether I make a success of my life is entirely up to me; (b) Success is a matter of being lucky enough to be in the right place at the right time.* Another typical item is: *I believe more strongly that: (a) Pressure groups can influence government decisions; (b) The government is beyond the influence of the ordinary person.* In both examples, (a) indicates internal and (b) external locus of control. The scale was introduced in an article in the journal *Psychological Monographs* in 1966 by the US psychologist Julian B(ernard) Rotter (1916–2014). **I–E scale** abbrev.

internalization *n.* In **psychoanalysis*, absorbing a relationship or an **instinctual object* into one's mental apparatus, as when a child's relationship with an authoritarian father is internalized as the relationship between an **ego* and a strict **superego*. In **Kleinian* analysis the term is used more broadly as simply another name for **introjection*: fantasizing the absorption of a **whole object* or a **part object*. See also DEFENSIVE TECHNIQUE. **internalize** *vb.*

internal meatus *n.* Another name for the **internal auditory canal*. [From Latin *meatus* a course]

internal rectus *n.* Another name for the medial **rectus muscle* attached externally to the eyeball. See RECTUS MUSCLE.

internal reliability *n.* Another name for **internal consistency*.

internal sense *n.* A generic name for **kinaesthesia*, **proprioception*, and **interoception*.

internal validity *n.* The extent to which the conclusions of an empirical investigation are true within the limits of the research methods and subjects or participants used. See also VALIDITY. Compare ECOLOGICAL VALIDITY (1), EXTERNAL VALIDITY.

International Affective Picture System See IAPS in the main body

of the dictionary.

International Classification of Diseases See [ICD](#) in the main body of the dictionary.

international personality item pool See [IPIP](#) in the main body of the dictionary.

International Phonetic Alphabet *n.* A set of symbols, based on the Roman alphabet but supplemented with modified Roman letters and characters from other writing systems, designed for the representation of human speech sounds in all languages. The IPA, first published by the International Phonetic Association in 1888 and revised many times since then, is accepted as the standard phonetic alphabet almost universally except in the United States, where it is only slowly gaining acceptance. [IPA](#) *abbrev.*

internet addiction syndrome *n.* A condition resembling an [*impulse-control disorder](#), first identified in the US in 1994, initially as a joke, and not included in [*DSM-IV](#) or [*ICD-10](#), characterized by excessive or pathological internet surfing, indicated by such signs and symptoms as being preoccupied with the internet; recurrent dreams and fantasies about the internet; lying to family members or therapists to conceal the extent of time spent online; attempting repeatedly and unsuccessfully to cut down or to stop spending time online, and becoming restless or irritable while doing so; using the internet as an escape from worry or unhappiness; and jeopardizing a significant job, relationship, or educational opportunity by spending excessive time online. See also [DATAHOLIC](#), [INTERNET GAMING DISORDER](#). Compare [IMPULSE-CONTROL DISORDERS](#). **IAS** *abbrev.*

internet gaming disorder *n.* Included in [*DSM-5](#) as a ‘condition for further study’, this condition is characterized by recurrent internet game-playing, often with other players, with excessive preoccupation, [*withdrawal](#) symptoms, and other signs and symptoms leading to clinically significant impairment or distress. Compare [GAMBLING DISORDER](#), [INTERNET ADDICTION SYNDROME](#). **IGD** *abbrev.*

interneuron *n.* A neuron that is itself neither sensory nor motor but forms
*****ebook converter DEMO Watermarks*****

a synapse with an afferent and/or an efferent neuron and lies in the path of a **reflex arc*, its axon not projecting outside the structure in which its cell body is located. Also called an *internuncial neuron*, an *intrinsic neuron*, an *intermediary neuron*, or a *relay cell*. See also *REFLEX*. [From Latin *inter* between + Greek *neuron* a nerve]

internuncial *adj.* Interconnecting, of or relating to an **interneuron* interposed between two other neurons. [From Latin *inter* between + *nuntius* a messenger]

interoception *n.* Any form of sensation arising from stimulation of **interoceptors* and conveying information about the state of the internal organs and tissues, blood pressure, and the fluid, salt, and sugar levels in the blood. See also *INTERNAL SENSE*. Compare *EXTEROCEPTION*, *KINAESTHESIS*, *PROPRIOCEPTION*. [From *inter(i)o(r) (re)ception*]

interoceptor *n.* A **sensory receptor*, specialized for **interoception*, that transmits impulses from organs or tissues within the body, excluding receptors in the vestibular system and in the tendons, muscles, and joints (which are **proprioceptors*), but including other receptors in the internal organs, tissues, and blood vessels. See *AREA POSTREMA*, *BARORECEPTOR*, *BLOOD-FLOW RECEPTOR*, *GOLGI TENDON ORGAN*, *MUSCLE SPINDLE*, *ORGANUM VASCULOSUM LAMINA TERMINALIS*, *OSMORECEPTOR (2)*, *STRETCH RECEPTOR*, *SUBFORNICAL ORGAN*. Compare *EXTEROCEPTOR*, *PROPRIOCEPTOR*. **interoceptive** *adj.*

interpersonal trust scale *n.* A scale developed by the US psychologist Julian B(ernard) Rotter (1916–2014) for measuring the degree to which a person judges others to be believable or trustworthy.

interplexiform cell *n.* A type of cell in the **retina* that conveys signals across the middle layer from the **inner plexiform layer* to the **outer plexiform layer*, in the opposite direction to the rest of the neural information flow in the retina, and whose functions are poorly understood. [From Latin *inter* between *plexus* a network, from *plectere* to weave + *forma* a shape]

interposition *n.* The placement of something between other things; specifically (in psychology) one of the monocular cues of visual **depth*
*****ebook converter DEMO Watermarks*****

perception, an object that appears in front of and overlapping another object being perceived as closer than the object that it occludes. [From French *interposer* to interpose, from Latin *inter* between + French *poser* to place]

interpretation *n.* **1.** The act or process of explaining, elucidating, or clarifying, or the product of such activity. **2.** In ***psychoanalysis**, a process of decoding the latent meaning of a patient's speech and actions, thereby revealing ***unconscious** (1) conflicts, exposing the underlying wishes that maintain them, and allowing the patient to gain ***insight** (3). Sigmund Freud (1856–1939) first described it in 1900 in relation to dreams in his book *The Interpretation of Dreams* (*Standard Edition*, IV–V), where the ***latent content** of dreams is derived from its ***manifest content** through interpretation. See also **ACTIVE ANALYSIS**, **OVERINTERPRETATION**, **PASSIVE ANALYSIS**, **REDUCTIVE INTERPRETATION**, **RESISTANCE**, **THIRD EAR**, **WORKING THROUGH**. Compare **PSYCHOANALYTIC CONSTRUCTION**. **3.** In ***logic**, the allocation of specific meanings to the terms of a purely abstract or formal system. **interpret** *vb.* **interpretational** *adj.*

interquartile range *n.* In descriptive statistics, a measure of the degree of dispersion, variability, or scatter in a group of scores, defined as the difference between the third and the first ***quartiles**. Compare **PROBABLE ERROR**, **RANGE**, **SEMI-INTERQUARTILE RANGE**, **STANDARD DEVIATION**, **VARIANCE**. **IQR** *abbrev.*

inter-rater reliability *n.* A measure of the consistency of ratings, equal to the correlation between the ratings given by different raters of the same people or stimuli.

interrupted time-series design *n.* A ***quasi-experimental** research design similar to a ***one-group pretest–posttest design** except that instead of a single pretest and a single posttest, the data consist of a ***time series** in the form of a sequence of baseline measurements, followed by a change in the independent variable, usually called an intervention, and then a sequence of post-intervention measurements. Compare **NON-EQUIVALENT GROUPS DESIGN**.

intersex condition *n.* A condition in which a person displays a mixture of both male and female physical forms, reproductive organs, and sexual
*****ebook converter DEMO Watermarks*****

behaviour.

intersexuality *n.* Another name for **intersex condition*.

interspecific competition *n.* Competition between or among species. *Compare* *INTRASPECIFIC COMPETITION*. [From Latin *inter* between + *specificus* specific, from *species* appearance or kind, from *specere* to look]

interstimulus interval *n.* The time interval between the termination of one stimulus and the beginning of another. *Compare* *STIMULUS ONSET ASYNCHRONY*. **ISI** *abbrev.*

interstitial-cell-stimulating hormone *n.* Another name for **luteinizing hormone*, especially in males. **ICSH** *abbrev.* [From Latin *inter* within + *sistere* to stand]

intertectal commissure *n.* Another name for the **posterior cerebral commissure*. [So called because it lies between the two halves of the **tectum*]

interval of uncertainty *n.* In **psychophysics*, the range of stimulus differences that are detected between 25 per cent and 75 per cent of the time. **IU** *abbrev.*

interval scale *n.* A scale of measurement in which differences between values can be quantified in absolute terms but the zero point is fixed arbitrarily, familiar examples being Fahrenheit or Celsius temperature scales and calendar dates. In an interval scale, equal differences between scale scores correspond to equal differences in the **attribute* being measured, but there is no score corresponding to the total absence of the attribute. *See also* *MEASUREMENT LEVEL*, *METHOD OF EQUAL-APPEARING INTERVALS*, *SCALE*, *UNFOLDING TECHNIQUE*. *Compare* *ABSOLUTE SCALE*, *LOG-INTERVAL SCALE*, *NOMINAL SCALE*, *ORDINAL SCALE*, *RATIO SCALE*. [From Latin *intervallum* space between, from *inter* between and *vallum* a rampart]

intervening region *n.* In genetics, another name for an **intron*.

intervening variable *n.* In a formal model, a ***variable** whose value is determined by a specified manipulation or combination of ***independent variables** and/or other intervening variables, without any hypotheses about the existence of unobserved entities or processes, and that plays a part in explaining the value of a ***dependent variable**, although it has no factual content apart from the empirical relationships that it summarizes. A typical example is the concept of broad ***heritability** (h^2), which is defined as the ratio of genetic variance V_G to total phenotypic variance V_P , so that, formally, h^2 (broad) = V_G/V_P . Another example is that of the ***therapeutic ratio** of a drug, defined as the ratio of the ***median lethal dosage** (LD-50) to the ***median effective dosage** (ED-50). ***Hullian learning theory** has scores of intervening variables. The term was introduced in 1938 by the US psychologist Edward C(hace) Tolman (1886–1959), and the distinction between hypothetical constructs and intervening variables was first made explicit in 1948 by the US psychologists Kenneth MacCorquodale (1919–86) and Paul Everett Meehl (1920–2003)—see **HYPOTHETICAL CONSTRUCT**.

interview *n.* A structured meeting in which a person is questioned as part of a process of choosing among candidates for a position, or a journalistic or other form of enquiry; more specifically a method of data collection involving face-to-face or telephone questioning of subjects or respondents by the researcher. An interview may be relatively structured or unstructured. *See also* **DEPTH INTERVIEW**, **FOCUS GROUP**.

intestine *n.* The section of the ***alimentary canal** between the stomach and the anus. *See also* **LARGE INTESTINE**, **SMALL INTESTINE**. [From Latin *intestinum* gut, from *intestinus* internal]

intimacy versus isolation *n.* One of the crises in the developmental theory of the German-born ***ego psychologist** Erik H. Erikson (1902–94). *See* **DEVELOPMENTAL CRISES**.

intolerance of ambiguity *n.* A ***cognitive style** characterized by an inability to accept without discomfort situations or stimuli that allow alternative interpretations, and a preference for situations or stimuli that appear black and white to those that consist of shades of grey. It is often

considered as characteristic of [*authoritarianism](#). See also [AMBIGUITY AVERSION](#), [ELLSBERG PARADOX](#).

intonation *n.* The distinctive modulation of vocal pitch in speech, functioning like punctuation to signal grammatical structure, as for example in the utterance *It's big, isn't it*, in which a rising pitch would be used to indicate a question and a falling pitch an assertion, and used also to express attitudes or emotions such as sarcasm, puzzlement, or anger. **intonology** *n.* The study of intonation. [From Latin *intonare* to intone, from *in* in + *tonus* a tone + *-ation* indicating a process or condition]

intoxication *n.* The state of being inebriated or poisoned by a drug or other substance taken into the body. **intoxicant** *n.* Anything that causes intoxication. [From Latin *intoxicare* to poison, from *toxicum* a poison + *-ation* indicating a process or condition]

intracellular *adj.* Inside cells. [From Latin *intra* within + *cella* a room, from *celare* to hide]

intracellular fluid *n.* Fluid inside the cells of the body, separated from the extracellular fluid by semipermeable cell membranes. See also [OSMOSIS](#), [SODIUM PUMP](#). Compare [EXTRACELLULAR FLUID](#). **ICF** *abbrev.*

intracellular thirst *n.* A form of thirst arising from depletion of fluid within cells and triggered by [*osmoreceptors \(2\)](#), as after ingestion of salt, which accumulates in the extracellular fluid and creates [*osmotic pressure](#), forcing fluid out of the cell. Also called *osmometric thirst* or *osmotic thirst*. Compare [HYPOVOLAEMIC THIRST](#).

intraception *n.* Subjectivity and imagination. See [ANTI-INTRACEPTION](#), [F SCALE](#). [From Latin *intra* within + *capere*, *ceptum* to take + *-ion* indicating an action, process, or state]

intracortical *n.* Within the [*cerebral cortex](#). [From Latin *intra* within + *cortex* bark or outer layer + *-icalis* of, relating to, or resembling]

intracranial *n.* Inside the skull. [From Latin *intra* within + *cranium* a skull, from Greek *kranion* a skull]

intracytoplasmic sperm injection See **ICSI** in the main body of the dictionary. [From Latin *intra* within + Greek *kytos* a vessel + *plasma* a form + *-ikos* of, relating to, or resembling]

intrafusal *adj.* Of, relating to, or consisting of small muscle fibres, up to a dozen of which are enclosed in each ***muscle spindle** embedded within extrafusal muscle fibres of ***skeletal muscles**. They signal information about the degree of stretch of the muscle. Compare **EXTRAFUSAL**. [From Latin *intra* within + *fusus* a spindle]

intragenic region *n.* Another name for an ***intron**.

intralaminar nucleus *n.* Either of two tiny clusters of nerve cell bodies on each side of the dorsal thalamus that receive inputs from the cerebral hemispheres, brainstem, cerebellum, and spinal cord and that project to the striatum, being involved in higher motor control. [From Latin *intra* within + *lamina* a plate or layer, so called because they are contained within the internal layers of white matter in the thalamus]

intransitive preferences *n.* Preferences violating the condition that if one alternative is preferred to a second, and the second is preferred to a third, then the first should be preferred to the third. The following is the simplest example of intransitive preferences: *x* is preferred to *y*, *y* to *z*, and *z* to *x*. It is often interpreted as necessarily irrational, but it can arise from the aggregation of rational individual preferences into a group preference ranking, as in ***Condorcet's paradox**, and it can even arise plausibly in an individual's preferences from a ***lexicographic semiorder**, or when multiple ***attributes** are involved, as in a person who rates three similarly priced cars, *x*, *y*, and *z* on three equally important attributes as follows:

	<i>Speed</i>	<i>Comfort</i>	<i>Fuel Economy</i>
<i>x</i>	excellent	satisfactory	good
<i>y</i>	good	excellent	satisfactory
<i>z</i>	satisfactory	good	excellent

*****ebook converter DEMO Watermarks*****

This person evidently prefers x to y because it is better on two of the three equally valued attributes, y to z for the same reason, and z to x for the same reason. *See also* [ARROW'S IMPOSSIBILITY THEOREM](#), [CYCLIC PREFERENCES](#), [DECISION THEORY](#), [MONEY PUMP](#). *Compare* [TRANSITIVE PREFERENCES](#). [From Latin *in-* not + *transitivus* going over, from *transiens* going over, *transire* to pass over, from *trans* across + *ire* to go]

intraspecific competition *n.* Competition between or among organisms within a species. *Compare* [INTERSPECIFIC COMPETITION](#). [From Latin *intra* within + *specificus* specific, from *species* appearance or kind, from *specere* to look]

intrinsic light *n.* The impression of a dim cloud of light that is generated in complete darkness by the spontaneous activity of neurons in the visual system. Also called *dark light* or *idiorretinal light*.

intrinsic neuron *n.* Another name for an [*interneuron](#).

intrinsic nucleus *n.* Any of a number of clusters of nerve cell bodies within the [*thalamus](#) that do not relay information to the cortex but make connections with other thalamic nuclei.

intrinsic validity *n.* In psychometrics, a form of [*validity](#) that is said to exist when the test items necessarily or inherently measure the construct in question. For example, a test to measure children's ability to recognize and name letters of the alphabet has intrinsic validity if it involves presenting each of the letters in turn and asking the child to try to name it. The line between intrinsic validity on the one hand and [*face validity](#) or [*consensual validity](#) on the other is often blurred.

introjection *n.* In [*psychoanalysis](#), a [*defence mechanism](#) whereby an [*instinctual object](#) is symbolically, or in fantasy, absorbed by a person, or instinctual energy is turned inward, as when a depressed person turns aggression back on the self. The term was introduced in 1909 by the Hungarian psychoanalyst Sandor Ferenczi (1873–1933) in an article entitled ‘Introjection and Transference’, where he contrasts it with [*projection \(1\)](#): ‘Whereas the paranoiac expels from his ego the impulses that have become
*****ebook converter DEMO Watermarks*****

unpleasant, the neurotic helps himself by taking into the ego as large as possible a part of the outside world, making it the object of unconscious phantasies' (*First Contributions to Psycho-Analysis*, 1952, p. 43). See also [IDENTIFICATION \(2\)](#), [INCORPORATION](#), [INTERNALIZATION](#).

intron *n.* Any segment of [*DNA](#) that does not carry coded information about the synthesis of proteins and that is removed by [*snurps](#) before translation by [*messenger RNA](#), such segments interrupting the coding sequences in most DNA molecules. Also called an *intragenic region*, an *intervening region*, or (especially in reference to long introns) *junk DNA*. See also [REPETITIVE DNA](#). Compare [EXON](#). [From *intr(agenic) (regi)on* on the model of *codon*]

introspection *n.* A method of data collection in which observers examine, record, and describe their own internal mental processes and experiences. It can be traced back to the writings of the Greek philosopher Aristotle (384–322 BC), who described in his essay *On Memory* in his *Parva Naturalia* how the process of recalling *autumn* was preceded by related thoughts such as *milk*, *white*, *air*, *fluid*, and only then *autumn*. When psychology emerged as an independent empirical science in Germany in the 1880s, Wilhelm (Max) Wundt (1832–1920) and other experimental researchers regarded uncontrolled introspection as unreliable and introduced methods based on introspection by trained observers under experimental conditions. In 1913 the US psychologist John B(roadus) Watson (1878–1958) launched an attack on introspection, declaring that psychology ought to be confined to the prediction and control of overt behaviour, but he advocated the study of reasoning processes via think-aloud methods, on which modern techniques of [*protocol analysis](#) are based. See also [INFINITE REGRESS](#), [METACOGNITION](#), [PHENOMENOLOGY](#), [STRUCTURALISM \(2\)](#). Compare [FREE ASSOCIATION](#). **introspect** *vb.* [From Latin *intro-* towards the inside + *specere*, *spectum* to look + *-ion* indicating an action, process, or state]

introspectionism *n.* The doctrine that the fundamental research technique of psychology must be [*introspection](#).

introversion *n.* A predominant concern with one's own thoughts and feelings rather than the outside world and social interaction, characterized by

*****ebook converter DEMO Watermarks*****

***traits** such as reserve, passivity, and silence, the negative pole of one of the ***Big Five** personality factors, namely ***extraversion**. The term first appeared in the mid 17th century, in a purely descriptive sense of turning one's thoughts inwards in spiritual contemplation, and it was introduced in its modern psychological sense in 1910 by Carl Gustav Jung (1875–1961). Also called *introversion–extraversion* or *extraversion–introversion*. **introvert** *n.* A person prone to introversion. **introverted** *adj.* Characterized by introversion. [From Latin *intro* towards the inside or within + *vertere* to turn]

intrusion *n.* In linguistics, the insertion of a speech sound, especially in ***allegro speech**, between two syllables, neither of which contains the sound when the syllable is spoken in isolation, or the letter representing it in that position, such as the /r/ often heard in such phrases as *the idea(r) of it*, *law(r) and order*, *India(r) and Pakistan*, *visa(r) application*, and *the Shah(r) of Iran*. Compare **LINKING R**. **intrusive** *adj.*

intuition *n.* Immediate understanding, knowledge, or awareness, derived neither from perception nor from reasoning. Immediate knowledge of a ***concept** exists when a person can apply the concept correctly but cannot state the rules of its application; this form of intuition has been shown experimentally in studies of ***concept** formation. The Chomskyan notion of ***competence** (2), for example, implies intuitive knowledge of grammatical concepts. Immediate awareness of the truth of a ***proposition** (1) (*I have an intuition that I will win the lottery today*) is essentially an unjustified ***opinion**, in contradistinction to a ***belief** or an item of ***knowledge**. Compare **ATTUITION**. **intuitive** *adj.* [From Latin *intuitio* a contemplation, from *intueri* to gaze at, from *tueri* to look at]

intuitive physics *n.* Assumptions about the motion of objects that are commonly held but that sometimes violate the known laws of Newtonian mechanics, as in the following three examples. If a person drops a ball from an outstretched hand while walking briskly, then the ball will continue moving forward until it hits the ground approximately alongside the walker, but a majority of people who have been questioned believe that the ball will drop straight down and will hit the ground directly below the point at which it was released. If a stone is tied to a string and whirled around one's head, and the string suddenly breaks, then the horizontal motion of the stone will be a

*****ebook converter DEMO Watermarks*****

straight line at a tangent to its original circular path, but many people believe that it will continue along a curved path. If a bullet dropped from shoulder height takes about half a second to reach the ground, then the same bullet fired horizontally at shoulder height from a high-powered rifle will also take about half a second to reach the ground, but many people falsely believe that it will take much longer. Such misconceptions embedded in intuitive physics are believed to be influenced by the discredited medieval impetus theory of motion. Also called *naive physics*. See also [EXTRAMMISSION](#), [KNOWLEDGE REPRESENTATION](#).

intuitive type *n.* One of the subsidiary personality types in **analytical psychology*. See [FUNCTION TYPE](#).

invariable hue *n.* Any colour that is not markedly affected by changes in the brightness of illumination, notably the **psychological primary* colours. See also [BEZOLD–BRÜCKE PHENOMENON](#).

inventory *n.* Any list or schedule of items. In psychometrics, a **questionnaire* or checklist usually functioning as a self-report test of abilities, aptitudes, or intelligence. Tests designed to measure interests, attitudes, personality traits, preferences, and psychological attributes are also sometimes called inventories, but tests designed to measure abilities, aptitudes, and intelligence are usually called questionnaires. [From Latin *inventorium* a list of things found, from *invenire*, *inventum* to find or come upon, from *in* on + *venire* to come]

inverse square law *n.* The principle according to which the intensity of a wave, including a light wave or a sound wave, decreases in proportion to the square of the distance from its source.

invertibrate *n.* 1. Any animal without a backbone, comprising all those not classified as **vertebrates* (1). *adj.* 2. Without a backbone; hence, figuratively, weak, indecisive, or lacking in courage or conviction. [From Latin *in-* not + *vertebra* a spinal joint, from *vertere* to turn]

inverted Oedipus complex *n.* In **psychoanalysis*, sexual desire for the same-sex parent and hatred of the opposite-sex parent. See [OEDIPUS](#)
*****ebook converter DEMO Watermarks*****

COMPLEX.

inverted qualia *n.* A hypothetical state of affairs in which one person experiences **qualia* in the opposite way to another, as would be the case if one person always experienced as red those stimuli that another always experienced as green. The possibility of inverted qualia, and the apparent impossibility of knowing if they exist, have been used by philosophers to argue that mental experiences are not reducible to physical states or events.

inverting spectacles *n.* Eyeglasses incorporating **prisms* that have the effect of inverting the images projected on the retinas and the visual images seen by the wearer, first worn by the US psychologist George Malcolm Stratton (1865–1957) in an experiment performed in 1895 and published in the journal *Psychological Review* in 1897. Stratton wore the spectacles, which in that case inverted the visual field and also reversed left and right, continuously during waking hours for seven days, and towards the end of this time the world looked almost normal to him, a finding that refuted the view held by some people at the time that an inverted retinal image was necessary for perceiving the world the right way up. *See also* [PRISM ADAPTATION](#).

investigative psychology *n.* A branch of **criminological psychology* in which psychological principles are applied to the investigation of crimes and the apprehension of criminals, especially serial murderers and rapists. The pattern of behaviour of serial criminals sometimes enables an investigative psychologist to engage in **criminal profiling*.

in vitro *adj.* Of or relating to biological processes or experiments that occur outside the organism in artificial environments. *Compare* [IN VIVO](#). [Latin: in glass, alluding to test-tubes]

in vitro fertilization *n.* Fertilization of an **ovum* by a **spermatozoon* **in vitro* before implanting it in a woman's uterus. *See also* [ICSI](#) in the main body of the dictionary. **IVF** *abbrev.*

in vivo *adj.* Of or relating to biological processes or experiments that occur in living organisms. *Compare* [IN VITRO](#). [Latin: in living]

*****ebook converter DEMO Watermarks*****

in vivo desensitization See SYSTEMATIC DESENSITIZATION.

involuntary muscle *n.* Any muscle controlling automatic functions and not under voluntary control, usually (with the notable exception of ***cardiac muscle**) consisting of ***smooth muscle**. See also **MUSCLE**. Compare **VOLUNTARY MUSCLE**.

involutional depression *n.* A form of ***depression** occurring in both sexes during the ***menopause** or in middle life, with feelings of anxiety, futility, and guilt. Also called *involutional melancholia*. Compare **INVOLUTIONAL PSYCHOSIS**. [From Latin *involutum* rolled up, from *involvere* to roll up + *-ion* indicating an action, process, or state + *-alis* of or relating to]

involutional psychosis *n.* A variant form of ***involutional depression** accompanied by ***persecutory delusions**.

iodopsin *n.* The violet ***cone pigment** in the retina of the eye that was the first cone pigment studied chemically; also, a generic name for any cone pigment, though this sense is avoided in careful usage. Also called *visual violet*. [From *iodine* + Greek *ops* an eye + *-ine* indicating an organic compound, so called because the element iodine is violet in colour]

ion *n.* An electrically charged particle that is either a ***cation**, having lost one or more electrons and therefore carrying a positive electrical charge, or an ***anion**, having gained one or more electrons and therefore carrying a negative electrical charge. The movement of ions across cell membranes is the main mechanism of electrical signalling in the nervous system. See also **ACTION POTENTIAL**, **ION CHANNEL**. **ionization** *n.* The production of ions. **ionize** *vb.* To produce ions or turn into ions. [From Greek *ion* going, from *ienai* to go]

ion channel *n.* A pore in the ***cell membrane** of a neuron allowing passive flow across it of particular ***ions** or groups of ions when it opens in response to a specific stimulus, resulting in either ***depolarization** or ***hyperpolarization** of the neuron, ion channels being divided broadly into ***anion channels** and ***cation channels**. See also **ACTION POTENTIAL**, **CALCIUM**

CHANNEL, CHEMICALLY GATED ION CHANNEL, SODIUM CHANNEL, VOLTAGE-GATED ION CHANNEL.

ionizing radiation *n.* Radiation such as X-ray or gamma-ray radiation of sufficiently high energy to cause ionization.

ionophore *n.* A chemical compound capable of combining with an **ion* and transporting it across a biological membrane. *See also* ACTIVE TRANSPORT, CARRIER PROTEIN. [From *ion* + Greek *-phoros* carrying, from *pherein* to bear]

Iowa gambling task *n.* A decision task designed to simulate real-life decision making. On each trial the decision maker chooses a card from one of four decks, each choice resulting in a fixed gain of \$100 for any card from two of the decks or \$50 for any card from the other two, although the decision maker is not told this. For some cards, the decision maker also suffers a loss. Losses total \$1,250 for every ten cards in two of the decks and \$250 for every ten cards in the other two. These gains and losses are arranged so that two of the decks yield substantial expected losses and the other two substantial expected gains over every run of 10 cards, but there are sharp differences between short-term and long-term payoffs, small losses occurring relatively frequently in some decks and larger but less frequent losses occurring in others. The task was introduced by the Canadian neuroscientist Antoine Bechara (born 1961) and published with three colleagues in the journal *Cognition* in 1994, where it was shown that people with damage to the **prefrontal cortex*, in contrast to neurologically undamaged participants in their **control group*, performed badly, failing to consider the future consequences of their actions and being guided only by immediate prospects. *See also* SOMATIC MARKER HYPOTHESIS. **IGT** *abbrev.* [So-called because the researchers who developed it were at the University of Iowa at the time]

Iowa Manifest Anxiety Scale *n.* Another name for the **Manifest Anxiety Scale*.

IPIP *abbrev.* International personality item pool, a collaborative resource on the internet for the development of measures of **personality* and **individual differences*, introduced in 1996 by the US psychologist Lewis Robert Goldberg (born 1932). One of the most popular scales arising from it, the
*****ebook converter DEMO Watermarks*****

IPIP-NEO, available in long and short forms, is an inventory for measuring the [*Big Five](#), and many other IPIP scales are freely available.

iproniazid *n.* An [*antidepressant](#) drug, the first of the [*monoamine oxidase inhibitors](#) (MAOIs), originally developed in 1951 for the treatment of tuberculosis. Also called *Marsilid* (trademark). [From *i(so)niazid* an earlier compound used for treating tuberculosis + *pro(pyl)* indicating a compound containing the monovalent group C₃H₇]

ipsative *adj.* In psychometrics, a property of a multi-score measuring instrument in which responses that increase one of the scores necessarily reduce one or more of the others, so that the various scores must be interpreted relative to one another rather than in absolute terms. For example, the [*Edwards Personal Preference Schedule \(EPPS\)](#) measures 15 needs, but by endorsing items pertaining to certain needs, a respondent necessarily rejects items pertaining to others, and it is impossible to score high (or low) on all the needs. *Compare* [NORMATIVE \(2\)](#). [From Latin *ipso facto* by that very fact, so called because a high score on one scale by that very fact implies a lower score on another]

ipsilateral *adj.* On, pertaining to, or affecting the same side of the body. *Compare* [CONTRALATERAL](#). [From Latin *ipse* self + *lateralis* of or relating to a side, from *lateris* a side]

IQ *abbrev.* Intelligence quotient, an index of [*intelligence](#) having a [*normal distribution](#) with a mean of 100 and a [*standard deviation](#) of 15 (usually). As a consequence, about 68 per cent of IQ scores in a population fall between 85 (one standard deviation below the mean) and 115 (one standard deviation above the mean), about 95 per cent fall between 70 and 130, about 99.74 per cent between 55 and 145, and so on. The concept was first proposed in 1912 by the German psychologist (Louis) William Stern (1871–1938), who defined it as [*mental age \(MA\)](#) divided by actual or [*chronological age \(CA\)](#): $IQ = MA/CA$, and that is how it came to be called a quotient. In 1916 the US psychometrician Lewis M(adison) Terman (1877–1956) introduced the convention of multiplying the ratio by 100, to eliminate unwanted decimals and to express IQ as a percentage of chronological age, so that $IQ = (MA/CA) \times 100$, and this means that a score of 100 is average for the age

*****ebook converter DEMO Watermarks*****

group by definition. That definition was used until the Romanian-born US psychologist David Wechsler (1896–1981) introduced the modern statistical definition, sometimes called the **deviation IQ* because it is based on standard deviations, in 1939. *See also* [DEVELOPMENTAL QUOTIENT](#), [GENIUS](#), [NORM-REFERENCED TEST](#), [RATIO IQ](#). *Compare* [EMOTIONAL QUOTIENT](#), [SOCIAL QUOTIENT](#).

IQ test *n.* An **intelligence test* that yields **IQ* scores. *See also* [NORM-REFERENCED TEST](#).

iris *n.* The opaque contractile diaphragm suspended in **aqueous humour* between the cornea and the crystalline lens of the eye, surrounding and controlling the variable diameter of the **pupil*, attached around its rim to the **ciliary body*, its deeply pigmented appearance determining the colour of the eye, containing the *dilator pupillae* muscle that contracts the iris and thus dilates the pupil and the *sphincter pupillae* muscle that expands the iris and thus constricts the pupil. *See also* [GLAUCOMA](#). **irises** or **irides** *pl.* [From Greek *iris* a rainbow]

irkunii *See* [LATAH](#).

irradiation *n.* **1.** The act or process of treating something with electromagnetic waves or beams of particles. **2.** The name used in the literature of art criticism for what psychologists call **Mach bands*. **3.** A shortened name for the **irradiation illusion*. [From *ir-* intensifier + Latin *radiatus* rayed, from *radiare* to shine + *-ation* indicating a process or condition]

irradiation illusion *n.* Any visual illusion arising from the fact that light areas of an image tend to appear larger than dark areas (see [illustration](#)), a classic example being the **Helmholtz illusion*. *See also* [STAR ILLUSION](#).

Irradiation illusion. The diameter of the discs is the same as the distance between them.

irrational type *n.* One of the basic personality types in **analytical psychology*. See *FUNCTION TYPE*.

irritable bowel syndrome *n.* A chronic condition of recurrent abdominal pain, with constipation or diarrhoea, without any known organic cause and poorly understood. **IBS** *abbrev.*

irritable male syndrome *n.* A behavioural state of irritability and aggression in adult male members of seasonally breeding mammalian species following a decline in **testosterone* at the end of a mating season, also occurring in men when testosterone declines as a consequence of ageing or **stress*, with additional symptoms of **lethargy*, and **depression*. Age-related
